I am a resident in Nassau, NY and I live in close proximity to the proposed pipeline/compressor station. I am against and wish to be recognized to intervene with the construction of this pipeline. Kinder Morgan has a vast history of negligence with other pipelines/compressors. It is unnecessary and only being built for profit. The air quality and water quality are more important and necessary to my family as well as everyone else this will impact. Not to mention it will be located above one of the largest fresh water aquifers in the county, the aquifer my family gets drinking water from. Listed below are some examples of Kinder Morgan's negligence in the past. Please, please think and act responsibly. Imagine you and your family lived here. Thank you.

The minimum federal safety standards for the transportation of gas and pipeline facilities was established by the U.S. Secretary of Transportation pursuant to Section 3(b) of the National Gas Pipeline Safety Act of 1968 (P.1.90-481, 49 U.S.C. Section L672(bl).

Public documents allege that ruptures of KM pipelines, releases of hazardous product into the environment, and safety violations pertaining to their pipelines have occurred frequently and excessively. Such occurrences include but are not limited to the following:

- In 2009 KM corporate defendants were cited by the Pipeline and Hazardous Materials Safety Administration (PHMSA) in for violating safety standards pertaining to their pipelines (PHMSA letter of September 1,2009).
- In 2011 the PHMSA cited KM corporate defendants for various safety violations, including: failing to update maps to show pipeline locations, failing to test pipeline safety devices, failing to maintain proper firefighting equipment, failing to inspect its pipelines as required, and failing to adequately monitor pipes' corrosion levels (PHMSA letter of February 28,z0Ll1).
- History of neglect documented by The Wall Street Journal, in "Wall Street Worries about Kinder Morgan's Safety Record: BC Pipeline slashes and defers maintenance spending," September t9,20L3.

- d) History of neglect further documented by The Wall Street Journal, in “Is Kinder Morgan Scrimping on its Pipelines?,” after an investment analyst determined that the company was starving its pipelines of routine maintenance by diverting excessive funds to investors, September 27, 2013.
- e) Excessive history of leak data and ruptures of Kinder Morgan’s onshore gas transmission pipelines documented by PHMSA, 1994-2013, including determinations of faulty infrastructure, failure of the pipe, cracked welds, faulty pipeline equipment, corrosion of the pipe, and other problems.
- f) In Texas alone, from 2003 to 2014, Kinder Morgan experienced 36 “significant incidents,” per Pipeline Risk Report of the PHMSA, “Building Safe Communities: Pipeline Risk and Its Application to Local Development Decisions.”
- g) PHMSA reports that throughout the United States since 2003 Kinder Morgan and its subsidiaries have been responsible for at least 180 spills, evacuations, explosions, fires and fatalities in 24 states.
- h) PHMSA Corrective Action Order CPF No. 4-2003-1008H cites Kinder Morgan for an explosion, throwing a 54-foot long section of pipe 30 feet from the ditch, due to cracking along the length of the failed section.
- i) Rupture of a KM 14 inch pipeline on April 27, 2004, in Solano County, California spilled over 120,000 gallons of fuel onto a marsh, resulting in a \$5.3 million dollar fine, and an agreement by KM to enhance spill prevention, response and reporting practices.
- j) Order of August 2005 by PHMSA cites 44 KM spills in 31 months, indicating “widespread failure to adequately detect and address the effects of outside force damage and corrosion.”
- k) California Occupational Safety and Health Administration cites KM for failure to accurately mark or map pipeline location; contributing toward an event which caused a gasoline spill and fire and explosion that incinerated five workers and severely injured others; also fine levied by the California Fire Marshall for KM’s role in the “completely preventable” tragedy; KM agreed to upgrade pipeline inspection methods and improve corrosion control.
- l) KM pipeline leaked gasoline into Summit Creek, near Truckee, California, on April 1, 2005.
- m) May of 2005, stress corrosion cracking of KM pipeline near Marshall, Texas caused an explosion, fireball and injuries.
- n) July 26, 2006, near Campbellsville, Kentucky, a KM pipeline exploded, due to external corrosion of the pipe.
- o) November 2006, near Cheyenne, Wyoming, rupture and explosion of a KM pipeline, after which the Federal Energy Regulatory Commission cited KM’s “poor compliance record.”
- p) November 27, 2006, at Charlotte, North Carolina, KM’s Plantation Pipe Line released about 4,000 gallons of gasoline.
- q) July 24, 2007, pipeline operated by KM Canada released over 250,000 litres of crude oil into the environment.
- r) September 23, 2008, corrosion of a KM pipeline causes explosion and fire near Pasadena, Texas, causing fatality and injury; deemed a “significant event,” with PHMSA referencing at least 18 “significant incidents” 2009 to 2013, per “Texas Significant Incidents Listing,” PHMSA.
- s) May 2009, near Palm City, Florida, a KM pipeline ruptured, blowing out of the ground about 106 feet of buried pipe, weighing about 5,000 pounds, causing injuries.
- t) July 15, 2009, a pipeline explosion at Sylva, North Carolina involving KM and other

Individual	jhawkowl@gmail.com	

Basis for Intervening:

I live in Sunderland, MA, and I want to intervene in this proceeding to oppose the NED pipeline. I have an interest which is directly affected by the outcome of the proceeding because I own property in Massachusetts, I have two young children, our quality of life would be negatively impacted if the project moves forward, I am an electric customer and suppose that the cost of NED will be reflected in an increase in my electric bills, AND my family and I are donors to a land conservation organization and we enjoy being outdoors, specifically at state and town public parks and forests (we camp at least one week per year).

We do not want what is left of our sacred, beautiful land to be defaced for any reason, but especially not for the profit of the gas companies. The donations I have made were not made with any assumption that protected lands would not actually be protected.

Basis for Intervening:

Why we are filing a Motion to Intervene in this docket (CP-16-21-000)

- .We are a land owner located less than a mile of the pipeline
- .Incomplete application by Kinder Morgan (approximately 30,000 TBD's).
- .Inaccurate application by Liberty Utilities to the PUC including proposed customers that do not exist.
- .Supply Path Component-There aren't enough customers interested in this pipeline.
- .Market Path-Not enough shippers interested
- .Eminent Domain taking of private land for petro-chemical corporate profit.
- .Minisink, NY & Porter Ranch/Aliso Canyon, the state of Oklahoma is now the Earthquake capital of the world, the destruction of air, land & water resources in Pennsylvania, New York, Ohio, & many other states are current & tragic examples of what happens when a Fracked Gas Natural Pipeline is allowed to go through.
- .Our proximity to proposed Pipeline, metering station, & blowoff valves. Also to alternatively proposed by SWRPC (Southwest Regional Planning Commission) & Kinder Morgan compressor station which would cause air, odor, noise, rogue gases & light pollution.
- .Snowmobile trail access, this proposed pipeline is located on the snowmobile trail. I don't want to ride over a pipe that is made with too thin a pipe, not buried deep enough & that could explode at any time
- .I do my shopping at Hannaford's where I would be in danger because of the Incineration Zone running next to the building.
- .The Monadnock wildlife including endangered Eagles, Jefferson Salamanders, & Blanding Turtles must not be disturbed. .
- .Kinder Morgan-modus operandi-Their safety record & financial standing are unstable & we don't believe that they will maintain their pipeline once it is completed.

.Blasting to bury the proposed pipeline could arguably contaminate & disrupt our well/drinking water

.Toxins, FLIR would pollute the air that we all breathe.

.Kinder Morgan plans on NOT burying their proposed Pipes below frost line which is at least 4 feet. During a NH spring thaw they would burst from spring frost heaves.

.The proposed Pipeline's pipes are not as thick as they could or should be & could easily burst during the NH spring thaw & spring frost heaves.This is the matrix formula called the "Kill Rate."

. Rindge's town workers need to be continuously trained in pipeline disasters. We have high turnover of town workers that will constantly need to be trained in the dangers of a pipeline explosion, fire control & disaster management.

.Rindge doesn't have proper equipment to fight pipeline disasters. We don't want to have pay for the special equipment to fight the gas explosions caused by a private company.

.We should not be expected to pay through an energy bill tariff for the building, polluting & profit of a private company.

.We can't accept the use of our pure conservation land water for the pipeline's greed and profit.

.So far the company employees have shown very little concern for the local people.They have been rude, told lies, driven recklessly on our roads & one even urinated on a ladies front lawn

.Our Property Value decline has already started. People are selling their homes to get away from the proposed pipeline.

.Too much inaccurate information from Kinder Morgan. We don't trust anything that they tell us. We have attended KM pipeline information meetings. The Kinder Morgan staff either doesn't have an answer or gives us one that we, after over a year of studying everything about pipelines, know to be a false answer.

.We must travel over the pipeline daily to go to work and recreational activities and will be in close proximity to proposed compressor stations.

.Our son must travel over the pipeline daily to go to school

.We moved to this part of the state because of the clean air, water and quiet way of life. This proposed pipeline has ruined that.

.The turmoil from proposed pipeline has caused much stress & disruption of our lives. Loss of sleep, travel to the NH capital on many occasions, travel to surrounding towns, travel to the Mass state capital, wear & tear on our cars & lives due to proposed pipeline. We don't like being lied too.

. Wetlands mitigation will be 3 to 5 times Kinder Morgan's estimate compensation. It will be over 1 million dollars in Rindge alone

.The Rindge Gravel Pit that KM is planning to use to build the proposed pipeline is on our street. All construction equipment would pass our home daily. Blasting would be less than a mile from our home. Our well water would be disrupted.

.We would have to cross the Pipeline on our daily commute to work, school,shopping & recreation.

Why we don't want to pay for it:

.Conservation Land/Water disruption

.Fossil Fuel Dependency

.The permanent damage done to our three separate Aquifers at Miller's River.

.24/7/365 days a year flare off/noise/PM2/Rogue gas emissions=loss of night sky

. Radioactive release gases/rogue gasses & particulate matter (P.M.2),& substrates

We believe that there is no amount of mitigation that can repair the amount of damage that will be done by the construction, operation & decommissioning of this proposed Fracked Gas Pipeline. There aren't adequate plans being presented for the retirements of this massive infrastructure overbuild.

The state of NH should not simply be used as a Pass-Through For The Pipeline.

WE DON'T LIKE BEING LIED TO OR BULLIED!

Basis for Intervening:

I live within 8 miles of the proposed New Ipswich compressor station.

For these reasons I am strongly opposed to the NED pipeline proposal:

I am concerned that the pipeline would be a daily hazard to those who live and work around it.

I am concerned the pipeline would cause excessive toxic emissions from compressor stations to poison the water and air, putting innocent people's health and lives at risk.

I am concerned the pipeline would cause excessive light and noise pollution from compressor stations.

I am concerned the pipeline would cause long-term damage to the beauty and health of nature preserves and wildlife in our area.

I am concerned the pipeline would be a soft terror target due to the pipeline's size, high pressure, volatility, and unpatrolled corridor.

I am concerned the pipeline would lower property values because no one wants to live in a potential danger zone.

I am concerned the pipeline would unjustly impose Eminent Domain on average citizens who have worked hard for their land.

I am concerned the pipeline would cause a proposed tariff to be forced on energy ratepayers.

I am concerned that the rural towns along the pipeline route are not equipped for the burden of the potential dangers associated with this volatile pipeline.

I am concerned the pipeline would negatively impact tourism in the area and result in a depressed regional economy.

Basis for Intervening:

I am concerned that the pipeline's compressor station would: (a) cause unacceptable toxic emissions in water and air, jeopardizing children's and adults' health; (b) cause unacceptable noise and light pollution; (c) irrevocably damage property values.

I am concerned that the pipeline would: (a) put all towns and homes within proximity in danger of explosions and fire too overwhelming to be controlled by local emergency services; (b) cause enduring damage to protected land and water, and to wildlife; (c) unjustly claim Eminent Domain; (d) diminish the Quality of Life of everyone living and working around it.

Basis for Intervening:

I am filing a motion to intervene in the FERC process for Kinder Morgans NED.

I have always loved nature and the outdoors. As a human services worker and now a hospice chaplain, I recharge myself through enjoying the beauty and peace of God's creation. I live in Western Massachusetts because I appreciate the gorgeous large expanses of unspoiled woods, fields, hills, rivers and lakes. My belief is that God gave humans the mandate to be stewards of the earth, which means we are to take care of it. In doing so we take care of each other's health and well being.

I have many concerns about this pipeline which make me an appropriate intervenor:

My interest as a Mass. electric customer with National Grid. I am very concerned that that our rates will go up to pay for the construction of this unnecessary pipeline. At this time the logical new energy sources are renewable ones. The existing pipelines have many leaks that have not been fixed. How can we expect new pipelines to be maintained adequately?

My family's property will decrease in value significantly and will be unlikely to have interested buyers if the pipeline is located next to it. This would be because of the changes to the appearance of the land, and also light and noise pollution. As well as potentially serious health effects due to air, water and ground pollution.

My interest as a neighbor to protected properties and a frequent visitor to protected lands.

As someone who frequently kayaks and hikes and camps on protected lands in Massachusetts.

My interest in Article 97 protection of lands that legally are supposed to be protected from eminent domain from corporations and other entities that will use the land in ways that do not protect the water, land, animals, historical significance and air.

As a gardner who is concerned with eating healthy organic vegetables and fruits and other foods.

As a person who has been interested in protecting and preserving our environment since high school.

Since there are many ways this pipeline is problematic without any needed benefit to the people of this state, as the study the Massachusetts Attorney General's office conducted concluded, I emphatically state that my decision about the pipeline is that it should be constructed here or anywhere, Thus my unique intervenor status is important.

Basis for Intervening:

I have been a resident of Mason NH for 45 years. Our town is being tri-sected by the NED pipeline and its Fitchburg lateral. Mason is a small town that depends on its volunteer emergency services which are not in any way prepared to deal with this large industrial project. In the town's Master Plan established in 1981 and updated in 2007, one of the highest priorities stated by townspeople is to protect Mason's rural character. NED would contravene this community mandate.

As the longest-serving member of Mason Conservation Commission, I am very concerned about the threats this pipeline project poses to Mason's water and air quality, and in particular to the 5 parcels of conservation land that will be directly impacted by NED and its lateral. This industrial project will violate the public trust that has been established by the donors and taxpayers of Mason and the state of New Hampshire who invested in the permanent protection of these outstanding natural resources, wildlife habitat and recreational lands.

In addition I am a member of non-profit groups who are dedicated to environmental protection and whose land will also be affected by NED: these include the Monadnock Conservancy and the Society for Protection of NH Forests.

Basis for Intervening:

I am writing to you to share my concern over Kinder Morgan’s proposed Northeast Energy Direct Expansion Project (NED). There are several reasons why it needs to be stopped.

I live four miles from one of the proposed compressor sites. I teach at a school one mile from my house. My neighbors in Temple have it worse than I. Their public school is 1300 feet from the proposed site. In the event of a” blowdown” or a leak, natural gas and the proprietary chemicals (many of which are outlawed by the Clean Air and Clean Water Acts) will contaminate our air and water. Children are more susceptible to these carcinogenic substances. For the health and safety of our children and future generations, please veto this pipeline proposal.

My grandmother gave up her land for the construction of I-84. This is what I understand as eminent domain-buying private land for public good. The proposed pipeline does not serve the people of New Hampshire. It stands only to put more money in the pockets of a large company. From all accounts, the fuel passing through our lands will be shipped overseas. Because this is not a case of eminent domain, please veto this pipeline proposal.

At last tally, New Hampshire had a surplus of energy. We need to put our focus on renewable resources like solar, wind, wood, and water. In the name of greenhouse gas reduction, please veto this pipeline proposal.

Conservation of land was one of the greatest gifts our forefathers left for future generations. New Hampshire is one of the best places in the US to live because of our landscape and conservation of resources. We owe it to our forefathers to protect the land they set aside for us. If we don’t, no one will want to continue maintaining such a legacy. In the name of our forefathers, please veto the pipeline proposal.

I recently moved to New Hampshire from the western slope of Colorado, where the effect of fracking is a daily conversation and for many, a fight for their livelihoods and health. The environmental degradation caused by the oil and gas industry is apparent on I-70. Massachusetts already has one pipeline highway/corridor. Let's not destroy another pristine area for someone else's profit.

As a native New Englander, I moved back to plentiful clean water, good air, beautiful landscapes and historically preserved towns. Please help protect our way of life and keep New Hampshire one of the best places to live.

Basis for Intervening:

I am writing this as a landowner in Pelham, Hampshire at 71 Dutton Rd. Map 11-100, who has had this undeveloped parcel of land in my family for over ninety years. My great aunt in 1929 had to sell a small portion of this land to the electric company for the sale price of one dollar. I did understand the rights that were granted by this agreement. What now is happening is that land and a possible additional 150-250 feet be now taken for this pipeline. Why this route was changed from the West side to my East side in September was never explained to me. This route now will degrade the prime wetland the the town voted to protect. This wetland is one of the watersheds for Little Island Pond. This prime wetland had to have met many set criteria to have the state recognize the wetland as a prime wetland. I have kept my land in its natural state to preserve this wetland's integrity.

My property, because of this pipeline, will have its wildlife corridor destroyed and it could impact my well, pollute the soil and the air. The noise from the construction will ruin the tranquility I now have in my yard. It will be a constant construction zone with the expansion of the electric lines, followed by the construction of the pipeline. The safety of pipeline has also been rightfully questioned. If even a small incident happens large blocks of forest land could be destroyed. The close proximity to this pipeline puts me and many of my neighbors in the incineration zone.

The class six road next to me is a road that has been abandoned by the town for as long as I can remember ie. sixty plus years. It is a trail for snowmobiles and for walking. My fear is that "town road" will be expanded and some of my land will be taken to access the land where the pipeline in being proposed. This would then prevent me from ever having a right of way to my backland. I have always wanted to grant to conservation my land for a minimal fee. I would however also want the option if need be, to develop. I need the fifty foot right of way. In addition if this "road" was ever expanded the noise would be constant and my view permanently destroyed. What price can be put on that by Kinder Morgan?

Individual mturre@umass.edu

Basis for Intervening:

I'm writing to voice my opposition to Kinder Morgan's NED project.

I have lived on Shelburne Falls Road in Conway for 25 years. I chose this town for its rural character, natural beauty, strong civic community, lack of industrial pollution, and healthful environment to raise children. Kinder Morgan's proposed pipeline threatens what I value most about my town, as it does for towns all along the proposed route.

My immediate personal concerns include:

- The route passes through wildlife corridors and sensitive ecological areas, many of which are supposed to be under conservation agreements.
- The planned blow-down valve less than two miles upwind from my home, threatens to contaminate my family's immediate environment.
- Kinder Morgan has an abysmal safety record for dealing with "accidents."
- I live on what will surely be a transport route route for construction of the proposed tunnel under the Deerfield River. Endless of truckloads of debris a week traveling over our roads, will cause wear and tear on roads, and threaten public safety.
- The very presence of the pipeline will affect the value of my family's primary asset, our home.

This is unneeded infrastructure, the only purpose of which is to fill the pockets of Kinder Morgan and Tennessee Gas. I do not believe that the gas is intended for local consumption; I am convinced it is intended for sale overseas.

Most importantly, it is short-sighted policy to further develop reliance on "dirty" (fracked) hydrocarbon-

based energy, especially as clean energy becomes increasingly affordable and reliable. Massachusetts and the nation should be investing in, and creating jobs in, clean, renewable energy.

Basis for Intervening:

The Northeast Energy Direct gas pipeline gas pipeline is being proposed in western and northern Massachusetts as well as New Hampshire at a time when the State is trying to find ways to move beyond fossil fuels due to the increasingly real and imminent threat that global warming poses to the earth. The fossil fuel industry has enjoyed a subsidized monopoly on energy in the United States for many decades. As a tax payer, I am outraged that our country's citizens continue to be used as a resource by oil and gas companies for our primary energy needs. On top of that Kinder Morgan has the audacity to charge a tariff to the citizens of the Commonwealth of Massachusetts and the State of New Hampshire. It is very easy to question the benefits of the citizens of the two states. It is time to move on and see that primary support shift to alternative green options. For this and numerous other reasons including 1) cutting across protected public open space 2) using tainted bi-products in the fracking process and 3) we do not need it, I oppose the development of this proposed pipeline. Please refrackulate your thoughts. THIS PART OF THE COUNTRY WILL HAVE NONE OF IT!

Judy Haupt

755 Watson Spruce Corner Rd.

Ashfield, MA 01330

We live on a small maple syrup producing farm one-half mile from the proposed pipeline crossing which also crosses near the Bear Swamp Reservation of The Trustees of Reservations of which we are members. We find the total disregard of the Tennessee Pipeline organization for sensitive habitat as found in Bear Swamp and the infringement on acres of farmland as proposed untenable. Following the Turnpike path seems like a much more acceptable route, as that right of way is already established with little disruption to private land holders and sensitive acreage.

- Sincerely, Tom McCrumm and Judy Haupt

Basis for Intervening:

There are so many reasons why this is project is a terrible idea, so many that it's going to be a challenge to sum it all up succinctly. I have many objections, but I'll limit my thoughts to one tiny corner of a very large argument.

One of my chief concerns is about excessive light pollution. It seems to be well understood that the facility will be brightly lit, 24-7.

Arguments against light pollution at the compressor station include:

- Devastation to wildlife: plants and animals depend on the natural cycle of dark and light to stay alive. Artificial light at night has negative and even deadly effects on many species. Once their natural cycles have been confused by artificial light at night, their chances of survival, and of sustaining their role in the natural world, are thrown off, to ill effect for the entire ecosystem.

- According to the International Dark-Sky Association, whose research is available at darksky.org, studies have shown artificial light at night negatively affects human health by increasing our risk for obesity, sleep disorders, depression, diabetes, and breast cancer. Humans rely on natural circadian rhythms to function properly, and any light trespass into the homes of nearby residents is going to have a terrible effect on both their physical health and their quality of life. The effects are similar to noise pollution in their ill effect on human health.

- Excessive lighting in general is simply a giant waste of energy and money. If we're in such an energy crisis due to a shortage of fracked gas, why waste so much of it on excessive lighting at a compressor station? Excessive lighting increases our reliance on fossil fuels and just means more greenhouse gas emissions.

- The effects of light pollution aren't just a problem for those living nearby the compressor station - the effects can be seen and felt for miles and miles around. A brightly-lit facility of this size would create an ugly patch of skyglow in what was once a pristine, dark sky. It's my best guess that an industrial-sized skyglow of that magnitude would be immediately visible and painfully obvious not just to Northfielders, but to residents of all surrounding towns, and deeper into the region: Vermont, New Hampshire, and the greater Pioneer Valley.

Finally, the night sky is a natural treasure that is perpetually under attack. Badly designed lighting fixtures, suburban sprawl, and ill-conceived attempts at improving security with excessive lighting have all contributed to a night sky that is washed-out, destroying the wonder of the stars and the awe-inspiring sight of a truly dark sky. Northfield and the surrounding areas have succumbed to that in some ways - there is a bright skyglow over Main Street, and the lighting at Vermont Yankee in Vernon casts a sickly orange glow over the northern skies as seen from Northfield. But, for the most part, Northfield's night sky is actually very well preserved, and a stunning view of the Milky Way on a clear night can still be enjoyed even from a location near Main Street. An annual amateur astronomy conference called the Astronomer's Conjunction meets every summer at Northfield Mountain, just 4 miles from the proposed site of the compressor station - a site chosen for the quality of its dark skies. Will they still want to meet in Northfield with an ugly patch of skyglow blocking their view? When I moved from New York City to Northfield twelve years ago, I did so in part because I knew Northfield would offer me a majestic view of the heavens. We're lucky that we have such a view in a world where the sky is getting washed out at a terrifying pace. I'd like to see our night sky

preserved by controlling light pollution all over town. Adding a massive, brightly-lit facility takes us in a completely disruptive and destructive direction.

Phoebe W. and Stephen W. Bushway

224 West St.

Cummington MA 01026 (mailing)

Plainfield MA 01070 (residence)

January 10, 2016

The proposed NED PF14-22-000 pipeline is shown in maps by Kinder Morgan to be routed nearby to our property in Plainfield MA. We have previously written to FERC to express our concerns about the detrimental environmental and cultural effects such a pipeline would have on the air, water, land, flora, fauna and people of our Commonwealth.

We only recently (November 2015) received written request from Kinder Morgan to have our land surveyed. We had previously (a year ago) mailed a written denial of permission to survey our property, preemptively. In late December 2015 we received a letter from Kinder Morgan's attorneys again requesting to have our land surveyed.

Whether the proposed pipeline would come through our property directly or not, it would be in such close proximity as to have a tremendous detrimental personal effect on our lives as well as on animal, plants and the water systems. Our house receives water gravity fed from a shallow, naturally occurring well situated approximately 100 feet from the road. Reps. from Kinder Morgan say that blasting will need to be done to prepare a bed for the pipeline. Such blasting would very likely damage our water supply.

Stephen has done soil surveys in many of the towns along the proposed pipeline route. The high plateau east of Dlaton, MA contain contain primarily shallow soils. Below the organic layer, the remaining 7 feet of trench would need to remove hard pan or ledge. ONce this trench were dug, the routing of ground water would be forever changed.

Stephen is an engineer with a patented steel roof scaffold accessory which he has been manufacturing for many years. The steep, sudden elevation changes along the proposed route would be extremely difficult for any 30 inch steel pipe to bend to conform to such abrupt changes without stretching the outside diameter of the pipe. Heaving ice WILL form in the gullies exerting additional stress on the pipe. We are extremely skeptical that these technical challenges can be met insuring ANY long term safety of the environment around them.

The ground water and air would be negatively effected by leaking of toxins from the pigging stations and leaks of gas at high pressure as well as releases from the compressor stations. We have received information from two physicians about the horrific health effects on all living organisms by the water and air polutants released over time by natual gas pipelines and compressor stations in particular. The negative effects are concentrated within a 10 mile radius of a compressor station. The proposed one is larger than any in the state and our property, in fact our whole town lies within that 10 mile radius of the compressor station proposed for Windsor/Peru MA.

WE are fearful that leaks from the pipeline would catch fire and explosions and cause untold damage. Our local volunteer firefighters would have no ability to fight such a fire and our only recourse would be to try to evacuate. Our main route of exit crosses the proposed pipeline. We would have to cross the proposed pipeline route to reach our town's Safety Complex for shelter.

We have a large organic vegetable garden ane we eat the foods from it all year round. We also have large areas of native wild cranberry, blueberry and blackerry as well as cultivated raspberry canes and apple and peach trees. We tend these crops, harvesting and eating the fruit. The air and water pollution from the pipeline would negatively impact our ability to grow organic fruits and vegetables and sustain ourselves on our property.

Our extended family has given a parcel of land to the Massachusetts Audubon Society to be protected in perpetuity. This parcel is in close proximity to the proposed pipeline off of West St. On the parcel is a high elevation rare bog full of rare and endangered plant and animal species. Contamination from the pipeline would negatively impact the fragility of the water, air and plants and animals of this special area.

There are culturally significant centuries old foundations, mill sites and stone walls on our property that could be disturbed by construction of a natural gas pipeline, as well as 1830's cemetery right next to West St and the proposed pipeline route.

The process of construction with large, heavy vehicles navigating on our narrow, unimproved, winding and hilly roads, as well as noise from blasting would destroy the peace and quiet of the life we enjoy. Travel times to and from work and other destinations would take longer and be more dangerous. We walk at least twice daily on the local roads and trails and the tranquility we daily experience would be disturbed.

We have every intention of remaining living on our land for generations to come. A gas pipeline through this area would make living here untenable.

Respectfully,

Phoebe and Stephen Bushway

travels through this pipeline will be sold to the highest bidder. If that happens to be in Europe for example then there will not be any benefit to the local economy. Also, as mentioned in 2) this is a fossil fuel which when burnt will release CO2 into the atmosphere.

In conclusion, I strongly oppose this project for the safety, environmental and economic concerns I have outlined.

Yours Faithfully,

Dr. Paul McIntosh.

Basis for Intervening:

The proposed NED project would cut through multiple sections of protected land which violates a section of the Massachusetts constitution. Our conserved and protected lands are ours into perpetuity. We will not allow them to be used for the profit of gas extractors, transporters, or distributors.

As a ratepayer I object to the increase in rates that is inevitable when the gas transported through NED is exported, since we can't use the huge volume of gas that will flow from the new pipeline.

Basis for Intervening:

I am concerned that the emissions from the proposed compressor station approximately 1-mile from my home will aggravate a medical problem in myself and my children. These emissions may also aggravate the same condition that is part of the thousands of relatives that I have who are in my town.

In addition, I will hear, smell, feel, see and potentially taste (dug well water quality) the effects of the compressor station.

We are concerned about air quality due to 41,000 HP turbines generating exhaust.

We are concerned disturbances to springs as they tap into stratified drift aquifer that the compressor station is on top of.

We are concerned with the continuous noise of compressor station, 24-7.

We are concerned with noise and pollution from blowdowns.

We are concerned with light damage to dark skies. We won't be able to see stars.

We are concerned with subsonic vibrations that can subconsciously affect health.

We are concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.

We are concerned with traffic, noise, air pollution and numerous disturbances during construction.

We are concerned with the property value of our house being extremely close to a compressor station.

We are concerned with the potential schools in the Mascenic Regional School District because families don't want children to go school system within two miles of the compressor station.

We are concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.

We are concerned with the industrialization of the neighborhood. The only things that are comfortable living next to 41,000 HP compressor stations is other heavy industry.

We live in the shadow of the proposed compressor station. We will feel its effects.

Please be advised that I have filed a motion to intervene in the above case.

FERC Acceptance for filing in CP16-21-000

Date Sun.10Jan 2016 12:00 noon

From eFiling@ferc.gov

To: epmroz@gmail.com, efilingsacceptance@ferc.gov

To Whom It May Concern:

The NED pipe line is not a good deal for New Hampshire. New Hampshire is self sufficient. We don't need Tennessee Gas, Kinder Morgan, to use our state as a corridor to ship any energy recourses overseas.

The history of Kinder Morgan's pipeline accidents, for example, leaky pipes, shows no concern for their infrastructure. I do not want the youth of our nation to be left with the consequences from our generation's arrogance.

I really am disappointed how our government is performing. I feel FERC is no exception. Eighty six thousand miles of pipeline to me is a bit much, don't you think? How many land owners have lost their homes due to eminent domain? Forty five years ago, our nation's leaders worked hard toward preserving

our resources, now, we are giving it away to be shipped overseas. FERC, you would think after more than six thousand letters and eleven thousand signatures as well as all town officials standing against the pipeline would be a clear enough indication that New Hampshire does not want gas pipelines, anywhere.

I truly believe that we the people can do better than this. Fracking our earth causes earthquakes and also contaminates our drinking water – as do leaking pipes. Please consider what this pipeline is going to take away from our state.

- I intervene because I'm a landowner that would be affected by this pipeline.
- I intervene of any possible pipeline on or near my property.
- I'll intervene of any property seized by eminent domain.
- I'm also a resident that would intervene because of physical risk of any blasting radius on or near my property.
- My drinking water resource is at risk by any of TGP's construction. I totally would intervene because of any contamination.
- The impact of my environment in my community health would not recover the same, because of the pipeline clearing. I intervene because of the animals would never recover as they once were.
- I enjoy the outdoors and do not want any state or town public parks or forest, which have been set aside for the people and wildlife to be impacted by any negativities of this commercial project.

Individual	glynngraham@yahoo.com	

Basis for Intervening:

I live in Wilton, New Hampshire and want to intervene in this proceeding to oppose the NED pipeline for a number of reasons.

The primary reason for this intervention filing is my objection to expanding the delivery of non-renewable fossil fuels in the form of fracked natural gas that contributes to greenhouse gas and the resulting warming of the planet, a course that is inherently self destructive to our world.

I live in the 5 mile radius of the compressor station and I am concerned that I am in the drift zone for toxic pollutants that will affect the quality of the air and water and the ability to grow toxic free organic garden for my family.

I have donated land for conservation and I am concerned about the fate of many tracts of conserved land being taken by eminent domain and used for fracked gas pipelines. This violates the purpose of such donations.

I am concerned that the rural and picturesque quality of life in the Monadnock region would be severely compromised. I am concerned that this will affect the income from tourists.

Respectfully submitted,

Glynn Graham

Kuster Family Application for Intervenor Status - Docket CP16-21-000

Gordon and Sandra Kuster

We live in Stephentown, New York. Our property is adjacent to the proposed route for the NED pipeline. Due to our location we would be vulnerable to the health risks from any leaks or explosions, to the potential property damage (i.e. to our water well, water supply etc.) from the construction process and the anticipated loss of property value following the construction of a pipeline. We are within the incineration zone that has been defined for a pipeline explosive accident. We also share our general community's conservation and public health concerns that have been well described to your agency. Due to the above noted factors it is clear that we have an interest which will be directly affected by the outcome of your proceedings and thus we request intervenor status.

Individual onthefarm2468@comcast.net

Basis for Intervening:

Request to file as an intervenor for the proposed NED pipeline. I have approximately 180 acres of managed woodlands on Four Mile Brook Road in Northfield, MA that will be bisected by the proposed pipeline and will have a significant negative impact on our real estate as well as adjoining lands. The reasons for this request are outlined below.

1. While the pipeline will be co-located along a 250' wide ROW granted to the predecessor of GDS Suez (current owner) it will widen this gash by 40% (another 100 feet during construction and at least 50' following construction). This will further exacerbate the fragmentation of not only our woodland but also of others in this area that abuts State owned woodlands. This will have a serious impact on the mammals and invertebrates that inhabit this fragile ecosystem.
2. Our dwelling unit and associated garage and workshop will be within the 500' blast zone. There is no doubt that this will have negative impact on property values. It is worthy to note that homeowners in other areas have abandoned their homes due to health concerns following construction of pipelines and their associated compressor stations and "blow off valves" due to the release of not only methane but benzene and other known carcinogens. Clearly, the pipeline will have a negative impact on all landowners abutting this unneeded pipeline. I don't think it is by coincidence that owners of pipelines don't live next to them or the compressor stations and blow off valves.
3. Since we actively manage our wetlands, the buried pipeline, if built, will adversely impact our ability to

access our land to remove logs or firewood. Crossing the pipeline will be limited to access points that will have to be negotiated with Kinder Morgan (as an expense to the landowner).

3. There are 3 perennial streams and associated wet lands on our land that the proposed pipeline will cross. This will alter water flow during the construction phase as well as later due to the pipeline itself acting as a dam. This is critical as the streams provide water to Four Mile Brook, a cold water stream recognized for its population of Brook Trout.

4. The topography of the land in our area is rather steep and the distance to ledge is minimal. This will require a significant amount of blasting during the construction phase. This has the potential to impact our foundations and other masonry structures. It is also significant that the pipeline will cross property owned by GDS Suez that includes a "pumped storage reservoir" and underground powerhouse and penstocks. GDS Suez is in the process of filing to increase the capacity of the upper reservoir by four feet and the lower elevation by 18 feet. Coincident with this filing were recent phone calls notifying us that should the earthen dam breach we would have minutes to evacuate before the water would inundate this narrow valley. Blasting that will be required in this area has the potential of disrupting the integrity of the earthen dam that impounds the upper reservoir.

5. Following the useful life of the pipeline it appears the preferred method of "disposal" is abandonment in place" as described in FERC's document supplied to landowners. This is unacceptable. It is easy to envision a cess-pool the length of the pipeline as it begins to rust through. The water will begin to dissolve the compounds remaining as sludge and leach into the soils, wetlands, and streams. This problem will then become the responsibility of and a liability to the land owner.

6. The Attorney General for the state of Massachusetts, Martha Coakley, has filed the results of a study whose results indicate that the NED pipeline is not needed. The study also outlined a series of less expensive alternatives that would meet the energy demands of the region. The state is also committed to decreasing its dependence on fossil fuels by increasing use non-polluting sources of energy such as solar, wind and hydro.

7. All towns in Massachusetts that will be crossed by the proposed pipeline have all voted against it as have towns in the other states.

8. Based on the opposition along the length of the proposed pipeline, the questionable need as only a fraction of the gas is required to meet regional demand, and the potential health risks and environmental impacts, I urge you to decline KM's request for a certificate.

For these reasons I am requesting to become an intervenor and urge you to grant my request.

Thank you.

Individual nielsenrinaldo@comcast.net

Basis for Intervening:

1) The New Ipswich (NH) compressor station is less than 1000 feet from our elementary school which also serves as our emergency shelter. We would need to construct a new elementary school/emergency shelter outside of the incineration zone and well-away from the blow-down gasses and other pollutants discharged from this station.

2) We live at a higher elevation than this station and consequently will be subjected to noise, air, and light pollution. We want this pollution to be mitigated so that our night sky and pristine air quality is not affected.

3) We are rate-payers of Ever-Source and expect to see a rate increase due to this project we oppose any such increase and will seek legislation that ratepayers will not be held responsible for any of the costs associated with this pipeline.

4) My family great enjoys the outdoors - especially our local forests and mountains. Our state, town parks, conserved lands, forests, etc. will be violated by this project as will their attractiveness for recreation. Again, we wish that FERC require that the impacts of light, water, air, noise, etc. pollution be mitigated to pre-construction levels.

Basis for Intervening:

We have children in the Temple Elementary School and as engineers and scientists we have concerns that Applicant has not addressed sufficiently regarding their own seemingly incompletely specified project.

We fear and otherwise have concerns that if the Applicant has seemingly little knowledge of the area for the development, with all trappings therein, and seemingly little knowledge of their own project that their investors might not be adequately protected with the added seeming design risk with an apparently unneeded detour into New Hampshire and possible massive risk to Tennessee Gas or Kinder Morgan's investors or stakeholders.

20160111-5126 Correction to Susan L Durling

FEDERAL ENERGY REGULATORY COMMISSION

IN THE MATTER OF NORTHEAST ENERGY DIRECT PROJECT

Docket No. CP16-21

I am writing once again to alert you to the carelessness and shoddy workmanship exhibited by Kinder Morgan / Tennessee Gas Pipeline in their mapping.

I refer to segment I, market path in alignment sheets labeled TE-SEG_I-004, TE-SEG_I-005, TE-SEG_I-006, and TE-SEG_I-007 submitted on July 24th 2015

Issue #1

I have found through careful examination that alignment sheets 4 of 7 and 5 of 7 that cross Winchester, New Hampshire do not meet at their ends.

This may be because when the pipeline route was changed, the southern part of the route was the most affected. Alignment sheets 5, 6 & 7 are on Winchester's tax map number 6, while alignment sheets 1 through 4 cross tax maps 2 & 3. The route changes were mainly on tax maps 2 & 3.

Errors were made on alignment sheet 5, in attempting to make it fit with the end of alignment sheet 4.

A contributing factor was that the intersection of alignment sheets coincided with the intersection of the tax maps and made it difficult to determine which property lines were showing on the alignment sheets. Through very careful examination, I have determined that the alignment sheets DO NOT intersect.

Issue #2

The town line between Winchester and Richmond, NH is incorrectly placed

Issue #3

How can affected property owners be notified with these poorly done maps? For example, the owners of lots 6-4 and 6-48 are unable to determine if the pipeline will cross their property.

Please ensure that Kinder Morgan corrects these errors and notifies affected property owners immediately.

I am sending you a PDF format picture of the alignment sheets with map and lot numbers added to illustrate my points. (Sent separately)

Winchester tax maps are large PDF files, available here:

http://www.winchester-nh.gov/Pages/WinchesterNH_Assessing/Winchester%20Tax%20Maps.pdf

http://www.winchester-nh.gov/Pages/WinchesterNH_Assessing/Topo%20Tax%20Maps.pdf

Thank you

Susan L Durling
215 Scotland Rd
Winchester, NH 03470

Basis for Intervening:

I am a property owner at 1239 Watson Spruce Corner Road, Ashfield, Mass. 01330. The proposed North-east Direct Pipeline will pass within a quarter mile of my property, crossing a small pond with a bi-centenary mill before invading protected woods and wetlands and animals. As a taxpayer, I refuse to accept any surcharge that will occur to underwrite this project, opposed by the majority of townspeople and, OFFICIALLY, by the town itself. Kinder Morgan and its subsidiary are using a ruse of supposed energy needs of our community and lower costs to Ashfielders to force approval of a project that is specifically intended to carry gas to the Dracut facility for export to Eastern Europe. The environmental and potential disaster risks of this project are too great to justify it -- for company profits without a thought to protect our waters and lands for future generations.

The downside to us as property owners is the diminishing value of our homes and properties and the inestimable damage that will be done to precious environmental resources. KM's rejection of alternative sites is in my view bogus, and FERC should reject the current proposed pipeline route in favor of one of the two proposed alternatives -- so that if the pipeline cannot be stopped in its construction a more appropriate route is compelled. The costs to property owners, towns and the environment need to be weighed against KM's contention that the marginal cost increased associated with the alternate routes make them inviable. THE DAMAGING PLANS CANNOT AND MUST NOT BE APPROVED BY THE AUTHORITIES.

LINE. A RURAL COMMUNITY WILL BECOME A HIGHWAY FOR UNNECESSARY AND DESTRUCTIVE CONSTRUCTION AND THE ENDLESS CONVOY OF VEHICLES USED IN THE BUILDING AND OPERATION. ADDITIONAL AIR AND PARTICULATE POLLUTION FROM THIS ACTIVITY WILL CHANGE THE CHARACTER OF MY PROPERTY AND MY TOWN IN THE LONG RUN. WE WILL BE DEVESTATED. FLY BY NIGHT DRILLING AND PIPELAYING CREWS FROM THE SOUTHEAST AND MIDWEST WILL PERFORM SUBSTANDARD WORK AND BE PAID VERY WELL FOR IT. THEY WILL RETURN HOME WHEN WORK IS DONE LEAVING BEHIND, AS SHOWN IN K-M AND TENN. PIPELINE'S "FINE AND FAILURE TO COMPLY RECORDS CLEARLY INDICATE."

AS A CUSTOMER OF NATIONAL GRID, I FULLY EXPECT A SIGNIFICANT INCREASE IN MY BILL WHICH DIRECTLY SERVES AS A SUBSIDY TO K-M IN ESSENCE I'LL BE PAYING FOR THE PIPELINE AND NOT RECEIVING 1 RED CENT OF VALUE FROM IT. K-M FOR ALL INTENTS AND PURPOSES PASSES THEIR TAB ON TO ME. REMEMBER, NO GAS WILL BE DISTRIBUTED THROUGH IN NYS, THE STATE IS SIMPLY A TRANSMITTAL PORTION OF LINE TO MOVE GAS FROM PA TO MA, WHERE, IT'S EXECUTIVES HAVE TOTALLY REVERSED THEIR PLEAS FOR MORE PRODUCT!

THIS GAS, AT LEAST 75%, PERHAPS MORE IS DESTINED FOR TRANSMISSION FROM THE TERMINAL IN MA TO AN ALREADY EXISTING LINKING LINE DUE NORTH TO NOVA SCOTIA, CANADA. ONE OF THE WORLD'S LARGEST LNG SHIPPING PORTS HAS BEEN IN OPERATION THERE FOR YEARS, AND K-M HAS RECENTLY SPENT HUNDREDS OF MILLIONS OF DOLLARS PURCHASING NEW, AND UP-GRADING THEIR CURRENT SHIPPING FLEET TO ACCOMMODATE THIS NEW WEALTH OF PRODUCT DIRECTLY AND UNMISTAKINGLY HEADED TO EUROPE AND ASIA AT A MARK-UP OF 400-500%. MUCH MORE BASED ON NEED THAN IF DISTRIBUTED IN THE USA. PURELY A GREED DECISION BY THE LARGEST EXPORTER OF SUCH PRODUCTS IN THE USA, PERHAPS THE WORLD.

THE ISSUES SURROUNDING THE OPERATION OF THE LARGEST COMPRESSOR STATION ON RECORD, ITS MAINTENANCE AND "BLOW-DOWNS AND PIGGING" HAVE BEEN, BEYOND REPROACH, PROVEN TO CAUSE NEUROLOGICAL IMPACTS OF ULTRA-SIGNIFICANT PROPORTIONS ON ALL THE RESIDENTS RESIDING WITHIN SEVERAL MILES OF SUCH A STATION. CANCERS, NOSEBLEEDS, CLUSTER HEADACHES, MIGRAINES, BIRTH DEFECTS SHORTENING OF THE LONG RUN OF QUALITY OF LIFE ISSUES.

THE FINAL POINT I WILL RAISE, BUT CERTAINLY STILL MANY NEED TO BE ADDRESSED, IS THE REASON WHY 40 YEARS AGO I UPROOTED MY WIFE AND CHILDREN TO MOVE TO SCHODACK IN SOUTHERN RENSSELAER COUNTY. THE QUALITY OF SMALL TOWN LIFE IN THE 20TH-21ST CENTURIES WAS STILL, AND CURRENTLY IS RESIDING IN SOUTHERN RENSSELAER COUNTY. THIS WILL FOREVER BE CHANGED, FOR THE WORSE IF NED IS ALLOWED TO PROCEED WITH A PROJECT DESIGNED, NOT TO HELP THE UNITED STATES, BUT TO FURTHER LINE THEIR CORPORATE ACCOUNTS VIA EXPORTS AT INFLATED PRICES, WHILE LEAVING A SEVERAL HUNDRED MILE SCAR FROM PA THROUGH NY TERMINATING IN MA; FOR EXPORT: THIS IS TOO LARGE A PRICE TO PAY FOR MY GENERATION AND FOR SEVERAL GENERATIONS THAT WILL FOLLOW, ALL IN THE CHASE OF THE ALMIGHTY PROFIT DOLLAR. DO NOT PERMIT THIS UNFORGIVEABLE MISTAKEN NED PROJECT TO BRING FORTH ALL THE EVILS IT POTENTIALLY WILL PRODUCE. I THANK YOU.

20160111-5131

Submission Description: (doc-less) Motion to Intervene of Rindge Conservation Commission under CP16-21-000.

Submission Date: 1/11/2016 9:25:03 AM

Filed Date: 1/11/2016 9:25:03 AM

ratepayers shouldn't foot the bill for additional pipelines.”

Likewise the known amount of natural gas leaking in existing pipes in New England is much greater than the amount needed to meet possible increased demand. Addressing this would have an added benefit of making our communities safer by reducing potentially explosive leak situations, many in urban and residential areas. The cost of this leaked, wasted gas is passed on to me as a ratepayer. I should not be charged for the cost of this wasted gas as well as for the gas to replace it.

An additional support of my intervenor status concerns my health and safety. My home is within 30 miles of two proposed compressor stations. Compressor stations are acknowledged to be significant sources of toxic releases, light and noise pollution and the ‘industrialization’ of the surrounding area. My family has camped many times at Savoy Mountain State Forest, a town adjacent to Windsor, Massachusetts which is a beautiful, rural town proposed as a location for one of the compressors. The noise, toxic releases into the air, light pollution and increased commercial traffic will all have a major negative impact on my family’s (and countless others) enjoyment of this public resource. Additionally, my home is directly downwind from this location in the most common pattern of prevailing winds.

Kinder Morgan has been cited by the U.S. Pipeline and Hazardous Materials Safety Administration for many “safety violations: failing to maintain updated maps showing pipeline locations, failing to test pipeline safety devices, failing to maintain proper firefighting equipment, failing to inspect its pipelines as required, and failing to adequately monitor pipes’ corrosion levels.”

Kinder Morgan and its subsidiaries were cited for 45 violations of workplace safety regulations just between 2006 and 2011, including 35 “serious” violations, which OSHA characterizes as a violation that is “likely to cause death or serious harm” to the employee. This time span is not the beginning or the end of serious problems involving safety at Kinder Morgan pipelines. Too many of their shortcuts and poor maintenance have resulted in explosions, leaks and other incidents resulting in injury and death to workers, as well as environmental and economic damage to the immediate and wider vicinity.

Many locations where I and my family hikes, kayaks, and visits in other ways would be negatively impacted by this project, resulting in a significant negative impact to our lives. As a Massachusetts citizen and taxpayer, I have the right to expect that the investment made in public lands will serve the public. There are many parcels of public land in Western Massachusetts that have been created and set aside as wild and natural places for citizens and other visitors to enjoy. Kinder Morgan is proposing to change many of these in ways that will never be able to return to the way their establishment was intended. The only confirmed benefit for this is for the benefit and profit of Kinder Morgan.

Additionally, I donate to The Trustees of Reservations, Mass Audubon Society, and other groups who own and/or have responsibility for properties on and adjacent to the proposed pipeline route. The purpose of my contributions over many years would be violated and negated if this proposed pipeline is built.

Kinder Morgan and Tennessee Gas have not shown that this pipeline is necessary. Additionally, they have not shown it to be for the public good, which is required for eminent domain provisions to apply. Until and unless these steps are met, no further consideration of their application for this pipeline is warranted. What they have shown to date is the intent to use public and private land to obtain corporate profit primarily through the export of gas out to the world market where rates are much higher than we currently pay or that we will likely be paying when this pipeline application is rejected. If this pipeline were to be built, we will be competing for gas with all markets resulting in the cost for gas in New England rising to the level on the world market. Not only is Kinder Morgan asking for approval to force us to pay for construction of a pipeline that would become their property, the result would be gas costs rising to well above the prices currently charged for that gas.

TURNERS FALLS, MASSACHUSETTS

01376-1605

January 11, 2016

Kimberly D. Bose, Secretary

Federal Energy Regulatory Commission

888 First Street NE, Room 1A

Washington, DC 20426

Re: Docket No. PF14-22-000 Northeast Energy Direct Pipeline Project (Project)

Dear Secretary Bose:

Please accept these comments on the above named Project's intended Environmental Impact Statement (EIS). These are supplemental to comments the Turners Falls Water Department (TFWD) provided on August 31, 2015 and are submitted as part of our cooperating agency status.

The Turners Falls Water Department (TFWD) has hired Geolnsight, Inc., an environmental engineering firm, to review information supplied by the Tennessee Gas Pipeline Company, LLC (Tennessee); to map the portion of the Project in relation to our municipal well protection area (Zone II); to evaluate and provide comment on work to be done and any recommendations or procedures that will help to ensure the safety of the aquifer. David Harwood, the hydrogeologist for Geolnsight, Inc., is looking at the possible benefit of having observation wells drilled for future testing between the proposed pipeline Project and our production

well. The fact the pipeline will some day be abandoned, Dave will also comment on how it should be left. The TFWD has requested information from Tennessee (Phil Chipman) pertaining to the directional boring, specifically the lubricant used while drilling and pipe pulling. Further, Tennessee intends to drill vertical test wells on our property for additional exploration of subsurface conditions which mayor may not change the pipe profile. Test well logs and the final pipe profile is information our retained expert hydrogeologist needs to review in order to identify any potential problems. At this time, we have not received this information. It is critical that best management practices, at the very least, be maintained at all times in this sensitive area.

The TFWD is committed to providing a safe and reliable supply of high quality drinking water to its customers in the Turners Falls Fire District's Water Department. It is our duty to provide water that meets and often exceeds all state and federal standards set for quality and safety as well as ensuring conservation and protection of our water resources.

Thank you for the consideration.

Sincerely,

Michael S. Brown, Superintendent
Turners Falls Water Department
Kenneth Morin, Steve Call and Bruce Merriam, Water Commissioners
Turners Falls Fire District's Water Department

Basis for Intervening:

I have several reasons to be extremely concerned about the proposed pipeline:

1. I am a committed donor to land conservation purchases and rely on Article 97 of our constitution to protect these lands in perpetuity. This pipeline would set a terrible precedent of violating this protection and would have a chilling effect on any future donations to land conservation organizations.
2. This pipeline would destroy the beauty and productivity of a large swath of treasured land that is part of our heritage and our lifestyle as well as our tourism industry.
3. I don't believe this pipeline is necessary to meet our local needs, and would impose financial hardship on ratepayers like myself as we will undoubtedly be charged for the costs of construction and maintenance of this pipeline (despite the assertions of the parent company which are not credible).

Basis for Intervening:

MOTION TO INTERVENE OF Abigael Mireault

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan"). Communications concerning this proceeding should be served upon me as follows:

Abigael Mireault 37 Gaudet Lane, Pelham NH 03076 abzymireault@gmail.com 978-590-9209

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a blow torch to light a candle. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England's ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

My primary concern is that my property is also located in the incineration zone. This would devalue my property and also give this company eminent domain over my property. I have children and I would like my children to play in their backyard without fear of being burned alive, drink polluted water and breath in polluted air.

I am sure this is not too much to ask living in a first world country.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted

Abigael Mireault

Basis for Intervening:

I provide the following facts in support of my motion to intervene: our homestead farm is in the pathway of the pipeline as proposed by Kinder Morgan and, as proposed, it will bisect our property and permanently

damage trees and other plants and topsoil on our farm and its watershed, serving the Merrimack River. I calculate the easement will permanently and substantially damage at least six acres of our home. Our property is a sanctuary for honey bees, bats, monarch butterflies, New England cottontail rabbits, woodcock, blue-eyed grass, asters, rushes, goldenrod, wild cranberries and other ecologically stressed species. At its heart, the pipeline will provide a privately owned company the ability to export natural gas to buyers anywhere in the world while not having one distribution outlet in New Hampshire. Kinder Morgan proposes to use the state's power of eminent domain and federal pre-emption powers to take what is the lawful property of individual citizens to maximize its own profits.

A finding of "public convenience and necessity" should be granted only after an applicant meets an exceedingly high standard, as you will be empowering a large private corporation to lawfully and forcibly take property from individuals. Very significantly in this instance, those who will benefit from such a taking are not American consumers of natural gas or electricity. The evidence is overwhelming that the pipeline is not needed by New Hampshire or New England consumers. There is not one distribution terminal planned for New Hampshire. The last time I checked, domestic buyers are only interested in purchasing ten percent (10%) of the proposed pipeline's capacity. Those who will benefit from such a pipeline are ultimately the shareholders of Kinder Morgan and those foreign interests to whom it will sell most of the gas. Such a result is inherently unfair even if so-called "fair market value" is paid to the landowners for the easements because private property will be forcibly relinquished, using the power of eminent domain, over the objections of landowners. The forced taking of private property by Kinder Morgan is a form of coercion that would be a criminal offense if not sanctioned by government. "[A] law that takes property from A. and gives it to B.: ...is against all reason and justice," *Calder v. Bull*, 3 Dall. 386, 388, 1 L.Ed. 648 (1798) cited by Justice O'Connor in *Kelo v. City of New London*, 545 U.S. 469 (2005). As with Pfizer Corporation in *Kelo*, "any boon for [Kinder Morgan] is difficult to disaggregate from the promised public gains in taxes and jobs [and free flowing natural gas]" *Kelo* at page 502. The facts of this case overwhelmingly support the conclusion that the boon to Kinder Morgan by forcibly taking private property to enable it to export gas (even to potential adversaries of our nation) far exceeds any imagined public benefit.

In addition, I earnestly request your commission require the plan submitted by Kinder Morgan include provisions Kinder Morgan must have and evidence it will have resources necessary to clean up the easement area after there is no longer any financial incentive to pump gas through this pipeline. Fracked gas is a finite resource and given rapidly advancing clean technologies, it may become uneconomical sooner than currently is predicted. The moment it is no longer profitable for Kinder Morgan (or any successor) to pump gas through the pipeline, Kinder Morgan will either abandon it by going bankrupt (lawful) or by spending as little as possible to extricate itself from a losing endeavor (again, lawful). There definitely will be a time when it is uneconomical to use such a pipeline as is proposed and it obviously is wrong to allow Kinder Morgan to use federal power to burden another's private property with easements that can only be used for a finite time. When that time is up, the individual property owners ultimately will be left with the liability and burden of cleaning up what Kinder Morgan abandons or lacks sufficient incentive to commit resources to adequately clean up. Kinder Morgan will not have sufficient incentive when it knows it only faces individual landowners who lack the resources or the political connections to force Kinder Morgan to fully meet its obligations. Without you ensuring substantial incentives are in place to protect us, if Kinder Morgan is faced with overwhelming liabilities (which, in my opinion, it would eminently face if all costs of the project were appropriately attributed to it), it can simply go bankrupt or inadequately address any clean up. Whatever toxic waste is left in the pipeline as well as the pipeline itself with all of its attachments will remain, substantially burdening the land owned by individual property owners. Eminent domain never was sanctioned or conceived to so burden a servient property yet this will be the reality if Kinder Morgan is granted permission to proceed with this project without you requiring adequate safeguards to prevent such inevitable and possibly catastrophic harm.

My wife and I will be several victims among many if your commission sanctions this proposed pipeline. To paraphrase Justice O'Connor, in *Kelo*, you have been given the power to grant a license to transfer property

from those with fewer resources (me and my wife and other property owners) to those with more (Kinder Morgan). The Founders of our great country could not have intended such a perverse result to occur with the power of eminent domain. “That alone is a just government which impartially secures to every man, whatever is his own.” (Emphasis in original) James Madison, for the National Gazette, Property, (March 27, 1792), reprinted in 14 Papers of James Madison 266 (R. Rutland et al. eds. 1983).

I live less than 1/4 mile from the proposed pipeline- I am extremely concerned about the negative impact the pipeline will have on the environmental nature of this area-rural farm land, river crossings, wetland disruption and conservation areas. In addition, my home of 38 years is my retirement nest egg-proximity to the pipeline will considerably decrease my property value and jeopardize my financial future as a senior citizen. Also, this rural population will not benefit from the pipe line-we will not have access to the gas although our utility bills will pay for it. Thank you for your consideration of these impacts on my family and my community.

My Name is Kari Dugas and I am writing because I am a landowner in Temple, NH. I am less than one mile from the proposed compressor station that the Tennessee Gas Pipeline Company is has petitioned to be built in Temple, NH. I am, according to paperwork I have received, in “the incineration zone”. I have several concerns, of which I will list.

I am concerned as the proposed 41,000 horsepower compressor station in Temple, NH would place my property within the toxic drift zone of particulate matter and other toxic pollutants and pollution into my back yard! This affects my ability to grow my organic vegetables, and placed me and my family into breathing pollutants and particulate matter every day. My concerned deepened when I read the SWPA-EHP Report that was published on February 24th, 2015, “Summary on Compressor Stations and Health Impacts”.

It is now reported 90% of individual's surveyed living near a Compressor Station have the following health impacts: Increased Allergies, Persistent Cough, Shortness of Breath, Frequent Nose Bleeds, Joint Pain, Thyroid Problems, and a host of other ailments.

I am concerned as my water supply may become affected. Well water tested before and after a compressor station has been constructed in an area, has shown a significant increase in chemicals and bio-hazards; specifically poly-chlorinated biphenyl (PCB) contamination. These are serious health implications directly affecting my family.

I am concerned as there is an elementary school located across the street from the proposed compressor station. If there ever were a "blow-down" in my area, children would be the first impacted. It is our responsibility to keep these little children safe. How do we do this in the event a "Blow-Down"? The children would certainly suffer first. The methane, ethane and other radioactive material that would occur during this incident would leave these children with life-long health implications, if they survive that is.

I am even more concerned about the possibility of an accident at a compressor station. We have a volunteer fire department. The possibility is very real for a fire. A gas compressor station exploded near Godley, TX. That fire destroyed the compressor station where it started and also the one next to it. The fire burned for several hours. In Madison County, TX, a compressor stations fire dispatched 4 local towns. The possibility of fire or other accidents raises the concern over whether our local surround towns have the resources available to contain a fire or explosion adequately and whether first responders and hospitals are able to care for injured workers or others nearby or whether an evacuation plan could be implemented. Our local hospital is still overlooked for care through the Obama Health Care act. It is too small; how could this hospital care for injuries of this nature? How could our towns combat a fire or disaster that could be so significant?

I am more than concerned about my property values. The possibility of selling my home to a prospective buyer reduces greatly with the construction of this station. I am relying on the sale of this home for my retirement. It is a perfect piece of land; just a little over 6 acres, with a beautiful field for horses. I wanted to sell this land as a small horse property. I worry that the compressor sight will greatly reduce the value of my home. I am in a financial position that I would receive no compensation from the pipeline company, yet my property would be more difficult to sell, and I, like many people do not have the financial ability to abandon my property or sell it at a greatly reduced rate to move elsewhere away from the this industrial development.

For these reasons, and more, I am interested in and would be affected by the applicants filing. My interests cannot be adequately represented and protected my any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

Sincerely,

Kari Dugas

TO: THE U.S. FEDERAL ENERGY REGULATORY COMMISSION

RE: TENNESSEE GAS PIPELINE, LLC, A DIVISION OF KINDER MORGAN,

NORTHEAST ENERGY DIRECT PIPELINE, DOCKET #CP16-21

FR: PHILIP ZEA, PRESIDENT, HISTORIC DEERFIELD, INC.,
DEERFIELD, MASSACHUSETTS 01342

DT: January 5, 2016

1. STATEMENT OF INTEREST

a. DESCRIPTION OF HISTORIC DEERFIELD, INC.

Historic Deerfield, Inc., is a 501 (c) 3 public, non-profit museum in Old Deerfield, MA. Our mission states that:

HISTORIC DEERFIELD, Incorporated, is dedicated to the heritage and preservation of Deerfield, Massachusetts, and the Connecticut River Valley. Its museums and programs provide today's audiences with experiences that create an understanding and appreciation of New England's historic villages and countryside.

Historic Deerfield is located within The Old Deerfield National Historic Landmark, one of the first established by the Department of the Interior in 1962, which encompasses the village of Old Deerfield and approximately 1000 acres of actively cultivated farmland within its view shed along the floodplain of the Deerfield River. We work daily with local, regional and national agencies to protect the agricultural way of life in this beautiful village. Historic Deerfield itself is a teaching museum and business with a national reputation as one of the finest, mid-sized cultural history agencies in the nation with a \$6.5m annual budget, 54 buildings on 104 acres wholly within the Old Deerfield National Historic Landmark, 58 full-time employees, and thousands of year round visitors to our culturally rich and beautiful part of western Massachusetts. We own and operate the Deerfield Inn as well as the museum of twelve antique houses, anchored by the modern Flynt Center of Early New England Life, where we teach the history and culture of the Connecticut River Valley and rural New England to thousands of tourists every year who learn about New England history and culture. In all, the Old Deerfield National Historic Landmark counts the survival of 26 eighteenth-century houses, and 14 more that pre-date 1850, on their original sites with related archeology in a village that retains its original scale and town plan from the 1670s. Just as importantly, the Old Deerfield National Landmark encompasses the homeland of the Pocumtuck Native Americans.

b. DESCRIPTION OF IMPACTS

The proposed pipeline is projected to travel through the middle of the Old Deerfield National Historic Landmark and within a half-mile of one of the most historic streets in America: home to private householders, working dairy farms, two schools—Deerfield Academy and Bement School, and two museums—Historic Deerfield, Inc., and Memorial Hall Museum, which are destinations for thousands of visitors every year.

The proposed pipeline will also travel through the very shadow of Pine Hill in the North Meadows, which is the site of the principal village of the Pocumtuck Indians established 8000 years ago and which, with other Native and historic sites within view, has been excavated and preserved by the University Massachusetts Summer Field School in Archeology, an affiliate of Historic Deerfield. Designation as a National Historic Landmark by the Department of the Interior recognizes high cultural and historic significance and provides a layer of protection from development. History and culture aside, we also feel that the proposed pipeline is a real threat to public safety, health, and our business with no benefit to the citizens and visitors to this great place on the American landscape let alone the long-term environmental impact of the pipeline on plant and animal species, air and water quality, and perhaps light and noise pollution not to mention land that is specifically protected by valid easements some of which are held by Historic Deerfield, Inc.

c. STANDARD FOR INTERVENTION

Historic Deerfield's Motion to Intervene must be recognized and accepted because it satisfies the standard for intervention under the regulations established by FERC and because of the significance of Historic Deerfield as a national resource.

2. CONTACT INFORMATION

Please add my name to the Official Service List, with all notices and communications in this proceeding addressed to:

Mr. Philip Zea, President and C.E.O.
Historic Deerfield, Inc.
P.O. Box 321
Deerfield, MA 01342

3. CONCLUSION

HISTORIC DEERFIELD, INC., respectfully requests that the Commission grant this MOTION TO INTERVENE and to allow the INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, question witnesses, and seek rehearing and appeal.

Sincerely yours,

Philip Zea, President and C.E.O., Historic Deerfield, Inc.

20160111-5161

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

TENNESSEE GAS PIPELINE, LLC)
A Division of Kinder Morgan)
Northeast Energy Direct Pipeline)

Docket No. CPI6-21-000

**MOTION TO INTERVENE OF THE DRACUT LAND TRUST, INC. IN REFERENCE TO
THE NORTHEAST ENERGY DIRECT (NED) PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. s. 385.214, the Dracut Land Trust Inc. (hereafter DLTI) files this Motion to Intervene in the above-captioned proceeding. DL TI has significant concerns regarding the environmental, safety, and socioeconomic impacts of the NED Pipeline project. The resources on DL TI property that could be directly impacted by the proposed pipeline include: public and private drinking water supplies, permanently protected open space, farmland, rare and endangered species habitats, wetlands, vernal pools, and private businesses. The short and long-term impacts that the proposed project could have on our property is profound. DLTI seeks to intervene on the NED Project to monitor the progress of the proceedings and expects to take a position on the Project once we complete our review of the application filed with FERC.

1. STATEMENT OF INTEREST

A. Description of Dracut Land Trust, Inc.

Dracut Land Trust, Inc. is a non-profit SOlc(3) approved, land trust established in 1998 for the purpose of maintaining and preserving farmland, woodlands and natural habitat property located in Dracut, Massachusetts.

The trust presently holds title to two farm and woodland properties located in Dracut, Massachusetts. The first is the "Ogonowski" property consisting of 34 acres of woodland, wetlands and farmland along Broadway Road and Jones Ave. The Ogonowski property was acquired by DL TI in large part as a result of a federal grant obtained in the memory of John Ogonowski, one of the American Airline Pilots killed in the September 11· 2001 terrorist attack. The property was granted to DL TI with a permanent restriction in place to ensure the farmland on the property is maintained in perpetuity for the benefit of all residents of Dracut and surrounding communities. DLTI also owns the "Healey" property which consists of approximately 28 acres of woodland and farmland along Jones Avenue in Dracut, Massachusetts. This property was donated to DLTI for the purpose of DL TI preserving the existing woodlands and farmlands on the property in perpetuity.

The proposed pipeline and a related compressor station would travel through the Healey property destroying both farmland and forest land currently in its path. The compressor station is currently planned to be located within 500 feet of the Healey and Ogonowski parcels.

B. Description of Impacts

Dracut Land Trust will be directly impacted and harmed by the proposed project as follows. The proposed pipeline will run approximately 1500 feet through the center of the Healey Farm property. It will cross conservation lands, protected by a conservation restriction, sensitive water protection areas, permanently protected open space, farmland, forestland, rare threatened and endangered species habitats, wetlands, and vernal pools.

The pipeline and related compressor station, which is currently planned to be located on a parcel adjacent to the Healey property, is expected to impact air and water quality and will generate noise pollution. The pipeline and related compressor station also has the potential to impact wells which provide water to the Healey property and property of surrounding residents. The emissions from the compressor station will contaminate the Healey and Ogonowski farm sites. Both sites currently serve as operational bases for the Tufts New Entry Farming Program which focuses on training local farmers about current farming techniques and distributes their organic produce throughout New England. Finally, both the Healey and Ogonowski parcels are located within the compressor station incineration zone and will suffer irreparable damage in the event of an accident.

C. Standard for Intervention

Dracut Land Trust, Inc. 's Motion to Intervene should be granted as it satisfies the standard for intervention under FERC's regulations. As discussed above, DLTr is directly impacted by the proposed project, and no other individual or organization can adequately represent DLTI's unique interest in this proceeding. Further DLTI's intervention is in the public interest because DLTI is responsible for the protection of the farmland and woodlands it holds title to.

Accordingly, DL TI respectfully requests that FERC grant this Motion to Intervene.

II. CONTACT INFORMATION

The following should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

George C. Malonis, Esquire
Attorney for Dracut Land Trust, Inc.
14 Loon Hill Road
Dracut, MA 01826

III. CONCLUSION

Wherefore, in light of the foregoing, DLTI respectfully requests that the Commission GRANT this Motion to Intervene and allow the INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Submitted by request of Dracut Land Trust, Inc.

John C. Sandelli, President

CERTIFICATE OF SERVICE

On this 7th day of January, 2016, I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission's electronic service list in this proceedings, in accordance with Commission regulations.

Basis for Intervening:

The proposed pipeline in my opinion will and has devalued my home and other properties in town. My home will be directly affected if the pipeline goes through, and will be without value. My and my husband's retirement has already been affected just by the PROPOSAL of the pipeline, due to its impacting the sale of our home and our being able to downsize. Also we are extremely concerned about health hazards, safety hazards, maintenance issues, ecology, wildlife, water supplies, (huge concern) and countless other issues concerning this pipeline and compressor station going through the town I live in , New Ipswich, NH, or the state of NH in general. It will absolutely destroy what New Hampshire is known for , thus it's economy. I don't believe this pipeline will add any benefit for any of us. I believe it is for company profit, and not appropriate for this area!

Basis for Intervening:

The NED pipeline is not only unnecessary but poses several dangers to the communities it will travel through, the people in its path, and the environment. Compressor stations are scientifically proven to release known carcinogens into the air, putting all those within a 10 mile radius into danger for serious health problems such as cancer, among many other things. The methane and benzene released by gas pipelines and compressor stations are harmful to the planet and powerful greenhouse gases known to cause climate change. The NED pipeline's primary purpose is to export its gas and not serve the towns and states that it will inflict so much harm into. There is no supported need for the NED pipeline with alternate green energy sources expanding across the country and the globe. Gas pipelines currently in place across the country are not properly maintained and as I stated above are only contributing to climate change, the most recent example being the Porter Ranch gas leak which has displaced thousands of families from their homes and continues to spill 50 tons of methane per hour into the atmosphere, and has been doing so for months with no end in sight. Gas pipelines, such as the proposed NED pipeline, are prone to such gas leaks and explosions, once again harming people and the environment. This must stop, and this must stop now! If you care about the future of your family, your children, your communities, states, and this country, you will not pass the NED pipeline. We do not want it, we do not need it, we are better off without it. Do the right thing, say NO to the NED pipeline and all future pipelines.

tfareed@tds.net

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

••••• My interest as an electric ratepayer, inasmuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a blow torch to light a candle. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England’s ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

••••• My interest as a taxpayer, neighbor and visitor to protected public land in southern New Hampshire. This project intends to disrupt and damage miles of environmentally sensitive landscapes and waterways, many of which my family uses for recreation, including canoeing, wildlife observation, hiking, emotional refreshment, and artistic inspiration. The destruction and fragmentation of existing habitats is a grave threat to a sound ecosystem that sustains human life as well as wildlife. As a taxpayer, I have contributed to the conservation of these public lands. NED will be destroying something I value enormously as a citizen, and I believe taxpayers would be owed some sort of restitution for the resulting short- and long-term destruction.

--- I am acutely concerned with the financial premises for this project. Kinder Morgan and our public utilities have repeatedly asserted that pipeline constraints cause the high electricity rates paid in New England. However, when I examine my electric bill and compare the Service Delivery charges and Energy charges to the national average from the eia.gov website, I see that for every 2.3 cents per KWh that I pay for energy charges above the national average, I also pay 2.5 cents per KWh above the national average for transmission and distribution charges. None of the studies commissioned by Kinder Morgan or the utilities discussed this issue.

••••• Moreover, I have learned from a NESCOE presentation that ISO-NE is the last to come under the rules of FERC Order 1000 concerning competitive transmission markets. A white paper on the impact of Order 1000 on ISO-NE is expected in the first quarter of 2016. I am concerned that our utilities are “loading up” on projects in advance of the new rules in order to avoid competition. And, while the utilities are prohibited from extracting profit directly from transportation contracts, many of them have set up separate entities with investment in the pipeline projects in partnership with Kinder Morgan.

••••• I am gravely concerned with furthering the development of fossil fuel based energy systems, especially as a ruse for fossil fuel exports, thereby doing damage to the immediate environment in which I live and breathe. The purported benefits of this 400-mile, 360,000-horsepower monstrosity cannot measure up to the known harm it will cause, especially when far superior energy efficiencies are within easy reach. In assessing risk of serious harm, I look no further than the health and habitat devastations in Pennsylvania, and Porter Ranch in California.

As a homeowner with a geothermal climate control system and an American-made hybrid electric car that rarely needs gasoline, I can attest to the technical capabilities readily available to everyday consumers - far more energy- and dollar-efficient and environmentally sound than any fossil fuel system could hope to be. These types of technologies give hardworking Americans real and lasting jobs, and give our children the one lasting legacy of most singular importance: a healthy climate. As a witness to effective technology options that protect the environment and provide thousands of real and lasting jobs while leaving hundreds of private and public properties unmolested, I am vested in FERC’s process for determining certification of the NED project.

Not only would it change the economy and lifestyle of thousands of residents of nine towns,
Not only would the affected towns end up paying large costs for its construction,
Not only is the probability the its purpose is more to serve foreign exprt than to serve the energy needs of our towns,
Not only all that, but it also supports the
Use of fracked oil which is destructive to the atmosphere and health.
And it works against the URGENT need for conservation and truly clean sources of energy for the future
This proposed pipeline extension does not serve the interests of the local residents.
It serves the needs of the companies and corporate interest involved.
It would be disastrous for and economy and way of life in these towns that are actually a MODEL for a sustainable response to climate change.
The resistance to this proposal will not diminish. The resistance is strong and passionate, and it will only grow if the proposal gains acceptance by FERC.

I am filing to intervene. I received first notice post marked 11/12/2015 that I was an abutter. Kinder Morgan's maps are inaccurate and change almost daily with no notification. They assume FERC will do auto approvals. Studies show all phases of the process poisoning Americans. Existing pipelines leaking. Compressor stations poisoning air quality. FERC should be culpable in all new permits now that supporting docs prove bad for environment and toxic to all.

Basis for Intervening:

We are landowners and farmers directly impacted by the pipeline construction. Use of several acres for “staging” will involve important hayfields critical to our beef production. The area is wet and drops off of the road elevation. Creating access for pipeline equipment will involve placement of fill and compaction, both of which will destroy productive soils. This -- added to the duration of construction -- means this field will be out of production for several years longer than its projected use, or about five years. This is onerous! Small farmers have no spare resources.

We sell beef to touring visitors, which is an important market. This field is importantly scenic to the town of Ashfield, which depends on tourism. It is located at the west entry to the town, and with commitments from the Town, the USDA and the Massachusetts Department of Transportation has been covenanted to remain open and in farming use.

It also abuts another business, which will suffer loss of clients.

We object to the construction of this pipeline as proposed.

Basis for Intervening:

I oppose the proposed pipeline. I object to it as an electric ratepayer, taxpayer, and neighbor to protected public land in Massachusetts. It would imperil my food, water, and air supply. There are many environmentally sensitive areas that will be disrupted by the building of this pipeline. I object to it as a person who is deeply concerned about climate change and the large scale extraction and combustion and release of natural gas into the atmosphere. Also, the generator stations create noise and light pollution to the immediate areas upon which they are constructed.

My belief is that this pipeline is not primarily being created for gas to be used in New England, but for a good amount of the gas to be shipped overseas for a better price.

billscaife47@gmail.com

Basis for Intervening:

My family and I live only one-quarter mile from the proposed route of the NED pipeline in Ashfield on a granite outcropping extending from beneath the proposed pipeline route to beyond our property and home. We believe that the proposed route is so close to our home that the pipeline could do irreparable harm to us, our property, our drinking water and much of Ashfield' historic preservation. We are seriously troubled about the potential damage that construction and operation of the pipeline may cause.

We believe that nearby, heavy pounding, drilling and any explosives needed to construct the pipeline on the granite outcropping could easily cause us serious hardship. Granite can transmit vibrations long distances, opening cracks and fissures. Our type of granite splits easily exposing it to weathering. Our granite plates crack and move (unlike the granite plates of the upper mid-West) aided by our annual "frost heaves" and coastal tectonic shifting. Water and air find their way into the cracks in the granite sheet and our alternating warmth, cold, frost and sun further expand this cracks, which become natural "byways" for liquids, air and other gasses to travel great distances deep underground. We rely for drinking and household water on a well drilled into the granite outcropping. Dangerous chemicals could find their way through those cracks and fissures into our well water with extremely serious medical consequences. We are not willing to take the risk, no matter how small Kinder Morgan may say it is.

And, there is a risk. In the past 20 years ending in 2014, 101 "serious incidents" have occurred with the type of pipeline Kinder Morgan wants to build, 40 fatalities and 174 injuries, the federal Pipeline and Hazardous Material Safety Administration reports. This is the agency charged with overseeing such hazards as pipeline corrosion, the strength of welds, pipeline strength and underground depth. But as The New York Times has reported, the agency is woefully understaffed and inspects only around 10 percent of the approximately 230,000 miles of pipeline in the United States.

No, our family does not want to live with this risk here or anywhere. We do understand that for the time being we have to live with the energy sources we have. But we see no sense in adding to the risk of additional environmental contamination when there are safer and cheaper sources on the horizon.

20160111-5235

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Project)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
DENENE M. PREMUS**

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan"). Communications concerning this proceeding should be served upon me as follows:

Denene M. Premus
43 Elm Street
Pepperell, MA 01463
(978) 433-0079
denenepremus@yahoo.com

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

- My interest as a homeowner on the original path, and a resident of the Town of Pepperell, which in part remains on one of the alternate proposed routes, insomuch as my family's health and safety, and my

homes intrinsic value, may be directly impacted by the outcome of this proceeding.

- My interest as a taxpayer, neighbor, and visitor to protected public land in Massachusetts. I am very concerned about the threat this Project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution. When people donate land or funds to support the protection of these resources, they do so with the understanding that these resources will be protected in perpetuity. To permit these lands to be targeted for destruction directly controverts the will of the people. The Federal Energy Regulatory Commission, as an agent of the U. S. Government, should recognize and uphold this will, and not allow a private corporation to destroy these lands for private gain.
- My interests as a resident of the Commonwealth of Massachusetts, inasmuch as I am gravely concerned about the impact the construction and operation of this pipeline will have on the region's watershed areas, wetlands, and natural wildlife habitat. Living directly adjacent to a parcel protected by a conservation trust, I have an appreciation for these protected lands and the role they play in maintaining a healthy ecosystem. Studies have shown that the extraction of natural gas through fracking, the transmission of natural gas through leaking pipelines, and the operation of compressor stations to transport this gas, causes dangerous chemical contamination of ground water and air, as well as extreme disruption to the surrounding landscape. Those living near such infrastructure and operations are particularly at risk. No one person, adult or child, should be deemed acceptable collateral damage, and thereby be forced to live in the proximity of such infrastructure against their will.

Throughout this proceeding, Kinder Morgan and its agents have routinely misled the region's ratepayers and landowners, masking their intent to export natural gas to global markets under the guise of enhancing the region's electricity supply. The purported benefits of this massive overbuild of natural gas transmission infrastructure are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs can and should be pursued, including the expansion of energy efficiency and demand response programs, recovery of gas lost to leaks, and development of commercially available-battery storage technology.

I have been outspoken in my opposition to the Project, conducting community outreach to educate and inform my neighbors and fellow citizens about the risks that this project represents to our community. As such, I have valuable experience and insight that can be brought to bear on this proceeding.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Denene M. Premus

Basis for Intervening:

I live in Harrisville, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am an electric ratepayer

who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED.

§385.214 Intervention (Rule 214)

(ii) The movant has or represents an interest which may be directly affected by the outcome of the proceeding, including any interest as a:

- (A) Consumer,
- (B) Customer,
- (C) Competitor, or
- (D) Security holder of a party; or

20160111-5240

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
RICHMOND LAND TRUST, INC.**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, Richmond Land Trust, Inc. (“RLT”) hereby moves to intervene in the above-captioned proceeding.

- 1) In support of this motion, RLT states, as follows: The exact legal name of movant is as set forth in the above, unnumbered paragraph. RLT, an all-volunteer land trust, is a nonprofit corporation dedicated to preserve Richmond’s rural character through land conservation and thoughtful development. Uniquely, Richmond is a rural Massachusetts town on the border with New York that is effectively accomplishing its mission through residents’ donations, bargain sales, and working with the town on development projects. The RLT has preserved approximately 900 acres with over 700 acres being permanently preserved via conservation restrictions (deed restrictions).
- 2) The name and mailing address of the person upon whom all communications concerning the proceeding should be served is, as follows:

John Mason
Richmond Land Trust, Inc.
621 East Road
Richmond MA 01254
Telephone: 413-698-3141
Email: jmason01@berkshire.rr.com

- 3) On or about November 20, 2015, Tennessee Gas Pipeline Company, LLC (“TGP”), filed an application with the Federal Energy Regulatory Commission, seeking authority to construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, all as part of a proposed Northeast Energy Direct Project (“NED”). TGP’s original route for the NED was to enter Massachusetts through the town of Richmond. Although TGP’s currently proposed route now enters Massachusetts through Hancock, alternate routes under consideration would bring the NED back through Richmond. Additionally, a route selection through Richmond would very likely result in construction of a new compressor station just west of Richmond in New York state.
- 4) RLT has direct interests that will be affected by the outcome of this proceeding.
 - a. The two alternate NED routes through Richmond pass through lands conserved by RLT and acquired by the generosity of our residents with the specific goal of permanently preserving these lands as

and the siting of that compressor station in particular. I am strongly opposed to the proposed Northeast Energy Direct pipeline and any further support for the fossil fuel industry that our country needs to work to free ourselves from. I hope FERC will reject this application.

Basis for Intervening:

The compressor station for this pipeline is scheduled to be built within 1 mile of the center of Greenville, NH, the town I live in. Also, it is planned to be built within 1/2 mile of Greenville's only drinking water supply, the Toby Reservoir located in Temple NH. I believe more studies are needed on the health effects of the toxic emissions Greenville's population will be subjected to by air and water pollution from the compressor station.

I do not believe residents of New Hampshire will benefit from this project. It appears to be more of a convenience route for Kinder Morgan to get their product to export points along the east coast. Greenville is in a rural area with a population of 2200. The planned pipeline route is through the most pristine part of town including state forest land. There will be no benefit for us from this project. Actually, I believe we will end up paying for this through tariff with no benefit at all.

There are better ways to obtain energy by way of barges or upgrade and repair of lines already in the ground. Public lands should not be sacrificed for the profit of "for profit" corporations.

Basis for Intervening:

Almost 20 years ago my family donated a conservation restriction on 80 acres of crop and forested land in Ashfield, Massachusetts to be preserved by the organization called "The Trustees of Reservations" for the purpose of protecting it in perpetuity from development. TTOR is one of the oldest land conservation organization in the country and manages thousands of acres and sites of historic, cultural and natural significance in the state of Massachusetts.

I oppose Tennessee Gas's NED pipeline which is slated to slice through the heart of my hometown of Ashfield. Although currently not proposed to traverse my own conservation land, the NED proposal would seek to take by eminent domain land with similar conservation easements in my town and in other parts of the state. These easements are protected by Article 97 of the Massachusetts State Constitution and this public trust should not be violated.

Individual kanderson20@yahoo.com

Basis for Intervening:

I am a resident of the city of Peabody whose watershed is crossed by the proposed route and could have my drinking water supply impacted by construction and/or operation.

I also have serious concerns about various impacts to local economy/environment/aesthetics/health with this pipeline. This gas does not appear to generate any benefit to our community at all, yet we are being used as a pass through for it and valuable and rare conservation land within the city will be adversely affected, not only during construction but also in the use of herbicides and other chemicals to maintain the pipeline route that will pollute the wetlands and possibly impact the drinking water. Our bike path will be at least partially closed during construction and who knows how it will be affected post construction. We only built it a few years ago and it is widely used within the community. Finally I have many friends whose homes are located within the blast zone and will surely be adversely affected in any number of ways whether it's an accident or devaluation of their homes.

Thank you,

Kurt Anderson

Re: Docket No. CP16-21-000, Federal Energy Regulatory Commission

Kinder Morgan/Tennessee Gas Pipeline Co. – NED Project

Motion to Intervene

While there are many reasons for me to oppose the construction of this proposed pipeline, I am requesting intervenor status based on my concern about the effects of its construction on the agricultural lands and the many farmers, including my husband and me, who own these lands. My family has been farming in Ashfield continuously since 1765. The property on which my ancestor settled, still intact and farmed, but no longer in the family, is in the path of the proposed pipeline. My own farm and the farms of my neighbors, in the town of my ancestors, are very important to me and to my extended family. The proposed pipeline will bisect these farm properties and change forever this way of life which we, who live here, so cherish. Those who have never farmed fail to understand the deep connection to the land of those of us who do.

1. Ashfield is zoned rural agricultural and residential in its entirety. There is no zoning for commerce or industry, which require special permits from the Zoning Board of Appeals.
2. In 2005 a group of town farmers met and formed an Agricultural Commission, approved at Town Meeting. We wrote a Right to Farm Bylaw, of which I was one of the authors. This bylaw was approved at Town

Meeting on 6 May 2006 and then approved by the state Attorney General.

3. “The purpose and intent of this Bylaw is to reaffirm the Right to Farm accorded to all citizens of the Commonwealth under Article 97, of the Constitution, and all state statutes and regulations thereunder, including but not limited to Massachusetts General Laws, Chapter 40A, Section 3, Paragraph I; Chapter 90; Section 9, Chapter 111, Section 125A; and Chapter 128, Section 1A. We, the citizens of Ashfield, restate and republish these rights pursuant to the Town’s authority conferred by Article 89 of the Articles of Amendment of the Massachusetts Constitution (“Home Rule Amendment”).”
4. This bylaw defines farming as: cultivation and tillage of soil; dairying; production, cultivation, growing and harvesting of crops; growing and harvesting of Christmas trees; cultivation of sugar maple trees for production of maple products; growing and harvesting of forest products; raising of livestock, including horses; raising of poultry, swine, cattle, sheep, and other animals for food and/or fiber; keeping of honey bees.
5. The market garden crops, grown on these lands by sustainable agriculture, supply stores, restaurants, and our neighbors with local fresh produce. Since 2002 Ashfield farmers have been selling their produce at a Farmers’ Market on the Town Common. Hay crops support beef, dairy cattle, and other farm animals. The open fields, gardens, and fruit trees provide forage for pollinators, such as the honey bees kept by us and other area beekeepers. These farms and forests have been owned by area farmers for many generations.
6. For over 150 years Ashfield and its neighboring towns, all to be impacted by the proposed pipeline, have been known for their production of maple products. For many years Ashfield was the headquarters of the Massachusetts Maple Syrup Producers Association. Many maple trees, used by local farmers to produce maple syrup, may be removed or damaged in the process of installing the pipeline. They cannot be replaced in our lifetimes. A neighbor’s Christmas tree and maple syrup-producing farm, which helps support three generations of one family, will be heavily impacted.
7. The perimeters of these fields are heavily forested. Some of the trees, which may be removed or root systems damaged by the pipeline construction, are old growth forest, such as a red oak with a 19 foot, 3 inch circumference growing on one of our family’s farms.
8. Stone walls, erected by the earliest farmers to mark boundaries and contain their farm animals, may be damaged or removed in part by the pipeline installation. These stone walls are protected by state law.
9. The open space plan for Ashfield shows that the soils in the northeast part of Town, through which the pipeline is proposed to pass, are prime farmland, the most productive for agriculture. See Town of Ashfield Open Space Plan, Map #4, Agricultural Soils, at the Town Hall. If the pipeline is built, the soils in a 100-foot wide corridor will be permanently impacted, as well as that of additional farm land to be used as staging areas, as shown on the Kinder Morgan map of the proposed route.
10. One of the farm properties to be affected by the pipeline is a certified organic farm. If the pipeline is allowed to pass through this property, it will lose its organic certification.
11. In 1979 Frederic Winthrop, State Agricultural Commissioner, established the Agricultural Preservation Restriction Program (APR) to preserve state farmland in perpetuity. It reduces the value of the farms, so they can be passed to future generations. The restriction requires “no activity detrimental to soil conservation, or to good agricultural or forestry management.” “No temporary or permanent structure shall be placed on this property or permitted to remain.” Several properties in Ashfield along the proposed pipeline route, including ours, and one slated to be used as a staging area, are permanently protected by an APR. Kinder Morgan/Tennessee Gas has replied to FERC that they will mitigate this taking “by protecting replacement real estate of equal value.” How does this help us protect our ancestral properties and pass them to our children?
12. Chapter 61 is a program established by the state legislature to lower taxes on farm, forest and open space recreation land. Our farm property, as well as many others through which the pipeline is proposed to pass, is under Chapter 61. If the property ceases to be used for one of the stated purposes, the land owner must pay five years of back taxes. The Town has a lien on every property in Chapter 61, giving it the right of first

refusal.

13. Kinder Morgan/Tennessee Gas claims the majority of the pipeline route will cross these farms in the “utility corridor” “owned” by the present power line companies. Parts of this route from the New York state line through Berkshire and Franklin Counties were taken by the Mass. Department of Public Utilities in 1969 by power of eminent domain. This taking was to build “lines for the transmission of electricity.” There was to be “no structure of any kind hereafter at any time erected or maintained nor any change of grade, filling, or excavating done within such parcel.” See Franklin County Deed, Book 1244, page 258. There are many more deeds, beginning in 1922, granting rights of way across these farms for use of the power companies. The power company does NOT own these properties. Each deed states that the right of way will be used for the transmission of electricity and/or intelligence and that no other structures will be placed near the power line. For example, see Franklin County Deed, Book 690, page 83, granted in 1922. Use of these rights of way by Kinder Morgan/Tennessee Gas would require new deeds from the present property owners.

14. The taking of this land for the pipeline by the power of eminent domain requires proof that this taking is for the health, safety, interest, or convenience of the public. How will this proposed pipeline benefit those of us who stand to lose the agricultural use of our property? Building this pipeline through this rural area will do more harm than good and permanently affect a way of life for many of us.

15. Kinder Morgan/Tennessee Gas replied recently to questions from FERC, including questions regarding farmland. Their answer was that they would work with farmers to “identify crops.” They did not specify HOW they would replace damaged soil, maple trees, which require at least 40 years growth to produce maple syrup, valuable timber which takes many years to grow, Christmas trees, organic farms, or prevent the growth of invasive species without the use of pesticides which harm honey bees and other pollinators.

16. Two different actively farmed properties abutting our property have been on the market ever since the pipeline route was first proposed. Neither farm has sold. As soon as a prospective buyer hears about the pipeline, they are no longer interested in purchasing either of these properties.

Please grant me intervenor status for the above stated reasons. It is difficult enough to be a farmer. We need to preserve in perpetuity the present state of the land on which farmers work so diligently.

20160111-5289

MOTION TO INTERVENE IN DOCKET # CP16-21, Docket # 14-22, NED PIPELINE

JOHN SERIO

JANUARY 11, 2016

BASIS

The NED pipeline is proposed to run along the utility right of way that borders my property in Stephentown. It would be within 500 feet of my home, my sole domestic water supply and my organic garden, and just a few yards away from an area my family and I, my friends, neighbors and community members regularly use for recreation. Compressor stations are planned both to the east (within 8 miles) and to the west (within 16 miles) of my property, and other above ground facilities (locations yet to be identified) will be built that will impact me, my family, my neighbors and the region in which I live. In addition, I have a home in Albany, NY, whose water supply and that of my family living in Albany will be affected by the pipeline path through Albany County (the pipeline could impact both the Alcove and the Basic Creek Reservoirs).

In addition, the bases for my intervention is a long, long list that includes but is not limited to:

- 1) **The impact on the two streams along my property.** One stream runs within 75 feet of my home, well and organic vegetable and flower garden, and right next to my organic blueberry garden. These streams will be disturbed by the construction procedures, installation and operation of the pipeline.

More specifically, I claim intervenor status because the environment will be impacted in a way that harms the natural filtration of the waters that run into and out of these streams. The flora and fauna that has depended on the natural grading, soil content and density distribution will be disturbed in a way that either temporarily or irreversibly harms the ecological systems that support them.

- 2) **The impact of an unusual weather** event that causes rapid flooding and (less likely but not impossible) the impact of an earthquake on the pipeline and related infrastructure that could undermine the pipeline along and under the streams near my home, causing an explosion, a serious leak or a smaller leak that goes undetected. See the NYS law passed in September, 2014 entitled the Community Risk and Resiliency Act confirming that unusual weather events are occurring more and more frequently and this is placing critical infrastructure in NYS is at risk. In addition, there is a dam just up river from the pipeline crossing that has been identified as not meeting the highest structural safety standards.
- 3) The adverse impact of the pipeline **on the value of my property** and **on my right to quiet enjoyment of my home and land** and without fear of accident, explosion (I am in the high impact zone, also known as the high risk area, high consequence area and incineration zone), noise and undiscovered or undisclosed gas leaks. A former local Fire Chief has informed me that if there was an accident due to fire department staffing and equipment limitations, they wouldn't even be able to help people evacuate. All they would be able to do is close off roads to traffic. Also, studies have shown that properties in rural areas lose more value when pipelines are built nearby than properties in more urban areas.
- 4) **Eminent domain for foreign gain** may be used in this project when the convenience and necessity for the project has not been substantiated. Private profit and the provision of this country's natural resources for use by other countries is not a just reason to impose eminent domain on me or my neighbors. The gas this project will transport will be used in the international market. The gas carried by this pipeline will not be used in New York State. No compelling case has been made that the gas will be used in this region.
- 5) And further, if eminent domain will be utilized, FERC should require the company to disclose each and every parcel that will be required for the project before FERC issues their authorization to proceed. My basis for intervention here is that I claim the right to comment on the specifics of the project before it is approved when I still may have more significant influence over the siting and increased bargaining power. Once FERC has issued their approval, I will have less influence over the use of my land and will be less likely to be able to secure compensation acceptable to me for the use or sale of my land.
- 6) Burning fossil fuels like gas contributes to global warming. The US Department of Defense (see their July, 2015 report to Congress) has confirmed that global warming and the civil disturbance it will cause in the near future is a serious threat to our national security. This alone is reason enough for any American to become an intervenor. The following is a quote from that report: "DoD recognizes the reality of climate change and the significant risk it poses to U.S. interests globally. The National Security Strategy, issued in February 2015, is clear that climate change is an urgent and growing threat to our national security, contributing to increased natural disasters, refugee flows, and conflicts over basic resources such as food and water." These impacts are already occurring, and the scope and intensity of these impacts are projected to increase over time. Since there are natural alternatives to fossil fuels there is no justification for the NED except the economic need of an obsolete industry to squeeze every last dollar out of their existing investments and entrenched business models. The argument that methane contributes to the supply of cleaner energy sources because it reduces usage of dirtier fuels is only valid if one ignores the fact that there are alternative energy sources that are even cleaner than gas. The development and utilization of cleaner, lower impact alternatives has been delayed because of interests like those supporting the development of this pipeline. The public has willingly or unknowingly been subsidizing the real costs of fossil fuels at the expense of safer

alternatives. I claim intervenor status because this must change. The pipeline company should pay the price for the foreseeable costs of their actions. Not me and other taxpayers.

- 7) Methane gas turns into formaldehyde when it is exposed to the sun. Formaldehyde is a known toxin. Radon carried by the gas and the polonium that radon breaks down into and the other gasses that have been associated with fracking, methane and its extraction and transport are all noxious or toxic. These toxins can be carried by the air, the soil, underground water ways and the stream that runs by my home, gardens and well. The likely health effects of these toxins on me, my family, my friends and neighbors is another basis for intervention.
- 8) Pipeline and facility maintenance: Accidents, improper handling and disposal of waste are possible (and these all do occur with some regularity on pipelines and in their infrastructure). These toxins can contaminate the streams that run by my homes, gardens and well. For example, tons of toxic gasses are leaking from a “natural” gas storage facility right now in northern Los Angeles. This leak started in late October and still has not been repaired!
- 9) During construction there will be greatly increased traffic along the road just yards from my house. The dust, safety, noise and health impacts as well as damage to our town roads will adversely impact us, especially my wife who is allergic to dust. In addition, there is a very old bridge with a very limited load limit (10 tons) over which construction vehicles will travel.
- 10) I claim intervenor status because the bio-diversity of the Rensselaer Plateau and Taconic Valley near my home will be disturbed or destroyed. I and my family will no longer be able to enjoy the full spectrum of flora and fauna that exists in these beautiful, natural areas if this project is approved. The natural features along the pipeline route include northern sandplain grassland, forest interiors, 71 stream patches, including trout streams, rare plants (i.e. Angerman’s peat moss), land gravel (a globally unusual geological feature), and 65 wetland patches. In addition, the likelihood of the introduction of harmful invasive species during the surveying, engineering, design, construction and operation and management phases could be devastating. I have attached a study by Dr. David Hunt that describes the bio-diversity of the area and the damage this project can cause.
- 11) I claim intervenor status because I question the integrity of the company that will build this project and FERC’s complicity with the company’s deceptive practices. For example, in their first correspondence to property owners about this project they stated that it is a “federal undertaking” That is not true. Neither FERC nor the company ever publicly corrected this lie. The least that could have been done was to publish newspaper ads correcting the deceptive statement. And a mailing could have been sent directly to those who received the deceptive letter. I have seen for myself other instances where the truth to them looks different sometimes than it looks to me or where they have failed to provide information that might be inconvenient to their purposes. So if this is how they act now, when they still need to get approval how will they be after they have gotten approval for the pipeline?
- 12) The fossil fuel industry has and is effectively interfering with the development of carbon- neutral, clean energy supply industries that will create more, longer lasting employment. This project, if approved, would be a specific example of that and it is my responsibility, and everyone’s who has figured that out to claim intervenor status in this unnecessary project.
- 13) The pipeline and its associated facilities are not adequately monitored for accidents and unexpected wear and tear. Nor are they adequately secured against physical vandalism and sabotage or cyber attacks. Moreover, placing the pipeline close to high voltage power lines adds to the possibility of more rapid degradation of the pipe wall. And the materials and safety standards for this project are lower because it is located in a rural area!
- 14) Prior to issuing the air, water and other environmental permits necessary to proceed with this project, a comprehensive health risk assessment consistent with the resolution of the Medical Society of the State of New York and the American Medical Association and in conformance with standards set by

the Center For Disease Control may not be conducted. Any project with the a scope of impact like this one should not be granted permits that allow it to proceed without such a study being conducted and its results considered prior to approval.

- 15) The KM/Tennessee Gas filings that describe the property near my home incorrectly locate significant existing man made conditions and existing ecological conditions. Therefore, any consideration FERC gives to the gas company's characterization of the area around my property will be based on inaccurate information. I therefore claim intervenor status because the existing conditions have not been accurately presented. Therefore FERC will not be reviewing a true presentation of the project.
- 16) There will be negative human health and economic impacts caused by the pipeline that will directly impact me, my family, my neighbors and other New York State residents. These impacts will have a cost due to increased health problems, lost wages, and lowered productivity. The full costs for these impacts should be covered by the gas transport company and the other entities that will profit from this project, not me, my family and my neighbors. These costs must be quantified. This can only be done (at least to some extent) after a comprehensive health and socio-economic impact assessment is conducted. I am hereby placing FERC on notice that this assessment must be done PRIOR to complete consideration of this project.
- 17) I hoped to leave my home and property in Stephentown to my children and grandchildren for them to enjoy as it is. I claim intervenor status on their behalf because they will be deprived of the awesome natural environment that has been preserved around my home. The natural environment is becoming more and more rare on our planet. Humans are great problem solvers and it may be that we will overcome the adverse climate changes that are occurring. But do we want to leave our descendants a barren, sterile planet, on which the human species has survived? I also claim intervenor status on behalf of all our descendants (mine and those of all of us alive today). They are not here to claim intervenor status themselves and their interests need to be considered before this project review is concluded.
- 1) Finally, I claim intervenor status because due to the influences of powerful private interests on the process, FERC needs watching by as many concerned citizens as possible. For example, FERC regulations allow only 21 days for concerned individuals to gain intervenor status. This is true despite the fact that a project like this will have a profound, decades long, irreversible effect on the environment, people, and the economy. So where is the balance? Decades of impact, less than a month to intervene? One must gain intervenor status to appeal any future decision or forever hold your peace. - a very significant right evaporates! And when you dig down, this 21 days is not even business days. It is calendar days! So that means only 15 business days. And guess what? FERC allows the company to choose when they submit. FERC has been manipulated into a timeframe that includes the Christmas, New Years, Hanukah and Kwanzaa Holidays. Most of us have celebrations planned and family obligations to meet in addition to our routine activities. So, really, for some, this timeframe has shrunk to a much smaller amount of time during a period of many distractions. So, this type of policy game-playing, on top of the fact that FERC staff frequently comes from the fossil fuel industry, some staff moves to the fossil fuel industry after working at FERC and the FERC on-line filing system has been down due to "inclement weather" during this time frame leads me to say SHAME FERC. And then we hear that Cardno, one of FERC's environmental consultants has been cited for making findings in a case where they had a conflict of interest! You may party on. But I say SHAME, SHAME! These are just two examples of how the process seems to be rigged against effective public participation. No amount of extended comment time would mitigate all biases against the public's interest, but an extension of time for filing as an intervenor until after all the most significant details of the project are finalized and published is the least FERC should do in this case and as a matter of policy in all fossil fuel projects.

I hereby request that the comments above and those attached also be added to the dockets and public record

as comments responsive to any and all public participation opportunities that have been or will be required for the review of this project. I also reserve my rights to continue to comment.

Should FERC find that any particular basis contained herein does not, on its own, warrant granting me intervenor status, please notify me and provide an explanation of your finding prior to the close of the opportunity to intervene.

Sincerely submitted, with more hope than despair and grateful for the blessings we all have in common and cherish.

Happy New Year!

John Serio
Stephentown

20160111-5293

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of
Tennessee Gas Pipeline Company, L.L.C.
Northeast Energy Direct Project

Docket No. CP16-21-000

MOTION TO INTERVENE AND PROTEST

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Town of Peterborough, New Hampshire hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Town opposes the construction of a natural gas transmission pipeline and other facilities known as the Northeast Energy Direct project ("Project") due to the adverse impacts that will be sustained by the Town and our region, and therefore seeks party status to protest the proposed pipeline, and fully protect the Town's interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. The Town is committed to enhancing and protecting the quality of life of all its residents, workers, and businesses, and is gravely concerned for those who live, work, and recreate near the proposed pipeline route and compressor station. There are substantial and real environmental, economic, and health threats to the Town arising from the construction and operation of the pipeline. It is unacceptable that we may be coerced into the industrialization of our landscape and the degradation of our scenic, historic, and cultural resources-for a Project that will never benefit us.
2. The proposed pipeline and compressor station poses significant risk to the public in the event of an incident that happen with unacceptable frequency. The risk is intensified with this Project because of the thin walled pipe that would be used, the forests that surround the Project and the lack of fire fighting, police, ambulance and medical resources in this region. Peterborough supports all regional towns in protecting citizens through mutual aid agreements. We have serious concerns about our collective abilities to deal with a pipeline or compressor station disaster.
3. The Project specifically contemplates building a compressor station in neighboring New Ipswich that would negatively affect the quality of life for all regional residents. In its normal operation, the compressor station will emit hundreds of thousands of tons of toxins, carcinogens, volatile organic

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	maryjohnson513@gmail.com	

Basis for Intervening:

I have lived in Northfield, MA since 1987 and want to intervene in this proceeding to oppose the NED pipeline. I have interest which may be directly affected by the outcome of the proceeding because:

*My home is located on Main St where the negative health effects of the planned 41,000HP compressor station will be felt. I have learned the following from Curtis Norgard, MD:

A limited review of public health studies shows:

Nitrogen dioxide: Increased respiratory hospitalizations (2%) , heart failure (1.7%)

Carbon monoxide: Increased premature birth rates (4%) 4, low birth weight (7%)

Sulfur dioxide: Increased low birth weight (3%) , heart failure (2.4%)

Particulate matter: Increased fatality from heart and lung disease (5.3%) , new childhood asthma diagnoses (10-12%).

*As a recently retired teacher having taught at Northfield Elementary School for 24 years, I also have an interest in the health of the children who are students there. The negative health effects would be many and especially harmful on days where inversion in our atmosphere is present, thereby sealing the compressor station generated pollution in the valley where I live and the elementary school exists. Again, I learned from Dr. Norgard the following:

Formaldehyde: Levels could exceed acute toxicity and cancer-causing thresholds for children based on published observations .

Nitrogen dioxide: If concentrations increase as predicted (13.4mcg/m3), public health studies suggest we should expect at least a 7% increase in new childhood asthma diagnoses 6 and a 2% increase in hospitalizations for asthma attacks 10 in a 10 km radius. People with chronic obstructive pulmonary disease, stroke, and heart disease would also be affected, as well as increased overall fatalities from these conditions.

*As a resident of Northfield I am very concerned about our water supply which comes from a reservoir which will be impacted by the operation of the planned compressor station.

*As a resident of this beautiful town, I enjoy almost daily hikes in areas that have been set aside and permanently preserved for people and wildlife. I do not want these precious places to be impacted by this project.

*As an electric company ratepayer, I am concerned that if Kinder Morgan secures my electric utility as a project customer, my rates will increase related to NED cost recovery.

*As a homeowner I am concerned that I will suffer financially due to decreased property values related to this project.

20160111-5332 Motion to Intervene from Wesley Spindler

January 10th 2016

To Whom it May Concern,

As a resident of Pepperell, Massachusetts, I am writing to object to the construction of the proposed NED pipeline. There are many reasons for my objection, but let me state just a few here:

- 1) As a local resident, the pipeline will not only interfere with potentially the integrity, worth and safety of my own property, but also the properties of local neighbors and friends

- 2) The proposed pipeline will provide destructive to the local environment – destroying pristine natural lands that make our towns so desired and loved, seriously impacting our quality of life
- 3) The pipeline will contribute to greater environmental issues due to the destructive nature of non-renewable fossil fuels in the form of fracked nature gas
- 4) Further to this, there is now serious momentum behind improving the state of the climate as an outcome of COP21, your agenda is working against the goals agreed upon by over 190 nations – I see this as a huge integrity risk for yourself and not something a conscious and aware person would support
- 5) Finally, I am individual who sticks to her principles, in the famous words of William McDonough, author of Cradle to Cradle, being “less bad” is not being good – the economy needs to shift to one which supports and mimics the environment, not works against it. NED pipeline reflects traditional, ruthless behaviour – the easy route. I am asking you to consider a different route, which is perhaps not the easy quick fix, but reflects a core value of human kind – to do good, by supporting human health and environmental wellbeing in the long run, which will have not only positive payoffs for our environment but economically as well (I should know, I analysis the success of companies doing this using hard facts and figures for a living)

I hope you seriously consider my above points, and take into consideration the countless interventions from people who care about their personal and their local environment’s health, as well as our planet’s collective wellbeing.

Best,

Wesley Spindler

RE: Docket CP 16-21-000

December 31, 2015

Dear Ms. Bose,

We live on Keyser Road in the town of Middleburgh. Both the Constitution Pipeline and the NED pipeline are slated to cross Keyser Road right near my house. (We would love to provide you with more detailed location information, but NED does not provide mile markers on their maps.) The Constitution Pipeline is approximately 150 feet away from my garage. The NED pipeline is proposed to co-locate the Constitution pipeline to the south along this section. This would put the proposed NED pipeline approximately 100 feet away from my garage. Why is the NED proposed to go so close to my house when there is ample room on the north side of the pipeline at this point? Is there any way possible that you can look into this matter and get Kinder-Morgan/Tennessee Gas to move the pipe to the north of Constitution right near our house? Looking at several maps, there are multiple places where the two pipelines cross each other, so I do not see an issue for NED to cross Constitution and travel on the north side as it traverses Keyser Road.

Respectfully submitted,

Robert Mau

BEFORE THE UNITED STATES OF AMERICA

FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.(TGP)

Subsidiary of Kinder Morgan (KM) Docket No. CP16-21, PF14-22-000

Northeast Energy Direct Project (NED)

MOTION TO INTERVENE AND FOR STAY OF ALL PROCEEDINGS PENDING

FINAL ADJUDICATION OF LITIGATION IN FEDERAL COURTS SEEKING A

DECLARATORY JUDGMENT THAT THE 2005 AMENDMENT OF THE NATIONAL

GAS ACT GRANTING THE FEDERAL ENERGY REGULATORY COMMISSION

JURISDICTION OVER NATURAL GAS PIPELINES CARRYING GAS FOR

EXPORTATION TO FOREIGN COUNTRIES IS UNCONSTITUTIONAL

(CA. NO: 3:15-C.V.30131(MAP) DISTRICT OF MASSACHUSETTS)

This Motion to Intervene and for Stay of All Proceedings is filed by Holly and Gordon Lovelace, Carolyn and Eric Ness, Michael and Kelly Paulsen, Woolman Hill Inc., and Meg Worcester aka Margaret W. Friedrich and the Margaret W. Friedrich Trust all severely impacted by the KM/TGP NED project as described below.

A. Holly and Gordon Lovelance

1. Holly and Gordon Lovelace have lived in their idyllic 22-acre homestead in Northfield, Massachusetts since February 2007. It is an absolutely amazing property, including a barn, pond, stream, mixed woodlands, blueberries, blackberries, peach and pear trees and an extensive woodlot as well.
2. The home itself is 200 years old, having survived the Civil War, hurricanes, historic blizzards and at least one fire. It has three original fireplaces, a beehive oven and a floor plan nearly identical to one of the reproduction homes in Sturbridge Village. It is truly an historic home.
3. This historic home needed a lot of love —and work. When the Lovelaces arrived, its basement was just a dirt floor and fieldstone walls.
4. Holly and Gordon installed a pea-stone base and lots of insulation. They refinished and made extensive repairs to the original 12-inch-wide floorboards throughout the main floor. They replaced a wall, three exterior doors, and almost every window. They replaced the ceiling in the dining room, renovated the main bathroom, installed crown molding and repainted nearly every room.
5. Outside, they replaced the front porch completely. They added two levels to the backyard deck, so now there is a view of the stream and wetlands surrounding their home. Several ill trees were professionally removed, as well as an ancient dump area, where they found many bottles and relics from the 1800s. They hired a bulldozer crew to level a massive area of the property.
6. All the work done on the property was worth every penny. Their renovated, historic home is now insulated, warm and comfortable. Sitting on the deck with binoculars and birdwatching books Holly and Gordon have identified more than 50 bird species, and sighted two more as yet unidentified. Their game camera catches photos of foxes, deer, coyotes and they see black bears round and about at least once a year. The Lovelaces collect garnets, tourmaline and other mineral-rich stones from up their hill and place them in their gardens.
7. This is not just their home. They have three businesses there: Homestead Computing Solutions; Mom’s House Estate Finds online collectibles store; and, in addition, they carry out sustainable logging on their land.
8. On June 4, 2015 Holly and Gordon Lovelace received communication from a Kinder Morgan Corporation’s subsidiary, Tennessee Pipeline Company, (“Tennessee”) stating that a major compression station will be built adjacent to their property. (Ex- I)’.
9. The proposed compressor station would be one the largest, if not the largest, compression station in the entire United States. (Ex.-2).
10. Building of the compression station adjacent to the Lovelaces’and amounts to a de facto taking of their property since it will make it impossible for Holly and Gordon to continue residing on their property.
11. No one would buy a property so close to what Safety Insurance Company describes as a biohazard area. Among the myriad threats are carcinogenic, toxic chemicals— including benzene —released by the station into the air, probable groundwater contamination due to blasting to build the station, and toxic waste from the periodic cleaning of the massive pipeline. Running 24/7, the massive station would always be brightly lit, ruining the rural night sky. Sporadic blasts of noise at levels in excess of 100 decibels will average, over 24 hour periods, to be significantly in excess of acceptable noise levels for residential use.
12. The construction of such compression station adjacent to their land will destroy the value of their land.
13. The knowledge that the United States, through the Federal Energy Regulatory Commission, would allow the taking of their home and despite the fact that the gas to be pumped by the compression station is primarily for exportation to foreign countries has caused and continues to cause Holly and Gordon Lovelace emotional distress and anguish.

B. Carolyn and Eric Ness

14. Eric and Carolyn were married on 1 May 1977 in Seattle, Washington and moved to 10 Old Albany, Deerfield in August 1980 when they bought their home. Deerfield, being close to Carolyn's family, was chosen as the place to raise their four children, William, Andrew, Samuel and Victoria, and has continually been their home except for Eric's two family-accompanied military assignments outside the continental United States. Despite Eric's current work location in Bloomsburg, Pennsylvania, Deerfield remains the family home, with Eric home regularly on weekends. The Deerfield home is the site for annual hosting of major family events like Thanksgiving and Christmas.
15. While living at their home in Deerfield through the years the Nesses have made significant improvements to their property, including a new septic system, new heating system, potable water, well deepening/improvement, renovations to two bathrooms and five bedrooms, rebuilt kitchen chimney, replaced slate roof flashing, new 200-amp below-grade electrical service, plumbing improvements, kitchen ceramic floor installation, electrical and data line distribution expansion, new workshop out-building, land clearing, landscaping, and pasture fencing, to name the most obvious.
16. The Nesses expected to eventually sell their home and use the funds so gained to finance a smaller retirement property.
17. Eric and Carolyn's commitment to this long-term plan for raising their family and financial strategy included retaining the house during overseas military assignments to tundra and Alaska and has meant Eric has worked away from his family, as a geographical bachelor, for 28 of the past 35 years.
18. Eric and Carolyn received two letters from Kinder Morgan's subsidiary, Tennessee Pipeline Company, dated January 26, 2015 and March 6, 2015 in which Kinder Morgan requested access to their property located at 10 Old Albany Road in Deerfield for the purposes of conducting civil, geotechnical, archaeological, wetlands and water body delineation and an endangered species survey. This request to survey the property is tied to the fact that the proposed pipeline would pass through their property. (Ex-3).
19. This letter has impacted Carolyn and Eric in more ways than one: a) The projected intrusion of the pipeline onto their property has caused a significant decrease in the value of their property if not destroying it completely; b) The proposed taking has caused and continues to cause emotional distress to Carolyn and Eric, as it undermines the purpose of all their sacrifices, time apart over the years, and their dreams and hopes for the future.

C. Kelly and Michael Paulsen

20. Kelly and Michael Paulsen bought their house on 10 Windsor Avenue in Plainfield almost 17 years ago. They did not have much money but wanted a place with enough land for gardening and horses. When they purchased the house, it had old rattling windows that barely slowed down the wind. It had plywood floors and a hatch with a ladder that led to the basement.
21. Kelly was pregnant with their first daughter at the time. They decided to fix up the house and build equity. Instead of investing in a 401k or like product they poured their savings into the house. They put in hardwood floors, new cabinets, tile, windows, siding, electrical service, spiral staircase, new roof, solar hot water panels, and an addition for a mudroom/laundry room. They put up new window and door trim and baseboard throughout. Outside, they added a stone patio with a concrete soaking tub and a native locust wood pergola. They constructed a full-size riding ring for the horses and installed new fencing.
22. Kelly and Michael knew that all their work would eventually allow them to sell the house and move to a new house, closer to their girls' schools, and still have enough to help out with college tuition. Once their younger daughter became old enough to need her own bedroom, they planned to build an addition that would give Kelly and Michael their own bedroom and bathroom. They planned on adding solar electric panels to save on electric costs, over time, and to do their part to lower their carbon

footprint.

23. In the fall of 2014, a man came to their door asking them to sign a piece of paper that would grant him permission to survey their land. The man told them that a gas pipeline was being planned to be built through their property. When they inquired as to the kind of pipeline, they were told it was to transport fracked gas out of Pennsylvania. Kelly and Michael denied him permission. He came back two more times and both times he was denied the requested permission.
24. Kelly and Michael began to inquire as to the nature of the proposed gas pipeline and finally established that the pipeline was going to be built by Kinder Morgan, a Texas corporation. The plan was to put the pipeline through their property, cutting a giant one-hundred-foot wide path to bury and hide a 36-inch pipeline planned to transport billions of cubic feet of natural gas per day from Pennsylvania to Dracut, Massachusetts, a natural gas hub from which natural gas could be transported for liquefaction to natural gas plants and then for exportation to foreign countries.
25. The value of the Paulsens' ouse was destroyed by this news, as no one wants to buy a house with a massive amount of explosive gas passing through the property.
26. Kelly and Michael quickly established that natural gas pipelines could leak and break and explode, destroying their house and ending their lives and the lives of their children. They can no longer sell their house and their equity has disappeared. They cannot move and have nothing to leave their daughters. They can no longer fulfill their plans to build an additional bedroom and bath or to add the planned solar panels.
27. They have been paralyzed by the pipeline proposal. Their emotional distress has damaged their marriage and it has made it impossible for their teenaged daughters to do the things that their friends do.

D. Woolman Hill Inc.

28. Situated on the beautiful Pocumtuck Ridge in Deerfield, Woolman Hill Retreat Center is a non-profit organization dedicated to the importance of reflection, spiritual engagement, and connection with nature. It provides simple, comfortable facilities for individual retreats, group gatherings, and programs that nurture spiritual growth. In its operations and its programming, Woolman Hill seeks to foster the values of peace making, simplicity, integrity, social responsibility, and stewardship of the earth.
29. Beginning with Antoinette Spruyt's original intent to "further the causes of peace and brotherhood in the world" when she donated the land to Quakers in the 1950s, Woolman Hill has a long history of advocacy and witness in western Massachusetts and beyond. Woolman Hill has served as the locus of peace conferences, international youth work camps, alternative school, the birthplace of Traprock Peace Center, the home of war tax resisters Juanita and Wally Nelson, and innumerable spiritual and social justice events.
30. The Nelson homestead was intentionally built with no reliance on fossil fuels or electric power. A demonstration fruit tree and nut project, begun several decades ago, continues to this day. Over the years, significant financial and human resources have been invested in the upkeep, improvement and renovation of Woolman Hill's buildings and land.
31. Consistent with its purpose and its Quaker values, Woolman Hill encourages lifestyles that reduce dependence on non-renewable energy and minimize negative impact on the earth. It places a high value on environmental stewardship in its operations —for example, using wood as the primary heating source, benefiting from solar panels for two of its buildings, and recently installing on-demand hot water heaters in its main building.
32. On February 5, 2014, Kinder Morgan's subsidiary Tennessee Gas Pipeline Company (jointly "Tennessee") sent a letter to Woolman Hill requesting permission to survey Woolman Hill's property because Tennessee was planning to expand its natural gas transmission system in the area. (Ex. - 4).
33. On March 11, 2014, Tim Corcoran, an agent of Tennessee, met with two Woolman Hill staff members

(Margaret Cooley and Will Stark) and indicated that the projected pipeline would require Tennessee to acquire an easement over Woolman Hill's property.

34. Tennessee has indicated in public meetings and informational pronouncements that the gas projected to be transported through the pipeline originates in the Marcellus Shell located in Pennsylvania and other states, will cross Massachusetts and other New England states, terminating at a natural gas hub located in Dracut, Massachusetts.
35. Tennessee and KM have also indicated at public meetings that the size of the projected pipeline would be 36" to 42" and that the pipeline will transport 2.2 billion cubic feet per day of fracked natural gas per day.
36. The energy that can be generated from two and two tenths billion cubic feet of fracked natural gas per day is the equivalent of one half the equivalent energy expected to be generated by tar sands oil scheduled to be transported by the heavily litigated Keystone pipeline, or the energy than can be generated by eleven nuclear power plants each of the size of the Vermont Yankee nuclear power plant.
37. Tennessee and KM have never denied that the great portion of the fracked natural gas to be transported through the pipeline is for exportation to foreign countries after the gas is liquefied at facilities expected to be approved by the Department of Energy of the United States ("DOE").
38. Woolman Hill relies on income from services that depend on a peaceful, quiet, naturally beautiful setting. Woolman Hill's setting, and its financial wellbeing, would be severely impacted by the construction and installation of the pipeline. Keets Road is also the only egress from the retreat center, and the pipeline would cross that road in three places. Woolman Hill hosts large groups of people, and emergency response or evacuation would be seriously hampered in the event of any pipeline malfunction.
39. In addition to significant concerns about the danger, environmental destruction and economic disturbance posed to Woolman Hill by the pipeline's route across its land, the Woolman Hill community carries equal concern for the broader implications of the pipeline's regional and global impact. All that Woolman Hill stands for would be challenged by the taking of its property for the purpose of fossil fuel export.
40. Installation of the proposed pipeline through Woolman Hill will destroy the moral, spiritual and physical value of Woolman Hill, reducing significantly its future value as a Quaker retreat center and/or the value of the property which could be derived from other possible uses.

E. Meg Worcester aka Maruaret W. Friedrich and the Margaret W. Friedrich Trust.

41. Meg Worcester married Edmund E. Friedrich, "Eddie," on December 28, 1989 and moved into the home where she has resided ever since. Eddie died on May 30, 2011.
42. During her lifetime Meg has lived in many homes around the country, but the home where she now lives, in Deerfield, Massachusetts, holds a great deal of significance for her. It is the modern version of her family's 150-year-old home in the White Mountains of New Hampshire. The setting is similar, has a view of the mountains, and it is where she has lived now for 25 years, a longer period in one home than anywhere else in her lifetime.
43. This home is Meg's ideal home, and finding it was the culmination of a life-long spiritual journey. It was designed by her beloved late husband 25 years ago, and where she lived with him there for 21 and half years, before his passing four years ago. She expected to live in this home with memories of him for the rest of her life, hosting guests at her bed and breakfast, all of whom are enchanted not only with the beauty of the accommodations (newly renovated last year) but with the view and quietness of the rural setting as well.
44. On December 12, 2014, Kinder Morgan, on Tennessee Gas Pipeline stationery, sent a three-page letter to Margret (sic) W. Friedrich Trust, owner of the property where Meg Worcester resides, stating that her home and property would be affected by a proposed natural gas pipeline expected to be built

through her property. (Ex.-5).

45. The aforementioned letter was clear indication to Meg that Kinder Morgan or Tennessee Pipeline intended to take an easement by legal action on the property where she has resided for 25 years.
46. Meg was devastated when she learned that Kinder Morgan wanted to install a 36- inch-wide natural gas pipeline across her property. She is still in a state of shock, suffering from nightmares about it. She is concerned about not only the construction noise that will completely destroy the sense of peace on her hill, but also the awful realization that her well water (within 30 feet of Kinder Morgan's proposed route) could be ruined by either contamination or mechanical malfunction of the pipeline. There is no other place on the property to build a new well.
47. Uppermost in her mind is the potential for an explosion, the fear of which would loom over her constantly.
48. Consequences of the construction of a pipeline across her property would be, for her, devastating. At her age (a healthy, active septuagenarian who is just trying to remain independent and productive) she is distraught, to say the least, and suffering from enormous emotional distress. She feels she belongs on this land and home, and she is not at an age when she can embark on a "fresh start" away from familiar, safe, and nostalgic surroundings. The pipeline would rip all of that away and destroy who she is.
49. The property is in her Trust, with the understanding that it will be given to Eddie's son, Kris, (if still alive) or to her daughter (if Kris is deceased). However, the value of the property has been destroyed by the announcement of the proposed pipeline.

L CONTACT INFORMATION

Please enter the names of all aforementioned Intervenor on the official service list for Docket No. PF14-22-000. All pleadings, filings and correspondence in these proceedings should be served on Intervenor's counsel:

II. MOTION TO INTERVENE

Aforementioned Intervenor intervene seeking a stay of all proceedings concerning the KM/TGP NED Project on the grounds that the 2005 Amendments to the National Gas Act (NGA) granting jurisdiction to FERC of pipelines transporting natural gas for export is unconstitutional.

FERC and the United States were placed on notice of the lack of constitutionality of the 2005 Amendment as early as February 28, 2014. KM/TGP NED project was placed on notice in late December of 2013. In spite of of this knowledge FERC continues to evaluate this project for eventual approval utilizing government resources which could be used for other purposes.

FERC and KM/TGP NED Project failed to respond to to the aforementioned communications.

Intervenor filed an action in Federal Court, Lovelace et al., v, United States CA. No. 3:15-cv-30131-MAP, seeking a judicial declaration of the unconstitutionality of the Amendment and seeking a declaratory judgment and order halting further evaluation/consideration by FERC, aka United States, of the NED Project, in August of 2015.

Intervenor incorporate here by reference all filings of Intervenor in the aforementioned legal action. FERC KM/TGP NED Project and other intervenor can access all referred documents, either from the record of

PF14-22-000 or at <https://ecf.mad.uscourts.gov/cgi-bin/DktRpt.pl?172928>.

WHEREFORE, Intervenors request the Commission to GRANT this motion to intervene and to STAY of all further proceedings in this action pending final resolution of Lovelace et al., v, United States CA. No. 3:15-cv-30131-MAP.

Respectfully submitted

By Attorney for Intervenors,
Cristobal Bonifaz, Esq.

MOTION TO INTERVENE

RE: Docket No. CP16-21-000 and DEIS I haven't received info on

I am writing to motion as a concerned intervenor, landowner , neighbor and tax paying resident presiding towards the end of the Proposed Kinder Morgan/ Tennessee pipeline for the proposed NED project.

I cannot address the DEIS at this time since I have never received one after requesting it months ago and reserve my right to comment on it upon receipt.

I leave my comments incomplete until DEIS is received for my review and to comment on.

A concerned intervenor,

Susan Jacques
116 Haven Lane
Schoharie, NY

20160112-5002

Lisa Allison, Averill Park, NY.

The Constitution Pipeline filed a request for a Partial Notice to Proceed to begin tree clearing. We assert this activity is presently ILLEGAL and will be resisted.

Unfortunately, there appears to be a misunderstanding since this is one of many inappropriate actions taken related to this project. Other examples include the following:

FERC has inappropriately neglected to study cumulative impacts of CP and the Kinder Morgan NED as required by the National Environmental Policy Act.

FERC has neglected to show a need for this pipeline, which will be largely used for export.

FERC granting a Certificate of Compliance and Necessity to principal partners Williams Company, and Cabot Oil and Gas, d/b/a "Constitution Pipeline Company", who collectively have one of the worst safety and compliance records in their respective industries and clearly cannot "perform the service proposed and to conform to the provisions of this chapter and the requirements, rules, and regulations of the Commission thereunder", and thus in violation of the Natural Gas Act.

FERC making a misstep by issuing the "conditional certificate" prior to the environmental review being completed. This legal trickery allowed properties to be condemned prematurely, before the suitability of the project could even be determined.

Please change your course and take the necessary steps to stop this pipeline from moving forward.

20160112-5003

Thomas J Berube, Dracut, MA.

December 20, 2015

Attention: Federal Energy Regulatory Commission

Docket# CP16-21-00

Dear Administrative Staff,

As a resident of the town of Dracut for more than 62 years I have yet to be shown the need for this new 30" pipeline with its accompanying 23000 hp Compressor Station and the Metering stations proposed . Kinder Morgan-Tennessee Gas Corporation will be pumping what I have been told 1.3 billion cubic feet of gas per day though the town of Dracut.

The new location of the proposed pipeline along with the Metering stations and Compressor station still affects many residents of the quaint rural town, with many open space acres and farms that produce vegetables for residents for the town and its surrounding neighbors.

This project has caused myself and my neighbors great concern for our safety and health. Kinder Morgan never has been open with the residents of this town or even openly explained what is about to happen in our town, especially the east end of town where I reside.

Kinder Morgans proposed project is devastating to me. I'm a 62 yr old man who has worked hard all his life to build a beautiful, but modest home for my wife and three children on an acre of land given to me that was part of my Fathers farm so i could start a family . I built the home 33 yrs ago. I worked countless hours to create what I have now at 270 Wheeler Rd. Dracut. Along comes Kinder Morgan and that if this project is approved will destroy everything I ever worked for. I can't start over at my age because I retired after having open heart bypass surgery at the age of 62. It will reduce my property to the value of a starter home... if that. I will have no opportunity to sell as I will have to disclose that I will have a Meter Station

being built across the backside of my property within 75 to 100 ft of my property line in full view of every window and every angle of my yards landscape . Most of my neighbors signed the do not survey papers that were out there to prevent Kinder Morgan from coming on their land. I chose not to because of how much this project would severely affect me. I wanted to keep open the lines of communication with them. The many times I spoke with land agents, I was fed all different scenarios that would happen but none to lessen the damage to my home equity and quality of life.

The new proposal will put me within 1/2 mile of that 23000 HP Compressor Station . My well is private and I have no public water access to my home My well is located on the backside of my property where all the digging will take place for the Meter Station . Will this affect my drinking water ? I have repeatedly asked the land agent as to why he would locate it in a proposed 35 lot subdivision called Berube Farms. This development has all the permits and roads designed and approved by the town and will be built sometime in the near future. The Land Agent said he would buy the 3 small abutting lots behind me to locate the Meter station. The Meter station with the many exposed pipes above the ground would be seen from every room of my home along with the added noise and smells the facility will cause. It's also very close to the Centerville Sportsman Gun Range . What should happen if a stray bullet from the range hit an exposed gas pipe ? The proposed site will effect so many facets of my life. .It also scares me and my family living so close to . This has caused me to be stressed out without no one to address any of my concerns. I have written Senators , State Reps , visits to Town Officials, have stayed until midnight to get the chance to speak with the FERC officials that came to the Town to hear residents concerns this past summer because this is so important to me and my family .

The town has a Meter station on Methuen Street Dracut that has many complaints from residents stating they smell gas all the time and the noise from it during winter months due to increased usage through the pipes.

I also will have a new 30 in pipe from the Compressor station that will connect to the Meter station. There is a 30 inch along the field behind me now. They will drive a new 30 inch pipe alongside a present 30 inch pipe comprising of two 30 ' pipes . m The new pipe will be closer to my home about 150 feet from the right side of my home stripping many trees and exposing my home to 5 rows of power lines.

The access road to the Meter station is not disclosed but will most likely be along the left side of my property directly alongside my property line from Wheeler road.

Three sides of my home will be dug up for construction that will destroy any value my property has now. I have no recourse as none of this is on my property that I own. I have thought of other sites that are away from developments and would have minimal affect on families and homes and wetlands. I have thought of a couple other spots to locate this Meter Station with much less impact on wetlands , housing developments, Gun Clubs at even a cost savings to Kinder but have no one to give my input too. . I've lived here for 62 years and know the surrounding area. I didn't ask for this and should not be subject to this from a company that has no empathy for anyone. I'm just the little guy asking for your help in this situation.

Please look thoroughly into what is happening here and to my town. Thank you so much for taking the time to read my letter.

Sincerely,

Thomas J Berube

Basis for Intervening:

I am opposed to the construction of an unneeded, unnecessary, unwanted pipeline across NY, MA and NH. I am a small scale organic farmer living not far from one of the alternate routes (through Wendell, MA). I feel strongly that conservation of energy combined with regional investment in alternative energy sources will more than meet the power needs of New England. Both of these would also be far less destructive to our environment and provide decent local jobs. The proposed pipeline threatens my health and livelihood. I have invested my personal time and energy in ways to heal the planet- growing organic food, installing a solar hot water system and a photovoltaic electric system for our farm. Probable contamination of soil, water and air will result from the construction and the building of the pipeline, saying nothing of the pollution and contamination caused by the fracking which is the source of this gas. Methane releases would also greatly impact the planet's fragile balance contributing to global climate change. Not only is a beautiful rural landscape threatened by this pipeline but also the wild life that inhabits this area will be disrupted and possibly destroyed. This destruction will also have a negative economic impact on this area in regards to decreased tourism.

Basis for Intervening:

As a resident of Old Wendell Rd in Northfield I am deeply concerned with the proposed pipeline. Although there are many negative impacts I am especially concerned about noise pollution, decrease in property

value, and safe exit in case of an emergency. First, we are easily able to hear the Amtrak train from >5 miles away. Next, my husband worked two jobs for two years prior to purchasing our land and home in Northfield so we would have enough money to make the move. It feels so unfair to have that hard work and patience taken from us by decreasing the value of our home. Finally, my road is in close proximity to the proposed project and it is a dead end. The chief of police is just a couple of houses away. In case of emergency there is not feasible exit and way to provide emergency services. Clearly, this is not for the betterment of the community, Massachusetts, or even New England. It is solely for the benefit of TGP.

Basis for Intervening:

I am applying as an intervener in Docket CP16-21-000 because I will be directly impacted by this project in a number of ways:

1. My town (Merrimack, NH) is identified as the location of a meter station, which I believe will negatively impact my quality of life.
2. The proposed route crosses my town's watershed and I believe this poses a risk to my town's water supply.
3. I am a Liberty Utilities ratepayer, and I do not wish to be forced to pay for this pipeline through my utility rates.
4. I believe that increasing our dependence on fossil fuels does not help us achieve our long-term goals.
5. I believe that support for this pipeline is based on false advertising.

6. I believe construction of this pipeline will result in a reduction in our rural quality of life.

Basis for Intervening:

I live in Stephentown, NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding for the following reasons:

I am a landowner directly impacted by the pipeline route. The proposed pipeline will run across the back of my property.

My property (parcel #184-.1-11) would be seized by eminent domain.

My source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline.

I live in the “blast radius”so I would be at physical risk.

I anticipate the value of my property will significantly decrease and thus impact my financial well being.

Basis for Intervening:

As Master of Guiding Star Grange # 1 of Greenfield, Massachusetts, I am writing on behalf of the membership of this organization.

We find no justification for this project strong enough to outweigh the obvious dangers to and degradation of our fields, farms, forests, and towns. Blasting and drilling endanger our groundwater and watersheds, and the importance of water to all of us dwarfs any perceived “need” for an additional natural gas pipeline.

Land designated as permanently undeveloped will be violated, and many acres of precious New England farmland which have been preserved through years of effort will be lost. In addition, we are appalled by the environmental degradation from compressor stations, as our natural landscape and its denizens cannot endure the intrusion of such noise pollution, let alone the potential for leaks and discharges. Industry protestations notwithstanding, everyone is aware that accidents will occur; the only questions are exactly where, exactly when, and exactly how far-reaching the damage will be.

Another concern to the Grange and by our estimation a majority of the residents in our area is the folly of promoting higher and higher use of fossil fuels. Although gas may have fewer deleterious effects on our environment compared specifically to coal or oil, we feel that spending capital on the increased use and sale of any fossil fuel, including natural gas, is an unjustifiable step backwards from the sustainable future that we envision for ourselves and our children. The \$5.2 billion and growing price tag of the pipeline would go a long way towards the development of truly effective mitigation of a major global concern.

The Guiding Star Grange calls on you to make the right decision, do not approve the Tennessee Gas Company’s Northeast Energy Direct project.

Thank you, David Cantieni Master Guiding Star Grange #1

20160112-5021

January 11, 2016

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission (FERC)
888 First Street, NE, Room 1A
Washington, DC 20426

Reference: DOC # CP16-21-000

Dear Ms. Bose,

I am writing today to oppose the Kinder Morgan Northeast Direct (NED) Export pipeline. The pipelines and compressor station will scar Massachusetts landscape and put our water, wildlife, forests, agricultural lands and rural character at risk. These include health and safety risks from emissions, industrialization, pollution and the devastating effects of fire and explosions. But then again, you already know this and the devastation it could potentially cause to so many innocent civilians.

Personally speaking, I am and have been a single parent who raised three daughters with little to no help from government programs and/or anyone else. Just over three years ago, I was finally able to purchase my dream home. Although my children are grown and will not benefit from having the security of a stable, safe and beautiful home my grandchildren (Ayva 8, Cameron 5, Leahna 4) will. My grandchildren spend limitless time with me, playing in the yard, fishing in the stream, rolling in the grass all of which are assessable in what is now referred to as ‘Ground Zero’ - Dadak Estates, Dracut, Massachusetts.

‘Ground Zero’ meaning my house, my family, my friends and neighbors will be greatly affected by the potential “PROPOSED” Compressor Station that could ultimately take over our neighborhood.

My concerns are many, including but not limited to:

- 1) Health risks for myself and my family. I currently struggle with Thyroid issues as well as rheumatoid arthritis. Having baseline medical information on these issues will allow me to file suit if they get worse because of the addition of a Compressor Station. ***Is this something you are willing to take responsibility for?***
- 2) Currently, my home uses Propane and I am housing three tanks. I understand, after doing simple research on Google, that a potential issue from the Compressor Station could create havoc and explosions. How would this affect my neighborhood? What about the many propane tanks located in the 'Ground Zero' neighborhood. ***Will I have time to evacuate safely? Is this something you are willing to take responsibility for?***
- 3) How will having a Compressor Station affect the value of my home? I recently placed my house on the market (July 2015) due to the potential of moving closer to my place of employment. After a quick three weeks, I realized that my home, located at 180 Methuen Road, Dadak Estates, was my dream home and there were no other homes comparable to it and therefore took it off the market. The appraised value at this time was \$499,000.00. It is important that I note this so that I have a baseline if, in fact, the value drops. My future, my retirement, my means to support myself as I age and to support my family is dependent on the value of my home. After simple research on line, it has been noted that home values quickly go down when a Compressor Station is built and operational. ***Are you willing to take responsibility for the potential loss in my home value?***
- 4) Why is it, considering I'm located within 'Ground Zero' that I was never notified by Kinder Morgan or the Tennessee Gas Company that a potential Compressor Station would be built in my neighborhood. As an American, born and raised in close proximity of where I currently reside, don't I have rights? I don't recall forfeiting these rights or my family's rights to Kinder Morgan or the Tennessee Gas Company allowing them to neglect or overlook informing me of the potential of a 'Compressor Station' being built and utilized in my neighborhood. ***Are you willing to take responsibility for this unconstitutional act by Kinder Morgan and the Tennessee Gas Company?***
- 5) I am requesting that the entire process be reviewed and resubmitted because of the change in route and not having been notified. Better yet, this project should be canceled all together. It is apparent that Corporate Greed is running this out-of-control project and should be stopped now.

In closing, I am begging and pleading on behalf of myself, my family and all those who will be affected by this unnecessary additional to my neighborhood to stop the Pipeline and the Compressor Station.

I can be reached at ronijn04@yahoo.com; mobile 508-951-7578; 180 Methuen Road, Dracut, MA 01826 if you find it in your heart to discuss my concerns with me direct.

Sincerely,

Ronnie Hoey (electronic signature)

Basis for Intervening:

I am a landowner in the town of Stephentown. I believe that the Tennessee Pipeline would do much damage to the health of those along the pipeline should there be an accident. I do not like the idea that there are incineration zones nor that it could contaminate my drinking water, pollute the land, cause noise pollution, and cause lasting health issues for myself and my family. Not only that but it would also bring down the property worth as many people would steer clear of the area, causing great economic hardships for those who enjoy and chose to live in this area. The folks of this area do not wish to see the pipeline come through the town of Stephentown or Nassau. I believe it will do more harm than good and seeing how it has already been determined that the pipeline is not vital necessary to those in the Massachusetts area and the surrounding areas I do not feel there is a need to put the public in harms way with the said pipeline.

Basis for Intervening:

The pipeline is not needed. Our state has made a huge commitment to renewable resources and conservation. It's working. I am frightened about how we could respond to an accident. Our emergency services are simply not equipped to deal with what would be required. I'm also concerned about our aquifer. I have a drilled well that supplies wonderful water. I do not want that to change. Those of us who live here sacrifice a lot to choose country life. It's a long way to drive to jobs, doctors, hospitals, and shopping. The roads are bad, especially in winter. We choose all these inconveniences because it's worth it to live in the midst of nature, where we have clean air, clean water, pure food, and pure forests that support a wide diversity of wildlife. The pipeline would jeopardize our entire way of life.

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION
Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct Project

MOTION TO INTERVENE OF KAELA LAW

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project proposed by Tennessee Gas Pipeline Company, LLC , a subsidiary of Kinder Morgan, Inc. Communications concerning this proceeding should be served upon me as follows:

Kaela Law, PO BOX 652, Pelham, NH 03076, 603-490-5575, kaelalaw@gmail.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

-Filing to intervene on behalf of the Pelham, NH Conservation Commission. The Conservation Commission’s responsibilities to the Town of Pelham, as established by RSA:36-A, are to assure the proper utilization and protection of natural resources including the watershed resource, wetlands, open space, surface and ground waters. The Northeast Energy Direct Project as it is currently sited directly impacts Pelham’s Peabody Town Forest (Map 29 Lot 7-3 and Map 30 Lot 7-4, Lot 7-12) and Pelham’s Costa Conservation Area (Map 36 Lot 10-10, Lot 10-10-1, Lot 10-15)

-Filing to intervene on behalf of myself. My property, located at 27 Briarwood Rd. in Pelham, NH, was at one time directly impacted by the Northeast Energy Direct Project, and may be again before the final siting of the pipeline.

Individual	lynnstw@sbcglobal.net	

Basis for Intervening:

The proposed NED pipeline designed to transmit high-pressure, odorless gas through 70 miles of Southern New Hampshire will have a negative impact on the environment and economics of the area. The project will disturb and redirect numerous aquifers, ponds, watersheds, and lakes. Noise and exhaust/toxic emissions from blow down valves and compressor stations are dangerous to residents, will disturb wildlife, and will impact hunting, fishing, snowmobiling, and boating. Given other ongoing hydroelectric and pipeline projects in NH, this project would provide substantial excess capacity that would not be used in NH. This project poses safety risks to residents, and passes along costs to ratepayers that are not in line with needs of NH residents.

This project endangers the health, safety, property value, and drinking water of NH residents, while threatening some property owners with eminent domain. The proposed path comes dangerously near superfund sites, local schools, and emergency shelters. According to a recent study/survey, most of Fitzwilliam alone is comprised of wetlands.

I oppose this project. Kinder Morgan states that this project is for public necessity and convenience, when in fact it is for their financial gain. No one in this town needs nor wants their services. Their project will disrupt our peaceful neighborhood as well as disrupt all of the wildlife that resides in the very area that they want to disturb. We have moose, deer, bear, turkeys, hawks, rabbits and fox to name a few. I can lose my property as a result of eminent domain because the pipeline is scheduled to go directly behind my property line. There is no reason to disrupt a lovely, high income neighborhood to put a pipeline in. This project will bring nothing but turmoil to our environment and possibly a great deal of harm to our homes, land and quality of life. All for KM to fill their pockets. Please don't let them do this to us.

I am a property owner directly impacted by the pipeline. I am worried about the safety of my family, the overall impact to the town of Townsend, and the environmental impact of fracking in general. It is also difficult to accept that a project that would diminish the quality of life of so many would in no way offers any benefit to those effected. yht

Basis for Intervening:

As a resident of the town of Fitzwilliam NH, through which the proposed Northeast Direct Pipeline will pass, I am concerned about the negative impact this pipeline will have on the quality of our water, air, and open spaces. I am particularly concerned about Tennessee Gas Pipeline, LLC's decision to locate the pipeline route adjacent to an EPA Superfund Site - a Superfund Site that itself lies in close proximity to the pristine waters of Rockwood Pond. Also, I am concerned about the economic impact this pipeline will place on our town's resources, our tax base, and our electric rates. Given the information shared with the public by Tennessee Gas, I have come to the conclusion that this pipeline does not serve the public good and in no way rises to the level of an appropriate use of eminent domain.

Basis for Intervening:

The 2008 Global Warming Solutions Act of Massachusetts calls for reducing greenhouse gas emissions between 10 percent and 25 percent below 1990 levels by 2020. The Northeast Energy Direct pipeline is in direct conflict with this.

FERC should not pre-empt Article 97 of the Massachusetts Constitution approved by voters in 1972 to protect land designated for conservation from being used for other purposes.

Regulatory agencies that have approval authority on such projects (FERC, DOT etc.) need to acknowledge the reality of climate change and our human impact upon it. This is not easy given the straightforward charges of their dominion to determine whether a applicant has satisfied all requirements established for business as usual fossil fueled economies. FERC has to figure out how to change its history of operating within its limits of authority and approving projects, such as the NED pipeline. The futures of our grandchildren and their grandchildren deserve better than the world we are creating for them.

The quantity of gas able to be transported in the pipeline is far and above what might be used domestically. The M&NE pipeline has recently applied for a permit to reverse direction, bringing gas up to export facilities in the Canadian Maritimes. The TGP Northeast Energy Direct pipeline goal is to make money for shareholders; it has little to do with residents of Massachusetts.

Basis for Intervening:

Although I live in Northampton, MA, I own land in Buckland, MA and intend to build a house on this land for my retirement years. Having lived in this area in the 1970s, I am familiar with its quiet surroundings, the wide variety of wildlife, and the opportunities for peaceful, outdoors recreation (skiing, hiking, etc.) The multiyear construction of the pipeline will generate a lot of noise, and the ongoing operation of the pipeline compressors will also have an impact on the quiet, the wildlife, and the opportunities for outdoors recreation.

These are the immediate personal impacts of the pipeline. In addition, I have a broader set of objections to the pipeline, based on its impact on the local and state economy and its impact on climate change

--I object to the evident overriding reason for construction of the pipeline: to move gas to ports in the NE, from where it will be shipped and sold to other countries. There is little or no economic benefit to residents of NE, and the cost of pipeline construction, passed on to ratepayers, may actually mean a rise in energy prices in NE. I also object to the recent moratorium in new natural gas customers for our gas company, an obvious ploy to build support for the pipeline.

--Current trends show that the renewable energy sector is generating jobs at a rate twice that of the fossil fuel industry (including infrastructure development), perhaps even more. The job creation argument for pipeline construction is thus a false argument, again designed to build support for a project that would create few jobs, most of which would disappear when the pipeline is completed.

--Most important, the renewable energy sector must be developed as rapidly as possible, if we are to have any hope of stopping climate change (global warming) in time to maintain a livable planet. The construction of a pipeline to move a fuel that, in its burning and in its leakage, substantially contributes to climate change is a counterproductive short term strategy and removes resources and labor from growing the renewable energy sector. Put bluntly, it is morally reprehensible to devote these resources to a dying energy model and to therefore increase the chances that the world will become much less friendly to human and all life.

For these reasons, all residents of the State, regardless of proximity to the actual proposed route of the pipeline, have an immediate, strong interest in the pipeline not being built. The impact is immense, unnecessary, and wrong.

Docket # CP16-21-00

Dear Administrative Staff ,

I would like to be an Intervener for this project . I am the property owner of parcel MBLU 38/48/1 on the Dracut Ma. assessors map. I reside at 270 Wheeler Road in Dracut Massachusetts . I will be severely impacted by this project on 3 sides of my property . On the right side of property an added 30” Pipe alongside a 30” existing pipe within 150 of my property line stripping trees that now hide 5 rows of power lines . Along the backside of my entire lot will be a New Metering Station within 100 ft of my property line exposing my home to fumes and noise pollution and severely impacting the views from my yard and windows . The left side will be dug up along the entire length of my property for an access road to the new Metering Station. This project will make the sale of my home virtually impossible along with substantial decrease of my homes property value. It will compromise my health and safety. I am also within 1/2 mile of the proposed Compressor Station on Broadway Rd Dracut .

Sincerely,

Thomas J Berube
270 Wheeler Road
Dracut Massachusetts 01826
978 551-1300
tmb270@aol.com

20160112-5042 Christophe Bradler

This project will negatively affect my family, our town, and community due to the fact that:

1. I am Concerned because we are developing a large Solar Array on our land, and the pipeline can not go through it. We are not going to sell any of our land to the pipeline. It will need to go around.
2. I am concerned that the Compressor Station, where it is proposed now, is very close and the emissions from the Compressor Station landing on the Solar Panels would reduce the efficiency and output, which would have a negative effect financially for all parties involved. This would need to be monitored and dealt with.
3. We are concerned that Compressor Stations emissions are known to result in a health problems including a Death Rate rating..... Solar Field Arrays do not!
4. We are concerned that this Solar Array plus any or all of the other three Solar Arrays that are in the works along the proposed pipeline route will also be subject to these negative effects.
5. The need for Solar Energy far outweighs the need for this NED pipeline.
6. I am concerned and do not wish to subject my family to the harmful effects of this NED pipeline.
7. I will hear, smell, feel, see and potentially taste (dug well water quality) the effects of the compressor station.
8. We are concerned about air quality due to 41,000 HP turbines generating exhaust.
9. We are concerned disturbances to our dug well as it taps into stratified drift aquifer that the compressor station is on top of.
10. We are concerned with the continuous noise of compressor station, 247.
11. We are concerned with noise and pollution from blowdowns.
12. We are concerned with light damage to dark skies. We won't be able to see stars.
13. We are concerned with subsonic vibrations that can subconsciously affect health.
14. We are concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.
15. We are concerned with traffic, noise, air pollution and numerous disturbances during construction.

16. We are concerned with the property values and housing values plummeting because they are close to a compressor station. Our hard earned money will be lost, without ANY gain.
17. We are concerned with the potential closing of the Temple Elementary School because families don't want their children to go an elementary school within half mile of the compressor station.
18. We are concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.
19. We are concerned with the industrialization of the neighborhood. The only things that are comfortable living next to 41,000 HP compressor stations is other heavy industry.
20. We do not want to live in the shadow of the proposed compressor station and feel its effects.
21. We do not want to pay for a Pipeline / Compressor Station in a tariff on the electric bill, when everyone is so vehemently against it being built.
22. We feel that Eminent Domain should only be used for Public Use not Private Company Use.
23. As a Electric customer of this state I do NOT want to pay for a high pressure gas pipeline as a tariff in my bill!

Basis for Intervening:

I am opposed to this pipeline and will be adversely affected because I have spent almost my whole adult life working in my town, Wilmington, to protect our local water supply and the Ipswich River Watershed. This pipeline will significantly impact all the work that has been done by me and others. Pipelines don't belong in aquifers. I have served on the Board of Selectmen, Open Space Committee, Master Planning Committee, Community Advisory Panel (to address contamination of the Maple Meadow Brook Aquifer), I currently serve as the Vice President of the Wilmington Restoration Committee, a 501C3 set up to administer an EPA Technical Assistant Grant to help citizens understand and to help over sight of the Olin Chemical Superfund Site responsible for shutting down and contaminating the Wilmington water supply in the Maple Meadow Brook Aquifer. I am currently on the Community Advisory Committee for the ongoing Wilmington Childhood Cancer Study which is suspected of being related to the contamination of our drinking water. I am also currently serving as a co-chair to the Headwaters Stream Team, a citizen group which has been advocating since 1999 for the protection of the Headwaters of the Ipswich River. We have filed several wetland appeals, adjudicated several with good outcomes and settlements. I also currently serve on the Board of Directors of the Ipswich River Watershed Association. I also have 3 children in their early 20's who's future is in jeopardy from this pipeline and the fossil fuel industry. I also am opposed to fracking. Fracking is unethical and is in my opinion one of the biggest environmental crimes against the American people. The gas should be left in the ground, we don't want it!

This pipeline is proposed to go through our last remaining large water supply. We have already lost one due to contamination with lingering effects. I know first hand the amount of work and dedication it takes to address contamination issues. I have been involved with the Olin Site referenced above since 1997. A major concern is pipelines can act as conduits. There is contamination in this area that could migrate via the pipeline into our aquifer. And then there is the prospect of leaking, either now or in the future especially if this use (material in pipeline) were to change to something else. Then also include this pipeline is proposed to

go through an active quarry is compounds concerns not only for safety but also what that would mean to our aquifer if a rupture were to occur. Wilmington can not afford anymore contaminated water supplies.

This pipeline will destroy habitat and the banks of the Ipswich River, the most stressed river basin in Massachusetts. Massachusetts has spent significant resources, both public and private to restore the Ipswich River. Just upstream of the Middleton/Peabody significant resources are being used to remove and reter the banks of the Ipswich River and just done stream Kinder Morgan is proposing to destroy the banks. It is just wrong! It is ludicrous for an out of state company with no interests other than profit to sell gas over seas to destroy what so many have worked for decades to restore. There is NO mitigation that can be done to lessen he impacts.

Basis for Intervening:

I am applying for intervenor status because my elderly parents currently call Gulf Road, Northfield, MA their home and would be directly impacted by the presence of a Kinder Morgan compressor station in the surrounding area. My entire family would be vulnerable to the deleterious health effects for which compressor stations have been shown to be responsible. The value of my parents' home would certainly decrease if a compressor station/pipeline was allowed, as would all the surrounding property values.

Northfield, MA is wonderfully charming, bucolic town with breathtaking landscapes and is the epitome of unvarnished, New England beauty. From it's colonial New England stone walls to the countless sites of historical significance, Northfield, MA is a lovely, rural town that deserves to be protected and preserved as a bedrock of this country's history, not exploited for the financial gain of private enterprise.

RE: Docket No. CP16-12-000 (Formerly Docket No. PF14-22-000)

Dear Sirs,

Please understand that it is necessary for me to become an intervener against the Northeast Energy Direct (NED) pipeline proposed by Kinder Morgan and Tennessee Gas Pipeline.

The compressor station is located close to an annual migration path of thousands of raptors. The high-pressure, high-capacity station’s exhaust plumes of heated gases may bring significant safety risks to these birds. The proposed pipeline route requires a new right-of-way that would cut through many miles of environmentally sensitive areas and take permanently protected land out of that protection. Co-location implies a 100 to 150 foot wide swath of land to be cleared during construction alongside (and not underneath) the power lines. That’s 1500 acres deforested along 71 miles in New Hampshire. Power lines can provide a convenient ignition source for any nearby leaks.

The pipeline and compressor station are alarmingly close to the Temple Elementary school whose heating system uses outside air to heat the facility. This high-pressure, high-capacity station may bring significant human safety risks to our teachers and children attending the school.

The pipeline and compressor station are located terribly close to Our Lady of Hope, our religious facility. This high-pressure, high-capacity station may bring significant safety risks to our Sisters living there.

The gas that would be carried in the pipeline as projected would be particularly high in toxins and radiation, and the negative health impact upon our families, animals and plants must be avoided. Some “fracking” compounds and chemicals negatively impact the skin, eyes, sensory organs, the respiratory system, the gastrointestinal system, the liver; the nervous system; and are candidate endocrine disrupting chemicals. Endocrine disrupting chemicals (EDCs) present unique hazards, particularly during fetal and early childhood growth and development. We do not understand why citizens of our community must be subjected to these increased risks when this is entirely avoidable. Noise and light pollution from the compressor station will also be significant.

Few people in New Hampshire actually use natural gas and this pipe’s capacity far exceeds the state’s demand even for peak winter use. This poses the possibility that gas may be exported via NED to foreign countries. We wonder why people’s land will be taken via eminent domain where the principal beneficiaries are foreign nationals? Gas is a precious American resource and must be preserved for American use.

Solar and wind energy production has been increasing rapidly across the state and can eventually fulfill our energy growth requirements. Natural gas is not renewable and is still a fossil fuel. Methane released from leaks and blowdowns is a much more powerful greenhouse gas than ordinary CO2.

I urge FERC to deny NED

Thank you for your consideration

20160112-5055

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

_____)	
Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
Northeast Energy Direct Project)	
_____)	

**MOTION TO INTERVENE OF
BOARD OF HEALTH
TOWN OF WINDSOR, MASSACHUSETTS**

There Board of Health of Windsor, Massachusetts hereby moves, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. We seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me, Chairman of the Board of Health, as follows:

Joseph L. Pfeifer, M.D.
110 Hill Cemetery Road
Windsor, Massachusetts 01270
shockdoc81@yahoo.com

Local boards of health in Massachusetts are required by state and local laws and regulations to perform many critical duties related to the protection of public health. These duties cover a wide range of public health control and prevention activities, including: disease surveillance; the promotion of sanitary conditions in housing, recreational facilities, and food establishments; elimination of nuisance; the protection of the environment; and numerous other responsibilities. These requirements reflect the principle that many critical health problems are best handled by local officials familiar with local conditions.

Creation and General Authorizing Statutes:

The general structure, powers, and duties of local boards of health are found at M.G.L. c. 111,s.26-33.Boards have authority to adopt and enforce reasonable health regulations under M.G.L. c.111, s.31.

Case law upholds boards’ authority to adopt regulations that are more restrictive than state standards so long as the local regulations do not conflict with state law and are not specifically preempted.

Among the specific responsibilities and laws pertinent to local boards of health are:

General Health Protection and Regulation:

- 1.Adopt and enforce any reasonable health regulations. M.G.L. c.111, s.31.
- 2.Issue an order reciting the existence of an emergency and requiring that such action be taken as the board deems necessary to meet the emergency. State Sanitary Code, Chapter 1, 105 CMR 400.200(B), pursuant to M.G.L. c.111, s.127A; and State Environmental Code, Title I, 310 CMR 11.05(1).

Hazardous Wastes:

1. Assign the site for a hazardous waste disposal facility as follows (M.G.L. c.111, s.150B):
 - a. Notify the Department of Environmental Protection (DEP) of the receipt of an application to assign a site.
 - b. Assess significance and degree of danger to public health and consider and evaluate any evidence submitted.
 - c. Give public notice and hold a public hearing.
 - d. Every decision of the board in assigning or refusing to assign a site must be in writing and include a statement of reasons and facts relied on.
2. Chairperson of board serves on the local assessment committee, established whenever a developer seeks to construct and operate a hazardous waste facility within the city or town. Committee has certain duties including negotiating with the developer, entering a contract, and adopting necessary rules and procedures. M.G.L. c.21D, s.5.
3. Notify the mayor and city council or board of selectmen of the following (M.G.L. c.21C, s.4):
 - a. Pending applications for licenses for the collection, storage, treatment, or disposal of hazardous

waste, upon notification from DEP.

b. Information supplied annually by DEP identifying types and quantities of hazardous waste generated, stored, treated or disposed of within the city or town.

Boards of health assign sites for storage, treatment, or disposal of hazardous waste (not including wastewater treatment facilities permitted under M. G. L. c. 21, s. 43) in compliance with M.G.L. c. 111,s. 150B.

The Department of Environmental Protection (DEP) must notify the board of any pending application in its town for a license for the collection, storage, treatment, or disposal of hazardous waste, and the board must notify the local governing authorities (selectmen, etc.). DEP also supplies information annually to the board identifying types and quantities of hazardous waste generated, stored, treated or disposed of within the city or town, and the board is again responsible for notifying the governing authorities. M.G.L. c.21C, s.4. A board may rescind, suspend, or modify the site assignment after due notice and hearing after determining that the operation and maintenance of a facility has resulted in a significant danger to the public health or is not in compliance with the conditions established in the assignment. A decision in writing must be made including a statement of reasons and facts relied upon by the board.

Solid Waste:

1. Assign sites of sanitary landfills, refuse incinerators, waste storage or treatment plants, and refuse transfer stations, after a public hearing. Ensure that these do not present a danger to public health. M.G.L. c.111, s.150A.

2. Consider and act on applications for permits for the disposal of special wastes. 310 CMR 19.16.

Nuisances:

1. Investigate nuisances which in the board's opinion may be injurious to health. The board shall destroy, prevent or remove such nuisances, and shall make regulations relative to nuisances. M.G.L. c.111, s.122.

2. License noisome trades M.G.L. c.111, s.151.

3. Condemn all nuisances; clean or tear down a nuisance. M.G.L. c.111, s.128.

Boards of health are required to examine into all nuisances, sources of filth and causes of sickness within the city or town. Whenever a board is aware of a nuisance or cause of sickness that may be injurious to the public health, the board is required to remove or destroy the nuisance or cause of sickness, or prevent the nuisance or cause of sickness. M.G.L. c. 111, s. 122.

The board is required to make regulations related to the removal and destruction of such nuisances. M.G.L. c. 111, s. 122. Boards may condemn all nuisances and clean or tear down a nuisance. M.G.L. c. 111, s. 125. Boards are authorized to enter any land, building or premises, or go on board a vessel within its town, to examine into and destroy or prevent a nuisance, source of filth or cause of sickness. M.G.L. c. 111, s. 131.

Air Pollution:

1. Adopt and enforce regulations to control air pollution. M.G.L. c.111, s.31C.

Boards may adopt and enforce regulations to control air pollution. M.G.L. c.111, s.31C. DEP's air pollution control regulations provide specific authority to local boards to enforce certain provisions. 310 CMR 7.00. Some of the specific areas include: open burning (310 CMR 7.07); incinerators (310 CMR 7.08); dust, odor, and construction and demolition (310 CMR 7.09); noise (310 CMR 7.10); transportation and idling (310 CMR 7.11); asbestos (310 CMR 7.15); and outdoor wood boilers (310 CMR 7.26(50)).

Occupational/Industrial Safety:

Boards receive reports of inspections by the Division of Occupational Safety regarding violations of health laws or nuisances in industrial establishments. Local boards must investigate these reports and enforce appropriate laws. M.G.L. c.149, s.136

Trenching Permits:

The Board of Health is also charged with the issuance of trenching permits in the town. Trenches are considered excavations deeper than 4 1/2 feet in depth.

Our interests, as the Board of Health for the Windsor community, “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

- 1) **AIR QUALITY**- The presence of a 40,000 horsepower compressor station, operated through the combustion of hydraulically fractured methane and other organic contaminants found in pipelines presents an imminent risk and threat to air quality in the town. These risks arise from the release of methane and particulate matter (P-2.5 and P-10 microparticles) from the normal operation of a compressor. Massive amounts of the same chemicals are released during maintenance and emergency blow-downs. Formaldehyde is produced when water vapor and sunlight act on methane, as would happen with fugitive or deliberate emissions. Formaldehyde is a known carcinogen and has been implicated in human illness occurring near compressor stations (e.g.-Minisink, NY). . Published studies by Dr. David Carpenter, director of the Institute for Health and Environment of SUNY Albany, and colleagues, have shown that these chemicals are found in high concentrations in the air at distances as high as 355 m from compressor sites in a five-state study (Environmental Health 2014, 13:82).

Adequate safeguards against these releases and their emissions have not been put in place by Kinder-Morgan. Adequate real-time monitoring of noxious emissions within 1/2 to 1 mile of the compressor has not been proposed in the filing of Kinder-Morgan.

- 2) **WATER QUALITY**-The construction of the pipeline will necessitate the use of high explosives to create the 6-8 feet deep trenches into which the pipeline will be laid. The geology of Windsor and the proposed pipeline route contains deep granite bedrock which will necessitate high explosive blasting. The health risk of such blasting includes, but is not limited to, the introduction of perchlorate into the drinking water supply. Because of the ubiquitous presence of bedrock throughout the Town, extensive use of explosives is expected during pipeline construction. The commonly used oxidant in such explosives has a known tendency to contaminate ground water in areas proximate to blasting. Perchlorate has been determined by the Environmental Protection Agency (EPA) to be a thyroid endocrine disruptor, a likely human carcinogen and an emerging chemical of concern.

The citizens of Windsor are completely dependent upon wells for their drinking water. Due to the bedrock formations at 38 inches below the surface along much of the proposed Pipeline Corridor through Windsor, there is great concern about the impact of the required blasting on nearby wells.

The Town of Windsor has 25 private wells within 1000 feet of the proposed Pipeline, documented by Berkshire Regional Planning Commission (BRPC) mapping, with two located within 300 feet. Fifteen of the Windsor wells are located in areas where the proposed Pipeline construction must pass through shallow to ledge conditions. Fourteen of these wells are located near the intersection of High Street Hill and Shaw Road, where there is perhaps the greatest density of housing in the Town, and where bedrock is at 38 inches and the proposed trench depth will be 72 inches. Another well in extremely close proximity to the Corridor is located on Peru Road.

Kinder Morgan has not proposed adequate monitoring and assessment of surface water, wells and underground water-bearing formations. No plan for assessing these water sources pre-blasting and post-blasting has been proposed. No plan for remediation of contaminated water sources is proposed.

- 3) **HEALTH AND HUMAN SAFETY**- The construction and operation of large-scale gas infrastructure entails risks to human health and safety. In 2011, the U.S. Pipeline and Hazardous Materials Safety Administration (USPHMSA) cited Kinder-Morgan for these safety violations: failing to maintain update maps showing pipeline locations, failing to test pipeline safety devices, failing to maintain proper firefighting equipment, failing to inspect its pipelines as required, and failing to adequately monitor pipes' corrosion levels.

Close examination of USPHMSA's incident reports for Kinder-Morgan's onshore gas transmission pipelines shows that faulty infrastructure caused 45 percent of onshore gas transmission pipeline significant leaks. Failure of the pipe, cracked welds, and faulty pipeline equipment together accounted for 28.3 percent of pipeline leaks, and corrosion of the pipe caused 16.8 percent. Throughout the U.S. since 2003, Kinder Morgan and its subsidiaries' pipelines have been responsible for at least 180 spills, evacuations, explosions, fires, and fatalities in 24 states.

USPHMSA found that pipelines installed since 2010 leak at a higher rate than pipelines installed before 1940. The majority of pipeline leaks detected from 2003 to 2013 came from pipes installed after 2010. Robert Hall, director of the NTSB's Office of Railroad, Pipeline and Hazardous Materials Investigations, noted in a Sept. 1 interview that the rapid construction of pipelines in the U.S. is likely a contributing factor to these leaks. It is of interest that the decade of 2010 is when Kinder-Morgan became the largest pipeline operator and builder, with 84,000 miles of pipeline. According to its annual report, it spends \$0 on research and development.

During construction it can be expected that an increase in industrial accidents will occur, such as crush injuries, burns from welding and traumatic amputations. These injuries will place an unprecedented strain on the resources of the Windsor community to deal with them.

Pipelines and compressors are subject to accidents and explosions. The available emergency resources in Windsor to cope with such potential disasters is utterly inadequate. A compressor explosion in Windsor would result in incalculable environmental damage.

The proposed Compressor Station is sited in a rural area at the end of a narrow, winding dirt road. There are six homes in close proximity to the Compressor Station site. Two of them produce lamb and vegetables, raised without pesticides for sale. The land of approximately 24 homeowners is crossed by or lies within a corridor 500 feet or less from the Pipeline, and the 2000 Gas Research Institute "Model For Sizing High Consequence Areas Associated With Natural Gas Pipelines" would lead to an Impact Zone of nearly 800 feet (Pipeline Safety Trust Working Paper No. 6 "Thinking About Risk" at pp. 4-5) and the one-half mile buffer zone around the Compressor Station eliminates one home and puts four others at risk. The Pipeline will cross the main arterial highway (Rt. 9) twice; once at the entrance to the Town, as well as several local roads, some of which are single access (other than undeveloped gravel roads that are closed during the winter season), causing significant detours. The Town of Windsor is one of the most rural towns in the Commonwealth, and has some of the lowest ambient noise levels in the state. The Town has minimal street lighting, and the lighting of the Compressor Station on one of the Town's highest points would be visible throughout much of the Town.

Gary Buchler, COO of Kinder Morgan has publicly claimed that Kinder Morgan has spent \$22 million in research and development since 2011 on pipeline and compressor safety. (Berkshire Eagle Oct. 3, 2015) Nowhere in Kinder Morgan's 2014 filing of its 10-K Annual Report with the Securities and Exchange Commission is there a line item for research or development. In fact, the word research cannot be found anywhere in the report. In Kinder Morgan's required Form 2 financial filings with FERC for the period in question, research and development expenditure is recorded as \$0.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower environmentally destructive industrial undertaking are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued. We have been studying this proposal since it first became public, and can bring valuable information and perspective to this proceeding.

Furthermore, the Board of Health serves as the guardian and protector of this community's health, with the aforementioned state-mandated regulatory and oversight responsibilities.

WHEREFORE, for the foregoing reasons, we respectfully request that our motion to intervene be

granted.

Respectfully submitted,

Joseph L. Pfeifer, M.D.

Chairman, Board of Health Town of Windsor, Massachusetts

{Maureen Morine}

I strongly object to the construction of the proposed pipeline for a number of reasons. The NED Pipeline Project infrastructure and increased natural gas capacity is not needed for New England.

There are currently enough leaks in the existing infrastructure to provide another 400 MW of power, natural gas pipeline leaks cost consumers billions and there are also existing pipelines that are standing at least partially unused. Using these to capacity to store gas during non-peak times can keep enough reserve to cover the few days every winter when peak demand drives up prices.

With nearly four times the capacity called for, where is the other three quarters of that capacity destined? The terminal hub in Dracut is also a connection point to the Maritimes & Northeast (M&NE) pipeline which has just applied to switch direction, bringing gas from Massachusetts, through Maine to the Maritimes of Canada, where two ports have just applied to switch from import to export. There is also new potential for export from facilities in Maine and Everett, MA. We should not be left holding the bag, the environmental damage, and the cost so Kinder Morgan and his investors can reap the rewards of economic gain at our expense. When the gas is exported consumers will see an increase by up to 45%. Subsidized pipelines are not in the best interest of energy consumers.

New England residents could be burdened with an additional tariff on their electric rates to pay for this private project that could generate enormous profits for Kinder Morgan and the gas producers. Kinder Morgan has estimated the cost of its proposed pipeline at approximately \$5 billion. This would be an inappropriate use of the public's money and land as the project would be a private for-profit venture. Not only is this an inappropriate use for a project that would be financed by tariffs on our electric rates, built using the power of eminent domain, and possibly breaking conservation easements as well, but it means we would see minimal, if any, benefit as towns, a state, a region, or a nation. It isn't fair or justified for ratepayers to bear the burden for something that's not needed or for a private for Profit Company.

The proposed pipeline path runs through thousands of private and public properties, some of the state's most sensitive eco-systems and lands set aside for conservation and aquifers. This pipeline infrastructure would be a super-gas-highway across the most pristine lands in the state. The pipeline also poses risks to water, safety, human life and health, from leaks, ruptures, explosions. Pipeline safety incidents are being reported across the country because existing pipelines aren't being maintained or monitored routinely and will force affected landowners to monitor pipeline safety.

Those in the path of the proposed pipeline should not be forced to aid and abet in this dangerous and short-sighted exploitation of our nation's natural resources. It's not clean, cheap, safe or even necessary. Our signature assets of picturesque towns, rolling hills, small farms, verdant forests and protected wetlands would be destroyed if Tennessee Gas Pipeline Company is allowed to carve a permanent scar into our landscape and destroy our natural resources. We have the right to safe and clean environments and future generations deserve the same opportunities we have today.

Respectively submitted January 11, 2016

MOTION TO INTERVENE

In regard to Tennessee Gas Pipeline's Proposal
Docket No. CP16-21-000

Claire Miller, lead organizer
Toxics Action Center
294 Washington St, Suite 500
Boston, MA 02108
617-747-4363
claire@toxicsaction.org

Shaina Kasper, community organizer
Toxics Action Center
30 South Main St, Suite 301B
Concord, NH 03301
603-229-1331
shaina@toxicsaction.org

Toxics Action Center is a non-profit that works side by side community groups throughout New England to clean up and prevent pollution. We provide free assistance to local community groups affected by these polluting projects in the form of critical capacity building, organizing training, and leadership development. We envision a region that minimizes pollution by reducing its consumption of fossil fuels to none while it maximizes energy efficiency, is powered by clean renewable energy like wind and solar, all connected by a state of the art smart grid.

Toxics Action Center's mission is to work side-by-side with communities, providing new leaders with the skills and resources needed to prevent or clean-up pollution at the local level while developing advocates for a sustainable future. Our community organizers partner with community groups and core grassroots leaders to hone a strategy, stay up-to-date with new information, and train and execute grassroots tactics. Additionally, we connect local grassroots groups with each other and with professional organizations.

Our member groups fighting this proposed pipeline include but are not limited to community groups fighting the pipeline including S.T.O.P the Pipeline, MassPLAN, No Fracked Gas in Mass, StopNED, and NHPlan. Pursuant to Rule 214 of the Federal Energy Regulatory Commission ("FERC") Rules of Practice and Procedure, 18 C.F.R. § 385.214, Toxics Action Center hereby submits this timely motion for intervention in the above-captioned proceeding.

As an organization operating in Massachusetts and New Hampshire with the distinct mission of assisting community groups prevent pollution in their neighborhoods, Toxics Action Center is filing this motion to intervene in the interest of residents along the proposed route in Massachusetts and New Hampshire who are in opposition to the construction of this pipeline Northeast Energy Direct project proposed by Tennessee Gas Pipeline Company, L.L.C. for the following reasons:

1. The construction of this pipeline would bring health hazards to the communities directly proximal its route. There is increased risk to extensive damage from said fires or explosions due to the inability of small local communities' emergency response teams along the route. These local emergency response teams often do not have the capacity to deal with potential disaster, particularly in rural communities. Additionally, gas leakages both intentional and accidental along the pipeline and a various appurtenant infrastructure, cause health concerns.
2. The construction of this pipeline will increase climate change and its related hazards of extreme and unpredictable weather events. The fracked natural gas that will be transported and/or stored in the pipeline is a fuel that releases climate-changing methane throughout its life cycle of being mined, process, trans-

ported, and stored, resulting in an intense impact to global warming. The public health impacts of global warming pollution are many and dangerous. The burning of fossil fuels pollutes our air and water with lead, mercury, soot, smog, and countless other toxic chemicals. Furthermore, global warming means a changing climate, which has its own public health impacts. We know that the environment also weighs heavily on peoples' health. Warmer average temperatures lead to hotter days and more frequent, and longer, heat waves. The number of heat-related illnesses and deaths may increase, along with concentrations of unhealthy air pollutants. Changes in temperature, precipitation patterns, and extreme weather events could enhance the spread of some diseases. The gas brought in by the proposed pipeline will come from fracking of the Marcellus Shale, a process that uses millions of gallons of water laced with toxic chemicals. At full scale it would transport 2.2 billion cubic feet of gas a day, potentially to the global market.

3. The federal pre-emption powers employed to allow construction of this pipeline is undemocratic. It includes removal of permanent protections from public lands in violation of Article 97 of the Amendments to the Massachusetts Constitution.
4. The construction of new fossil fuel infrastructure runs counter to the goals by Massachusetts, New Hampshire, and the region for promoting and prioritizing energy efficiency and clean, renewable energy development. Examples of this include Global Warming Solutions Act, and the Regional Greenhouse Gas Initiative.

As an organization providing direct assistance to communities affected by the pollution resulting from pipeline development, particularly to concerned citizens in Massachusetts and New Hampshire, Toxics Action Center has both (1) "an interest which may be directly affected by the outcome of the proceeding" pursuant to Rule 214(b)(2)(ii); and (2) uniquely positioned with our many years of experience such that "participation is in the public interest" pursuant to Rule 214(b)(2)(iii). We seek FERC approval of our **intervenor request**.

Sincerely,

Shaina Kasper

My land is next to the proposed pipe line route in Erving and am concerned from noise from the blasting and potential leaks from the gas line.

20160112-5062

Submission Description: (doc-less) Motion to Intervene of TOWN OF GROTON, MASS. ET AL. under CP16-21-000.

Submission Date: 1/12/2016 8:51:08 AM Filed Date: 1/12/2016 8:51:08 AM

Wherefore, for the reasons discussed above, the Town of Groton respectfully requests that the Commission grant the Town's motion to Intervene as a party in the above captioned proceeding with all the rights attendant hereto.

Respectfully submitted this 12th day of January, 2016.

On behalf of the Groton Board of Selectmen

Mark W. Haddad
Town Manager

20160112-5067

Lucie W Murray, Nassau, NY.

Hi,

My name is Lucie Murray and I live on Clarks Chapel Rd, Nassau, NY

The Constitution Pipeline filed a request for a Partial Notice to Proceed to begin tree clearing. We assert this activity is presently ILLEGAL and will be resisted.

In fact, this is just the latest in a long list of illegal activities relating to this project, including:

FERC failing to study cumulative impacts of CP and the Kinder Morgan NED as required by the National Environmental Policy Act.

FERC failing to show a need for this pipeline, which will be largely used for export.

Constitution Pipeline Company lying to landowners, and using threats, intimidation, and bribes of dubious legality.

FERC granting a Certificate of Compliance and Necessity to principal partners Williams Company, and Cabot Oil and Gas, d/b/a "Constitution Pipeline Company", who collectively have one of the worst safety and compliance records in their respective industries, and clearly cannot "perform the service proposed and to conform to the provisions of this chapter and the requirements, rules, and regulations of the Commission thereunder", and thus in violation of the Natural Gas Act.

FERC issuing the bogus "conditional certificate" prior to the environmental review being completed. This legal trickery allowed properties to be condemned prematurely, before the suitability of the project could even be determined.

.... and countless other examples of violations of law.

And now this request to begin clearing trees before the CWA 401 or 404 permits are in place.

We therefore DEMAND that

- 1: FERC rescind the Certificate in CP13-499 until cumulative impacts analysis are done
- 2: Constitution Pipeline Company CEASE AND DESIST any and all construction activity, including clearing of trees.

So please be advised that any tree clearing, or other illegal, unauthorized, and/or unpermitted construction activity will be resisted by citizens.

Best Regards,

Lucie Murray

Basis for Intervening:

My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. This proposed pipeline is far more than is needed to meet demand in the Northeast yet, it is very likely to lead to higher energy costs for New England's ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

I also have an interest as a land owner 2.5 miles downstream from the possible compressor station in Dracut near Brox Quarry. I learned from the Northern Middlesex Gas Pipeline Coalition that your agency has instructed Kinder Morgan to investigate alternative locations for the Dracut compressor station. Three alternative sites have been identified at the Brox quarry off route 110 very close to the Methuen line and the Merrimack River.

I am disturbed by this development. The compressor station is a massive, automated, unmanned 23,000 horsepower facility that compresses the natural gas into higher pressures to move the gas through the system. Venting of the system known as “blowdowns” can occur several times throughout the year. Blowdowns can last for hours, releasing large quantities of methane and a host of other chemicals and toxins into our atmosphere. I am concerned for the health of my family, our fragile watershed along the Merrimack, my land value, and the health and well-being of those in my community.

I respectfully request that my motion to intervene be granted.

20160112-5092

Don Simms and Magda Ponce Castro
261A Old Wendell Road, Northfield, MA 01360

Motion to Intervene – Docket #CP16-21-000

We oppose the NED project as I see no public convenience or necessity for the gas pipe line project. As a long term residents of Northfield, we see multiple environmental, economic and safety issues regarding building this project. Drilled wells are the main source of water for the home on Old Wendell Road and the surrounding area. The mapped and targeted are for the pipeline goes through an abundance of ledge, wetland and streams which will be adversely affected.

The Town of Northfield does not and will never have enough resources to support a catastrophic event at the proposed compressor station on Gulf Road. There are already numerous accidents which have happened with gas line compressor stations. Air Quality will also be adversely affected. The supposed intent of the fracked gas pipeline is to bring inexpensive energy to the consumer. The proposed cost of the pipeline exceeding five billion dollars would be better utilized providing safe clean energy.

We have lived in this rural community for over 30 years. There is no way this pipe line can be constructed safely without a massive adverse economic and environmental impact.

Basis for Intervening:

As a resident of Conway since 1971, I want to express my deep and strong opposition to the proposed NED pipeline. There are numerous reasons for my opposition, but in the interest of brevity, I will limit this statement to three of them.

It has been meticulously documented, by multiple unimpeachable sources that, to assure an uninterrupted supply of gas for the New England states the gas, this pipeline will transport is not needed. More efficient management of current gas supplies, conservation efforts, the repairing existing leaks, other proposed, and far less disruptive, pipelines, and the use of existing LNG storage facilities can more than meet the current and future demand for gas.

The construction of this pipeline, a delivery system for an environmentally destructive fossil fuel, is contrary to the energy policy and goals adopted by the State of Massachusetts and the recent worldwide energy summit. Instead of throwing money away on outdated systems and fuels, taxpayer dollars should be used to support innovative and renewable energy sources. As the owner of a solar PV system, I have put my money where my belief system is.

The construction of the pipeline would carve a wide path of destruction through some of the State of Massachusetts most beautiful land, negatively impacting, among other things, forests, wetlands, animal habitat and property values. As chair emeritus of the local conservation commission and a land owner who has his land in Chapter 61 Forestry and Stewardship programs, this pipeline goes against the land protection values I have worked hard to support.

Peter Jeswald

Basis for Intervening:

I am writing because I live within a mile of the proposed compressor station. I fear for my health and for those others who live in the proposed pipeline area.

There is NO economic benefit to our region with this pipeline. We do not need the natural gas from the pipeline, and even if we did, we would not be the ones to benefit as it is for export.

The Monadnock Region of NH is the second highest income-producing area of the state of NH in terms of tourism. Mt. Monadnock is the most often climbed mountain in the US, and the second most climbed in the world. This alone generates millions of dollars in revenue for the state. If the pipeline goes through, this income will disappear. This will affect not only state government, but the people who live in the region.

Many will be forced to move. Tourists will no longer want to come here because the air will be polluted with emissions from the compression station, nor will they want to see our polluted ponds, rivers, and streams.

This doesn't even begin to address the adverse health issues that the compression station and pipeline will bring. It is estimated that people in the affected areas will pay more than \$2 million more in health insurance premiums alone as it adversely affects their health, another economic drain. A huge part of southern NH will become a serious pollution center with high levels of dangerous methane (look at Los Angeles!), carbon dioxide and nitrogen.

This is a critical issue: the compression station will sicken people. With Kinder Morgan's history of equipment malfunctions, and explosions, this station could possibly kill the children at the Temple Elementary School that is located less than 1/8 of a mile from the proposed compressor station, as well as others nearby. Equipment and operator error could cause our drinking reservoirs to become toxic much like what has happened where DuPont has been allowed to pollute. Our rivers, streams and lakes could be polluted, killing fish and making swimming and even boating dangerous. This affects not only those who live here but also tourists - another reason for decreased revenue to an area that deeply depends on this income.

Kinder Morgan's proposal is full of errors, and they have not even completed specific areas of the proposal that are required. If they are this careless with a proposal of this magnitude, do you think they care about the people in NH, their health, their jobs, the environment or its economy?

NH's economy is based on its beauty, and this pipeline will destroy a great deal of that throughout the southern region of the state, as well as bordering areas in Massachusetts.

No one in NH will benefit from this project.

Please state your objection to the proposed pipeline and reject this proposal.

Thank you,

Lilliane LeBel

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	p_lauriat@comcast.net	

Basis for Intervening:

I am strongly against this pipeline project, for many reasons.

1. The plan includes a compressor station within 1/2 mile of Temple Elementary School, exposing our children to toxic fumes, noise, and the likelihood of explosion. Kinder Morgan does not have a good safety record.
2. This plan would forever lower the standard of living in this area. Because of the great natural beauty of the Monadnock Region, people come from all over, to walk in the woods, to climb Monadnock (the second most climbed mountain in the world!), and to enjoy the outdoors here.

With this scar across the region, that would be lost. Property values would also drop significantly. Does Kinder Morgan have a budget line to compensate property owners in the region?

3. We don't need it. Eversource would need to commit to buying far more natural gas than it would need, and our electric rates would go up.

This is bad for NH, bad for the country, and must be stopped!

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	atgibson@crocker.com	

Basis for Intervening:

I am a member of the Board of Health in Conway, Mass. It is the mandate of the Board of Health to look out for the health and safety of our community. And the health of our community is directly related to the health of the environment. If the quality of our air, our drinking water, or our farmland were compromised in any way, our collective health would be compromised. The body of literature on the health risks associated with the transporting of gas by pipelines is not yet well developed. But the lack of evidence that something is harmful is not proof that it is safe. The Conway Board of Health is not willing to risk the public health of our townspeople, and has opposed the pipeline in various ways.

In addition, I live one mile from the proposed Blowdown Valve on Shelburne Falls Road and am deeply concerned about 1) the impact on the quality and flow of water in wells, streams, and groundwater aquifers; 2) noise during construction and operation, particularly in light of the location of the Blowdown valve; 3) the impact of planned (and unplanned) gas releases on air quality and public health; 4) the impact to roads, bridges and related infrastructure, particularly during construction; 5) proximity of the pipeline to the high tension lines; and 6) emergency access and response, given the pipeline would bisect Shelburne Falls Road, a major roadway in Town, thereby cutting off the north end of Town where I live.

Basis for Intervening:

After 18 years of incredibly hard work, my wife and I have built a thriving organic horse-powered farm of our own, Natural Roots Farm. We choose to farm with horses primarily to minimize our fossil fuel consumption, which in turn helps minimize our contribution to global warming. Presently our farm is a beautiful and healthy environment in which to work and to raise our two young children. Perhaps you have raised children yourselves and can relate to the deep joy and satisfaction of providing a healthy and safe environment to raise them in. But it is not just a nourishing home for our immediate family; our farm is visited by hundreds of customers every week who come for their produce, meat and eggs, and simply to enjoy the beauty of the place. Children swim in the South River, which runs through the farm and they pick berries by the fistful. This is a safe, clean, and healthy farm that our customers trust. Our farm is also visited by school groups, university classes, and professional development groups who are unanimously inspired by our practices.

The short list of my broader concerns includes:

- Severe disturbance to our natural environment
- Major impact on residents, farms, and businesses during and after construction
- Health risks to residents and to the local ecology from potential pipeline leaks into aquifers, water supplies, and ecologically sensitive areas
- Safety risks from potential catastrophic explosions (which are occurring with alarming frequency across the country)
- Risks to endangered plants and animals from impacted habitat
- Major impacts to historical and cultural resources in our community
- An increase in hydraulic fracturing in the Marcellus Shale region that has already suffered HUGE impacts on its environment and human health and wellbeing
- An increase in fossil fuel infrastructure at a time when ecosystems and human civilizations are seriously threatened as global warming is rapidly pushing the earth towards an unprecedented and catastrophic ecological collapse.

There is one main reason why I feel this project poses a direct threat to the future of Natural Roots Farm. On the TGP route map, there is planned a remote blowoff valve less than a mile uphill, to the northwest, directly upwind, of my farm. This poses two serious threats to any living thing in the vicinity, one long term and one immediate. The long-term threat comes from the residue of an array of hydrofracking chemicals that travel with the natural gas. There are over 60 chemicals used in the hydrofracking process, many of them are proven carcinogens, endocrine disruptors, and neurotoxins. Most, if not all, of these chemicals are heavier than air, so when they are released with the gas, they first travel with the prevailing wind (which would carry them directly over our farm), and then settle out, falling to the ground. The blowoff valve could vent the pipeline at any time and is expected to happen several times per year. This would mean that my wife and I, our two young children, all of the crops and animals on our organic farm, our employees, all of the children who visit our farm every week and the families that eat our produce would all be exposed to proven carcinogenic hydrofracking chemicals.

The more immediate threat comes from the volatile nature of methane. The industry claims that because methane is lighter than air, when vented, it will dissipate into the atmosphere. However, whenever cold air inversions occur, which they frequently do, the gas released could drop to the ground. Our farm is situated in the bottom of a steep-sided, narrow valley. The same topographical feature that causes cold air to settle on our fields, bringing late frosts in the spring would provide a basin for the methane gas to fill. Given the combustible nature of this gas, it is entirely possible that this pool of gas, flooding our farm and contained and concentrated by the walls of our valley, would ignite and explode. I don't believe that TGP has looked at the topography or cultural features at risk in the vicinity of this blowoff valve.

Our mission is to "raise every plant and animal on this farm in optimal health and vitality... and to contribute to the nourishment and healing of our culture." The proposed blowoff valve and Natural Roots Farm cannot coexist.

Essentially, our life's work, as well as our community's health and safety, is at stake here.

The NED pipeline is solely for the benefit of corporate profit. Kinder Morgan has no concern for the extensive harm a pipeline would bring to our citizens' health and wellbeing. It has no concern for citizens' land rights, and none for the environmental destruction inherent in the production and distribution of natural gas from fracking, both short and long term. Given the magnitude of the public threat posed by this project, it is imperative that alternatives to NED be thoroughly explored.

As we weigh the information before us in the context of the local and global situation, we realize that the question we are dealing with here is not actually whether or not NED is justified, as that question has been clearly and decisively answered. The question we are dealing with is whether FERC will proceed in accordance with its mission and the due process of law, or whether you will exhibit corruption at the highest level of government. Thousands of people are watching you very closely.

I am asking you, the Federal Energy Regulatory Commission, as human beings in positions of power, to act on the behalf of my family, my community, and myself and of thousands of concerned residents of the Commonwealth of Massachusetts. You are responsible for protecting the lives of your fellow citizens. I implore you to yield to your conscience and deny Kinder Morgan and Tennessee Gas approval for the Northeast Direct Pipeline, as it is NOT an acceptable solution to Massachusetts' energy needs.

20160112-5113

Carole Osborn, Winsted, CT.

As a concerned citizen of CT, I find no justification for this project strong enough to outweigh the obvious dangers to and degradation of our fields, farms, forests, and towns. Blasting and drilling endanger our groundwater and watersheds, and the importance of water to all of us dwarfs any perceived "need" for an additional natural gas pipeline. Land designated as permanently undeveloped will be violated, and many acres of precious New England farmland which have been preserved through years of effort will be lost. In addition, I am appalled by the environmental degradation from compressor stations, as our natural landscape and its denizens cannot endure the intrusion of such noise pollution, let alone the potential for leaks and discharges. Industry protestations notwithstanding, everyone is aware that accidents will occur; the only questions are exactly where, exactly when, and exactly how far-reaching the damage will be. Another concern I have is this project continues to promote higher and higher use of fossil fuels. Although gas may have fewer deleterious effects on our environment compared specifically to coal or oil, we feel that spending capital on the increased use and sale of any fossil fuel, including natural gas, is an unjustifiable step backwards from the sustainable future that we envision for ourselves and our children. The \$5.2 billion and growing price tag of the 20160112-5020 FERC PDF (Unofficial) 1/11/2016 7:45:21 PM pipeline would go a long way towards the development of truly effective mitigation of a major global concern. I urge you to make the right decision and do not approve the Tennessee Gas Company's Northeast Energy Direct project.

Individual	rchrdburke@gmail.com	

Basis for Intervening:

I live in the town of Peru, MA (2 Andes Road, Peru, MA 01235) where the pipeline will run and less than 2 miles from the Windsor, MA compressor station. My family (wife and 4 children) have lived at this location for 35 years and during that time we have regularly hiked, skied, hunted, fished, walked our dogs at the proposed location of the compressor station. I want to intervene in this proceeding to oppose the NED pipeline. We have an interest which may be directly affected by the outcome of of the proceeding because

- We will hear, smell, feel, see and potentially taste (on site well) the effects of the compressor station.
- We are concerned about air quality due to the 41,000 HP turbines generating exhaust.
- We are concerned with the continuous noise of the compressor station, 44-7.
- We are concerned with any natural gas infrastructure incidents, such as the recent (1/7/16) Southern California Gas methane gas leak resulting in the evacuation of 2300 homes and potential damage/destruction of property and lives.
- We are concerned with light damage to the dark skies which would blot out the stars.
- We are concerned about the adverse environmental affects on the fish and wildlife that we have hunted,

fished and observed for decades.

- We are concerned with subsonic vibrations that can subconsciously affect health.
- We are concerned with traffic, noise, air pollution and numerous disturbances during construction.
- We are concerned with the property value of our house being located so close to the compressor station.
- We are electric rate payers, who if KM secures my electric bill as a project customer, expect to see an increase on my bill relating to NED cost recovery.
- We enjoy the outdoors and do not want the many nearby state and town parks and forests which have been set aside for the people and wildlife to be impacted by any activities of this commercial project.
- We are long time donors to land conservation organizations and the purpose of our donations would be violated if this project is allowed to take easements over land that is meant to be protected forever.
- We and our neighbors live in the shadow of the proposed compressor station. We will feel its effects.

Basis for Intervening:

As residents and property owners in Northfield, Massachusetts since 1991, my husband and I are deeply connected to the community.

Our home, a historic Stearns home built in 1824, is emblematic of the historic traditions and culture that existed in Northfield in the early 19th century. The town, settled in the early 17th century, holds artifacts from prehistoric time to today.

As committed supporters of environmental projects to maintain the health of the planet, we value the healthy resources that abound in Northfield and her environs.

I am also a member of the Northfield Historical Commission and have made a commitment to the town and the state to preserve the history, culture, and environment of Northfield.

For these reasons I request to be an intervener in the Northeast Energy Direct Pipeline project proposed by Tennessee Gas Pipeline Company, LLC, a division of Kinder Morgan Energy Partners. In so doing, I protect my right to involvement in future actions.

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party	Signer (Representative)	Other Contact (Principal)
Town of Wilton, New Hampshire	runningrickswanson@gmail.com	

Basis for Intervening:

“The Selectmen of Wilton are opposed to the North East Energy Direct (NED) natural gas pipeline proposed by Kinder Morgan. The Selectmen have the following concerns:

1. The size of the compression station would present a significant risk to our safety, health, and quality of life.
2. The pipeline poses a risk of contamination to the aquifer that is a resource for the Wilton Water Works and private wells.
3. The potential risk is not justified because the pipeline would provide minimal benefits to Wilton or New Hampshire.
4. Our opposition is intended to join neighboring towns such a Milford, Greenville, Brookline, Mason and Temple who are affected by the pipeline.
5. The pipeline would come as close as a few hundred feet from Wilton’s town limits and could threaten our property values.
6. We oppose the use of eminent domain for takings of property for private commercial gain.”

The Wilton, NH Conservation Commission strongly opposes the Northeast Energy Direct (NED) Pipeline proposed by Kinder Morgan:

“A compressed gas pipeline, especially one put underground, out of sight and out of reach, puts plants, wild-life, and aquifers; thus, people’s health at risk. The WCC notes that all of Wilton’s drinking water is pumped from wells in Wilton, from aquifers that know no man-made boundaries.

The size and proximity of the proposed compressor station would pose significant health, safety and environmental hazards due to routine as well as accidental

discharges of compounds that have known health risks, and other, unregulated compounds into the atmosphere. These discharges have the potential for fire and/or explosion in close proximity (1/4 mile) to the Temple elementary school and to lands conserved by Wilton, Temple, Greenville, Mason, and by private organizations.

The noise impact of a compressor station of the proposed magnitude is entirely out of keeping with the rural, natural character of the area surrounding the proposed site; this would severely degrade the quality of life for people within earshot. In addition, it would degrade the surrounding wildlife habitat the Wilton Conservation Commission is charged with protecting.

The proposed pipeline would transport gas obtained by Hydraulic Fracturing (HF). HF is a process we reject for the same reasons and for their similar consequences: the injection of unspecified and unregulated compounds into the environment, even though that process may take place “somewhere else”. The WCC reminds FERC, Kinder M

organ, and the public, that the price of a fuel does not necessarily reflect its cost, and that the real costs are seldom borne by the end users.

We do not support efforts, especially “dirty” ones, to extend the existing fossil fuel infrastructure at the cost

of distracting effort and dollars from, and thus delaying the search for, and development of cleaner and more sustainable sources of energy.”

20160112-5150

My name is Genevieve Fraser, I live in Orange, MA, not far from where Kinder Morgan wishes to place a NED compressor station. Having read reports and viewed videos, I am deeply concerned that the pollutants from this station will impact air quality and present potential explosion hazards. A case in point is the horrific disaster currently impacting California with the leaking methane - a highly toxic substance. If allowed, the pipeline would transverse some of the most environmentally sensitive and protected land – public and private in the state - lands that have taken decades of effort and millions of dollars to protect.

Given the catastrophic impact of climate change, it is of the utmost importance that we move away from fossil fuels and utilize renewable sources for energy. The health and well-being of our citizens, the habitat of our wildlife and the water quality of our river, streams, lakes and ponds in its path would be jeopardized. Studies have shown that over 2000 gas leaks need to be fixed in Massachusetts. This state is one of the leaders in the implementation of renewable energy. Recently, I have had solar panels installed on my roof and over 40 other home-owners nearby are doing the same. The impression given is that NED is a profit generator for shareholders and there is no discernable benefit to impacted stakeholders, yet we are the ones who are asked to suffer, sacrifice financially and place our health, safety and well-being in jeopardy so that the fracked gas might be sold elsewhere...to the greater detriment of the planet. Please vote against this project.

Basis for Intervening:

I am A resident of Conway, MA. I live on Shelburne Falls Road - about 2-3 miles away from the proposed Kinder Morgan Blowdown Valve.

Human activity is killing the earth. And it must stop. It is unconscionable that projects which continue to encourage the use of fossil fuels are being pursued. We need to dedicate all our resources to new answers. And apparently, over 200 countries agree with this premise.

Personally and specifically, I am worried about the noxious gasses which would be released by the Blow-down Valve. How can this be permitted? We have all kinds of regulations in this country which are intended to keep us safe - building codes, food processing rules, traffic laws, emissions standards, etc., etc.. And yet it is okay to release methane and other fracking gasses? It just makes no sense. We grow a lot of our own food. Will it be safe to eat? Will the water in our well be safe to drink?

I live here in Conway for the quiet beauty of the area. My husband & I are making changes to our home that will enable us to continue to stay here as we grow older. We are in our late 60's. If the pipeline is passed, we may be forced to flee for our health but then find that we cannot sell our house - regardless of the improvements made.

All for a pipeline that is likely to be outdated before it is completed. Please. Whether you look at the global picture or the local perspective this pipeline cannot be justified.

I live in Ashfield, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am electric rate payer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery. Furthermore, extracting and transporting fracked gas runs counter to the Commonwealth of Massachusetts' goal of reducing greenhouse gas emissions.

20160112-5160

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC

)

Docket No. CP16-21-000

**NOTICE OF INTERVENTION OF THE
NEW HAMPSHIRE DEPARTMENT OF ENVIRONMENTAL SERVICES**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's (the "Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the New Hampshire Department of Environmental Services ("NHDES"), by and through its attorneys, the New Hampshire Office of the Attorney General ("OAG"), hereby submits this notice of intervention in the above captioned docket.

I. NOTICE OF INTERVENTION

NHDES is a duly constituted Department of the State of New Hampshire, charged by law with the administration and protection of New Hampshire's water, air, public health and other environmental resources. As the State's water quality certification agency, NHDES is further charged to consider and to issue water quality certifications pursuant to Section 401 of the Clean Water Act [33 U.S.C. Section 1341]. Accordingly, NHDES qualifies under section (a)(2) of Rule 214 to intervene by notification.

As the state regulatory body having jurisdiction over water quality certifications, wetlands permits, alteration of terrain, and air emissions permits, NHDES has a direct and substantial interest in this proceeding, as approximately 70 miles of the project and related facilities are proposed in New Hampshire. NHDES intervenes in this docket solely to obtain party status and to preserve its rights to participate in any review process, including the ability to seek judicial review or enforcement of any final decision on the underlying application. NHDES neither supports nor opposes the project and its intervention should not be interpreted as indicating that NHDES will ultimately take a position on the project, though NHDES reserves its right to do so. Regardless of whether NHDES ultimately takes a position on the project, NHDES reserves its right to continue to bring issues within NHDES jurisdiction to the attention of the Commission through public comments.

II. PLEADINGS AND SERVICE CONTACTS

Service of all pleadings and other filings in this proceeding should be addressed to the following persons, whose names should be placed on the official service list prepared by the Secretary in this docket:

Timothy W. Drew
Administrator
Public Information and Permitting Unit
Office of the Commissioner
NH Department of Environmental Services
P.O. Box 95
29 Hazen Drive
Concord, NH 03302-0095
(603) 271-3306
Timothy.Drew@des.nh.gov

Christopher G. Aslin
Assistant Attorney General
Office of the Attorney General
Environmental Protection Bureau
New Hampshire Department of Justice
33 Capitol Street
Concord, NH 03301
(603) 271-3679

Basis for Intervening:

My name is Edward Goodell and my home is located at 150 Rockwood Pond Road in Fitzwilliam, NH. I moved here eight years ago to enjoy the clean, rural character, scenic beauty, and inherent safety of this countryside location.

If the pipeline is allowed to be constructed, my home is located 1,500 feet from the proposed NED pipeline route.

This being said, my home and several of my neighbor's homes will be within the incineration zone if there is ever a rupture and ignition within this pipeline. In the winter months, Rockwood Pond Road only has one egress route as the road's south westerly portion is not winter maintained. There may be no escape if this disaster were to happen.

The proposed pipeline route is also located less than 200 feet from the Troy Mills Landfill superfund site. There are Institutional Controls required for this site. With the potential disturbances from blasting for the pipeline installation, what preventative measures are going to be implemented to prevent disturbing this site? What prevents the existing toxins from escaping their current containment controls?

The water well for my home and a large number of residences in the surrounding area's of Fitzwilliam, Troy and Bowkerville are located in a designated Wellhead Protection area, which are supplied from the underlying aquifer. The installation of the pipeline can disrupt the natural flow of this aquifer threatening our clean water supply.

The value of my and my neighbors will only decrease if the pipeline is allowed to be installed. Who compensates us for the loss when these values decrease only due to their proximity to a pipeline which we had no control over?

I'm asking that this pipeline not be allowed.

It has no benefit to the state of New Hampshire.

There is no need for the additional capacity which Kinder Morgan says we need.

It will not decrease energy costs.

It will be a burden on New Hampshire residents who will end up paying for it.

It is just another fossil fuel that flies in the face of the clean air initiative.

I live in Turners Falls MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because as someone who was born and raised in Franklin County I love this area and have always intended to continue to reside here and work and raise a family. I am deeply troubled by the myriad ways in which this project could damage our environment. I have concerns about the impact the construction and use of a gas pipeline may have on sources of drinking water in my area. I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. I do not want to see the land I love ruined. Nevermind all the potential dangerous situations that could arise from a pipeline failure, construction alone will decimate fragile ecosystems and destroy many creature's habitats. I want future generations to have the opportunity to live healthy lives, and not live in a place ruined by an unnecessary pipeline.

20160112-5180

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

MOTION TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Town of Lenox, Massachusetts (“Lenox” or the “Town”) hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Town questions the need for the construction of a natural gas transmission pipeline and other facilities known as the Northeast Energy Direct project (“Project”). The Project, originally proposed to be routed through Lenox, would have adversely impacted the Town. Lenox remains on the alternate route and is concerned that the route may be changed again, and Lenox again subjected to adverse impacts from the Project. The Town therefore seeks party status to protest the Project, and fully protect the Town’s interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. Lenox is a municipal corporation located at 6 Walker Street, Lenox, Massachusetts.
2. The Town is committed to enhancing and protecting the quality of life of all its residents, workers, and businesses, and is gravely concerned for those who live, work, and recreate near the Project. The alternate route as proposed would seriously threaten Lenox’s drinking water supply and watershed near its Upper and Lower Root Reservoirs and Lenox Mountain Brook. In addition, the alternate route would also cut directly through the Upper Housatonic Area of Critical Environmental Concern (ACEC) which encompasses land area around the Housatonic River in Lenox’s eastern valley. The alternate route would not only potentially impact the ecological integrity of special natural resource areas and impact the quality of Lenox’s sole public water source, but also impact the regional economy including tourism, hospitality and recreation.
3. In the event the alternate route would be selected, there would be substantial and real environmental, economic, and health threats to the Town arising from the construction and operation of the pipeline within the municipality. Lenox questions the need for a Project that would industrialize the landscape and degrade scenic, historic, and cultural resources without any specific benefits to the Town or to the region. The Project would extend approximately 6 miles through the Town and encompass an area of approximately 1,760 acres. It would cross conservation lands, sensitive water protection areas, permanently protected open space, farmland, forestland, endangered species habitats, wetlands, vernal pools, public infrastructure, private homes and business, and historic resources. The proposed location of the pipeline is intrusive, and threatens to disrupt the rural nature of the Town. In addition, the Project would damage numerous natural resource areas including (but not limited to) Kennedy Part, Pleasant Value Sanctuary, ACEC (as noted), and October Mountain. A more complete list is referenced in Lenox’s Scoping Comments dated October 16, 2015 and submitted in Docket PFI4-22.
4. The Project would damage the exceptional aesthetic quality of Lenox while also harming natural resources. The Town is concerned that chemicals applied to the exterior of the pipeline would have significant potential to cause groundwater contamination. In addition, erosion from steep slopes could threaten integrity of headwater streams and water supplies. Further, construction will impede Town roadways and cause traffic and transportation disruptions along with related interruptions of public services.
5. In addition, the Project will impact property values. It is axiomatic that an industrial Project in Lenox will reduce property values of both homes and businesses. Moreover, the Project threatens public safety by placing fire and explosion hazards in close proximity to residential and sensitive areas, and would subject the Town and its residents to an ongoing fear of such catastrophic incidents. The Town’s emergency response systems would be burdened by these potential pipeline failures.
6. Lenox is responsible for the protection of both its natural environment and the health and welfare of

its residents. It objects to the Project as unnecessary, overly intrusive, and environmentally damaging. There is no need for this Project, and, even assuming that natural gas is required in the region (which has not been demonstrated), better alternatives.

7. Lenox seeks to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project. Accordingly, Lenox has a substantial interest in the outcome of this proceeding. Moreover, given the Town's expertise and familiarity with the locale of the proposed pipeline, and the proposed alternative site locations, its participation in the above-captioned proceeding will significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual(s) should be included on the service list for this docket, and all communications should be sent to:

Christopher J. Ketchen, Town Manager
6 Walker Street, Lenox, MA 01240
(413) 637-5500 x1201
cketchen@townoflenox.com

III. CONCLUSION

WHEREFORE, the Town of Lenox respectfully requests that it be permitted to intervene in this proceeding with full rights to participate in all further proceedings.

Respectfully submitted,
Edward Lane, Chair
Board of Selectmen
6 Walker Street
Lenox, MA 01240
(413) 637-5500 x1201

Basis for Intervening:

I am a resident of Merrimack, NH, and a part-time employee at the Pizza Hut on 101a. The pipeline is planned to parallel 101a right across the street from the Pizza Hut where I work. During construction of the pipeline, I do not know if rt. 101a will be open, but even if it is, traffic in the area will be affected and so will business. I worry that my income might be affected.

In addition, the Pizza Hut is in the 1,000 foot "incineration zone." Therefore, going to work will be dangerous. This is why I am opposed to the pipeline and I am filing to be an intervenor.

Basis for Intervening:

I am thoroughly, deeply opposed to this NED project not only due to the specific proposed route but for the overall expansion of Pipelines and the use of fossil fuels as a whole. Humans must be absurd to think that we can continue the use fossil fuels for energy; we are stripping our Earth of its natural resources as if there are infinite amounts. There are plenty of sustainable alternatives to meet our energy needs including, but not limited to, cold fusion energy, resonate “free” energy (ie. Nikola Tesla batteries), nuclear fision, wind saponions, etc. We need to be forward thinking, in a radical way and admit that our energy methods are unsustainable and toxic to all life. But that can all change ~ we no longer have to be stuck in this way of thinking. We can evolve beyond this and live more harmoniously with the Planet that is providing us with everything we need. Let us educate ourselves and each other and evolve.

And to put this Pipeline through such pristine land is absurd. These are right to farm communities! These are families with well water, gardens, who have chose to live in this area for clean air and clean water and beautiful views of the mountains. All of this would be compromised, for something that is completely unnecessary. Imagine if we put more creativity and energy into figuring out alternatives. We are choosing to be complacent. Let’s change that.

What you have in these towns that Kinder Morgan is proposing they put this Pipeline through, is heart and passion. Something big corporations lack. This type of force is much greater than money or greed. This power is so strong and we will not give up. Please work with us.

And if you do want to look at it from a capitalist point of view~ solar energy is where the money is. You see more solar roofs being built each day. So, to invest billions of dollars for fracked gas which is widely opposed, is a complete waste, when you view it all from a long-term stand point.

Thank you.

Basis for Intervening:

I live in Petersham MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceedings as stated below:

1. I am a donor to several land conservation organizations and the purpose of my donations would be violated if this project is allowed to take easements over land that I meant to be protected forever. Twenty-five percent (25%) of the land on the planned pipeline route in Massachusetts is over protected, conserved land.
2. As a Massachusetts taxpayer, I have an interest in conserved state land
2. I am an electric rate payer, who if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill related to NED cost recovery. My utility is National Grid, which needs to use more renewable energy sources.

3. I oppose fracking anywhere, and this NED pipeline is scheduled to bring fracked gas from Pennsylvania, but is just one part of the larger infrastructure Kinder Morgan wishes to develop to send gas everywhere, nationally and internationally.

4. I am from a Massachusetts farming family going back to 1630, and the disregard for productive farming land caused by this pipeline will affect my access to fresh fruits and vegetables.

After 92 years of enjoying the natural beauty of this area, I strongly oppose this project which would compromise the clean air and water and productive soil of Massachusetts.

Submission Description: (doc-less) Motion to Intervene of Ellen Davis under CP16-21-000. Concerns re: pipeline compressor station in NH.

Submission Date: 1/12/2016 3:21:10 PM

Filed Date: 1/12/2016 3:21:10 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	elmdavis@smith.edu	

Basis for Intervening:

I fear that the pipeline's compressor station would: (a) cause unacceptable toxic emissions in water and air, jeopardizing the health of children, adults, animals, and plant life; (b) cause unacceptable noise and light pollution; (c) put all towns and homes within proximity in danger of explosions and fire too overwhelming to be controlled by local emergency services; and (d) cause enduring damage to protected land and water, and to wildlife. Furthermore, I am concerned that the compressor station would (a) irrevocably damage property values; (b) unjustly claim Eminent Domain; and (c) diminish the quality of life of everyone living and working around it.

The proposed location of the compressor station is a stone's throw from an elementary school. The risk of fire and explosion that near a school for young children should be reason enough to reconsider that location. The school also doubles as the town's emergency shelter. This means that should residents of the surrounding area (my family included) need to evacuate due to a problem at the compressor station, they would have no shelter to go to as the shelter itself is in the line of fire.

Fossil fuels are not a renewable resource. I understand the importance of job creation, but whatever jobs are created in the building of this compressor station will be obsolete as soon as there is no more fuel to run through the pipeline. Think about it: we can invest in renewable energy now while we still have oil and gas to ease the transition, or we can wait until those materials run out completely and then scramble to keep our entire economy from collapsing. Solar, wind, and water power may be expensive investments now but they will soon be our only choices.

For the sake of the residents of New Hampshire, New England, and the world; for the sake of all animal and plant life that is essential to the well-being of this planet; for the sake of your children, my children, and all future generations who will inherit everything we leave behind: please invest your time and money into a more sustainable energy source and do not build a natural gas compressor station in my hometown.

Thank you for reading.

Comments re: CP16-21-000

1/11/16

It is inconceivable to me that the proposed gas pipeline of Kinder Morgan/Tennessee would be allowed.

The ecological destruction is of major scope:

- Habitat destruction of many species including endangered ones.
- Trees and other plants decimated.
- Major wetlands and watershed impingement (including removing water from the Farmington River and using a bizarre upland de-watering device).

Impacts on human health including transgression of a highly protected public water supply and denigration of hiking trails that are clearly a benefit to our mental and physical well being.

Sincerely, Shirley McCarthy, MD, PhD
Professor Yale School of Medicine
Chair, Branford Community Forest Commission

Basis for Intervening:

I am a landowner directly impacted by the pipeline route / compressor station. [any specifics you want, or not]

- I am a landowner who would have my property seized by eminent domain.
- I am a resident who lives in the "blast radius" [or whose daily commute crosses over the proposed pipeline route] so I would be at physical risk
- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health [any specifics you want, or not].
- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

20160112-5236 Christophe Bradler

This project will negatively affect my family, our town, and community due to the fact that:

1. I am Concerned because we are developing a large Solar Array on our land, and the pipeline can not go through it. We are not going to sell any of our land to the pipeline. It will need to go around.

2. I am concerned that the Compressor Station, where it is proposed now, is very close and the emissions from the Compressor Station landing on the Solar Panels would reduce the efficiency and output, which would have a negative effect financially for all parties involved. This would need to be monitored and dealt with.
3. We are concerned that Compressor Stations emissions are known to result in a health problems including a Death Rate rating..... Solar Field Arrays do not!
4. We are concerned that this Solar Array plus any or all of the other three Solar Arrays that are in the works along the proposed pipeline route will also be subject to these negative effects.
5. The need for Solar Energy far outweighs the need for this NED pipeline.
6. I am concerned and do not wish to subject my family to the harmful effects of this NED pipeline.
7. I will hear, smell, feel, see and potentially taste (dug well water quality) the effects of the compressor station.
8. We are concerned about air quality due to 41,000 HP turbines generating exhaust.
9. We are concerned disturbances to our dug well as it taps into stratified drift aquifer that the compressor station is on top of.
10. We are concerned with the continuous noise of compressor station, 247.
11. We are concerned with noise and pollution from blowdowns.
12. We are concerned with light damage to dark skies. We won't be able to see stars.
13. We are concerned with subsonic vibrations that can subconsciously affect health.
14. We are concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.
15. We are concerned with traffic, noise, air pollution and numerous disturbances during construction.
16. We are concerned with the property values and housing values plummeting because they are close to a compressor station. Our hard earned money will be lost, without ANY gain.
17. We are concerned with the potential closing of the Temple Elementary School because families don't want their children to go an elementary school within half mile of the compressor station.
18. We are concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.
19. We are concerned with the industrialization of the neighborhood. The only things that are comfortable living next to 41,000 HP compressor stations is other heavy industry.
20. We do not want to live in the shadow of the proposed compressor station and feel its effects.
21. We do not want to pay for a Pipeline / Compressor Station in a tariff on the electric bill, when everyone is so vehemently against it being built.
22. We feel that Eminent Domain should only be used for Public Use not Private Company Use.
23. As a Electric customer of this state I do NOT want to pay for a high pressure gas pipeline as a tariff in my bill!

sseelig@smith.edu

Basis for Intervening:

As an electric rate-payer in Massachusetts, I am concerned that my rates will rise in order to pay for this project, even though I am opposed to it. It has not been demonstrated that we actually need this pipeline. Moreover, much of the gas will very likely be shipped overseas: so why should we, members of the public, be paying for it in order to benefit a private corporation that is not even based in Massachusetts.

I believe that those who want this pipeline have been using blackmail to get it passed, by arguing, falsely, that they cannot otherwise satisfy current and future demand for natural gas. As stated in a recent Hampshire Gazette article, their arguments for the pipeline and for the routing of the pipeline are based on peak capacity, something that would not usually be the case. We should be turning to renewable energy sources, to wind and solar, not to fossil fuels. Building this pipeline is taking us in the wrong direction.

Finally, I am deeply concerned that this pipeline will cut across areas of the commonwealth that are preserved land. This is a legal matter: private commercial use, particularly something that could lead to pollution, environmental damage, noise, and other forms of disturbance should not be permitted on public and preserved land. As member of and contributor to the Kestrel Land Trust, which seeks to preserve land in Massachusetts, I believe that my interests are violated by this project.

I urge FERC to reject the application.

Submission Description: Motion to Intervene - Docket # CP16-21-00

Dear Administrative Staff ,

I would like to motion be an Intervener for this project . I am the property owner of parcel MBLU 38/48/1 on the Dracut Ma. assessors map. I reside at 270 Wheeler Road in Dracut Massachusetts . I will be severely impacted by this project on 3 sides of my property . On the right side of property an added 30” Pipe alongside a 30” existing pipe within 150 of my property line stripping trees that now hide 5 rows of power lines . Along the backside of my entire lot will be a New Metering Station within 100 ft of my property line exposing my home to fumes and noise pollution and severely impacting the views from my yard and windows . The left side will be dug up along the entire length of my property for an access road to the new Metering Station. I’m on a private well and have no access to public water and with the fracking of all the pipe that will be installed all around my private well causes alot of concern . This project will make the sale of my home virtually impossible along with substantial decrease of my homes property value. It will compromise my health and safety. I am also within 1/2 mile of the proposed Compressor Station on Broadway Rd Dracut

Sincerely,

Thomas J Berube

Basis for Intervening:

On behalf of the Hall Family Trust I hereby move to be granted intervenor status.

The proposed TGP route would require use of an historic family property in Ashfield, dating to the late 18th century and continuously in family ownership since. The proposed pipeline would encroach on a significant amount of Hall Family Trust land on the north side of the present power line, from Hawley Road over the first ridge eastward.

This land includes watershed to the Town of Ashfield water supply; blasting required by the proposed pipeline would risk disruption of springwater and pollution of it.

The proposed pipeline if developed not only would degrade the appearance and character of this historic property but also would reduce its monetary value significantly. Additional Hall Family Trust property rising to the east of Smith Road along the present power line would be devalued and disfigured similarly.

I and other members of the Hall Family Trust are concerned that the proposed pipeline if authorized would pose environmental, health and safety risks along its route, and that it would impose monetary costs on electric ratepayers. Massachusetts gas supply issues are minor and can be addressed in much more modest ways than the proposed pipeline.

Addison C. Hall, for The Hall Family Trust

Washington, D.C. 20426

RE: **Motion to Intervene**

Kinder Morgan/Tennessee Gas Pipeline, LCC - Northeast Energy Direct - Docket #CP16-21-000

Dear Ms. Bose and Mr. Davis,

This letter will serve as my intent to file for individual intervener status in opposition to the Kinder Morgan/Tennessee Gas Pipeline Company, LLC (KM/TGP) Northeast Energy Direct (NED) transmission gas pipeline (Docket #CP16-21-000).

One of the many routes KM/TGP has proposed to trench the NED pipeline through Merrimack, NH takes it directly through a thirty-foot deep peat bog that sits less than 400 feet behind my home. While the pipeline itself would not be directly on my property, there is a green line identified on the map that travels directly through my property, as well as through both of my neighbors' properties and common land that is owned collectively by our neighborhood, Castleton Ridge. As a direct abutter, I am concerned about the environment, safety, wildlife, quality of air and town water, and property value.

I respectfully ask that you grant me individual intervener status. Thank you.

Sincerely,

Karen E. Fletcher
17 Dunbarton Drive

Individual spatzlarryalice@verizon.net

Basis for Intervening:

I am a resident of Lanesborough MA, through which the proposed NED pipeline will pass. I wish to become an intervenor for many reasons. First, I have received, from Tennessee Pipeline, a request to access and survey my land for an access road to the project. I therefore believe that my property will be directly affected by the pipeline if it is built as currently proposed. In addition to the disturbance that an access road would create, the current path is quite close to my house and my residence is in the incineration zone and evacuation zone should the pipeline explode or malfunction. Apart from these threats to my life and property, I feel that the construction of any access road and the pipeline itself may well constitute a threat to the integrity and usability of the deep well on my property which is my sole water supply. I therefore would like to be able to comment on and perhaps influence the outcome of the project.

In addition to the above, I am a member of the Lanesborough Board of Health, charged with insuring the public health of the town. The proposed pipeline transects the recharge zone of Lanesborough's public water supply. Disruption or contamination of that supply would have a catastrophic effect on the several hundred households that rely on it. There is an additional public water supply in Berkshire Village (part of Lanesborough) that also might be impacted by the project. Because of the possible threats of the project to these public water supplies, both during construction and throughout the lifetime of the pipeline, I feel that extraordinary precautions by Tennessee Pipeline must be incorporated into the project. These public wells are not very deep (67 and 54 feet). There are also other private wells that draw from the same recharge area (including my own). My concern is that the pipeline, both during its construction and its ongoing operation, may cause contamination of this indispensable water source. At a minimum during construction, there is the potential for gas and oil leaks from the heavy equipment used and from the materials used in welding. Once installed there may be concerns about chemicals released from the anti-corrosion coating on the outside of the pipeline. And once the gas starts flowing there is the possibility of leaks from the pipeline itself. Since the wells are so shallow the distance contaminants have to travel to infiltrate the water is not very far. With leaks from the pipeline there is no way to know, without testing, what chemicals in addition to methane are present. There may be sulfur compounds both naturally occurring and added as odorants; there may also be residual chemicals from the fracking process; and methane itself can, under some conditions of temperature and pressure, form a hydrate (methane clathrate) that then moves freely through water.

If the present pipeline path is approved, the approval must take into account all the possible contaminants that may arise during construction and operation and must detail testing methods of sufficient sensitivity to be used for assessing all of them in the ground water. The required testing should begin prior to any construction so that baseline levels are known and it must continue on a regular basis during the lifetime of the pipeline. In addition, the approval should address what actions will be taken if contaminants exceed defined levels, what mitigation is possible for removal of contaminants and, if mitigation is not possible, there must be a robust plan in place to supply potable water to any affected households. The cost of all of this is to be borne by Tennessee Pipeline and a surety bond must be secured by said company and paid in full to insure that funds are available for these activities in the event that the company fails during the pipeline's lifetime.

In view of the above considerations, I believe that I should be granted status as an intervenor so that I can be assured that my concerns are properly addressed.

Submission Description: (doc-less) Motion to Intervene of Mothers Out Front: Mobilizing for a Livable Climate (by Susan Lees, Leadership Team) under CP16-21-000.

Submission Date: 1/12/2016 5:12:44 PM

Filed Date: 1/13/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	swlees@earthlink.net	

Basis for Intervening:

Mothers Our Front opposes the Kinder Morgan NED project. We need to stop building more fossil fuel infrastructure NOW to give our children and grandchildren the chance of a livable future. With gas infrastructure, the methane released throughout the extraction, delivery, and consumption is a potent greenhouse gas. In addition, we - and the health professionals we are in touch with on this - also have grave concerns about the health risks of this NED and all fracked gas infrastructure, to our water, air, soil, to all living things. At any new compressor stations along the NED route, toxins, carcinogens and radioactive elements would be released into the air through ongoing blowdowns. Most vulnerable to health affects would be children, elders, and those already heavily impacted by environmental toxins...Toxins are also released from other parts of the pipeline infrastructure: metering and regulation stations, pigging facilities, gas plants...

20160113-5008

Beth Jochum, Schodack Landing, NY.

I deeply enjoy and appreciate the out of doors. My partner and I have worked hard to create habitat on our small plot of land in order to encourage an environment for monarch butterflies, bats, honeybees, and various birds. We have planted numerous trees to provide habitat; even habitat for rabbits from brush we have cleared.

While our land is not directly impacted by the NED project at this point, I am writing to say that I do not want any public parks, or state parks, or land, impacted by any activities of the NED pipeline. I have seen the preparation for such in advance of any permit being allowed. I am writing to voice my concerns and opposition to this.

In addition, we have dear friends whose land is directly impacted by the proposed pipeline, and so I oppose the pipeline on those grounds.

Thank you.

20160113-5011

ryan connor, dracut, MA.

This is a giant health hazard to my little boys as this compressor and pump station is in my neighborhood. This company is almost bankrupt and will never care for this station. Why put thousands of kids and newborns at risk. Please

20160113-5012

Amy Chaput, Old Chatham, NY.

These are comments that pertain to the proposed pipeline and compressor station proposed by Kinder Morgan in Rensselaer County, NY. I am concerned about the health effects, lack of risk information made

available to the general public and nearby residents about activities related to building and maintaining these facilities, lack of risk information regarding catastrophic scenarios, and the destruction and exploitation of natural resources which do not benefit the landowners, local labor force, residents and taxpayers within the proposed location. Further I have been unable to obtain any current information about an existing compressor station within 10 geographic miles of the proposed new station.

My family lives within probably one mile of the Tennessee Gas (subsidiary of Kinder Morgan) Compressor station in Malden Bridge, NY. I have lived within 2 miles of this facility for the last 22 years and also grew up within 8 miles of this same facility, which I believe was built before I was born. I am 50 years old.

Health effects: I suffered more than 5 years of infertility before bearing twins through in vitro fertilization. I was diagnosed with thyroid disease during the period of infertility, had to be treated with radiation to destroy my thyroid and will be dependent on medication for the rest of my life. If I do not take thyroid supplement I will die, shortly. I believe my mother, who died more than 25 years ago, but also lived for more than 40 years within 8 miles of this facility also had thyroid issues. I am aware of at least one close neighbor, also died, who also had thyroid problems. Myself and my children occasionally suffer from sudden nosebleeds,.

Lack of information: Granted, the Malden Bridge facility has not exploded in 50 years, but let me share 2 recent incidents which are of great concern to me living in close proximity.

1. Within recent memory there was a day when the entire neighborhood was engulfed in the smell of natural gas. It was noticeable between and within in at minimum the hamlets of Malden Bridge and Old Chatham, which are about 1 mile apart, and within 2 miles of the site. This was reported to the local utility (now NYSEG). I do not know if Tennessee Gas received a report of this incident however I'm not aware of any way to contact them to report a gas emergency. NYSEG would not have had anything to do with it since there are no natural gas customers in this area. Many of us heat our homes with oil or propane stored in tanks delivered by truck, not by gas line. Whatever the problem was, the local residents were never contacted or notified of anything. My belief has been there was a leak at the Compressor station. Or maybe it was an intentional discharge. Who knows?

2. About a month ago, I was taking my son to school, passing by the Compressor station. Something major was going on there as we started to hear a noise like an incoming jet was about to crash on us as we passed by. It got louder and louder. I was fearful of an explosion. I floored the car to get past as fast and as far away as possible. I suspect the Compressor station was performing a "blowdown"? Not sure what that is but it sounded dangerous enough they should not have traffic passing by within 50 feet. Whatever it was, there again was no notification. Within the past 10 years they tore down an abandoned but historically marked house on their property. There is also a street of occupied houses less than 500 feet from this compressor.

I cannot find any public information about this existing site in Malden Bridge. How big is it? Have there been any other reported incidents in the last 40 years? How does it compare with the new compressor station they want to build on Clarks Chapel Road, less than about 5 miles away? Why do they need another station so close? This is the same company, Kinder Morgan.

Destruction and exploitation of natural resources which do not benefit the owners, workers, residents and taxpayers within the proposed location: None of the companies involved are based locally. None of the companies involved own the land they propose to plow through, so at minimum they will be forced into eminent domain proceedings. It is clear in this location there is fierce opposition. There has been no demonstration of the need for natural gas in this area of NY, nor have I seen a plan to provide any, which by the way could replace our dependence on oil to heat our houses. There has been no evaluation of the risk to farmland, crops and animals produced for human consumption. There is no demonstration of how New York and its affected residents, citizens, taxpayers and government will benefit from these proposed projects.

20160113-5013

Royal Graves, Wethersfield, CT.

I urge you to reject the Tennessee Gas Pipeline Company, L.L.C. (TGP) proposed pipeline. This project is

unneded because within several years alternative energy sources and conservation will make this pipeline obsolete. In addition the pipeline is unsafe because the proposed route crosses protected watershed lands belonging to the Metropolitan District, which provides high-quality drinking water to hundreds of thousands of Connecticut residents. Protection of safe clean drinking water must override other considerations.

Again I urge you to reject this proposal and protect our drinking water.

20160113-5015

Elisabeth Green-Schmidt, Monroe, NC.

Hello. On behalf of the landowners of Dimock and Aburn Township in PA, Please consider the msp route for this pipeline in Susquehanna County Pa, as proposed shortest distance it breaks up acres of land and is close to personal residences.

This land has been owned by the same families for decades. Please work with the land owner as a partner in creating the path for the pipeline. If the pipeline is passed please have Tennessee Gags Pipeline collaborate with land owner on the path that is agreeable to both parties. Tennessee Gas Pipeline also is schedule to pass through Crep land. If trees are removed they should be replanted on existng land.

Communication is critical to land owners and giving a fair and equitable price on land. With an easement it will lower the land value and nearby houses based on current path. The fair and equitable price should be place on an elevated scale for life of the pipeline as land valus increase as availability diminishes.

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	ernie_popp@yahoo.com	

Basis for Intervening:

The safety record of Kinder Morgan is a huge cause for concern for me. Their pipes breakdown, leak, and even explode leaving people with property destroyed, homes destroyed, roads and infrastructure destroyed and at times kills people. My neighborhood, county and state doesn't participate in fracked gas exploration (because that's what you are peddling, fracked gas, lets be honest) and because of the safety, health and environmental risks involved in fracked gas I couldn't and wouldn't promote this pipeline or fracked gas ever. Kinder Morgan's safety record and failure to meet their requirements in B.C. are only indications of what would lie ahead for New Yorkers and your lackluster efforts in keeping neighborhoods safe from pipeline failures should stand as reason enough. Its up to FERC (which we all know is funded by fossil fuel companies) to start enforcing and holding to companies like KM to an even higher standard, especially since their only failing to ensure the safety and protection of wildlife, infrastructure and PEOPLE. I mean really how can you expect any business that doesn't have respect for human life (except in a risk/reward spreadsheet) to be welcome in New York?

Filing Party/Contacts:

there are more streams. Our property is part of a contiguous wildlife corridor which abuts the conservation parcels and which runs from the Merrimack River to the Shawsheen River. Our wetlands also contribute to and serve to feed the drinking water supply for the Town of Andover.

This natural setting and all the benefits it provides was a material reason we invested in our single family home, paid a premium price for the property, have substantially invested in upgrading our home and property, and continue to upgrade and maintain our home at significant cost and expense.

If this Application is approved, we will be permanently and unnecessarily adversely impacted. The permanent clear cut easement will be 50 feet wide, while the temporary work easement will be as wide as 165 feet. The finished pipeline will be about 150 feet from our home. This puts our family as well as our entire neighborhood, well inside the “Blast” or “incineration zone”. Our family will hear the high pressure gas being pumped through the line and the significant noise when cleaning occurs. We will lose our trees, our sound buffer, our privacy, our beautiful, natural views. All of the mature trees that give our neighborhood its character will be permanently eliminated. Our neighborhood will never be the same. The removal of the trees will cause the wetlands to dry out. The wildlife habitat will be eliminated and our family will be deprived of the enjoyment of watching the animals that inhabit and travel through the corridor and property daily. After construction, our view from our home will consist of nothing more than an expanse of land cleared of trees and replaced with invasive weeds and yellow posts clearly marked “Danger High Pressure Pipeline”. Because of the need for ongoing inspections and maintenance we will be permanently be subjected to random intrusions and violations of our privacy by total strangers, as well as to risks associated with toxic herbicides. The path of the pipeline will deprive us of privacy, disturb and dry out wetlands and ground water, and put our health at risk.

3) The current construction plans show that the pipeline which was represented throughout the public hearings and through public materials as “co-located”, defined then as within the existing corridor/ROWs with existing public utilities is not the true scenario of what will unfold here. Documented evidence in the form of the construction plans, shows that the pipeline will not be “co-located” but in fact will require the creation of new parallel corridors that extend 50ft – 100ft from the existing corridors/ ROWs. The construction and “temporary” construction sites will unnecessarily and permanently devastate hundreds of acres of our most valued conservation lands and private properties. This includes the removal of hundreds of mature trees, whose value goes well beyond the physical tree, by, as mentioned above, helping protect the wetlands that feed the drinking water supplies and adding substantial value to our property values which we never recoup during our natural lives. Temporary construction zones create permanent destruction.

4) During construction, our family will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of privacy. In addition, we both run our offices out of our home. We need to be able to work during the days. We will be deprived of that ability and our livelihood will be adversely impacted. Our neighborhood is well known to consist of ledge (thus the need for septic and no gas lines to homes, only tanks) so substantial blasting would be inevitable. This blasting will endanger the structural integrity of our home, our septic system, of the other homes in our neighborhood, and adversely impact health and wellbeing of our family, as we use our property for solitude and relaxation and impede our ability to work productively. It will diminish the quality of our life. It will also unconscionably disrupt the wildlife. As we work from home, the construction noise will impact our livelihood, and will require other accommodations to be made at an additional cost.

5) Furthermore, according to the Plans, Tennessee Gas intends to clear cut, then cross Bailey and River Roads, main Roads between our home and the highway, and town 911 services. During construction, this will make coming and going to and from our home almost impossible and also more expensive. This also creates great risk for us and the other residents of our neighborhood should we need emergency responders. We will be greatly inconvenienced and endangered.

6) We are customers and rate payers.

7) This Infrastructure is not necessary. Massachusetts has all the infrastructure it needs. Massachusetts is a

leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Andover has been a strong participant in the Solarize Mass Program. It successfully executed a Solarize Andover program. In addition, Massachusetts has an LG facility in Everett that has been sitting unused, but which could be called upon to meet the needs of any days where there is high demand. The Attorney General's independent study has clearly established that there is no need for this additional NED infrastructure. This pipeline clearly is not necessary at all to service New England. This Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience. By this time it has become quite clear that the true purpose of this oversized pipeline is to transport fossil fuels to Canadian and US coastal areas for sale and export to foreign markets, all at the expense of US rate payers. Massachusetts does not need this new pipeline infrastructure. It does not meet the criteria of serving the greater good and does not meet the definition of eminent domain and our rights under the constitution of the United States of America.

8) Our home is our only major asset. We depend on the equity here to survive and is the basis for our quality of life now and through our retirement. The value of our property will be diminished by the construction, operation and mere presence of the pipeline path. In fact, the resale value of my property has already been diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive our family of retirement funds and directly impact the quality of life for ourselves and our two children.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, We, David Yachnin and Michelle Yachnin respectfully request that the Commission to grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Respectfully submitted this 9th day of January, 2016.

David Yachnin, Michelle Yachnin

Basis for Intervening:

I live in Merrimack, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply

is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.

I am also an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

21. We do not want to pay for a Pipeline / Compressor Station in a tariff on the electric bill, when everyone is so vehemently against it being built.
22. We feel that Eminent Domain should only be used for Public Use not Private Company Use.
23. As a Electric customer of this state I do NOT want to pay for a high pressure gas pipeline as a tariff in my bill!

Basis for Intervening:

I own a home on Burden Lake in Nassau NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding.

I live within the "blast radius" of the proposed compressor station so I would be at physical risk.

I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.

- I am a member of an impacted community who has concerns about various impacts to the local environment, aesthetics, and health of the citizens of the community.

- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

I strongly oppose the NED pipeline and have SERIOUS concerns about the health impacts it will generate. I am particularly concerned with the proposed location of the Compressor station on Clarks Chapel Road in the Town of Nassau, NY. This is a picturesque and RESIDENTIAL area and very close to a popular and beloved lake and fear the pipeline and compressor station will not only bring light, noise and environmental pollution but also potential DEADLY consequences to the many young families that reside near and adjacent to this proposed sight. Kinder Morgan/Tennessee Gas has already acted in an unethical manner, trespassing on local PRIVATE property to conduct illegal surveying and they are clearly acting SOLELY in their own interest with NO CONCERN for local citizens. There will be NO BENEFIT to the local residents

and I believe they have proposed this location targeting lower income families who may not have the 'political means' to oppose it. PLEASE DO THE RIGHT THING and DENY Kinder Morgan's proposed certificate of public convenience and necessity for the construction.

Individual	throwtothechains@yahoo.com	

Basis for Intervening:

I want to intervene in this proceeding to oppose the NED pipeline. I live in Washington DC but grew up in Massachusetts and spend a lot of time in Massachusetts now helping my 91 year old mother maintain her small farm.

I am specifically and directly affected by this proposed pipeline because I have provided a significant amount of my available funds to conserve, protect and steward lands in the path of this unnecessary fossil fuel infrastructure. I gave that money with the understanding that the land protected in Massachusetts would be protected for the present and the future. I also serve on the Board of Directors of the Mount Grace Land Conservation Trust which operates in 23 towns in north central Massachusetts, four of these towns are to be run over by this pipeline. As a member of this Board, I have pledged to be a faithful steward to the land that is under the protection of MGLCT, and must protect those lands from the pipeline, the heavy construction vehicles, the pipe yards and the compressor stations.

This proposed pipeline would blast its way through conserved farms and forests and wetlands and bedrock all supposedly protected forever by people with the ability to see why preserving and protecting our environment is the better path to sustaining our future than Kinder Morgan's route of exploitation and greed.

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual irenejenks@gmail.com

Basis for Intervening:

I am filing a motion to intervene because I am currently a directly impacted landowner as well as an abutter and a ratepayer. Since 1972 my family has derived our income by operating Windblown Cross Country Ski Area in New Ipswich, NH. We are dependent on attracting skiers of all abilities to purchase area use fees. The NED pipeline project is proposed to pass directly through the ski area. If built it will destroy the two ski trails that are necessary for beginner skiers to access the rest of the trails. The pipeline route follows one half mile of our trail system. Skiers come for the beauty of the woods. Removing acres of trees will destroy the scenery. The ski area brings over 10,000 tourists to the Monadnock region annually. If this pipeline is built, it will greatly reduce our business as well as tourism to the region.

I am greatly concerned about what the impact of blasting through one-half mile length of bed-rock adjacent to our two wells will be. My family depends on this drinking water to run our restaurant for our customers, as well as for the four residences on the property.

A very popular and historic 21-mile-long ridgeline hiking trail known as the Wapack Trail passes through our ski area directly along the route of the proposed pipeline. Tourists coming to hike the trail will be highly likely to choose not to hike the southern section of the Wapack Trail anymore due to the loss of scenic quality as well as due to the noise and air pollution released by the proposed compressor station.

The ski area property is a certified Tree Farm with the American Tree Farm System. This certification means the forest is being carefully conserved for tree health, water and wildlife. Building a pipeline through this forest is similar to building it on land with conservation easements. The state recognizes this by permitting the property to be in Current Use, which is another method of encouraging protection from development. This land is specifically not intended to be built on by a pipeline or any other type of development.

If this pipeline and compressor station are permitted to be built, they will significantly reduce our business and will certainly change our rural, scenic, peaceful lifestyle. My spouse bought this property in the rural hills of New Hampshire in 1963, 52 years ago. This was before the power line right-of-way was forced through. It is not justified that this land should once again be taken and stripped of its forest. There is no proof of need for the methane in this region.

Basis for Intervening:

I am an electric ratepayer who does not want to see an increase on her bill due to NED cost recovery. Also, Massachusetts Attorney General Maura Healey has stated as a result of a recent study her office commis-

sioned to see if my state, Massachusetts, needs the extra gas capacity, and I quote: “This study demonstrates that we do not need increased gas capacity to meet electric reliability needs, and that electric ratepayers shouldn’t foot the bill for additional pipelines.” Moreover, I happen to care about the families that will be forced to live near the compressor stations of the pipelines. Other such denizens have been shown to have adverse health conditions, at least such as asthma and nosebleeds, at worst such as childhood leukemia, which has been linked to Benzene, a chemical emitted by compressor stations.

Basis for Intervening:

I am filing intervene in opposition to this project. I am an individual who operates a sheep, chicken, and hay agricultural operation and an educational farm in the Town of Temple. I sell sheep, lamb, wool, eggs, and hay in the local area to a growing base of retail customers and other farmers who want healthy, locally and sustainably produced food and farm products. I also provide 4-H and related farm educational experiences for local children and their families. My farm house, farm buildings and livestock are all located within 2 miles of the site of the compressor station proposed to be built in New Ipswich for this project. Based on the scientific studies I have seen concerning the impacts of lesser sized compressor stations I fully expect the health and well being of my livestock will be negatively and seriously impacted by the noise, vibrations, and other emanations that will be produced by this station. I also expect the airborne emissions from the station will pollute the ~65 acres of hay fields I farm on my own and others's property in Temple and the nearby town of Wilton. All my hay fields are located within 1/2 to 3 miles of the station. I have been operating them in accordance with organic farming requirements and have used most of the hay for my own livestock farming operations while selling some hay to other Farmers. I have been increasing the production on these fields and planned to begin selling much more hay that would meet the requirements of organic hay customers. My entire operation will be affected by this project and it may very well have to be shut down. This project is unnecessarily large and damaging to our area. It should not be allowed to go forward on its current scale and the compressor station should never be built in the proposed location near our elementary school and the Greenville Reservoir which are other major nearby areas with major negative impacts.

20160113-5044

Basis for Intervening:

I live in Merrimack, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding.

I am a NH resident who may be charged with paying for the pipeline with a tariff charge added to my electric rates.

The aquifer which provides my town water could be degraded by construction and operation of the pipeline. If there's any kind of damage to the pipeline this could contaminate the town's water supply.

The quality of air that I breathe could be degraded by toxic emissions from planned and unplanned compressor station blow downs and/or valve and/or metering station leaks.

The soils on nearby farms and my garden which grow produce I eat could be compromised by toxic emissions from planned and unplanned compressor station blown downs and/or valve and/or metering station leaks.

The financial ramifications of known and unanticipated consequences of the construction and operation of this pipeline and related appurtenances could increase my local and state tax obligations.

I am opposed to the construction of new infrastructure which promotes further dependence on fossil fuels. I, like all other citizens, will experience the consequences of climate warming which could be accelerated by the methane this project will release into the atmosphere. I believe this pipeline is NOT in the public interest, and I oppose it.

A huge concern to me is that the pipeline will be installed close to Thorntons Ferry School which is where my daughter goes & is very near my house.

Basis for Intervening:

The NED pipeline proposed by Kinder Morgan poses great danger to the environment, affecting protected lands, water sheds, and greenhouse gases among many other things. The NED pipeline poses serious danger to people with leaks and blow downs causing health problems to those within it's proximity, as has been shown through data collection and scientific evidence. There is no documented proof of need for expanded gas utilities in this area (and there is documented proof that we aren't even using the resources we already have!) and Kinder Morgan plans to export the gas which will raise the cost of utilities and services for people in an area already struggling with the poor economy. Passing the Kinder Morgan proposal on the NED pipeline says that you do not care about the well being of people, that you do not care about the environment, and that you do not care about the future of this country. You need to say NO to the proposal of the NED pipeline. We the people do not want the pipeline, and we will not stand for it.

20160113-5048

Hello. My name is Karen Ross Kelso and I live with my family of four in Richmond, MA and want to intervene in this proceeding to oppose the NED pipeline.

CP16-21

I am a landowner directly impacted by this project. We are in the incineration zone of this proposed project, with our deck 50 feet and our house 65 feet from an existing pipeline. With talk of a possible 4th line that

would put a new pipe through our bedroom, so our home would be seized by eminent domain.

Even if a different route were chosen (and Kinder Morgan has been evasive about the potential locations) we would still either be in the incineration zone and blast radius so be at physical risk, or if not through our own yard it would go through our neighbors and many others.

FERC please stand with the people to protect our lives and communities in opposition to NED's attempt to gain eminent domain for private profit, which is in direct violation to the intent of the eminent domain laws.

There are so many things wrong with this project so I will focus on some of the highlights as I see it.

1. This project is simply not needed. Approval of a permit by FERC does not in any way, shape or form, constitute the requirements of public convenience and necessity.

Though many think this new fracked gas pipeline will save us, it is a blind attempt for a transportation company (Kinder Morgan) to profit from exporting gas overseas. KM has applied for more than twice as much capacity to transport than has been shown to be needed anywhere. In fact in March KM had failed to sign up any new customers in the previous 8 month period* and given the Dracut terminal hub is the connection to M&NE, which has applied to switch directions, it does not take a rocket scientist to figure out that a plan to export is underway, spoken of or not. I consider it a sacrilege for a private company to be given permission to do this, especially causing so much harm along the way.

*quoted from Marcellus Drilling News

2. My, and/ or my neighbor's drinking water would be at risk during construction and/or operation of NED pipeline. In fact, permitting this pipeline will adversely impact every resident of the Commonwealth of Massachusetts.

The catastrophic effect on public health, public safety, quality of life, right to clean air and pure, uncontaminated water can not even begin to be adequately addressed or understood without further independent studies!

3. I am also an electric ratepayer who, if KM secures my electric utility as a project customer expects to see an increase on my bill relating to NED cost recovery. This is insane given there will be no benefit to anyone in our town and most all neighboring communities..

I think a moratorium on any new pipeline in Massachusetts should be imposed until every one of the thousands of gas leaks in the Commonwealth are sealed and all aged pipes replaced to contain and stop further leakage.

4. I am a lover of our rural beauty and participate in an economy that relies on the values of rural living. Our beautiful outdoor environment is our most sacred and precious resource. My livelihood is at risk in the event of this project. I would lose both my home and place of work!

In conclusion, I not only request to be granted intervenor status, but also to have these initial observations considered and logged.

Ashfield Park Commission	judy@southfacefarm.com	judy@southfacefarm.com

Basis for Intervening:

I am writing as the Chair of the Ashfield Park Commission. Our responsibilities are to the beach front and lands around Ashfield Lake, considered the "Jewel" of the Town. The Lake serves the Town with opportuni-

ties for swimming, boating, fishing year round, skating and snowmobiling in the winter months. The proposed pipeline passes on the ridge above the Lake and should any leak or explosion occur, it would prove disastrous for the cottages around the lake and the water alike. For these concerns, we are opposed to the path that this pipeline is scheduled to take.

TO INTERVENE

RE: Docket No. CP16-21-000

I am writing to motion as a concerned intervenor, landowner, neighbor and tax paying resident presiding towards the end of the Proposed Kinder Morgan/ Tennessee pipeline for the proposed NED project.

I cannot address the DEIS at this time since I have never received one after requesting it months ago and reserve my right to comment on it upon receipt.

I have not found the DEIS online and have requested to have it mailed to Ms Susan Jacques, 116 Haven Lane, Schoharie, NY 12157

In general I will be impacted greatly in a negative way by the Wright Compression Station that will be expanded with larger blowdowns affecting my air, water and soil!

A rural gas running through inferior grade pipe puts us all at excessive and "explosive" risk!

Our streams and forests will be slaughtered with the invasion of the pipeline easements....easements of which another pipeline has marred and raped our hillsides in a flood zone that will possibly lead to landslides and further flooding by the erasures of our precious trees!

Trees that remove the carbon monoxide from our air, helping to purify our air. In place we get radiation and methane and other harmful chemicals leading to various servers health issues!

These pipelines will also invade our karats/caverns which lie right behind my home and extend a short distance down route 30 to the easement already carved out; as well as located in many other areas along this pipeline route.

I already live between two pipelines and feel targeted by the invasion of these larger intrusive size pipelines!

Now actually closer to three and Kinder Morgan/Tennessee NED will make 4 if the later two are allowed to go through!

I have already seen the "theft" of my neighbors property through eminent domain from the other pipeline company which leads to the mistrust of this company as well.

I reserve the right to add to this list as I'm sure there will be much upon receipt of the printed DEIS that I can and will respond to at a later date.

A concerned intervenor,

Susan Jacques

Basis for Intervening:

I live in Stephentown, New York, adjoining on both sides the proposed route of the NED pipeline. Our property is located on N. Moore Hill Road and Newton Road in Stephentown My wife and I have resided in our home for more than 50 years. We and our property are directly affected by the proposed pipeline, including the threat of the taking of some of our property by eminent domain. We live next to a stream which potentially is in danger of pollution by any leakage or degradation of the pipeline.

The sponsor of the proposed pipeline is unlikely to be a financially responsible party because its valuation has decreased by more than 70% in the last year. Kinder Morgan cannot show that it will be able to raise the necessary financing to complete the project. The upshot is that there will be a long period of time during which property values will be called into question because of the overhang of pipeline talk.

We and our dog walk our land every day. We don't want the pipeline and it brings no benefit to us, our community or our state.

Please refer to the article published on January 6, 2016, in YALE NEWS which reported on a study done at the Yale School of Public Health: "In an analysis of more than 1,000 chemicals in fluids used in and created by hydraulic fracturing (fracking), Yale . . . researchers found that many of the substances have been linked to reproand developmental health problems, and the majority had undetermined toxicity due to insufficient information". New York State does not allow fracking within its borders because of the threat to public health. Why should we be subjected to a ticking bomb on what is now our property?

My wife and I respectfully request that we be allowed to intervene in this proceeding so that we may have the opportunity to bring to FERC the objections and fears of threatened landowners.

Respectfully submitted,

Andrew P. Davis

Jessica G. Davis, M.D.

Individual glenayers@gmail.com

Basis for Intervening:

"I live in Greenfield, MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because:

– I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED.

– I am gas ratepayer in the Berkshire Gas service area, a gas company that has contracted for NED capacity, which I expect will result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts of the gas company).

I believe that there is a corporate conspiracy between Berkshire Gas (owned by Iberdrola) and K-M and that the regional moratorium that has been enacted by Berkshire Gas is illegal and amounts to racketeering and should be prosecuted under the Racketeer Influenced and Corrupt Organizations (RICO) Act. I believe that the granting of the powers of eminent domain by FERC constitutes an additional Mafia-like action that most reasonable persons would consider corrupt.

– I work and frequently travel throughout Franklin County and believe I will often be in the "blast radius" of the pipeline because my day job will require that I cross over the proposed pipeline route, or work in very close proximity to NED components, so I will be at constant physical risk.

– My job requires that I interact with and represent residents whose watershed will be crossed by the proposed route and could have their drinking water supply impacted by construction and/or operation of the NED pipeline or components.

-I am responsible for certifying that private water supplies are considered "potable" under the State Sanitary Code, so my job performance will be impacted by the construction, operation, and possible defects associated with the NED pipeline and its components, in that this pipeline will have serious and profound impacts on local groundwater resources.

– As a resident of Franklin County, I am directly impacted when my community is disrupted and the local environment and ecology are destroyed and damaged by construction of an unnecessary pipeline.

– I am a frequent donor to land conservation organizations and the purpose of my donation would be violated by the building of this pipeline through permanently protected and conserved lands. In addition I have served on the board of a local land trust and feel that the illegal taking of permanently protected conservation lands, as is proposed by K-M and the NED pipeline project violates the Public Trust Doctrine and Article 97 of the Massachusetts Constitution.

-For these reasons I request to be granted status as a full intervenor in the FERC process.

Basis for Intervening:

I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health. I am particularly concerned with the health impacts to myself and my 4 year old daughter. I believe a comprehensive health study should be conducted by an unaffiliated third party before any infrastructure is approved. I am also concerned with the environmental impacts such a project would pose. I live on Burden lake and am concerned about the water and wildlife that would be affected if such infrastructure were allowed in this recreational, residential community. The noxious gases released into the air would ultimately contaminate the lake and groundwater, and put all our health at risk if said pipeline and compressor station is approved. You can't put a dollar value on human life, no profit is worth the potential risk.

Basis for Intervening:

I live in Merrimack, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because; I am a directly impacted landowner. I have lived on this property my entire life. It is a quiet spot where I can keep a kennel. The pipeline will be very close to my house, my kennel and my well. The construction/blasting could affect everything. The land is on a hill and the trees being taken down could affect preservation of my land.

I am surrounded by the town underground watershed. The blasting of the ground could cause major issues for the town water supply. A supply that cannot be replaced. A supply that the town has been working on for many years. Please consider the importance of a water supply over the importance of a pipeline.

I am also concerned of the possibility of earthquakes since the area is considered to be on a fault.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	rlgaulin@gmail.com	

Basis for Intervening:

I am staunchly opposed to the proposed Northeast Energy Direct application and encourage its denial by FERC.

I am a donor to a land conservation organization and the purpose of my donation would be violated if this

project is allowed to take easements over land that is meant to be protected forever. I have worked long and hard to help conserve these special lands with the express understanding that their protections will hold “in perpetuity”.

I also live along a powerline corridor that was part of the originally proposed route and is still a potential alternative route. This would pose a direct and unacceptable danger to my home, farm, and family.

I live downwind from the Northfield compressor station, which would, by design, spew toxic gasses on a regular basis in the course of its daily operation in maintaining pressure within the pipeline.

I am a trained scientist, and understand very clearly the climatological threat of increasing our use and infrastructure for fossil fuels, and the CO2 equivalent of methane leaking directly into the atmosphere, both by design and as a byproduct. As a former member of the Global Warming Solutions Act Advisory Committee for the Commonwealth of Massachusetts, I strongly feel that this project would make compliance with that legal mandate much more difficult to achieve.

As a father, I care about the world that we are leaving to our children and the next generation, and the next. We have inherited a beautiful and bountiful planet and it is our responsibility to pass what is left of it down with our eyes open, deliberately. So I am impacted by this continuing threat to the quality of our land, water, air, health and climate, as presented by the NED project.

20160113-5058

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)

Docket No. CP16-21-000

MOTION TO INTERVENE OF TROUT UNLIMITED

Trout Unlimited, Inc., along with its New York, Massachusetts, New Hampshire and Connecticut Councils and its Clearwater, Homewaters, Deerfield River Watershed, Taconic, Millers River, Nor’East, Greater Boston, Squan-A-Tissit, Great Bay, Merrimack River Valley and Farmington Valley chapters (collectively, “Movant”), in accordance with the requirements of Rule 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”), 18 C.F.R. § 385.214, and regulations under the Natural Gas Act (“NGA”), 18 C.F.R. § 157.10, hereby moves to intervene in the above-captioned proceeding on the terms set forth below.

I. Notices and Communications

Service is to be made upon, and communications regarding this proceeding should be addressed to:

Katy Dunlap, Esq.
Trout Unlimited, Inc.
6281 Cayutaville Rd.
Suite 100
Alpine, NY 14805
607-703-0256
kdunlap@tu.org

William H. Wellman
New York Council of Trout Unlimited
7 Helen Street
Plattsburgh, NY 12901
wellman1985@charter.net

Alicea Charamut
Connecticut Council of Trout Unlimited
56 Francis Ave

II. Request for Formal Hearing

Pursuant to NGA regulations, 18 C.F.R. § 157.10(a)(1), Movant respectfully requests a formal hearing on the application of Tennessee Gas Pipeline, LLC (“TGP”) for a certificate of public convenience and necessity authorizing the construction and operation of the Northeast Energy Direct pipeline and associated facilities (“Project”), including the environmental impacts of and public need for the Project.

III. Identity of Movant

TROUT UNLIMITED is a private, nonprofit 501(c)(3) organization, founded in 1959 and currently headquartered outside of Washington, D.C. Trout Unlimited is the nation’s largest coldwater conservation organization with a mission to conserve, protect and restore North America’s trout and salmon fisheries and their watersheds. As of December 2015, Trout Unlimited has more than 30,000 members working to achieve its mission throughout Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut. Trout Unlimited members are passionate about the sport of fishing and they dedicate a significant amount of time to fulfilling the organization’s conservation mission and to ensuring fishing opportunities for today’s anglers and for the next generation.

IV. Background

In Docket No. CP16-21-000, TGP has applied for authorization under Section 7(c) of the NGA to construct, own and operate a new project comprised of two components: 1) the Supply Path Component, which is comprised of facilities from Troy, Pennsylvania, to Wright, New York (Supply Path Component), and (2) the Market Path Component, which is comprised of facilities from Wright, New York, to Dracut, Massachusetts (Market Path Component). The Supply Path Component facilities include: (i) approximately 174 miles of pipeline facilities in Pennsylvania and New York of which approximately 41 miles will be looped, (ii) three new compressor stations totaling 153,500 horsepower (hp), (iii) modifications to one existing compressor station, (iv) two new meter stations, and (v) various appurtenant facilities. The Market Path Component facilities include: (i) approximately 188 miles of mainline pipeline facilities in New York, Massachusetts, and New Hampshire, (ii) approximately 58 miles of lateral and pipeline looping, including a total of five delivery laterals in Massachusetts and New Hampshire, one pipeline loop in Connecticut, (iii) six new compressor stations totaling 207,600 hp, (iv) construction of 13 new meter stations, (v) modification of 14 existing meter stations, and (vi) various appurtenant facilities.

The Project construction workspace including temporary workspace, additional temporary workspace, permanent (or operational) right-of-way, temporary and permanent access roads, contractor yards, and above-ground facilities for the Project will total approximately 10,957.40 acres. Operation of the Project facilities will require approximately 2,397.03 acres that will be maintained as permanent right-of-way (or fee-owned property of TGP for compressor station facilities).

The Commission’s Notice of Application for the Project states that motions to intervene are due on or before January 6, 2016. On January 4, 2016, the Commission extended the comment period to January 15, 2016.

V. Intervention

In accordance with the Commission’s Rules of Practice and Procedure (18 C.F.R. § 385.214) and the Regulations under the Natural Gas Act (18 C.F.R. §157.10), Movant seeks to intervene in this proceeding because, if the application is granted, the Movant and its members may be immediately and permanently harmed by the economic, environmental, and other impacts of the Project.

Specifically, Movant has informational interests in a comprehensive analysis, pursuant to the National Environmental Protection Act (“NEPA”) and other law, of all direct, indirect, and cumulative environmental, social, and economic consequences of the Project. Additionally, Movant has substantive interests that will be adversely affected by the following Project impacts: the direct, indirect, and cumulative environmental im-

pacts of Project construction and operation on Movant's members who live, work or engage in recreational activities in the Project area and surrounding communities; impacts on fishing opportunities that Movant and its members enjoy within the vicinity of the Project area and surrounding communities; and the economic impacts of the Project and the environmental damage it may cause, including but not limited to the costs of impaired ecosystem services, costs of stream restoration and harm to fishing-related tourism and recreation. Collectively, on average, Movant's members spend more than 189,000 hours on an annual basis working to protect, restore and reconnect native and wild trout streams in

Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut. According to the U.S. Fish & Wildlife Service, in 2011, there were approximately 1.36 million anglers who fish for trout in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut and they spent more than 14 million days that year fishing for trout in those states. Further, in 2011, anglers spent more than \$3.54 billion on fishing equipment and trip-related expenses, generating significant revenue for these five states and local communities. The Project is proposed to be located in or near many of the streams and rivers where Movant's members and other anglers fish for native and wild trout, and where communities benefit from economic revenue generated by fishing-related activities. As the nation's largest coldwater conservation organization working to protect and restore native and wild trout streams, and to retain and increase fishing opportunities, and as a result of our continuous efforts to achieve these goals in the affected states, Movant has a significant and unique interest in the Project.

The Movant's interests will not be represented by any other party and therefore will not be adequately protected unless the Movant is permitted to intervene and to participate as a formal party to this proceeding. Further, the Movant's participation in this proceeding will lead to better informed decision-making and more reliable protection of affected public water resources. The Movant therefore satisfy the conditions for intervention because their participation is in the public interest. See 15 U.S.C. § 717n(e); 18 C.F.R. § 385.214(b)(2).

WHEREFORE, Movant respectfully request that the Commission grant this motion to intervene and authorize Movant to participate fully as parties in this proceeding.

Alpine, New York
January 12, 2016

Respectfully submitted,
Katy Dunlap, Esq.
TROUT UNLIMITED

20160113-5059

Submission Description: (doc-less) Motion to Intervene of Darrell J Scott under CP16-21-000.

Just compensation clause of eminent domain.

Submission Date: 1/12/2016 10:16:45 PM

Filed Date: 1/13/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	djscott.ned.project@gmail.com	

Basis for Intervening:

Just compensation clause of eminent domain.

I have a 21 acre woodlot that is in the path of the Fitchburg lateral of the Northeast Energy Direct Project. It was purchased primarily as a retirement investment. The town of Mason zoning laws require a 5 acre minimum lot size for new building lots. The Fitchburg lateral of the Northeast Energy Direct Project will bisect the western-most 5 acre lot, when subdivided, rendering it difficult to install a house, well, septic system, driveway etc. Present day lot values are \$90,000 for a buildable lot. I am concerned that Kinder Morgan will not give me just compensation for the taking of my property.

The United States Constitution 5th amendment requires “just compensation” for the taking of property for “public use”. Considering the public use of this pipeline project is to supply natural gas through the Maritimes & Northeast pipeline to LNG export terminals such as Goldboro, Nova Scotia to Europe, South America, and Asia, and that the monetary profit of the pipeline and natural gas companies will be significant, I am requesting that just compensation be made to all affected property owners as myself. In my case 50% of fair market value of the virgin lot.

Not settling on an agreement with Tennessee Gas Pipeline prior to FERCs approval of the NED project should have no bearing on the fair market value. Tennessee Gas Pipeline Company must honor the constitution regarding Eminent Domain rights both before and after FERC’s approval of the project.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	samww@comcast.net	

Basis for Intervening:

My interests which may be directly affected by the outcome of the proceeding include:

My interest as an electric ratepayer, insomuch as the company seeks to secure my electric utility as a project shipper, which, in turn, would seek to recover costs associated with the project from ratepayers.

As explained in depth by others on this docket, Kinder Morgan is essentially telling the commission that New England needs a blow torch to light a candle. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England’s ratepayers — either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

My interest as a resident of the Deerfield River Watershed, living less than a mile from where the company proposes to pass under the Deerfield River with its pipeline.

In addition to living in the watershed, my family swims and fishes in the river at Bardwell’s Ferry Bridge in Conway. I am concerned about the impact that the construction and operation of the pipeline could have on ecological and human health in our watershed.

My interest as a member of Natural Roots CSA, and a gardener growing my own food. The proposed blow-down valve near Pine Hill Rd in Conway has the potential to release toxic chemicals into the air. Prevailing winds would deliver this pollution to the South River valley, where we live. Our crops, and those of our nextdoor neighbor Natural Roots and our water supply risk being polluted. This would endanger the food security and health of hundreds of families.

My interest as a resident of Bardwell’s Ferry Road and a taxpayer. The massive project of drilling under

the Deerfield River will mean many hundreds if not thousands of trips by heavy equipment, taking a toll on Bardwell's Ferry Rd, and resulting in a huge increase in both noise and air pollution.

My interest as a taxpayer, neighbor and visitor to protected public land in Massachusetts, particularly South River State Forest in Conway. I am very concerned about the threat this project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution.

The public record indicates that Kinder Morgan's modus operandi is to do whatever it takes to get pipelines approved and installed as quickly as possible, cut corners on construction and maintenance, and simply pay the fines later.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued.

Basis for Intervening:

As a landowner of a property that is in the path of the proposed pipeline, I am a stakeholder adversely impacted by the project. I request that the Commission grant my Motion to Intervene as a party with full rights to participate in further proceedings.

- 1) I purchased the house in June 2013 to raise my family at the best place that I could afford. The proposed pipeline will make it the least desirable place to raise a family.
- 2) The pipeline is so close to the house and to the bedrooms that it will become a life-threatening situation if the gas leaks or explodes. It is not acceptable to
- 3) The pipeline will make the property unsellable and that affects my ability to relocate for better career opportunities.
- 4) The value of the property will diminish significantly. I spent most of my life's savings to purchased the house and it is my major asset that I need to survive during the retirement.
- 5) The privacy provided by the trees in the backyard will be completely lost when the trees are cut down. The privacy is one of the reasons that I purchased the house.
- 7) The wooded area of the backyard is part of wildlife corridor to and from a conservation area. There are wild turkeys, deers, foxes, rabbits, squirrels, and fireflies to name a few. I am against destroying the environment for wildlife to make a private corporation profitable.
- 8) The construction will make me and my family subject to noise, odors, dust, debris, and loss of privacy and safety.

January 13, 2016

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street NE Room 1 A

Washington, DC 20426

re: Tennessee Gas Pipeline Company, L.L.C., Docket No. CP16-21

From Mason (NH) Pipeline Committee

RE: TGP provides false number for miles of new NED ROW

Dear Secretary Bose:

It is appalling that at this advanced stage in the FERC process TGP continues to put forth the lie that only a few miles of new ROW are needed for the Wright to Dracut pipeline. TGP stated in their 12/28/15 response to FERC's 12/8/15 information request on NED: "the proposed route (referring to NED Market Path) incorporates 173.57 miles of co-location with existing utility easements and only 14.29 miles of new ROW." (1) In truth, this pipeline will require a completely new ROW corridor to be obtained beside the 77+miles of Eversource powerline easement across southern NH. Along this corridor NED will double the width of intrusion into private property and public conservation lands with associated destruction of forests, wildlife habitat, wetlands and water resources. In the town of Mason, NH, alone at least 9 miles of new ROW will be needed, including more than 5 on NED's Fitchburg lateral.

With their deceptive use of "co-location", TGP implies the NED project will be sited almost entirely within existing utility easements, so people will assume the pipeline will cause little new disturbance. But TGP's maps reveal that the pipeline is NOT located within the Eversource powerline easement.

This has to be so, because the powerline easement is specifically limited to the transmission of electricity and intelligence ONLY. This is clearly stated in property deeds: for example, Mason Conservation Commission's protected land crossed by the Eversource easement. (Hillsborough County Book 2058, pp.153-55; Book 8577, pp.1770-72) Nearly ALL of NED Market Path will require new ROW easements, meaning that TGP must negotiate with many hundreds of resistant landowners, more than half of whom (up to two-thirds of landowners in some areas) have denied TGP access to survey their property.

Indeed, the siting of pipelines close to powerlines is dangerous, accelerating the rate of pipeline corrosion. To combat corrosion, large grounding arrays are required, necessitating the acquisition of further ROW for grounding. This is a significant consideration, given that the Pipeline Safety Trust of the US Pipelines and Hazardous Materials Safety Administration has documented that gas pipelines installed since 2010 have more incidents annually than those installed in ALL previous decades. (March 2015)

Please require that TGP state the true miles of new ROW that must be acquired for NED, both for the pipeline and its grounding arrays. The true figures of new ROW must be shown in TGP's tables. This truth is necessary to dispel any false impression that the Wright to Dracut route is less disturbing than following the existing Alternatives, the 200 and 300 pipelines.

FERC should require the true numbers in order to make a wise decision. Thank you for your consideration.

Sincerely,

Liz Fletcher

Mason NH Pipeline Committee

(1) TGP's December 28th response to FERC's December 8, 2015 Environmental Information Request No. 1, (20151230-5351(31114660)), page 19-20: Tables 3 and 4 also show these deceptive figures.

UNITED STATES OF AMERICA
BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC)
A Division of Kinder Morgan)
Northeast Energy Direct Project)

Docket No. CP16-21-000

**MOTION TO INTERVENE AND OPPOSITION
OF THE DADAK ESTATES HOMEOWNERS TRUST
OF DRACUT, MASSACHUSETTS**

We hereby move, pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("FERC" or "Commission") Rules of Practice and Procedure, 18 C.F.R. §385.212 and 18 C.F.R. §385.214, to intervene in the above-captioned proceeding. We seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan").

On November 20, 2015, the Company filed its application under §7 of the Natural Gas Act, 15 U.S.C. §717(f) and §157 of FERC's Regulations, 18 C.F.R. §157.1 et seq., for the proposed NED Project, FERC Docket No. CP16-21-000.

I. STANDING TO INTERVENE

We believe we have standing to intervene because we are the members of the Dadak Estates Homeowners Trust ("Dadak Trust") which is duly recorded at the Middlesex Registry of Deeds. The members of the Dadak Trust consist of the owners of twenty (20) homes built in 2011 and 2012. We are interested parties and are directly impacted by the proposed compressor station and pipeline of the NED Project.

II. REASONS FOR INTERVENING

We are requesting to intervene because of the detrimental impact on the health and safety of the homeowners and their children, and the environment as a whole, including harm to waterways, animal life, crops and soil, increased noise pollution, and diminished air quality that the proposed compressor station and pipeline poses.

We are further requesting to intervene because there has been insufficient research and studies conducted concerning the detrimental impact a compressor station and pipeline will have on the environment and whether there is sufficient need for gas expansion in Massachusetts.

We are further requesting to intervene because of Kinder Morgan's failure to provide notice to any of the members of the Dadak Trust who are within the proximity of those who should have received notice of the proposal from Kinder Morgan or a related entity.

A. IMPACT ON HEALTH AND SAFETY

The members of the Dadak Trust are personally individually impacted by the construction of the proposed NED Project including the compressor station and pipeline with respect to our health and safety. Further, the compressor station and pipeline will have adverse environmental impact on the waterways, animal life, crops and land protected by municipal, state and federal law.

The compressor station is proposed to be built within a range of approximately 1400 feet to 1500 feet from our homes, in addition to the proposed construction of a new 30 inch pipeline running near the homes within the Dadak Trust and the schools where the members' children attend school. There are known health hazards resulting from the toxins emitted from such compressor stations which include but are not limited to: chronic dizziness, headaches, nosebleeds, sore throat and an elevated risk of certain cancers. Emission of such harmful toxins from the compressor station will cause detriment to our health. Further, catastrophe would result from an explosion at the compressor station.

The member homes of the Dadak Trust are at what is now being called "Ground Zero" of the proposed compressor station and within the "incineration corridor" if there is an explosion. Within our neighborhood, there are more than 17 children under the age of 10 (and over 20 minor children in total) living within approximately 1500 feet of the compressor station. If there is an explosion at the compressor station, it will cause harm and death.

Specifically pertaining to the compressor station, there is concern of the "blow-down" cycles which can last for hours which release methane (a green house gas that is approximately 30 times more potent than CO₂) into the air which quickly turns into formaldehyde (a carcinogen) when it reacts with the sunlight. It is also known that these "blow-downs" release many other cancer causing chemicals, including but not limited to benzene and toluene. Furthermore, the "blowdown" noise levels are not regulated by the EPA, and can range from 90 - 120 decibels. Upon information and belief, Kinder Morgan has requested permits to allow for at least seventy (70) "blow-downs" per year for each unit.

Upon information and belief, the Town of Dracut has insufficient first responders to react to an incident at either a compressor station or the pipeline. Further, the Town of Dracut has insufficient funds to maintain the integrity and safety of the compressor station or the pipeline.

This proposed Project is causing distress and alarm to the members of the Dadak Trust.

B. INADEQUATE RESEARCH AND FINDINGS REGARDING ENVIRONMENTAL IMPACT AND ALTERNATIVE SITES

There has been woefully inadequate research and study of the environmental impact that will be sustained by the residents of Dracut and the environment.

Upon information and belief, the Town of Dracut has commissioned an independent third party consulting firm to determine the environmental impact upon the air, soil, water, human and animal life.

Upon information and belief, neither Kinder Morgan nor any other related entity has conducted studies sufficient to determine the environmental impact of the proposed compressor station and pipeline.

Massachusetts Attorney General, Maura Healey, commissioned a study which produced findings stating that there is not a need to expand interstate natural gas pipeline capacity and that reliability can and will be maintained over time.

Upon information and belief, there have been studies conducted regarding alternative routes and sites for the NED Project in less densely populated areas and where the environmental impact would be less severe, regarding water and soil contamination and other related harm.

C. FAILURE TO PROVIDE NOTICE

Upon information and belief Kinder Morgan is required to provide notice to affected landowners. Kinder Morgan has failed to comply with that duty to notify the members of the Dadak Trust as we are affected landowners whom are in such close proximity to the compressor station and whom will be severely negatively impacted if the project moves forward as proposed.

Upon information and belief Kinder Morgan is requesting an exemption regarding their failure to provide adequate notice of their project to the potentially affected landowners directly impacted.

Kinder Morgan is a sophisticated corporation with legal counsel that should be held accountable to the rules and regulations of the application and notice process. Kinder Morgan either chose not to follow the notice

requirements or was grossly negligent in its failure to follow the notice requirements. In either case, Kinder Morgan should be required to re-file the application ab initio and provide sufficient notice to all potentially affected landowners.

III. PRAYER FOR RELIEF

We, the members of the Dadak Trust respectfully request the following:

1. that the Commission grant our Motion to Intervene and Opposition,
2. that the Commission deny Kinder Morgan's application for the foregoing reasons and require Kinder Morgan, if they choose to move forward, to resubmit the application ab initio and provide notice to all the potentially affected landowners,
3. that the Commission require Kinder Morgan to commission, conduct and complete sufficient independent third party studies into the environmental impact of the NED Project, and related compressor station and pipeline in Dracut Massachusetts, and
4. that the Commission require Kinder Morgan to establish a fund with monies sufficient to compensate those adversely affected by the NED Project, including funds for those affected by the compressor station and pipeline in Dracut Massachusetts.

IV. CONCLUSION

For the foregoing reasons, we are opposed to the NED Project and respectfully request that the Commission allow the Motion to Intervene and Opposition and the other relief requested.

Respectfully submitted, this 12th day of January 2016

Basis for Intervening:

We are the residents of Whittier Place - a 64 home subdivision in Merrimack, NH.

We are applying as interveners in Docket CP16-21-000 because we will be directly impacted by this project in a number of ways:

1. We are affected land owners.
2. If built, the rural quality of life in our neighborhood will be decreased at the onset of construction and forever more.
3. The proposed route crosses our town's watershed and we believe this poses a risk to our town's water supply.
4. We are Liberty Utilities ratepayers, and we do not wish to be forced to pay for this pipeline through our utility rates.
5. Our town (Merrimack, NH) is identified as the location of a meter station, which we believe will negatively impact our quality of life.

As the owner of 7 acres and a home less than a mile from the proposed route of the NED pipeline in Ashfield, MA, I am convinced that the value of my property will be impacted and my safety and that of my neighbors will be diminished. Pipelines have accidents, and studies show that real estate prices decline in proximity to projects like them. This project is clearly not appropriate for a rural town like this one.

Individual jenniehill@myfairpoint.net

Basis for Intervening:

I live in Richmond NH near the proposed pipeline route. This portion of the route has been quite contentious with at least 3 different routes proposed since December 2014. The closest alternative was less than 1000 feet from my house and abutted property I own jointly with my brother Jonathan Hill. The current alternative is less than 0.25 mile from my house. This will negatively impact me, my siblings and my neighbors in

a number of ways. First is the danger of living within/near the incineration zone. Being that this is a pipeline Class 1 location, thinner pipe and longer distances between valves are permitted. Just because we live in a less densely populated area, we shouldn't be subjected to less stringent construction specifications. Safety standards by insurance actuary tables is unacceptable. The proximity also raises concerns about leaks contaminating ground water, and compromising the drilled wells we all rely on in Richmond.

The Current route crosses land owned by my brother Timothy Hill. A proposed access road crosses a lot owned by brother David Hill, as well as a lot owned by Jonathan. That lot abuts the property he and I own jointly. The town roads connecting the access road to SR 119 have a tight 90 degree turn. That corner would have to be widened for the project by removal of a bank on our property. Kinder Morgan was less than forthcoming about changes, failing to notify town officials, and neglecting to send certified notification to land owners affected by the proposed access road. The only way that we can be sure to know what is going on, is to be directly involved in the process.

Upstream less than 15 miles away, if this project is approved, my grandniece will be starting kindergarten in Northfield, Ma about the time the compressor station goes online. That will put her and her classmates' health in jeopardy.

Additionally, this project provides absolutely no benefit to myself, my siblings, my neighbors and my fellow citizens of New Hampshire. We are being told that our land will be taken by eminent domain, our property values diminished, home owners insurance perhaps cancelled, the air, earth and water potentially polluted, all for a trumped up "need" here in New England, when it is clearly to transport overseas to Europe, the Northern European Direct is what the acronym really stands for.

For these reasons, I respectfully file to be an intervener in this case.

20160113-5069

Individual	spilmandan@yahoo.com	

Basis for Intervening:

The proposed pipeline will run about one mile from my house, a path traveled by car and a jogging route on a regular basis. My house is also less than two miles from two sites that are potential locations for the compressor station, if the current location on Clarks Chapel Road is changed. As I do not expect FERC to restart the application process if this change does happen, and allow a full review when considering such a drastic project redesign change, I am preemptively filing intervener status.

Looking at the more important aspect, which comes from the perspective that I would like to have a habitable planet for my grandchildren's grandchildren to live, I am intervening on their behalf. The world, and primarily the United States, needs to reverse course 180 degrees, and invest all our energies and resources in creating an industrialized system that uses minimal fossil fuels. Along with Europe, we created the mess of 8000 tons per second of ice melting (that is 16,000,000 lbs/sec for those keeping score at home), and we need to stop the pending problems from ravaging the Earth, and especially the poor and most vulnerable countries. I am committed to doing all that I can to push our country towards a future livable planet, and will put my being on the line for future generations to keep this project from being another in the long line of corporate greed expositions at the expense of the Earth.

It is obvious that there is no need or common good for this project in the USA, and we can see through the curtain to know that the fracking industry has a limited window to make all the money that they can, before

fracking is even banned in the most conservative states. These corporations obviously aim to get as much out of the ground and sold before that day, which means selling large volumes overseas. If this project was for the common good of the USA, we would be pacing out the use of the fracked gas, and helping maintain our economy over the decades ahead as we continue to reduce fossil fuel use. This would be a sound policy for a federal agency to follow, and if FERC was to do it's job in the interest of public good, it would facilitate the transition in this manner. But we are not naive enough to expect this, and we do see the push by the companies applying for permitting to FERC to get as much fossil fuels burned as quickly as possible while they can still pad their bottom line. Most of us will all have to look our grandchildren in the eyes when they ask what we did to allow our Earth to get to the point of destruction, and I will be prepared to tell my story with pride. I do not expect the same from FERC employees that would approve such a sham of a project, nor from the applicant's employees.

My family will be directly impacted by the proposed pipeline, our drinking water, our safety, and our property. KM has a long history of H&S violations, and their recent financial problems (where their maintenance budget has been reduced) means we have a disaster 200 feet from where we live.

Our local fire chief has told me that when an explosion happens, they can do nothing, except evacuate the survivors and wait for the fires to burn out.

This is a repeat of the 'Love Canal' - we need to learn from environmental disasters and not allow them to happen again.

Basis for Intervening:

I am a Methuen resident with several reasons for filing for intervener status.

I am at risk of being in close proximity to the pipeline and/or compressor station were there to be a route change.

Methuen's source of drinking water is the Merrimack River. It is proposed to be crossed by the Lynnfield lateral route upstream from Methuen and Lawrence drinking water intake plant. My drinking water supply is at potential risk of contamination due to the disturbance of 100+ year old sediment from the textile industry upstream in Lowell, Ma. during construction. In addition, the construction and/or operation of the pipeline, compressor station, or other facilities will disrupt this precious water resource which has fought back from

devastating pollution in the 1970's to class "B" status. The Merrimack River is also home to the American Bald Eagle.

As a Methuen resident, my community has concerns about various impacts to the local economy with property devaluation, and risks to health and safety of the heavily populated neighborhoods which the Haverhill lateral would disrupt. First responders and residents are at great risk in the event of a "failure" event.

Lastly, I am an electric ratepayer who, if Kinder Morgan secures a certificate, my electric bill will increase in relation to NED cost recovery.

20160113-5081

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company,
a subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline Project
Docket No. CP 16-21-000

**MOTION TO INTERVENE OF
NASHUA REGIONAL PLANNING COMMISSION**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, Nashua Regional Planning Commission files this Motion to Intervene in the above-captioned proceeding. The Nashua Regional Planning Commission does not take a position on the proposed project at this time and seeks to intervene to monitor the progress of the proceeding.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

The Nashua Regional Planning Commission (NRPC) is a subdivision established under New Hampshire Revised Statutes Annotated (RSA) 36:45. NRPC's responsibility is to prepare a coordinated plan for the development of the region, taking into account present and future needs with a view toward encouraging the most appropriate use of land, such as for agriculture, forestry, industry, commerce, and housing; the facilitation of transportation and communication and the proper and economic location of public utilities and services.

The NRPC region consists of 13 communities in Hillsborough County and represents the regional interests of more than 206,000 residents. The NRPC member communities of Amherst, Brookline, Hollis, Hudson, Litchfield, Mason, Merrimack, Milford and Pelham New Hampshire are directly impacted by the proposed Tennessee Gas Northeast Energy Direct (NED) pipeline. NRPC, working with its Energy Facilities Advisory Committee (EFAC) has been an active participant in the FERC process and worked to provide its member communities with factual information regarding the impacts of construction and operation of energy facilities in the region will have on local land use, economy, and employment, and the effects on the orderly development of the region. NRPC seeks to intervene to monitor the progress of the proceeding and protect the interests of our member communities.

B. Description of Impacts

NRPC is committed to fostering the orderly development of the region in partnership with its member communities through the implementation of the goals outlined in the NRPC Regional Plan (the Plan). The Plan places high value on quality of life for the residents of the region, socio-economic growth and the preservation of natural, agricultural, recreational, and historic resources. As such the Plan serves as an authoritative basis for our review of the proposed NED pipeline and all developments of regional impact.

Under the current project proposal, nine communities in the NRPC region will be directly impacted by more than 29 miles of 30-inch mainline transmission pipeline. There is an additional five miles of lateral pipeline

proposed through the Town of Mason. The proposed pipeline will intersect approximately 273 land parcels in the region. Within 500 feet there are approximately 730 land parcels, 450 of which are residential use. As a result, there are significant concerns for the public health and safety of residents who live along the proposed alignment. Residents may be exposed to reduction in air quality, increased ambient noise from compressor stations and gate/metering stations as well as risks from pipeline failure.

The proposed pipeline will result in impacts to natural, agricultural, recreational, and historic resources in the NRPC region. Specifically, stratified drift aquifer resources, river ecosystems, wetlands, and trails, cultural and historic resources all exist along, and adjacent to, the proposed alignment of the pipeline. In addition, there is concern regarding the project's impacts on critical infrastructure including roadways, public and private drinking water supply wells, municipal water, storm and sewer systems, and electric utilities.

Significant questions remain regarding (1) the economic effect of the facility on the affected communities; (2) the economic effect of the proposed facility on in-state economic activity during construction and operation periods; (3) the effect of the proposed facility on the tax revenues of the host and regional communities; (4) the effect of the proposed facility on real estate values in the affected communities; (5) the effect of the proposed facility on tourism and recreation in the region; (6) the overall impact of the project on the region's long-term energy portfolio.

The Nashua Regional Planning Commission's Motion to Intervene Must Be Granted

The Nashua Regional Planning Commission satisfies the standard for intervention under the Commission's regulations. As discussed above, The Nashua Regional Planning Commission interests are directly impacted by the proposed project, and no other individual or organization can adequately represent the Nashua Regional Planning Commission's unique interest in this proceeding. The Nashua Regional Planning Commission respectfully requests that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The following The Nashua Regional Planning Commission should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Timothy Roache, Executive Director
Address: Nashua Regional Planning Commission
9 Executive Park Drive, Suite 201
Merrimack, NH 03054
Phone: (603) 424-2240
Email: intervenor@nashuarpc.org

III. CONCLUSION

Wherefore, in light of the foregoing, the Nashua Regional Planning Commission respectfully requests that the Commission GRANT this motion to intervene and allow the Nashua Regional Planning Commission to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,
Timothy Roache, Executive Director
Nashua Regional Planning Commission
9 Executive Park Drive, Suite 201
Merrimack, NH 03054

Basis for Intervening:

Kinder Morgan's plans to build a compressor station and run a pipeline through our rural town of Windsor. Compressor stations produce noise at 120db levels during blow downs as well as present known health risks, including methane emissions, as well as emissions of harmful nitrogen oxides and volatile organic compounds. Light and noise pollution from the compressor station running 24/7 will destroy our scenic rural farm and forest environment. My wife and I therefore request intervenor status because this project would forever destroy the peaceful nature of our home and our town as well as subject us to known health risks and lower our property value.

20160113-5084

Jay O Aronson, Canaan, NY.

-I live in New Lebanon, NY, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because

- I am a resident who lives in the "blast radius" [or whose daily commute crosses over the proposed pipeline route] so I would be at physical risk.

- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health. This region's environment would be degraded substantially by this project.

- I am a serious hiker and enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

- I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

This NED project has no benefits to the communities through which it will transgress. It serves none of the communities, but the residents bear all the risks. This is purely a commercial venture serving corporations.

Motion to Intervene of Steve Ham and Myung E. Ham

Steve Ham and Myung E. Ham are residents of the Town of Pelham, Hillsborough County, New Hampshire. The proposed right-of-way of the Tennessee Pipeline Company's NED project runs across Ham property. As a result, approximately 25% of the Ham's property is subject to condemnation if a certificate is granted.

Pursuant to Commission Rules 385.214(b) and 157.10, Steve Ham and Myung E. Ham move to intervene in the above captioned proceeding. This intervention is timely filed.

The Ham' are directly impacted by the proposed pipeline. Their land lies within the right-of-way for the NED pipeline, thus exposing the property to condemnation if the certificate is granted. The residence relies on a drilled well as its sole water source. Construction activities would jeopardize the integrity of the well.

Basis for Intervening:

We are a preserve, a sanctuary for a critically endangered pony breed, that would be 1 mile from the proposed 40,000hp compressor in New Ipswich. This poses a serious threat to not only our herd but also the remaining world-wide population of this pony as there are only 250 breeding age ponies of this breed remaining on the planet. We provide a safe harbor for 10 that carry one very rare bloodline in it's entirety. Despite the documented hazards compressors pose to livestock, we are physically unable to quickly evacuate 10 ponies in an emergency. Evacuating that many animals requires the equipment and help on hand at all times, in order to exit quickly and safely. We are an all volunteer run 501c3 federally recognized charitable organization. We do not have the capability nor the means to evacuate. Nor are we able to risk these ponies. Kinder Morgan has had numerous compressor accidents, as documented by the DOT, in the last 5 years. History is truth. Truth is this pipeline poses a huge environmental threat to the existence of these precious beings. We have met with Kinder Morgan and they admitted that they are not able to ensure the safety of the herd here. This was admitted face to face, to our board and attorney. We received a letter in follow-up that basically said the project is completely safe. Our grave concerns were not addressed at all, our proof of danger to the herd was not taken seriously. Representatives have told people publicly that they are in ongoing talks with us. That is not so, not at all. Obtaining Intervenor status is an extremely important next step. Thank you.

Basis for Intervening:

I oppose this pipeline project. My home is within a half mile radius of the proposed Kinder Morgan Pipeline and Compressor Station.

My concerns are for the pollution of our air, water, and land. My only source of potable water is my well, and I am concerned about the contamination of deep water aquifers. The chemical pollution from blow downs will contaminate the air, be noisy, and have a bad odor.

I buy all naturally raised beef and vegetables from local farms that are within a one mile radius of this proposed site. If this station is allowed to exist, it would mean the contamination of our soil and water putting our local organic farming industry in jeopardy.

Pipeline and fossil fuel energy are known to pose a multitude of hazards including, pollution, long term health, and pose extremely dangerous safety issues. I would strongly urge FERC to pursue clean sources of energy such as geothermal, wind, and solar and prevent the expansion of pipeline and fossil fuel infrastructure.

Thank you for your consideration,
Evan Themeles

Individual theopenboat@tellink.net

Basis for Intervening:

I am a homeowner/landowner in the town of Wilton New Hampshire. The proposed NED pipeline route passes within 200 feet of my town, It crosses the Souhegan River multiple times (the Souhegan River flows through the Town of Wilton. The pipeline passes through the aquifer which supplies water to my dug well. I am concerned that the pipeline will threaten my water supply. I have attended multiple information meetings held by Kinder Morgan. The proposed compression station in New Ipswich will be approx five miles from my home and will (according to Kinder Morgan) release on an intermittent basis methane, propane, ethane among other gases into the air. I am concerned about the negative impact on air quality. Methane is a major contributor to global warming, propane and ethane have been documented as contributing to multiple health problems (cancer, asthma, liver problems). The compression station will be loud enough to be heard from my house. I am concerned that each of these threats (negative impact on my water supply, pollutants in the air my family breathes and noise and light pollution) will degrade the quality of my life and could poten-

tially have negative impacts on my health, and the health of my family. I am also concerned that the potential degradation of the environment where I have built my home and my life will lose dollar value either through real or perceived threats to health and environment. These are all personal concerns, in addition I am concerned that these potential negative impacts will also affect my neighbors in Wilton and the surrounding towns.

I take seriously the well documented impact that fossil fuels have on the warming climate and feel strongly that the health and well being of my family and community would be well served by keeping fossil fuels in the ground. I am concerned about the negative impact that fracking has on to the water, air, and health. The proposed pipeline will create infrastructure which promote the continued dependence on fossil fuels at a moment in time when 200 nations have agreed to limit their use. New Hampshire does not need the infrastructure to bring gas through our state. We do need infrastructure which promotes the use of renewable clean energy (solar/hydro/wind).

I am concerned that the NED proposal is filled with risk for myself and family and is of no benefit to my community, the surrounding communities or the state of New Hampshire...It will only benefit the gas and pipeline company who will profit at the expense of my life, and the life of my family. Currently, the water I drink is pure, the air is some of the cleanest air in the nation, and the woods are filled with the sound of the wind and the rustle of the trees...The pipeline threatens all this. I am against the proposal and the construction of any fossil fuel infrastructure in my community.

Basis for Intervening:

I live in Petersburg, NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which will be directly affected by the outcome of the proceeding because I live in Rensselaer county and within several miles of the proposed route of the pipeline. I believe the pipeline construction and subsequent transportation of the gas will vastly and negatively impact the quality of the land, water, air, people and wildlife of this county.

The economic gain of Kinder Morgan will be at the expense of the local people and wildlife who will have their properties and habitats disrupted and destroyed by this pipeline. Many people who live in rural areas do so because we enjoy the beauty of the outdoors and the nearness of flora and fauna. We enjoy fresh air, clean water, fresh food and interacting with the land and the wildlife that is only possible in undeveloped areas. If these precious qualities of life are taken away so that a corporation may profit and an energy hungry society be given more ways to waste fuel, where is our American dream? Kinder Morgan claims it will be providing needed fuel (for a price to the consumer and at the expense of the local environment) to the inhabitants of New England. However, in order to do so, it will have to trample heavily over the environment and over the dreams and aesthetics of many rural people in order to get the fuel to its final destination. It may be easy sometimes to see rural people as less deserving or less needy than other people, but does delivering more fuel to a wasteful society make it right to hurt rural people? Does creating environmental hazards, polluted air and polluted water in order to feed the huge unappeasable hunger of an energy wasteful society make sense?

It is easy to destroy a thing, especially if one does not see any value in it. But please understand that the people of Rensselaer county see a great value in the land, water, air and wildlife that are here. We need those

who do not live here to understand how precious this way of life is to us and that to destroy it by building yet another pipeline would destroy part of the soul of the people of this county. Why not use what we have already built and use it more efficiently and wisely than destroy more of the environment because it's easier? Just because we feel we can do something doesn't mean we should.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Kestrel Land Trust	judy@kestreltrust.org	

Basis for Intervening:

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy regulatory Commission ("Commission") promulgated at 18 C.F.R. 382.212 and 385.214, the Kestrel Land Trust ("Kestrel" or the "Trust") respectfully moves to intervene in the Tennessee Gas Pipeline Company, LLC Docket #: CP16-21-000, regarding the application (the "Application") of Tennessee Gas Pipeline Company, LLC (the "Company") for a certificate of public convenience and necessity for the Northeast Energy Direct ("NED") project.

Kestrel is a non-profit organization founded in 1970 whose mission is to conserve and care for forests, farms, and river ways in the Pioneer Valley, while nurturing an enduring love of the land. We represent 19 communities and over 1,000 citizens in Hampshire and Franklin Counties and partner with local, state and environmental agencies as well as private landowners, foundations, other land trusts, and businesses to secure funding for our work. Kestrel has conserved over fifteen thousand acres including family farms, forests, and additions to parks and forests subject to Article 97 of the Articles of Amendment to the Constitution of the Commonwealth of Massachusetts ("Article 97"). These lands include the largest single conservation restriction in the state — 3,486 acres.

Kestrel seeks to intervene in opposition to the proposed NED project. Kestrel's interests that may be directly affected by the outcome of the proceeding include:

*Conservation restrictions and/or fee interest in properties which may be affected by the NED project either directly or indirectly are held by the Trust for stewardship in perpetuity. Substantial fiscal investments have been and continue to be made to uphold this commitment. Several alternative routes filed with the Application would run through Kestrel's service area.

*Uncertainty about final location for the NED project. The continual changes to the NED proposal, the inadequacy of the information supplied by the Company, and the segmented nature of the process for gaining approval for such projects make the potential impacts on the Trust difficult to ascertain. Incompletely calculated and evaluated impacts on the natural resources of our service area and those of adjacent communities with respect to ground and surface water, air quality, habitat, and resiliency in the face of climate change have created a moving target. Therefore, it is in the Trust's interest to be adequately informed and a party to the proceedings.

*Protection of the Connecticut River and its tributaries are part of the core mission of Kestrel Land Trust. Any impacts to the river and its habitat values also impacts our efforts to secure support for our work.

*Existential threat. Loss of public confidence in the reliability of conservation restrictions and other contracts involving land protection is a major concern. Article 97 sets out public rights and purposes; if lands subject to Article 97 protection are altered or taken in contravention of these purposes, the credibility of all lands trusts is put at risk along with obligations of charitable trusts, restricted donations, grants, etc. Whether

or not activities affect properties in our service area, if donors and foundations question any land trust or agency's ability to protect land in perpetuity, the ability of the Trust to represent to current and future donors that covenants and investments in land protection will be honored will be undermined.

*Financial ramifications. Taxpayer monies derived from all levels of governmental levies and programs have been used to protect and preserve properties across the Commonwealth. Donors to the Trust have invested in protection of both working landscapes as well as wild lands. Should threatened takings of conservation land occur, these public and private investments are put at risk along with effective working relationships with landowners and donors who have been persuaded that land protection is in the long-term best interest of their families and communities. Thus, long-term investments made by individuals, governments and foundations are at risk along with potential future support for our work.

*Current science. Kestrel's efforts toward sustainability and resiliency are in line with the scientific data on Global Climate Change. The NED project may create changes to the environment that the Trust is attempting to protect through landscape level acquisitions with a variety of partners to maintain the integrity of ecosystems in the Pioneer Valley and beyond.

The Kestrel Land Trust's interests cannot be adequately or completely represented by any other party and in accordance with the Commission's Rules of Practice and Procedure, we believe the Trust satisfactorily meets the conditions for intervention because our participation is in the public interest and we have a direct and substantial interest in the outcome of this proceeding. The Trust is likely to be adversely affected by action taken in this proceeding if not permitted to intervene and have an opportunity to be heard. Therefore, the Kestrel Land Trust requests that the Commission grant this motion to intervene.

Respectfully submitted January 12, 2016 by: Robert Jonas, Board Chair and Kristin DeBoer, Executive Director, Kestrel Land Trust

Address: Kristin DeBoer, Executive Director Kestrel Land Trust

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Mark A. Annunziata
17 Bam Road
Dracut, MA 01826
617-429-0908
Markannunziata@yahoo.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Provide paragraphs on how construction of the pipeline will adversely impact you: (You may put your reasons here in the body, or on a separate sheet called "Exhibit A", with wording here stating: "See Exhibit A, attached and made a part hereof by reference")

The Pipeline Proposed by Kinder Morgan will directly affect me and my Family. The new route for the pipeline is proposed to run directly through my backyard, exactly 30 feet from where my four children (ages 9,8,6 and 3) play. I am more worried about the Compressor station that is also being proposed to be built roughly I mile from my home. We are downwind from the proposed location and the Methane and other toxic elements that will be spewed from the compressor station will directly impact my neighborhood and my children's health and well-being. I ask that you please consider stopping the proposed Pipeline and Compressor station from entering an area of Dracut, MA that not only is home to over 200 children under the age of 10, but also located I mile from an elementary school and less than a mile from a rock quarry Company that frequently blasts.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 13th day of January, 2016.

Mark A. Annunziata
17 Barn Road
Dracut, MA 01826

Markannunziata@yahoo.com

20160113-5106

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.

Docket No. CP16-21-000

**MOTION TO INTERVENE ON BEHALF OF THE CAPITAL REGION BOARD OF
COOPERATIVE EDUCATIONAL SERVICES**

Pursuant to Rule 214 of the Commission's Rules of Practice and Procedure [18CFR Section 385.214], the Capital Region Board of Cooperative Educational Services hereby moves the Federal Energy Regulatory Commission for an order granting it party status in the above-captioned proceeding. The persons to whom communication regarding this Motion should be addressed and upon whom service of all pleadings or other documents in this proceeding should be made are:

John J. Privitera, Esq.
McNamee, Lochner, Titus & Williams, P.C.
677 Broadway, Suite 500
Albany, New York 12207
Phone: 518-447-3337
privitera@mltw.com

Michele V. Handzel Esq.
Capital Region BOCES
900 Watervliet Shaker Road, Suite 102
Albany, New York 12205
Phone: 518-464-5139
Michele.handzel@neric.org

As grounds for its Motion to Intervene, Movant respectfully asserts:

**ALBANY-SCHOHARIE-SCHENECTADY-SARATOGA BOARD OF
COOPERATIVE EDUCATION SERVICES**

1. The Movant Albany-Schoharie-Schenectady-Saratoga Board of Cooperative Educational Services (“Capital Region BOCES”), is a public educational service agency serving the school districts in the Counties of Albany, Schoharie, Schenectady and Saratoga in the State of New York. The Movant provides educational leadership, services and support to meet the needs of students in the four county area and the school districts therein. The Movant is the sixth largest Board of Cooperation Educational Services (“BOCES”) in New York State, and delivers more than 300 educational and administrative services to its 23 component school districts and to the City School District of Albany. Capital Region BOCES was formed in 1953 to serve these districts and it employs about 1,100 staff members who provide a wide range of services.
2. Career and technical education is one of the divisions of Capital Region BOCES. The career and technical education division includes three campuses. One of these campuses, the Capital Region Career and Technical School, is located at 174 State Route 30A, Schoharie, New York. The Schoharie campus (the “School”) will be directly impacted by this proposed pipeline project.
3. The School is on a parcel of land that is about 63 acres in size. Over 200 students are enrolled in various programs at the School, which provides focused studies and degrees in eight programs. The facility was custom built in 1972 so as to provide a specialized curriculum in two of these eight program areas: commercial construction and heavy equipment; and, residential construction and heavy equipment. Approximately 60 students are enrolled in the two construction/heavy equipment programs at the School, whose continuity and viability are threatened by this proposed project.
4. On any given school day, approximately ten pieces of heavy equipment are in operation at the School in outdoor classes, including two backhoes, two bulldozers, two excavators, a farm tractor, a skid steer, a dump truck and trailer, and a roller. Other outdoor construction training includes the use of various compactors, chainsaws and rigging, hauling and logging activities. Students learn to operate each piece of equipment, engaged in digging, trenching, earth moving, compaction, tree felling and other heavy equipment activities. Outdoor topics of study include workplace safety and management, tools use and maintenance, site development, layout, blue prints and codes, soils identification, structures, utilities, concrete and form construction, rough framing, as well as operation and preventive maintenance of compaction equipment, backhoes, bulldozers and excavators.
5. The Schoharie campus of the School is fully used and occupied, from the bus loop, School building, maintenance buildings and outdoor class rooms, all the way to the edge of the property along Route I-88.
6. Although the parcel of land upon which the Schoharie campus of the School is located is 63 acres, approximately 50% of that acreage is not usable by the School because the parcel is bisected by a flood-prone creek and associated deep gorge running north to south and then under State Route 30A. The creek and gorge cannot be crossed by heavy equipment and therefore, the easterly half of the acreage is not capable of being used as a portion of the outdoor classroom. Thus, the usable acreage is only about 30 (thirty) acres, of which about 7 (seven) acres are buildings and lots. All of this outdoor, useable acreage, about 23 acres, is used in the School’s curriculum at the Schoharie campus.
7. The highly specialized, unique elements of the School’s Schoharie campus are irreplaceable elsewhere. The custom School building contains features that are not found in other school buildings including several

large storage bays with overhead doors for the ten pieces of heavy equipment; large classrooms with vaulted ceilings where operation and maintenance of the heavy equipment can be taught indoors; and, specialized storage areas for safety equipment and outdoor gear.

8. The outdoor teaching areas have taken years to develop and construct. These areas include well established earthen features, including berms, inclines and ponds, where the different functions and operational modes of heavy equipment can be taught in a controlled, safe, instructional setting.

9. The School is also located on an established bus route, so it can be served by a broad geographic region which is necessary to the missions of Capital Region BOCES and the School.

10. The pipeline company proposes to use a portion of the School's outdoor classroom area. Specifically, the proposed pipeline route would cross the parcel owned by the School and in an area where excavation and construction activities are being conducted as part of the School's curriculum. There is simply no substitute for the teaching acreage that will be lost.

11. The School represents a scholastic and academic interest that will be directly affected by the outcome of this proceeding. Capital Region BOCES' participation in the proceeding as an intervenor is necessary and in the public interest of protecting the School's resources. For these reasons, Capital Region BOCES should be granted party status pursuant to 18 CFR § 385.214(b).

12. The Commission must direct the pipeline company to assess route deviations to protect the special land uses and special interest area relating to the School's academic resources.

13. The School is a high consequence area that ought to be avoided because at any given point in time there could be over 200 people on campus, including dozens of students outside near or along the pipeline, using heavy equipment.

14. The proposed location of the pipeline, within a school that trains young students in the use of heavy equipment, will intimidate the students and teachers, raise concern among parents, restrict academic freedom, stigmatize the School and will thus have a socioeconomic impact upon the public services provided by the School.

15. The geotechnical impact of students operating ten pieces of large heavy equipment in proximity to the pipeline, including trenchers and compactors must be avoided. The Schoharie campus of the School is a heavily used, dynamic environment. It is not a static land use. Ongoing, future impacts from the geotechnical force of the heavy equipment in proximity to the proposed pipeline must be avoided or mitigated.

16. The School's outdoor classroom area is a uniquely designed, special land use area; the applicant must document ways to avoid the taking of School property. See *Natural Resources Defense Council v. Morton*, 458 F2d 827, 838 (DC Cir. 1972). NEPA demands that the Commission not defer a detailed analysis to the future when the impacts of the pipeline company's proposed taking of the School property are reasonably foreseeable and capable of analysis at the current time. *Pacific Rivers Council v. United States Forest Service*, 689 F3d 1012 (9th Cir. 2012). Moreover, the public disclosure objectives of NEPA require a complete discussion of the full impact and alternatives including cumulative impact analysis from paired pipelines. See *North Carolina Wildlife v. North Carolina Department of Transportation*, 677 F3d 596 (4th Cir. 2012).

CONCLUSION

17. No disruption to this proceeding will result from granting the School party status.

18. The School's interest is not adequately represented by any other party hereto.

19. Existing parties will not be prejudiced by, nor will they sustain any additional burden by Capital Region BOCES becoming a party to this proceeding.

WHEREFORE, Petitioner respectfully requests that the Commission grant Capital Region BOCES, owner and operator of the School, intervention as a full party in this proceeding. Capital Region BOCES does not request a hearing in this proceeding at this time; however, if a hearing is ordered Capital Region BOCES further requests that it be granted the right to have notice of and an opportunity to appear at all hearings in

this proceeding, to produce evidence and witnesses, to cross-examine witnesses, and to be heard by counsel or other representatives for briefing and oral argument if oral argument is granted.

Dated: January 13, 2016

Respectfully submitted,
McNamee, Lochner, Titus & Williams

Basis for Intervening:

I am opposed to Kinder Morgan's pipeline project because it will have direct negative impacts on the environment and community in my town of Fitzwilliam, New Hampshire as well as several other nearby towns where our friends and family members live.

Not only will this gas pipeline not benefit rural residents like myself, it will actually increase our cost of living because ratepayers are going to be the ones funding the project.

It will also disrupt the natural beauty and function of two recreational spaces in our town that I frequent, Rhododendron State Park and Rockwood Pond.

Kinder Morgan has not given clear responses to many of the critical questions posed by the towns that will potentially be impacted. The alignment plan has changed each time I've seen it, and Kinder Morgan also hasn't addressed how a gas emergency will be handled.

I think it's clear in the present moment that those types of emergencies are not uncommon. Right now, California is experiencing a leak that has been and will continue to go on for months. As a result, the community there has been destroyed. Residents have experienced significant health effects, houses are abandoned, and small businesses have been ruined. And that's just one example of how these antiquated energy systems cause damage.

In addition, this project is just that - antiquated. It does not align with the sustainable energy goals of New Hampshire, and it is a step back in terms of ending our reliance on fossil fuels. Let's fund projects that don't cause harm to the earth instead of ones that will destroy it in multiple ways.

I could list a thousand reasons why this is an outrageous, unnecessary, and dangerous project, but suffice it to say that any responsible government agency would prevent it from moving forward and support the rights of citizens instead of the greed of privately held companies. I urge FERC to do what's right by stopping the pipeline project from happening.

January 12, 2016

Comments to FERC regarding Northeast Energy Direct (NED) FERC 7(c) certificate application on Nov. 20, 2015 by Tennessee Gas Pipeline Co., L.L.C.

These comments repeat our response to an earlier pre-filing application by Tennessee Gas. In the interim, these concerns have not been sufficiently addressed by Tennessee Gas. The Farmington River Watershed Association strongly opposes the proposal by Tennessee Gas/Kinder Morgan to install a natural gas pipeline through the Class I and Class II watershed land owned by the Metropolitan District Commission (MDC). A gas pipeline installation on this land has potential to impact a high quality drinking water source. Also, granting permission for a new pipeline through this land undermines Connecticut's current protections for drinking water.

CT General Statute 25-32 requires a change of use permit from the CT Department of Public Health for projects like this one. Furthermore, it restricts the use changes that are allowable. The existing gas pipeline and easement on the MDC property pre-date the statute. A proposal now, to install new pipeline and enlarge the permanent right-of-way, is inconsistent with the letter and intent of CGS 25-32.

Regardless of the degree of threat posed by this particular pipeline, allowing an exception to the statute sets a dangerous precedent, paving the way for other encroachments on water supply land. Connecticut's standards for drinking water quality are second to none in the country. They are important in maintaining public health and quality of life in our state. While other regions face increasing threats from contaminants in their drinking water sources, Connecticut's protective legislation stands out as a model and should not be compromised.

The first drafts of the NED Environmental Reports submitted to FERC contained an erroneous statement that the proposed pipeline route is not located within any public drinking water or aquifer protection areas. In the recent public forum held by Kinder Morgan in West Hartford on October 7 (held after an emphatic request by the MDC) it was clear that Tennessee Gas/Kinder Morgan has every intention of putting more pipeline through the MDC's drinking water supply area. During the question and answer session, alternate routes were dismissed as impracticable.

FRWA urges FERC to require a description of alternate pathways for this pipeline before considering approval of the route through the MDC's land. That said, we realize that alternate routes will have their own share of impacts on the Farmington River watershed. As a private, non-profit watershed protection organization, FRWA is concerned with a wider array of issues than protecting the MDC's drinking water supplies. We will no doubt comment on the impacts of alternate routes as well, including (for example) possible impacts to wetlands, forest cover, and other aquifers.

If this pipeline goes forward along any route, impacts to the Farmington River Watershed's land and water resources are inevitable. We urge FERC to consider, early on, whether the entire project is necessary; the legality and safety of a route through Class I and II watershed land; alternate routes and their impacts; and

what mitigation projects in the watershed would be appropriate to require as offsets.

Thank you for this opportunity to comment.

Individual amypipeline@gmail.com

Basis for Intervening:

I live in Dalton, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding because I am a landowner directly impacted by the pipeline route.

As of the most current map at the time of this writing, my property will abut the pipeline easement. If the

route needs to be slightly adjusted, I could possibly have my property seized by eminent domain. I will live within the blast radius and the pipeline will go under the only road that leads to my house. My property will also abut a valve station which will affect the aesthetics of the area I live and will blow off gas intermittently, releasing chemicals into the air near my home. I will live within ten miles of a compressor station which will also blow off gas. I am concerned about the health and environmental effects of this off gassing and release of chemicals.

I chose to live in this area because I enjoy the outdoors and this is an area with a large amount of conserved land. I do not want any of these conserved/protected lands, which have been set aside for the people and wildlife, to be impacted by the activities and presence of this commercial project.

20160113-5118

RE: Northeast Energy Direct (NED) Pipeline,
Tennessee Gas Pipeline, LLC, a division of Kinder Morgan

Docket # CP16-21-000
January 13, 2016

MOTION TO INTERVENE by Daniel Fisher to OPPOSE the NORTHEAST ENERGY DIRECT PIPELINE

As a United States citizen and owner of property in Andover, MA in close proximity to the proposed NED pipeline and the Dracut, MA primary compressor station, I am filing this Motion to Intervene in this proceeding to oppose the NED pipeline. I am taking this action due to the significant, negative consequences which would result from this project, including health, safety, environmental, and socioeconomic impacts on myself directly as well as the region.

My interests “which may be directly affected by the outcome of the proceeding” include, but are not limited to:

- The close proximity of my residence to pipeline infrastructure. My property is situated less than a half mile from the proposed pipeline location, and 2.5 miles from the “Market Trail” Primary Compressor Station in Dracut, MA. The growing documentation which identifies numerous detrimental consequences such a compressor station would impose on the local environment, as well as the health and safety of those families who live nearby, should not be ignored. Note that the public record indicates that Kinder Morgan’s modus operandi is to do whatever it takes to get pipelines approved and installed as quickly as possible, cut corners on construction and maintenance, and simply pay the fines later.
- My interest as a taxpayer, neighbor, and hiker on affected (and supposedly protected) public land in Massachusetts and New Hampshire. I am very concerned about the threat this project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution.
- The concern I have as an electric ratepayer in this state. The capital costs of this project will supposedly be funded through the use of a monthly bill surcharge. In addition, as explained in depth by others on this and PF14-22 dockets, the massive overbuild embodied in this proposal will very likely lead to higher energy costs for ratepayers and an increase on my bill relating to NED – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for export, driving up domestic energy prices.
- My interest in our area wildlife, established ecosystems, the value of our forests to combat climate change and the sanctity of protecting our clean water resources. Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. Far less harmful and disruptive means of meeting our energy needs should be pursued.
- My indignation at FERC’s ability and willingness to approve eminent domain to advance corporate agendas and private industrial profits. How can FERC be trusted to be objective during this process when, as an organization, it is thoroughly compromised and corrupted by industry insiders? A study commissioned by Attorney General Maura Healey’s office concluded that increased pipeline capacity is not needed to meet electric reliability standards, and ratepayers should not be forced to foot the bill for what

amounts to a corporate giveaway. Most studies which say otherwise have been funded by the natural gas industry itself, bringing the impartiality of these reports into question. If the NED is built, capacity will far exceed demand, allowing for net export. Eminent domain should only be utilized as a last resort for “public good.” To abuse the tactic of eminent domain in order to increase the profit of a private corporation is morally reprehensible.

- o Kinder Morgan plans to construct a section of this pipeline across the land of a personal friend, a move which would devalue her property and cause tremendous pain and upheaval for her family. These are good, hard-working people who recently paid off a 30-year mortgage and plan to retire soon. The stress alone that these corporate bullies have put this family through is criminal, in my opinion, not to mention the hostile letters from lawyers, trespassing violations on their land, etc. This is not a unique story, as hundreds of families in MA and NH are being threatened with land confiscation.

In conclusion, I, Daniel Fisher, satisfy the standard for intervention under FERC’s regulations and request that the Commission grant this Motion to Intervene and allow me to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses, and seek rehearing and appeal.

Basis for Intervening:

I am a resident of Greenville, a town that would be traversed by the NED pipeline if it is built. I oppose the construction of the pipeline. Because the pipeline is subject to changes in route at any time, I believe I am justified in fearing that it might be re-routed closer to my home than the roughly one mile now planned. I am also concerned about emissions from the New Ipswich compressor plant and the facilities that will be built in Mason for the Fitchburg lateral.

The home I own is located on a conservation-based community land trust. Much of the land in this land trust is in “current use”, i.e. it is given a special tax rate in exchange for keeping it as forest and farmland. To build a pipeline, compressor station or other natural gas processing facility near this land would reduce its value as a conservation area, due to the potential for noise, air, water and soil pollution. I and my neighbors have chosen to live in harmony with nature and to forgo many urban conveniences. Having an industrial installation near our land would change the nature of the place dramatically, in addition to causing potential increases in tax liability and decreases in house values.

The land trust provides hiking trails for the benefit of the public, and the quality of that experience would be dramatically affected by NED if it is built.

The pipeline is clearly being built mainly to provide a way to export gas (domestically and/or internationally) from the fracking fields of Pennsylvania and will provide no direct benefit to my town or to any of the others it passes through.

The time has come to begin using carbon-free energy sources in place of oil, gas and coal, and building the NED infrastructure would saddle the state, the town, the region and the country with a huge sunk investment in increasing the use of fossil fuels. Continuing to use more and more fossil fuels for decades will doom the planet to climate catastrophe.

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company,
a subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline Project

Docket No. CP 16-21-000

cc

**MOTION TO INTERVENE OF HOLIDAY FARM, INC.
IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §385.214, by vote of its Board of Directors, Holiday Farm, Inc. seeks leave to Intervene in the above-captioned proceeding.

I. STATEMENT OF INTEREST

A. DESCRIPTION OF THE INTERVENOR

Holiday Farm, Inc. is a duly authorized and existing domestic profit corporation under the laws of the Commonwealth of Massachusetts with a business address of 100 Holiday Cottage Road, Dalton MA . Its business is that of a family farm conducted on 1300 acres of land which has been in the family for over one hundred years, surrounded by land protected by the 3000 acre Chalet Wildlife Management Area, and land of the Dalton Fire District. It is subject to a conservation restriction on farm owned forestland and an Agricultural Conservation Restriction one the agricultural land under the Mass APR program.

B. DESCRIPTION OF IMPACTS

Holiday Farm, Inc. (“Farm”) opposes the Northeast Energy Direct Pipeline Project (“NED”) of the Tennessee Gas Pipeline Company (“TGP”) because the 30 inch Pipeline operating at 1460 psig, the Main Line Valve, contractors yard, and access roads, all proposed to be placed on or adjacent to the farm, will have deleterious impact on the operation and profitability of the Farm.

The Farm raises and sells organic hay, vegetables and flowers, which are raised without the use of pesticides, and naturally raised meat, with animals fed with organic hay grown on the farm. The Farm taps maple trees has a substantial syrup boiling operation, sells maple syrup and maple products, and operates a farm store where customers buy locally produced foods as well as the farm’s vegetables, flowers, syrup and meat. The Farm is large producer of compost managing leaf/yard waste plus food waste from a large area of Berkshire County. The compost product is certified for use by the organic farmers of Berkshire County. TGP proposes to situate a contractor yard directly adjacent to the site of the compost operation, using one of the farms most productive hay fields as working space, which would entirely disrupt both composting and hay making.

The proposed pipeline crossed several feeder streams into the East Branch of the Housatonic River. Every one of these streams is used for watering the farms 100 head beef herd.

TGP intends to use private farm roads an access roads to haul and other materials to the pipeline ROW. These private roads are pass through the core of the farm, its retail store, the traditional farm house rented for both long term and short term seasonal rental, and prime event space for farm based entertainment activities. The access roads will be supplying pipe and materials to several miles of otherwisw inaccessible corridor. The intensity of construction phase activity will drive customers away as it destroys the Farm’s carefully built brand: its reputation for clean, safe and healthy food and farm products.

Party status is further necessary for the Farm to be able to protect its financial interest. It is burdened by an Agricultural Conservation Restriction conveyed to the Commonwealth of Massachusetts by deed. That Restriction forbids Holiday Farm Inc. from doing what a normal business would do to protect its rights: it cannot permit surveys involving motorized vehicle use or geotechnical exploration, since there are prohibited activities under the CR. Neither can the Farm negotiate with TGP for lease of land for the purpose of pipeline, or any other form of construction along the 3/4 mile proposed pipeline route. The construction of access roads either feeding into the corridor or along the utility ROW is not an allowed use under the CR. Holiday Farm is forced to stand helpless in the face of a forced taking, which will mean it receives minimal value for its land in an eminent domain proceeding. The Farm, under the terms of the restriction, cannot negotiate compensation for a use which is disallowed under the CR. Given the nature of the Pipeline operation and the nature of the Farm’s unique business model, the Pipeline is completely destructive of the value of the Farm.

C. NECESSITY OF INTERVENTION

If Holiday Farm, Inc. is not permitted to intervene as party to this proceeding, its interests and those of its shareholders and customers will not be adequately represented by other parties and they may be bound by actions, determinations and decisions in this proceeding without opportunity to participate and be heard. Holiday Farm Inc.’s participation as party in this proceeding is in the public interest.

II. HOLIDAY FARM INC.’S MOTION TO INTERVENE SHOULD BE GRANTED

Holiday Farm, Inc. satisfies the standard for intervention under the Commission’s regulations. As discussed above, Holiday Farm, Inc. is directly impacted by the proposed Project, and no other individual or organization can adequately represent Holiday Farm, Inc.’s unique interest in this proceeding. Further, Holiday Farm Inc.’s intervention is in the public interest because the Farm serves the residents of Dalton and Central Berkshire County by producing health and clean food, supplies farmers, contractors and homeowners throughout the county with organic hay and compost for organic farms.

III. CONCLUSION

Wherefore, in light of the foregoing, Holiday Farm Inc. respectfully requests that the Commission GRANT this motion to intervene and allow INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,
James Dicken Crane
Vice President of the Corporation

III. CONTACT INFORMATION

The following [individuals/entities] should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: James Dicken Crane, Holiday Farm, Inc.
Address: 100 Holiday Cottage Road, Dalton, MA 01226

Individual	The.pied.harpist@gmail.com	

Basis for Intervening:

My home is at the base of the Hills of Wisdom. It is on land that was Lakeshore for the giant inland lake that was Lake Hitchcock. My house is built at a stage-coach inn that served the Boston to Albany route in the colonial days. The lands all around us were farmed by the Pocumtuck Native American Tribe for almost a thousand years and is some of the richest farm soil in the world. My neighbors are entering their fifth generation as acting custodians of these hillsides, operating an orchard and fruit farm for over a hundred years. All of this is threatened.

I live next to a stream and a "planned access road" by wetlands, all within the "planned incineration zone" for NED. Recently, although this project has not been "approved", there have been large construction vehicles up and down the single lane country road I live on, that accesses the planned route for the NED. They are here six days a week, from 6:30AM, and this already is affecting wildlife and polluting the stream and wetland with silt. There is also noise and light pollution at inordinate hours as my home is within yards of where they load and unload the construction vehicles.

Coyotes and Wolves are now being seen on residential yards during daylight hours (being pushed down out of the woods by the activity), endangering domestic animals and humans. There has been a drop in the appearance of more picturesque and less invasive wildlife such as bears, moose, and lynx, that used to cross our yard and the stream every morning. We are suspect of the connection between the sudden work on the utility lines and this as YET not approved operation!

The alternate planned route for this outdated mode of fuel is along the existing cross-state pike. That route does NOT cross under our Deerfield River, or the Connecticut, which serves the highest percentage of fresh water to Long Island, NY - everything IS connected - nor does that route impact publicly protected lands and our aquifers. There is also an existing pipeline which only requires repair and updating, but Kinder Morgan does not wish this route to be used as, in that case, the profits will need to be shared with other servers. This project is the most environmentally devastating of any of the plans. This project is the most economically destructive to the public of any of the plans. This project is the largest corporate land-grab against the public welfare of any plans in recent history. This project is geared to strip our country of its natural resources for the profit of the few and the economic hardship of the many.

You KNOW it is wrong. Why, then, isn't it being stopped?

20160113-5126

Nancy Watson, RIverside, CT.

As a concerned citizen I DISAPPROVE of the gas pipeline going through land that would directly threaten our clean water supply. How many environmental disasters does it take before we care properly for our natural resources? Protecting our clean water supply, is to my mind, non-negotiable. And, I believe allowing this encroachment sets a dangerous precedent for future decisions about our natural resources.

Thank you for your thoughtful consideration on this matter.

Basis for Intervening:

This project is not only an unnecessary venture into a dwindling means of energy, but it is harmful to both the economy and environment of all states affected. Forests and wetlands protected by the Commonwealth of Massachusetts will be violated and thousands of trees cut down. In the face of numerous valid reasons for the project not to go on, there has not been a single rebuttal on the part of TGP that expresses NEED.

The current proposal would bring this inessential pipeline over hills, taking down hundreds of acres of trees and passing beneath two rivers. It in part follows the path of the high-tension wires, whose charge will contribute to accelerated wear and damage to the pipe, leading to a shorter life and increased risk of explosion. This dangerous pipeline will also be laid in the ground above the valuable water tables and aquifers of the Connecticut River Valley.

The NED pipeline is not only superfluous, it is a risky construction that will cost millions in taxpayer money for a maximum usefulness of ten years. It will not lower energy costs. It is not in demand. It will not create jobs. All it will do is harm.

In the interest of the people and the wildlife, please stop this error in judgement before it goes too far.

Basis for Intervening:

Hello,

I am filing to intervene on the proposed Kinder Morgan/NED pipeline project.

As a property owner at 8 Barn Rd; Dracut, MA 01826 this project will have an adverse affect of our property value.

Additionally the proposed metering station will be within 500 of feet of our home.

Continuing on, as a parent of children attending the Campbell Elementary School located at 1021 Methuen St; Dracut, MA 01826, that could put the school within distance of harmful blowdowns, gas emissions from the compressor station site.

Lastly, the proximity of the pipeline to the active blasting from the quarry owned by Brox Industries, located at 1471 Methuen St; Dracut, MA 01826.

Thank you,

Rob Palmer

Basis for Intervening:

The NED plan that crosses the protected and preserved lands in Western Massachusetts is being forced on the civilian population in a manner which is insidious and criminal. Property owners, such as myself, have

received threatening letters from Kinder Morgan. Kinder Morgan has paid thugs to stand up and disrupt public meetings on their behalf. The “build the pipeline” signs and union speakers are bribes to the construction community. Kinder Morgan is well documented for underhanded and indeed dangerous practices, and we fear that IF you allow THIER plan to proceed, there will not be proper oversight. This is why so many citizens fell that they need intervenor status. The continued forward motion on behalf of NED shows that the federal government has more interest in allowing corporate greed to rule them than what is right for the future. The economy of the country of Greece was toppled by just this type of corporate activity: forcing the public to invest while profits are not returned to society. Let me tell you about the path of this monstrosity: Our home is at the base of what colonial maps call “the Hills of Wisdom”. It is on land that was Lakeshore for the giant inland lake that was Lake Hitchcock. My house is built at a stage-coach inn that served the Boston to Albany route in the colonial days. The lands all around us were farmed by the Pocumtuck Native American Tribe for almost a thousand years and is some of the richest farm soil in the world. My neighbors are entering their fifth generation as acting custodians of these hillsides, operating an orchard and fruit farm for over a hundred years. All of this is unnecessarily threatened.

I live next to a stream and a “planned access road” by wetlands, all within the “planned incineration zone” for NED. Recently, although this project has not been “approved”, there have been large construction vehicles up and down the single lane country road I live on, that accesses the planned route for the NED. They are here six days a week, from 6:30AM, and this already is affecting wildlife and polluting the stream and wetland with silt. There is also noise and light pollution at inordinate hours as my home is within yards of where they load and unload the construction vehicles.

Coyotes and Wolves are now being seen on residential yards during daylight hours (being pushed down out of the woods by the activity), endangering domestic animals and humans. There has been a drop in the appearance of more picturesque and less invasive wildlife such as bears, moose, and lynx, that used to cross our yard and the stream every morning. We are suspect of the connection between the sudden work on the utility lines and this as YET not approved operation!

The alternate planned route for this outdated mode of fuel is along the existing cross-state pike. That route does NOT cross under our Deerfield River, or the Connecticut, which serves the highest percentage of fresh water to Long Island, NY - everything IS connected - nor does that route impact publicly protected lands and our aquifers. There is also an existing pipeline which only requires repair and updating, but Kinder Morgan does not wish this route to be used as, in that case, the profits will need to be shared with other servers.

This project is the most environmentally devastating of any of the plans. This project is the most economically destructive to the public of any of the plans. This project is the largest corporate land-grab against the public welfare of any plans in recent history. This project is geared to strip our country of its natural resources for the profit of the few and the economic hardship of the many. You KNOW it is wrong. Why, then, isn't it being stopped?

Basis for Intervening:

I live in Dracut.

My concerns are

1. we don't need the pipeline
2. The destruction of conservation land and the environment, specifically the spotted turtle (endangered species watch list) whose habitat is on the protected wetlands my condo borders. The last route I saw goes straight through it and puts a distribution station 20 feet from my door.
3. traffic
4. safety
5. my property value will go down and I'm already underwater
6. WE DON'T NEED IT and the promises of lower energy is a lie since the gas from this line will be exported.

NO TO THE PIPELINE.

John Keiley

I live in Wendell, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have land in a Land Trust and land under APR. I am watching as the threat to land set aside in the public trust in perpetuity is being threatened.

I do not believe that corporate interests should be able to take over land for profit that has been set aside in reserve.

I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

Basis for Intervening:

I am a fruit farmer in Winchester, NH, 2 miles from the proposed NED pipeline and proposed compressor station.

For 30 years, we've built a sustainable farm business incorporating ecological practices & photovoltaics.

I believe that pipelines cause environmental destruction during construction, explosion hazards, and leakage into wetlands & aquifers.

Compressor stations are noxious & noisy, emitting methane & other toxins.

Neighboring farmers raise heritage breed cows, pigs, chickens, lambs & turkeys and organic vegetables, feeding hundreds of families good, healthy food raised with care & love.

Their animals deserve to not have the noise & belching emissions of a compressor stressing them, nor should the produce growers be threatened with contamination of their land or water.

Indeed, the compressor station jeopardizes the health & well being of people & animals for miles around. Leaks & explosions in pipelines are well-documented & I don't trust the assurances we've been given that this pipeline will be a safe one.

I don't believe that Winchester's small fire department should be burdened with protecting a private venture.

Furthermore, I believe that there is no benefit to NH as much of the gas appears destined for export.

Fracking is dangerous technology that has been shown to ruin farmland & aquifers, sicken animals & people, and cause earthquakes.

Although the technology is relatively new, its toxic legacy is already revealed and well-documented.

It's time to stop before more damage is done!

Hmm...how about 71 miles of solar panels...

Sincerely, Patti Powers, Cheshire Garden

Basis for Intervening:

I am a home owner at 24 Whittier Road in Merrimack, NH. My home is currently in the "incineration zone" of the NED natural gas pipeline proposed route.

I do not want this pipeline coming thru our neighborhood, not only for safety and environmental reasons but I do not believe the builder of the pipeline (Kinder-Morgan) has made a convincing and/or compelling case as to why this pipeline is necessary. There are other existing pipelines, which can carry natural gas to the destination this pipeline is proposed to carry gas to.

I also do not want my neighborhood looking like a "war zone" during the construction phase of this proposed pipeline and we would suffer the loss of many trees, which provide us with a natural buffer between our homes and properties we would rather not look at.

TO: THE U.S. FEDERAL ENERGY REGULATORY COMMISSION
RE: TENNESSEE GAS PIPELINE, LLC, A DIVISION OF KINDER MORGAN,
NORTHEAST ENERGY DIRECT PIPELINE, DOCKET #CP16-21
FR: PHILIP ZEA, PRESIDENT, HISTORIC DEERFIELD, INC.,
DEERFIELD, MASSACHUSETTS 01342

DT: January 5, 2016

1. STATEMENT OF INTEREST

a. DESCRIPTION OF HISTORIC DEERFIELD, INC.

Historic Deerfield, Inc., is a 501 (c) 3 public, non-profit museum in Old Deerfield, MA. Our mission states that:

HISTORIC DEERFIELD, Incorporated, is dedicated to the heritage and preservation of Deerfield, Massachusetts, and the Connecticut River Valley. Its museums and programs provide today's audiences with experiences that create an understanding and appreciation of New England's historic villages and countryside.

Historic Deerfield is located within The Old Deerfield National Historic Landmark, one of the first established by the Department of the Interior in 1962, which encompasses the village of Old Deerfield and approximately 1000 acres of actively cultivated farmland within its view shed along the floodplain of the Deerfield River. We work daily with local, regional and national agencies to protect the agricultural way of life in this beautiful village. Historic Deerfield itself is a teaching museum and business with a national reputation as one of the finest, mid-sized cultural history agencies in the nation with a \$6.5m annual budget, 54 buildings on 104 acres wholly within the Old Deerfield National Historic Landmark, 58 full-time employees, and thousands of year round visitors to our culturally rich and beautiful part of western Massachusetts. We own and operate the Deerfield Inn as well as the museum of twelve antique houses, anchored by the modern Flynt Center of Early New England Life, where we teach the history and culture of the Connecticut River Valley and rural New England to thousands of tourists every year who learn about New England history and culture. In all, the Old Deerfield National Historic Landmark counts the survival of 26 eighteenth-century houses, and 14 more that pre-date 1850, on their original sites with related archeology in a village that retains its original scale and town plan from the 1670s. Just as importantly, the Old Deerfield National Historic Landmark encompasses the homeland of the Pocumtuck Native Americans.

b. DESCRIPTION OF IMPACTS

The proposed pipeline is projected to travel through the middle of the Old Deerfield National Historic Landmark and within a half-mile of one of the most historic streets in America: home to private householders, working dairy farms, two schools—Deerfield Academy and Bement School, and two museums—Historic Deerfield, Inc., and Memorial Hall Museum, which are destinations for thousands of visitors every year. The proposed pipeline will also travel through the very shadow of Pine Hill in the North Meadows, which is the site of the principal village of the Pocumtuck Indians established 8000 years ago and which, with other Native and historic sites within view, has been excavated and preserved by the University Massachusetts Summer Field School in Archeology, an affiliate of Historic Deerfield. Designation as a National Historic Landmark by the Department of the Interior recognizes high cultural and historic significance and provides a layer of protection from development. History and culture aside, we also feel that the proposed pipeline is a real threat to public safety, health, and our business with no benefit to the citizens and visitors to this great place on the American landscape let alone the long-term environmental impact of the pipeline on plant and animal species, air and water quality, and perhaps light and noise pollution not to mention land that is specifically protected by valid easements some of which are held by Historic Deerfield, Inc.

c. STANDARD FOR INTERVENTION

Historic Deerfield's Motion to Intervene must be recognized and accepted because it satisfies the standard for intervention under the regulations established by FERC and because of the significance of Historic Deer-

field as a national resource.

2. CONTACT INFORMATION

Please add my name to the Official Service List, with all notices and communications in this proceeding addressed to:

Mr. Philip Zea, President and C.E.O.

Historic Deerfield, Inc.

P.O. Box 321

Deerfield, MA 01342

3. CONCLUSION

HISTORIC DEERFIELD, INC., respectfully requests that the Commission grant this MOTION TO INTERVENE and to allow the INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, question witnesses, and seek rehearing and appeal.

Sincerely yours,

Philip Zea, President and C.E.O., Historic Deerfield, Inc.

20160113-5158

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”)

Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we , name here , file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Wendy Geraci
13 Cart Path Road
978-459-5848
wmgeraci@comcast.net

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Provide paragraphs on how construction of the pipeline will adversely impact you: (You may put your reasons here in the body, or on a separate sheet called “Exhibit A”, with wording here stating : “See Exhibit A, attached and made a part hereof by reference”)

The Pipeline Proposed by Kinder Morgan will directly affect me and my Family. The new route for the pipeline is proposed to run directly through my backyard, exactly 30 feet from where my 2 children (ages 11 and

15) play. I am more worried about the Compressor station that is also being proposed to be built roughly 1 mile from my home. We are downwind from the proposed location and the Methane and other toxic elements that will be spewed from the compressor station will directly impact my neighborhood and my children's health and well-being. I ask that you please consider stopping the proposed Pipeline and Compressor station from entering an area of Dracut, MA that not only is home to over 200 children under the age of 10, but also located 1 mile from an elementary school and less than a mile from a rock quarry Company that frequently blasts.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 13 day of January, 2016.

Wendy Geraci
13 Cart Path Road
Dracut, MA 01826
978-459-5848
wmgeraci@comcast.net

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Wilton Conservation Commission	wcc.jeff@jrs.jetemail.net	

Basis for Intervening:

- The proposed route of the pipeline passes within a few hundred feet of Wilton, NH's town border.
- The 1/4-mile and 1/2-mile buffer zones include Wilton residences, businesses, designated scenic roads, a recreational trail, and town and state conservation lands.

As a result, the Wilton NH Conservation Commission has the following concerns:

- that the pipeline would present physical hazards (fire and/or explosion, compressor station noise, and light pollution) to residents, workers, and visitors to the conservation lands within the buffer zones and beyond;
- that the potential consequence of these physical hazards would be beyond the ability of local emergency services to intervene, and/or require expensive equipment and training to prepare for, at the town's and therefore the residents', expense;
- that the pipeline would present a health hazard (carcinogenic and other health-damaging gaseous emissions and compressor blow-offs, into the air and the aquifers) to residents, workers, and users of the public lands for a considerable distance from the pipeline;
- that the pipeline and its construction would despoil the natural beauty of the area;
- that the pipeline, its construction, and its hazards would damage the natural areas nearby, which the Wilton Conservation Commission oversees and works hard to protect; which damage would include destruction or damage to wildlife habitat, and health hazards to the wildlife living, feeding, and breeding in the area;

- that the pipeline would have a negative impact on tourism in a region whose towns are already struggling to maintain stable economies;
- that the pipeline would have - and is already having! - a negative effect on land values in the surrounding area;
- that the pipeline project would take land from its current, rightful owners, solely for the private gain of the pipeline owner(s);
- that the pipeline costs would be passed on to local energy rate-payers while offering little or no benefit to them.

For these reasons, the Wilton NH Conservation Commission strongly opposes the NED pipeline proposal.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Co., LLC

Docket No. CP16-21-000

**MOTION TO INTERVENE, INITIAL COMMENTS, AND REQUEST FOR
PROGRAMMATIC ENVIRONMENTAL IMPACT STATEMENT OF
CONSERVATION LAW FOUNDATION**

Tennessee Gas Pipeline Company, LLC (“Tennessee Gas”) has filed an Application under Sections 7(b) and 7(c) of the Natural Gas Act (“NGA”) requesting, among other things, that the Federal Energy Regulatory Commission issue a certificate of public convenience and necessity authorizing the construction and operation of the proposed Northeast Energy Direct pipeline to transport up to 1.3 billion cubic feet per day (“Bcf/day”) of natural gas over a designated Market Path and 1.2 Bcf/day of natural gas over a designated Supply Path. The project is proposed to extend from Pennsylvania through Wright, New York, to Dracut, Massachusetts, at a total estimated cost of \$5.2 billion. Pursuant to Rules 203, 212 and 214 of the Commission’s Rules of Practice and Procedure, 18 C.F.R. §§ 385.203, .212 and .214, Conservation Law Foundation (“CLF”) moves to intervene with full rights as a party in the above-captioned proceeding and provides the following initial comments on the Application. In addition, CLF requests that the Commission carry out a Programmatic Environmental Impact Statement to assess regional need in light of the Application’s extraordinary reliance on assertions regarding regional electric rates to allege pipeline demand.

CONSERVATION LAW FOUNDATION

Founded in 1966, CLF is a non-profit advocacy organization with members across New England, including over 2,000 members in Massachusetts and approximately 500 in New Hampshire. CLF works to solve the environmental problems threatening the people, natural resources, and communities of New England. CLF's advocates use law, economics and science to design and implement strategies that conserve natural resources, protect public health, and promote vital communities in our region.

CLF and its members are concerned with the potential environmental and health impacts of meeting the region's current and future energy needs. CLF strives to enhance the clean energy public policies of the New England states to facilitate the development of clean energy sources. For decades, CLF has been active at state utility commissions, ISO-New England ("ISO-NE"), and before this Commission advocating for policies that advance clean energy including demand-side resources, non-transmission alternatives, and renewables including solar and wind.

CLF previously filed scoping comments in PF14-22-000 on October 16, 2015.¹ CLF has also been an active participant in relevant state dockets in Massachusetts and New Hampshire.

MOTION TO INTERVENE

CLF requests that the Commission grant this Motion to Intervene pursuant to Rule 214 of the Commission's Rules of Practice and Procedure. CLF, on behalf of itself and its members across New England, has a direct and substantial interest in this proceeding and will be directly affected by its outcome. Further, CLF's interests cannot be appropriately represented by any other entity and its participation is in the public interest.

CORRESPONDENCE & COMMUNICATIONS

Communications regarding this matter should be addressed to:

COMMENTS ON THE CERTIFICATE APPLICATION

I. Introduction

The Northeast Energy Direct pipeline project ("NED Project") is a massive new pipeline proposed to transport natural gas from Pennsylvania to Massachusetts. Although subscriptions are currently lacking for much of the planned pipeline's capacity, Tennessee Gas intends that the pipeline will transport up to 1.3 Bcf/day of natural gas over its Market Path, and 1.2 Bcf/day over the Supply Path.² Tennessee Gas acknowledges that the project's size dwarfs that of others in recent memory, calling it a "transformative long-term solution,"³ a "high-priced expansion project,"⁴ and stating that there "is no doubt that its impact on the capacity available to the New York and New England markets will be extraordinary."⁵

The Application comes at a time when global agreement has just been reached to keep dangerous climate warming to well below 2 degrees Celsius above pre-industrial levels, with a goal of limiting warming to no more than 1.5 degrees.⁶ There is broad recognition of the economic impacts of climate warming, and there is no doubt that both public health and economic impacts will worsen if the proliferation of climate-warming gases, including power plant emissions, cannot be checked.

Tennessee Gas provides the following three main justifications for the pipeline. First, that the additional supply of natural gas it transports will make electricity more reliable and affordable in New York and New England. Second, that it will increase access to natural gas for thermal uses – i.e. to heat homes and businesses.

Third, that the pipeline will benefit the environment by advancing clean air policy, helping New England states to meet their climate change goals, and supporting the transition from coal and oil to natural gas. In addition, the company suggests that the portion of the pipeline that is not subscribed at all will be needed and beneficial – if not now, then potentially sometime in the future.

CLF opposes each of Tennessee Gas’s stated justifications. As explained below, CLF submits that the proposed pipeline exceeds any reasonable expectation of need for either electricity or thermal uses, and comes when the region has already moved beyond the need for major costly fossil fuel infrastructure investments to reduce reliance on coal and oil.

Significantly, this project proposal is not like any other the Commission has reviewed before for the New England region. It relies heavily on oversized contracts with local distribution companies, many of which are currently the subject of appeal, and still lacks contracts for 60% of the Market Path segment of the Project. Tennessee Gas hopes to fill a portion of that gap with illegal out-of-market, state-supported long-term contracts with electricity companies that would impose unprecedented obligations on electric ratepayers.

The rush to overbuild natural gas pipelines in New England, and policymaker support for overbuilding, owes its momentum to a particular year’s high peak wholesale electricity rates. During the unusually frigid polar vortex that took hold of the eastern United States during winter 2013/2014, New England’s excessive reliance on natural gas, combined with poor planning and coordination, resulted in high demand for home heating fuels and serious price spikes for natural gas to serve power plants. New England’s grid operator, ISO-NE, called on demand response resources to help balance supply and demand, as well as other resources including available coal and oil.

Since the winter of 2013/2014, the region has responded in an effective manner to this trifecta. Though gas storage and deliverability mechanisms can stand further improvement, improved gas/electric coordination, market adjustments, demand-reducing state energy efficiency programs, the effective use of more readily available liquefied natural gas (“LNG”), occasional fuel-shifting to help meet the most extreme demand spikes, and better use of renewables and demand response have enabled the region to meet its winter peak needs at wholesale electricity prices that were nearly half those experienced in the winter of 2013/2014.

But the real result of this unusual event was that sticker shock and fear of future volatility prompted state regulators in New England to seek to exert authority over regional electricity rates by putting in place long-term contracts for natural gas capacity. Indeed, initially the states sought to revise the OATT on file with ISO-NE to authorize regional charges to electric ratepayers to make those ratepayers pay directly for pipeline capacity. Realizing that revising the tariff in such a way was legally untenable, the states continue to seek other means by which to exert control over the wholesale electricity and gas markets. One effect of this popular misapprehension as to the cause of the 2013/2014 winter gas prices has been for state public utility commissions to hastily approve oversized contracts between local distribution companies and pipeline companies. Another has been for the same public utility commissions to sanction experiments with state-supported long-term capacity contracts with electric distribution companies (“EDCs”). While Tennessee Gas has not yet secured an EDC contract, it is clear that it hopes to fill at least some of the remaining capacity of the project with out-of-market arrangements, either with EDCs or states themselves. The NED Project is the result of fear-driven manipulation of the energy markets by regional political representatives,⁷ although in fact many of the region’s political representatives nonetheless are lukewarm or opposed to the NED Project itself.⁸

Despite its efforts over the past two years to secure shippers for its proposed capacity, Tennessee Gas still has only received subscriptions for 552,262 Dth per day of firm transportation service for the Market Path component of the line, and 751,650 Dth per day for the Supply Path component. That leaves 780,238 Dth per day of unsubscribed capacity on the Market Path – or almost 60% of the total capacity that Tennessee Gas requests permission to build and operate. Capacity unspoken for on the Supply Path amounts to 478,350 Dth per day, or almost 40% of the total capacity on that component of 1.23 million Dth per day. Apart from the potential for export, it is unclear how Tennessee Gas will be able to fill the remaining 60% of capacity

on the pipeline, though it states a hope that additional precedent agreements and long-term contracts with EDCs may be forthcoming.⁹

The pipeline that Tennessee Gas proposes is at base opportunistic, taking advantage of the willingness of political leaders to make a faulty bet at the expense of ratepayers that further increasing reliance on natural gas could help the states to take control over the rates of regional electricity markets. It fails the test for need, imposing the costs of speculative expansion on local gas delivery customers under the contracts it has secured to date and upon electricity customers under the contracts with states or EDCs that it hopes to secure. Moreover, as the region moves to stem climate change, this pipeline can only become an albatross. Either the pipeline falls into disuse as energy efficiency, demand response, and renewables supplant demand for fossil fuels, or its continued use serves as an insurmountable obstacle to achieving state and regional climate goals. The energy landscape holds no happy ending if this pipeline is constructed and operates as proposed. New England would lose money and resources on the bet Tennessee Gas asks the Commission to approve.

Before granting any certification for this proposed “high-priced expansion project,”¹⁰ the Commission should either conduct a hearing as to the contested issue of need that lies at the heart of this proceeding, or should exert its authority under the National Environmental Policy Act (“NEPA”) to conduct a cumulative review of major energy infrastructure projects planned throughout the region and their purported benefits relative to prospective impacts on state and regional climate goals.¹¹ Absent a thorough analysis of regional needs and climate impacts, an accurate assessment as to the public benefits of the proposed project is impossible, and any certification would not meet the standard of reasoned decision-making.

II. Standards to Be Applied

Under the Natural Gas Act, the Commission must determine whether the proposed Northeast Energy Direct pipeline “is or will be required by the present or future public convenience and necessity.”¹² The Commission “will approve an application for certificate only if the public benefits from the project outweigh any adverse effects.”¹³ The first prong of the Commission’s balancing test assesses the present and future need for the proposed pipeline. To this end, the Commission considers “all relevant factors reflecting on the need for the project.”¹⁴ The second prong of the balancing test requires the Commission to identify and weigh the project’s adverse impacts against its potential benefits.¹⁵ The Commission “will consider the effects of the project on all the affected interests.”¹⁶

The applicant bears the burden of establishing the need for the project, and must also show public benefits that outweigh the project’s adverse impacts. Under the Commission’s balancing test, “[t]he amount of evidence necessary to establish the need for a proposed project will depend on the potential adverse effects of the proposed project on the relevant interests.”¹⁷ Cost-shifting and financial risk as well as potential overbuilding and risk to consumers may all be factors.¹⁸ Although the public benefits balancing test that precedes the Commission’s NEPA analysis “will largely focus on economic interests such as the property rights of landowners,”¹⁹ the Commission’s policy states that it may also consider related and additional factors such as “clean air objectives”²⁰ and “environmental interests.”²¹ Ultimately, “the Commission will approve an application for certificate only if the public benefits for the project outweigh any adverse effects.”

In addition to evaluating the potential public benefits and adverse effects of a proposed pipeline pursuant to the Natural Gas Act, before any certificate is issued, the Commission takes up an environmental review under NEPA.²² Together with the “public benefits” test applied under the NGA, NEPA requires the Commission to take a “hard look” at the environmental consequences of the pipeline. The Commission evaluates whether a project “can be constructed and operated in an environmentally acceptable manner” and has the discretion to reject a proposed project on the grounds that there is no way to construct or operate it in such a manner.²³ The Commission may also impose conditions on certification that include environmental mitigation measures developed through its NEPA analysis.²⁴

III. Project Need and the Public Benefits Test

A. A Pipeline of this Size Cannot Be Justified Based on Regional Electricity Needs or Thermal Uses, and the Harms Outweigh Any Benefits.

The Commission should reject the application for certificate under the Natural Gas Act public benefits test because need cannot be established for electricity or thermal uses. The proposed NED Project is an oversized investment with poor timing, as the region's transition to clean energy is already underway. Tennessee Gas has not met the fundamental burden of establishing project need. Moreover, the harms associated with the project militate against a finding of adequate public benefits. These harms include elevated costs and risks for electric and thermal ratepayers, entrenched regional overreliance on natural gas to the exclusion of other market solutions, and elevated costs to meet state and regional climate goals, as well as economic harms associated with the loss of coastlines and other economically quantifiable environmental impacts implicated by unchecked greenhouse gas ("GHG") emissions.

1. Thermal need fails to justify this project.

As Tennessee Gas acknowledges, the pipeline remains significantly undersubscribed, including for thermal uses. Agreements for thermal uses currently constitute only about 40% of the total planned capacity of the Market Path. Furthermore, the Commission should not assume that state-approved precedent agreements between Tennessee Gas and local distribution companies ("LDCs") constitute qualifying evidence of need under the Commission's standard of evidence, because state approval standards for this purpose do not necessarily require the same analysis of need.²⁵

Tennessee Gas speculates at length in its application that if natural gas were used more widely for residential heating purposes in New England, it would bring consumer and environmental benefits. Yet Tennessee Gas does not claim or demonstrate that the NED Project will make natural gas widely available to New England's residential heating customers. It merely speculates that if the natural gas were available, it would be beneficial.²⁶ The Application concedes that "it is not feasible for all northeast U.S. oil consumers to convert to natural gas."²⁷ This speculation does not constitute evidence of need.

2. The pipeline is not needed to keep the electricity running or to contain electricity costs.

Recent expert analyses refute the premise of Tennessee Gas's request for certification: that New England cannot meet its electricity needs year-round without the proposed pipeline. While it is not disputed that the region experiences winter peak deliverability constraints, the question is whether a massive pipeline expansion project makes sense to address a deliverability problem affecting only a few hours of a handful of days each year. The answer to that question is no.²⁸

i. A reliability study commissioned by the Massachusetts Attorney General shows that building a pipeline the size of the NED Project to address regional electric needs would be like swatting a fly with a sledgehammer.

On November 18, 2015, the Massachusetts Attorney General's Office released a study entitled Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas.²⁹ The study, carried out by Analysis Group, Inc., evaluates options to address regional electricity reliability, including new natural gas capacity, through 2030.³⁰

The study also modeled whether deficiencies would occur under certain stressed conditions. As the study explains, Analysis Group assumed a scenario in which New England becomes even more reliant on natural gas power than expected and experiences a short-term disruption in other fuels—causing the electric system to be more stressed than expected on very cold days. Under these stressed conditions, the region could need approximately 2,400 MW for a few hours on a few very cold days (around 9 days) by 2029/2030. This is the energy-equivalent of an additional 0.42 Bcf/d of new gas capacity. That amount is equal to about one-third of the NED Project.

Thus, even based on the stressed system analysis that assumes the persistence of excessive reliance on natural gas, even by 2029/2030, regional needs would not justify a project of this size. Constructing the pro-

posed pipeline to address New England's electricity reliability needs is far in excess of reasonable necessity, and accords with common sense no more than using a sledgehammer to swat a fly. ISO-NE's load forecasts, which indicate declining total electric load through 2023, once energy efficiency is considered,³¹ likewise belie the need for this project.

ii. The Skipping Stone white paper commissioned by Conservation Law Foundation proposes a targeted solution to a problem that occurs during only a few hours on the coldest days of winter.

Analysis released by Skipping Stone in August of 2015 under commission with Conservation Law Foundation draws similar conclusions, finding that any new "big pipeline" solution to the region's winter deliverability problems would result in dramatic underutilization of the pipeline the large majority of the year, and would not be cost-effective. ³² The Skipping Stone white paper not only indicates that a massive pipeline such as the NED Project is unnecessary for electricity purposes, it points to a significant current underutilization of LNG storage facilities in the region. It proposes the increased use of LNG storage as a more cost-effective means to further ease the winter peak deliverability problem while limiting the risk of stranded costs and providing for a nimble alternative from which we can pivot as new, cleaner alternatives are developed.

As currently managed, New England's natural gas delivery system – its pipelines, storage and import facilities – do not deliver sufficient quantities of natural gas to meet demand during the limited winter peak period. During these peak periods of demand, when high volumes of gas are consumed to simultaneously meet the region's heating and electric power generation needs, management and operation of the current system fails to make the necessary gas deliverable. Numerous corporate and governmental entities have thus begun to urge a large infrastructure solution such as the NED Project: building more pipelines into and across New England to increase regional pipeline capacity. New pipelines, they argue, are needed to address a structural problem of constrained gas supply and the high wholesale energy prices experienced during the winter of 2013/2014.

But New England's problem is not a structural pipeline capacity problem, as the Skipping Stone report shows – the primary issue is deliverability. On those portions of the 50 coldest winter days each year when the near-simultaneous and high demands of regional heating and electric generation loads are not being met efficiently, New England has an issue of "deliverability," or the ability to provide a certain quantity of gas to a certain location at a certain time. Importantly, not only are new pipelines not the only solution – they are also the least cost-effective one. For the majority of the year, the region's system of natural gas pipelines and LNG deliverability already operate at less than 50% capacity. It is a waste of resources to build massive new capacity when capacity is widely under-utilized for the vast majority of the year.

Once New England's current "gas problem" is properly understood as one of deliverability, rather than insufficient pipeline "capacity," the solution that most rapidly, efficiently, and cost-effectively enhances deliverability in New England would be increased use of the region's existing LNG infrastructure. It also likely requires the least new regulation, and can be easily modified as cleaner energy sources and storage solutions become available.

For New England, the best means of solving the winter gas issue from a cost of use approach is better utilization of existing natural gas infrastructure and, specifically, existing LNG infrastructure. The Skipping Stone report calls this the Winter-Only LNG "Pipeline" approach. This approach suffers from none of the weaknesses of a year-round pipeline capacity solution.

New England has both LNG vaporization capacity from large import terminals as well as from LNG storage facilities owned by the local gas distribution utilities, or "LDCs." The Skipping Stone white paper shows that if LDCs were to contract for a baseload level of LNG vaporization during the December 15 to March 15 winter period, and for more frequent truck refills of their existing LNG storage facilities, local gas reliability could be maintained while freeing up existing pipeline capacity for sale on the secondary market to power plants.

For these reasons, the Winter-Only LNG “Pipeline” option outlined in the Skipping Stone white paper would be less costly and more effective than building major new gas pipeline capacity. However, this approach to addressing New England’s winter peak deliverability issues requires a break from pipeline-centric management of the region’s gas transmission and distribution system.

iii. Declining regional electricity rates further undermine the assertion that a massive pipeline is needed to serve electrical load and constrain electricity costs.

Recent electricity prices in New England do not support a need to flood the market with gas. While prices during periods of constraint are a concern, the extreme price spikes of the polar vortex have not recurred. Although February 2015 was the coldest month in decades and the winter was colder overall, average wholesale electric prices were well below the prior winter’s prices, as reflected in the charts below. Average wholesale electric prices for the winter as a whole were down 45%. Absent February 2015’s historic cold, in a more typical winter, winter prices would likely have been much lower, consistent with the prices in January and March. Even accounting for February and excluding the warm month of December, wholesale prices for the first five months of 2015 were down 40% from the first five months of 2014, averaging approximately 6 ¢/kwh, which is less than the average price in 2014 as a whole. Wholesale prices in the spring of 2015 have continued this lower trend, averaging 2.6 ¢/kwh in April and May of 2015.

{charts omitted, see end of article for links to download complete original and also Exhibits 1 & 2}

Critically, these price reductions occurred without any additional regional energy infrastructure and despite the retirement of four large non-gas power plants (Vermont Yankee, Norwalk, Mount Tom, and Salem Harbor) and several significant outages or downrates of non-gas resources (the Phase I/II line, Pilgrim, and Brayton Point).

In recent months, prices have not only not risen, moderate weather has resulted in price drops of more than 40% compared with last year. The average monthly wholesale power price during November was \$26.12 per megawatt-hour (“MWh”), 41.8% below the November 2014 price of \$44.86/MWh.

This is not to say that nothing should be done to ward against future extreme situations like the polar vortex. Not only is it wise to learn from the past and plan for multiple contingencies, climate change is known to increase the frequency of weather aberrations. But increased use of existing infrastructure, smarter electric-gas coordination, heavier investment in energy efficiency and demand resources, strategic use of LNG and LNG storage capability, and winter reliability measures including fuel diversity and outage management comprise a common sense cohort of tools to ensure reliability.³³ Massive infrastructure buildout that ensures more over-reliance on a single fuel source is not sound energy management. On the contrary, it makes the system more vulnerable to the contingencies associated with single-fuel use³⁴ including the price fluctuations that struck in the winter of 2013/2014.

3. The precedent agreements contemplated between Tennessee Gas and New England EDCs are the fruit of state efforts to interfere in the electricity markets, are preempted, and cannot constitute proper evidence of need.

As part of its certificate review, the Commission should address whether the efforts of the New England states to interfere with regional electricity markets by supporting novel “precedent agreements” between EDCs and pipeline companies is properly preempted. As the Tennessee Gas certificate application states, “New England states have initiated public proceedings to bring additional pipeline capacity to the region in order to reduce energy costs and enhance electric reliability in the region.”³⁵ The out-of-market character of the capacity contracts that Tennessee Gas may enter into with EDCs would mean that those contracts are regulatory constructs of the New England states.

The states launched their efforts to influence the electricity markets with a proposal to modify the OATT on file with ISO-NE to permit electric ratepayers to directly assume the costs of additional pipeline capacity.³⁶ Deterred from this course (presumably by its obvious illegality), the states next initiated state-level proceedings to provide an avenue for the establishment of “precedent agreements” between pipeline companies and

EDCs, and have supported the realization of such arrangements.³⁷

The naked intent of these actions is to reduce electricity rates. For instance, the Maine legislature enacted the Maine Energy Cost Reduction Act with explicit legislative findings that “[i]t is in the public interest to decrease prices of electricity and natural gas for consumers in this State,” and speculation that “[t]he expansion of natural gas transmission capacity into this State and other states in the ISO-NE region could result in lower natural gas prices and, by extension, lower electricity prices for consumers in this State.”³⁸

Tennessee Gas now justifies the need for the NED Project with an unprecedented expectation that electric utilities may contract for a significant portion of capacity. Tennessee Gas states that it hopes to make up its persistent subscription shortfall by securing precedent agreements with EDCs with the support of the governments of Maine, Connecticut, and New Hampshire.³⁹ Thus the potential “precedent agreements” that states are urging EDCs to enter with Tennessee Gas are at the heart of the question of “need.”

By acting to ameliorate wholesale market conditions, the states tread on the Commission’s exclusive jurisdiction over wholesale rate-setting as established by the Federal Power Act (“FPA”) and the Natural Gas Act. Congress has vested in FERC the exclusive authority to regulate wholesale energy rates.⁴⁰ The FPA and NGA together have long been recognized as a comprehensive scheme of federal regulation of all wholesale sales of energy in interstate commerce that serves, pursuant to the Supremacy Clause of the U.S. Constitution, to preempt state regulation of the same.⁴¹ Not only is “direct state regulation of the prices of interstate wholesales of [energy]” preempted, “state regulations which would indirectly achieve the same results” are likewise infirm.⁴² Whether a state action falls within a preempted field of regulation depends on “the target at which the state law aims.”⁴³

As the regulatory approach that the New England states have pursued is expressly intended to affect interstate wholesale markets, it is impermissible. The federal wholesale rate scheme “leaves no room either for direct state regulation of the prices of interstate wholesales of [energy], or for state regulations which would indirectly achieve the same result.”⁴⁴ The Commission need not tolerate the states’ infringement upon its exclusive jurisdiction, and in any event bears the burden of regulating the energy markets without arguably improper delegation to the states. Further, the fact that Tennessee Gas justifies what may be a significant portion of the NED Project primarily on the basis of these out-of-market “precedent agreements” with EDCs underscores the importance of a rigorous needs analysis as part of the Commission’s certificate review.

4. Tennessee Gas’s claim of public benefits relies on false assertions of the environmental attributes that natural gas offers the region, and the extent to which natural gas will assist in reaching regional climate goals.

Tennessee Gas alarmingly asserts that the NED Project provides public benefits and merits certification because natural gas will advance climate goals and improve markets for renewables, when the opposite is true. Tennessee Gas’s claims about natural gas’s benefits⁴⁵ lag far behind regional realities and global technologies.

Tennessee Gas claims that its project is needed to avoid “reversion to coal and oil,”⁴⁶ but this is incorrect. As Tennessee Gas elsewhere acknowledges, the transition away from coal for electric power generation is virtually complete in New England. By the time the NED Project would come into service, the region will have, at most, just over 1,000 MW of coal-fired generation,⁴⁷ which is just 3.2% of all ISO-NE generation. As for oil-fired generation, it accounts for only approximately 0.8% of total generation.⁴⁸ The use of oil for electric generation during limited peak winter hours will diminish with increases in demand-side management including energy efficiency, in combination with greater penetration of renewables and the application of new storage technologies.

New England’s system-wide average greenhouse gas emissions are already lower than the emissions from the most efficient new natural gas plant.⁴⁹ Any action that would further entrench natural gas with massive new pipeline infrastructure is thus not a positive contribution for achieving the reductions in carbon emissions from the electric sector that are needed to reach New England’s climate goals.

Tennessee Gas asserts that “if” natural gas is available for thermal needs (which it does not claim to guar-

antee, and which would not be ensured by the instant project) then there will be a “drastic” GHG reduction benefit.⁵⁰ But contrary to this logic, fuelsing switching will not enable the region to meet its long-term climate goals; it will hinder those goals by impeding markets for true clean technologies.⁵¹ In response to the claim that Tennessee Gas makes here – that “natural gas is the cleanest fossil fuel available” – it merely bears reiterating that fossil fuels are not clean.

The region has also begun a shift toward renewable energy to meet thermal needs. Co-generation, geothermal- and water-based heat pumps,⁵² district heating, as well as solar and other renewable technologies are increasingly making clean thermal energy a reality. In general, job growth across New England in the clean energy sector grew by 48% between 2010 and 2014.⁵³ This growth is expected to continue. However, flooding the markets with natural gas would hinder the region’s emerging markets for residential and community-scale renewables.

Tennessee Gas claims that the natural gas it intends to transport will facilitate and “support” renewables by maintaining a “symbiotic relationship.” However, the scale of the NED Project is far larger than any project that ostensibly might be needed to “support” renewables. To the contrary, a project of this size risks deferring and displacing the market for renewables at a moment when the time to act on climate is spare, and costs to achieve required GHG emissions reductions are already anticipated to be high.

5. Under the Natural Gas Act, the Commission must consider that the project as planned would increase the costs of meeting state and regional climate goals, and result in direct costs in the form of climate impacts.

The Commission’s evaluation of the economic value of this project, as well as its overall public benefits, cannot reasonably exclude consideration of the costs of planned GHG emissions.⁵⁴ The applicant itself seeks to count clean air policy as a need or benefit in its favor. Tennessee Gas asserts that, although GHGs will be emitted, at the regional level they will be reduced overall, thereby advancing state and regional climate goals.⁵⁵ The issue of GHG emissions and climate impacts is thus squarely before the Commission.

Climate change and the reduction of associated costs have long been important issues throughout the region. The New England states that will be affected by the pipeline have sought to reduce the costs of GHG emissions reductions through the early adoption of emissions-reduction strategies, including under the Regional Greenhouse Gas Initiative. In the interests of constraining the direct costs of climate change, some states have established statutory GHG reduction requirements. The Massachusetts Global Warming Solutions Act requires that GHG emissions be reduced at least 80% below 1990 levels by 2050.⁵⁶ A similar law in Connecticut requires that GHG emissions be reduced at least 80% below 2001 levels by 2050.⁵⁷ The New England Governors and Eastern Canadian Premiers have adopted a policy goal of reducing carbon emissions by 75-85% of 2001 levels by 2050.⁵⁸ These levels of emissions reductions are not compatible with long-term investments in massive fossil fuel infrastructure like the project proposed by Tennessee Gas in this proceeding.

That the New England states suffer real and tangible harms with economic impacts as a result of climate change is well-established. The harms to Massachusetts and its coastlines have been recognized by the Supreme Court.⁵⁹ That there are costs associated with the region’s efforts to combat climate change is indisputable. That it is technically feasible to estimate the GHG emissions from natural gas combustion is also inarguable – indeed, it is on this basis that Tennessee Gas touts the dubious honor of being the “the cleanest fossil fuel available.”⁶⁰ That no one source alone causes climate change provides no reasoned basis to ignore the impacts of a given project.⁶¹ For these reasons, the costs of climate impacts must be included in the Commission’s economic analysis of this project, and in the Commission’s ultimate balancing of the benefits versus the harms of the proposed project.

The only means to conceivably cabinet the harms that would result from the NED Project would be to reduce its size dramatically and to impose sunset provisions on the use of the pipeline. Sunset provisions were included in a February 2014 settlement concerning the construction and operation of a natural gas-fired power plant in Massachusetts, which otherwise would have been in conflict with the Massachusetts Global

Warming Solutions Act.⁶² A pipeline project of the scope and ambition of the instant project, however, is surely too large an investment to reasonably build with the express understanding of a future sunset date.

6. The risks of this project must fall on Tennessee Gas and not New England ratepayers.

As noted at the outset of these comments, this Application arrives at a time when the region and the world stand at a point of change, raising the risk of abandonment for any major fossil fuel infrastructure investment. This is not something the Commission has regularly contended with in the climate context in the past, but it is a concern that the Commission has the means to address.⁶³ The Commission's Certificate Policy addresses the subject of shifting the costs of undersubscription to existing customers, and finds such cost-shifting to be impermissible.⁶⁴ Similar directives should ensure that ratepayers do not bear the cost of a future reduction in need for the proposed pipeline, which reduction in need is fully foreseeable.

The risk is clear. In its Application, Tennessee Gas acknowledges that the natural gas it transports will likely be used less, and for different purposes, in the future. Tennessee Gas asserts that "as more renewable energy is integrated into the grid, natural gas-fired generators will be increasingly important for their capacity and decreasingly important for their energy production."⁶⁵ The applicant further projects that "some natural gas will likely be displaced by renewable energy" – though it asserts that this will only occur "on the margin."⁶⁶ The reality of our time is that fossil fuel companies are increasingly being held to task for not disclosing to their investors the substantial risk of loss associated with major fossil fuel projects. Financial institutions and universities are being called on to divest from fossil fuels. A massive investment like this one on the basis of mere possible need – now or in the future – is speculation that carries a significant risk.

Ratepayers should not be left holding the check. The Commission must protect ratepayers from unjust and unreasonable rates, and costs arising from high-risk investments should not fall to ratepayers.⁶⁷ The proposed NED Project is undersubscribed from the get-go, and Tennessee Gas predicts declining future need.⁶⁸ Tennessee Gas asserts that the Commission should nonetheless certify it to be built and operated at full planned capacity⁶⁹ on an apparent "build it and they will come" theory – including speculation on the possibility that additional distribution lines could someday make it possible for the project to serve new thermal demand. While CLF objects to the certification of the project, to the extent that the Commission approves it, the Commission should ensure that the risks of this self-described "high-price expansion project" fall solely on the shoulders of Tennessee Gas and its investors, not on New England ratepayers.

The risks to the region of this project are potentially exacerbated by the uncertain financial health of Kinder Morgan, the parent company of Tennessee Gas. Kinder Morgan operates a large network of natural gas and refined petroleum product pipelines across the country. Although the negotiated rates associated with the precedent agreements for the proposed NED Project are not publicly available, one assumes that the NED Project is designed to bring in much-needed positive cash flow to Tennessee Gas and Kinder Morgan. Kinder Morgan recently has suffered rising debt costs, was temporarily placed on a negative outlook by one rating agency, was forced to cut its dividend by 75%, and its stock value has declined. Kinder Morgan and the health of the instant project continue to face a number of risks going forward, including rising interest rates, low gas prices, contract renewal risk, and volume risk on contracts and sales that are not take or pay, as well as contract defaults from its natural gas liquids pipeline and processing and gathering pipeline customers. A combination of these risks coming to fruition could exacerbate Kinder Morgan's financial woes and potentially cause inadequate cash flow to sustain the NED Project. Given these risks are foreseeable at the project proposal stage, appropriate ring-fencing and other conditions should be imposed on any grant of certificate, or the requested certificate should be denied.

**REQUEST FOR PROGRAMMATIC ENVIRONMENTAL IMPACT
STATEMENT
OR OTHER COMPREHENSIVE REVIEW**

I. The Commission has the Authority to Conduct a Comprehensive Review.

The Commission has the authority to conduct a comprehensive review of regional need, including through a programmatic Environmental Impact Statement (“EIS”). NEPA requires federal agencies to prepare an EIS on major actions significantly affecting the quality of the human environment.⁷⁰ The Supreme Court has held that “[a] comprehensive impact statement may be necessary in some cases for an agency to meet this duty.”⁷¹ Thus, “when several proposals for [] actions that will have cumulative or synergistic environmental impact upon a region are pending concurrently before an agency, their environmental consequences must be considered together.”⁷² The Commission therefore recognizes that “[p]roposed actions with potential cumulative impacts may mandate the preparation of a regional or comprehensive impact statement.”⁷³

Support for region-wide consideration of multiple correlated proposals is found in NEPA’s implementing regulations, which define the scope of government actions requiring review to include both “[c]umulative actions”—defined as those with “cumulatively significant impacts” when considered with “other proposed actions”—as well as “[s]imilar actions, which when viewed with other reasonably foreseeable or proposed agency actions, have similarities that provide a basis for evaluating their environmental consequences together, such as common timing or geography.”⁷⁴ Accordingly, the Council on Environmental Quality has determined that a regional or programmatic EIS is appropriate where there are “[s]everal similar actions or projects in a region or nationwide (e.g., a large scale utility corridor project),” or where there exist “[a] suite of ongoing, proposed or reasonably foreseeable actions that share a common geography or timing.”⁷⁵ NEPA thus authorizes a region-wide EIS for proposed pipelines or expansion projects now pending before the agency, including but not limited to the NED Project, the Access Northeast Project, and the Atlantic Bridge Project.

II. A Comprehensive Assessment is Necessary to Enable the Meaningful, Regional Review of the Need for, and Impacts of, the Proposed NED Project and Other Projects.

A comprehensive regional review is particularly important in this case because the Application relies substantially on claims that the project will positively affect regional electricity rates. A comprehensive review would give the Commission the tools that it needs to adequately address this claim. The Application also makes claims as to the regional climate impacts of the project – impacts that it again asserts will be positive. Without an environmental impact statement that addresses the question of regional energy resources, including other planned projects in the region, as well as non-build-out alternatives such as those recommended in the Skipping Stone white paper attached as Exhibit 2, the Commission’s capacity to evaluate these claims will be limited.

The Commission should exert its authority to identify and evaluate alternatives to the NED Project, and to evaluate and better address the energy needs of the region. NEPA authorizes a region-wide EIS for proposed pipelines or expansion projects now pending before the agency, including the NED Project, the Access Northeast Project, and the Atlantic Bridge Project. Given the Commission’s recent action on several other projects in the region, any region-wide EIS should also include a detailed cumulative impacts analysis that evaluates the collective environmental impacts of pending projects in conjunction with those newly approved or pending final approval, including the Algonquin Incremental Market Project, the Connecticut Expansion Project, and the Constitution pipeline.

Here, adequate assessment of both regional need and the significant potential environmental harms of the NED Project must account for the fact that the Commission is considering several proposals in the New York/New England region—including the Access Northeast Project, and the Atlantic Bridge Project—all of which impact the same geographic area within roughly the same timeframe.⁷⁶ Standing alone, these projects, and those “reasonably foreseeable,” will have the “cumulative or synergistic environmental im-

pact upon [the New York/New England] region” that warrants their review as either a cumulative or similar action.⁷⁷ It is also important for the Commission to consider that these projects come on the heels of several more recently approved by or awaiting final approval the agency—including the Algonquin Incremental Market Project, the Connecticut Expansion Project, and the Constitution pipeline—that are within the same geographic area. The Constitution line runs on a parallel and often nearly identical course with the proposed NED pipeline for more than a hundred miles. Under these circumstances, a region-wide EIS should also have a thorough cumulative impacts analysis that considers the combined impacts of these projects in the context of all recent or anticipated Commission-approved infrastructure in the region.

Holistic consideration of the environmental impacts of proposed and approved infrastructure is also key to adequate identification and evaluation of alternatives that minimize cumulative impacts for the region.⁷⁸ As the Supreme Court recognized in *Sierra Club v. Kleppe*, “[o]nly through comprehensive consideration of pending proposals can the agency evaluate different courses of action.”⁷⁹ When multiple proposals are pending for the same region, separate environmental review for each project presents the serious risk that a federal agency will overlook important alternatives that could avoid or minimize impacts for the region as a whole. The Commission can only rationally evaluate any viable alternative in the context of a complete understanding of the demand for natural gas, the capacity of existing pipelines, and the proposed capacity of new pipelines—in other words, a regional EIS.

The existence of alternatives that could avoid or minimize the impacts to the region as a whole is also closely tied to the need for the project, which, as detailed above, is questionable given the existence of other recently approved infrastructure, existing and native capacity, and the availability of more cost-efficient means to meet peak regional electricity demand during the coldest winter months. Region-wide consideration of pending projects in light of recently approved infrastructure will enable the agency to identify alternatives that minimize environmental impacts through elimination of projects or project-components that are simply unneeded. Accordingly, such consideration would not only assist in appropriate assessment of a “no-action” alternative for a particular project, but also allow the agency to consider alternatives including non-gas alternatives as well as co-location of elements of proposed projects with existing infrastructure or other proposed projects.

CLF urges the Commission to comprehensively examine these alternatives in a region-wide EIS that incorporates all recently approved, pending, and reasonably foreseeable pipelines in the region.

WHEREFORE, Conservation Law Foundation should be permitted intervention with full rights in this proceeding, the initial comments contained herein and attached as Exhibits 1 and 2 should be accepted, and the Commission should conduct a comprehensive regional review as set forth above.

Respectfully submitted,

Melissa E. Birchard*

Staff Attorney

- 28 CLF is confident that a balanced analysis will reach the conclusion that there is insufficient need for this project. However, to the extent that the Commission finds that there are disputed facts as to the need for the pipeline, CLF requests that the Commission conduct a hearing on this subject. See *Millennium Pipeline Co.*, 141 FERC at P85.
- 29 Available at <http://www.mass.gov/ago/docs/energy-utilities/reros-study-final.pdf>.
- 30 While the aim of the study was to assess the region’s electricity reliability needs and not its thermal gas capacity needs, the study did assume a generous rate of growth in thermal demand in its deficiency analysis. See *Analysis Group Study* at 8, n.25.
- 31 See http://www.iso-ne.com/staticassets/documents/trans/celt/fsct_detail/2014/pac_29apr2014_iso_state_energy_peak_forecast.pdf at slide 31.
- 32 The white paper is available at <http://www.clf.org/wpcontent/uploads/2015/09/Solving-New-Englands-Gas-Deliverability-Problem.pdf>, and is included as Exhibit 2 to this filing. Appendix B of the white paper discusses prospec-

- tive utilization of a theoretical large pipeline solution to address regional deliverability constraints.
- 33 The Commission’s own investigation into the winter of 2013/2014 revealed a number of factors that are unlikely to repeat, such as inadequate hedging and market psychology, both of which were partly due to the unprecedented nature of the extreme and widespread cold. See Powerpoint in Docket No. AD14-8, “Commission and Industry Actions Relevant to Winter 2013-14 Weather Events,” Item No.: A-4 at slide 10 (Oct. 16, 2014), eLibrary no. 20141016-3038. The North American Electric Reliability Corporation (“NERC”) found that more than half of all outages experienced during the polar vortex were caused by frozen equipment, controls, and coal, and recommended improvements such as winterization to reduce the likelihood of recurrence. See *id.* at slide 15.
- 34 ISO-NE repeatedly has acknowledged that increasing reliance on natural gas entails significant reliability risks for the region, due to factors including potential supply interruptions and the “just-in-time” nature of the resource. See, e.g., ISO-NE Strategic Planning Initiative white paper, “Addressing Gas Dependence,” at 1 (July 2012), discussion draft available at http://www.iso-ne.com/staticassets/documents/committees/comm_wkgrps/strategic_planning_discussion/materials/natural_gas_white_paper_draft_july_2012.pdf.
- 35 Application at 7.

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
(North East Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Warwick Buildings and Energy Committee, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 u.s.c. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Janice Kurkoski, Chair
Warwick Buildings and Energy Committee
Warwick Town Hall
12 Athol Rd Warwick MA 01378
978-544-3419
jdauphin3@hotmail.com

II. INTEREST OF PETITIONER

The Warwick Buildings and Energy Committee unanimously opposes the construction of the NED pipeline. Our interest in this project lies directly in the scope of our mission statement (as follows), which was assigned to us by the Warwick Selectboard at the Committee's inception in 2007.

"The purpose of the Warwick Buildings and Energy Committee is to assess town buildings and maintenance needs, research options for the select board and Warwick citizens to encourage efficient energy consumption and optimal maintenance of town properties, and encourage Warwick townspeople's own efforts in renewable energy production and carbon footprint reduction."

The proposed NED pipeline project negates our Committee's directives and points us down the opposite road to "renewable energy production and carbon footprint reduction".

Our Committee's reasons stated herein are aimed at the perceived need for additional fossil fuel infrastructure as it pertains to the NED pipeline project.

In the TGP Resource Report, RR-10, Section 10.1.1, TGP says, ... "implementation of sufficient energy conservation measures to eliminate the need for the proposed project is not feasible in the short term."

Our Committee's experience in Warwick is otherwise, and is supported by the findings in the recent independent study commissioned by the office of Massachusetts Attorney General Maura Healey.

Conservation has proved itself to be the most practical, effective, and least costly method to insure against rising energy costs, pre-mature building failure, resource depletion, and climate change.

Using low-cost weatherization methods, local labor, and common sense, we have reduced energy use in all town buildings, and in two of them by over 50%, saving hundreds of tax-payers dollars (see attached "Warwick town buildings oil use 2005 to 2014.pdf"). The energy savings are accumulative - each year's conser-

vation activities add to the conservation done in prior years. At the end of 20 years the efforts made in the first year will still be contributing savings.

The situation is quite different with a gas pipeline. The gas gets burned and it is gone, except for the pollution it caused. There is no carryover benefit from one year to the next. At the end of 20 years, or 40 years or whatever is the useful life of the pipeline, we are left with a depleted gas resource, a huge contribution of greenhouse gasses to the atmosphere, and an old, leaky, dangerous pipe, which is more of a hazard than an asset. The proposed NED pipeline will bisect Warwick, so this is of great concern to it's citizens.

We in Massachusetts are already failing to meet the goals of the Massachusetts Global Warming Solutions Act of 2008. The NED pipeline will put us further away from reaching those goals.

This committee will therefore continue to implement conservation and efficiency measures that are in the inters est of the public good for generations to come, not only for Warwick taxpayers and ratepayers, but for citizens far and wide. This pipeline is not one of those measures.

III. CONCLUSION

The building of this pipeline would negate much of what we have worked towards in our community - a reduction of and a more responsible use of energy. Beyond a doubt, the projections for need for this project have been overstated, there being many more cost effective alternatives to a 5+ Billion dollar new fossil fuel infrastructure.

Wherefore, the Warwick Buildings and Energy Committee requests with all due respect that the Commission grant our Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 13th day of January, 2016.

Janice Kurkoski, Chair
Warwick Buildings and Energy Committee
Warwick Town Hall
12 Athol Rd Warwick MA 01378

Basis for Intervening:

I am an electric ratepayer who doesn't want an increase to my bill.

Attorney General Maura Healey's 11/18/15 report on the pipeline states: "This study demonstrates that we do not need increased gas capacity to meet electric reliability needs, and that electric ratepayers shouldn't foot the bill for additional pipelines."

I am also concerned about the health costs to children who live in the compressor station vicinity: higher incidents of nosebleeds, asthma, rashes, headaches; also, one of the documented gases the compressors emit

is Benzene, which is associated with childhood leukemia.

Dr. Curtis Norgaard, who studies areas around compressor stations as well as impacts of particular pollutants, documents how they emit nitrogen oxide and formaldehyde. Apart from the increased respiratory problems due to the NO, it's the formaldehyde (CH₂O), which has more potential for health danger. This toxic gas becomes a cancer hazard at 0.08 micrograms per meter and is toxic at 10-49 micrograms per meter. It can cause cancer of the nose and throat as well as leukemia. Air quality tests around an existing compressor station in PA measured formaldehyde at a peak of 61 micrograms at about 800 meters from the station. All this evidence comes from Dr. Norgaard, who has been testifying on behalf of denizens of the Monadnock area in southern New Hampshire where the KM pipeline has been routed.

Individual	suross@comcast.net	

Basis for Intervening:

I am writing to make a request to become an intervenor on the Northeast Direct pipeline proposal that will make a huge negative impact on the Town of Northfield where I have lived for over 40 years. I am a member of the Northfield Historical Commission, President of Northfield Historical Society, a past president of Greater Northfield Watershed Association, a member of Northfield Open Space Committee, and recently served on the Northfield Master Plan Roundtable. I would like to list the concerns I have about this proposed project:

1. First and above all, I am very concerned about the impact this project will have on Northfield's two water systems and on private wells. My husband and I get our water from East Northfield Water Company's Grandin Reservoir which is very close to the pipeline path. Water flows through the rocky ledge all through Northfield's mountains as it travels toward the Connecticut River. I think it is dangerous to think about a pipeline that could compromise the quality of the water we drink. In the center of Northfield, the Northfield Water Company is in even more jeopardy.

2. Second, I am dismayed that after spending two full years working on a Master Plan for Northfield in which we identified recreation and agriculture as the most promising features for economic development, that a pipeline project could derail all the wonderful plans people in the community have made. No one will want to come to Northfield to hike along a ridge with a noisy compressor station. Our dreams of developing Northfield as a destination for eco-tourists will be ruined if the pipeline is built.

3. Third, the existing trails, cellar holes and historic landscape features are some of Northfield's greatest treasures. Long before the English settled Northfield in 1673, Native Americans walked the hills and fields leaving evidence of their existence. We need to preserve these archaeological resources.

4. Finally, I want to intervene on behalf of my friends who live near the proposed Compressor Station. I have lived here long enough to know that forty years ago there were very few families living up in Northfield's hills. I have watched this area grow into a community as people bought a few acres of land, built their own houses, raised their families and are now looking at retirement in their beloved homes on land that is so special to them. It is wrong to destroy these people's lives for a pipeline project that will transport natural gas that no one in town will be able to use.

20160113-5209

{Motion to Intervene of Wendy E Thomas}

I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health of our community and wish to be file an intervention.

Wendy Thomas
!0 Wildcat Falls
Merrimack NH 03054

20160113-5213

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we , Tim Carter and Lori Mattheiss, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Tim Carter & Lori Mattheiss
422 River Rd
Andover, MA 01810
frackingpipeline@gmail.com

II. INTEREST OF THE PETITIONER

We are filing a motion for intervention status on FERC docket CP16-21-000 (Tennessee Gas Pipeline Company, L.L.C. Northeast Energy Direct (NED) Project) based on my residence at 422 River Rd, Andover, MA 01810. Specifically, we are shown on drawings as lot MA LL 40.00 on Segment N, Lynnfield Lateral. Our property is either crossed by, or directly abuts the proposed pipeline, depending on which version of the maps you review.

We have several issues:

- The permanent clear-cutting of the pipeline Right Of Way.

Between our home and the existing high-voltage electric transmission power line corridor there is a wide thickly wooded area, full of mature trees, This forested area provide not only aesthetic natural beauty by blocking the view of the unsightly power-lines, but also provides protection from the power lines, shelter from the emissions and other elements, shade and other protection for our property. as well as privacy. This line of mature trees wraps around our entire neighborhood and acts as a natural privacy and sound barrier to the noise from local traffic on River Road.

At present it is not possible, at any time of year, to see any of the lines or towers associated with these transmission lines. If these trees are removed the lines and towers will become a clearly visible eyesore through all windows on the front and side of our home. Our entire neighborhood is semi-rural and heavily wooded; this would impact our enjoyment of our home in dramatic and grossly negative ways.

These trees also provide privacy screening from River Rd. Removal of these trees would expose our home to the noise and light pollution of River Rd. Our neighborhood will be irreparably and permanently changed for the worse.

This natural setting and all the benefits it provides was a material reason when we invested in our single family home. We have, and continue to substantially invest in upgrading and maintaining our home and property at significant expense.

- Significant property value loss.

A formal appraisal is outstanding but common sense would dictate that removal of shade trees and the screening from the high-voltage transmission lines will have a significant and permanent negative effect on our property value.

Our home is our only major asset. We depend on the equity here to survive and is the basis for our quality of life now and through our retirement. The value of our property will be diminished by the construction, operation and mere presence of the pipeline path. In fact, the resale value of our property has already been diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive our family of retirement funds and directly impact our quality of life.

-Safety.

The proposed pipeline route is within 100ft of our home. My understanding is that this is well within the 'blast radius' for a pipeline of this type (size and pressure). I recall having a conversation with a representative of the applicant who indicated that the pipeline "used space-age materials and methods". My response was "That didn't work out so well for the space shuttle Challenger."

The following appeared in the New Hampshire Union Leader newspaper

(<http://www.unionleader.com/apps/pbcs.dll/article?AID=/20150208/NEWS05/150209202/0/NEWS03>).

A review of accidents on Kinder Morgan pipelines across the country shows more than 20 since 2003 that were serious enough to be reported to the Pipeline and Hazardous Materials Safety Administration. Here are some examples:

August 2003: Kinder Morgan 26-inch diameter natural gas pipeline exploded in a farming area in Caddo County, Okla., throwing a 54-foot long section of pipe 30 feet from the ditch.

May 2005: Kinder Morgan 30-inch diameter natural gas pipeline exploded near Marshall, Texas, sending a giant fireball into the sky and hurling a 160-foot section of pipe onto the grounds of an electric power generating plant. Two people were hurt, 40 evacuated.

July 2006: Kinder Morgan Tennessee Gas pipeline exploded near Campbellsville, Ky., blowing a 25-foot chunk of pipe out of the ground and sending it 200 feet away.

September 2008: Kinder Morgan gas pipeline manifold exploded and burned for more than 10 hours in Pasadena, Texas, injuring one employee. The Houston Chronicle reported the blaze "could be seen for

miles.”

August 2011: A flash fire at a Kinder Morgan gas pipeline south of Herscher, Ill., sent five employees to the hospital.

November 2011: A weld failed on a 36-inch diameter Kinder Morgan Tennessee Gas Pipeline near Glouster, Ohio, leading to an explosion that caused a blast crater 30 feet across and 15 feet deep. Three homes were destroyed by the fire.

June 2012: A 26-inch Kinder Morgan natural gas pipeline failed in Gray County, Texas, blowing a crater 30 feet in diameter, burning two acres of agricultural land and closing State Highway 152 for several hours.

June 2013: in Louisiana, a 30-inch diameter Kinder Morgan pipeline ruptured and exploded in a rural area of Washington Parish. No one was seriously hurt, but 55 homes were evacuated.

- Water Supply.

We, along with several of our neighbors, depend on private wells for our potable water supply. These wells are within 100ft of the proposed pipeline path. These wells will be exposed to any/all toxic materials released during the construction and operation of the pipeline. Further, this area has considerable sub-surface ‘ledge’ that will likely require blasting to allow for placement of the proposed pipeline. There is potential for our wells, and surrounding aquifers to be impacted by this blasting.

- No need for gas transmission capacity.

A study commissioned by the MA Attorney General determined that there was no need to build additional gas transmission capacity in the state. <http://www.scribd.com/doc/290193152/AG-Maura-Healey-s-Energy-Study>

The Massachusetts Attorney General recently commissioned a study, (<http://www.scribd.com/doc/290193152/AG-Maura-Healey-s-Energy-Study>), which has proven that there is no need for this pipeline and that New England has capacity to meet all of our energy needs, even during peak season, until at least 2030. Previous studies, which were commissioned by Kinder Morgan and the gas companies, showed a need for increased capacity, but I would argue that since Kinder Morgan sponsored these studies we should have expected no other result than a conclusion in which they could increase their profits by building a pipeline.

- Misleading statements made by KM/TGP

Throughout the public hearings and through public materials it was represented that the pipeline was to be “co-located”, defined then as within the existing corridor/ROWs with existing public utilities; this is not true. Documented evidence in the form of the construction plans, shows that the pipeline will not be “co-located” but in fact will require the creation of new parallel corridors that extend 50ft – 100ft from the existing corridors/ ROWs.

The construction and “temporary” construction sites will unnecessarily and permanently devastate hundreds of acres of our most valued conservation lands and private properties. This includes the removal of hundreds of mature trees, whose value goes well beyond the physical tree, by, as mentioned above, helping protect the wetlands that feed the drinking water supplies and adding substantial value to our property values which we never recoup during our natural lives. Temporary construction zones create permanent destruction.

III. Conclusion

We, Tim Carter and Lori Mattheiss respectfully request that the Commission to grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Tim Carter
Lori Mattheiss

FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of
Tennessee Gas Pipeline Company, L.L.C.
Northeast Energy Direct Project

Docket No. CP16-21-0000

TOWN OF HOLLIS, NEW HAMPSHIRE'S MOTION TO INTERVENE

NOW COMES, the Town of Hollis, New Hampshire (hereinafter "the Town"), by and through its attorneys, Donahue, Tucker, & Ciandella, PLLC, and respectfully requests that this honorable Commission grant the Town status as an intervenor pursuant to 18 C.F.R. § 385.214 and 18 C.F.R. § 157.10, and in support thereof states as follows:

I. IDENTITY AND INTERESTS OF THE PETITIONER

1. The Town is a municipality located in Hillsborough County, New Hampshire. As such, the Town is charged with protecting the public health, safety, and welfare of all of its residents, workers, and businesses. The Town is an interested party in the above-referenced docket because the pipeline implicates matters of public health and safety, as well as matters of ecological import.

2. While the Town is not, at present, opposed to the pipeline that is reflected in the Applicant's November 20, 2015 Application for a Certificate of Public Convenience and Necessity (hereinafter "Application"), the Town remains interested and concerned about the pipeline route because the proposed route will involve the establishment of a permanent easement on wetlands located within the Town. Notwithstanding the foregoing, the Town reserves its right to oppose and protest the Application in the event that the Town learns facts which would lead it to conclude that the proposed pipeline would adversely affect the health, safety, and welfare of the Town, its residents, workers, and business.

3. Moreover, the Town was previously opposed to the route proposed in the Applicant's September 14, 2014 Application to Open Pre-Filing Proceeding ("Pre-file Application"). In the Pre-file Application, the Applicant proposed a route for the West Nashua Lateral that would traverse approximately 11 miles of pristine forest and woodlands, much of which was protected through a conservation easement and/or was within the Town's watershed. That route would have resulted in the disruption of land of ecological significance, and the Town remains concerned that said route may be reconsidered as the Application is considered.

4. Lastly, the Application reflects that one of the alternative routes for the West Nashua Lateral that the Applicant considered and dismissed would be located in or around the Town of Hollis' municipal limits. As filed, the exact location and impact of this alternative cannot be precisely ascertained, as the submitted map does not reflect municipal boundaries and is undetailed as to the properties that would be traversed. The Town, however, remains concerned that the Applicant or the Commission may consider an alternative route that will result in a greater presence in the Town, with possible adverse effects to the Town, its residents, its workers and its businesses and that those adverse effects may not be brought to the attention of the Commission absent the Town's involvement as a party.

5. As the Commission is aware, the construction of a natural gas pipeline involves several considerations that go to the heart of municipal health and safety, including but not limited to ecological preservation, water-quality protection, emergency response preparation and infrastructure, amongst other matters. The Town is committed to ensuring that its residents, workers, and businesses are adequately represented and that relevant concerns are addressed to the satisfaction of the Town during the course of the Commission's review of the Application.

II. GOOD CAUSE EXISTS TO GRANT THE TOWN’S MOTION TO INTERVENE AFTER THE JANUARY 6, 2016 DEADLINE

6. The Commission should grant the Town’s Motion to Intervene after the January 6, 2016 deadline because good cause exists to allow the Town to participate in these proceedings.

7. Good cause exists because, as stated above, the Town is seeking to intervene to represent and safeguard the interests of its residents, workers, and businesses. Said interests will not be adequately represented or safeguarded unless the Commission grants the Town’s Motion to Intervene.

8. Additionally, good cause exists to grant the Town’s Motion to Intervene because the proceedings would not be disrupted and the Applicant would not be prejudiced by the Commission granting the Town’s Motion to Intervene.

9. Lastly, the Town’s failure to file by January 6, 2016 was not intentional, but rather, occurred because the Town was not aware of the Commission’s December 7, 2015 Notice. The Town immediately acted upon said notice upon learning of the January 6, 2016 filing date.

III. COMMUNICATIONS AND CORRESPONDENCE

10. The following individual(s) should be included on the service list for this docket, and all communications should be sent to:

Town of Hollis
7 Monument Square
Hollis, NH 03049
Administration@hollisnh.org
(603)465-2209

WHEREFORE, the Town of Hollis hereby respectfully requests that this Honorable Commission:

- A. Grant the Town of Hollis’ Motion to Intervene;
- B. Admit the Town as a party to the above-referenced docket;
- C. Grant such further relief as is just and equitable.

Respectfully submitted

Town of Hollis
Through its attorneys,
Donahue, Tucker, & Ciandella, PLLC

Dated: January 13, 2016

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____
Individual morningstar210@gmail.com

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the proceeding concerning docket CP16-21-000. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”).

I am directly affected by the Kinder Morgan NED pipeline in these ways:

I live in Erving, a town through which this pipeline will run. The construction of the pipeline will destroy natural habitat - animals, insects, birds, plant life that makes the place where I live a beautiful, healthy and peaceful place to live.

Not only will it destroy the natural habitat, but it threatens to pollute the water that is supplied to our family and our neighbors but the Town of Erving. As time has shown, there are no pipelines without leaks - and those leaks that will inevitably happen will destroy the health and safety of generations to come. Our aquifer and local Miller River are in imminent danger.

As a Massachusetts tax-payer and frequent visitor to our local state forests, I have a deep interest in all area Article 97 protected lands which our state has promised it will protect for generations to come. This proposed route cuts through thousands of old growth trees and rural areas, destroying what we citizens value, more than money.

I am also concerned about tariffs proposed to force regional ratepayers to cover the costs of the pipeline and possible increases in energy costs that could result from the exporting of natural gas, forcing local markets to compete on a global scale

There is a particular danger in the construction of the pipeline in our area - because it would run close to a sludge dump that is a part of the Erving paper mill. Contamination of the water and land is a real threat in this area.

Our recreational activities and tourist attractions will be greatly harmed by the construction of this pipeline. Our town is on Route 2, a site where many come in the autumn to see the change of seasons. Our town is working to create a waterfront park -that will serve the residents and tourists who come to our area - to swim, boat, fish and relax. It will encourage the patronage of local businesses. We also have a beautiful lake, Laurel Lake, that our families use for recreation. This lake is dangerously close to the proposed pipeline. Erving will no longer be a place that people will frequent, if the pipeline is constructed here, due to the noise, pollution and dangers this pipeline will bring.

The proximity of a compressor station in Northfields will seriously affect our air quality. Lung disease follows the path of pipelines. This station will spew methane gas, among other chemicals, into our air and will also change our neighboring areas into an industrial zone. Our health and that of future generations is at risk. Our very small town will not be able to protect itself from explosions that could, and often do, happen in the area of pipelines. We have a volunteer fire department that is not trained for fast burning, explosive fires and we do not want to lose lives and property in this way.

As a user of electricity, I support the increased use of renewables - something that our state and our nation and our world understand to be the solution to the dangers of climate change. I cannot support the fracking that is used to bring gas out of our earth. Fracking has proven itself to endanger people, animals, water, land and air. How can our government encourage the use of natural gas - when it will contribute to the destruction of our earth as we know it?

The Massachusetts Attorney General, Maura Healey, has stated that our state does not NEED this pipeline for our energy use. What is the purpose of this project, other than the profit it will bring to Kinder Morgan? There is no benefit for the people of our region, our state.

For these reasons, I am standing up for my community and for our shared earth. For these reasons I submit my request to be an intervenor in this process.

Communications concerning this proceeding should be sent to me as follows:

Morning Star Chenven

20160113-5226

KAMPOOSA STEWARDSHIP COMMITTEE

To restore and preserve the Bog by fostering community stewardship of the Kampoosa Bog Drainage Basin ACEC

January 14, 2016

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street NE, Room 1A
Washington, DC 20426

Re: Northeast Energy Direct Project, Project Docket # CP16-21-000, #PF14-22-000

Dear Secretary Bose:

The Kampoosa Stewardship Committee sends this letter to formally comment on the environmental review of the Northeast Energy Direct Project (Docket #CP16-21-000). Our decision to send this comment letter is to restate our grave concerns regarding four of the proposed alternatives to the Northeast Energy Direct Project, namely that of the Massachusetts Turnpike Alternative, the Existing 200 Line Alternative, the Combined NY and Massachusetts Turnpike Alternative and the Combined NY and Existing 200 Line Alternative. All four of these alternatives would cross directly through the Kampoosa Bog Area of Critical Environmental Concern (ACEC), and new activity within the watershed will threaten the unique and delicate ecological habitat that our Committee has worked so hard to conserve and protect. We therefore ask that you review these alternatives with the utmost environmental consideration and with an intent to protect the long-term survival of this ecological gem.

On May 15, 2015, in a letter sent by Eric Tomasi (Docket #PF14-22-000), FERC requested that Tennessee Gas Pipeline Company (TGP) prepare additional environmental, engineering, and economic analysis of the (1) Existing 200 Line Alternative combined with the New York Alternative and (2) Massachusetts Turnpike Alternative combined with the New York Alternative. The request further requested that TGP provide more information on 15 different factors so that a quantitative comparison could be made between the alternatives and the proposed route (we refer to letter section Resource Report 10 – Alternatives, Question #11).

On October 7, 2015, as part of the public review process, the Kampoosa Stewardship Committee sent a letter to FERC asking that the Commission consider carefully the potential impacts of alternatives to the Kampoosa Bog ACEC. In this letter we described the unique ecological system that will be impacted if either the Existing 200 Line Alternative or the Massachusetts Turnpike Alternative were to become the proposed route. This same letter was copied directly to TGP. For easy reference, we are attaching a copy of our letter of October 7th.

In November of 2015 TGP issued a revised Environmental Report, Resource Report 10, Alternatives. In Section 10.3.1 of this report, Major Route Alternatives, TGP provided a cursory comparison between the proposed route and the four alternatives that FERC requested in its letter of May 15, 2015. However, to our dismay TGP's November 2015 report does not mention the fact that all four alternatives (Existing 200 Line Alternative, Combined NY Existing 200 Line Alternative, Mass. Turnpike Alternative, and Combined NY and Mass. Turnpike Alternative) cross directly through the Kampoosa Bog ACEC. Other ACECs across the state are discussed, but Kampoosa Bog is not once mentioned within the alternatives discussions. This despite the fact that the proposed alternative pipeline routes would specifically be located in very close prox-

imity to the Calcareous Basin Fen, in which the majority of sensitive species are located. These omissions are very serious flaws in TGP's alternatives analyses. We find this omission unusual, as TGP has been an active member of the Kampoosa Stewardship Committee since its inception in 1995, and its staff are obviously aware of the existence and rare ecological status of the Kampoosa fen and its surrounding ACEC.

On December 8, 2015, in a letter signed by Eric J Tomasi (Docket # CP16-21-000, PF14-22-000), FERC once again requested that TGP prepare additional environmental, engineering, and economic analysis of the Existing 200 Line combined with the Mass. Turnpike Alternative (we refer to letter section Resource Report 10 – Alternatives, Question #3) . This renewed request to TGP by FERC indicates to us that these alternatives are very seriously being considered by FERC. We ask at this time that FERC direct TGP to include the Kampoosa Bog ACEC in all past and future environmental analyses regarding these routes as alternatives. A thorough and complete analyses of alternatives cannot be conducted without including Kampoosa Bog ACEC as an extremely sensitive environmental factor.

As we stated in our letter of October 7th, Kampoosa is the largest, most diverse and pristine Calcareous Basin Fen (S1) in Massachusetts. This type of wetland is nationally rare, being restricted to 10 states, mostly in the upper Midwest and northeast. Calcareous basin fens are considered by the Massachusetts Natural Heritage & Endangered Species Program (NHESP) as S1 Critically Imperiled in the Commonwealth, meaning that five or fewer good examples remain. This ecosystem is also relatively rare in New England (being restricted to areas such as the Housatonic River Valley where calcium-rich bedrock is abundant). The habitat includes a floating mat of vegetation but, while a bog typically would have a very acidic environment with little inflow of water and a mat of sphagnum moss, Kampoosa has inflow of mineral-rich alkaline water and sphagnum moss overlaid with a sedge mat. This unusual chemistry and floating mat supports a high concentration of highly specialized calciphilic plants, many of which are considered extremely rare and found at very few places in Massachusetts. The watershed hosts 22 rare plant species, two rare animal species and many other species uncommon in the state.

In addition to the basin fen, the watershed supports two NHESP-listed Priority Natural Communities: 1) Black Ash-Red Maple-Tamarack Calcareous Seepage Swamp (S2-Imperiled), with Kampoosa noted as one of the highest quality in the state for its large size, extensive natural buffer, and many state-listed rare species, and 2) Rich Mesic Forest, noted for their moist unusually nutrient-rich soils and diverse herbaceous layer that includes many ephemeral plant species. NHESP also considers the Kampoosa Bog Watershed as a Regional Priority Conservation Area. To further illustrate the unique natural heritage of the site, we are attaching to this letter relevant sections from A Resource Management Plan for the Kampoosa Bog Drainage Basin ACEC (1999). The cross-section map on page 10 of this report illustrates the habitats and their synergistic locations within the Bog. Also attached is the Stockbridge BioMap2 (2012), with the most relevant sections highlighted for ease of reference.

Unlike many fens across the northeast, Kampoosa Bog has never been disturbed by ditching, draining, or dam construction, and still supports distinctive plant life whose populations have been diminished or extirpated at other such wetlands. The watershed was designated as an ACEC by the Massachusetts Secretary of Environmental Affairs in 1995, recognized by the state and by wetland professionals for its exemplary conditions. The purpose of this designation is to protect and preserve resources and ecosystems of critical environmental significance. This designation also carries some regulatory protections from the ACEC regulations found at 301 CMR 12.00. It was at this time that the Kampoosa Stewardship Committee was established, bringing together a wide consortium of state and local stakeholders who could each bring their distinct resources to the table for a common, protective cause. The list of committee members is attached to this letter.

Although Kampoosa Bog has not been altered by ditching or damming, the upper watershed has been impacted by the Massachusetts Turnpike and the TGP pipeline corridor, both of which have cut wide swaths through the upper reaches of the watershed. This intrusion has allowed the introduction of a litany of invasive plant species, most notoriously of which is *Phragmites australis*, which has invaded much of the wetlands and which is the greatest threat to the sedge mat and its assemblage of rare plant species. *Phragmites*

thrives on disturbance, and populations that followed the turnpike and gas pipeline corridors are the main sources of expansion. Monitoring, mapping and treatment of the Bog began in earnest in 1993, but by 2005 there were 39 distinct patches of Phragmites identified, ranging in size from 1/8 of acre to more than 7 acres. Rare native orchids, seen prior to this time, had disappeared. The Nature Conservancy (TNC) led scores of volunteers into the bog, valiantly and laboriously hand-applying herbicides (“clip & drip”) to Phragmites stands in this sensitive wetland. When funding became available, professional herbicide contractors were hired to bring the invasion to a more manageable level. The Phragmites stands were larger and denser on the TGP right-of-way, so mist-blower herbicide applications were conducted by the company, and within two years these stands were controlled.

By 2010, all of the most threatening patches had been treated. During this time both the Turnpike Authority (now MassDOT) and TGP joined TNC and Massachusetts Natural Heritage & Endangered Species Program (NHESP) to become active combatants in this war to control Phragmites and other invasives, providing technical assistance, funding and on-the-ground staff to contain invasive species within their respective rights of way. To date almost \$1 million has been directed toward invasive species control within the ACEC, and more is needed.

Invasive species is not the only primary threat to the Kampoosa Bog’s ecosystem. A detailed hydrogeochemical study of the Bog determined that groundwater and surface water chemistry is greatly being altered by road salt runoff from the turnpike), which is located upgradient of the Bog. Salt is effecting natural ion exchanges between groundwater, the water column and the peat within the basin fen. The data suggests that sodium is being retained within peat and other organic material. As these materials provide the growing medium for many of the rare plants in the Bog, it is suspected that salt contamination is further stressing sensitive plants and could threaten longterm survival of some plant assemblages. Further studies must be conducted to document and quantify such stresses.

While we believe we are winning the battle against invasive species, only time will tell if we reached a point where we can say that we’ve won the war. Monitoring and treatment is ongoing, but we have now attained a level of invasive species control that is deemed sustainable within the Kampoosa Bog ACEC. Where our original battles were exhausting and seemingly unattainable, our current patrols are exponentially less intimidating. Mass DOT has purchased new equipment and undertaken new operating procedures to reduce salt runoff along this section of the turnpike, but contamination will continue to be a concern.

Because of these dual and ongoing threats to the ecosystem, we are greatly concerned that any proposal to install additional natural gas pipelines within either the turnpike or TGP corridors threatens to defeat the hard-won, expensive and precarious balance of invasive species control that the partners of this Committee have been able to achieve. Laying and maintaining a large pipeline system will undoubtedly involve construction of roads and staging areas, bring an influx of soils and heavy equipment that could import invasive species, and permanently create new acreage of land disturbance. Any new outbreak or expansion of invasive species, coupled with continued salt contamination, could very well tip the balance of control out of our hands and result in additional losses of rare species.

For the reasons stated above, the Kampoosa Stewardship Committee respectfully requests that you and your colleagues at FERC consider the precarious environmental condition of the Kampoosa Bog as you evaluate the environmental impacts of all route alternatives that involve the Existing 200 Line Alternatives and the Massachusetts Turnpike Alternatives of the Northeast Energy Direct Pipeline proposal. We trust that, given our concerns and those that will undoubtedly be shared by NHESP, the forthcoming Environmental Impact Study will look with the utmost detail at the environmental impacts of any new or expanded pipeline within the Kampoosa Bog ACEC.

If you have any questions regarding the environmental significance of the Kampoosa Bog ACEC, or if you would like more information about the Kampoosa Stewardship Committee, please do not hesitate to contact co-chairs Jessica Murray Toro ([jessmtoro@gmail](mailto:jessmtoro@gmail.com)) or Lauren Gaherty (lgaherty@berkshireplanning.org).

Sincerely,

Jessica Murray Toro Lauren Gaherty

Basis for Intervening:

I am a landlady in Windsor and Plainfield. People rent here for the quiet and unspoiled beauty of the land. The dark sky brings star watchers. Your compressor station would ruin our standard of clean quiet country life that we treasure and make my rentals unattractive. The pollution the compressor station would emit would increase the rates of childhood and adult cancer. It would negatively affect our health. The methane emitted from fracking and transporting this gas make it a contributor to global warming. We are going solar

and reducing greenhouse gas is a matter of human survival. I do not want this pipeline and it is a severe threat to my livelihood and health. Pipelines have a bad record of leaking. Once that poison gets in our water there is no way to retrieve it. Just look at LA CA and the huge methane leak that is unstoppable, health of the people is injured and to think the system once in place to shut it off was removed . How greedy and uncaring. Sincerely No Pipeline Jennifer Lee

20160113-5237

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Project)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
MARY LEEDHAM CLARK**

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Mary L. Clark
183 Riverside Dr.
Florence, MA 01062
(413) 586-8488
maryleclark@gmail.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

- My interest as an electric ratepayer, inasmuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), the overbuild embodied in this proposal is very likely to lead to higher energy costs for New England’s ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.
- My interest as a resident of the Westfield River Watershed, living just downstream from where the Company proposes to cross the federally designated Wild & Scenic Westfield River with its pipeline. In addition to living in the watershed, my family swims and plays in the river near the Windsor town line. I am concerned about the impact that the construction and operation of the pipeline, and the compressor station proposed for Windsor, could have on ecological and human health in our watershed.
- My interest as a taxpayer, neighbor and visitor to protected public land in Massachusetts.
- My interest as a land trust supporter, volunteer, Ski Patrol supporter, and weekly visitor to The Trustees of Reservations’ Notchview Reservation in Windsor, MA.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued. I have been studying this proposal since it first became public, and I can bring valuable information and perspective to this proceeding.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.
Respectfully submitted,

January 13, 2016

20160113-5238

January 13, 2016

Federal Energy Regulatory Commission Testimony on Tennessee Gas Pipeline Company, L.L.C. Northeast Energy Direct Project Docket Number CP16-21-000

VIA eFiling www.ferc.gov

Thank you to the Federal Energy Regulatory Commission for the opportunity to send you these comments. My name is Gail Cariddi. I am the State Representative from the First Berkshire District. Three of the nine communities I represent are along the proposed Tennessee Gas/Kinder Morgan North East Direct Pipeline route as it enters the Commonwealth from New York; Hancock, Lanesborough and Cheshire. In reviewing your maps I find that my constituents are along a route that is about half of the Segment G Market Path in Berkshire County.

I want to make my opposition to this project clear. I oppose the project for environmental, economic, public safety and public health reasons.

For months as State Representative I have received thousands of contacts on the Tennessee Gas/Kinder Morgan North East Direct Project through personal meetings, letters, emails and phone calls from my constituents. From these contacts all but three are opposed to the construction, operation, and maintenance of the proposed pipeline facilities going through or near their communities. The communities that would be affected by the pipeline overwhelmingly oppose this project.

I have also received information that the communities of Hancock, Lanesborough, North Adams and Williamstown in the First Berkshire District have all voted at their Town or City Council meetings to oppose construction of the proposed North East Direct Pipeline project.

The City Council of North Adams at their City Council meeting on August 26, 2014 stated in part that the City opposes the pipeline, as well as their desire to keep the pipeline out of North Adams and the Commonwealth.

The Town of Williamstown at their town meeting on April 13, 2015 stated in part that they stand in opposition to the pipeline and seek to ban its construction in the town of Williamstown and in the Commonwealth. The Town of Hancock at their town meeting on May 4, 2015 stated in part they are in opposition to the pipeline and that with this resolution they are stating their intent to disallow the pipeline within their borders, and ban its construction in the town of Hancock.

The Town of Lanesborough at their town meeting on June 9, 2015 stated in part that they stand with many nearby communities in opposing the pipeline not only in the town of Lanesborough, but in the Commonwealth as a whole.

Generally, the comments I have received from individuals cite health, environmental, and safety concerns and reasons for their opposition. While the route is proposed to follow an existing right of way, this does not alter the fact that the proposed pipeline construction and the building of temporary and permanent access roads will cause considerable destruction. It would permanently alter our natural habitat, vegetation and wildlife. Much of our local economy is dependent on the beauty of our surroundings that feature hundreds of acres of publicly accessible conservation land, spectacular views, and home to many rare and endangered plants.

The route is proposed in an area that will affect local water resources and wetlands. The community of Lanesborough is particularly concerned that the proposed route will go through the town's water aquifer. In Cheshire, the proposed route also shows the pipeline going under Cheshire Reservoir, another important water and recreational resource in the region. These are sensitive resources that include wetlands and forested

areas. This pipeline will threaten the environmental health and quality of life in our region.

There are serious questions as to whether this project is needed. I believe a sound and reasonable alternative would be to create a project with the same amount of investment that would further investigate and repair all of the gas leaks along existing pipeline in the Commonwealth. Because thousands of gas leaks have been identified such a project would employ more local workers over many more years than the few years of construction of the proposed new larger line. The investigation and repair of existing gas leaks would also avoid the potential negative environmental impacts, and in fact eradicate existing leak problems on our roads, streets, and connections to existing users. I believe doing this will provide greater economic activity that will have a longer lasting positive effect on our local economy in the First Berkshire District and the Commonwealth of Massachusetts.

I ask that you take in your highest regard the peoples wishes of Massachusetts when we voted Article 97 into the Commonwealth's Constitution. In part it reads:

The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historic, and aesthetic qualities of their environment; and the protection of the people in their right to the conservation, development and utilization of the agricultural, mineral, forest, water, air and other natural resources is hereby declared to be a public purpose. I ask that this is commission adopts this as your public purpose.

Because of Article 97, I believe it is my responsibility as State Representative to speak out for my constituents and all citizens of the Commonwealth who want to maintain the right of the people to clean air and water.

As such I have come to the conclusion that allowing this project to be constructed is not in the public's best interest. Therefore, I ask that the Federal Regulatory Commission (FERC) not allow the project to go forward.

20160113-5244

Submission Description: (doc-less) Motion to Intervene of Peter R Wood under CP16-21-000.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	peterrmapleacres@gmail.com	

Basis for Intervening:

I live in the Town Of Nassau, New York and wish to intervene in this proceeding to oppose the NED pipeline. I have a strong and serious interest which will be directly affected by the outcome of the proceeding. I am a landowner who would have my property seized by eminent domain, and have the remaining part of my property devalued by its proximity to a high-pressure gas pipeline.

I am a resident of a rural area whose home is supplied for domestic water by a shallow artesian well. This well has provided my house with a reliable water supply for over 200 years. I have serious concerns about the risk that the blasting and drilling to construct this pipeline, planned to be located approximately 50-125 feet from my house and well, may compromise my house's water supply, and possibly the underlying aquifer. I fear that the construction and operation of this pipeline may disrupt, reduce or contaminate my water supply. I am also greatly concerned about the possible affect the construction and operation of this pipeline may have generally on the watershed, aquifers, and watercourses here, which it would impact. The bedrock is close to or even at the surface throughout this part of Rensselaer County.

The planned route of this pipeline will take it directly through a rare lag gravel, vernal pools, and an aquifer recharge area located on my property. I have serious concerns that these natural areas will be destroyed or

compromised by the construction and operation of this pipeline.

The proposed pipeline will cut through, reduce, degrade and destroy parts of the Rensselaer Plateau, which is a unique and irreplaceable natural area, and a reservoir of natural diversity.

The pipeline's approval would force us to sell or cede through eminent domain a right-of-way of at least several acres and create an unnatural tree-less leveled strip separating our house and barns from the main part of our property. The pipeline will pass through what is our backyard. The high-pressure gas pipeline will pass closely around our house on two sides. I would not feel safe or comfortable living fifty or one hundred feet from a 30" high-pressure gas pipeline. It will also leave our c.1800 home and barns isolated on a small rump portion of what is a thirty-five acre parcel, cut off from and inaccessible to the larger portion. This strip, which will be owned or controlled by Kinder Morgan, will be a magnet for off-road vehicle mayhem running 24/7. I do not believe that they can ever successfully fence off or otherwise restrict this space.

The proposed pipeline compressor plant located in Nassau, NY will burn gas, possibly contaminated with hydrofracking chemicals. Residents in that area, as well as those living downwind of it, will be exposed to and breathing those contaminants. Gas contaminants released by compressor stations include volatile organic compounds such as methane, benzene, methylbenzenes, ethylbenzene, xylene, pentane, hexane, toluene, 1, 3-butadiene, aliphatic hydrocarbons. These are known human carcinogens. Compressor stations also release formaldehyde, hydrogen sulfide, and radon, which are carcinogens and can cause cancer and other health disorders, and respiratory and nervous system diseases. The compressor plant will operate 24/7 and its noise will reverberate for miles through the Burden Lake basin and the surrounding hills and hollows. The fumes, noise, and light pollution will become a constant presence in the lives of hundreds, if not thousands of residents in the vicinity. This dangerous industrial facility is completely unsuited to what is a bucolic agricultural and residential area.

Kinder Morgan has a demonstrated record of skimping on safety and compliance, and an above average incidence of pipeline explosions, fires, and other safety issues.

Our towns, Schodack, Nassau, and Stephentown, and the Rensselaer County legislature, have passed resolutions expressing the people's will against the construction of this pipeline.

This project will override local control and opposition, and subject the people of Rensselaer County to potentially devastating health impacts, for a hydrofracked gas pipeline operated by a company with a poor safety record. It would degrade the unique Rensselaer Plateau.

I strongly oppose the taking of my property and its value without fair recompense for the private gain of Kinder Morgan. This pipeline is not about convenience or necessity but rather an industry taking profit by forcing risk and cost onto individual private property owners. This amounts to an unfair taking of my property.

Basis for Intervening:

I oppose the construction of the Northeast Energy Direct (NED) pipeline project. My primary concern is related to the risks associated with climate change.

Our leading scientists tell us that we must leave 80% of currently known reserves of fossil fuels in the ground in order to avoid catastrophic levels of climate disruption.

In Massachusetts, our legislature passed the Global Warming Solutions Act in 2008. The commitments embodied in that legislation would be put at significant risk if the NED project were to proceed.

We need to be aggressively phasing out our dependence on fossil fuels, not building more pipelines that will lock us into years and possibly decades of increased greenhouse gas emissions.

To quote President Obama,

‘...[I]f we stop trying to build a clean-energy economy and reduce carbon pollution, if we do nothing to keep the glaciers from melting faster, and oceans from rising faster, and forests from burning faster, and storms from growing stronger, we will condemn our children to a planet beyond their capacity to repair.’

What greater environmental impact could there possibly be than disruption of our climate, of the very life support systems of this planet, our home?

For this compelling reason, and as a resident of Massachusetts, I submit this Motion to Intervene in Docket CP16-21

Basis for Intervening:

As a board member of the Dracut Land Trust, Inc. I am concerned with the NED gas pipeline crossing a parcel owned by the Trust; the Smith/Healey Farm at 30 Wildlife Way, Dracut, MA 01826.

This land was secured with funds under an agreement that it would not be disturbed by industrial construction such as a gas pipeline. Consequently, to permit such construction would violate our promise to protect the property in perpetuity.

A portion of the property adjacent to the pipeline is currently used by the New Entry Sustainable Farming Project to train farmers in sustainable organic growing methods. Emissions from the pipeline and the proposed nearby compressor station would compromise the efforts of new farmers to grow produce free of environmental contaminants associated with the gas pipeline workings.

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

MOTION TO INTERVENE OF BERKSHIRE NATURAL RESOURCES COUNCIL, INC.

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, Berkshire Natural Resources Council, Inc. (“BNRC”) hereby moves to intervene in the above- captioned proceeding.

- I. In support of this motion, BNRC states, as follows: The exact legal name of movant is as set forth in the above, unnumbered paragraph. BNRC works to to protect and preserve the scenic beauty and ecological integrity of the Berkshires for public benefit and enjoyment. BNRC represents approximately 1,000 households in Massachusetts, and owns or holds conservation restrictions on nearly 21,000 acres of land in Berkshire County, Massachusetts. BNRC’s activities in land conservation and stewardship, information and education, and advocacy and public policy, pursued in collaboration with its supporters, local and state officials, and fellow public and non- governmental agencies and organizations, are essential to its mission and interests.
2. The name and mailing address of the person upon whom all communications concerning the proceeding should be served is, as follows:

Theodore H. Ames, President
Berkshire Natural Resources Council, Inc.
20 Bank Row
Pittsfield, Massachusetts 01201
Telephone: 413-499-0596
Fax: 413-499-3924
tames@bnrc.net
3. On or about November 20, 2015, Tennessee Gas Pipeline Company, LLC (“TOP”), filed an application pursuant to sections 7(b) and 7(c) of the Natural Gas Act (NGA), and the Federal Energy Regulatory Commission (Commission) regulations thereunder, seeking authority to (i) construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, and (ii) to abandon certain facilities, all as part of a proposed Northeast Energy Direct Project (“NED”). The proposed NED is comprised of two components:
 - a. Supply Path Component: Comprised of the proposed facilities from Troy, Pennsylvania to Wright, New York, including approximately 174 miles of pipeline facilities in Pennsylvania and New York, the proposed construction of three new compressor stations and modifications to one existing compressor station, further construction of two new meter stations, and purported appurtenant facilities.
 - b. Market Path Component: Comprised of proposed facilities from Wright, New York to Dracut, Massachusetts. These proposed facilities include approximately 188 miles of mainline pipeline facilities in New York, Massachusetts, and New Hampshire, laterals located in Massachusetts and New Hampshire, and Connecticut), proposed construction of six new compressor stations, 13 new meter stations and modification of 14 existing meter stations, and purported appurtenant facilities.
4. During this proceeding, BNRC may seek to verify that TOP can locate the proposed NED within or adjacent to existing rights-of-way; and, further, BNRC may investigate whether appropriate pre-filing and application protocols were followed.
5. BNRC herewith reserves its right to submit comments and other information during this proceeding.

6. BNRC has interests that will be affected by the outcome of this proceeding.
7. BNRC's interests cannot be adequately represented or protected by any other party.
8. If BNRC is not permitted to intervene in this proceeding, it is highly likely to be adversely affected and bound by action taken in this proceeding without having had an opportunity to be heard.

WHEREFORE, BNRC respectfully requests that it be permitted to intervene in this proceeding and that it be granted all the rights of a party thereto, including the right to notice of, and to participate in, all hearings and other proceedings.

Respectfully submitted,

On behalf of BNRC:

Theodore H. Ames, President
Berkshire Natural Resources Council, Inc.
20 Bank Row
Pittsfield, Massachusetts 01201

Honorable Angela M. O'Connor
Chairperson, Department of Public Utilities
1 South Station Track 13
Boston, MA 02110

RE: Carolyn and Eric Ness, Meg Worcester, Michael and Kelly Paulsen, Holly and Gordon Lovelace, and Woolman Hill Inc., and FERC's Notice of Intent for the Northeast Energy Direct Project, Docket No. PF14-22- 000.

Dear Ms. O'Connor:

Carolyn and Eric Ness, Meg Worcester, Michael and Kelly Paulsen, Holly and Gordon Lovelace, and Woolman Hill Inc., (hereinafter Plaintiffs) are parties impacted by the proposed Kinder Morgan NED project. They have filed an action, currently pending in Federal Court in Springfield Massachusetts, challenging the legality of FERC's evaluating the proposed Kinder Morgan's right to take an easement on their properties located in Franklin County Massachusetts for installation of their proposed pipeline.

The aforementioned action challenges the constitutionality of the Section 15 USCS f 717(a) of the Natural Gas Act 15 USCS8 717et seq., upon which FERC is relying for consideration of the NED project and the taking of easements over Plaintiffs'roperties.

The United States Congress deprived FERC of jurisdiction to decide whether or not 15 USCS f 717(a) passes constitutional muster:

Federal Power Commission [now FERC] will not pass upon constitutionality of Natural Gas Act, and will not question legislative declaration, contained in 15 USCS \$ 717(a), that transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption "is affected with public interest" and that federal regulation thereof "is necessary in the public interest." 15 USCS f 717(a).

Plaintiffs are challenging, in CA. 1 3:15-cv-30131(MAP), that portion of 15 USCS 5 717(a) over which Congress deprived FERC of jurisdiction:

Necessity of regulation in public interest.... [I]t is hereby declared that the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest, and that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest. 15 U.S.C.f 717(a). (CA. 13:15-cv- 30131(MAP)], Massachusetts Federal District Court, Plaintiffs 'omplaint at f[58j.

In spite of CA. 1 3:15-cv-30131(MAP), Kinder Morgan has recently threatened Plaintiffs with possible legal action from the Department of Public Utilities (DPU) to force them to provide Kinder Morgan access to

survey their properties for possible installation of the NED pipeline.

The purpose of this letter is to formally notify DPU that if DPU takes any action to force Plaintiffs to provide Kinder Morgan with access to their properties, for allegedly surveying purposes, DPU will be forced to litigate through a counter claim the constitutionality of 15 U.S.C. § 717(a) under Article X of the Massachusetts constitution. The issue raised in CA. 13:15-cv-30131(MAP) is identical as the one that will be raised under Article X.

DPU will also face an abuse of process counterclaim given the fact that unless, the United States prevails in the federal court system in CA. 13:15-cv-30131(MAP), DPU will continue to be abusing its authority, by taking any action with regard to the Plaintiffs.

Sincerely,

Cristobal Bonifaz, Esq.

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.J.C.
NORTHEAST ENERGY DIRECT PROJECT

Docket No. PF14-22-000, CP16-21-000

MOTION TO INTERVENE OF TOWN OF DRACUT, MASSACHUSETTS

WHEREAS: The Tennessee Gas Pipeline Company has proposed a new natural gas pipeline known as the Northeast Energy Direct Project ("Project") to be constructed in Pennsylvania, New York, Connecticut, Massachusetts, and New Hampshire. In Massachusetts, the Project would include approximately 101 miles of new pipeline, plus additional facilities in this region; and

WHEREAS: The Town of Dracut, Massachusetts is a municipality incorporated under the laws of Massachusetts. It appears that nearly 9 miles of the proposed pipeline work will cross properties located within the municipal limits of the Town of Dracut. In addition to the mainline, Dracut will also have the Lynnfield delivery line, Concord delivery line, Maritimes and Northeast delivery line, part of the averbil lateral line, a compressor station and three new meter stations. Dracut is greatly impacted by the project.

WHEREAS: We, the Dracut Board of Selectmen do hereby strongly oppose the aforementioned pipeline as previously voted and evidenced by our active and vocal participation in the "North Municipal Gas Pipeline Coalition"; and

WHEREAS: Once Tennessee Gas files its formal application with the Federal Energy Regulatory Commission, the Board of Selectmen resolve to become an "Intervenor" which is an official party to the Federal Energy Regulatory Commission's proceeding. Intervenor's play an important role in the process and are able to file briefs, appear at hearings, and be heard by the courts if they choose to appeal the Federal Energy Regulatory Commission's final ruling.

WHEREAS: As an "Intervenor", the Board of Selectmen can formally participate in the proceeding by filing a request to intervene within the required twenty-one (21) day window, if it is deemed needed by the Chairman of Board of Selectmen;

NOW, THEREFORE, BE IT RESOLVED, pursuant to Commission Rules 385.214(b) and 157.10, that the Dracut Board of Selectmen do hereby resolve and vote to become an "Intervenor", once Tennessee Gas files its formal application with the Federal Energy Regulatory Commission. Further, the Board of Selectmen resolve to become an "Intervenor" which is an official party to the Federal Energy Regulatory Commission's proceeding, and/or any other actions considered by the Chairman of the Board of Selectmen. Additionally, the Dracut Board of Selectmen do hereby instruct Selectwoman Cathy Richardson to stand ready to file a motion to intervene. In witness whereof, We the Dracut Board of Selectmen do hereby set our hands and affix the Great Seal of the Town of this 13 Day of October, 2015.

Before the United States of America
Federal Energy Regulatory Commission

Kinder Morgan
Tennessee Gas Pipeline, LLC

Docket No. CP-16-2 L900

Motion to Intervene of the Town of Berlin, Massachusetts

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure 18 CFR 385.212 and 385.214, Section 15(a) of the Natural Gas Act (18CFR157.10) the Town of Berlin, Massachusetts moves to intervene in the above captioned proceeding.

On November 20, 2015, Tennessee Gas Pipeline LLC filed its Notice of Application for a Certificate of Public Convenience and Necessity to Construct, install, modify and to operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut and to abandon certain facilities as part of the Northeast Energy Direct Project (NED Project).

The Town of Berlin is a municipal corporation, duly organized under the laws of the Commonwealth of Massachusetts, incorporated in 1812, with offices at Linden Street in Berlin, Massachusetts 01503. The Board of Selectmen is an elected three person board and is the governing body of the Town of Berlin.

When Kinder Morgan/Tennessee Gas Pipeline announced in 2014, that it was planning to build a pipeline called the Worcester Lateral that would traverse mostly conservation land protected by Article 97 of the constitution of Massachusetts, as well as farmland, wetlands and neighbor hood lands.

The Town of Berlin was concerned about this proposed lateral and appointed a committee, known as the Pipeline Study Committee, to research the project and make recommendations to the Board of Selectmen on how best to address this proposed pipeline.

The Pipeline Study Committee went to work, researching the impacts of pipelines on the lands and residents in other parts of the United States, the actual published reports of the need or lack of need for more natural gas pipelines, health impacts of natural gas and its contribution to global warming & methane and carbon dioxide pollution, alternate sources of energy, and many other aspects of this proposed pipeline through the town of Berlin and surrounding towns. One immediately perceived negative impact was the affect such a pipeline would have on conservation lands in the Town of Berlin.

Article 97 was passed by the Massachusetts legislature as an amendment to the Massachusetts Constitution, to allow all citizens to have access to land that was conserved in its natural and undeveloped state that could be enjoyed and appreciated as one of the rights of all citizens.

The taking of lands protected by Article 97 of the amendments of the Massachusetts Constitution for the construction of the proposed pipeline and its related infrastructure would have impacted all land conservations efforts throughout the Town of Berlin as well as the entire state. Land left as legacies to future generations would have been severely compromised and forever damaged and would have destroyed the tenets of Article 97. The Article 97 lands comprise wildlife habitats and corridors, nature trail systems, wetland and aquifer protection. These lands were chosen for pipeline construction and installation, infrastructure needs and as places for future expansion as the least expensive places to site such a pipeline.

At the annual town meeting on May 4th, 2015, with only one dissenting vote, voters approved an article to protect all lands under Article 97 of the Massachusetts State Constitution and prohibit construction of any gas pipeline or related project on these lands, and include farm land, wetlands, and woodlands not currently preserved under Article 97.

The words of the article read:

ARTICLE 36 - To see if the citizens of the town of Berlin will vote to request the Board of Selectmen ensure the continued protection of all Article 97 lands in Berlin and to oppose any proposal to construct a natural gas pipeline or any other project or facility through conservation lands in Berlin protected under Article 97 of the Amendments to the Massachusetts Constitution and to also oppose the construction of these projects on farmland, wetland or woodland not currently protected by Article 97.

In addition, to request the State Representative and State Senator representing Berlin to vote NO on any legislative proposal to override Article 97, or to take by eminent domain, or to remove conservation lands from the protection of Article 97, in order to plan or install any high-pressure Interstate or intra-state natural gas pipeline and any pipeline related project or facility, or take any action thereto.

In addition, to request the State Representative and State Senator representing Berlin to vote NO on any legislative proposal to override Article 97.

Then in June 2015, in a filing with the Federal Energy Regulatory Commission on Tuesday, Kinder Morgan/Tennessee Gas Pipeline dropped plans for the Worcester Lateral Line it had originally proposed for Bolton, Berlin, Boylston, Northborough, West Boylston, Shrewsbury, and Worcester.

The Pipeline Study Committee continued its research into the entire pipeline project, reporting as needed to the Board of Selectmen. It was clear that although the Worcester Lateral through Berlin had been dropped, route changes were still taking place and, depending on circumstances, the Worcester Lateral could be rein-

stated.

Then FERC proposed that the pipeline in Massachusetts follow more closely existing interstate highways, such as I-495. I-495 traverses the length of Berlin and so Berlin would once again be subject to an unwanted pipeline through the Town. In addition, the pipeline would pass close to the Town of Hudson, MA water supply which is located in the Town of Berlin. For the time being, Kinder Morgan has rejected this proposal, but there is no knowing what the future will bring.

As one of 351 towns and cities of the Commonwealth of Massachusetts, the Town of Berlin is committed to addressing its energy needs through investment in energy conservation and in alternate clean energy. The Town of Berlin is committed to supporting the Commonwealth of Massachusetts established targets under the Global Warming Solutions Act by reducing its Green House Gas emissions by 25% below 1990 levels by 2020 and 80% below 1990 levels by 2050. This pipeline project (NED) through Massachusetts would make reaching these goals impossible.

The Town of Berlin has a direct and significant potential to be adversely impacted by this above Docket (CP-16-21-000) and could be directly impacted by the outcome of this proceeding. The town cannot be adequately be represented by any other party and may be adversely affected or bound without the opportunity to present its position unless it is permitted to participate in this matter. It is in the interest of the Town of Berlin to participate in this proceeding, and thus, good cause exists to grant the Town of Berlin motion to intervene. All correspondence and communication related to this proceeding should be directed to the following whose name and address should be placed on the official service list maintained by the Secretary for this proceeding.

Jointly signed this 11 day of January, 2016

Berlin Board of Selectmen

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION
INTERAGENCY PRE-FILING CONFERENCE CALL

Tennessee Gas Pipeline Company, LLC

Docket No: CP16-21, PF14-22-000

NORTHEAST ENERGY DIRECT PROJECT

December 3, 2015

Agencies in Attendance (list of attendees is attached):

- Federal Energy Regulatory Commission (FERC)
 - o Cardno (FERC 3rd Party Contractor)
- U.S. Army Corps of Engineers (USACE)
- U.S. Environmental Protection Agency (USEPA)
- U.S. Fish and Wildlife Service (USFWS)
- National Park Service (NPS)
- PA Department of Environmental Protection (PADEP)
- NY State Department of Environmental Conservation (NYSDEC)
- NY Department of Transportation (NYDOT)
- NY Department of Public Health
- MA Attorney General's Office
- MA Energy and Environmental Affairs (EEA) – MA Environmental Policy Act (MEPA) Office
- MA Department of Fish and Game (MA DFG)

- MA Department of Conservation and Recreation (MA DCR)
- MA Energy Facilities Siting Board
- NH Attorney General's Office
- NH Fish and Game Department (NH FGD)
- NH Division of Energy and Planning
- NH Department of Environmental Services (NH DES)
- NH Natural Heritage Bureau
- NH Division of Forests and Lands
- NH Fire Marshall's Office
- Nashua Regional Planning Commission
- Berkshire Regional Planning Commission
- Southwest Region Planning Commission
- Franklin Regional Council of Governments
- Northern Middlesex Council of Governments
- Tennessee Gas Pipeline (Tennessee Gas)
 - o Hatch Mott (Contractor for Tennessee Gas)
 - o AECOM (Contractor for Tennessee Gas)

Meeting Summary

The conference call was conducted to review the general status of the Northeast Energy Direct (NED) Project, including the Project's schedule, field surveys, and the National Environmental Policy Act (NEPA) process. Topics discussed included:

Project Status

- Tennessee Gas filed the project Application to FERC on November 20, 2015.
- FERC in the process of reviewing application for acceptance. They will either deny or accept the application. FERC will issue a Notice of Application (NOA) if they accept the application and determine that it meets the minimum filing requirements. The deadline for FERC to issue the NOA is December 7th.
- The Intervention period begins on the date the NOA is issued – There is potential for the Intervention Period to be extended beyond 21 days. This decision will be made by the FERC Commissioners and Division of Pipeline Certificates and will be outlined in the NOA. FERC has historically accepted requests for intervenors past the 21 days on other projects.
- Eric Tomasi will email the NOA to participants on this call when it is issued on the docket.
- If the application is not accepted by FERC, they will put a letter on the record detailing their objection to the application. Information regarding additional interagency conference calls would be included in this letter. If the application is accepted, then agency conference calls will continue between FERC and cooperating agencies only. This is due to ex parte rules regarding communication after the NOA has been issued.
- If agencies want to be a cooperating agency for this project, then they need inform Eric Tomasi via email or a letter to the record. Multiple agencies from the same state can be cooperating agencies. Cooperating agencies participate in development of the Environmental Impact Statement (EIS), including editing and writing sections of the document. They also have the ability to issue a letter to FERC stating any objections to the EIS after it is formally issued. Typically FERC accepts state and federal agencies.
- There are three different ways for agencies to participate in the FERC process after the NOA is issued:
 - o Intervenor – the person/agency has the right to ask for re-hearing after the Commission's Order is issued.

- o Participating Agency – Agencies that comment on the record. FERC will accept comments on the project through the entire process.
- o Cooperating Agency – Agency is involved in the process of developing the EIS.
- Summary of FERC Process
 - o If FERC issues NOA, they will then begin to issue multiple data requests. Tennessee Gas is required to formally respond to these data requests on the record.
 - o When enough information has been provided by Tennessee Gas for FERC to develop the EIS, FERC will issue a Notice of Schedule for development of the Final EIS.
 - o Next FERC will develop the Draft EIS
 - o After the Draft EIS is issued, a public comment period begins. Typically the Draft EIS comment period will be a minimum 45-days, but may be extended on this project due to the number of meetings that will likely be held. During this time, Draft EIS comment meetings will be conducted by FERC similar to the scoping meetings held earlier this year. Comments received during Draft EIS comment meetings and received on the docket during the comment period will be addressed in the Final EIS. The comments on the draft will have individual responses in an appendix in the Final EIS
 - o Final EIS will be issued on the date listed in the Notice of Schedule.
 - o Typically the Commission will decide whether or not to issue an Order for the project at least 30 days after the Final EIS is issued. The Certificate Order will approve or deny the project.
- Other Notes
 - o FERC may issue a Supplemental Notice of Intent (NOI) to re-open the Scoping period due to recent changes in the project route, compressor station locations, and the number of new landowners affected by the project. Approximately 700 new landowners may be affected these changes. FERC is still determining out how to notify these new landowners and ensure that they have the opportunity to comment on the project. Notification for new landowners will likely be issued after the application has been accepted or denied.
 - o There is no formal schedule for the Final EIS until the Notice of Schedule is issued by FERC.
 - o FERC will be sending Tennessee Gas a data request asking for clarification on certain cultural resources issues.
 - o FERC will be issuing a data request to Tennessee Gas shortly after determining acceptance of the application. The data request will focus specifically on alternatives. FERC will issue another data request regarding the entire application at a later date.
- Tennessee Gas Status Update:
 - o Surveys are continuing due to mild weather in the Northeast. Surveys will continue until there is snow cover or freeze.
 - o A supplemental filing will be submitted to FERC that includes information from surveys conducted from October 1st through December. Tennessee Gas is evaluating when the supplemental information will be filed with FERC, likely in the first or early second quarter of 2016.
 - o Aerial surveys are ongoing and should be completed in the next couple weeks, depending on weather.
 - o Geotechnical surveys are ongoing at multiple sites, including the Wright compressor station. Indiana bat and Northern Long-eared bat concerns were identified at this site. These issue were addressed with NYSDEC and USFWS.
 - o NH Site Evaluation Committee (SEC) Public meetings are being held this week. December 3rd is the last meeting. Tennessee Gas will file the NH SEC application in the first quarter of 2016.

- o Three additional Open Houses will be held in NY the week of December 14th. These meetings will be held in the towns of Franklin, Schoharie, and Castleton-on-Hudson.
- o Tennessee continues to coordinate with Tribes on a weekly basis to give updates regarding ongoing and upcoming surveys.
- o Agency meetings are being held with NH town committees to discuss mitigation and mitigation plans for the NH SEC filing. Tennessee Gas is also meeting with NY State to discuss routing.
- o Tennessee Gas plans to continue holding agency meetings through the winter to resolve any outstanding issues on surveyed lands and to plan a path forward for surveys in 2016.
- o Tennessee Gas will issue another supplemental filing to FERC no later than December 21st which will address scoping comments.
- o Pipeline Class Location study is ongoing. The pipe size and thickness will be according to Department of Transportation (DOT) regulations and recommendations of the study. Additional information will be included in the supplemental filing to FERC.
- o The project route in NH submitted with the application changed so that it is further away from the power line corridor. The route was adjusted in this area for a variety of reasons, including landowner requests and constructability issues that required the route be moved further away from the power line. Tennessee Gas is still proposing to overlap workspace with the powerline right-of-way, but in some cases they needed to move the NED project centerline so that it was located five feet from the edge of the powerline easement. In some cases the powerline right-of-way is 300 - 350 ft. wide, but the powerlines are not located within the center of the easement. Tennessee Gas is still working with Eversource and National Grid regarding the right-of-way.
- o FERC questioned the large number of pipe yards. Tennessee Gas proposed 198 pipe yards in the application. They are working to re-evaluate and reduce the number of pipe yards and their locations.
- o If Tennessee Gas does not have access to survey a property, then they will use the best information they have to evaluate the area. Tennessee Gas cannot survey properties where access was denied until after a FERC Certificate is issued. If a Certificate is issued, Tennessee Gas will have access to those properties and will have to submit survey information to FERC and state permitting agencies for those areas. Construction would be allowed only if the survey information is accepted. One of the conditions of a Certificate is that all permits must be issued before Tennessee Gas can receive a Notice-to-Proceed with construction.
- o Tennessee cannot make changes to the route outside of the approved right-of-way without approval from the Commission once the Certificate is issued. If they need to move the route they will file a Variance with FERC. Volume II Public – Appendices F and G of the application show the project Alignment Sheets.
- o Public scoping comments and responses from Tennessee Gas included in Attachment A of the application are current through October 1, 2015.
 - Tennessee Gas stated that they will file, on December 2, the comments filed from October 1st through 16th.
 - FERC will also have to respond to comments submitted during the scoping period in the Draft EIS. Scoping comments are addressed generally in the Draft EIS, not specifically. The Final EIS will include an appendix with specific comment letters filed on the Draft EIS. FERC will identify where this comment is addressed in the Final EIS or will refer to a separate comment response within the appendix.
- Miscellaneous
 - o Eric Tomasi will email attendees the FERC's decision regarding whether or not the applica-

tion was accepted on December 7th.

Next Call

- This is the last open agency call for the project. Future agency calls will be with cooperating agencies and FERC only. The dates and times of these calls have not been determined.

Peter R Wood, Stephentown, NY.
 Re: Docket CP16-21

Peter R. Wood
 153 Fire Tower Road
 Stephentown, NY 12169

Federal Energy Regulatory Commission
 Kimberly D. Bose, Secretary
 Washington, D.C.

Commissioners:

I write to express my strong opposition and serious concern about the proposed Kinder Morgan/Tennessee Gas Northeast Energy Direct Project.

Kinder Morgan has a demonstrated record of skimping on safety and compliance, and an above average incidence of pipeline explosions, fires, and other safety issues.

Our towns, Schodack, Nassau, and Stephentown, and the Rensselaer County legislature, have passed resolutions expressing the people's will against the construction of this pipeline.

The proposed pipeline compressor plant located in Nassau, NY will burn gas possibly contaminated with hydrofracking chemicals. Residents in that area, as well as those living downwind of it, will be exposed to and breathing those contaminants. Gas contaminants released by compressor stations include volatile organic compounds such as methane, benzene, methylbenzenes, ethylbenzene, xylene, pentane, hexane, toluene, 1, 3-butadiene, aliphatic hydrocarbons. These are known human carcinogens. Compressor stations also release formaldehyde, hydrogen sulfide, and radon, which are carcinogens and can cause cancer and other health disorders, and respiratory and nervous system diseases. The compressor plant will operate 24/7 and its noise will reverberate for miles through the Burden Lake basin and the surrounding hills and hollows. The fumes, noise, and light pollution will become a constant presence in the lives of hundreds, if not thousands of residents in the vicinity. This dangerous industrial facility is completely unsuited to what is a bucolic agricultural and residential area.

The proposed pipeline will cut through, destroy, reduce and degrade parts of the Rensselaer Plateau, which is a unique and irreplaceable natural area, and a reservoir of natural diversity.

The proposed pipeline is planned to pass through our property. It will slash through and require bulldozing 200-year old stone walls, a maple sugar bush, a low and high blueberry bush, a rare lag gravel, vernal pools, wetlands, and an aquifer recharge area. As bedrock is close to or even on the surface, I question what effect blasting or other excavation techniques might have on our water well and aquifer, and have extreme concerns about the pipeline's construction and operation may have on our water supply.

The pipeline's approval would force us to sell through eminent domain, or forcibly cede, at least several acres and create an unnatural leveled strip separating our house from the main part of our property. The pipeline will pass through what is our backyard. The high-pressure gas pipeline will pass closely around our house on two sides. I would not feel safe or comfortable living fifty or one hundred feet from a 30" high-pressure fracked gas pipeline. It will also leave our c.1800 home and barns isolated on a small rump portion of what is a thirty-five acre parcel, cut off from and inaccessible to the larger portion. This strip, which will be owned by Kinder Morgan, will be a magnet for off-road vehicle mayhem running 24/7. I do not believe that they can ever successfully fence off or otherwise restrict this space.

The pipeline will reduce our property's value and destroy part of what we have worked for, saved, and accumulated. This amounts to an unfair taking of our property, and government overreach.

This pipeline is not about convenience or necessity, but an industry taking profit by forcing risk and cost onto individual private property owners, who will not be fairly compensated. This is wrong, and Un-american.

This project will override local control and opposition, and subject the people of Rensselaer County to potentially devastating health impacts, for a hydrofracked gas pipeline operated by a company with a poor safety record. It would degrade the unique Rensselaer Plateau.

Joyce Palmer-Fortune, Whately, MA.

Please reject the Northeast Energy Direct Pipeline proposed by Tennessee Gas Inc. I have 3 reasons.

First, as an electric rate payer I am appalled that I will be required to pay for this pipeline with a surcharge while the energy company gets risk free easy profits. Our government should be protecting us from this kind of profiteering.

Second, the with climate change a fact that very few dispute, we need to invest in non-carbon energy sources.

Third, our state's dept of energy resources finds that we can meet our needs with continued conservation and other measures to address peak demand. Energy storage technology has advanced quite nicely so that short periods of high demand can be easily accommodated at a much lower cost. This is the sort of cost that would rightly be born by the ratepayers, and even gladly paid by many of us for this purpose, rather than paying for more carbon energy infrastructure.

Thank you for reading all the way to the end.

Sincerely,

Joyce Palmer Fortune

Robert J Berube, Dracut, MA.

Docket # CP16-21-00

Dear Administrative Staff,

I am the property owner of 205 Wheeler Road. Parcel ID 38//41 Dracut Massachusetts . I am requesting to be an intervener of this project . I oppose this project as I will be in close proximity to a newly constructed 30 “ pipeline along with being close to a Meter Station and less than a half mile from a 23000 hp Compressor Station . This project will affect my property value and could adversely affect myself and families health due to noise and odor pollution. I feel that this project had not been looked into enough and should this be necessary other more rural locations should be considered Doing so will have less impact on neighborhoods and the many damaging effects a project like this could pose to the town of Dracut and its citizens, and the environment . Kinder Morgan changes its mind constantly as to where to put this or that with no regards to anything but their own interests. Please take careful thought before approving a project that has not been well thought out and seems to be rushed by Kinder Morgan . I do not think this project is even needed at this time . Let’s take our time and look into other sources of energy that are safer and less damaging to our environment that are out there.

Sincerely,

Robert J. Berube
205 Wheeler Road
Dracut , MA 01826
978 390-1242

20160114-5006

Jason Trovato, Dracut, MA.

This pipeline does not belong in Dracut. It is not needed and there are many health risks to our community. The proposal wants to build a compressor station within 2 miles of my home, and a metering station on Article 97 conservation land right in my neighborhood, which is shared ownership by myself and all my neighbors. Our children use this conservation land to play with their friends. There are hiking trails, biking trails, and open fields where they play baseball and football. To take this away to install a metering station will be a disgrace, not to mention the health risks that come along with it.

There have been many studies correlating illnesses among residents within close proximity to the compressor stations that like the one proposed to be constructed right in my town. Along with the noise and air pollution that go along with it, this is not needed and will be a great burden on the town of Dracut, and any other town that this pipeline goes through.

How do we tell our children the the land we own and that they play on all year long is to be replaced by a gas pipeline and industrial site that they must stay away from due to risk of them getting hurt or sick? It makes me sick just thinking about this after how much we spent to buy our dream home in an amazing neighborhood with so many children. The neighborhood we live in consists of 50+ homes, most with children under the age of 10, all at risk of losing a part of their neighborhood, and future risk of health problems.

Please find another place for this pipeline in a non-populated area, or eliminate it completely. There is no benefit to the Northeast as the gas from this proposed pipeline is to be sold and shipped overseas. This is not needed for the Northeast, and not needed for Dracut.

20160114-5008

Marianne Berube, Dracut, MA.

Dear Administrative staff,

I have very serious health and safety concerns with the proposed 30 in Pipeline along with a Meter Station that will be at the rear of my property and close to my private well. The fracking that will occur on the two sides of my property could affect my well water, this will be very close to my property line. I have no access to public water . I'm also very concerned about the noise and odors the Meter Station will produce . My husband and I raised 3 children in this rural farm land community and we have worked hard for the last 33 years to make for a nice home. My husband has questioned on numerous times as to why they would located this Meter Station so close to homes. It will be built in the middle of a 35 lot approved Subdivision that will be built in the near future , potential for many complaints . There are other locations that would make so much more sense at a much less cost to Kinder than to purchase 3 approved buildable lots at a top cost. This is if this location along with the contaminated site for the compressor Staion On Broadway Rd Dracut makes any sense at all. Has Kinder exhausted all other options ? This project will ruin everything we ever worked so hard for. It will virtually make ever selling our home impossible. It will compromise out healy and safety . None of this we deserve. We don't want to live next to this but will be forced too. Please help the citizens like us who this project will destroy should it be built as proposed . Other options are out there , they just need to be explored Thank you for any help FERC can provide.

Marianne Berube

20160114-5010

DeAnne S Riddle, Amherst, MA.

January 13, 2016

To: Kimberly Bose, Secretary, and Nathaniel Davis, Deputy Secretary
Federal Energy Regulatory Commission

From: DeAnne Riddle, intervenor

RE: North East Direct Pipeline, aka Kinder Morgan Pipeline

Dear Ms. Bose and Mr. Davis:

I have become an intervenor in the issue of Kinder Morgan's North East Direct proposed pipeline, because I, my children and my grandchildren will be seriously affected if the pipeline is built. The pipeline will cause the production of fracked gas from the Marcellus shale in Pennsylvania to increase, since it will enable gas to be piped to the coast for export. The burning of natural gas emits carbon into the atmosphere and natural gas itself is a very potent greenhouse gas.

My descendants will have to live with the effects of the increased extraction and burning of Marcellus shale gas, which include sea level rise, and warming stream and river temperatures. Sea level rise threatens low-lying coastal wet lands and beaches, and ultimately will cost us, as citizens of Massachusetts, a lot of money to try to hold back the sea and to deal with property damage, rising insurance costs and displaced populations.

It is time we switched as much as possible to renewable energy and conservation. Just as you enabled the building of the electric grid in the 1900s to bring a better standard of living to Americans, it is now time that you help us convert to sustainable energy to protect my standard of living for me and that of my children and grandchildren. Building a new pipeline will hurt us, not help.

Sincerely,

DeAnne Riddle

252 Strong Street

Amherst, MA 01002

riddlecd@comcast.net

20160114-5012

Denise Hodgdon, Dracut, MA.

Our residential neighborhood is full of young children with nothing but lives ahead of them, we do not want to put our children at jeopardy! You really need to reconsider this project into an area that has no lives that will be affected. Do you have a large gas pipe in your neighborhood that affect your children well if you don't then obviously we don't!

Individual	Deirdrechisholm@gmail.com	

Basis for Intervening:

I am a Dracut resident. Due to the large number of proposed facilities and the sheer scale of proposed construction and road closures, this project would have an enormous effect on our town.

I also have children that attend Dracut public schools, all of which are close to either the current or the alternate route for the NED pipeline.

Basis for Intervening:

I live in Merrimack, NH and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the con-

struction and/or operation of the pipeline, compressor station, or other facilities.

I am a member of the impacted community who has concerns about various impacts to the local economy/ environment & health.

I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

---------------------	--------------------------------	----------------------------------

Individual	billtruz@gmail.com	
------------	--------------------	--

Basis for Intervening:

I live in Stephentown New York and I want to intervene in this proceeding to oppose the NED pipeline.

I am a member of the community that will be impacted by the NED pipeline on numerous accounts.

I am a resident whose daily commute crosses over the proposed pipeline route which poses a physical risk during construction and afterwards.

My local community will be impacted adversely in terms of economics, environment, aesthetics and health as a direct result of the NED pipeline.

Kinder Morgan is known to be starving its pipeline routine maintenance by diverting funds to investors as reported by the Wall Street Journal on at least two occasions (Sept 19 2013; Sept. 27, 2013), which was described therein as "Wall Street Worries about Kinder Morgan's Safety Record: BC Pipeline slashes and defers maintenance spending." They have been cited by PHMSA numerous times for violating safety standards. (PHMSA letter of September 1,2009; (PHMSA letter of February 28,2011 ;August 2005 PHMSA cites 44 KM spills in 31 months, indicating "widespread failure to adequately detect and address the effects of outside force damage and corrosion.") These are only a few of numerous more accounts that could be cited.

I object to a company like this potentially having a harmful effect in my community based on leakage and rupture as well as likely harmful effects to water supplies in my area (due to aquifer interruption) including my own due to the extensive blasting that will need to take place in this very rocky vicinity.

In addition, I don't believe that Kinder Morgan has adequately proven the need for natural gas in our vicinity nor at the pipelines destination (in Dracut, Mass. area).

Based on careful examination of evidence, the AMA is calling for a comprehensive health impact assessment. It is known that regulatory agencies do not address Emission Spikes, Dynamic Evolution of Emissions, Downstream and Upstream Impacts--identified as weak points by the AMA. (See David Carpenter, M.D., Director, Institute for Health and the Environment, University at Albany.)

20160114-5020

Submission Description: (doc-less) Motion to Intervene of Robert Cook, JR under CP16-21-000.

I am a property owner. The pipeline route is several feet from my water well. I oppose this due to safety concerns and financial impact due to property value reduction.

Basis for Intervening:

I am a landowner directly impacted by the pipeline route, which is proposed to be within several feet of my well. I am concerned about safety, and the financial impact to me as a result in reduction in my property value. I oppose this pipeline.

20160114-5022

Submission Description: (doc-less) Motion to Intervene of brown williams under CP16-21-000.

Submission Date: 1/13/2016 6:55:48 PM Filed Date: 1/14/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	bfwilliams1@comcast.net	

Basis for Intervening:

I oppose the proposed pipeline as unnecessary, surprisingly laden with risk to land and life, a violation of principal in that it uses land set aside for wildness, and carrying a disproportionate gain to the few over the rights and interests of the many.

20160114-5025

{Motion to Intervene of Eileen Martin}

FERC wells

January 13, 2016

I am a homeowner in Richmond, Massachusetts.

We are a town dependent on private wells for our water and fear contamination from the gas pipelines that already exist in our town.

We live only two miles from a connection station in Richmond, and several years ago we experienced the frightening event of a 'blow-off' at that station. That was so significant that our volunteer fire department responded to the scene.

Our town is a rural and scenic place, away from industry. We have open farmlands and woodlands, places

to hike, swim, and enjoy the beauty of nature around us.

We raise dairy goats, honey bees, and keep a donkey, dogs, and cats.

We know that if a pipeline sustained a problem we are not able to evacuate.

We have nurtured an organic garden on our property for the past forty years. We honor our land and surroundings.

We are not in a financial position to sustain property devaluation as a result of a new pipeline, and could not abandon our home to move away from pipeline development.

We are elderly residents and would not be able to tolerate the contamination of our air and water.

The NED possibility is a serious threat to us.

Therefore, I ask the Commission to grant me permission to intervene in proceedings for the Northeast Energy Direct

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), We, R. JOAN UNGER, (aka Ruth Joan Unger Harmon) and JAMES B. HARMON, of Tewksbury, Middlesex County, Massachusetts, do file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

R. Joan Unger and James B. Harmon
160 Cardigan Road
Tewksbury, MA 01876
509-254-6000
Joanu2@verizon.net

II. INTEREST OF PETITIONERS

Construction, operation and maintenance of the Pipeline will directly and adversely impact us as follows:

1) Our home, as well as the other homes in our neighborhood, is in the direct path of Segment N, the Lynnfield Lateral. Our home is in a residential zone consisting of single family homes on 1-2 acre lots. Our house is located in Tewksbury while our backyard is located in Andover. Our property is shown as Lots MA LL 56.03 and MA LL 59.00 on sheet TEG_N-005 on the map named Segment N, Lynnfield Lateral, and on construction drawings LA-SEG_RES-06 and LA-SEG_RES- 07. Our back yard is a forested swamp and abuts other homes with forested lots shown on the map as located on Jordyn Lane and Brown Street, Andover. A portion of our property also abuts an undeveloped tract of land zoned as office park.

There is no utility corridor or power right of way near our property. As stated, our yard is a forested swamp with large, mature trees. The wetland in our yard is identified on the map as WPI-2776, as a result of an aerial viewing and not an actual survey. Our yard has numerous perennial streams running through it in multiple locations. Our land is in its natural, forested state, as are the abutting back yards of all of our neighbors, forming a wildlife corridor. It is midway between two major rivers and is part of a wildlife corridor which runs through several Article 97 parcels which are NHESP rare species habitats and at least one Biomap 2 core habitat. This area is a natural home, and breeding ground for a variety of wild life, including many birds, reptiles, amphibians, foxes, coyotes, rabbits and deer. It serves as a wildlife corridor as the animals and birds migrate between the Merrimack and Shawsheen Rivers, between our numerous certified wild life habitats, and as they otherwise travel north to south and back again throughout the state. This area has been preserved in its natural state because it is wetlands and supporting uplands habitats, both of which are recognized by Federal, State and Town law as important wildlife habitats and a source of contribution to plentiful, clean water. It also has historic, cultural and archeological significance, dating back to the 1600's. It is part of an area which was originally inhabited by the Pennacook and Wamesit Indians/ Native Americans.

The setting of our home is private, quiet and natural. Our neighborhood is one of natural beauty and balance which makes it a great place to live while it also encourages native species, specifically rare wildlife. This will all be permanently destroyed.

2) According to the plans, Tennessee Gas (TGP) intends to install a 24", 1460 psi pipeline in and across the entire width of our private back yard by clear cutting a swath behind our home in order to create temporary and permanent work easements. The swath will pass directly through valuable wetlands and will result in the elimination of hundreds of the mature trees which now protect our water tables, give our neighbors and us privacy and shade, and which provides a wildlife habitat that we deeply care about. According to the

maps, although the clear cut swath behind our home will be approximately 90 feet wide, the swath on abutting properties along this forested corridor will be as wide as 195 feet wide and will detrimentally impact the corridor.

3) The path as proposed will disrupt the numerous streams through our back yard and the other yards along the path. In our yard specifically, there is a natural stream that flows across the land behind and around our home. Although the maps to date fail to disclose this stream, this stream, plus any surface run off storm water by the nature of the topography, next continues on past our home to an even lower elevation to recharge the Certified Zone II Well Head protection area that our home borders, and Tewksbury Ground Water Protection Zone that our home sits in. The proposed path of the pipeline will traverse the stream on the perpendicular, and cut off/disrupt the flow of that natural stream.

4) Our back yard is an historic resource area: There are numerous historical New England fieldstone walls running down the entire length of the stretch of land between Cardigan Road, Tewksbury and Brown Street, Andover. These fieldstone walls are at least 200-400 years old.

There is at least one major historic wall, substantially still intact, which runs through our yard precisely where they intend to bury the pipe. We believe this specific wall was erected in colonial times, perhaps as an original border between Andover and what was then Billerica but which is now Tewksbury. This wall runs along the length of the width of our Property. It then continues on through all the back yards here, exactly where this Lynnfield Lateral is proposed to go. Because our land extends over both sides of the Tewksbury/Andover Town line, a major section of this stone wall exists, intact, at the edge of our yard, precisely where the maps show KM wants to dig to install the pipeline and maintain their permanent easement. These walls are recognized in Massachusetts as cultural, historical, archaeological, and geologically significant Landscape structures. These stone walls are unique to New England and without argument, have significant cultural, historical, geological and archaeological value. The proposed Lynnfield lateral will traverse them, run over them, run through them, and otherwise permanently destroy these significant historical and archaeological monuments, which are unique to New England. See also booklet published by MA DCR entitled, "Terra Firma, Putting Historic Landscape on Solid Ground" and "Stones that Speak".

6) Risk to Health and Safety -The permanent clear cut easement will be 50 feet wide. The finished pipeline will be about 180 feet from our home. This puts us (and our neighbors) well inside the "Blast" or "incineration zone". We will hear the high pressure gas being pumped through the line and the pigging when cleaning occurs. Our neighbors and I will lose our trees, our sound buffer, our privacy, our beautiful, natural views. All of the mature trees that give our neighborhood its character will be permanently eliminated. The wetlands will dry out. The wildlife habitat will be eliminated and we and our family will be deprived of the enjoyment of watching the animals that inhabit and travel through the corridor daily. After construction our view will consist of nothing more than an expanse of grass or invasive weeds upon which our trees would have been replaced by yellow posts clearly marked "Danger High Pressure Pipeline". That is all that will separate us from our neighbors on Jordyn Lane and Brown Street. Because of the need for ongoing inspections and maintenance, we will be permanently subjected to random intrusions and violations of our privacy by total strangers, as well as to risks associated with toxic herbicides. The path of the pipeline will deprive us of privacy, disturb and dry out wetlands and ground water, threaten our aquifers and well heads, and jeopardize our water supply.

7) During construction, we will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of privacy. Our neighborhood is well known to consist of ledge so substantial blasting would be inevitable. This blasting will endanger the structural integrity of our home, of the other homes in our neighborhood, and adversely impact our health and sanity, as well as our use and enjoyment of our property. It will diminish the quality of our life and will unconscionably disrupt the wildlife.

8) Furthermore, according to the plans, TGP intends to clear cut and cross Kendall Road at Bellevue, the only main road between our home and route 133, as well between our home and the highways. This makes commuting to and from our home almost impossible. There are no reasonable alternate routes for us to

travel to destinations in that direction. This creates a great expense and inconvenience for us and other homeowners as well as puts us at great risk should we need first responders in the event of an emergency. We will be greatly inconvenienced and endangered.

6) We are customers and rate payers. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Massachusetts has an LNG facility in Everett that has been sitting unused. The Attorney General's independent study has established that there is no need for this additional NED infrastructure. This pipeline is not necessary at all to service New England. This Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience. By this time it has become quite clear that the true purpose of this oversized pipeline is to transport fossil fuels to Canadian and US coastal areas for liquefaction and ultimate sale and export to foreign markets, all at the expense of US rate payers and private property owners. Massachusetts does not need this new pipeline infrastructure. It should not be expected to pay for it.

7) We are senior citizens and this home is our only major asset. I depend on the equity here to survive. The value of our property will be diminished by this pipeline path. In fact, the resale value of our property has already been diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive us of our retirement funds.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, R. Joan Unger and James B. Harmon, respectfully request that the Commission grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Respectfully submitted this 13th day of January, 2016.

R. Joan Unger and James B. Harmon
150 Cardigan Road
Tewksbury, MA 01876

Submission Description: (doc-less) Motion to Intervene of leni fried under CP16-21-000.

Leni Fried is against the pipeline.

Submission Date: 1/13/2016 7:35:18 PM

Filed Date: 1/14/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
leni fried	leni@titaniumarts.com	

Basis for Intervening:

1) I am a member of an impacted community, and have concerns as to the negative effects the proposed pipeline will have on the local economy, environment, aesthetics, property values, and the health of the community. I own property that I purchased for its pristine beauty; I fear the pipeline will cause permanent scarring and contamination in the mediate vicinity of the property, resulting in a decrease in the value of my property and the enjoyment I derive from it.

2) I am a ratepayer to Eversource, whose rates have already increased because of this project and will increase again to cover cost recovery if Kinder Morgan secures them as a Pipeline customer. I understand that western Massachusetts already has among the highest electrical rates in the country. The proposed pipeline will impose an even greater burden on consumers, including myself, if built. I also think we should be going

in the direction of renewable energy.

3) I donate to land conservation organizations in the area whose properties adjoin the proposed Pipeline. My donations would be violated if this project is permitted to take easements over land protected in perpetuity. Moreover, once conservation land is spoiled, it cannot be replaced and the wildlife living on it will be adversely affected.

4) For the reasons stated above, I believe I will be irreparably harmed if the proposed pipeline is constructed. Accordingly, I oppose the approval and construction of the proposed pipeline and ask that the FERC deny and prevent its construction.

Basis for Intervening:

I am requesting intervenor status opposing the Kinder Morgan/Tennessee Gas Pipeline/Northeast Energy Direct (NED) project. I am a homeowner in New Ipswich New Hampshire. I am concerned with the possible adverse long-term effects to the health of my children.

20160114-5034

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street, NE
Washington, DC 20426

RE: Tennessee Gas Pipeline Company, previously Docket #PF14-22-00 and currently Docket #PF16-21-000, Northeast Energy Direct Project

Dear Secretary Bose,

This letter is being written as **a motion to intervene** on the Northeast Energy Direct project proposed to go through my town of Ashfield Massachusetts. I have been opposed to this project from the moment I heard about it in February of 2014. As a resident and landowner in Ashfield, (though I am not directly impacted, as it does not run through my property) I am impacted because it directly impacts many of my fellow residents, my town overall on a number of levels, and several others along its proposed path; impact of a community is significant, we are all in this together.

Imagine in your mind's eye:

a community of about 1800 individuals nestled in the hills of western Massachusetts, incorporated in 1765 and still containing many of the dwellings from that time. There is a lake at the center. This lake, and the surrounding park, provide many recreational opportunities including tennis, swimming, fishing, kayaking, canoeing, and in the winter, skating and ice fishing. There is a restaurant on the lake, several private residences, and a town beach. At the center of town you will find the town common. On every Saturday from May to October this common provides the setting for a farmer's market at which you are able to purchase locally grown vegetables and fruit, locally raised meats and eggs, locally made cheeses, yogurt, syrup and Turkish food. There is music, there are children playing and dancing, there is conversation. A local bread maker will be seen bicycling by on her way to deliver the bread she has made and carries in her baskets to the restaurant and convenience store down the street. In the fall this town common (along with the town

hall) will be the center of a two day fall festival, a massive undertaking by innumerable volunteers that not only provides entertainment and good food, but a place that brings folks together to celebrate who we are and what we offer, which is considerable given the gifted artists in this community. It's also a major fundraiser for college scholarships to assist our young people in pursuing their dreams. Next to this town common you will find the fire station, staffed entirely by volunteers, and next to that, the town hall which houses our police department, town offices and is the setting for the annual town meeting, a uniquely New England style of democracy in action. A community potluck is held in the town hall on New Years day to bring in the New Year.

In June of 2014 a special town meeting was held in this town hall to vote on a resolution to oppose the Northeast Direct (NED) pipeline, a proposal that will impact virtually every Ashfield citizen on some level. The town hall was filled to capacity, standing room only. **The resolution to oppose this pipeline passed unanimously, the citizens of Ashfield proclaiming a resounding NO to the pipeline.**

1949 Aldo Leopold wrote The Sand County Almanac, a beautifully written book on the importance of our responsibility as stewards of our natural resources. In this book he states, "A thing is right when it tends to preserve the integrity, stability, and beauty of the biotic community. It is wrong when it tends otherwise."

A pipeline is wrong. There is nothing, nothing whatsoever about this project that will serve to preserve the integrity, stability and beauty of this community we call Ashfield, a community that sustains itself through the preservation of the very resources this pipeline will certainly compromise, if not outright destroy.

My reasons for requesting intervention status are as follows:

- 1) **Extensive blasting** all along the ridge that runs above our lake will potentially create bedrock fractures leading to contamination of any aquifers, wetlands, rivers, and our lake. Everything runs downhill from there.
- 2) **Water supplies**; The proposed route will pass very near our town water supply and a number of private wells, compromising water supplies.
- 3) **Soil contamination, disturbance, and instability**; will take place at virtually every single place construction goes on.
- 4) **Destruction of wildlife habitats**: thousands of trees and plants will be destroyed along with the habitats they provide for wildlife.
- 5) **Loss of property value and thus tax revenue**; we have already had one individual on the proposed route whose home has become unsellable because of the mere possibility that a pipeline will go through the property.
- 6) **Loss of homeowners insurance**; a pipeline is considered a significant hazard.
- 7) **Public safety**. We are a town of 1800 people. Our fire department and emergency responders are volunteers and I am fairly certain they are not equipped to deal with the magnitude of an explosion from a pipeline this size, or other possible emergencies that may result.
- 8) **Construction traffic and its consequent wear and tear on our roads**; the sheer number and size of construction vehicles required for this project will debilitate our roads.
- 9) **Co-location with power lines**; electric current generates heat. Do we really want a gas pipeline co-located with high-tension wires?
- 11) **Health concerns**. Pollutants, everywhere, from the emissions of construction vehicles, pipe coatings, pigging stations...and what of what of the source of this gas? This is fracked gas from the Marcellus Shale. A new study published in Toxicology and Applied Pharmacology titled, "Malignant human cell transformation of Marcellus Shale gas Drilling flow back water", is the first study of its kind to confirm widely held suspicions concerning the carcinogenicity of fracking pollution. The study concluded:
Our work has provided the first line of evidence that Marcellus Shale flow back water induces malignant cell transfor-

mation in vitro. In other words fracking wastewater is capable of producing cancer in mammals.

The implications of the data presented above are truly harrowing. Pennsylvania, alone, has over 7,700 active wells in use at present. Over 4,000 violations have been reported, and over 6 million in fines paid out thus far. The operation of these Pennsylvania wells require about 42 billion gallons of water, and according to the figures above, would together produce between 1.4 and 6 billion gallons of flow back wastewater.

There is no NED pipeline without this gas from the Marcellus Shale. I will not be party to poisoning the folks in Pennsylvania because of some fabricated need for natural gas in New England. Nor should you. I don't think Kinder Morgan much cares as long as they make their money, which makes them culpable...and perhaps could make you too as well if you approve this project.

12) **Incomplete filings and inaccurate filings:** that the FERC has been required to continually request follow-up data in response to questions suggests virtually every filing Kinder Morgan (KM-Tennessee Gas) has done to date has been incomplete; vague, imprecise and incomplete plans require FERC to speculate about compliance, which is not acceptable. At what point does it become clear that KM has not been, and may well be unable to be, forthcoming in their application? Given the fact that 60% of the landowners impacted by this proposal have refused survey access, how could a thorough and comprehensive environmental impact statement ever be done? I read in a filing from NEES (New England Energy Solutions) that in one instance KM used data from 1969. (Resource Report #3 on fish and wildlife) Wow. How can that possibly be acceptable? Here are two of many other examples:

STATE OF NEW HAMPSHIRE
DEPARTMENT of RESOURCES and ECONOMIC DEVELOPMENT
DIVISION of PARKS and RECREATION
172 Pembroke Road Concord,

It is our understanding that Kinder Morgan has submitted their application to the Federal Energy Regulatory Commission for the NED proposal, and that they used the NH GRANIT GIS data set as their resource for identifying conservation land and public properties. You should be aware that the LWCF data within NH GRANIT is not complete, and therefore unreliable in identifying the location of 6(f) properties.

20151123-5013 FERC PDF (Unofficial) 11/21/2015 12:47:04 PM Kaela Law, Pelham, NH. During a conservation commission meeting in Pelham on 11/18/15 Kinder Morgan company reps mentioned that their November 20 filing would NOT be complete and that "a subsequent April filing" would be more complete. Can somebody from F.E.R.C please explain what that particular Kinder Morgan Tennessee Gas Pipeline rep was talking about? Is there going to be a subsequent April filing? We were under the assumption that if and when Kinder Morgan was prepared to file for a Certificate of Public Convenience and Necessity they must do so with a complete project plan. If they are telling us already their November 20 filing is NOT complete, wouldn't the F.E.R.C's decision to deny this application be an easy one?

Let me repeat: vague, imprecise and incomplete plans require FERC to speculate about compliance, which is not acceptable. IT IS NOT ACCAPTABLE.

14) **Kinder Morgan's questionable financial status;** Kinder Morgan's finances are in disarray. They have a 4.1 billion dollar long-term debt right now. Their stock has lost 65% of its value this year. Are we one of the projects they are desperately hoping will bring solvency to their company? Not our need, or in our public interest.

15) **Need, Public interest:** whose "need" are we talking about here? Whose "public interest"? There doesn't, in fact, appear to be an adequate and consistent definition of "public interest" on the part of the Department of Energy. On February 9, 2015, the Industrial Energy Consumers of America (IECA) filed a motion to intervene, suspend, and protest Pieridae Energy's application for long-term authorization to export 292 billion cubic feet per year of domestic natural gas as liquefied natural gas. (FE Docket No. 14-179-LNG). In this motion, IECA states that "The definition of "public interest" is at the core of this entire discussion. Yet, we cannot find where the DOE (Department of Energy) has articulated any such definition. More concerning is that the Government Accountability Office (GAO) reached the same conclusion in its September 2014 report. The GAO finds that neither the Natural Gas Act, nor the DOE, has defined

public interest. “ Furthermore, the recent extensive study put out by Massachusetts Attorney General Maura Healey concluded the “need” could be met through “energy efficiency and demand response” and that this “would result in the greatest customer savings and would reduce GHG (green house gas) emissions.” The project is also contrary to the Massachusetts Global Warming Solutions Act, which makes it incompatible with our state’s energy goals. This project is also undersubscribed as far as contacts are concerned, a basic requirement to prove need.

This is my town, my community, a place that is the embodiment of all that I value and care about. We are doing it right here; living as sustainably as we can, caring for and about each other on a daily basis. I ask that you deny this application for the NED project, this pipeline, through what is good and right about how we should live on this planet. I cannot stress enough that you will destroy everything that we have strived to avoid by allowing this project to go through...the further destruction of our very life resources.

Earlier in a comment phase of this project I stated that I wish for this to be your legacy: You paved the way for a new course and stopped the destruction.

I reiterate that wish.

Sincerely, truly sincerely,

Jane M Shaney

20160114-5038

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
Northeast Energy Direct Project)	

MOTION TO INTERVENE OF POLLY RYAN

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“FERC”) promulgated at 18 C.F.R. § 385.212 and 385.214, respectively, Polly Ryan hereby respectively moves to intervene in the above captioned proceeding.

POSITION ON THE NED PROJECT

I protest the Commission’s acceptance of an incomplete application.The Commission issued an information request to the Applicant the day after accepting the NED application noting, among other things, that the Company “did not fully provide adequate data for alternative comparisons” in its Application, as required by the Minimum Filing Requirements (“Minimum Filing Requirements”) under 18 C.F.R. 380, Appendix A and 18 C.F.R. 380.12(1)(2)(ii). This, and other violations of the Minimum Filing Requirements previously noted on this docket, should have barred the Commission from accepting the Application. As such, this proceeding should properly be terminated, and the intervention deadline should be voided.

If these proceeding move forward, I am opposed to the NED project as it is little to no public convenience or necessity whereas there is great potential for private corporate gain. Our Attorney General, Maura Healy, recently released a study that evaluated options to address regional electricity reliability in New England, including natural gas capacity needs through 2030. It is entitled Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas and was published on November 18, 2015 by the Analysis Group, Inc. One of the Study’s findings was that “under the status quo, the reliability of New England’s power system can and will be maintained over time, including during periods of peak winter demand, without adding any new interstate natural gas pipeline capacity to service the New England region”. Based on this finding and other published studies I support a “no build, no need” alternative. I advocate for increased reliance on renewables which is a better solution in minimizing carbon emissions and our global warming crisis.

Presently the Applicant has only contracted about .55 Bcf/d along the Market Path and the board of directors

of TGP's parent company, KinderMorgan, Inc., has not authorized the capital for the Supply Path. Should the Commission choose not to consider the "no build, no need" alternative, many less impactful and less costly alternatives have been suggested that would accommodate the present subscribed capacity on the Market Path. One of which is to modify the existing 200 line. Another is to simply evaluate the cumulative impacts of all gas infrastructure projects under consideration at FERC and already permitted by FERC for the New England region in justifying the need for any one given project like NED.

INTEREST IN THE NED PROJECT

I am a directly impacted Landowner and as such have interests related to;

- **Health and safety**—I am situated downwind of the proposed Windsor, MA compressor station and will be impacted by noise, light and air pollution.

The lowest quality grade pipe (class 1) will be utilized in our region where our climate experiences severe frost heaves inevitably causing loose rock movement. This increases the potential for pipe damage and explosion risk. I am in the "High Consequence Area" according to the study prepared for Gas Research Institute in 2000 by Mark J. Stephens and my house will be instantly incinerated should an accident happen.

The pipeline is proposed to be situated 5 feet outside the electric utility easement on my property and engineers in the gas industry have advised me that pipelines should be situated at least 1000' feet from high tension wire for safety purposes. These engineers common sense justification is that sparks and gas leaks are not a safe mix." According to the Forensic Appraisal Group, Ltd. "the US DOT Pipeline Safety rules requires a gas company to report an accident only if there is a loss of life, severe injury to a person, or \$50,000 of property damage. And these accidents are "self" reported. There is evidence of leaks going unreported and off the radar to the public exposure due to these reporting guidelines."

My well is fed by the head waters of the Westfield River Watershed on Deerfield Hill in Plainfield, MA, on which extensive blasting is required during the NED installation. Explosives contain known perchlorate products that contaminate water. In addition the stress waves that propagate out of blast holes and cause radial fracturing of rock must be less than 2 milliseconds per foot once they reach the vicinity of any well. Otherwise, water contamination from hazardous materials or turbidity are a risk. My well currently pumps 26 gallons per minute. What assurance does TPG offer homeowners that their well recovery rates will remain the same after blasting and pipeline construction and what remediation methods are proposed for any affected wells?

I also grow organic vegetables for my personal food consumption and potential contaminants from infrastructure leakage to the air and water tributaries compromises the future viability of an organic (let alone safe to eat) production.

- **Depreciated property value** – Studies indicate a minimum 2.0 and up to 30 % depreciated property values where pipelines already exist across the US. In addition resale potential is diminished in some cases. Some mortgage companies prohibit liens on properties that contain explosive material (Fannie Mae). Properties in proximity to compressor stations on the NED route have already been informed that their entire mortgage will get called in the day this project is put into service and they will no longer qualify for homeowner's insurance.
- **Diminished future business income** – I plan to start a Bed and Breakfast business in my retirement which will be impacted during the construction of NED and while NED is in service. The potential exists for diminished financial returns and increased liability insurance.
- **Diminished utilization of my land** – One tenth of my property will be rendered unbuildable in addition to having limited growing capacity on it.
- **Increase liability and possible increased house insurance costs.**

- **Inequitable easement contracts** –No one has directly contacted me and proposed any terms or settlement for an easement. Standard compensation for easements outlined by some gas companies is \$1 per inch of pipe diameter...in the NED case 30in.x \$1 multiplied by the number of feet the pipeline crosses a property. In my case this is 30 x 50 = \$1,500. This level of compensation is inequitable in comparison to the adverse impact of this project on my property.
- **Loss of valuable trees and prime agricultural land** –I planted over thirty valuable ornamental trees on my property that have increased significantly in their value since they were originally planted 30 years ago. Many of these trees as well as a stand of pines over 150 years old will be directly impacted by this project. In addition, I bought my property specifically because of the 2 feet of “black gold” (top soil) that has been generated from this property having been a hay pasture for a century and a half. No amount of compensation or mitigation can replace what I value most about my property, the soil, trees, clean air and water.
- **Eminent domain will have to be exercised**

I am a land conservation advocate and as such have interests related to;

- **Preservation of rare and endangered** –27 percent of the NED project crosses conserved lands. In addition, wetlands, rivers, streams, forests and prime farm land are traversed. Many of the impacted properties on the preferred route are documented by the Massachusetts Natural Heritage & Endangered Species Program as habitats for rare and endangered species. American bald eagles have been spotted in my town of Plainfield. It has not been determined whether they are nesting in the NED project area or discussed in the NED application. Several neighbors of mine on the currently proposed route have vernal pools on their properties which could also contain endangered species. None of these vernal pools have been documented in the NED application.
- **Mitigating the spread of invasive species**–It has been well documented that cleared landscapes are prime targets for the infiltration of invasive species.
- **Massachusetts constitutional protected Article 97 lands**–It is the policy of EOEA and its agencies to protect, preserve and enhance all open space areas covered by Article 97 of the Article of Amendment to the Constitution of the Commonwealth of Massachusetts. Accordingly, as a general rule, EOEA and its agencies shall not sell, transfer, lease, relinquish, release, alienate, or change the control or use of any right or interest of the Commonwealth in and to Article 97 land. The goal of this policy is to ensure no net loss of Article 97 lands under the ownership and control of the Commonwealth and its political subdivisions.

How will the Tennessee Gas mitigate the goal of this constitutional policy and “ensure no net loss of Article 97 lands under the ownership and control of the Commonwealth and its political subdivisions”? How will the Tennessee Gas ensure the acquired land provided to mitigate this loss is the same quality of land presently under the Article 97 restrictions?

I am a utility rate payer and as such have interests related to;

- **Utility Costs** –Our region does not utilize natural gas and has no direct benefit from the NED project. However I am an electric utility customer and natural gas prices are reflected in electric generation costs and then passed onto their customers. Many studies have advocated that the price of natural gas will increase should the under-utilized capacity of the NED project remain under-utilized or the gas be contracted to an overseas market. Since Tennessee Gas and Kinder Morgan are advertising lower utility rates as the primary benefit and justification of this project, how does FERC plan to assure that remains the benefit of this project in years to come? What recourse do utility rate payers have when the FERCs’ justification for a certificate of convenience and necessity no longer applies for this project?
- **Imposed tariffs to cover costs of building the NED pipeline** –I am an Eversource customer and am anticipating an imposed tariff on my utility bill to cover the cost of building this pipeline. How does

this translate to reduced utility costs which, again, is the primary justification for the project?

Basis for Intervening:

I live in Pelham, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because:

- I am a directly impacted landowner with site-specific concerns that is in close proximity of the pipeline.
- I am a resident whose watershed is crossed by the proposed route and could have my drinking water supply impacted by construction and/or operation.
- I am a member of an impacted community concerns about various impacts to local economy/environment/aesthetics/health

Basis for Intervening:

I vehemently oppose the expansion of non-renewable fossil fuel infrastructure in our region, especially within the town of Conway, MA where I was born, raised, and currently farm. The potential health hazards to the region from the construction of such a Natural Gas pipeline far outweigh any perceived benefit to the local or even state-wide economy. It would be utterly irresponsible for FERC to approve such a project as the proposed NED pipeline, when overwhelmingly the majority of the constituency of the state (and even the region) have made their opposition to the project crystal clear.

As such, I feel it is my personal responsibility to file for Intervenor status, to stay up to date with the project's progress, and to do whatever I can to make sure the voices of the majority are heeded properly over the voices of the wealthy few.

Thank you for your time.

Sincerely,

Jason Silverman

Basis for Intervening:

I am notifying you of my strong opposition and serious concern about the proposed Kinder Morgan Northeast Energy Direct Project.

As an electric ratepayer of Eversource in Westhampton, MA, I strongly oppose this pipeline because of the expected increase on my bill directly relating to the cost of building and maintaining this pipeline. According to the DPU of MA, electric distribution companies may contract for natural gas capacity to fuel power generation, and pass the cost on to consumers.

A recent study that was commissioned by the MA Attorney General, Maura Healey found: "Attorney General Maura Healey today announced that a study commissioned by her office has determined that the region is unlikely to face electric reliability issues in the next 15 years and additional energy needs can be met more cheaply and cleanly through energy efficiency and demand response." This quote is the first paragraph of her press release, which was released November 18, 2015. She goes on to say: "we do not need increased gas capacity to meet electric reliability needs, and that electric ratepayers shouldn't foot the bill for additional pipelines". Electrical rate payers should not be paying for a pipeline that is not needed, and especially, not for a pipeline that could carry natural gas to export facilities.

In addition, as a visitor to the many protected conservation lands on which the pipeline is projected to be built, I object to the use of herbicides around the pipeline course. Round Up was declared a carcinogen by WHO last year after years of study and other herbicides that could be used pose the same danger. My sincere enjoyment of hiking and visiting these "conservation" lands will be greatly diminished and I probably would not be using them if the pipeline were built (I already am a cancer and brain aneurysm survivor). I use the word "conservation" as a ridicule that conservation land could now be used to line the pockets of Kinder Morgan, their investors, and our electric/gas companies while polluting not only Massachusetts, New York, and New Hampshire, but the state of PA from the fracking wells that are leaking and contaminating their state and their residents.

Thanking you in advance for your consideration in not allowing this dangerous pipeline to be built.

20160114-5043

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

**MOTION TO INTERVENE OF
THE PLAINFIELD OPPOSITION TO THE PIPELINE GROUP**

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“FERC”) promulgated at 18 C.F.R. § 385.212 and 385.214, respectively, the Plainfield Opposition to the Pipeline group (POP) hereby respectfully moves to intervene in the above captioned proceeding.

POSITION ON THE NED PROJECT

The POP group is opposed to the Northeast Energy Direct (NED) project. Our position is that there is no real need for the project as substantiated by Our Attorney General’s, Maura Healey, study entitled Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas and was published on November 18, 2015 by the Analysis Group, Inc. Our view holds that the real purpose for this project is reflected in Kinder Morgan’s objective to profit from gas sold overseas. This objective does not justify a Certificate of Public Convenience and Necessity for when it is actualized American citizens will not benefit from the project.

INTEREST IN THE NED PROJECT

The POP group consists of 78 Plainfield and Cummington residents. The members include directly impacted landowners, abutters to directly impacted landowners, utility customers, tax payers, business owners, farmers, conservationists, naturalists, and citizens of the Commonwealth of Massachusetts. Our interest in this project are as vast and varied as its members.

As citizens of the Commonwealth of Massachusetts these interests include;

- Article 97 conserved lands – We actively support our State Constitutional Amendment in preserving and maintaining conserved lands. The NED directly and adversely impacts this objective.
- The Massachusetts Global Warming Solutions Act – We enacted legislation in August of 2008, for reducing heat-trapping emissions to levels that scientists believe give us a decent chance of avoiding the worst effects of global warming. It requires reductions from all sectors of the economy to reach a target of a 25% reduction of Greenhouse Gas (GHG) emissions by 2020 and an 80% reduction by 2050. The NED project directly and adversely impacts these goals.
- Plainfield’s Historic District – A proposal was submitted to the Massachusetts Historical Commission last year for a Nationally Registered Historic District in the center of our town and we have recently been notified that the proposal was approved. NED construction will directly impact this area as a contractor yard is proposed to border this district. <http://www.sec.state.ma.us/mhc/mhcupdf/press-releases/Plainfield-Center-Historic-District-National-Register-8-May-15.pdf> <https://drive.google.com/file/d/0Bxwb2AXze7dwX1ILVktfN3V0VjA/view>
- Health and Safety – Plainfield is a neighbor to the Town of Windsor and situated 4 to 10 miles downwind of the site proposed for a compressor station. We are concerned about noise, light and air pollution impacts. In addition, sites for a pump station and a contractor yard are proposed less than half a mile from our Village Center. Emissions and contaminants from this infrastructure resulting from their construction and once the pipeline is in service will detrimentally affect our most populated section of town.
- Blasting – a great deal of the proposed NED route through our community is on solid ledge requiring blasting during construction to submerge the pipe. We have concerns related to water contamination from perchlorate compounds in blasting materials. In addition the stress waves that propagate out of blast holes which cause radial fracturing of rock can lead to well damage and water contamination.

The proposed pipeline path is situated near a hazardous waste disposal area in Plainfield. Blasting near this area could result in movement of these hazardous materials through our ground water and then contaminate wells. Blasting in proximity of wells also raises the risk of water turbidity. Wells have measurable recovery rates that may also be negatively impacted from blasting. What assurance does TPG offer homeowners that their wells will not be contaminated and recovery rates will remain the same after blasting? And, what remediation methods are proposed for any affected wells?

- Water contamination from construction techniques – Plainfield has some of the highest elevations found in the State of Massachusetts. As a result we are the head waters to important tributaries that feed the Wild and Scenic Westfield River. Any diversion of these headwaters will negatively impact this river, abutting habitats and the wildlife it supports. <http://westfieldriverwildscenic.org/>

In addition, all of Plainfield's residents own private drinking wells and they are fed by these headwater tributaries. Diversion of their water flow may impact well recovery rates.

As naturalist and conservationist these interests include;

- Continued preservation of conserved land – In Plainfield, the Tennessee Gas preferred route crosses land conserved that is held by the Audubon Society, Department of Fish and Game and Department of Agricultural Resources. Much of this land was donated by Plainfield residents with the intention that these areas remain natural habitats for wildlife and undeveloped. In addition, the route crosses State Forests. All this aforementioned land contains wetlands, stream, vernal pools, and State protected species. Many of which are not documented in the NED application.

As farmer and business owners these interests include;

- Continued viability of our livelihoods – Plainfield is a Right to Farm community. It is why people choose to live in our community. Most of these farms follow organic practices. Air and water contamination as well as soil compaction resulting from the NED project will be detrimental to their livelihoods.
- A 300 acre parcel of farmland on which there is a State Agricultural Preservation Restriction is proposed for a contractor yard in our Village Center- The owners of this property placed this restriction on their farm with the expectation it would keep this land permitted forever for only agricultural use. It holds some of the most prized farmland soil in all of the County. We protest the use of this land for this purpose in the NED project. No amount of mitigation by Tennessee Gas can preserve this soils' original quality. Should a Certificate get issued an alternative must be in place. This site also borders our National Historic District which could suffer greatly from perpetual, heavy machinery, construction traffic.
- Many of our residents have home businesses likely to be impacted during the NED construction period and possibly while in service.

As utility customers these interests include;

- Utility Costs - Our region does not utilize natural gas and has no direct benefit from the NED project. However, we are all electric utility customers and natural gas prices are reflected in electric generation costs and then passed onto their customers. Many studies have advocated that the price of natural gas will increase should the under-utilized capacity of the NED project remain under-utilized or excess gas is contracted to an overseas market. Tennessee Gas and Kinder Morgan are advertising lower utility rates as the primary benefit and justification for this project. FERC needs to assure this justification remains the benefit in years to come should a Certificate of Convenience and Necessity be granted.
- Imposed tariffs to cover costs of building the NED pipeline – We are all electric utility customers and anticipating an imposed tariff on our utility bills to cover the cost of building this pipeline. We protest paying for infrastructure that benefits only private corporate gain.

As tax payers these interests include;

- Our past and future tax dollars have and will continue to uphold aforementioned State programs which the NED project compromises.

As directly impacted landowners and abutters to directly impacted landowners these interests include;

- Adverse direct impacts on properties resulting from NED construction and while the project is in service – Specific and individual property issues are not currently addressed in the application. These must be assessed and mitigated in the EIS before a Certificate of Necessity is granted.

January 13th, 2016

20160114-5044

UNITED STATES OF AMERICA
BEFORE THE

FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we , Debbie and Mike Bernard , file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Debbie and Mike Bernard,
10 Cart Path Road, Dracut, MA 01826
978-793-3234/603-401-1109
debberna@cisco.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me and the town we live in. Reasons of concerns are as follows:

- Compressor station air and noise pollution within a mile from our homes
- Brox blasting and public safety with pipelines in our area • Metering stations in our neighbor’s backyards (right down the street)
- Loss of property value
- Tariffs forced on regional ratepayers to cover the costs of the pipeline
- Added noise and damaged lands and roads from construction around our town

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 13th day of January, 2016.

Debbie and Mike Bernard
10 Cart Path Road, Dracut, MA 01826
978-793-3234/603-401-1109
debberna@cisco.com

Individual	ford8n1952@aol.com	

Basis for Intervening:

I live two miles from compression station and pipeline that is being proposed by Kinder Morgan for construction in the Town of Nassau, NY. I am a member of the impacted community and am concerned that construction of this project would negatively impact on the woodlands and farmlands that it will be built on, with disruption of wildlife and plant life, and the streams and wetlands over/under which it would cross. The health of people living near the compression station would be at risk in the event of accidents and leaks as well as the routine maintenance involving the release of noxious gases through "blow downs". I am opposed to this project.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	simplegiftsfarm@gmail.com	

Basis for Intervening:

I am a Western Massachusetts resident and the owner of an organic vegetable farm. This project will cause a major disruption to many farms and a great deal of forest land, much of which is protected. Furthermore, the project is unnecessary since much of the gas is slated to be exported to Europe. My farm has seen many negative impacts from the early effects of global warming; it is imperative that we take steps to limit, not increase, the production and burning of fossil fuels. Please deny the permit for this project.

20160114-5048

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, a subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline Project(NED)

**MOTION TO INTERVENE OF ESTHER A. COLER
IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, I file this Motion to Intervene in the above-captioned proceeding. I oppose the project because of natural resource, infrastructure and economic impacts and seek party status to protest the proposed pipeline, and fully protect my personal interests and those of my children.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

I live in Ashfield, Massachusetts, one of the towns on the proposed pipeline route. I have lived in this town most of my life. The pipeline would pass through environmentally sensitive areas, residential neighborhoods, and aquifer recharge areas associated with public drinking water. This proposed pipeline along with its transport of irresponsibly extracted hydro-fracked gas from the Marcellus Shale deposits of Pennsylvania is an affront to all that I believe in.

B. Description of Impacts

I will be impacted and harmed by the proposed project in the following ways:

- a. The pipeline will devalue my house and property. I live on Main Street and it will be near impossible to sell my house once the pipeline runs through Ashfield. Traffic will increase, there will be more big trucks going by our home, and experience has proven that no one will want to buy a home in a town with a dangerous pipeline running through it.
- b. Fracking is deadly and dangerous to our health. The act of fracking adds many unsafe to consume chemicals to our ground drinking water. It also destroys the natural geology. I do not support fracking and I do not support a pipeline carrying fracked gas through my town where I live with my children.
- c. Pipelines are dangerous. They often leak gases, and the compressor stations are not fool proof.

C. No Need for the Pipeline

The impacts described are problematic generally, but entirely unacceptable given that TGP has failed to demonstrate a need for the pipeline. In the three years TGP has offered open contract seasons to local gas distribution companies, their interest is only .55 bcf/day. Even after downsizing NED from 2.2 bcf/day capacity to 1.3 bcf/day, these contracts cover less than 40 percent of capacity. A recently-released assessment of New England's electrical needs by the Massachusetts Attorney General's office demonstrated that the electric sector does not need NED or other major new gas pipelines: <http://www.mass.gov/ago/doing-business-in-massachusetts/energy-and-utilities/regional-electric-reliability-options-study.html>. I request that FERC adopt this study's findings and recommendations in evaluating the question of domestic need for the NED pipeline.

II. CONTACT INFORMATION

The following should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Esther Coler
Address: 243 Main St., Ashfield MA 01330
Phone: 413 628 3253 Email: esthercoler@gmail.com

20160114-5049

Submission Description: (doc-less) Motion to Intervene of Laurie Boosahda under CP16-21-000.

As an abutter, I have an interest which may be directly affected by the outcome of the proceeding, because I am a landowner directly impacted by the pipeline route. My home is within 300-400' of the proposed route of the pipeline. My home is well within the "blast radius." I moved to Pelham 24 years ago in order to enjoy its rural nature, not to live in an "incineration zone." This risk is excessive given that the fuel to be carried by this pipeline is not for the benefit of Pelham or even New Hampshire. It is en route from Pennsylvania to Dracut, Massachusetts (both locations being south of New Hampshire), and it is unreasonable for the residents of Pelham, and all of Southern New Hampshire to bear the risks and costs of this pipeline. The proposed pipeline runs directly in front of my house on a site that currently contains 3 sets of power lines. A fourth has already been approved and is set for construction during the same timeframe as this pipeline, and yet it seems there is no coordination between Kinder Morgan and the electric utility for the new power line. There are many unanswered questions about both projects individually, and how they will be coordinated together, and the safety thereof. ...Yet, the pipeline proposal is being rushed forward with Kinder Morgan giving only lip service to addressing the questions and concerns of Southern New Hampshire residents.

Pelham, New Hampshire is dissected by this pipeline route from the northeast corner to the southeast corner, and many homes are impacted. I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. As a community, Pelham has concerns about various impacts to the environment, conservation lands, and health and safety of its citizens.

Further, I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery. If I am to bear increased costs for a commercial enterprise to increase energy infrastructure, then it should be for fuel that will benefit this area, and from renewable resources that are safer for the environment.

I am also very concerned about reduced property values and the effect this would have on local tax bases, beyond any compensation offered by the pipeline company. As an abutter, I would receive no compensation from the pipeline company, yet will find my property more difficult to sell either at all or without a greatly discounted property value. I have already heard from real estate agents of trouble selling properties in Pelham with this proposed pipeline cited as the reason.

Construction and operation of the NED pipeline would greatly impact my quality of life, and economic well-being, and leave me in a position where it would be impossible to re-establish myself somewhere else. Thank you for your consideration.

Sincerely,

Susan Martis

20160114-5051

Submission Description: (doc-less) Motion to Intervene of Peter E Aho under CP16-21-000.

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party	Signer (Representative)	Other Contact (Principal)
Individual	01.paho@gmail.com	

Basis for Intervening:

I am requesting intervenor status opposing the Kinder Morgan/Tennessee Gas Pipeline/Northeast Energy Direct (NED) project docket #CP16-21.

I am a landowner who will be adversely affected by the construction of this proposed pipeline and the

proposed location of MID compressor station #4. My land, a registered Tree Farm located in Sharon and Temple NH, is within a one mile of the proposed pipeline and within three miles of the proposed MID compressor station #4 in New Ipswich, New Hampshire.

I am concerned that this project will have an adverse effect on my property values.

I am concerned that this project could have on adverse effects on the quality of the water and air. The proposed compressor station, with its toxic emissions, and the pipeline, with possible leaks, could contaminate the local water supply and/or affect the air quality in the area.

I am concerned about the noise, particularly during blow downs. I know that this sounds exaggerated, but it is known locally that this area is like a huge amphitheatre with the sound vibrations bouncing off the cliffs of Temple Mountain.

I am concerned about the light “pollution” that may be present in the nighttime sky. It may destroy this wondrous view of the starlit sky. Come and see it for yourself.

I am concerned about the possibility of an accident involving high-pressure gas that could cause catastrophic results.

But I am mostly concerned with the possible adverse long-term effects to the health of my kids and my grand kids and for the health of all my neighbors and their kids. Many of our families have lived here for generations.

I am concerned that there are not enough local, regional and even national common good benefits from this project to justify subjecting us to these dangers.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party Signer (Representative) Other Contact (Principal)

Unitarian Universalist Society of Amherst, MA Green Sanctuary Committee dumont140@yahoo.com

Basis for Intervening:

The Green Sanctuary Committee of the Unitarian Universalist Society of Amherst moves to intervene as a group of Massachusetts taxpayers, ratepayers and interested parties.

On Sunday, October 18, 2015, the congregation of the Unitarian Universalist Society of Amherst (MA) voted to oppose the installation of a gas pipeline in Massachusetts, specifically the New England Direct pipeline.

The vote was 50-0 with one abstention.

The actual resolution reads as follows:

The Unitarian Universalist Society of Amherst Resolution to Oppose the Installation of a Gas Pipeline in Massachusetts

WHEREAS, the Unitarian Universalist Society of Amherst (the “Society”), a Unitarian Universalist Congregation, has covenanted to affirm and promote seven principles, including “justice, equity, and compassion in human relations,” and “respect for the interdependent web of all existence of which we are a part;

WHEREAS, a proposed high pressure pipeline carrying natural gas obtained through hydraulic fracturing (“fracked gas”) currently called the Northeast Energy Direct project, of Kinder Morgan/Tennessee Gas Pipe-

line Company, L.L.C., would run through many communities in Western Massachusetts;

WHEREAS, in addition to the inherent risks of high pressure gas pipelines (possible ruptures, fires and explosions, and possible impacts to sensitive areas along the pipeline route) fracked gas may carry additional risks of pollution by hydraulic fracturing chemicals as well as the added environmental burdens for communities that are the site of the fracking;

WHEREAS, there is a growing concern regarding the impact of methane, the main component from gas leaks at drilling sites and along pipelines, in addition to the impact of the carbon dioxide produced when the gas is burned;

WHEREAS, instead of increasing our dependency on fossil fuels like natural gas, we are better served by embracing and strengthening the Commonwealth of Massachusetts' commitment to combating global climate change through increased energy efficiency and renewable energy; and

WHEREAS, the Unitarian Universalist Society of Amherst has an interest in protecting public health, public land, and the environment in the Pioneer Valley, the Commonwealth, New England, and our shared world;

THEREFORE, BE IT RESOLVED, by the Unitarian Universalist Society of Amherst, that the Society:

1. opposes the construction of the proposed Tennessee gas pipeline and any such new or expanded pipelines carrying gas in the Commonwealth of Massachusetts;
2. opposes any tariffs that may be imposed on Massachusetts ratepayers to fund the Tennessee Gas Pipeline or other such new or expanded gas pipelines;
3. Stands in solidarity with communities opposing the Tennessee Gas Pipeline and other such pipelines;
4. Asks that our state and federal representatives and the governor oppose the Tennessee Gas Pipeline and any other such new or expanded pipelines carrying gas in the Commonwealth and oppose any tariffs or taxes that may be imposed on the ratepayers; and

BE IT FURTHER RESOLVED that the clerk of the Board of Trustees shall, within 30 days of the vote of the congregation, forward a copy of this resolution and the vote thereon to Gov. Charlie Baker, president of the Senate Stanley Rosenberg, state representative Ellen Story, Sen. Elizabeth Warren, Sen. Edward Markey, Congressman James McGovern, and the chair and commissioners of the Federal Energy Regulatory Commission.

Basis for Intervening:

I enjoy the out of doors and do not want any state or town, public parks or forest which have been set aside for the people and wildlife to be impacted by any activities of this commercial project.

I was the first Steward of the White Oak River in North Carolina and through continuous efforts of several friends we were able to have the White Oak River named a North Carolina clean river two years in a row. The Stewards of the White Oak River and I cleaned many rivers in eastern North Carolina. The Stewards of the White Oak have received many awards and thank you's for the tireless efforts that they have put forth.

I myself have been involved in finding and improving canoe and kayak access points in eastern North Carolina. This was including but not limited to handicapped access. It was with great satisfaction to know that

we had made it possible for many other people with disabilities to enjoy nature. This would not have happened otherwise.

In my private life we try to recycle and have the lowest environmental impact as possible. We also enjoy growing organic foods.

I would be very upset if this pipeline is built because of its detrimental effect on air, water, and the land. The absurdity of building a pipeline that is not wanted or needed and the responsibility and dangers being left for people that did not want it or need it in the first place is ridiculous.

As an avid canoeist and kayaker, with a deep love of the outdoors I feel it is my duty and responsibility to stop this atrocity. Thus my application to become an intervenor.

Basis for Intervening:

To whom it my concern,

I am filing a comment to FERC to express my deep concerns for the proposed Kinder Morgan natural gas pipeline that will cut through Western Massachusetts and Southern New Hampshire if its construction is permitted.

I currently a student at the University of Rhode Island studying environmental science and conservation biology. I have been following the developments in the Kinder Morgan proposal for over a year and a half now and my family and I, as well as my friends, have been doing everything we can to stop the construction of this destructive pipeline. So far it seems our efforts have been in vain since FERC has recently stamped their "rubber stamp" of approval for this pipeline. Clearly, money was a huge factor in this decision. It seems that the people at FERC have ignored all environmental concerns of the pipeline, as well as ignored all of the public comments from the people in the areas which will be destroyed if the pipeline is constructed. To me, there is no greater fault than to put money above morals.

Take money out of the picture for a minute. Growing up in such a beautiful area surrounded by natural beauty is what inspired me to peruse a degree which would allow me to protect it in my future. As a kid, nature was such a huge part of my life. I would take walks in the woods, discovering salamanders and birds, and even then I knew how important it was to have areas protected from human disturbance. I would hate to know that future children would take nature walks in the same woods that I did when I was a kid and stumble across a disgusting pipeline and cleared trees. This would just show that areas set aside for protection mean nothing if money is involved. Right now, this is a sickening reality.

I urge you to consider how important it is to protect what we have left of the natural world. These areas threatened by the greedy and money hungry CEOs of Kinder Morgan have been set aside for conservation. What gives them the right to come in and take this away from us? The hundreds of miles of protected land mean so much to us. Not to mention the countless other environmental threats potentially brought on by the construction of natural gas pipelines. But does Kinder Morgan care? Not in the slightest.

If injustices such as the construction of this pipeline continue, we will ALL be under threat. If we continue to allow the fragmentation of habitat and protected land, it will not just be the residents of Southern New Hampshire and Western Massachusetts that bare the burdon of the pipeline. The construction must be impeded today and companies such as Kinder Morgan, who have become rich by exploiting the public and the

natural world, must be stopped before this can happen.

Sincerely,

Charlotte Steeves

Basis for Intervening:

I am a citizen of the commonwealth of Massachusetts. I wish to intervene to oppose the building of the proposed Northeast Energy Direct Pipeline to bring fracked gas from the Marcellus Shale to Dracut for eventual shipment overseas. As a rate-payer who heats with natural gas, I will suffer the tariff that will be levied to build the pipeline which, according to Massachusetts Attorney General Maura Healey's office, is not needed for use in Massachusetts. Further, as a rate-payer, the exporting of the gas will cause an increase in its price because of competition with consumers abroad.

I also wish to intervene because the pipeline threatens water resources and public lands important to me and to my state.

Finally, I wish to intervene against the building of the pipeline because it will increase climate change and global warming, by leaking methane and causing the burning of fossil fuels that should be left in the ground, according to climate experts. By releasing for consumption fracked gas this pipeline threatens the future of my children and grandchildren and FERC must intercede and prevent its construction.

Federal Energy Regulatory Commission

Reference: Docket# CP-16-21-000

Attention: Kimberly Bose, Secretary

My name is Caroline B. Zuk. I am a resident of Dracut, Massachusetts. I own and operate Saja Farm (403 Parker Road), a family owned and operated vegetable farm which has been in the family for 100 years. We are less than a mile away from a proposed natural gas compressor station, metering station(s), and a high energy gas pipeline infrastructure posing a threat to crops, soil composition, ground water, wildlife, and safety of residents and operations associated with food production.

I respectfully request that every measure be taken to cease expansion of this type of industry in a town where agricultural production remains as a significant contributor to the local food supply chain, local food

pantries, and senior citizen centers.

I and my family reject industrial plans of any kind which stand to disrupt the common good. The farm land in East Dracut represents some of the last known remaining rich farm land established by our colonial ancestors.

Saja Farm, protected under the Agricultural Preservation Restriction, seeks to promote sustainable agricultural practices both for the present and future generations. We do not wish our ground water aquifers, air quality, and soils to be placed at risk for contamination of any kind.

It is in our best interests to preserve farms of this type which supply fresh produce locally and throughout the Merrimack Valley and beyond anywhere from 6 months to 12 months throughout the calendar year.

Should there be a national emergency or local food shortage, local farms become a most valuable resource in times of crisis.

I request to be an intervenor to prevent such industrial expansion of gas pipeline projects of this type from disrupting Dracut as we are not convinced that this project truly benefits Dracut, farms, and residents who reside here.

Please do NOT approve this project for Dracut, Massachusetts.

Respectfully,

Caroline B. Zuk

I am a landowner directly impacted by this pipeline route as are many of my neighbors. This pipeline will not only impact my land directly where I would have property seized by eminent domain, but it will negatively impact my town as well as surrounding towns. Townsend is a beautiful, quiet, community with lots of open land and state forests and this pipeline would be detrimental to it and ruin a special place that we as residents have been able to enjoy.

I live in Merrimack, NH and want to intervene in this proceeding to oppose the NED pipeline. As a homeowner in Merrimack my drinking water comes from the Merrimack Village District. The Merrimack Village District wells and aquifers are in the path of this pipeline and just building it will cause significant damage to our town water system. I also live in a neighborhood surrounded by a pond that depends on Naticook Brook for its ecosystem. The NED pipeline will threaten to destroy this ecosystem as Naticook Brook is also in the path of the NED pipeline. We have a significant population of endangered species in the area of the proposed pipeline.

Thank you for your time and consideration.

Basis for Intervening:

I am opposed to the application for the following reasons:

1. We need to slow down the development of fracking in this country. Many of the harmful side effects are just beginning to emerge. Since there is, for the moment, an energy glut in the world, we can afford to be careful in how we support the development of this technology. There is no urgency to approving this application, if that is the direction we ultimately choose to go. I'm guessing, in fact, that with more study of the issues, it will be determined that the project is not needed at all.
2. There is still much that can be done to develop greater conservation and fuel efficiency. I would like to see much more emphasis placed in these area and therefore resist something like the pipeline that would make it easier to continue our current wasteful and inefficient use of energy.
3. I am an avid outdoor person and see that this pipeline would run through a number of rural woodlands that I frequently explore. In particular, it would actually go through a retreat center I'm committed to, seriously disrupting an unusual ecosystem, with some of the degradation being permanent.

MOTION TO INTERVENE

In regard to Tennessee Gas Pipeline's Northeast Energy Direct pipeline proposal

Docket No. CP16-21-000

We are directly impacted property owners whose residence is located on Map 2, Lot 7A, Subdivision 3 parcel in the town of New Ipswich. Since the inception of Northeast Energy Direct (NED) project proposal, our property value decreased by thirty-three percent. This will further impact our property and financial well being thus we are filing a motion to intervene, in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10), in opposition to the construction of the NED pipeline by Tennessee Gas Pipeline company (TGP) a subsidiary of Kinder Morgan (KMI).

There are various environmental and safety hazards that will impact our way of life; however, regardless of the environmental, safety, economic, constitutional, and community impacts this pipeline project has and would continue to strike if approved; FERC seems, to only base their decisions on the "need for the public"; as shown by having woefully only a single historical record of declining a permit based on lack of need. There is much to be said about the topic of energy demand and we reserve the right to further support this claim.

Currently, there is no demand for additional energy resources for the New England area, especially in New Hampshire, whom is an exporter of the commodity to nearby States. Additionally, economic indicators reflect that in 2016 the US energy sector retains massive surpluses and commodity prices continue to fall to records levels due to monumental energy shifts in global markets. So much so that partners such as Arch Coal Inc (ACI), which hold contracts with Kinder Morgan, have gone bankrupt. The loses of business for Kinder Morgan is a reality that the company currently faces. The trends can even be seen with their current Fayetteville Express Pipeline. Some of their partners are not renewing contracts to transport their commodities. Hence, how can Kinder Morgan still make statements in good faith that there are needs for additional natural gas energy when there is a high renewal risks for their services presently. The United States among other countries have entered a renewable energy era that will continue to grow and suppress old fossil fuels of yesterday.

In closing, a public convenience certificate should only be used for domestic purposes and never granted to privately own companies for the exportation of US goods to foreign countries. This alone is a grievously unconstitutional action FERC should avoid.

Thank you for your time and consideration on this matter.

Respectfully

Basis for Intervening:

I am opposed to the NED pipeline. It poses environmental and public health hazards. It is not needed to meet energy needs in New England. it is meant for export. This has been validated by the Massachusetts Attorney General’s Office independent study. New England residents will be asked to pay for this project and to clean up its mess. It will not profit the residents of New England, rather it will cost us. It will serve only to profit Kinder Morgan.

Basis for Intervening:

I live in Florence Massachusetts, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest

which may be directly affected by the outcome of the proceeding because:

- I am gas ratepayer [Columbia Gas] who has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts).
- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.
- I am an electric ratepayer (National Grid) and, if KM secures my electric utility as a project customer, I expect to see an increase on my electricity bill relating to NED cost recovery.

20160114-5066

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C. F. R. § 385. 212 and 385. 214, WE, ROBERT J. WALD and JEAN R. TROUNSTINE, both of Tewksbury, Middlesex County, Massachusetts, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U. S. C. § 717f, and § 157 of FERC’s regulations, 18 C. F. R. § 157. 1 et seq. , for the proposed North East Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Robert J. Wald
97 Cardigan Road
Tewksbury, MA 01876-1206
978-590-8172
r. wald@comcast. net

II. INTEREST OF PETITIONER

We have a direct interest in the outcome of the proceedings. Construction, operation and maintenance of the Pipeline would adversely impact us as follows:

1) Our home abuts homes in the direct path of the pipeline. Our home is not shown on the maps the Applicant has filed, but a portion of our street is. Our home, which is at 97 Cardigan Road, Tewksbury, MA, is approximately 550 feet from the home identified as Lot MA LL 56. 02 on the Map entitled Segment N, Lynnfield Lateral, Alignment Sheet TE-SEG_N-005. We are less than 800 feet from the pipeline itself, as are at least 40 other homes on our street and in the cul de sacs off of our street. This makes our neighborhood a high-consequence area.

Our home is in a subdivision of single-family homes in a suburban Residential Zone. The entire neighborhood is in the Tewksbury Ground Water Protection Zone and the Massachusetts DEP Zone II Well Head Aquifer Protection Area. The neighborhood here is thickly wooded with hundreds of mature trees. It is in its natural forested state and is part of a contiguous wildlife corridor providing valuable wetlands and supporting uplands habitats. There are many streams and valuable wetland areas in various yards, which ultimately feed the drinking water supplies and which require the mature trees for protection. There are no Utility Corridors or Power Rights of Way near our neighborhood. The setting of the homes in our neighborhood is private, quiet and natural, one of natural beauty and balance. These things have great value as is proven by the fact that the homes in this section of town have the highest resale values.

This neighborhood will be destroyed by this proposal and the quality of our lives will be diminished. The ground water protection areas and the wellhead aquifer protection areas will be irreversibly damaged. According to the plans, the Tennessee Gas Pipeline Company intends to create a new right of way through back yards of the single-family homes on one side of the street. According to the plans, they will take these back yards by eminent domain and create temporary and permanent clear-cut easements of up to 195 feet in width for the purpose of installing a 24” 1460 psi high-pressure pipeline. Many of the homes will lose their privacy and be forced to suffer the sounds of the high-pressure gas flowing through the pipeline, as well as pigging operations. All of the homes and the health, safety and welfare of the families in them will be endangered and at risk because they all are inside the blast / incineration zone.

2) We are nearing retirement and this home is a major asset. Our equity here was to be a very significant part of our retirement. The value of our property will be diminished by this pipeline path. In fact, the resale value of our property has already been diminished by the mere news of this proposed project. No one wants to live next to a high-pressure pipeline. The construction of this pipeline will deprive us of very substantial retirement funds.

3) During construction, we will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of privacy. Our neighborhood is well known to consist of ledge so substantial blasting would be inevitable. This will endanger the structural integrity of our home, of the other homes in our neighborhood, and adversely impact our health and sanity, as well as our use and enjoyment of our property. It will unconsciona-

bly disrupt the wildlife.

4) Furthermore, according to the plans, TGP intends to clear-cut and cross Kendall Road at Bellevue, the only main road between our home and the highways. (See MP 4. 0 on the alignment sheet TE-SEG_N-006) This makes commuting to and from our home almost impossible. There are no reasonable alternate routes for us to travel in that direction. This creates a great risk for us and other homeowners should we need emergency responders. We will be greatly inconvenienced and endangered.

5) Furthermore, in addition to being property owners we are customers and rate payers. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Massachusetts has an LG facility in Everett that has been sitting unused. The Attorney General's independent study has established that there is no need for this additional NED infrastructure. This pipeline is not necessary at all to service New England. This Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience.

6) We will also be adversely impacted by the climate change which will result from the drilling and use of natural gas fossil fuels. Where are we now already as a country? As a world? In Miami Beach, hotel lawns flood at the time of the super blood moon (The New Yorker, 12/21/15, p. 42). The Miami Beach government has already spent around \$100M – and plans to spend hundreds of millions more – in an effort to delay the inevitable deluge (p. 43). Dikes like Holland has will not work because the limestone under the surface will channel the water inland by raising the water table (p. 49) – water will come up through the ground. (p. 50) The National Oceanic and Atmospheric Administration predicts up to 6. 5 feet rise in average sea levels by the end of this century. The Greenland ice sheet is melting at an increasing pace, and holds enough water to raise sea levels 20 feet. The Amundsen Sea sector of the West Antarctic ice sheet has, according to two groups of researchers, melted past the point of no return, and will eventually raise sea levels four feet. That melting could destabilize other parts of the ice sheet, which hold enough water to add 10 more feet. (p. 44). As a species humans are enormously adaptable, and we may eventually relocate hundreds of millions of people inland or live in the floating cities imagined by Buckminster Fuller. That is not the future I want for our grandchildren, and it is not inevitable. It will, however, take a concerted effort by all of us way to prevent that future. In our personal lives, we will all have to accept the task of powering our lives with much less fossil fuel – and probably the short-term cost. The long-term costs of adapting to higher sea levels are way, way too expensive. Those people who can make the biggest impact have the most responsibility to preserve the only climate we have.

Last fall's study for the Office of the Attorney General of Massachusetts of the rationale for the pipeline found that the needs that the pipeline was going to address could be met other ways, ways that are consistent with the climate change programs and goals of the New England states. The pipeline would make it much more difficult to achieve the state's emission goals under EPA's Clean Power Plan.

If a shortage does bring a spike in the price of carbon-based fuels, the study estimates that the spike would be brief. Price spikes have the important added benefit of motivating officials and the public to develop alternatives to fossil fuels, such as solar and wind power, and more energy-efficient appliances, windows, HVAC equipment, and lights. According to the Energy Information Administration, outside of peak daytime hours, most natural gas-fired power plants in America used only 5 percent of their total capacity in 2012, making wide use of the sun's power a very promising other way to meet the daytime demand. ("The Conservative Case for Solar Subsidies", New York Times, Jan. 6, 2016).

The ongoing natural gas leak from a storage facility near Los Angeles, California has emphasized that gas can leak massively and dangerously. This June there was a gas main rupture in Fitchburg, MA, in front of Montachusett Regional Vocational Technical High School. In November, there was a leak in this Town of Tewksbury at Merrimack Meadows Condominiums, resulting in the evacuation of a major portion of the complex. Since 2003 Kinder Morgan's pipelines have had more than 20 serious accidents, including fires and explosions. (Yankee Magazine, Jan/Feb. 2016, p. 111). Kinder Morgan's claim that their safety record is

better than industry averages is beside the point. Leaks often occur, even for Kinder Morgan. Each leak creates more damage to our only climate.

Leaks also endanger the people nearby. In the California leak, thousands of families have been relocated indefinitely. The Fitchburg rupture required evacuations, as did the leak in Tewksbury. I would avoid living near a pipeline, and so would many others.

If the path of the pipeline changes, we may be impacted in other ways.

7) We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, ROBERT J. WALD and JEAN R. TROUNSTINE, respectfully request that the Commission grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Respectfully submitted, this 14th day of January, 2016.

Robert J. Wald and Jean R. Trounstine

20160114-5067

UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CPI6-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, State Representative Colleen M. Garry, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC («<TGP») filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to:

State Representative Colleen M. Garry
Thirty-Sixth Middlesex District
Massachusetts State House, Room 238
Boston, Massachusetts 02133
Colleen.Garry@mahouse.gov
(617) 722-2380

II. INTEREST OF PETITIONER

As an elected State Representative of the communities of Dracut and Tyngsborough, located in northern Middlesex County in Massachusetts, I have actively participated in the FERC process as it pertains to the proposed Northeast Energy Direct (NED) pipeline project. Over the past year, I have communicated with hundreds of constituents from my district and fully intend to closely monitor the development of the NED pipeline project so as to ensure that residents of my communities have access to relevant, up-to-date infor-

mation throughout the next phases of this process.

The NED pipeline project will undoubtedly have a significant impact on my district before, during, and after its construction, and I file this motion to intervene so that I may continue to actively monitor this issue and best represent the needs and opinions of my constituents, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Colleen M. Garry, respectfully request that the Commission grant my motion to intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 13th day of January, 2016.

State Representative Colleen M. Garry
Thirty-Sixth Middlesex District
Massachusetts State House, Room 238
Boston, Massachusetts 02133
Colleen.Garry@mahouse.gov
(617) 722-2380

20160114-5068

MOTION TO INTERVENE

CONCERNED HEALTH PROFESSIONALS OF MASSACHUSETTS AND NEW HAMPSHIRE

Docket No. CP16-21-000

I Introduction

We, the undersigned health professionals, submit our motion to intervene in the Tennessee Gas Pipeline Company Northeast Energy Direct (NED) project application under docket CP16-21-000.

According to the Code of Federal Regulations §385.214, a motion to intervene must demonstrate that a movant has a right to participate, including because “The movant’s participation is in the public interest.” Health professionals by definition work to ensure individual and public well being through direct patient care, but also through related professional activities. We are filing because of our responsibility to the public interest, in that the proposed project jeopardizes individual and public health.

II Health concerns

Health related concerns for the project include, but are not limited to, the following (in no particular order):

1 Health surveys have identified a high proportion of residents living near compressor stations as experiencing symptoms consistent with known toxic effects of air pollutants

2 Hazardous air pollutants have been measured near compressor stations that exceed CDC and EPA toxicity and carcinogen limits

3 Compressor stations and metering and regulating stations are known to release toxic and cancer-causing emissions, as documented in the application prepared by the Tennessee Gas Pipeline Company.

4 The air quality impact analyses in the report demonstrate that local concentrations of EPA criterion pollutants such as nitrogen dioxide will increase by amounts that will directly result in excess cases of cardiopulmonary disease, outpatient visits, emergency department visits, hospitalizations, and fatalities.

5 Increased disease and early death due to pipeline-related construction, emissions, noise, leaks, planned releases, and emergency releases, as well as potential explosions, place an undue burden on families that goes beyond the increased spending on health care to include increased stress and lost time from school and work.

6 Other impacts, such as blasting bedrock, diesel truck traffic, and increased noise levels all have the poten-

tial to affect human health and have been cited as health-related concerns by both local residents and local physicians.

7 Increased emission of EPA criterion pollutants are associated with increased health care utilization and spending, which will provide additional stress upon health care financing and budgets in states affected by the NED project.

8 Pipelines have a well documented history of leaking, and have significant risk of contaminating water supplies with fracking chemicals that include carcinogens and endocrine disruptors. Furthermore, informal conversations with environmental scientists have suggested that bedrock fractures from blasting the pipeline pathway and the buried pipeline itself (due to porosity of the pipeline backfill) could create new conduits between the pipeline and leaked toxic materials with existing private wells and aquifers.

9 There are limited references in reports, regulatory documents, and the biomedical literature arguing that the radon produced during the fracking process does not pose a significant threat to human health due to the relatively short half life of radon and its dilution in homes. However, these discussions do not reference radon decay products such as lead, polonium, and bismuth which could harm human health in the home or through precipitation in pipelines.

III Correspondance

The name and address of the person upon whom all communications concerning this proceeding should be served are as follows

Curtis L Nordgaard, MD MSc
curt.nordgaard@gmail.com
19 Thurston Rd
Newton, MA 02464

IV Conclusion

At this time, there is limited consideration of health effects through the federal regulatory process. As health professionals we have a unique expertise and direct understanding of human health in relation to the proposal, including direct experience working with the populations that would be affected by the project. We therefore represent the public interest as defined in in the Code of Federal Regulations §385.214.

WHEREFORE, for the aforementioned reasons, the undersigned health professionals respectfully request that this motion to intervene in the above-captioned proceeding be granted, and that they be granted the right to participate in all hearings in this proceeding as full intervenors with all attendant rights accorded that status.

Federal Energy Regulatory Commission

Attention: Kimberly Bose, Secretary

Ref: Docket# CP16-21-000

Dear Kimberly and Staff:

Dracut Pipeline Awareness Group respectfully requests to intervene in the review of the Northeast Energy Direct Project proposed by Kinder Morgan/Tennessee Gas.

To date, we are not convinced of the benefit such a project would bring to our community. We are not convinced that this private, for-profit company has our best interests at stake.

We are not convinced that our safety, ground water, and air quality will be protected now and for future generations to come.

We are not convinced that noise levels and emissions generated by any proposed natural gas compressor stations and other infrastructures will not harm our current environment both now and in the future.

We are not convinced that any further pipeline installations will not be impacted by the effects of routine blasting operations from the nearby Brox Quarry located on Methuen Street.

We are not convinced that children, staff in Campbell School, nearby residents can be evacuated in a timely manner in the event of danger.

We are not convinced that with the outdated road systems in/out of Dracut, Massachusetts that anyone doing business within the town or residing within the town will be protected during and after install of such a widescale expansion project.

We are not convinced that any part of this proposal will result in lower utility costs.

We are not convinced that farms and farm animals will remain free of contamination (especially lead) during/after install.

We are not convinced that there is consistency, total transparency, and complete information being provided to the general public and residents along the proposed pipeline route(s).

We are not convinced that risks to residents within the the high area of impact, especially children and staff at Campbell School will be able to escape the effects of any accidents which may occur before/during/after install of such a pipeline project.

We are not convinced that proper measures are in placed to receive the high traffic of excavation equipment, high levels of diesel emissions from operation of heavy equipment, transportaion issues, and other issues affecting day to day business throughout the town.

We are gravely concerned about long term effects of a project of this size and magnitude being installed as a “terminus” in a town with less than four major roads leading in and out of Dracut.

We are not convinced our property values will not drop. We are equally concerned about the long term effects on the town’s image and costs which will be passed to rate payers.

We are not convinced that our valuable farm land will remain protected.

We are not convinced our conservation lands (article 97) and wildlife corridors will remain protected before/during/after install and for the long term.

We are not convinced that long term health effects and impact on the health of current residents will be protected.

We are concerned about upper respiratory concerns which are caused by chemicals emitted during various maintenance procedures. We are concerned about “long term” health effects which may occur over time after continued exposure to emissions resulting from unplanned maintenance procedures and the like.

We are concerned about “chemical washdowns” and other procedures like this, which can add more problems as our children fully develop into adulthood.

We are concerned about the number of “blow downs”, unplanned maintenance events, unplanned exposure to various chemicals, and other side effects not yet named.

We are not convinced that security in and around this project will be deemed safe and fully protected against terrorism.

Above all, we are not convinced that a project of this magnitude is “sized” for a town such as Dracut.

With all the complaints regarding substations located on Brigham Ave. and Methuen Street, still yet unresolved, why is more infrastructure proposed?

Why aren't we looking at the new cutting edge technology designed to lower energy costs?

Can we examine the influx of available electrical energy located in and around Niagara Falls in Canada?

Are we truly looking at energy need in New England? We are not convinced this project is deemed necessary.

Would you please consider halting a project of this size and magnitude that does not point us in the direction of renewable energy solutions and presents more causes for harm than good.

We strongly oppose this project.

Thank you for taking the time to review our considerations.

Respectfully,

Caroline B. Zuk, Team Leader
Dracut Pipeline Awareness Group
100 Old Parker Road
Dracut, MA 01826

Basis for Intervening:

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, David LaDone and Cindy Mena, of 3 Regis Rd, Essex County, Andover, MA 01810, file this motion Motion to intervene in this proceeding.

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

David LaDone and Cindy Mena
3 Regis Rd, Andover, Ma 01810
617-388-2143
davidladonepipeline@hotmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact us as follows:

1) Destruction of forest areas including: wetlands, rare and mature trees, valuable ancient historic stone walls and ancient artifacts, vernal pools and a variety of rare and protected plants and animals. There is one perennial stream, identified on the Alignment sheet as Stream SPI-673. We believe there are more streams. Our wetlands also contribute to and serve to feed the drinking water supply for the Town of Andover.

This natural setting and all the benefits it provides were a material reason we invested in our single family home, paid a premium price for the property and, have substantially invested in upgrading our home and property, and continue to upgrade and maintain our home at significant cost and expense.

- If this Application is approved, We will be permanently and unnecessarily adversely impacted. The permanent clear cut easement will be 50 feet wide, while the temporary work easement will be as wide as 165 feet. The finished pipeline will be about 400 feet from our home. This puts our family and our neighbors as well as our entire neighborhood, well inside the “Blast” or “incineration zone”. Our family will hear the continuous construction and lose the freedom to let the kids play throughout the neighborhood due to the increased traffic (work vehicles). We will lose our trees, our privacy and our beautiful natural views. A number of the mature trees that give our neighborhood its character will be permanently eliminated. Our neighborhood will never be the same

2) The removal of the trees will cause the wetlands to dry out. The wildlife habitat will be eliminated and our family will be deprived of the enjoyment of watching the animals that inhabit and travel through the corridor and property daily. After construction, because of the need for ongoing inspections and maintenance, we will be permanently subjected to random intrusions and violations of our privacy by total strangers, as well as to risks associated with toxic herbicides.

3) The current construction plans show that the pipeline which was represented throughout the public hearings and through public materials as “co-located”, defined then as within the existing corridor/ROWs with existing public utilities is not the true scenario of what will unfold here. Documented evidence in the form of the construction plans, shows that the pipeline will not be “co-located” but in fact will require the creation of new parallel corridors that extend 50ft – 100ft from the existing corridors/ ROWs. The construction and “temporary” construction sites will unnecessarily and permanently devastate hundreds of acres of our most valued conservation lands and private properties. This includes the removal of hundreds of mature trees, whose value goes well beyond the physical tree, helping protect the wetlands that feed the drinking water supplies and add substantial value to our property values which we will never recoup during our natural lives. Temporary construction zones create permanent destruction

4) During construction, our family will be unreasonably subjected to noise, diesel odors, dust, debris, etc. Our neighborhood is well known to consist of ledge (thus the need for septic and no gas lines to homes, only tanks) so substantial blasting would be inevitable. This blasting will endanger the structural integrity of our home, our septic system, of the other homes in our neighborhood, and adversely impact health and well-being of our family, as we use our property for solitude and relaxation.

It will diminish the quality of our life. It will also unconscionably disrupt the wildlife.

5) The increased traffic and parked work vehicles will also create great risk for us and the other residents of our neighborhood should we need emergency responders. We will be greatly inconvenienced and endangered.

6) We are customers and rate payers.

7) This Infrastructure is not necessary. Massachusetts has all the infrastructure it needs. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Andover has been a strong participant in the Solarize Mass Program. The Attorney General’s independent study has clearly established that there is no need for this additional NED infrastructure.

8) Our home is our only major asset. We depend on the equity here to survive and is the basis for our quality of life now and through our retirement. The value of our property will be diminished by the construction,

operation and mere presence of the pipeline path. The construction of this pipeline will deprive our family of retirement funds and directly impact the quality of life for ourselves and our two children.

III. CONCLUSION

Wherefore, We, David LaDone and Cindy Mena respectfully request that the Commission to grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Respectfully submitted this 12th day of January, 2016.

David LaDone

20160114-5074

{val hetzel}

We need to focus on Solar energy, and higher insulation of homes and proper site selection and roof orientation. I have a masters in Environmental studies, and a certificate in Renewable Energy. I am against the pipeline

Please be informed I am completely against the building of this gas pipeline project. The irreparable cost of damaging our pristine, bucolic landscape added to the potential damage to our water supplies, the leaking of gasses into the atmosphere, (thereby contributing to climate change) are all but a few critical reasons to stop this project idea NOW before it proceeds any further. We cannot afford to lose this precious resource that so depends on this untouched land, for such flimsy rationale of it providing needed energy. There are other more viable options available that will not incur such horrific consequences.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

The future is in your hands!

NO pipeline, it is not necessary. Our attorney general, Maura Healy, has already stated the facts about this proposed pipeline. We are working very hard in MA to reduce our energy consumption, and increase our energy efficiency methods. We are on a roll. Let's keep it that way.

Rural vs. industrial route...If you allow this behemoth to come into our state, at least require they follow a more industrial route... Pittsfield, Springfield, Worcester, Boston, to provide for greater need. The laterals would be so much easier to install as it is already a route and they are closer to the populated areas and industrial areas for laterals. This rural route is only to line the pockets of Kinder Morgan and others. We receive no benefits at all.

...if this pipeline is permittedplease require:

Complete independent baseline testing prior to any work

No exported gas, preserve our natural gas for us as we transition to energy independence

Safer, thicker walled pipes

Industrial route not a rural route...

Annual royalties to each and every landowner and community

Make sure they have to have insurance or provide a bond against loss resulting from malfunction or failure at the pipeline and/or compressor plant.

We are electric rate payers and will not tolerate additional fees to line their pockets.

Continuous dedicated ongoing testing to be sure there are no negative health effects

Remember, health issues are extraordinarily costly for all of us!

Do you r

Individual	heatherrelej@gmail.com	
------------	------------------------	--

Basis for Intervening:

I seek Intervenor status as an individual. My family home and sole residence is located at 382 Lower Road in Deerfield, MA 01342 abuts the ROWs for the Eversource power lines on 2 sides of my property in close proximity to my house. Our home and quality of life at our residence would be significantly and negatively impacted, in perpetuity, by the proposed NED pipeline by TGP/Kinder Morgan. Our home, in fact, could be damaged structurally by road vibration, land shifting and even vibration from passing heavy trucks, staging, hauling, clear cutting/felling of trees, road building for haul in of equipment along ROWs and digging of any pipeline based on our proximity to ROWs.

My family home, enjoyment of daily life at or in my home and yard and personal safety for myself and my family including our pets would be significantly impacted by building, staging and preparation for such every single day by the heavy truck traffic hauling, clearcutting, road building, pipeline installation and unannounced routine maintenance that would directly impact my life and enjoyment of my home life based on noise, pollution via application of arborcides and the threat to life and limb caused by proximity to a pipeline that by sheer proximity renders my home and family unlikely to be able to receive aid in the event of a mishap or explosion. My son, a boy with respiratory issues, would be severely impacted by spraying of

arborcides in perpetuity right along our back, side and drifting across the front yard. The thought that our son and ourselves would be breathing arborcides that will also leach into food sources -corn, cow corn, and pristine Deerfield River waters in the fields below our home, forever, is absolutely frightening. We and so many here in our area cannot even use the gas that the pipeline is purported to carry- for our personal use- in the 8 towns of Franklin County, because we have no gas service along much of the route. None. We are being forced to lose land, homes and families and farms for a pipeline that does not serve our area or our homes except to endanger us in perpetuity.

Our personal views get destroyed forever by clearcutting. We -my neighbors and I- stand to lose valuable trees here along the proposed route that preclude soil erosion and flooding as well as performing the vital function of cleaning the air of pollution, and in my own area: soaking up road salts and traffic noise from Interstate 91N and S that run along the front of our property, across the road from our home. My historic home's ceilings, windows, and beams may crack in our 1880 farmhouse simply due to movement of earth and shifting as parts of the proposed NED pipeline would be trucked past our house in close proximity, on a country road meant for scenic enjoyment, not heavy equipment. Traffic would be a dangerous thing here based on narrow, crowned roads. My child, neighbors and tourists could not even ride bikes or walk near here -across the entire span in Deerfield, MA -if NED comes along because NED would be trucked, bored, fracked, blasted and cut into the land at close range to humans, homes and pets. My home is within the designated Incineration or Blast Zone mapped in bright red for over 900 feet across on all the inaccurate and ever-changing maps that Kinder Morgan has provided to FERC as part of their duty to let you know how many lives they would shatter in their quest to secure additional dollars for their shareholders at the cost of farm land, family homes, water, trees, historic Native American sites and our personal safety, in perpetuity. I seek Intervenor status and request that the FERC grant me the right to participate as an individual who abuts the Eversource ROWs that are part of the mapped route in Deerfield, MA and are in very close proximity to my home.

For the record: the position of the water pipes- which are 8" and plastic- and are only 5 feet down and likely above the proposed prone-to-leakage NED pipeline. That bisection of NED under our water pipes would render the hydrant and water unreachable for our tiny volunteer FD in relation to the intended route if there was a mishap. They cannot fight a 200 foot high inferno, a 1/4 mile wide raging fireball with nothing but desperation.

I have been advised that I will have to sue for damages, at my own cost to obtain legal representation, to seek compensation if my house gets damaged during build out or in the event of a mishap or blast. My health and my family's health and our current and future finances hang in the balance if NED is built- the damage has already been done just by mapping us into the route. We cannot sell or hope to sell our home at anywhere near fair market value now or ever, if NED comes in. We face the thought of being blown up in our beds in the event of a disaster. Therefore, I seek Intervenor status.

The fracked, toxic, explosive gas is not even able to be used by this area. Our own state AG, Maura Healey, commissioned a third party, comprehensive energy usage study and needs forecast which determined and demonstrated, in Fall 2015, that NED and the gas it purports to be so necessary for the NE region is NOT NEEDED and is never going to be needed. Further, MA ratepayers would be expected to pay for the NED pipeline in a tariff in electric and gas bills, forcing ratepayers to pay for infrastructure that we cannot even utilize in these rural communities that do not even use gas.

In addition to being an abutter to the ROWs where NED is proposed to be built, I seek to intervene as a Massachusetts rate payer. I have rights based on being a consumer of Electricity and a resident who purchases utility services like Electricity along the route of the proposed NED. Too many living people, historic cultural assets and homes stand to be lost or destroyed in our area-my own included, by the proposed NED. My finances, our home and my son's future are at stake.

I seek Intervenor status on these grounds.

Individual sgudell@comcast.net

Basis for Intervening:

I live within a couple of miles where the pipe line will come through. This pipe line will will go through a rural area destroying fields and woodlands in its path. Not to mention reducing property values in the area, because who is going to wish to live nears a pipeline. There is a great chance that this will devastate the property values of the towns it goes through without giving us any economic benefit. This gas line only serves to transport gas from one market to the next, and will not help to supply our communities. Economically this is a no win situation for our area.

This pipe line also poses a threat to our safety. If the line should leak or rupture the spill or explosion could be devastating, and puts my family at risk. This pipe line also crosses the Connecticut River. A spill in the river could affect the towns along the river all the way to Long Island Sound.

All in all, this pipe line is a negative for the Northeast, and especially the immediate areas that it traverses.

Docket No. CPI6-21-000

**MOTION OF CAROLYN A. AND FREDERICK M. SELLARS TO INTERVENE IN
OPPOSITION TO ISSUANCE OF A CERTIFICATE OF CONVENIENCE AND NECESSITY**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212, 385.214, landowners Carolyn A. and Frederick M. Sellars (“Landowners” or “we”) file this Motion to Intervene in the above- captioned proceeding. Landowners will be materially and adversely affected by Tennessee Gas Pipeline Company, LLC’s (“TGP’s”) Northeast Energy Direct Pipeline (“NED”) and intervene in order to oppose this project, as proposed, and to urge the Commission to reject the application for a certificate for convenience and necessity. All communications, filings, notices, and orders concerning the proceeding should be served on Landowners at:

Carolyn A. and Frederick M. Sellars
90 West Meadow Road
West Townsend, MA 01474
casellars@gmail.com

I. STATEMENT OF INTEREST

On November 20,2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under Section 7 of the Natural Gas Act, 15 U.S.C. § 717f(c), for the proposed NED Project, FERC Docket No. CPI6-21-000. According to the application, the proposed “Fitchburg Lateral Extension” is slated to cross land we own, and we therefore are directly affected by this proposal. See 18 C.F.R. § 385.214(2)(ii). Our land - containing our home, garage, well, and septic system - is identified by TGP as parcels MA FL 17.02 and MA FL 17.03. See Application, A Lat. Seg. Q-007.

TGP had also asked for survey permission on our adjoining land it identified as MA FL 17.04.

We could not be more directly impacted by this project. Our house appears to be less than 100 feet from the proposed lateral, potentially impacting the safety, value, aesthetics, and environment in and around our home. Our well also appears to be within 100 feet of the proposed work area. In addition to impacting the quiet enjoyment of our property, the proposed lateral would present a grave impact to the environment. Our property is mostly forested and located entirely within the Squannassit Area of Critical Environmental Concern (“ACEC”), as designated by the Massachusetts Department of Energy and Environmental Affairs. We have carefully stewarded this land to enhance its value as a wildlife and woodland sanctuary, including managing the property through the Massachusetts Forest Management Program, Ma~s. Gen. L. ch. 61 § I et seq., taking special care to protect Locke Brook, a cold water fishery that transects our property. The proposed placement of a lateral would significantly affect the value, character, our enjoyment and security of this property.

In addition to our role as landowners, our participation in the proceeding is in the public interest. See 18 C.F.R. § 385.214(2)(iii). Frederick is an environmental consultant with more than 35 years of experience, specializing in the siting and environmental licensing of major energy infrastructure projects. He has provided expert witness testimony on environmental matters related to energy infrastructure projects in eight states, including in Massachusetts, Connecticut, and New York. Carolyn has experience in land use and development in the central New England region, including an appointment by Massachusetts Governor William Weld to serve as the Environmental Specialist on the Fort Devens Redevelopment Board. In addition to being residents and activate participants in the affected community, we bring a depth of knowledge and experience regarding the environment in the region.

II. COMMENTS IN OPPOSITION

Landowners were active participants in the pre-filing process for this project. We formally raised a number of concerns on the pre-filing docket, provided comments at a FERC Scoping Session in August 2015, and provided extensive written comments during the formal scoping period. See, e.g., Entry No. 20151007-5145, PF14-22-000 (Oct. 7, 2015). Our comments summarized our major concerns, including the lack of need for this pipeline in light of other projects further along in development and the excess capacity in existing infrastructure; the failure to consider “no action” or “no build” alternatives to the project; failure to consider obvious routes that have less environmental and right-of-way impact; and failure to adequately assess noise, air, water, greenhouse gas pollution. Id. These comments have yet to be addressed by TGP, in violation of the pre-filing process. See 18 C.F.R. § 157.21(£)(9) (“[P]rospective applicant must ... within 14 days of the end of the scoping comment period, respond to issues raised during scoping.”).

Following TGP’s application on November 20, 2015, movant Carolyn Sellars also filed additional comments alerting the Commission to the fact that TGP filed an incomplete application. Entry No. 20151203-5016, CPI6-21-000 (Dec. 3, 2015). In later comments, TGP conceded that they did not file a complete application, have yet to file a complete application, and do not plan to do so until at least April of this year. See Entry No. 20151230-5351 at 5, CPI6-21-000 (Dec. 30, 2015) (“[TGP] will ... submit additional information to the Commission ... by the end of April 2016.”). This Commission may not proceed on an incomplete application. 18 C.F.R. § 157.21(d)(10) (participants in a pre-filing process acknowledge that “a complete Environmental Report and complete application are required at the time of filing” (emphasis added)). It is a direct violation of the procedures TGP opted into when proceeding through the pre-filing process, and deprives the public of meaningful participation in the process, as deadlines for public responses arise before the developer has provided the public with the information necessary to assess their application.

Furthermore, as landowners whose land may be subject to an eminent domain taking, we are concerned about what appears to be a lack of transparency and public discourse in the discussion of public benefit in the Commission’s process. The White House Council on Environmental Quality (“CEQ”) regulations implementing National Environmental Policy Act require that the Environmental Impact Statement “[r]igorously explore and objectively evaluate all reasonable alternatives, and for alternatives which were eliminated

from detailed study, briefly discuss the reasons for their having been eliminated.” 40 C.F.R. § 1S02.14(a). It is our position that the applicant has failed to consider a reasonable range of route alternatives, including available and reasonable alternatives that would not entail eminent domain taking and permanent alteration of forested lands within the Squannassit ACEC.

III. HEARING REQUESTED

Pursuant to 18 C.F.R. § 1S7.10(a)(1), Landowners respectfully request a formal hearing on the Application, including the environmental impacts of, alternatives to, and public need for the NED Project.

IV. CONCLUSION

For the reasons discussed above, we respectfully request that our motion to intervene be granted, that hearings be convened in this proceeding, and that the Commission deny the requested certificate for public convenience and necessity.

Respectfully submitted,
Carolyn A. Sellars
Frederick M. Sellars
90 West Meadow Rd.
West Townsend, MA 01474
casellars@gmail.com

CERTIFICATE OF SERVICE

I hereby certify that I caused a true and correct copy of the foregoing motion to be served electronically on app parties on the Commission’s electronic service list in this proceeding, in accordance with the Commission’s regulations.

Dated: January 14, 2016

by: Carolyn A. Sellars

20160114-5096

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 335.212 and 385.274 (2007), I/we, name here, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. 5 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Ryan Connor
12 Bam rd
978-710-5257
Ispend05@aol.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me. This project is very harmful to my wife, my small children and myself. Harmful gas emission proven to be life changing with various medical issues. This project to be constructed a few hundred feet from not o2J{my 50 homes plus neighborhood. But a giant Quarry that blasts sending earthquakes already damaging the foundation of the houses here. I can only imagine the impact of gas leaks and methane gas into the children's undeveloped lungs. I have dockets of proof with the environmental impact of these gas lines and compressor stations worldwide.

My neighborhood overlooks conservation land and this will destroy not only people's backyards but animal inhabitants. This project would be a gross negligence of basic human rights to a clean and safe environment to live in.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Ryan Connor, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this _13th_ day of January_,2016-.

Ryan Connor
12 Barn rd
978-710-52s7
lspend05@aol.com

20160114-5105

Motion to Intervene of Phil B Maguire

I am a directly impacted landowner with site-specific concerns. I understand that the track of the proposed pipeline comes dangerously close to my property.

20160114-5113

Richard M. Husband
10 Mallard Court
Litchfield, NH 03052

January 14, 2016

To: The Federal Energy Regulatory Commission:

**RE: Application for a Certificate of Public Convenience and Necessity
(NED Project)
Docket No. CP16-21-000**

Dear Sir or Madam:

Please accept and file this letter and my accompanying January 7, 2016 correspondence to the New Hampshire State Legislature as public comments in opposition to approval of the application for a Certificate of Public Convenience and Necessity requested in the above-referenced proceeding.

Thank you for your courtesy in this matter.

Sincerely,
Richard M. Husband, Esquire
N.H. Bar No. 6532 2

Richard M. Husband

January 7, 2016

To: The New Hampshire State Legislature
Particularly, but not limited to, Members of the
Ways and Means Committee
Judiciary Committee:
Science, Technology and Energy Committee:
Municipal and Government Committee:

I would greatly appreciate your time and courtesy in reading the following, which concerns both a matter of critical concern to New Hampshire and important responsive legislation before the referenced committees. At stake are the character and quality of our state, irreplaceable resources, and the basic civil liberties of New Hampshire citizens respecting property rights, including those protected by the New Hampshire State Constitution. There is no positive in ignoring the issue, as this will only enable the negatives to come to fruition, and there is plainly no net benefit.

First, the matter, then the legislation ...1

A Matter of Critical Concern

The Northeast Energy Direct (“NED”) high-pressure natural gas *transmission* (not local distribution) pipeline, proposed by Kinder Morgan (“KM”) and its subsidiary, Tennessee Gas Pipeline Company, LLC (“Tennessee Gas”), is one of “[n]umerous projects ... in development to expand the Northeast pipeline system.” See http://www.northeastgas.org/pipeline_expansion.php. By “numerous,” **at least 16 natural gas pipeline projects** are in the works. See *id.* (proposed pipelines diagram of 16 projects). Although the massive 30” pipeline will have a roughly 1.3 billion cubic feet per day capacity, less than 9% (about 8.8%) of that capacity is under contract for New Hampshire use by the pipeline’s lone subscribing New Hampshire gas customer, Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/a Liberty Utilities (“Liberty Utilities”), with only a little more than half of that small amount—**only about 5% of the pipeline’s capacity**—representing **new natural gas for New Hampshire**.² Essentially, New Hampshire will just serve as a conduit for this transmission line, enabling it to transport (Pennsylvania-fracked) natural gas from Wright, New York to Dracut, Massachusetts.³

Plainly, the NED pipeline is not about New Hampshire and, with a transmission end point at the verge of connectivity with Maine, Canada and lucrative markets overseas, the motives of those attempting to bring it to New Hampshire are extremely suspect. In the course of the PUC proceeding approving the pipeline agreement between Liberty Utilities and Tennessee Gas, it was revealed that Liberty Utilities, through one or more corporate layers, is owned by Algonquin Power & Utilities Corp. (“APUC”), a roughly \$4.5 billion Canadian corporation with a sizable investment in the NED pipeline.⁴ Moreover, at least one of the members of the Board of Directors of APUC and Liberty Utilities are the same.⁵ This certainly raises a real question of credibility as to whether Liberty Utilities is—as many contend—inflating its claimed “need” for fuel from the pipeline: when New Hampshire is needed as a conduit for approval of the pipeline, why would there not be an incentive and influence to inflate or even completely manufacture the claimed need, to increase the likelihood of approval of such a conduit to get the vast bulk of the pipeline’s gas (more than 90% of its capacity) flowing into Canada and beyond, for huge APUC profits?

Certainly KM has made no bones about the fact that the market will dictate where the NED pipeline goes, and what will have to be paid by New Hampshire citizens after the “get-the-pipeline-in-the-ground” price under the Liberty Utilities/Tennessee Gas contract expires. In response to the question posed by Brookline, New Hampshire citizens whether at least some of the gas will be exported, KM was blunt: “Kinder Morgan cannot discriminate among customers based on the ultimate destination or use of the gas, such as the Northeast versus Canada or another foreign country ... The ultimate destination of the gas and volumes associated are within the sole control of the project customers.”⁶ In other words: the gas will fol-

low the money, whatever kind, wherever from. With European and Asian markets paying several times more for gas than the market bears in this country,⁷ the “end game” here is obvious.

Although pipeline proponents love to emphasize that portions of its path will follow existing transmission rights-of-way, i.e., it will be “co-located” with power lines,⁸ the ugly truth is that the pipeline will leave a jagged scar across 71 miles of New Hampshire, with much of its route comprising “greenfield” rights-of-way, i.e., undeveloped, agricultural areas, including working farms, state forests, historic and conservation areas, wetlands, aquifers and other environmentally sensitive areas. Over 150,000 New Hampshire citizens from at least 17 towns will be negatively affected.⁹ From contamination of their drinking water to the health and safety dangers posed by the volatile pipeline and its chemical contents (mostly methane), what remediation will be available to these citizens, when no bonding is required for the pipeline, if the “unlikely” accident/leak/explosion that keeps happening happens yet again?¹⁰ While studies have not yet linked the methane in natural gas to health problems, the plain fact of the matter is not enough studies have been conducted to rule methane out as a health risk, either.¹¹ Indeed, complaints of headaches, nausea and other sickness are certainly made with respect to natural gas pipeline leaks,¹² and cannot, responsibly, just be ignored. Moreover, hundreds of New Hampshire property owners will lose property rights to the project and KM by eminent domain, in plain violation of Part I, Article 12-a of the New Hampshire State Constitution, which expressly provides:

“[Art.] 12-a. [Power to Take Property Limited.] No part of a person’s property shall be taken by eminent domain and transferred, directly or indirectly, to another person if the taking is for the purpose of private development or other private use of the property.”

Id. Those not directly on the pipeline’s route, but nonetheless in towns along its path, will still suffer a loss in their property’s value by the general diminution in value of nearby properties. These are good, hardworking, taxpaying New Hampshire citizens, for whom the value of their home is by far their largest asset, with many counting on this value for retirement. As one elderly resident in my town put it: “You work your whole lifetime for retirement, then this ...”

To top off the NED pipeline negatives, a study undertaken by the NHMPC concludes that it will not bring energy savings, but increased energy costs to New Hampshire. The average Liberty Utilities customer will pay roughly \$600.00 per year for the 20-year duration of the Liberty Utilities contract with Tennessee Gas, about \$12,000.00, to pay off the \$53 million price tag for the pipeline being kicked back to state residents to finance this private corporation boondoggle.¹³

There are better alternatives.

Supporters of the NED pipeline contend that we need it to reduce electricity prices. But the New Hampshire Climate Action Plan, p. 16,¹⁴ acknowledges that “New Hampshire is a net exporter of electricity with nearly 50 percent of its total generation currently exported out of state,” so the problem is plainly not one of natural gas supply. Moreover, none of the NED pipeline gas that the PUC has approved for purchase by Liberty Utilities is for the generation of electricity in New Hampshire. Supporters of the NED pipeline would like us to believe that we have an “energy crisis,” but that is plainly not the case: if we were truly experiencing an “energy crisis,” would not at least one New Hampshire electricity generation customer have signed on to the NED pipeline?

Any “need” we have for more natural gas in New Hampshire is only for peak periods of use on the coldest winter days (a few hours 10-27 days of the year).¹⁵ So, we are talking about making a commodity otherwise in plentiful supply more available a small percentage of the year. We have a winter reliability problem, not an energy crisis: a problem that would be best addressed by proper planning and storage of natural gas during the vast majority of time that is non-peak demand, than by blackening the state with pipelines like a three-year-old’s etch-a-sketch “solution.” We do not “need” to become New Jersey, we need to stay New Hampshire; we need to address the issue responsibly, in a manner that preserves the beauty and soul of our state.

Other better solutions include:

- a) Liquid natural gas. Distrigas of Massachusetts LLC has signed long-term contracts to bring in additional liquid natural gas (“LNG”) to New England that will be stored in EXISTING infrastructure over the summer to be used during winter peak demand. (as with this last winter, when we did not experience drastic price spikes because we were getting more LNG).¹⁶
- b) Renewable resources and Distributed Generation. Wind, solar, thermal ... renewable sources of energy are energy solutions already mandated by the New Hampshire legislature.¹⁷ New Hampshire’s official energy action plan encourages using smaller “generation facilities,” such as residential rooftop solar panels, to supplement large power plants:

“Distributed Generation (DG) refers to producing electricity and/or thermal energy through dispersed, smaller scale generation facilities rather than relying on large centralized power plants. DG includes sources from residential rooftop solar photovoltaics (PV) to large combined heat and power (CHP) systems. DG supports a system that is more resilient, flexible, and efficient. Small scale energy projects also enhance New Hampshire’s economy, as installation of these projects creates jobs that are difficult to outsource, and money spent on the projects circulates within the state’s economy. Despite these benefits, DG remains under-developed in New Hampshire because it is difficult for many residents to pursue. New Hampshire should work to improve access to renewable generation for homes and businesses.”¹⁸

New Hampshire should stick to its game plan and work toward the development of renewables and other energy generation facilities to diversify our energy sources and replace our unhealthy (in so many respects) overdependence on fossil fuel generated energy.¹⁹ Piling on pipelines that only increase our dependence on fossil fuels will not solve our problems.

- c) Energy efficiency coupled with demand response programs. “Energy efficiency is the cleanest and cheapest way for New England to meet its energy needs.”²⁰ Energy efficiency measures to date have already caused electric consumption to decline in New England.²¹ Add demand response incentive programs—such as providing big manufacturing companies incentives to cease operations during peak consumption hours—and the squeeze that contributes to rate hikes would be alleviated. Home “nesting” systems and smart meters can contribute to demand response, too.
- d) Dual Fuel power plants. The Granite Ridge power plant in Londonderry was actually designed to be dual fuel gas-fired with oil storage tanks on the side for “backup” generation. Although funding was not secured for the oil tanks, such a “backup generator” makes all the sense in the world to address those brief, crunch periods of energy need in the winter: back-up generators and/or supplemental heating systems have become commonplace for residences in New England; if such planning and solutions can be implemented at residential level, why not at the generation level?
- e) Incremental pipeline upgrades. The real concern here seems to be meeting the needs of the “Concord Lateral.” But, the proposed Spectra Energy and/or Portland Natural Gas Transmission System pipeline upgrade projects, both in the approval process, could both do this, with significantly fewer negative impacts as they will actually be “co-located” in existing (pipeline) easements and involve far fewer “greenfields,” and will hook up to existing power generators.

Important Responsive Legislation

At least the following bills have been introduced to respond to the concerns raised by the NED pipeline, or similar high-pressure natural gas pipelines: *{hyperlinks in original to text of bills omitted}*

2016-2014 HB1101 Title: Prohibiting charges to New Hampshire residents for the construction of high pressure gas pipelines.

2016-2083 HB1109 Title: Relative to notice of offer for property in eminent domain cases and making the condemning entity liable for reasonable attorney’s fees in certain cases.

2016-2304 HB1140 Title: Relative to financial responsibility for gas transmission pipelines.

2016-2301 HB1146 Title: Relative to certificates of site and facility.

2016-2305 HB1148 Title: Relative to pipeline capacity contracts.

2016-2306 HB1149 Title: Requiring a royalty on the price of natural gas conveyed by pipeline intended for use in a foreign country.

HB1472 Title: Relative to the siting of certain new pipelines and storage vessels.

2016-2546 HB1533 Title: Relative to noise level limitations for permanent machinery.

2016-2464 HB1544 Title: Establishing a tax on revenues from natural gas transmission.

2016-2547 HB1555 Title: Relative to the manner in which New Hampshire takes possession of land.

2016-2072 HB1660 Title: Relative to eminent domain for gas pipelines and relative to assessment of the land use change tax for eminent domain takings for energy infrastructure.

2016-2239 HB1174 Title: Relative to energy sources for new natural gas transmission compressor stations.

2016-2823 SB350 Title: Establishing a moratorium on federal land acquisition pending a study by the department of resources and economic development.

A quick review of these bills establishes their purpose and merit.

We are all citizens of New Hampshire and have only the one state to share. Please come to the aid of your fellow state citizens, and state, and support the responsible, responsive legislation coming before you. Do not give in to “quick fixes”: we cannot lose sight of the Big Picture and need to move on from fossil fuels. Fostering additional dependence on natural gas is not the answer, especially when it deprives so many New Hampshire citizens of fundamental property rights; we need to roll up our sleeves and go with better solutions, even if means a lot more work in the present: our futures will thank us.

Again, thank you for your time and courtesy in this matter.

Sincerely,

Richard M. Husband, Esquire
N.H. Bar No. 6532

Footnotes:

- 1 If any of the URL internet links provided herein do not work the first time, please try them again as the Public Utilities Commission (“PUC”) links, in particular, do not work every time (but will work subsequently).
- 2 In approving the “precedent” pipeline agreement between Liberty Utilities and Tennessee Gas, the PUC acknowledged: “Of the total 115,000 Dth per day of capacity contracted for in the Precedent Agreement, 50,000 Dth per day is replacement of existing TGP capacity and 65,000 Dth per day is new or incremental capacity.” 65,000 is only roughly 57% of 115,000; 57% of 8.8% is 5.016%. — the percentage of capacity equating to actual new gas for New Hampshire. See PUC Order No. 25,882 dated October 2, 2015, p. 4, at <https://www.puc.nh.gov/Regulatory/Docketbk/2014/14-380/ORDERS/14-380%202015-10-02%20ORDER%20NO%2025-822.PDF>.

Basis for Intervening:

I live on Burden Lake in the township of Nassau, town of Averill Park, NY, and wish to intervene in this proceeding to oppose the NED pipeline, and the compressor station planned for .3 miles from my home.

I have an interest which may be directly affected by the outcome of the proceeding as I live in the blast radius and would be at physical risk. My source of drinking water is at risk by the construction of the compressor station and pipeline.

I am concerned about the impact to the environment and to the health of the many people who love and treasure this land where we have chosen to live because of its beauty, quiet, delicious water, rolling farms and fascinating, high-spirited folk of all types -- who can enjoy semi-rural life at a reasonable cost.

Basis for Intervening:

I am a landowner in Londonderry, NH. I bought my house in 2002. I am located at 42 Elwood Road in Londonderry, NH. The proposed gas pipeline is supposed to be located near or on my property. It has yet to be determined the exact location. I have many concerns regarding this pipeline. I am concerned about the well water. The well is located in my front yard and could be compromised due to the location of the gas pipeline. I also am concerned about the foundation to my house if/when blasting will occur during the pipeline process. Another concern is the safety of the gas pipeline should there be a leak or more importantly an explosion. I have two young children and never did I think when we bought this house that I would have a gas pipeline potentially going through my front yard, or across the street from my house. Lastly, my concern is my financial position. After the pipeline is in place, whether it be across the street or in my front yard, my property will be more difficult to sell or sold at a greatly reduced rate.

In conclusion, construction and operation of the NED pipeline would without a doubt negatively impact my family and myself.

20160114-5120

Thomas Kreek, Conway, MA.

PF14-22, CP16-21

KM Pipeline project, Massachusetts

I am a landowner at 1021 Pine Hill Road, Conway MA, 01341 and want to intervene in this proceeding to oppose the NED pipeline. I have several concerns about the proposed pipeline and they are as follows:

- 1) loss of property values.
- 2) loss of water quality.
- 3) air and land quality, including habitat and landscape.
- 4) risk of increased to taxpayers for state consolations, kickbacks and tax breaks.
- 5) cost of continued investment in fossil fuel infrastructure.
- 6) safety risks from leaks, accidents and fires as have occurred in several other KM projects, most notably, 2 compressor fires.
- 7) Studies evaluating the cost/benefit of the project have been inconclusive at best.
- 8) use of a wide range of chemical compounds in developing, building, extracting and transporting fuel, without open, published research on the safety impacts. PSHMA reports 115 public deaths, and 35 industry deaths, in the last 10 years. additionally, a total cost of accidents and injuries of 4.8 billion dollars. Since revenue to pay for industry costs becomes a public/subscriber burden. Relative to total revenue this does not appear to be a large number, but compared to long term value of the project, this is a real measure of impact.

Filing Party/Contacts:

Energy and Planning (“OEP”), by and through its attorneys, the New Hampshire Office of the Attorney General (“OAG”), hereby moves to intervene as a full party in the above captioned docket.

I. MOTION TO INTERVENE AND INTERESTS OF INTERVENOR

OEP is a duly constituted office of the executive department of the State of New Hampshire within the Office of the Governor of New Hampshire. OEP is charged by NH RSA 4:C with duties related to planning for the orderly development of the state and the wise management of the state’s resources. In addition, OEP is charged with the development of an energy strategy for the state of New Hampshire and with administering several energy programs. OEP also serves as the Chair of the New Hampshire Council on Resources and Development (“CORD”), which has duties related to the disposal of state property and the oversight of certain conservation lands pursuant to NH RSA 162-C. OEP seeks intervention in this docket in furtherance of its duties and to represent the interests of the State of New Hampshire as they relate to OEP’s duties.

On November 20, 2015, Tennessee Gas Pipeline Company, LLC filed an application with the Federal Energy Regulatory Commission (“FERC”) seeking a certificate of public necessity and convenience to construct and operate a natural gas pipeline and related facilities known as the Northeast Energy Direct project (“NED Project”). A portion of the NED Project is proposed to cross approximately 70 miles in New Hampshire, including lands in which the State holds interests. If Tennessee’s application is granted, the NED Project will result in significant impacts to state resources and lands. In addition, the NED Project will impact hundreds of landowners along the path of the proposed pipeline and could impact a range of state energy policies and programs.

Accordingly, as the state office charged with planning for the orderly development of the State, the wise use of state resources, and the state energy strategy, OEP has a direct and substantial interest in this proceeding, and no other party can adequately represent OEP’s interests. OEP’s intervention in this docket will not cause prejudice to, or additional burdens on, any other party to the proceedings and will not cause any disruption to the proceedings.

OEP moves to intervene to obtain party status and preserve its rights to participate in the review process, including the ability to seek judicial review of any final decision on Tennessee’s application. At this time OEP does not request a formal hearing in the docket, but reserves the right to request a hearing at a later date as allowed by the Commission’s Rules and Regulations.

II. PLEADINGS AND SERVICE CONTACTS

Service of all pleadings and other filings in this proceeding should be addressed to the following persons, whose names should be placed on the official service list prepared by the Secretary in this docket:

Meredith A. Hatfield

This pipeline proposal is costly and unnecessary, and will disrupt the land, lives and livelihoods of citizens of Franklin County for years to come. We already have miles of unmaintained infrastructure in need of repair, some of it

leaking unknown amounts of natural gas and chemicals into our air and water, damaging our health and that of the natural world. It is irresponsible and unethical to pursue the building of this pipeline as proposed. We ask our government to let our voices be heard and protect us from the obvious damage and danger proposed.

Individual	davidgrant888@gmail.com	

Basis for Intervening:

My family and I live in the town of Peru, MA (77 August Smith Rd.) right next to the proposed pipeline and less than 2 miles from the proposed Windsor compressor station. My family and I regularly, in all 4 seasons, use the pristine woodlands all around the proposed site for this compressor station. I feel that the proposed gas pipeline would be very injurious to the health of me and my family and I would like to intervene to arrest the development of this project. As I am sure you know well, there are very strong winds in this region and we should expect that much of the toxic gasses will find their way to the air we breath and to the water we drink (like everybody around this rural community, we get all our water from our own well). To put this in monetary terms, I feel that our close proximity to the pipeline/compressor station will materially lessen the value of our property.

So, for so many reasons, from health, recreational, peaceful enjoyment of my own property to it's negative impact on my own net worth, we oppose this pipeline in the strongest possible terms.

Please consider denying the progress of this pipeline.

Thank you

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC

)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF NEW HAMPSHIRE
ATTORNEY GENERAL JOSEPH A. FOSTER**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's (the "Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the New Hampshire Office of the Attorney General Joseph A. Foster hereby moves to intervene as a full party in the above captioned docket.

I. MOTION FOR INTERVENTION AND INTERESTS OF INTERVENOR

On November 20, 2015, Tennessee Gas Pipeline Company, LLC filed an application with the Federal Energy Regulatory Commission ("FERC") seeking a certificate of public necessity and convenience to construct and operate a natural gas pipeline and related facilities known as the Northeast Energy Direct project ("NED Project"). A portion of the NED Project is proposed to cross approximately 70 miles in New Hampshire, including a proposed compressor station and associated facilities. The proposed route transverses a number of parcels of land that are owned by the State, including a state park and two state forests, as well as parcels in which the State has a legal interest. If Tennessee's application is granted, the NED Project will result in significant impacts to the State of New Hampshire and its citizens, including the hundreds of property owners whose lands will be affected.

The Attorney General is a constitutionally appointed official of the State of New Hampshire and the state's chief legal officer and chief law enforcement officer. He is charged with the enforcement of the state's consumer protection, antitrust and environmental laws, and protection of the state's property interests. For these reasons, the Attorney General has a direct and substantial interest in this proceeding, and no other party can adequately represent that interest. Accordingly, the Attorney General respectfully requests intervention in

this docket to protect the State of New Hampshire and its citizens through the proper enforcement of New Hampshire and applicable federal laws.

The Attorney General's intervention in this docket will not cause prejudice to, or additional burdens on, any other party to the proceedings, and will not cause any disruption to the proceedings.

At this point, the Attorney General is not taking a position with respect to the merits of the pending request for a certificate of public necessity and convenience. He moves to intervene to obtain party status and preserve his rights to participate in the review process, including the ability to seek judicial review of any final decision on Tennessee's application. The Attorney General is not requesting a formal hearing in the docket, but reserves the right to request a hearing at a later date as allowed by the Commission's Rules and Regulations.

II. PLEADINGS AND SERVICE CONTACTS

Service of all pleadings and other filings in this proceeding should be addressed to the following person, whose name should be placed on the official service list prepared by the Secretary in this docket:

Ann Rice
Deputy Attorney General
Office of the Attorney General
33 Capitol Street
Concord, NH 03301
(603) 271-4900
Ann.Rice@doj.nh.gov

III. CONCLUSION

WHEREFORE, the New Hampshire Attorney General Joseph A. Foster respectfully requests that the Commission grant this motion to intervene and grant the New Hampshire Office of the Attorney General full party status in this proceeding.

Dated this 14th day of January, 2016

Respectfully submitted,

Joseph A. Foster
Attorney General

Ann Rice
Deputy Attorney General
Office of Attorney General

Southwest Region Planning Commission

37 Ashuelot Street, Keene, NH 03431 603-357-0557 Voice 603-357-7440 Fax

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company,
a subsidiary of Kinder Morgan
Northeast Energy Direct (NED) Pipeline Project
Docket No. CP 16-21-000

**MOTION TO INTERVENE OF
SOUTHWEST REGION PLANNING COMMISSION**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §3 85 .214, Southwest Region Planning Commission files this Motion to Intervene in the abovecaptioned proceeding. The Southwest Region Planning Commission does not take a position on the proposed project at this time, and seeks to intervene to monitor the progress of the proceeding.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

The Southwest Region Planning Commission (SWRPC) is established under New Hampshire Revised Statutes Annotated (RSA) Chapter 36. SWRPC serves its member communities by providing a range of planning services and technical assistance in the areas of land use, environment, transportation, economic development, emergency management, and information services. The SWRPC region consists of 34 communities in Cheshire, Hillsborough and Sullivan counties covering an area of approximately 1,000 square miles and with a population of just over 100,000. The SWRPC communities of Fitzwilliam, Greenville, New Ipswich, Richmond, Rindge, Troy, and Winchester are located directly along the proposed NED pipeline corridor. In addition, other SWRPC communities are located within close proximity and/or adjacent to the proposed corridor such as Sharon and Temple. SWRPC been an active participant regarding the NED proposal by gaining an understanding of both natural gas pipeline siting issues and the Commission's process, reviewing the proposal itself, providing factual information regarding the proposal, and assessing potential and/or anticipated impacts of construction and operation of the proposal on a range of physical and cultural resources within the SWRPC planning district. To continue to serve in these and related roles through the remainder of the Commission's review process, and with a primary intent to represent the best interests of resources of Southwest New Hampshire and its residents, SWRPC seeks to intervene to monitor the progress of the proceeding.

B. Description of Impacts

Southwest New Hampshire will be directly impacted by the NED proposal. As described in the proposal at the time of this filing, seven communities serve as host to the approximately 37 mile pipeline corridor in the SWRPC planning district. The proposal also includes a number of above-ground facilities sited throughout the project area as well as the Market Path Mid-Station 4 compressor station, proposed to be sited in New Ipswich. Additional communities are located in areas within close proximity and or adjacent to the facilities of the proposed project. It is expected that these facilities will result in impacts to natural, agricultural, recreational, and historic resources in the SWRPC Region. More specifically, resources which may be impacted include but are not limited to soils, ground and surface waters, wetlands, vegetation, wildlife, air, recreation, historic, and economic. Critical facilities which may be impacted by the proposal include transportation and

roadway infrastructure, public and private drinking water supply wells, municipal water and sewer systems, storm water, drainage, and electric utilities. In addition, the proposal raises concerns for the public health and safety of residents who live in proximity to the proposed pipeline corridor and above-ground facilities, and calls into question the capabilities of the emergency response personnel within the impacted communities and beyond in the event of an emergency situation.

SWRPC is concerned that the project proponent has not provided meaningful and quantifiable data and information which adequately demonstrates the socioeconomic benefits the region would realize from the approval of this proposal. Nor has the project proponent demonstrated sufficient need for the project to justify the adverse impacts to the region's natural and cultural resources.

In its continued review of the NED proposal, SWRPC is committed to fostering the orderly development of the region. In doing so, SWRPC will utilize Monadnock Region Future, the adopted regional plan for Southwest New Hampshire, as a primary resource and as a basis for its review, findings and recommendations. SWRPC endeavors to ensure that the proposed project is, on balance, consistent with the information contained and direction provided in the regional plan.

C. The Southwest Region Planning Commission's Motion to Intervene Must Be Granted

SWRPC satisfies the standard for intervention under the Commission's regulations. As discussed above, SWRPC's interests are directly impacted by the proposed project, and no other individual or organization can adequately represent the SWRPC's unique interest in this proceeding. SWRPC respectfully requests that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The Southwest Region Planning Commission should be added to the Official Service List, with-all notice and communications in this proceeding addressed to the contacts listed below:

Name: Tim Murphy, Executive Director
Address: Southwest Region Planning Commission
37 Ashuelot Street
Keene, NH 03431
Phone: (603) 357-0557
Email: intervenor@swrpc.org

III. CONCLUSION

Wherefore, in light of the foregoing, SWRPC respectfully requests that the Commission grant this motion to intervene and be allowed to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,

Tim Murphy,
Executive Director

Individual	bjjah@gmail.com	

Basis for Intervening:

I am requesting intervenor status opposing the Kinder Morgan/Tennessee Gas Pipeline/Northeast Energy Direct (NED) project docket #CP16-21-000.

I am a landowner who will be adversely affected by the construction of this proposed pipeline and the proposed location of MID compressor station #4. Our land, which my husband and I have owned for 25 years, located in Sharon and Temple NH, is going to be our future homestead. The property is within a one mile of the proposed pipeline and within three miles of the proposed MID compressor station #4compressor station #4 in New Ipswich, New Hampshire.

I am concerned that this project will have an adverse effect on my property values.

I am concerned that this project could have on adverse effects on the quality of the water and air. The proposed compressor station, with its toxic emissions, and the pipeline, with possible leaks, could contaminate the local water supply and/or affect the air quality in the area.

I am concerned about the effect that this project will have on our existing tree farm and all the wildlife in the area.

I am concerned about the noise, particularly during blow downs.

I am concerned about the light “pollution” that may be present in the nighttime sky.

I am concerned about the possibility of an accident involving high-pressure gas that could cause catastrophic results. The Temple Elementary School is dangerously close to the proposed compressor station.

But I am mostly concerned with the possible adverse long-term effects to the health of my kids and my grand kids and for everyone who lives in these rural communities.

I am concerned that there are not enough local, regional and even national common good benefits from this project to even begin to justify subjecting us to these dangers.

20160114-5146

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION
Tennessee Gas Pipeline Company, LLC
Docket No. CP16-21-000
Northeast Energy Direct Project (NED)

Motion to Intervene and Protest of Robert T. and Jean P. Ford (“Fords”), Upper Gap Mountain Road, Fitzwilliam, NH 03447

The Fords are directly and negatively impacted by the proposed pipeline in the above proceeding, the destruction and loss of land caused by its installation, and the dangers, economic loss, and decreased property value due to its continued operation. NED proposes to forcibly take by eminent domain permanent construction and pipeline easements, temporary construction easements, temporary workspace easements, and staging easements all of which will permanently destroy our property, reduce its economic value, and forever damage its historical significance (our home is a 1790 cape built by a Revolutionary War soldier who is commemorated in Town Hall). NED will directly and negatively impact our land and lives in several ways, including but not limited to the following: (1) our residence and farm buildings are within close proximity to the pipeline and the proposed route will cross sections of our land, (2) temporary construction areas are located on our land and will negatively impact surrounding dirt roads we have an ownership interest in, (3) our property is vulnerable to structural damage, landslides, contamination and loss of drinking water aquifers and water quality, damage to wetlands, loss of wildlife habitat and rare species, the loss of trees, and is in the incineration zone, (4) our property will be negatively impacted by the loss of forested areas, loss of quiet enjoyment and tranquility, loss of environmental quality, and the loss of sound buffers during and after construction, as well as numerous other safety hazards (such as being within a blast radius) including chemical releases in the air and ground and other hazards due to the pipeline’s location adjacent to a high voltage substation, (5) our property and trails will be forcibly taken by eminent domain proceedings, (6) we are donors of conservation land, conservation funds, and benefit from conservation-based IRS tax deductions and the pipeline constitutes a wrongful breach of IRS regulations, charitable trust protections as well as other perpetual protections intended for conservation land, and (7) our property lines have been inaccurately represented and misidentified on the maps filed with FERC and we are currently economically harmed by these misrepresentations.

We question the need for the pipeline relying on numerous reports, including the Massachusetts Attorney General’s independent study, and question the pipeline’s location through untouched virgin forests such as ours and other pristine conservation land, as compared to a more appropriate location along existing pipeline corridors and other hardscape/roadway infrastructure.

For these reasons, the Fords request that FERC grant this Intervenor request and/or reject and deny the Northeast Energy Direct Project application.

Basis for Intervening:

I have lived within 1/2 of a mile of the proposed compressor station sight for my whole life. My wife, two teenage children, and I enjoy countless hours engaging in numerous outdoor activities year round. These activities include jogging, golfing, boating ,swimming, fishing,lacrosse, football, basketball, and water skiing. All of these activities are on or around Burden Lake, the second largest body of water in Rensselaer county. The emissions from the proposed compressor station threaten the air and water around my house and lake in a variety of ways. The airborne emissions from the station will harm the air that we breathe and the water that we swim, ski, boat, and fish on. The light pollution will ruin our many beautiful starlit evenings and the noise pollution will disrupt our usually quiet and tranquil rural setting. The dangers associated with living in

the incineration zone speak for themselves. The intangible resultant decline in our homes value is something that will only be realized after the fact. The location of the Dewey Loeffel toxic waste site within 1.5 miles of the proposed site should strongly be considered with the required blasting that will be necessary. This could disrupt the veins in the ground and result in numerous contaminated wells. Please consider all of these facts and either move the compressor station or cancel the entire project!

Basis for Intervening:

My husband and I live in the house we own in Wendell, Massachusetts. I have an interest which may be directly affected by the outcome of the proceeding because I am a member of an impacted community who has concerns about various impacts to the local

economy/environment/aesthetics/health. Of special concern is the seriously unstable Mormon Hollow demolition debris landfill which could be caused to slide into the Millers River and onto the railroad tracks if blasting occurs in the area. Another real concern is the affect of the release of gas from the compressor station in Northfield on the air in Wendell. Careful analysis suggests that there is no need for this pipeline and there are more environmentally sound solutions to energy needs.

I live in Florence, MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I want to see our commonwealth investing in clean energy and demand side management programs to reduce consumption of fossil fuels. I see this project as directly standing in the way of such progress and contributing to more greenhouse gas emissions rather than reducing them. This will further jeopardize our health, our children's health and the biodiversity of the planet.

Northeast Energy Direct Project)	

MOTION TO INTERVENE AND PROTEST

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Town of Hudson, New Hampshire ("Hudson" or the "Town") hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Town opposes the construction of a natural gas transmission pipeline and other facilities known as the Northeast Energy Direct project ("Project") due to the adverse impacts that will be sustained by the Town, and therefore seeks party status to protest the proposed pipeline, and fully protect the Town's interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. The Town is committed to enhancing and protecting the quality of life of all its residents, workers, and businesses, and is greatly concerned for those who live, work, and recreate near the proposed pipeline route. There are substantial and real environmental, economic, and health threats to the

Town arising from the construction and operation of the pipeline within the municipality.

2. The proposed pipeline will run through 2.53 miles of the Town and within the right of way of public streets and on other property owned by the Town. It will cross conservation lands, forestland, wetlands, public infrastructure, private homes and private wells. The proposed location of the pipeline is intrusive, and threatens to disrupt the rural character of the area that our residents currently enjoy. Additionally, construction will impede roadways and cause traffic and transportation disruptions along with related interruptions of public services along Kienia Road, and Route 111.
3. There are also approximately 43 residences that the pipeline will intersect and an additional 95 residences within 500 feet of the proposed pipeline and these residents are deeply worried about the reduction in value of their homes, and the difficulties they may encounter in refinancing, and in obtaining homeowner's insurance for their properties. Faced also with the looming threat of the forcible taking of their property to facilitate the construction of the Project, these citizens are uniquely harmed by the Project and the Town is obligated to defend them from encroachment by the pipeline. Moreover, the Project threatens public safety by placing fire and explosion hazards in proximity to residential areas and subjects the Town and its residents to an ongoing fear of such catastrophic incidents.
4. Hudson is responsible for the protection of both its natural environment and the health and welfare of its residents and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project. Accordingly, Hudson has a substantial interest in the outcome of this proceeding. Moreover, given the Town's expertise and familiarity with the locale of the proposed pipeline and the proposed alternative site locations, its participation in the abovecaptioned proceeding will significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual should be included on the service list for this docket and all communications should be sent to:

Mr. Stephen A. Malizia
Town of Hudson
12 School Street
Hudson, NH 03051
(603) 886-6024
smalizia@hudsonnh.gov

III. CONCLUSION

WHEREFORE, the Town of Hudson respectfully requests that it be permitted to intervene in this proceeding with full rights to participate in all further proceedings.

Respectfully submitted

Stephen A. Malizia
Town of Hudson
12 School Street
Hudson, NH 03051
(603) 886-6024

RESOLUTION

Board of Selectmen

**Reaffirming the July 9, 2014 Town Meeting vote in opposition of the
Northeast Direct Project**

January 6, 2016

WHEREAS, at a Special Richmond Town Meeting on July 9, 2014 by a majority voted to adopt the attached NON-BINDING RESOLUTION TO BAN KINDER MORGAN’S PROPOSED GAS PIPELINE EXPANSION IN RICHMOND, MA., and

WHEREAS, the Berkshire Eagle recently reported that federal regulators have asked Kinder Morgan to consider building the Northeast Direct pipeline on an alternate route that would colocate the new pipeline within the existing Kinder Morgan right-of-way gas pipeline that runs through the town, and

WHEREAS, while the Town of Richmond already hosts the TGP 200 system which enters Massachusetts in Richmond from Columbia County. This system is comprised of 3 pipelines (24”, 30”, 36”), a gas hub with a regulating station and 2 laterals (10”,12”), and

WHEREAS, the residents of the town of Richmond and the members of the Board of Selectmen remain steadfast in their opposition to the construction of the Northeast Direct pipeline through their town,

NOW, THEREFORE, BE IT RESOLVED

1. The Richmond Select Board, reflecting the expressed will of the residents of the town, hereby re-affirms its opposition to the construction of the Northeast Direct pipeline through Richmond, and
2. The Select Board will cause a copy of this resolution to be presented to FER(, Richmond’s state representatives, the Governor, our Congressman, our two Senators as well as the local press and media outlets.

So voted by the members of the Richmond Board of Selectmen, January 6, 2015

Marguerite Rawson

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISISON

In the Matter of)	Docket No. CP16-21-000
Tennessee Gas Pipeline Company, LLC)	
Northeast Direct Project)	

MOTION TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, Beaver Brook Association, Inc., a New Hampshire non-profit corporation with a mailing address of 117 Ridge Road, Hollis, New Hampshire 03049, hereby submits this timely Motion to Intervene.

1. Beaver Brook Association, Inc. is non-profit conservation organization which operates environmental education centers and a summer nature camp, offers workshops and recreational opportunities and maintain trails that are open to the general public on over two thousand acres which it owns in the towns of Hollis, Brookline and Milford, New Hampshire Much of the land is subject to conservation easements granted to Nichols Smith Conservation Land Trust.
2. Beaver Brook Association, Inc. is a landowner affected by the proposed Northeast Energy Direct natural gas pipeline project that is the subject of the above captioned Docket as land that it owns are crossed by an alternative route (See Resource Report 10). A portion of the affected land is subject to a conservation easement. The construction of the proposed pipeline is prohibited by the terms of the

conservation easement, and is contrary to the mission of Beaver Brook Association, Inc.

3. As an affected landowner, Beaver Brook Association, Inc. has a direct and substantial interest in the outcome of the proceeding, and therefore moves to intervene and to participate as a party in the proceeding.
4. The following individual should be included on the service list for this docket, and all communications should be sent to:

Drew Kellner, Chair
Beaver Brook Association, Inc.
117 Ridge Road
Hollis, NH 03049
(603) 465-7787
E-mail: service@bbanaturecenter.org

E-mail communication is preferred.

WHEREFORE, Beaver Brook Association, Inc. respectfully requests that it be permitted to intervene in this proceeding with full rights of party status to participate in all further proceedings.

DATE: January 14, 2016

Respectfully submitted,

BEAVER BROOK ASSOCIATION, INC.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	shelleygeller555@yahoo.com	

Basis for Intervening:

I live a mile away from the proposed Kinder Morgan/Tennessee Gas Northeast Energy Direct (NED) pipeline in the town of Stephentown, New York. Because living one mile away from a hydro-fracked gas pipeline in a state which has banned hydro-fracking is an outrage, I wish to formally request intervenor status in all FERC proceedings regarding the NED under docket number CP16-21.

The inverse logic that would allow a fracked gas-carrying pipeline to be built in my town is obvious to me. Additionally, living so close to it and the proposed compressor station in the neighboring town of Nassau, is too close for comfort. I fear the following:

1. the inevitable, constant methane leakage and its effect on my health;
2. leakage of the toxic chemicals used in the fracking process and their impact on my area's environment;
3. the possibility of a catastrophic event;
4. possible contamination of my well water, damage to my region's aquifer(s) due to construction and ongoing underground gas seepage;

5. reduction of my property's value, as well as the increase of local taxes and electricity rates;
6. the noise, air pollution, inconvenience, traffic disruption, and damage to my area's infrastructure during construction.

In a world struggling to control greenhouse emissions (largely due to burning fossil fuels), why would we build yet another contributing part of the problem? The price of renewable energy sources continues to fall and its efficiency continues to improve, so why would we build a new pipeline instead of improving the efficiency and capacity of the old ones while increasing our investment in renewables? In a year that has seen a major methane leak from aging, under-inspected and regulated infrastructure, why would we add yet another possible "accident waiting to happen?" Why would another carbon-burning, greenhouse-emitting part of old technology be added to our vast, close-set, intertwined pipeline web? To profit an already very profitable company? Most of the gas is slated for export, not domestic use. The small percent that will be used domestically will not be for New Yorkers. Why, then, would a private company's bottom line be more important than the safety, health, and well-being of our country's citizens? Although many think that gas is cleaner and safer than other energy sources and provides the "bridge" between the old fuels and the new, it doesn't, contributing more to climate change than burning carbon and statistically no cleaner or safer than nuclear. For all of these reasons and more, I will be directly and/or indirectly affected by construction of the NED. For all of these reasons and more, I am interested in everything concerning the NED and its application to FERC. For all of these reasons and more, I respectfully submit my request to become an intervenor in all proceedings related to docket CP16-21.

Basis for Intervening:

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION
Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct Project

MOTION TO INTERVENE OF JAMES MALAPAN

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project proposed by Tennessee Gas Pipeline Company, LLC, a subsidiary of Kinder Morgan, Inc. Communications concerning this proceeding should be served upon me as follows:

James Malapan, PO BOX 85, Pelham, NH 03076, 603-490-5846, jmalapan@gmail.com

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

-Filing to intervene as a resident of the town of Pelham, NH directly impacted by the Northeast Energy Direct project.

-Filing to intervene as President of the Little Island Pond Association of Pelham, NH representing over two hundred families. The Northeast Energy Direct Project directly impacts the lake (Little Island Pond). The

Northeast Energy Direct Project is sited less than 1,000 feet from the lake's shore, putting it directly in the lake's watershed. This watershed is in the Peabody Town Forest conservation area, and should be protected. Abutting the conservation land is Camp Runels, owned and operated by the Girlscouts of Eastern Massachusetts. For over 80 summers, the girlscout campers have enjoyed the lakeshore at Little Island Pond. A separate parcel of land surrounding Little Island Pond was purchased by the town of Pelham as the Little Island Pond Conservation Area in order to protect the lake's watershed and was made possible by a generous grant from the State of New Hampshire's Land and Community Heritage Program (LCHIP). The PA State Department of Environmental Protection announced an \$800,000.00 settlement on Dec. 24, 2014 with Tennessee Gas Pipeline Company, a subsidiary of Kinder Morgan, for multiple violations of Pennsylvania's Clean Streams Law." <https://stateimpact.npr.org/pennsylvania/2014/12/24/dep-reaches-800000-settlement-with-pipeline-company/> This has us greatly concerned over the safety and quality of the water of Little Island Pond should the Northeast Energy Direct Project move ahead as currently planned, traversing the lake's watershed. We are concerned about and strictly oppose the use of any water that may be taken from the lake during hydrostatic testing. No hydrostatic testing should occur within this watershed and threaten to contaminate the lake with the effluent from a hydrostatic test failure or dump site. Because this lake is spring fed, there are very real concerns regarding the possibility of contamination due to soil compaction and chemical contaminations secondary to alteration of surface water and groundwater pathways as a result of blasting, construction activities and tree loss. Further, Little Island Pond drains into one of Pelham's prime wetlands which feeds Pelham's aquifer, the source of drinking water for a vast majority of Pelham's 13,000 residents. We also have concerns that contaminants and emissions from the Dracut Compressor Station, metering stations, and other pipeline support infrastructures will be less than a mile from this water resource. Introduction of methane, mercury, lead and other air- and waterborne contaminants are of great concern in this lake environment, not only with respect to the human residents in the area, but to the waterfowl and wildlife there. The Nongame and Endangered Wildlife Program New Hampshire Fish and Game Department has the Common Loon listed as a "threatened" species. Common Loons are thriving at Little Island Pond. Please accept my motion to intervene in these proceedings.

20160114-5167

RENSSELAER COUNTY LEGISLATURE

Introduced by Legislator(s) Brownell, Shannon, Danaher, Herrington, Bayly, Breselor, Fiacco, Goodermote, Hoffman, Reid, Stammel, Tesman, Walsh

Date January 12, 2016

Resolution No. P/44/16

RESOLUTION REQUESTING THE FEDERAL ENERGY REGULATORY COMMISSION (FERC) TO GRANT RENSSELAER COUNTY'S MOTION TO INTERVENE IN THE MATTER OF THE NORTH-EAST DIRECT PIPELINE PROJECT

WHEREAS, That this Legislative Body has long endeavored to protect the health, safety, quality of life and environment for those who live and work in Rensselaer County; and

WHEREAS, A Northeast Energy Direct pipeline and gas compressor station project has been proposed for Rensselaer County, and will present a number of health, safety, environmental and quality of life issues; and

WHEREAS, This compressor station proposed for Nassau will be 41,000 horsepower, powered by turbine engines which produce sound up to 113 decibels and operate 24 hours/7 days a week requiring stadium style lights that will light the 10 acres needed for the compression station complex in a rural neighborhood; and

WHEREAS, Studies have shown that air quality in the vicinity of compressor stations can be impacted by chemicals, including volatile organic compounds (VOCs); and

WHEREAS, This Legislative Body has many concerns regarding the health impacts of the proposed compressor station and pipeline project including its impact on private and public water supply wells; and

WHEREAS, The current project plan depicting a ten mile distance between shut off valves on the pipeline is insufficient for fire and EMS personnel to respond; and

WHEREAS, The construction of the compressor station and pipeline will potentially impact the infrastructure in the area affected; the movement of heavy trucks and equipment along state, county and town roads has the potential to cause damage to the roads, traffic patterns and general quality of life issues for Southern Rensselaer County residents; and

WHEREAS, Kinder Morgan, the company constructing the pipeline and compressor station, has failed to respond to Rensselaer County's concerns about the project, including the above-mentioned; and

WHEREAS, Rensselaer County has determined that intervention is necessary to enable the County to protect its residents, natural resources, water supply, roadways and quality of life; furthermore intervention will afford Rensselaer County the opportunity to monitor the project and its proceedings, while addressing residents' concerns; and

RESOLVED, This Legislative Body does hereby request that the Federal Energy Regulatory Commission (FERC) grant Rensselaer County's Motion to Intervene in the Northeast Direct Pipeline Project; and, be it, further

RESOLVED, That the Clerk of this Legislative Body is hereby directed to transmit a copy of this resolution to the Federal Energy Regulatory Commission.

Resolution ADOPTED by the following vote:

Basis for Intervening:

I live in Shelburne Falls, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a resident who lives in the "blast radius" and whose daily commute crosses over the proposed pipeline route, so I would be at physical risk. I am also a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities. Additionally, I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health. I demand that this project not proceed.

Basis for Intervening:

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street NE, Room 1A
Washington, DC 20426

Re: Tennessee Gas Pipeline Northeast Expansion Project

RE: Northeast Energy Direct, CP16-21

Dear Secretary Bose,

As a long-time resident and multiple property owner of Dracut, Massachusetts, the NED Project CP16-21 will impact my property, health, environment, farm, crops, animals, wells and financial well-being. I travel to work and to my properties daily and the proposed facilities and amount of construction and road closures will have an enormous impact on me.

I use well water in East Dracut and I am particularly concerned about the fact that the development plans by Kinder Morgan and the blasting from construction are likely to impact the migration of toxic chemicals from the contaminated former EXXON site at 970 Broadway Road. This contamination was detailed in a letter and proposal reviewed at the meeting of the Dracut Board of Health on April 1, 1982 and is fully documented at the Mass DEP web site at the following URL: <http://public.dep.state.ma.us/fileviewer/DefaultScanned.aspx?documentid=24154>

As a chemist, I know that many of the chemicals involved in this endeavor are toxic, carcinogenic and never dissipate after they are emitted whether it is from construction, building, testing, "accidents" or the 75+ blow-downs scheduled per year.

I am openly opposed to taking any Article 97 conservation land for the purpose of profit.

Sincerely,

Lisa Lipomi
34 Gilbert Street

20160114-5173

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we , name here , file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Jason Ward
64 Cart Path Rd
Dracut MA 01826
978 4599252
Jaward13@gmail.com

II. INTEREST OF PETITIONER

The Pipeline Proposed by Kinder Morgan will directly affect me and my family. The new route for the pipeline is proposed to run directly through my back yard very close to my house and family. I am very concerned that a compressor station is being proposed to be built less than one quarter mile from my home. The proposed location of the compressor station is less than a mile from an elementary school and directly on top of a rock quarry that blasts at least four times a month. My home is also downwind from the proposed location and the Methane and other toxic elements that will be spewed from the compressor station will directly impact my neighborhood and my children’s health and well-being. I ask that you please consider stopping the proposed Pipeline and Compressor station from entering an area of Dracut MA that is home to over 200 children under the age of 10.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 14th day of January, 2016.

Jason Ward
64 Cart Path Rd
Dracut MA 01826

20160114-5174

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct Project (NED)

Motion to Intervene and Protest of Ford Law Offices and Law Library (hereinafter “Ford Offices”), Robert T. Ford, Esq. sole practitioner, Upper Gap Mountain Road, Fitzwilliam, NH 03447

The Ford Offices are directly and negatively impacted by the proposed pipeline in the above proceeding, the destruction and loss of land caused by its installation, and the dangers, economic loss, and decreased property value due to its continued operation. NED will directly and negatively impact my land and business in several ways, including but are not limited to the following: (1) the Ford Offices, law library, and business is within close proximity to the pipeline and the proposed route will cross sections of business land and within the incineration zone, (2) temporary construction areas are located on business land and will negatively impact surrounding dirt roads and visitor and client access to the Ford Offices, (3) my business property is vulnerable to structural damage and landslides, loss of drinking water aquifers and water quality, and is within the pipeline blast radius, (4) my business activity and property will be negatively impacted by the loss of forested areas and loss of sound buffers during and after construction, as well as numerous other safety hazards (such as being within a blast radius) including chemical releases in the air and ground due to the pipeline’s location adjacent to a high voltage substation, and (5) my business property will be forcibly taken by eminent domain proceedings, (6) the Ford Offices regularly assist conservation organizations in the perpetual protection of important land and maintain that the pipeline constitutes a wrongful breach of IRS regulations, charitable trust protections as well as other perpetual protections for conservation land, and (7) my property lines have been inaccurately represented and misidentified on the maps filed with FERC.

Ford Offices question the need for the pipeline relying on numerous reports, including the Massachusetts Attorney General’s independent study, and question the pipeline’s location through untouched virgin forests such as ours and other pristine conservation land, as compared to a more appropriate location along existing pipeline corridors and other hardscape/roadway infrastructure.

For these reasons, the Ford Offices request that FERC grant this Intervenor request and/or reject and deny the Northeast Energy Direct Project application.

20160114-5178

Docket No. CP16-21-000

Tennessee Gas Pipeline Company, L.L.C., A subsidiary of Kinder Morgan

Northeast Energy Direct Pipeline

**MOTION TO INTERVENE
IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission’s Rules of Practice and Procedure, 18 C.F.R. §385.214, I file this Motion to Intervene in the above-captioned proceeding.

I oppose the project because approval and the consequent construction of the NED pipeline would amount to destruction and disruption of a rural area which would significantly impact my farm (Kenburn Orchards) and compromise my ability to attract tourists and visitors to my Bed and Breakfast. The impact on the overall environment, economy and quality of life for residents and visitors to the region would be significant. Therefore, I seek party status to protest the proposed pipeline, and fully protect my interests.

STATEMENT OF INTEREST

A. Description of Impacts

I will be directly impacted and harmed by the proposed project because

the economic health of my farm and business rely on the influx of visitors who come to western Massachusetts throughout the year to enjoy the pristine, scenic and undisturbed natural surroundings — open land, farm fields and orchards, farm stands, forests, and the rural, small-town environment. The construction disturbance and ongoing presence of a major gas pipeline will adversely affect essential tourism and recreation related income. Presence of the pipeline will deter tourists from visiting the area and staying at my Bed and Breakfast.

Pipeline development is contrary to the Shelburne Open Space and Recreation Plan. The pipeline would cut through and fragment wildlife corridors and habitats expressly cited for protection. The pipeline would pass through and along highly sensitive ecosystems, wetland resource areas, vernal pools, cold river fisheries, areas of critical habitat for rare species, protected forests, prime farmland and permanently protected open space.

B. My Motion to Intervene Must Be Granted

I satisfy the standard for intervention under the Commission's regulations. As discussed above, I am directly impacted by the proposed project, and no other individual or organization can adequately represent my unique interest in this proceeding. Accordingly I respectfully request that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The following should be added to the Official Service List, with all notices and communications in this proceeding addressed to me as listed below:

Name: Laurence K. Flaccus, Owner
Kenburn Orchards
Address: 1394 Mohawk Trail
Shelburne, MA 01370
Phone: 413-625-6116
Email: LKF2@RCN.com

III. PROTEST/COMMENTS

A. TGP's application and its Environmental Reports are incomplete and information is missing on the exact location and construction of the pipeline. Missing details make it difficult if not impossible for me, other property owners and town officials to know and assess the actual project impacts.

B. TGP has not yet made a compelling case that there is a need for additional pipeline capacity to serve Massachusetts' energy needs. I support the proposal that FERC simultaneously review all pipeline proposals now before it collectively, not individually. Such a side-by-side review will show how much additional gas infrastructure, if any, is needed in Massachusetts and the New England region, and which other measures for meeting regional energy needs create the least impacts and environmental damage. When such a review is complete, I believe it will be clear there are even lower impact and more effective methods of meeting our energy needs than building a new pipeline.

C. Massachusetts Attorney General Maura Healey commissioned a study that has made a compelling case that the NED Pipeline is not needed. I concur and urge FERC to consider the recently completed study in its evaluation of whether the need for this pipeline and public benefit to Massachusetts residents justifies the taking of property and the environmental impacts it will make.

D. TGP has not made a compelling case that the need could not be better served by less intrusive, more sustainable and lower cost methods. The NED Pipeline should not be approved by FERC without establishing that it is the most effective means of meeting our intermediate and long-term energy needs as a state, and that it will not result in overbuild or potentially unnecessary infrastructure.

E. I and other Massachusetts residents and customers of Eversource should not be required to pay for a gas export pipeline through infrastructure cost transfers embedded in long-term gas contracts. FERC must spe-

cifically reject the pass-through of infrastructure costs to ratepayers for any pipeline it approves, particularly if such a pipeline is transporting gas for export.

F. I believe the most efficient and lowest impact means of meeting our region's energy needs is to invest in energy efficiency. These measures include: building insulation, efficient appliances and industrial processes, residential and commercial solar generation, co-generation and re-use of waste heat. Repairing leaks in the current gas infrastructure must be a priority. By ramping up our investments in energy efficiency and renewable energy resources, any need for additional gas capacity can be met by installing efficiency investments. In summary, it is possible to make our current gas infrastructure more than adequate to transition the region toward a renewable energy future.

IV. CONCLUSION

Therefore, in light of the foregoing, I respectfully request that the Commission GRANT this motion to intervene and allow me to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,

Laurence K. Flaccus

Basis for Intervening:

Representing Regency at Methuen Condominium Trust, a community of 240 homes. Our community is located very close to a proposed alternative site for a compressor station -- the Brox quarry in Dracut, MA. In addition, Kinder-Morgan has indicated an intent to alternatively use this site as a Contractor Yard. Either use would have a severe deleterious effect on our community in terms of health and safety as well as our property values and quality of life.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	rclement37@yahoo.com	

Basis for Intervening:

- a) I live close to the proposed compressor station; I am concerned for the safety of my family.
 - o I am also concerned with the impact to the value of my property located at 38 Regency Drive in Dracut.
- b) I have a child who attends Dracut public schools, some of which are close to either the current or the alternate route for the NED pipeline

- c) I am a taxpayer in Dracut and I am concerned with loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services.
- d) I am a consumer of produce from Dracut farms and I am concerned the pipeline may cause industrialization and contamination of the water supply and crops that are part of my food supply
- e) I am a ratepayer for National Grid gas service or electric service and am concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals
- f) I am a Dracut resident. The NED project, due to number of proposed facilities and amount of construction and road closures proposed in town, would have a enormous effect on me.

Basis for Intervening:

I live in Warwick, Mass., and want to intervene in this proceeding to oppose the NED pipeline. I have interests that may be directly affected by the outcome of this proceeding.

- I am an electric ratepayer who expects to see an increase on my bills relating to helping NED pay for their proposed project.
 - I am aware of various studies (e.g. the Massachusetts Attorney General; the US Department of Energy) that show decreasing need for natural gas. The likelihood is great that KM will sell the Marcellus Shale gas overseas, further destabilizing prices and harming the local economy.
 - The prospect of the pipeline crossing through my town, and the proximity of the proposed compression station in the adjacent Town of Northfield, is already being identified by local realtors as the cause of declining home sales and prices, at a time when non-effected towns in the region are enjoying increased sales and prices. This affects me directly; I was widowed in December, 2015. My home is my only asset and I must sell as soon as possible.
 - I have concerns about environmental, economic, health, and aesthetic impacts of the proposed project.
 - KM has not yet answered many questions about its proposal and will not answer before April 2016. FERC lacks sufficient information on which to make a decision at this point.
 - I believe that an independent Federal agency lacks the authority to override provisions (Chapter 97, specifically) of the Massachusetts Constitution and allow protected lands to be taken by eminent domain.
- For these reasons and more I am interested in and would be affected by the Applicant's successful filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me intervener status.

Individual	info@thecentennialhouse.com	

Basis for Intervening:

My interest in intervening in the Northeast Energy Direct (NED) pipeline project is as a founder, along with my wife Joan, of the Northfield (Massachusetts) Area Tourism and Business Association (NATABA), established a decade ago to stimulate economic development in the town of Northfield, Massachusetts in response to the closing of the local boarding school that had been the source of jobs and commercial activity here for over 100 years. Since the school closing, significant state and local resources and hundreds of hours of volunteer time have been devoted to attracting tourists to the natural beauty and outdoor recreational assets—mountain trails, streams, Connecticut River, privately conserved lands, recently created and/or expanded state forests and other constitutionally protected lands—of this beautiful New England town.

Our interest is also as local historians who have studied and understand the value of Northfield in the eyes of the world. No forgotten backwater whose best days are behind it, Northfield is known throughout the world as the home of 19th century evangelist D.L. Moody, whose legacy lives on in the hospitals, orphanages and schools founded by his followers. Today, they continue to serve the world's poor and return "home" to Northfield frequently for inspiration and renewal.

Our interest is as preservationists who understand the value of Northfield's historic Main Street, which boasts an unrivaled collection of homes that are examples of early 19th century American residential architecture during the period 1811 through 1835. Currently, we are fortunate that these homes are being carefully preserved by conscientious homeowners who may be driven out by the carcinogens released by the proposed compressor station which will be sited in the hills above them and carried directly downhill at them by documented air currents. In addition to Main Street, there are several other historic neighborhoods

located closer to the path of the pipeline, such as The Ridge community.

Our interest in this matter is as owners of an historic bed and breakfast (established in 1981), who work with other business owners to rebuild the town's economy in partnership with one of the region's premier recreational facilities located here, and through the re-development of an historic bridge by the Massachusetts Department of Transportation, the Massachusetts Division of Conservation and Recreation and, not inconsequentially, federal funds. These entities are:

1. The Northfield Mountain Recreation Center (NMREC), owned and operated by GDF Suez, has developed a national reputation for its ability to host top tier, national outdoor athletic contests, such as Mainly Marathons (500 participants in 2015), Ragnar Relay (3,000 participants in 2015) and the U.S. Canoe and Kayak Association's national races planned for an estimated 1,000 participants in 2016. Local organizations also attracting visitors are the 111-year old Northfield Golf Club, located near the proposed pipeline, and the Northfield Trails Association, which introduces hikers to the beauty and challenge of the New England National Scenic Trail, established by Congress only a few years ago.
2. The Schell Bridge, built in 1904, is one of four Pennsylvania truss bridges in existence today in the U.S. In 2017, the state and federal governments will re-construct and re-open the bridge, closed since the 1980's, for hiking, walking and cycling. According to a study by the University of Massachusetts Center for Economic Development, the bridge, which will link to bike trails already in place in nearby Vermont and New Hampshire, will draw as many as 100,000 tourists to Northfield each year.

All of the natural resources and the physical assets either currently in place or currently in development that are based on their use and enjoyment, and the current businesses and community institutions relying on them for customers will be irreparably harmed by the proposed pipeline. Roads clogged with construction vehicles building the pipeline will be avoided by tourists. Racers dedicated to pursuing healthy lifestyles will not want to breathe our air, and far fewer well-educated outdoor enthusiasts will be willing to risk cycling through a town with a reputation for carcinogens in its atmosphere, reducing the use of the new bridge and diminishing its economic potential to a fraction of what has been predicted by the experts. As a consequence, the presence of the pipeline and the compressor will impede our efforts to attract the new outdoor recreation businesses and jobs that are currently anticipated.

As bed and breakfast owners, our very livelihood is at stake. We have already heard from prior guests that they will stop coming to Northfield if the pipeline project is approved. One, the owner of a cottage in the historic Ridge neighborhood, will abandon the summer home that has been the locus of his family since Moody's time. In addition to tourists, summer residents and their extended families are an important source of revenue, not only for our business, but for the other local businesses where they shop and the Town from which they currently buy municipal services. These cottages were paid for long ago, and can easily be abandoned if the pipeline comes through.

At ages 66 and 67 respectively, we are already in our second careers, and have invested over \$600,000--our life savings--in our business, an investment that will become worthless if the town deteriorates around it as the result of the NED project. Tourism has been one of the major industries in New England as a whole for 150 years, and is currently one of the top three industries in Massachusetts. The low population density and preserved natural resources in our region are not excuses for industrial incursion but the carefully planned and stewarded elements of a thriving larger economy.

Basis for Intervening:

I live in New Ipswich NH and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding because:

I am a landowner whose property abuts the pipeline route for approximately 1,080 feet. In some spots it will come within 200 feet of my home and my well.

My home is well within the "blast radius" so I would be at physical risk.

My water supply is at risk from the construction and operation of the pipeline.

My home is within 3 miles of the compressor station which will pose a health risk to me.

I can expect to see an increase on my electric bill relating to NED cost recovery.

There will be no benefit to myself or to any of the other individuals along this route.

If my well is comprised my home will become worthless. I have no other place to live.

I am retired and cannot afford to lose everything that I have worked so hard for.

Individual rahobbie@yahoo.com

Basis for Intervening:

I am seeking Intervenor status as an individual. The quality of life in the towns impacted by the NED will significantly and negatively and in perpetuity cause untold damage, by the proposed NED pipeline by TGP/ Kinder Morgan.

The personal safety & enjoyment of daily life in the areas delineated on the maps will be significantly impacted by building, staging and preparation for such every single day by the heavy truck traffic hauling, clearcutting, road building, pipeline installation and unannounced routine maintenance that would directly impact my life and enjoyment of based on noise, pollution via application of arborcides and the threat to life and limb caused by proximity to a pipeline that by sheer proximity renders the areas unlikely to be able to receive aid in the event of a mishap or explosion. The spraying of arborcides in perpetuity right along the farm fields and open areas pose a health risk to all w/ respiratory issues side and drifting across the field and ourselves would be breathing arborcides that will also leach into food sources -corn, cow corn, and pristine Deerfield River waters that surround much of village of Deerfield forever, is absolutely frightening.

We and so many here in our area cannot even use the gas that the pipeline is purported to carry- for our personal use- in the 8 towns of Franklin County, because we have no gas service along much of the route. None. We are being forced to lose land, homes and families and farms for a pipeline that does not serve our area or our homes except to endanger us in perpetuity.

Beautiful views will forever lost by clearcutting. Our town and landowners stand to lose valuable trees here along the proposed route that preclude soil erosion and flooding as well as performing the vital function of cleaning the air of pollution, and in my own area: soaking up road salts and traffic noise from Interstate 91N and S that run along the front of our property, across the road from our home.

Historic homes in the area are likely to have significant structural damage and beams may crack simply due to movement of earth and shifting as parts of the proposed NED pipeline would be trucked past our house

in close proximity, on a country road meant for scenic enjoyment, not heavy equipment. Traffic would be a dangerous thing here based on narrow, crowned roads. Neighbors and tourists could not even ride bikes or walk near here -across the entire span in Deerfield, MA -if NED comes along because NED would be trucked, bored, fracked, blasted and cut into the land at close range to humans, homes and pets. The data is faulty on all the inaccurate and ever-changing maps that Kinder Morgan has provided to FERC as part of their duty to let you know how many lives they would shatter in their quest to secure additional dollars for their shareholders at the cost of farm land, family homes, water, trees, historic Native American sites and our personal safety, in perpetuity.

For the record: the position of the water pipes- which are 8” and plastic- and are only 5 feet down and likely above the proposed prone-to-leakage NED pipeline. That bisection of NED under our water pipes would render the hydrant and water unreachable for our tiny volunteer FD in relation to the intended route if there was a mishap. They cannot fight a 200 foot high inferno, a 1/4 mile wide raging fireball with nothing but desperation.

The fracked, toxic, explosive gas is not even able to be used by this area. Our own state AG, Maura Healey, commissioned a third party, comprehensive energy usage study and needs forecast which determined and demonstrated, in Fall 2015, that NED and the gas it purports to be so necessary for the NE region is NOT NEEDED and is never going to be needed. Further, MA ratepayers would be expected to pay for the NED pipeline in a tariff in electric and gas bills, forcing ratepayers to pay for infrastructure that we cannot even utilize in these rural communities that do not even use gas.

I seek to intervene as a Massachusetts rate payer. I have rights based on being a consumer of Electricity and a resident who purchases utility services like Electricity along the route of the proposed NED. Too many living people, historic cultural assets and homes stand to be lost or destroyed in our area- by the proposed NED.

Therefore, I seek to Intervene.

20160114-5207

Submission Description: I am a seasonal resident and property owner in Davenport, Delaware County, New York. My property, 16.-2-30 will be irreversibly impacted if the North East Energy Direct (NED), Tennessee Gas Pipeline (TGP), pipeline is located as planned. My property will become worthless, unbuildable, unsealable, uninsurable and hazardous to my health and well being.

This pipeline would create massive privacy issues, and enable uninvited people to trespass. It would also create extensive harm to woods, water and wildness.

This pipeline will encourage more industrial development, including extraction of natural gas, which will dramatically alter the rural character of the community that I have enjoyed since 1963. I will never agree to a right of way on my property. Also, I request a full and complete cumulative impact analysis of this project and all directly and indirectly associated future projects.

I stand to suffer significant damages and irreparable harm if this project is approved and built. As no one else can represent my interest in this matter, I am filing this motion to intervene.

Basis for Intervening:

The proposed pipeline is not needed (we can do better with conservation and renewable energy), it would contribute to climate change, devastate much of our region's natural beauty, dump hundreds of tons of toxic chemicals into the air over its lifetime (making us sick), and occasionally explode, causing injuries and death. It's obviously a very bad idea.

Basis for Intervening:

I live in the town of Schodack, NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a land-owner directly impacted by the compressor station. I live less than a mile from the compressor station and I am very concerned about the health impacts to my family and friends who live in the area. I also live in the "blast radius" which will be a constant source of worry since my family and I would be at physical risk. I am also a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline. I am extremely concerned about the value of my property. I believe this will have a huge impact on my property value and ability to sell it.

20160114-5220

My motion: I live in Florence, MA and move to request intervenor status regarding the proceeding concerned with the Tennessee Gas Pipeline, LLC's NED pipeline. I have several interests that are to be directly affected by the proceeding. These interests are listed below not necessarily in order of importance. I believe my interests are not adequately addressed by other intervening entities. The reasons for this are also addressed below.

I am a Massachusetts resident who will be directly affected by the Northeast Direct Pipeline now and in the future in a number of ways:

Noise and industrial activity: My wife and I are and have been contributing members of the Trustees of the Reservation for many years and are regular users of the Notchview Reservation Property owned by the Trustees in Windsor, MA. This property is of great importance to me for its recreational and psychological

resources, which could be significantly negatively impacted by the NED pipeline. Issues of potential degrading of this resource in my life include the potential persistent and variable noise from a compressor station that has been proposed near the Reservation. The noise from the compressor station and its construction and maintenance could significantly degrade the property's value for me and others.

Loss of safe refuge due to risk of rupture: Additionally, the potential risks created for me and my children and grandchildren visiting that property and surrounding area due to potential ruptures with attendant incineration areas and/or explosions are of great concern to me and these risks would be shared by the parents of my grandchildren. These risks further degrade the value of the natural resource of the Trustee's property both as concerns being on the property and travelling to and from it. The property is currently a relatively safe haven for mental and spiritual replenishment due to the sense of safety and calm it creates. Introducing noise and increase risk degrade its value for me and my family.

Disruption of the supporting local rural environment: Furthermore, the area of Northwestern Massachusetts and Southern New Hampshire are valuable for the many protected natural areas accessible to me for my own physical, mental, and spiritual wellbeing and that of my family. I make frequent day trips to these local areas, which I consider to be part of my back yard and a big reason I have chosen to live in Western Massachusetts. I have been on firm ground to assume I would have lifelong access to several areas that would be preserved for their valuable habitat given that many of these have been specifically protected by the Commonwealth of Massachusetts. Running an industrial facility (the pipeline) through this area will potentially degrade these many areas set aside for wilderness or semi-wilderness experiences and wildlife habitat enhancement. Both the existence of the pipeline facilities (the pipe itself, the compressor stations, blow down valves, pigging stations, the maintenance equipment, and other equipment) and associated industrial activities related to the running, upkeep, maintenance, and emergency preparedness and responses further increase industrial activity. If this pipeline were necessary for the general good, I would still assert that I qualify for intervenor status in order to advocate for the least harmful ways to provide for the general good with minimal impact on the human and wildlife communities that provide such richness and potential future richness for me, my family, others, and the rural communities within which I live.

No need for pipeline for New England: It is my current conclusion that this pipeline is not necessary for the general good. It is in fact overall harmful to the wellbeing of the biological world. Physical, liquid, and gaseous materials created by carbon fossils should stay in the ground. The Paris Climate Talks have begun to reap a shift in investment in renewable energy sources to replace reliance utilizing carbon fossils for fuel. The viability of using carbon fossils for fuels is increasingly called into question. Building infrastructure based on assumed continued use of carbonized fossils for fuel is more and more likely to leave Western and Northern Massachusetts and Southern New Hampshire with the problems associated with an abandoned property with unknown potential contaminants. This would leave us, as Massachusetts taxpayers and utility rate payers with the burden of expenses for this industrial facility, which would come at the expense of other needs and priorities.

I would be affected by the tariff under consideration requiring utility customers to contribute to this project. I am a customer of National Grid Electric. The Commonwealth of Massachusetts is considering an unprecedented tariff on electric utility customers, which would include National Grid Customers, to pay for this pipeline. This means that electric rate payers will be footing the bill to pay for the infrastructure for a pipeline that is, at a minimum, hugely larger than even the most generous estimates of what is needed to supply Massachusetts with natural gas for electricity and home heating. Moreover, as I and others have testified at public meetings in the FERC process, it is clear that this pipeline is being built primarily for export of natural gas rather than for the benefit of Massachusetts or the combined New England states.

[Background: Concerned about possible shortages of energy grid supply once the region's coal, oil and nuclear plants are off-line in a few years, all six New England Governors signed a letter, urging regional cooperation between them to make sure the grid stays sufficiently supplied. They asked ISO New England and NESCOE to investigate what would be necessary. Studies by these organizations resulted in a plan to upgrade efficiency of the grid and to bring an extra 0.6 Billion cubic feet a day (Bcf/day) of natural gas

capacity into New England, along with an unprecedented tariff on all electric ratepayers to cover the costs of the new infrastructure.

According to Kinder Morgan / Tennessee Gas Pipeline's meetings with affected communities, their pipeline proposal is in direct response to this plan, but they pipeline they're proposing is 1.3 Bcf/day (though that could increase back up to the originally proposed 2.2 Bcf/day).

Concerns over how the Governor's letter and NESCOE's creation of the tariff came about were raised in a report from Conservation Law Foundation, which presented a substantial amount of evidence that closed door meetings with energy companies led to the request for more pipeline capacity.(Source: NoFrackedGas-inMass.org)]

My interests and concerns are not adequately addressed by other intervenors:

My interests and concerns are not adequately represented by other entities. In addition to the specific ways in which I am directly affected by the proposed pipeline, I also have additional concerns that are partially, but not wholly, represented by other individuals and entities that are current or potential intervenors in this process.

I represent that there should be specific attention given to the observable fact the TGP is one component of a larger non-legally defined global entity that could be named as the global carbon-burning industry collective. It is unmistakable to me that the business entities that are initiating the building of this industrial pipeline facility are members of a family of self-perpetuating corporations focused on the survival, growth, and reproduction of themselves and their "family" members. Because of the limited self-interest of this "family" of entities in the local communities, the likelihood of conflictual relationships with the current human and biological communities is high. Given their gigantic size compared to me and my compatible communities, their likelihood of prevailing in a conflict of interests is much higher than mine and much higher than that of my neighbors or of organizations such as the Trustees of the Reservation of which I am member. While these entities are enormously larger than I, they are also no more than complex creations of our society. They are not actual living beings yet they can have profoundly negative effects on actual people and biological communities.

Global corporations and companies are predominantly life alienated non-physically defined, but substantial robotic creations: I refer to these businesses as robotic because they are managed by operating and decision-making systems that are very specific. They are "programmed" (through their business plan, articles of incorporation, shareholder obligations, etc.) to operate within national and global legal and financial environments. Once a company is publically traded it is expected to hold responsibility for returns on investment at the highest of priorities. Even before becoming publically traded businesses are overwhelming aimed at income and profit generation. Moreover, I say these are robotic instructions because they treat the human and biological communities within which they reside as external to them and sometimes as hostile entities.

It was perhaps assumed that these entities would maintain a compatible relationship with people generally, but these entities were not given specific operating instructions on how to integrate their financial and legal obligations and interests with people, human communities, and biological communities. In fact, the lack of instructions for this biological compatibility has led to an overall hostile relationship to global life when the robot's needs conflict with people or biological entities. This hostile relationship alternates with stances of indifference or neutrality when there are no conflicting interests. Sometimes the company can choose to work to foster good community relationships that foster a friendlier attitude toward the company. However, the friendlier relationship is a choice of the company that is not assured. Furthermore, the communities within which a company resides has no firm avenue to have voice in the company decision.

These robotic creations (that is to say corporate and global sized companies and the informal, but real non-legally defined collections of these companies) have been programmed to be guided by financial, business, and legal rules, regulations, and operating instructions with little or no incorporation of instructions for the protection and enhancement of human or biological health and wellbeing. I propose and believe that it is

the responsibility of FERC to recognize the rights of people and life in general over the rights of non-living robotic creations in the forms of corporate and other legal entities. While global corporations and other companies outweigh individuals in size and resources, people are intrinsically and exponentially more important than any robotic creation regardless of the enormity of its size and presence. This is an important reason for the existence of FERC.

In order to be effective in discharging its responsibilities FERC must not consider only the content, technical procedural issues, and individual arguments presented by petitioners of new energy projects. I believe, to be effective, FERC must assess and analyze the general and global pattern of behavior of the petitioner paying particular attention to the disclosed and undisclosed self-interest of the petitioner in relation to its interactions with people and human communities. Corporations have shown themselves to be highly capable of analyzing and taking advantage of patterns of interaction and behavior for their own benefit. In order to address this reality, FERC must also take advantage of the rapidly increasing wealth of information related to mega-data collection and analysis and use it particularly to assess the patterns of behavior and self-interests of global-sized petitioners.

Companies can join together in groups with other entities worldwide. Whether these are legally defined, non-legally defined, or informal groups of companies or executive, they can be robust entities with major influence in the world. It would be naïve to think that corporations do not share strategies and resources at a certain level especially when there is mutual benefit to be gained in managing an external threat or perceived hostile entity. It would also be naïve to think that corporations in competition would not be seeking ways to unlock the secrets and methods of its competitors and taking note from what is witnessed as effective. Corporations do work in planned and unplanned ways as a group in certain situations. In the case of carbon-burning industries, one company has a lot to gain in noting how another company handles a regulatory body such as FERC. They have a lot to gain in learning how other corporations handle citizen and other affected parties complaints and objections. I propose that FERC take advantage of the same sort of mega-data and analysis technologies and methods that corporations and other government agencies utilize. TSA makes use of meta-data technology and analysis for national security.

The pipeline, as an industrial facility, also creates a structure for a permanent presence of current and future corporate entities that are foreign to the area, have no collaborative relationship with the existing human and biological communities.: This pipeline proposal seeks to create a permanent or long-term presence of two related but distinct entities into my local communities and into my life as an electric utility customer and benefactor of, up-until-now, protected wildlife habitat.

The physical pipeline: The first is the physical pipeline as a conduit for “natural” gas along with any other intended and unintended chemicals and other material that will also flow through the pipe and either pass on or become temporary or permanent residents of the local area. Both the individual components and the industrial facility as a whole including components such as vehicles, emergency response buildings and equipment, and vehicles and equipment necessary for the operation of the facility will have some negative effect on biological habitat and will have (as yet) unknown effects on human communities.

The permanent, but ever changing corporate or global sized business presence: The pipeline also provides for the introduction of a more permanent presence of another resident in the area, which is the human-created entity that will manage or abandon the pipeline. This second resident is currently identified as the Tennessee Gas Pipeline, LLC. However, TGP is not necessarily and perhaps not likely to be the permanent operator of the pipeline. The permanent resident that will gain access to these local communities, governments, and biological habitats via the pipeline is the changeable and shifting parade of corporate or other large business entities needed to manage the operation and decommissioning of the operation of the pipeline. We don't know what that multi-entity will be specifically, but we do know something about it. It will have to be large enough to manage the size of the industrial facility that is being installed, by which I mean the whole pipeline and its operational components. We know that publically traded corporations are beholden to one primary instruction, “Work for return on investment to your shareholders.” We know that these corporations are large enough to provide a flood of information to local communities in such form that it can be over-

whelming and expensive to digest and evaluate. We know that the resources of these corporations are larger than the resources of the citizens and governments that the pipeline resides in and that the corporations or future other large companies will likely have no personal ties to the community and have loyalty to serve a much larger (likely global) customer base. Thus they undermine the democratic processes of city, town, and county governments by taking up “permanent” residence as alien and quite possibly adversarial robotic entities in these areas.

Can we prove that the corporate or large business entities will be harmful to the communities rather than acting cooperatively? No, we can't prove it on a point by point, argument by argument basis. However, we can look at the overall life of the physical pipeline and the overall structure of the business entities operating within the global fossil fuel energy environment and predict pretty reliably what will happen at any point that is reached where the interests of individual citizens, cash-strapped towns, and local governmental bodies clash with the significant interests and/or the larger needs or greeds of the alien corporation. (An alien corporation being one that is one that has no direct concern or interest in the overall health of a particular area or the wellbeing of the inhabitants of that area.) The odds are stacked in favor of the alien larger entity because its size and attendant resources are no match for those actually affected by its actions and interactions.

A specific expose of corporate behavior that provides a look at excerpts from a virtual loose leaf notebook of strategies for interacting with regulators and the public: The article is based on Dupont, but I propose that it is the duty of FERC to see this for what it is; a window into an otherwise hidden world of the dark side of the strategies and behaviors that are harmful to people and biology.

The New York Times Magazine on January 6, 2016 printed an article, “The Lawyer Who Became Dupont's Worst Nightmare” written by Nathaniel Richjan about a lawyer, Rob Bilott who worked for the Taft Law Firm helping corporations comply with environmental laws and regulations. Here is a link to the article: <http://www.nytimes.com/2016/01/10/magazine/the-lawyer-who-became-duponts-worst-nightmare.html>. The article states that Bilott became unexpectedly involved in extensive work related to corporate malfeasance. Rob Bilott saw his job as helping his corporate clients comply with regulations by being fully knowledgeable about the law and the processes.

Around 1998 he was approached by Jim and Della Tennant who asked him to represent them. He took the case based on seeing videos and photos taken by Jim Tennant of grossly deformed and poisoned cattle and deer. They were apparently poisoned at Dry Run Creek which ran from a property owned by Dupont onto the Tennants' ranch. The video included dissecting of the animals organs, which were grossly discolored and deformed.

At first, Bilott had trouble getting the information he needed to pursue a case against Dupont. This article gives us a window into the inner workings of the Dupont Corporation. I believe FERC must look beyond the specifics of this corporation to see that there is a larger pattern of corporate strategies and decision-making that is not corporation specific. Corporations argue that even if another corporation is using a sophisticated pattern of wrong-doing that doesn't prove they do that. For FERC to work from that premise is unacceptable in this day and age. It is not currently acceptable for the NSA to say that they will not use comparisons of patterns of communication of people who have carried out terrorist attacks to predict and apprehend those plotting future attacks. Yet, the same argument could apply. The person plotting a terrorist attack could legitimately say that even if their pattern were identical to the pattern of a person who carried out an attack, the government should not act on this because it is not 100% proof of anything. Corporations share information and strategies and learn from one another.

Given that privacy and secrecy are seen as basic business rights, I propose that if there has been no proof that a corporation is not following patterns of other similar corporations it should be assumed that such strategies are known by the corporation in question, discussed within the corporation, and may well be at play in their current activities and decisions. The reasons for this approach are listed, in part below.

Here is what we can observe from the New York Times article. (My comments about what principals being

illustrated are in bold. The text from the New York Times article is contained within the brackets [].

Overwhelm the opponent. Flood them with information. Drag one's feet when asked for information or cooperation not in the interest of the company even if it is against the public interest.

[However, Bilott eventually finds a correspondence with the EPA from Dupont about a substance PFOA, which stands for perfluorooctanoic acid. Bilott asks for all documents related to this substance. Dupont refuses. He goes to court and Dupont fights him. The court grants the order. Dupont responds by sending 110,000 pages of documents going back fifty years or so. Bilott sequesters himself in his office to take on the monumental task of going through the documents and arranging them in chronological order. This takes him a few months of immersion in this process.]

Dupont learned that there were studies by the manufacturer of PFOA, 3-M Corp that showed it to be potentially harmful. Dupont did its own survey to find that it likely had caused birth defects in the children of its own employees. It decided not to tell the employees.]

It can be prudent to do studies on your products. If there are negative results, an internal discussion is prudent. However, one should remember that even when there are internal disagreements, it is possible and perhaps recommended to withhold that information from those negatively affected by the product.

[In 1984, DuPont became aware that dust vented from factory chimneys settled well beyond the property line and, more disturbing, that PFOA was present in the local water supply. DuPont declined to disclose this finding. In 1991, DuPont scientists determined an internal safety limit for PFOA concentration in drinking water: one part per billion. The same year, DuPont found that water in one local district contained PFOA levels at three times that figure. Despite internal debate, it declined to make the information public.]

Work on developing alternatives to harmful products. However, even when there is likelihood of profound harm from the current product that could be eliminated or reduced by an alternative product, the financials including the profits of the company may be found to be more important to the company.

[By the '90s, Bilott discovered, DuPont understood that PFOA caused cancerous testicular, pancreatic and liver tumors in lab animals. One laboratory study suggested possible DNA damage from PFOA exposure, and a study of workers linked exposure with prostate cancer. DuPont at last hastened to develop an alternative to PFOA. An interoffice memo sent in 1993 announced that "for the first time, we have a viable candidate" that appeared to be less toxic and stayed in the body for a much shorter duration of time. Discussions were held at DuPont's corporate headquarters to discuss switching to the new compound. DuPont decided against it. The risk was too great: Products manufactured with PFOA were an important part of DuPont's business, worth \$1 billion in annual profit.]

There may always be an option on the table to grossly violate the law and knowingly put toxic waste in an area where it will harm others. If this option is taken, the corporation should do everything to hide this behavior and take hostile action towards any victims including blaming them for the problem.

[But the crucial discovery for the Tennant case was this: By the late 1980s, as DuPont became increasingly concerned about the health effects of PFOA waste, it decided it needed to find a landfill for the toxic sludge dumped on company property. Fortunately they had recently bought 66 acres from a low-level employee at the Washington Works facility that would do perfectly.]

By 1990, DuPont had dumped 7,100 tons of PFOA sludge into Dry Run Landfill. DuPont's scientists understood that the landfill drained into the Tennants' remaining property, and they tested the water in Dry Run Creek. It contained an extraordinarily high concentration of PFOA. DuPont did not tell this to the Tennants at the time, nor did it disclose the fact in the cattle report that it commissioned for the Tennant case a decade later — the report that blamed poor husbandry for the deaths of their cows. Bilott had what he needed.]

If one is being sued take steps to apparently cooperate with the complainant. Within that process do everything possible to create conclusions that absolve the corporation of wrong-doing.

[The best metric Bilott had to judge a safe exposure level was DuPont's own internal limit of one part per billion. But when DuPont learned that Bilott was preparing a new lawsuit, it announced that it would re-

evaluate that figure. As in the Tennant case, DuPont formed a team composed of its own scientists and scientists from the West Virginia Department of Environmental Protection. It announced a new threshold: 150 parts per billion.]

Recognize the possibility of finding ways for your loyal scientists and lawyers to work collaboratively with and eventually be hired by any regulatory agencies affecting your business.

[Bilott found the figure “mind-blowing.” The toxicologists he hired had settled upon a safety limit of 0.2 parts per billion. But West Virginia endorsed the new standard. Within two years, three lawyers regularly used by DuPont were hired by the state D.E.P. in leadership positions. One of them was placed in charge of the entire agency. “The way that transpired was just amazing to me,” Bilott says. “I suppose it wasn’t so amazing to my fellow counsel in West Virginia who know the system there. But it was to me.” The same DuPont lawyers tasked with writing the safety limit, Bilott said, had become the government regulators responsible for enforcing that limit.]

In the face of probable defeat, settle the case even if you have to pay so as to close the books on even greater possible future costs.

[In August 2000, Bilott called DuPont’s lawyer, Bernard Reilly, and explained that he knew what was going on. It was a brief conversation.

The Tennants settled. The firm would receive its contingency fee. The whole business might have ended right there.]

Consider the likelihood of future action against you if you concede to the plaintiffs and their lawyer who have been pursuing the case. Once settled the lawyer will have no reason to continue further.

[But Bilott was not satisfied.

“I was irritated,” he says.

DuPont was nothing like the corporations he had represented at Taft in the Superfund cases. “This was a completely different scenario. DuPont had for decades been actively trying to conceal their actions. They knew this stuff was harmful, and they put it in the water anyway. These were bad facts.” He had seen what the PFOA-tainted drinking water had done to cattle. What was it doing to the tens of thousands of people in the areas around Parkersburg who drank it daily from their taps? What did the insides of their heads look like? Were their internal organs green?

Bilott spent the following months drafting a public brief against DuPont. It was 972 pages long, including 136 attached exhibits. His colleagues call it “Rob’s Famous Letter.” “We have confirmed that the chemicals and pollutants released into the environment by DuPont at its Dry Run Landfill and other nearby DuPont-owned facilities may pose an imminent and substantial threat to health or the environment,” Bilott wrote. He demanded immediate action to regulate PFOA and provide clean water to those living near the factory. On March 6, 2001, he sent the letter to the director of every relevant regulatory authority, including Christie Whitman, administrator of the E.P.A., and the United States attorney general, John Ashcroft.]

You should be able to pretty much count on the fact that lawyers and citizens who have other obligations are not going to spend the enormous amount of energy and time it would take to tackle something without definitive compensation for this. In the event that the highly improbable occurs you may be forced to take unusual and extraordinary steps to block the threat.

[DuPont reacted quickly, requesting a gag order to block Bilott from providing the information he had discovered in the Tennant case to the government. A federal court denied it. Bilott sent his entire case file to the E.P.A.]

Industry’s work is to make profit and produce products without regard or concern for people or biological life. Following the business of profit-making, keep as much as possible secret from the public. Do not let issues of safety limit your ability to provide products. Block efforts and do not participate in efforts that would bring facts to light that would limit your product production.

[With the Famous Letter, Bilott crossed a line. Though nominally representing the Tennants — their settlement had yet to be concluded — Bilott spoke for the public, claiming extensive fraud and wrongdoing. He had become a threat not merely to DuPont but also to, in the words of one internal memo, “the entire fluoropolymers industry” — an industry responsible for the high-performance plastics used in many modern devices, including kitchen products, computer cables, implantable medical devices and bearings and seals used in cars and airplanes. PFOA was only one of more than 60,000 synthetic chemicals that companies produced and released into the world without regulatory oversight.]

Faced with massive, legitimate, costly complaints about your product do everything possible to bog down the process. Go over each complaint in painfully slow and laborious detail even if you know you are in the wrong. In the best scenario those most injured by your product will die waiting for justice.

[Bilott says, his tone landing halfway between wonder and rage, “that they could keep making a profit off it, then get the agreement of the governmental agencies to slowly phase it out, only to replace it with an alternative with unknown human effects — we told the agencies about this in 2001, and they’ve essentially done nothing. That’s 14 years of this stuff continuing to be used, continuing to be in the drinking water all over the country. DuPont just quietly switches over to the next substance. And in the meantime, they fight everyone who has been injured by it.”

Bilott is currently prosecuting *Wolf v. DuPont*, the second of the personal-injury cases filed by the members of his class. The plaintiff, John M. Wolf of Parkersburg, claims that PFOA in his drinking water caused him to develop ulcerative colitis. That trial begins in March. When it concludes, there will be 3,533 cases left to try.]

I believe that all of the above options are or will be known about by the current petitioner, TGP, LLC and by future entities that may take over the facility. As such they are all potential tangible threats to me, my neighbors, and the communities affected by the presence of the physical pipeline and the companies whose presence for the purpose of running and managing the facility will be residents of the area indefinitely.

How is this relevant to my petition for intervenor status? The building of this pipeline and the introduction of such a robotic entity into my local community has direct consequences to me. This entity is and will be alien and perhaps hostile to the human and biological habitats that directly affect my quality of life. The fact that the current corporations are beginning this process says nothing about which corporations will continue with the project. Certainly, Tennessee Gas Pipeline, LLC seems to imply that it envisions operating the pipeline, but we do not know what considerations they may be making or will be making about the benefits associated with selling their asset or reaping profits from its operation. The truth is that the building of this pipeline is the introduction of fertile ground for corporate robots currently most likely to be global corporations with extremely little to no concern for the effects of their behavior on any particular habitat within which their industrial facility resides. The excessive size of the pipe itself being proposed makes it impossible for operation or management of that facility by smaller and more local businesses.

The undermining of the democratic process: This leaves me and all residents of the affected areas, sharing space with a gigantic entity with hugely more time, money, and other resources that it can use to over-ride any voice I may wish to have concerning its presence in our community. It has already violated its word to our representatives by doing its best to run the pipeline through state protected lands after telling them it would not take such steps when speaking with them to pave the way for this project in Massachusetts. I urge FERC not to allow this project to go forward. The project is not needed and the scale of the project undermines the democratic process by creating a long term alien entity in the area (a changeable but persistent corporate robot) not subject to healthy relationships with the human biological communities within which it has gained a foothold. I request that I and others be granted intervenor status to actively participate in the process to bring to your attention concerns and/or experiences of harmfulness caused by these entities.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	wherethegreatonesrun@gmail.com	

Basis for Intervening:

I reside in Delaware County, NY in the town of Andes. The proposed "Constitution" pipeline route would cross approximately 42 miles of my county.

I am concerned that the proposed "Northeast Direct" open-access pipeline would lead to fracking and unwanted industrial development along the pipeline route. This would destroy Delaware County's rural character, which is its greatest asset. Additionally, few would be interested in investing in property anywhere near a high pressure gas pipeline. Because of this, property values and all taxpayers in Delaware County would suffer if the NED pipeline project is permitted by FERC.

I have friends and business associates in many Delaware County towns including, Sidney, Masonville, Franklin, Davenport, and Harpersfield. All of these towns are on the proposed pipeline route. I often travel thorough these communities and am concerned about my safety and welfare, as well as that of the friends and associates who reside in these communities, from inevitable accidents involving this pipeline.

The multiple interests I've noted above, and others too numerous to mention, would be directly affected by the outcome of these FERC proceedings. I also expect the proceedings to include a full cumulative impact analysis of the pipeline project which includes the proposed "Constitution" pipeline. As no one else can represent my interests in these matters, I am filing this motion to intervene.

Basis for Intervening:

Please DO NOT allow the Kinder Morgan Northeast Energy Direct pipeline to be built, neither market nor supply path. The damages to our economy far outweigh the advantages. The list of external costs has been articulated well by many intervenors, I need not remind you here. For the sake of a future healthy economy in this country, reject the TGP proposal. Thank you very much for your consideration.

station(s) in the Town of Franklin. I am concerned for the health of my family, our pets, our organic crops and the wildlife on our 65 acres, not to mention the health of our entire community. Especially at risk is the health of children and also older folks (which would include my husband and myself). We are well aware of the toxic air pollution that can emanate from compressor stations for many miles, sometimes hundreds of miles. We have learned about the terrifying noise from unpredictable blow-downs, and about the cumulative health issues that arise from the low frequency noise that can move long distances from compressor stations. We do not wish to be forced to move. For these reasons I wish to be able to intervene for my family and my community.

Basis for Intervening:

I am applying as an intervenor in Docket CP16-21-000 because I will be directly impacted by this project in a number of ways:

1. My family owns two homes that depending on the route chosen may directly cross or abut the proposed pipeline. Both of these homes have wells that could be damaged by the blasting of bed-rock to install this pipeline.
2. I am concerned about the impacts to the conservation land, recreational land and historic sites which would be damaged should this pipeline be installed.
3. The town of Merrimack's drinking water is being put at risk. The location of the proposed pipeline in relation to our well head protection area is unacceptable.
4. As a Realtor I have concerns about the effect this pipeline will have on real estate values and the ability for homeowners to sell their homes.
5. I believe construction of this pipeline will result in a reduction in our rural quality of life.

RE: Docket No. CP16-21-000
Northeast Energy Direct Project
Lynnfield Lateral - Comments on Pipeline through Wilmington, MA

Dear Secretary Bose:

The Town of Wilmington (Town) has reviewed the Application and Resource Report filings of Kinder Morgan (KM) dated November 20, 2015 regarding the proposed Northeast Energy Direct Project (NED). From our review of the documentation, it is evident that the Town will be subject to long term impacts that do not result in any benefit to its residents. Also, it is unclear whether NED is necessary; specifically, it is unclear whether the construction of NED would result in a condition of overdeveloped pipeline capacity for the New England area. Given all of these circumstances, the Town strongly opposes this project and prefers a no-build alternative that would avoid both short-term and long-term impacts to the Town's resources and on-going safety concerns of its residents.

According to the documents filed by K1v.I on November 20, 2015 relative to the NED, the proposed pipeline and specifically the Lynnfield Lateral (24-inch pipeline segment) would enter Wilmington just prior to station 420+00± and exit at station 536+50. This approximately 2.2 miles of new pipeline would directly and adversely impact **24 properties** across Wilmington.

From our review, the Town has considerable concerns about the proposed pipeline route. Should FERC determine that the NED is necessary following their comprehensive review, the Town requests that the following concerns be thoroughly evaluated and addressed.

The Town's primary environmental concern is protecting the remaining well fields and their contributing watershed area, also referred to as the Town's Zone 2 Groundwater Protection District (Zone 2). The NED will have a direct impact within the Zone 2 for two (2) of the Town's remaining primary drinking water well fields: the Browns Crossing well field and the Salem Street GP well field. Both of these well fields draw from shallow, overburdened gravel-packed aquifers. Browns Crossing is the oldest (1927) and most productive of the remaining active well fields in Wilmington. These two well fields currently account for 64% of the remaining local drinking water supply.

The words "remaining local drinking water supply" are used because 5 of Wilmington's original 9 drinking water wells were lost in 2003 as a result of contamination from the Olin Superfund Site, a USEPA national priority list site. That disaster placed significant health and economic stress on the 22,000 citizens of Wilmington. As a result, the Town's drinking water resources are uniquely vulnerable and Wilmington is determined to protect its remaining supply. The Town is committed to protecting these well fields and has spent considerable resources in doing-so. As an example of our commitment, in 1990 the Town purchased approximately 14 acres of land adjacent to the Brown's Crossing well field to protect the very sensitive Zone 2 area that K1v.I plans to disturb.

As proposed, the total length of NED pipeline located within the Zone 2 is approximately 7,750 LF (1.46 miles). The area of disturbance associated with this pipeline through our Zone 2 could result in possible contamination and degradation of our most valued natural resource. The Town requests that FERC sincerely consider and evaluate the short term (construction) and long-term impacts within the Town's Zone 2 area for each of these well fields when determining the final location of the proposed gas pipeline.

The revised pipeline route would also traverse a parcel owned and operated by Benevento Companies, an aggregate based material supply company and active quarry. The Town is concerned with the proximity of the revised pipeline route to blasting operations at the quarry. On numerous occasions, the Town has requested case studies from KN.I related to their experience with routing a gas pipeline through conditions similar to the Benevento parcel. The information received thus far consists only of an aerial photograph of a rock quarry, at a very small scale, with a superimposed line indicating an "existing gas pipeline". It is simply impossible for the Town to draw any meaningful comparison from this information to the current proposal. In addition, due to the lack of any detailed information presented by KM, the Town is unable to draw any conclusions regarding the safety of high pressure pipelines in close proximity to active quarries. The Town requests that FERG assess the long term reliability of the proposed gas pipeline operating in such close proximity to an active quarry. The Town requests that FERC sincerely consider and address this concern to ensure the safety of the Town's residents.

Among our other concerns are construction impacts to regulated wetlands, wetland buffer zones, and river-

front area; noise and air quality impacts; and the overall safety of residents in close proximity to the pipeline.

Again, the Town strongly prefers a no-build alternative that would avoid both known and unknown short-term and long-term impacts to the Town's resources and on-going safety concerns of its residents. However, should FERC determine that there is a need for the proposed gas pipeline and associated infrastructure to serve the general public, in the identified market area, as a matter of convenience and necessity; we ask that FERC rigorously evaluate the concerns discussed above.

Sincerely
Jeffrey M. Hull
Town Manager

20160114-5245

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of
Tennessee Gas Pipeline Company, L.L.C.
Northeast Energy Direct Project

Docket No. CP16-21-000

MOTION TO INTERVENE AND PROTEST

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("FERC") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Planning Board ("Board") of the Town of Sharon ("Sharon"), New Hampshire hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Board opposes the construction of the natural gas pipeline and other facilities known as the Northeast Energy Direct project ("Project") due to the adverse impacts that will be sustained by the Town of Sharon and the region, and therefore seeks party status to protest the Project and assist in protecting the Town's and the Monadnock Region's interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. The Planning Board is charged with the responsibility to monitor and protect the quality of life and the safety of all Sharon residents, and is gravely concerned for those who live, work, and recreate near the proposed pipeline route and the compressor station. There are substantial and real environmental, economic, and health threats arising from the construction and operation of the pipeline so closely adjacent to the town. It is unacceptable that we may be coerced into the industrialization of our landscape and the degradation of our scenic, historic, environmental and cultural resources for a Project that will never benefit us.
2. Several miles of the pipeline will be located immediately adjacent to our Town border and a proposed 41,000 horse power compressor station would be situated within miles of our Sharon Town line. The Town and its residents will be directly affected by the construction and operation of the pipeline. The Board has concerns as to construction-related impacts on the safety and convenience of residents and business, and as to the impacts of the completed pipeline and compressor station on public health and safety of the town and the entire region.

3. The proposed location of the pipeline and compressor station is intrusive, and threatens to disrupt the rural tranquility our residents enjoy. Additionally, it would cross the historic Wapack Trail at least three times seriously impacting a major contributor to the tourist based economic health of Sharon and the entire Monadnock region.
4. There are also many Sharon homes in close proximity to the proposed pipeline and well within hearing distance of the proposed compressor station. These residents are deeply worried about the reduction in value of their homes, and the difficulties they may encounter in refinancing and in obtaining homeowner's insurance for their properties.
5. The project threatens public safety by placing fire and explosion hazards in close proximity to our residential areas, and subjects our citizens to an ongoing fear of such catastrophic incidents. The entire town of Sharon is forested, as are those areas adjacent to the town and the proposed pipeline route. A significant accident at any point along the proposed pipeline or compressor station that involves fire could create catastrophic consequences to the entire town. A fire anywhere on the proposed pipeline could set the adjacent forests ablaze and the probable damage the electric lines within the shared easements would leave the Town of Sharon without power, and therefore without water. There would be no adequate responders to this level of emergency, since the town has neither fire or police, and relies on contracted aid from neighboring towns.
6. The Project specifically contemplates building a compressor station close to Sharon's eastern and southern borders that would negatively affect the quality of life for all residents of Sharon. In addition to producing harmful toxic emissions and atmospheric pollution, the compressor station will burden our residents with constant noise pollution that will be unbearable and damaging during blowdowns. Communities should not have to endure the inherent risks associated with compressor stations.
7. The Board is responsible for the protection of both its natural environment and the health and welfare of its residents, and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the project. One of the unique and important environmental features is the "Lead Line" feature of the Wapack Range, that follows the ridge that defines the border between the towns of Temple and Sharon, and continues south through the New Ipswich. The "Lead Line" provides the spring and fall migration of thousands of raptors and other migratory fowl an important navigational source, and is the only "lead Line" in New England. The proposed compressor would be situated within this important fly-way, and the noise, lights and toxic emissions would have a devastating impact.
8. The long term emissions of toxic materials from the compressor station, especially from the required "blow-downs" caused by the occasional release of gas to regulate the pipeline pressures, will ultimately contaminate the vegetation and soils in the proximity of the compressor. Since the geology of the area shows very limited top-soil, this contamination will quickly seep into the local aquifers and pollute the only water source available to the residents of the town and much of the region. We cannot survive without water.
9. The process of burying the pipeline adjacent to the existing high-power electrical transmission lines bring a portion of the construction to within a half mile of the Sharon's border and across lands that have sparse vegetation overlaying solid granite. Beneath this granite mantle is the Gridley aquifer, the most important source of water for many of the town's private wells, and also provides water for the Gridley River, which flows into the Contoocook River in Peterborough. Considerable blasting would be required to allow a thirty-inch pipeline to be buried, and the blasting would certainly fracture some underlying granite, leading to probable contamination of the water within the aquifer. This seepage would also ultimately lead to further contamination from toxic chemicals released by leakage from the pipeline, and the blown-downs at the compressor site.
10. The Planning Board of Sharon is responsible for the protection of the town's natural environment

and the health and welfare of its residents, and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project. Given the Board's familiarity with the locale of the proposed pipeline and compressor stations and the proposed alternative site locations, our participation in the above-captioned proceeds should significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual(s) should be included on the service list for this docket, and all communications should be sent to:

Mitchell N. Call, Chairman
Sharon Planning Board
Town of Sharon
432 NH Route 123
Sharon, NH 03084-7125
603-924-9250
PlanningBoard.SharonNH@gmail.com

III. CONCLUSION

WHEREFORE, the Planning Board of the Town of Sharon respectfully requests that it be permitted to intervene in this proceeding with full rights to participate in all further proceedings.

Respectfully submitted,
Mitchell N. Call, Chairman
Town of Sharon Planning Board

I am a local citizen who acts as steward of the earth, and all its living inhabitants. I believe it is imperative for all of us to live as conscientiously as we can, respecting wildlife and natural environs through all of our choices and actions. What we all need is to reduce our dependence on fuel and energy, and be more independent and cleaner with our use -- WE DO NOT NEED TO DESTROY THE EARTH ANYMORE FOR OUR OWN SELFISH DESIRES!! Have you heard this enough yet?? How about refocusing your drive toward something fantastic for our planet??!!

Basis for Intervening:

Allen Fore made it clear during a town information session that Kinder Morgan would only repair wells and septic systems, damaged by their operations, within 50' (fifty feet) of their operations. Blasting is expected and can easily alter aquifers, causing well damage and loss over a far greater area. I am seeking assurances that Kinder Morgan will be required to fix (including drilling a new well) our well should it become contaminated (samples to be drawn before and after operations) or should we experience a loss or reduction in water pressure, and failing to do so, must purchase our property at fair market price determined by a bank appraiser prior to damage.

We will also monitor air quality for a period of one year preceding the first operation of the proposed New Ipswich, NH compressor station. We also seek assurances that Kinder Morgan will be required to put in place mitigation that will keep our air quality at pre-operation levels.

---------------------	--------------------------------	----------------------------------

Individual	FERC@jrs.jetemail.net	
------------	-----------------------	--

Basis for Intervening:

- The proposed route of the pipeline passes within a few hundred feet of my town, Wilton, NH's, border, and 4 miles from my home.
- The 1/4-mile and 1/2-mile buffer zones include Wilton residences, businesses, designated scenic roads, a recreational trail, and town and state conservation lands.

Therefore I object to this proposal because I am concerned that:

- that the pipeline would present physical hazards due to fire and/or explosion, compressor station noise, and light pollution, to residents, workers, and users of the conservation lands within the buffer zones and beyond;
- that the potential consequence of these physical hazards are beyond the typical abilities of most local emergency services to intervene, and will require expensive equipment and re-training at our, the taxpayers, expense;
- that the pipeline would present a health hazard due to carcinogenic and other health-damaging gaseous emissions and compressor blow-offs, to all of us downwind for a far greater distance than the so-called impact zone, and to all of us who depend on the aquifers (everyone in town) for our drinking water;
- that the pipeline, its construction, and its hazards would damage our natural areas and wildlife;
- that such damage would have a negative impact on tourism on which we depend. We in Wilton recently lost 3 restaurants to economic pressures - we can't more losses;
- that the pipeline proposal will, and already is, reduce our property values;
- that the pipeline project would take our land solely for the private gain of the pipeline owner(s);
- that the pipeline's costs will raise our energy costs with no benefit to us.

United States of America
Federal Energy Regulatory Commission

Tennessee Gas Pipeline Company, L.L.C.

Docket No. CP16-21-000
MOTION TO INTERVENE

I hereby move, pursuant to 18 CFR § 385.214, to intervene in the above- captioned proceeding for an application filed on November 20, 2015 by Tennessee Gas Pipeline Company, L.L.C. (hereinafter TGP).

Statement of Interest

The Intervenor has lived most of his life in Franklin County, Massachusetts and has been actively involved with many natural resource and land use issues as an individual and as a member of the Franklin Regional Planning Board. The proposed pipeline route and its construction and its operation, if it becomes a reality, has the potential for serious impacts to land and water resource areas, habitat, agricultural areas, forests, conservation restriction and easement lands, and supposedly permanently protected State forest lands and privately held land trusts. My family, friends, neighbors, fellow residents, and I enjoy the use of these

resources and lands and live in this rural landscape to experience a rich and rewarding quality of life. I personally use many trails in this region to hike, cross country ski, and to mountain bike. The pipeline could detrimentally affect this region along its route and from its operation and have permanent impacts on the region. Not only does the proposal impact me as a resident, but also as an electric ratepayer from the proposal by the applicant to recover project costs through rate structure in electric bills and as a taxpayer with the extensive impact the proposed route has to public lands, forests, and parks, a resource shared by all residents and visitors.

The Applicant has not demonstrated nor evidenced the need for the Project. There are many areas of present filings that are inadequate or void of any detail. Safety issues remain unaddressed. It is certainly has not risen to a level that the region can embrace with any degree of confidence.

Service and Communication

Service of Process and all other communication concerning this motion and the above-referenced project should be made to:

Charles V. Olchowski
28 Smith Street
Greenfield, MA 01301-2018
charlieolchowski@hotmail.com

It is respectfully requested that filings on this docket by the applicant be provided to the Intervenor by First Class Mail as well as by e-mail.

Conclusion

For the reasons stated above, I respectfully request that that the Commission grant this Motion to intervene and to provide party status in this proceeding.

Dated: January 14, 2016

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	LBJM1224@YAHOO.COM	

Basis for Intervening:

-I live in Averill Park, NY, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because...

- I am a landowner directly impacted by the pipeline route / compressor station.

- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health

- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

- I Live on Burden Lake not far from one of the proposed compressor stations and am concerned about the air, noise, and light pollution.

A little known aspect of gas pipelines is that they require large compressor stations to help concentrate and move the pressurized gas along. As compressor stations release large amounts of methane, plus other toxins,

they contribute significantly to global warming. They are noisy, humming 24/7, and are subject to dangerous explosions and fires. At public meetings and during the Federal Energy Regulatory Commission application process, gas pipeline companies have not revealed the number, location and size of planned compressor stations.

The large compressor stations, part of every gas pipeline project, can include acres of industrial plant, plus buffer zones.¹ At these stations gas is pressurized to move it along high-speed gas pipelines more efficiently. The stations are spaced every 30 to 70 miles, though sometimes they are much closer.

Compressor stations are significant contributors to global warming. During ventings known as “blow-downs” large quantities of methane are released to the atmosphere. In the first two decades after methane is released it is 79 to 105 times more powerful than CO₂ at destabilizing the climate. (Source)

Compressor stations also leak methane via valves and gaskets that weaken and leak from corrosion and thermal stress. A recent study by Cornell University scientists Bob Howard and Anthony Ingraffea estimates leaks. They found that anywhere from 3.6% to 7.9% of unburned methane leaks out at gas wellheads and along pipeline infrastructure before reaching end users. (Source)

Compressor stations release huge amounts of toxins. These toxins include benzene, toluene, sulfuric oxide, and formaldehyde. Citizens within 1500 feet of compressor stations in PA, TX, LA and other states have suffered from nose bleeds, rashes, headaches, sore throats, dizziness and nausea.

A typical compressor (from FERC application for the Compressor Station in Reed, PA.) also emits 46.2 tons of nitrous oxide per year. An anesthetic for dental surgeries, nitrous oxide can cause numbness and mental impairment. It has a sickly sweet smell. Nitrous oxide and volatile organic compounds interact to produce ground level ozone. Ozone inhibits crop growth by up to 30%.

Compressor stations emit radon-222. This radioactive gas precipitates out as radioactive polonium and lead. During blow-downs these toxins deposit in surrounding areas. Rowan, E.L. and Kraemer, T.F., 2012, Radon-222 Content of natural gas samples from Upper and Middle Devonian sandstone and shale reservoirs in Pennsylvania: Preliminary data: US Geological Survey Open File Report 2012-1159. (Source)

Compressor stations are noisy. “Blow-downs” can last for two hours. The noise is comparable to a commercial jet taking off. Blow-downs are needed if a gas pipeline is taken off-line for maintenance, in the event of emergencies, or to accommodate fluctuating demand. They often occur in the middle of the night. (Source)

The sound of regular compressor station operation has been compared to four diesel locomotive engines running 24/7. Residents as far as a mile away can hear the racket. This humming can cause hearing impairment, learning disabilities and cardiovascular problems.

Compressor stations are dangerous. Since 2011, there have been explosions and fires at compressor stations in Lathrop, Pa, Brooklyn Township, PA, Montrose, PA, Branchville, NJ, Windsor, NY, Pinedale, WY, Marengo County, AL, Oaktown, IN, Langton, OK, Nine Mile Canyon in UT – among others. Explosions have required midnight evacuations of nearby residents, with people evacuated out to a one-mile radius.

Compressor stations are fully automated, without staff present. In emergencies local fire departments (often volunteer) must wait for gas pipeline crews to arrive from distant depots hours away.

Basis for Intervening:

I am a landowner in Dracut, MA and I reside on Cart Path Road. This road is the destination for the proposed metering station related to the NED pipeline. I opposed this project for so many reasons.

1. The pipelines and proposed metering station are to be located less than a quarter of a mile away from an active blasting quarry called Brox Industries. They blast at least once a week and we have foundation issues due to the severe blasting.
2. The pipeline, metering station and proposed compressor station are all under a mile away from the Campbell Elementary School where both of my children go to school. This is considered inside the “incineration zone” if anything were to happen at the metering station.
3. The neighborhood in which we live has over 50 homes with young children throughout. They play in the field year round. The same field where the metering station is proposed to go.
4. I am concerned about the toxic particulates that will inevitably be sent out into the air into our neighborhood causing various health conditions.
5. I am concerned with the possibility of ground and water contamination in our neighborhood, as well as the neighboring farm lands and protected spaces throughout our town and state.
6. I am concerned that the proposed route of the pipeline is traveling through over 100 parcels of protected land, 86 out of the 100 are protected by Article 97 of the Massachusetts Constitution.
7. I am concerned that our property value will be negatively impacted if this pipeline goes through our neighborhood with a metering station right in our backyard.
8. I am concerned that our small town of Dracut, which already has financial difficulties, will not be able to fund the necessary training and equipment needed to prepare our town in the event of a catastrophic incident.

Please consider all of these facts before approving this project. The MA Attorney General has stated that our region does not even need this natural gas. Thank you.

20160114-5283

{Motion to Intervene of Lynn M Huntington}

I live in the Town of Schodack New York and I want to **intervene** in this proceeding to oppose the NED pipeline. I am a landowner directly impacted by the pipeline and compressor station. I am also within the incineration zone which not only puts us in imminent danger in case of accident but decreases the value of our property. I am a gardener who grows much of the food for our household and have grave concerns about the air and water quality after the pipeline and compressor station are completed. We are beekeepers and are concerned that the change in air quality, water quality, noise and light pollution will impact the health of our bees.

Basis for Intervening:

There has been no clearly demonstrated need for the NED pipeline. We live in a community that is working hard to use alternative sources of energy so that we can mitigate the need for fossil fuels and fracking. Our ecosystem is fragile; so much will be destroyed in the construction process and because of the ongoing

dangers of the pipeline and the continued fracking process.

**BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION**

Tennessee Gas Pipeline Company
A subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline Project (NED)

Docket No. CP 16-21-000

**MOTION TO INTERVENE OF THOMAS J MINER JR
IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, I file this Motion to Intervene in the above-captioned proceeding.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

I live in Ashfield, Massachusetts approximately one mile south of the proposed pipeline route on the shores of Ashfield Pond. The major reasons I chose and continue to live in Ashfield are its rural character, pristine environment, lack of heavy industry, and affinity toward local business and strong community. The proposed pipeline would change the character of Ashfield beyond recognition. It will bring heavy industry to an otherwise agricultural community, pass through environmentally sensitive areas, pass through or abut at least 8 parcels of land under Conservation or Agricultural Restrictions, pass within 0.5 miles of two (2) community groundwater sources, residential neighborhoods, and aquifer recharge areas associated with public drinking water. This proposed pipeline will also transport irresponsibly extracted hydro-fracked gas from the Marcellus Shale deposits of Pennsylvania, a process that uses over 600 chemicals including EDC's, known carcinogens and neurotoxins. This pipeline project is an affront to my family's well-being, health, and Massachusetts constitutional right to a clean environment. It is also an environmental, economic and health threat to the community of Ashfield, MA.

B. Description of Impacts

I will be impacted and harmed by the proposed project in the following ways:

Water Resource Impacts: My water is supplied by the Ashfield Water District, whose reservoir is located between 0.25 and 0.5 miles from the proposed pipeline route. Any attempts to bury a pipeline will certainly include destructive construction methods (blasting and/or hydraulic hammers) that will impact the water sources supplying the water district. In addition, corrosion, installation error, and materials breakdown could lead to contamination of our town's water supply and Ashfield Pond. I must know that this project will not interfere with my basic right to high-quality drinking water and environment.

Carbon and Water Footprint: To have the Northeast Energy Direct Pipeline Project deliver a fossil fuel product that was extracted in such secretly destructive and poisonous manner (hydraulic fracturing) is a vulgar show of complete disregard for the Earth and its inhabitants. CO2 emissions from this type of fuel are higher (1,210 lb. per MWh) than the Massachusetts average CO2 emissions of all electric power generation in the state (910 lb. per MWh). Given that our state has a GHG emission reduction goal of 25% below 1990 levels by 2020, this project is a huge step backwards in reaching our environmental goals.

At the 2015 Paris Climate Conference the US joined 185 countries in working toward a clean energy future. With clear goals around climate change, emissions reductions, investment in renewable technologies, and private sector responsibilities, COP21 was a huge success in showing that the United States will play an active role in ensuring the environmental health of the planet. In complementary actions, 117 mayors signed the Compact of Mayors in support of standard emissions reporting; 154 private sector companies joined the American Business Act on Climate Pledge supporting an ambitious agreement at COP21; and 311 colleges have joined the American Campuses Act on Climate Change demonstrating their commitment to climate action. The fact that this pipeline transports fuel that is higher in GHG emission than existing sources, takes money from renewable energy projects, and poisons water supplies shows that this project is just another dinosaur from an extinct economic paradigm that undermines existing domestic legislation and international agreements.

Article 97 of the Articles of Amendment to the Massachusetts Constitution: As a taxpayer in the State of Massachusetts, I trust (and demand) that all private and public land (APR or otherwise designated) that falls beneath the protection of said Article, be dealt with in accordance with the protocols established by said Constitution. Any change of use whether temporary or permanent must be voted upon by "Lands and easements taken or acquired for such purposes shall not be used for other purposes or otherwise disposed of except by laws enacted by a two thirds vote, taken by yeas and nays, of each branch of the general court." Per the Massachusetts Constitution, I have a constitutional right to a clean environment and therefore any attempt to thwart such would be considered a breach of public trust.

Liability Concerns: With their poor fiscal status I am concerned about the company's ability to cover potential damages. The Commission must consider this issue and explore solutions which may include requiring the parent company to take responsibility for liability or post substantial bond to ensure its ability to pay for damages. Communities that this pipeline passes through are in no fiscal position to undertake this burden.

C. No Need for the Pipeline

The impacts described are problematic generally, but entirely unacceptable given that TGP has failed to demonstrate a need for the pipeline. In the three years TGP has offered open contract seasons to local gas distribution companies, their interest is only .55 bcf/day. Even after downsizing NED from 2.2 bcf/day capacity to 1.3 bcf/day, these contracts cover less than 40 percent of capacity. A recently-released assessment of New England's electrical needs by the Massachusetts Attorney General's office demonstrated that the electric sector does not need NED or other major new gas pipelines: <http://www.mass.gov/ago/doing-business-in-massachusetts/energy-and-utilities/regional-electric-reliability-options-study.html>. I request that FERC adopt this study's findings and recommendations in evaluating the question of domestic need for the NED pipeline.

II. CONTACT INFORMATION

The following should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Thomas Miner
Address: 243 Main St. Ashfield, MA 01330
Phone: 413-628-3253
Email: thomasminerjr@gmail.com

20160114-5294

Eric J Allen, Dracut, MA.

I am a resident of Dracut, MA and am opposed to the Northeast Energy Direct Project. This project has too many negative effects to our town and to our state. I am a land owner directly in front of where a proposed metering station is supposed to be built. My children, as well as all of the other neighborhood children use this space year round. I am concerned that if this metering station is built here, our neighborhood will have to bear the brunt of all the toxic particulates that are emitted into the air daily from the metering station. Also, Brox Industries is located less than a quarter of a mile away from the proposed site. Brox is an active blasting quarry. They blast at least once a week and our foundation has cracks from it. How can we rest assured that a high pressure gas pipeline and metering station can withstand weekly blasting without being compromised? When a Kinder Morgan representative was asked that question, he wasn't even aware that there was an active blasting quarry on the pipeline map. Please take into consideration all of the protected parcels of land that will be taken by eminent domain if this passes. 86 parcels of land throughout Massachusetts are protected by Article 97 of the Massachusetts Constitution. That land which has been protected for decades, will be ripped apart. This is not acceptable. Please do not accept Kinder Morgan and Tennessee Gas Company's plan for this project. It is unnecessary and unwanted. Thank you.

Docket No. CP16-21-000

**MASSACHUSETTS ATTORNEY GENERAL MAURA HEALEY’S FILING OF ITS
NEW ENGLAND ELECTRIC RELIABILITY OPTIONS STUDY FOR INCLUSION IN THE
RECORD AND CONSIDERATION BY FERC ON TENNESSEE GAS’S APPLICATION
FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY**

On November 20, 2015, the Tennessee Gas Pipeline Company, L.L.C. (“Tennessee Gas”) filed an application for a certificate of public convenience and necessity [“CPCN”] for the Northeast Energy Direct interstate gas pipeline project [the “NED Project”] pursuant to sections 7[b] and 7[c] of the Natural Gas Act (“NGA”). On December 7, 2015, FERC issued a Notice of Application for Tennessee Gas’s CPCN application and set a comment deadline for motions to intervene and protests in this proceeding, which deadline was subsequently extended by FERC to January 15, 2016.

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission [“FERC” or the “Commission”] promulgated at 18 C.F.R. §§ 385.212 and 385.214, respectively, the Office of Massachusetts Attorney General Maura Healey [“AGO”] timely moved to intervene in the above captioned proceeding by motion filed on December 21, 2015. No opposition to the AGO’s motion to intervene was filed within 15 days and, pursuant to 18 C.F.R. § 385.214[c], the AGO is party to the above captioned proceeding.

In its December 21, 2015 motion to intervene, the AGO noted it had actively participated in the pre-filing process for the NED Project under docket PF 14-22-000, including by filing detailed scoping comments dated October 16, 2015. The AGO’s scoping comments requested that FERC combine NEPA reviews of several pending New England pipeline projects into a single process [a combined Environmental Impact Statement] to avoid piecemeal review, to utilize a common analysis of regional gas demand, and to compare each projects’ impacts and benefits. In particular, the AGO’s scoping comments questioned New England’s need for the natural gas capacity proposed by the NED Project and called on FERC to undertake a full evaluation of the nature and extent of the regional need for new gas capacity. As part of this regional evaluation, the AGO urged FERC to consider the results of its study of New England electric reliability options. Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas, prepared by Analysis Group, Inc. [the “Study”]. The AGO previously filed the Study on November 18, 2015, under PF 14-22-000 for the NED Project.

The AGO’s December 21, 2015 motion to intervene noted that, once it was a party to this proceeding, the AGO would file the Study for FERC’s consideration during the proceedings on Tennessee Gas’s application for a CPCN under CP16-21-000. Accordingly, the AGO hereby files the Study for the Commission’s consideration in the above captioned proceeding. The Study is attached hereto as “Exhibit 1.” The AGO further requests that FERC include the Study in the full administrative record for Tennessee Gas’s application for a CPCN for the NED Project.

The Study evaluated options to address regional electricity reliability in New England, including natural gas capacity needs, through 2030. Among the Study’s findings was that under the status quo, the reliability of New England’s power system can and will be maintained over time, including during periods of peak winter demand, without adding any new interstate natural gas pipeline capacity to service the New England region. The Study’s findings fundamentally call into question any reliability-based need for the NED Project, as proposed by applicant Tennessee Gas Pipeline, L.L.C. (Tennessee Gas). We provide below a brief summary of the Study’s conclusions and their relevance to the above-docketed proceeding:

First, the Study finds that, under status quo conditions and using very conservative assumptions, **the reliability of New England’s power system can and will be maintained over time without new interstate natural gas pipeline capacity, including at the time of winter peak demand.** The Study utilizes a conservative reliability planning perspective—namely, with every judgment and assumption the Study errs on the side of overstating the need for electricity generation, and understating the level of resources available to meet that need. The Study models the need for gas-fired generation to meet the region’s electrical load requirements in each year through 2030, and compares that to a forecast of gas that could actually be avail-

able for electricity generation. The Study finds that under existing market conditions, we can expect no electric sector reliability deficiency through 2030, and that no additional pipeline gas capacity is needed to meet electric reliability needs. This finding reflects the combination of declining winter peak demand and the success of new ISO-NE market initiatives that provide strong financial signals for resource developers and operators of existing assets to ensure unit reliability during periods of winter gas scarcity.

Second, the Study goes beyond conservative reliability planning assumptions and assesses a “stressed system” case in which New England becomes even more reliant on natural gas-fired power than anticipated, and experiences a short-term disruption in other fuels—causing the electric system to be more stressed than expected on very cold days. In the “stressed system” case, the Study finds a maximum reliability deficiency of roughly 2,400 MW by 2030, with deficiencies in no more than 26 hours over 9 winter days.

Third, the Study assesses “solution sets” to meet the reliability need identified in the “stressed system” case by comparing their respective ratepayer costs and effects on regional greenhouse gas (GHG) emissions. These approaches include market-driven solutions (including oil backup (dualfuel) capability at natural gas power plants and firm contracts for liquefied natural gas (LNG) delivery to power plants), natural gas pipeline expansion, and renewable/distributed resource investments (including energy efficiency, demand response, and low carbon imports from neighboring areas with and without new transmission lines). The Study uses the market-oriented dual-fuel solution set as the baseline for assessment of other solution sets. Based on modeling of New England’s electric prices and through 2030, the Study finds with respect to:

[1] Market-driven solutions:

- a. electricity markets would likely meet any deficiency need through the addition of dual-fuel capability at existing facilities, and/or by contracting for LNG;
- b. however, market-based solutions fail to offer outcomes consistent with the climate change programs and goals of the New England states and would not necessarily achieve the states’ mass-based GHG emission goals under EPA’s Clean Power Plan [CPP goals].

[2] Electric ratepayer investment in new interstate natural gas pipeline capacity:

- a. the construction of additional gas capacity could address the identified stressed system deficiency, provided such capacity was fully reserved for delivery to electricity generators under coincident winter peak conditions for heating and electricity generation;
- b. investment in new gas capacity would generate significant wholesale electricity price benefits but would also require up-front ratepayer commitments; and
- c. investment in new interstate natural gas pipeline capacity fails to offer outcomes consistent with the climate change programs and goals of the New England states or with the states’ CPP goals.

[3] Renewable/distributed investments:

- a. additional investment in energy efficiency and demand response measures is the most cost-effective and clean option for meeting any future electric reliability need, fully addressing the stressed system reliability deficiency, delivering the most wholesale electricity price benefits, and significantly reducing GHG emissions;
- b. firm imports of low-carbon resources from outside New England on existing transmission lines, when combined with energy efficiency and demand response measures, provide the greatest GHG emissions reductions of the reliability solutions studied;
- c. firm imports of low-carbon resources from outside New England on new transmission lines could address future reliability needs and reduce GHG emissions, but would result in net costs to electric ratepayers; and
- d. while these reliability solutions, which are sized and timed to meet the stressed system reliability deficiency, would meet the states’ CPP goals, they fail to achieve state climate change goals, meaning that the states must take yet more aggressive actions to reduce GHG emissions.

Fourth, the Study examined the cost and GHG emission impacts of two large infrastructure projects: (1) new natural gas pipeline capacity that is larger than the stressed system reliability deficiency and installed earlier than needed; and (2) firm imports of distant low-carbon resources on new and existing transmission lines that are installed earlier than needed. These infrastructure scenarios demonstrate cost, risk, electricity price, and GHG emission impacts that are similar in nature but larger in size than like infrastructure that is sized and timed to meet the reliability need. Notably, the oversized natural gas pipeline infrastructure scenario would deliver less customer savings than are achievable with investment in energy efficiency and demand response. The firm imports infrastructure scenario was the most expensive option analyzed in the Study, but it provides the deepest GHG emission reductions and would achieve the New England states' current climate goals.

The Study underscores the critical importance of FERC's own rigorous evaluation of the nature and extent of the regional need for new gas capacity as part of its review of the NED Project. See AGO Scoping Comments at 5-13. In particular, and as discussed in the AGO's detailed scoping comments, Tennessee Gas intends to finance most of the NED Project's capacity (up to 0.8 Bcf/day) with long-term contracts with electric utilities paid for by electric ratepayers to serve natural gasfired electric generators. See AGO Scoping Comments at 7. In light of market conditions that will promote alternatives to new pipelines, the Study demonstrates that, under the status quo, there is no electric reliability deficiency that would justify electric ratepayer investment in the NED Project.¹

Furthermore, the Study shows that electric ratepayer-funded gas pipeline investments like the proposed NED Project are more costly to ratepayers than comparable investments in cleaner alternatives, including energy efficiency, demand response, and firm low-carbon imports over existing transmission lines [when paired with energy efficiency]. In this regard, the Study provides relevant data and analysis for FERC's use in analyzing the reasonable non-pipeline and non-gas alternatives to the NED Project, See AGO Scoping Comments at 15-16.

In fact, the Study finds that, unlike these alternatives, natural gas pipeline investments like the NED Project that seek to serve the power sector will *increase* regional GHG emissions relative to status quo market conditions. In light of this finding, FERC's NEPA-required analysis of the incremental GHG emissions in New England should determine that the NED Project, as proposed, cannot meet the New England states' climate goals or applicable federal CPP goals. See AGO Scoping Comments at 23-25.

The AGO requests that FERC fully consider the findings of the Study in the Environmental Impact Statement for the NED Project, including in the EIS's analysis of reasonable alternatives. FERC also should take the findings of the Study into account as part of its overall review of the NED Project's application for a certificate of public convenience and necessity.

Attorney General Healey appreciates the Commission's willingness to consider the Study as part of its review of the NED Project and would also welcome the opportunity to discuss its findings with the Commissioners in other appropriate venues.

CONCLUSION

For all the above stated reasons, the AGO respectfully files for the Commission's review and consideration on Tennessee Gas's application for a Certificate for Public Convenience and Necessity the AGO's Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas, attached hereto as Exhibit 1."

Footnote:

¹ The Study does not seek to address gas customer needs. As discussed in the AGO's scoping comments, FERC should consider whether the gas capacity amounts under Tennessee Gas's precedent agreements with New England local gas distribution companies [LDCs]—the only transportation service commitments currently supporting the NED Project's development—are justified not only by the LDCs' needs but also in absence of reasonable alternatives. See AGO Scoping Comments at 9-10.

Basis for Intervening:

Dear Sirs:

I am concerned that there will be too much loss of habitat for the local raptors and other wildlife.

I am concerned with traffic, noise, air pollution and numerous disturbances during construction.

I am concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and my life. My hometown in Richmond Indiana had a major gas explosion where lives were lost and the Main Street demolished in 1964

I am concerned with the property value of my house being close to the pipeline.

I am concerned that New Ipswich NH, my home town may become a terrorist target.

I am a resident of East Dracut, Massachusetts, and I object to the NED Pipeline Project. After doing some research I have a deep concern for the pollution and possible leaks and explosions that occur regularly with pipelines. The US DOT Pipeline and Hazardous Materials Commission 20 year trend on pipeline incidents show well over 10,000 incidents and over 5,000 significant incidents.

I respectfully ask that you pursue clean, renewable sources of energy such as geothermal, solar and wind and prevent the expansion of pipeline and fossil fuel infrastructure.

Thank you,

Mark Peters

Submission Description: (doc-less) Motion to Intervene of Henri A Vaillancourt under CP16-21-000., as a resident of the Town of Greenville NH

Submission Date: 1/14/2016 1:55:08 PM Filed Date: 1/14/2016 1:55:08 PM

Dockets

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	henri@myfairpoint.net	

Basis for Intervening:

I live in the Town of Greenville NH , a community whose center lies one mile downwind from the Market Path Mid Station 4 compressor station located in New Ipswich near the Greenville border . As the science is now clear that compressor stations can have severe health impacts on those living in their proximity [see Minisink NY and other studies relating to compressor station health problems] ... and that those effects are most severe on those living in downwind situations ... the community of Greenville - out of all of the neighboring communities - is likely to suffer the greatest harm from this compressor station. I therefore seek intervenor status on docket # CP16-21-000.

Greenville NH, while geographically one of the smallest towns in the State, has a relatively large population (over 2100) relative to its size. It developed as an industrial village centered around the textile mills that proliferated throughout the northeast in the 1800's . As such , the housing is tightly clustered within the village district with a large majority of the population living within this area. The densely settled village district begins at the northwestern corner of the town slightly over one half mile downwind in a southeasterly direction from the proposed Kinder Morgan Market Path Mid-Station 4 compressor station off of Route 45 . The heart of the village district lies approximately one mile from the proposed compressor station ; in this area lies a mix of closely spaced residences, businesses, churches , town offices , police, fire, and school district department buildings , as well as the large Greenville Falls Elderly Housing which is home to more than 80 elderly and disabled, and which serves the needs of not just Greenville , but the entire region as well .

The dense housing and business in Greenville precludes the possibility of private wells and septic systems , and these necessities are provided by the Town with a sewage treatment plant, and a reservoir situated in the Town of Temple. Greenville is unique in this regard in relation to the neighboring towns of Temple, New Ipswich and Mason which are not so densely settled and can rely on both private wells and septic systems.

The above mentioned reservoir is located approximately one half mile downwind in a northeasterly direction from the proposed compressor station. Moreover, the compressor station sits on land elevated above this reservoir , and which drains in several directions into streams which feed into the water supply . As mentioned previously, this reservoir supplies the only source of water for most of the Greenville residents and businesses.

The densely populated areas of Greenville, as well as the municipal water supply, both located in close proximity to, and downwind from (due to prevailing westerly winds) the compressor station , place Greenville at greater risk than surrounding communities from the toxic emissions. The less densely populated village districts of Temple and New Ipswich would be similarly affected when the winds shift to the south [for Temple] and the northeast [for New Ipswich] , a far less common occurrence .

In Summary

The placement of the Market Path Mid-Station 4 compressor station as sited by Kinder Morgan poses severe health and economic risks to Greenville for the following reasons :

- 1) The compressor station location poses an unreasonable health risk to the most densely populated community along the pipeline route in this region. The thickly settled sections of Greenville are located approximately one half mile at the nearest point, to approximately one mile at the very center of the village to the proposed compressor station ; this downwind location jeopardizes the health of a large number of Greenville residents, including the more vulnerable elderly and disabled population of the Greenville Falls Elderly Housing complex.
- 2) The location of the Greenville municipal water reservoir a mere one half mile downwind from the pre-

vailing westerly winds , places what is the only source of water for the majority of both residences and businesses in Greenville at high risk from both air and surface contamination . Moreover , the placement of the compressor station on land elevated above the reservoir, and which drains into streams feeding the reservoir , greatly enhances the danger of contamination of this water supply. Indeed, it is highly unlikely that an industrial building of far lesser impact would ever find state or local approvals for placement in this watershed area.

3) The community of Greenville has suffered from years of economic and social decline subsequent to the 1970's closing of the textile mills that had been the mainstay of local employment, and has struggled for decades to regain the vitality it once had . It has the geographic and architectural features to once again become a thriving community. But its hazardous geographical positioning in relation to a polluting compressor station doom it to further degradation ...it will likely be yet another casualty in what is known in the literature as a 'sacrifice zone' – a zone where the health and well being of poorer communities is sacrificed in favor of powerful corporate interests and profit .

For all of the above reasons ...and out of a love borne of more than 6 decades of life in my hometown ...a community of hardworking, honest, and trusting people... a people who came as immigrants from Quebec, New Brunswick, and Ireland seeking a better life, and whose three generations lie buried in the hill above the town for all of these reasons, I seek intervenor status in the aforementioned docket .

Henri Vaillancourt
Greenville NH 03048

Basis for Intervening:

I live in Northfield,Mass.,and want to intervene in this proceeding to OPPOSE the proposed NED pipeline. I am also a landowner (abutter)who is directly impacted by the pipeline and proposed compressor station. Indeed,our family property has already been downgraded and deemed markedly less valuable because of the actions of Kinder-Morgan.I believe that Kinder-Morgan is acting in an UNCONSTITUTIONAL manner,and the NED represents NO viable "need for the greater good";in spite of the propaganda espoused by KM.In fact the NED really represents a horrific example of "Public Harm" being proposed by a private for profit company with NO interest for the Public Good!

I also live in the blast area,my water would be affected,and being close to the compressor station(down the hill)whenever there is an atmospheric"conversion"(frequent in this area,my breathing air would be toxic. This proposed Pipeline is WRONG physically,constitutionally,morally,ethically,and more!

NO NEED has been demonstrated.In fact the Extensive Mass.Att.Gens.report released at the end of 2015,reinforced this fact.

I Entreat FERC to study the REAL FACTS ,and not be swayed by the Fabrications put forth by K-M,Berkshire Gas,and other private concerns that are only interested in their profit margin,with total disregard for humanity and the environment,which would be affected extremely ADVERSELY ,if the NED ever comes into being.....Thank You

this legal tool to protect our land. The proposed (alternate) main line, not including laterals, will cut through 30.9 miles of core waters (206 wetlands, 15 outstanding resource waters, 13 public water supplies, 2 scenic rivers, and 4 wellhead protection areas) (data compiled from the Massachusetts GIS website by Samuel King of Sustainable Community Development at UMass).

My interest as a human being dependent on clean air is that “natural” gas (obtained through “fracking”) is often touted as a clean alternative to other fossil fuels, yet the significantly greater increase in methane that is produced in the production of “natural” gas is alarming. The Environmental Protection Agency has already weighed in on this issue: “Pound for pound, the comparative impact of CH₄ on climate change is over 20 times greater than CO₂ over a 100-year period.” Henry Tepper, President of MassAudubon has stated that: “The proposed Kinder Morgan project... is also contrary to the state’s commitment to meet the greenhouse gas (GHG) emission reduction targets of the Global Warming Solutions Act.”

Sincerely,

Graylen Scarsdale

20160114-5312

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
North East Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, Lizabeth Vargonen, file this motion to intervene in this proceeding.

On November 20,2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 u.s.c. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16-21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Lizabeth Vargonen
205 China Hill Road
Nassau, NY 12123
(518) 766-2047
lizvargonen@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

I, Lizabeth Vargonen, am concerned over the absurdity of the assumption that Kinder Morgan can come into our community and tell where they are going to put a pipeline of fracked gas that nobody in this community and area want. Kinder Morgan knows and cannot hide the fact that fracked gas not only pollutes the air, land, and water, but also tells us that everything will be alright, treating us like uneducated, ignorant country folk. Kinder Morgan states that this pipeline will provide jobs and inexpensive fuel when they know that this is an untruth. The fracked gas is to be shipped overseas. How is this going to make fuel cheaper here? Also it is known that they bring their own crews and hire very few local skilled workers and, if they do, it’s temporary work.

I moved from California to Nassau, New York, for the peace and quiet and clean air of country living. The

proposed pipeline would abut my property behind my house.

I am a person who suffers from chronic bronchitis, asthma, and a heart condition, I would be adversely affected by pollutants caused by the construction and operation of the pipeline. I moved here to improve my health, which has improved since moving from California, due to the pristine air and spring water.

I am also appalled at the fact that a compression station is proposed to be within a mile of my home, which would put poisonous gases into the air and make a constant vibration of the ground. If I wanted earthquakes, I would have stayed in California.

It has been proven over and over again how detrimental fracked gas is to the environment. This is the 21st century. We can have hydro-energy, solar-energy, hybrid cars. Continuing to rely on fossil fuel is slowing our transition to renewable energy. If we put our energy and money into creating renewable energy sources we could meet our energy needs with these sources. The destruction of habitat created by the building of the pipeline is significant. The pipelines and compression stations are not for the common good. If an explosion or accident of any kind happens, it cannot be designated as an "act of God." It is a blatant and open crime against humanity and the environment.

III. CONCLUSION

Wherefore, I, Lizabeth Vargonen, respectfully request that the Commission grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 13th day of January, 2016

Lizabeth Vargonen
205 China Hill Road
Nassau, NY 12123

lizvargonen@gmail.com

20160114-5313

Docket No.CP16-21-000
Tennessee Gas Pipeline Co.,L.L.C. – Northeast Energy Direct Project [NED]
36-inch natural gas pipeline on Waldenmaier Road in Albany County, New York
From Alignment Sheet TE-SEG_F-023 ISSUED FOR FERC 03/2015

{ map omitted }

The above picture shows the proposed NED gas line[in blue] connecting with the southern property line of the 400 foot National Grid Power line corridor and paralleling it East.That was acceptable to us because it paralleled the existing 2 pipelines [shown in red] and 3rd Connecticut Expansion pipeline not shown in this picture and took the least amount of our land. The picture below, we are told is now the path that the 4th gas line will make to connect with the southern property line of National Grid corridor. We see no reason for this unnecessary path change and the taking of more of our land. If they MUST have the pipe bends at this level then move them further east on to the municipal property. The objects in the pictures are not permanent structures and are being constantly being removed and replaced. We can see that this is the easiest and cheapest way for Kinder Morgan but at the expense of our land.

From current Alignment Sheet TE-SEG_F-023

{ map omitted }

Thank you,

Mike Waldenmaier

Basis for Intervening:

I am strongly opposed to the NED pipeline. I live within 8 miles of the compressor station and the pipeline runs through the state forest in my back yard. My reasons are:

- 1) I am concerned about the effects of blasting the granite formation upon which our town is built.
- 2) I am concerned about the pipeline causing excessive toxic emissions in water and air thus compromising the health of innocent citizens
- 3) I am concerned that lands set aside by the public as preserves will lose beauty and health.
- 4) I am concerned that the pipeline will lower property values because no one wants to live in a hazard zone.
- 5) I am concerned that imminent domain is being imposed unnecessarily on citizens for the profit of a few.
- 6) I am concerned that our small towns have not the infrastructure (roads, fire departments etc) to deal with a potential disaster.

Basis for Intervening:

I am filing this motion to intervene in this project proposal to formally object to this massive disruption of our natural and economic world. There are many reasons and will list just a few. Born in 1960, raised in New Jersey I have been a witness to many events, naturally occurring and those born from human activity. As a child I recall the wide variety of seashells, all along the beach thick masses of large clam, oyster, muscles etc...sharp under feet. flying fish hopping out of the water. thru the 1960's and 70's industrial activity erased all of this biodiversity and with it the death of once bountiful miles and miles of coast line and estuaries, the very important cradle of marine life itself. Fast forward, I moved to Silver St. Lanesborough, Mass. in the Berkshire Hills the very headwaters of the Housatonic River, the Hoosac River, and the Kinderhook River to be among the clean air producing forests, the fertile soils for growing organic produce, the soil filtered water that is essential for this high grade habitat to thrive. This current proposal will be less than one half mile from my kitchen window, which sits in the woods far from the mayhem and toxicity of New Jersey. Here in my neighborhood, home to Black tailed Ermines (Weasel), Beaver, Moose, many owls and coyotes just to name some of the ones I most enjoy seeing and hearing, here in the peace and quiet of

the day and night. once an industrial area with its many streams flowing down off the mountain serving as power sources to sharpen and power the tools used in mining limestone will be threatened with elimination and certainly degradation from the heavy equipment necessary to prepare for and to construct this very questionable project.

This proposed transmission pipeline with its heavy equipment, clearing the forests, blasting, trenching and compacting the very soils that hold precious water for this unique environment will decimate in the short term and most definitely threaten its existence in the long term. When I was searching for my home in this town I refused some properties that were acres of what I wanted, except they were located in close proximity to an underground gas transmission line. For safety reasons I avoided this gas corridor by miles. It is widely recognized that transmission lines of this type emit on a regular basis poisonous gases. Between the staging of heavy equipment and materials the actual clearing and blasting for this project will interfere with our families daily commute into Pittsfield. Literally our dirt road will be impassible. My wife is a Registered Nurse with the Coronary unit and is on call very often. Which means she must be at the hospital within 20 minutes. As it currently goes our location is so remote and rugged most people do not wish to reside here. The elevation creates conditions of snow when in town may be raining. With the massive equipment making a mess of miles of our road it will certainly be near impossible to get there in time and perhaps not at all as the road would be unusable by the best of 4 wheel autos.

I must say over the years I have enjoyed the convenience of heating my homes and cooking my spaghetti with gas. But this proposal simply does not make sense environmentally or economically due to new technology in energy generation, Storage and efficiencies. What does seem to make more sense is to replace the current pipelines that are decades old, smaller in size and decaying with new less inferior pipes that carry a slightly larger volume. This project as proposed will destroy unnecessarily to many acres of prime human habitat and the natural clean flowing waters above ground and underground which serve as unfiltered drinking source for many of us. The destruction I describe here is huge yet only a tiny percent of total project proposal. In other words this project should be scrapped.

Thank you for accepting my application to be a part of this conversation.

Basis for Intervening:

I live in Montague, MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome because:

I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/and health;

I am an electric rate-payer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill related to NED cost recovery;

I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project;

I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
ALGONQUIN GAS TRANSMISSION, LLC**

Pursuant to Rules 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“FERC” or “Commission”),¹ Algonquin Gas Transmission, LLC (“Algonquin”) hereby moves to intervene in the above-captioned proceeding. This proceeding involves Tennessee Gas Pipeline Company, L.L.C.’s (“Tennessee”) application for a certificate of public convenience and necessity related to the proposed Northeast Energy Direct Project (“NED Project”). In support hereof, Algonquin respectfully shows as follows:

**I.

* Parties to be designated on the Commission’s official service list.

**II.
PARTY**

The exact legal name of Algonquin is Algonquin Gas Transmission, LLC. Algonquin is a limited liability company organized and existing under the laws of the State of Delaware, and has its principal place of business at 5400 Westheimer Court, Houston, Texas 77056-5310. Algonquin is a wholly-owned, indirect subsidiary of Spectra Energy Partners, LP.

Algonquin is a natural gas company as defined in the Natural Gas Act, engaged in the transmission of natural gas in interstate commerce, subject to the jurisdiction of the Commission. Algonquin’s transmission system operates throughout New England.

**III.
MOTION TO INTERVENE**

On November 20, 2015, Tennessee filed an application in Docket No. CP16-21- 000 seeking a certificate of public convenience and necessity to construct, install, operate, and abandon certain facilities as part of the

NED Project. Tennessee proposed to provide up to 1.3 billion cubic feet per day of firm capacity. The NED Project includes two components: (1) the Supply Path Component, which is comprised of facilities from Troy, Pennsylvania, to Wright, New York and (2) the Market Path Component, which is comprised of facilities from Wright, New York, to Dracut, Massachusetts.

Algonquin interconnects with the Tennessee system and serves customers in the New England region. As such, Algonquin has a direct and substantial interest in the captioned proceeding. Moreover, Algonquin is not adequately represented by any party to this proceeding and will be affected by the Commission's actions herein.

IV. CONCLUSION

WHEREFORE, for the foregoing reasons, Algonquin respectfully requests that the Commission grant this motion to intervene and permit Algonquin to participate in the captioned proceeding with full rights as a party thereto.

Footnote:

1 18 C.F.R. §§ 385.212 and 385.214 (2015).

Respectfully submitted,
Jennifer R. Rinker
Senior Counsel
Attorney for
Algonquin Gas Transmission, LLC

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
MARITIMES & NORTHEAST PIPELINE, L.L.C.**

Pursuant to Rules 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission ("FERC" or "Commission"),¹ Maritimes & Northeast Pipeline, L.L.C. ("Maritimes") hereby moves to intervene in the abovecaptioned proceeding. This proceeding involves Tennessee Gas Pipeline Company, L.L.C.'s ("Tennessee") application for a certificate of public convenience and necessity related to the proposed Northeast Energy Direct Project ("NED Project"). In support hereof, Maritimes respectfully shows as follows:

I.
CORRESPONDENCE AND COMMUNICATIONS

The following persons should be included on the official service list in this proceeding, and all communications concerning this motion should be addressed to the following persons:

*Berk Donaldson
General Manager, Rates and Certificates
Maritimes & Northeast Pipeline, L.L.C.
5400 Westheimer Court
Houston, Texas 77056-5310

Email: awilson@velaw.com

* Parties to be designated on the Commission's official service list.

II.
PARTIES

The exact legal name of Maritimes is Maritimes & Northeast Pipeline, L.L.C. Maritimes is a limited liability company organized and existing under the laws of the State of Delaware, and has its principal place of business at 5400 Westheimer Court, Houston, Texas 77056-5310. Maritimes is a wholly-owned, indirect subsidiary of Spectra Energy Partners, LP.

Maritimes is a natural gas company as defined in the Natural Gas Act, engaged in the transmission of natural gas in interstate commerce, subject to the jurisdiction of the Commission. Maritimes owns and operates a natural gas pipeline subject to the Commission's jurisdiction that, along with its Canadian pipeline affiliate, transports natural gas in international commerce from a point near Goldboro, Nova Scotia, to the Canadian-United States border and through the northeastern states of Maine and New Hampshire, with a terminus in Dracut, Massachusetts.

III.
MOTION TO INTERVENE

On November 20, 2015, Tennessee filed an application in Docket No. CP16-21- 000 seeking a certificate of public convenience and necessity to construct, install, operate, and abandon certain facilities as part of the NED Project. Tennessee proposed to provide up to 1.3 billion cubic feet per day of firm capacity. The NED Project includes two components: (1) the Supply Path Component, which is comprised of facilities from Troy, Pennsylvania, to Wright, New York and (2) the Market Path Component, which is comprised of facilities from Wright, New York, to Dracut, Massachusetts.

Maritimes interconnects with the Tennessee system and serves customers in the New England region. As such, Maritimes has a direct and substantial interest in the captioned proceeding. Moreover, Maritimes is not adequately represented by any party to this proceeding and will be affected by the Commission's actions herein.

**IV.
CONCLUSION**

WHEREFORE, for the foregoing reasons, Maritimes respectfully requests that the Commission grant this motion to intervene and permit Maritimes to participate in the captioned proceeding with full rights as a party thereto.

Attorney for
Maritimes & Northeast Pipeline, L.L.C.

20160114-5324

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we, name here, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Paul West
60 Reagan Rd
Dracut, MA 01826
978-455-3373
Pjwest54@yahoo.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Provide paragraphs on how construction of the pipeline will adversely impact you: (You may put your reasons here in the body, or on a separate sheet called "Exhibit A", with wording here stating:

The Pipeline proposed by Kinder Morgan will directly affect me and my family. The most concerning is the compressor station which will be located less than 1 mile from our son's elementary school. The school is downwind and within 1 mile of the school, there will be Methane and other toxic elements that will be released and airborne, these elements will easily travel and be transported to the school as well as into its ventilation system. There's no reason to expose our young innocent children to these harmful chemicals, especially with the uncertainty of the long term health effects this may cause them.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 14th day of January, 2016.

Paul J. West

Individual bill@williamthomas-furniture.com

Basis for Intervening:

I am a concerned citizen of the town of Rindge, NH living approximately one half mile from the projected NED pipeline route. The projected need for the NED pipeline is based on misleading and false projections of the energy requirements of New England. This pipeline is a waste of money that should be spent developing alternative energy sources.

Kinder-Morgan is barely above junk bond rating at this point, and their track record of poor installation, and especially maintenance of their existing pipelines is a good indication of the damage they will do to the New Hampshire environment, and the high risk of hazardous incidents in the future. When viewing Kinder-Morgan's application, there are page after page after page of charts with TBD as their only entries. In reality they don't begin to have enough information to proceed with such a huge project, and are most certainly planning on "winging it" if they get FERC approval. This is not reassuring in the least as far as potential damage to the environment. At a Rindge Conservation Commission meeting on 1/11/16, Kinder-Morgan claimed that they would keep a thirty foot wide open right of way over the pipeline, but photographs of other pipeline projects show enormous damage done in a wide swath. I see no reason to believe that they would do better during the construction of the NED.

A further concern has to do with the fact that although this is being billed as a gas pipeline, ICC rules specify that the pipeline has to be available to anyone with a product to ship as a common carrier. This means that the pipeline has the potential of being used to ship crude oil, benzene, or other hazardous products that could cause major environmental damage if there was a spill.

It is an open question whether the gas that is projected to be shipped via this pipeline is really intended for use in New England. The capacity is rated at somewhere around six times the energy needs of the entire region. There have been many rumors concerning gas exports from Nova Scotia if the pipeline was connected to existing lines. Why would the United States government allow our natural resources to be exported for commercial profit?

I call on FERC to do their job and reject the NED application.

Basis for Intervening:

I am a resident of a community near the proposed pipeline, and expect negative impacts on my enjoyment of the outdoors from light, noise and air pollution.

I am a citizen of the Commonwealth of Massachusetts, and expect significant damage to state forest and park lands, and protected farm land and conservation land, which were supposed to be protected forever under state law.

I am a human being dependent on the earth for my well-being, and I expect the pipeline to worsen the problems of global warming, air pollution, and destruction of wildlife habitat.

20160114-5341

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Project)

Docket No. CP16-21-000

MOTION TO INTERVENE OF DOUGLAS RICK

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Douglas Rick
127 Wallingford Road
Milford, NH 03055
(603) 860-3956
douglas_rick@yahoo.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

— My interest as a property owner located just 300 feet outside the current proposed limit of the incineration zone. I am very concerned about the possibility of leak leading to a devastating explo-

sion. Kinder Morgan has been shown to have a poor safety and maintenance record. This has been documented in numerous places including New Hampshire's Union leader (<http://www.unionleader.com/apps/pbcs.dll/article?AID=/20150208/NEWS05/150209202/0/NEWS03>). The area my home is located in is heavily forested and I have little faith that our our volunteer fire department would be able to contain a fire of that magnitude.

Additionally I am very concerned about likely loss in value of my property. Like many people my home represents one of my biggest assets. Since Kinder Morgan is not compensating landowners unless they need an easement I will not receive any form of payment from Kinder Morgan. Thus the likely loss in value of my property will essentially be a donation from me to a multi billion dollar corporation which I AM NOT interested in making!

- My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a blow torch to light a candle. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England's ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.
- My interest as a taxpayer, landowner, and citizen of New Hampshire and The United States of America in that the law of Eminent Domain will be used illegally either to directly seize easements from landowners, or purchase such easements under threat of its use. As you are aware the use of Eminent Domain requires that its use be for reason of public convenience or necessity rather than advancing the economic interests of private parties. There are very serious questions as to whether there is a public need for this project. A 30 to 36 inch pipeline represents destructive overbuild when compared to the actual need for additional gas in New Hampshire. Myself as well as many other people suspect that the gas is headed for terminals on the East coast and Canada for export overseas where gas prices are higher. The exportation of gas to further enrich a multi billion dollar corporation IS NOT a public need or necessity!

I am opposed to the NED – Kinder Morgan pipeline! Kinder Morgan continues to show disregard and disrespect for the people of New Hampshire and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs are available and can be pursued.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Douglas Rick

Individual	patkonecky@gmail.com	

Basis for Intervening:

I am a resident of Western Massachusetts, in an area not far from the proposed new Kinder Morgan pipe-

line. I have several concerns about this pipeline: 1) The primary concern is that we do not need additional infrastructure for transporting fossil fuels. The recent MA Attorney General's study confirms this. The nation's goals of moving toward renewables confirms this. The security of our future requires this. 2) Attempts are being made to charge back the cost of this unwanted unneeded pipeline to consumers. We should not be made to pay for infrastructure that only benefits (financially) the company attempting to foist this on us. 3) I am concerned about the safety of pristine lands that could be impacted by this project. Our clean air and water and wilderness is far more valuable than this unwanted pipeline. 4) I support land conservation organizations and fear that the purpose of my donation would be violated if this project is allowed to take easements over protected lands.

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	drgilda@aol.com	

Basis for Intervening:

I am an abutter to the proposed pipeline. and oppose its construction for the following reasons:

1. Construction of the pipeline in the current route takes it across large segments of granite shelf. The blasting and drilling that would be necessary would undermine the foundation of my home, as well as cause irreparable damage to the vertical supports and roof. Not to mention the filth and noise that would pollute our neighborhood.
2. As the route will cross the location of the aquifers which feed my well and those of my neighbors, we face possible contamination or disruption of our sole water sources.
3. The pipeline would cross the only access road to my home. Dan Hill is a dead end road which ends at a wooded wetland which has never been developed as it is impassible for most of the year. We are facing being trapped in our home in the event of a gas line accident. There is no "back way out."
4. As a consumer, I cant see any possible benefit to NH or to our electrical supply. Currently, Eversource, Londonderry's electricity supplier is not signed-on to purchase any gas from Tennessee Gas. Liberty Utilities "possible" inroads into Southern NH is not a good enough reason to devalue my property and that of my neighbors.

I will continue to oppose the construction of the pipeline as a consumer, an abutter and a concerned citizen.

Gilda R. Guttman

Individual djatwood31@yahoo.com

Basis for Intervening:

I am a Dracut resident. The NED project, due to number of proposed facilities and amount of construction and road closures proposed in town, would have a enormous effect on me.

A proposed path put the pipeline through my backyard, within 40ft of my house. A different path has since been proposed, but if it were to change back, there would be a huge impact to my home, to the safety of my family, and the value of my home. My family would essentially be forced to move from the home we love.

My family lives close to the proposed compressor station and could be adversely affected by emmissions to the atmosphere. I have two children (twins) that were born significantly prematurely whom are very sensitive to adverse atmospheric conditions.

I am a taxpayer in Dracut and I am concerned with loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services.

I am a consumer of produce from Dracut farms and I am concerned the pipeline may cause industrialization and contamination of the water supply and crops that are part of my food supply

I am a ratepayer for both National Grid gas service and electric service and I am concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals.

I use well water in East Dracut and I am particularly concerned about the fact that the development plans by Kinder Morgan and the blasting from construction are likely to impact the migration of toxic chemicals from the contaminated former EXXON site at 970 Broadway Road. This contamination was detailed in a letter and proposal reviewed at the meeting of the Dracut Board of Health on April 1, 1982 and is fully documented at the Mass DEP web site at the following URL:

<http://public.dep.state.ma.us/fileviewer/DefaultScanned.aspx?documentid=24154>

20160114-5353

Motion to Intervene of Keswick Farm Equine

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct Project (NED)

Motion to Intervene and Protest of Keswick Farm Equine Assisted Therapy, Jean P. Ford, Licensed Physical Therapist (hereinafter Keswick Farm Equine”), Upper Gap Mountain Road, Fitzwilliam, NH 03447

Keswick Farm Equine is directly and negatively impacted by the proposed pipeline in the above proceeding, the destruction and loss of farmland caused by its installation. Keswick Farm Equine operations include utilizing equitation therapy to assist those with physical disabilities and those rehabbing from physical injuries. NED proposes to forcibly take by eminent domain permanent construction and pipeline easements, temporary construction easements, temporary workspace easements, and staging easements all of which will permanently destroy farm property, reduce its economic value, and endanger animals, customers, and clients. NED will directly and negatively impact Keswick Farm Equine in several ways, including but are not limited to the following: (1) the farm structures, pastures, riding rings, and stables are within close proximity to the pipeline and the proposed route will cross sections of farmland and are in the incineration zone, (2) temporary construction areas are located on farmland and will negatively impact surrounding dirt roads, trails and pastures, and access for clients, (3) Keswick Farm Equine land is vulnerable to structural damage and landslides, loss of drinking water aquifers and water quality, and is within the pipeline blast radius, (4) Keswick Farm Equine activities will be negatively impacted by the loss of forested areas and loss of sound buffers during and after construction, as well as numerous other safety hazards (such as being within a blast radius) including chemical releases in the air and ground due to the pipeline’s location adjacent to a high voltage substation, and (5) Keswick Farm Equine property and trails will be forcibly taken by eminent domain proceedings, and (6) the pipeline constitutes a wrongful breach of IRS regulations, charitable trust protections as well as other perpetual protections for conservation land.

Keswick Farm Equine questions the need for the pipeline relying on numerous reports, including the Massachusetts Attorney General’s independent study, and question the pipeline’s location through untouched virgin forests such as ours and other pristine conservation land, as compared to a more appropriate location along existing pipeline corridors and other hardscape/roadway infrastructure.

For these reasons, Keswick Farm Equine requests that FERC grant this Intervenor request and/or reject and deny the Northeast Energy Direct Project application.

MILLERS RIVER WATERSHED COUNCIL, INC. ivan@millersriver.net

Basis for Intervening:

The Millers River Watershed Council (MRWC) was founded in 1970 to protect and maintain the health of the waters and natural and human communities of the Millers River Watershed, and its members and supporters are found throughout the towns of the watershed--including those on the route of the proposed project. The proposed project would pass through several towns in the western part of the watershed, the Millers River, several of its tributaries, numerous streams and extensive wetlands and woodlands. MRWC, with assistance from a host of professional colleagues, has studied the potential project closely for the last 18 months and has firmly concluded that project construction activities have significant potential to severely disrupt the hydrogeological connections between these surface flows and their interconnected groundwater flows, and that based on experience with similar projects the ability to adequately mitigate these impacts is dubious, if not non-existent. Pipeline accidents and leaks, which are inevitable and well documented on many similar projects, would release significant amounts of contaminants into these waters, which would naturally move down-gradient towards the Millers River itself, close to its confluence with the Connecticut River. All of these project-related impacts have significant potential to irreversibly disrupt local drinking water wells and aquifers on which most local residents rely. Potentially major and possibly irreversible further impacts to the region's hydrogeological regime would also be expected to result from the clearance of extensive woodlands, and the resultant soil loss, erosion and sediment dispersal would wreck havoc with sensitive local wildlife populations.

Additionally, blasting through bedrock during construction has the potential to destabilize the Erving Paper landfill located in Erving on the banks of the Millers River, causing its contents to migrate into and pollute the Millers River; similar impacts are possible for a demolition and construction landfill located upstream in Wendell on the opposite bank of the Millers River.

Additionally, fugitive emissions from compressor stations are known to be enormous in scale, diminishing air quality and endangering the health of local residents who must breath air contaminated with hydrocarbons and other toxic substances. Such inevitable emissions also would run completely counter to the stated goals of the Commonwealth to reduce its emissions of greenhouse gases, as mandated by its Global Warm-

ing Solutions Act.

Additionally, the supposed need for the proposed project has no firm basis in reality. Conversely, it is well documented that any need to meet peak demand during the few hours on a few days during winter can be met by a combination of available and cost-efficient energy efficiency and market efficiency improvements. The Commonwealth does not need a cannon to kill a mosquito, and the economics of such an approach will not benefit residents and consumers. Further, the very real likelihood that the large majority of gas to be supplied by the proposed project would be exported raises the very real risk of significantly higher domestic rates that would negatively impact all residents and businesses of the Commonwealth, not just those along the proposed route.

Finally, in consideration of the above and the absence of a legitimate need for the proposed project, there is no basis on which lands protected by the Commonwealth under Article 97 of the State’s Constitution should be subject to losing that protection, nor is there a legitimate basis on which landowners should be forced to forfeit their properties as a result of eminent domain proceedings.

20160114-5367

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)	Docket Nos.	CP16-21-000
)		PF14-22-000

PROTEST OF PC CONNECTION, INC.

PC Connection, Inc. (“PC Connection”), pursuant to Section 211 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”), 18 C.F.R. § 385.211, protests the pipeline route proposed by Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) in its November 20, 2015 application for certificate authorization under Section 7(c) of the Natural Gas Act, 15 U.S.C. § 717f(c) (“Application”).¹ As discussed more fully below, Tennessee’s proposed pipeline route would run adjacent to PC Connection’s corporate headquarters and data center, which is the hub of a \$2.6 billion enterprise, houses extremely sensitive technology, and employs more than 1000 people. The construction and operation of the proposed 30-inch, high pressure pipeline would significantly and adversely impact PC Connection. Among other things, the seismic shock of pipeline construction techniques will threaten sensitive technology in the data center. Later, the existence of the pipeline would impair the ability to upgrade essential sub-surface telecommunications needed for evolving technology and further develop the headquarters and data center. Therefore, unless Tennessee’s proposed pipeline route is modified to eliminate the harm to PC Connection and others in Merrimack, NH,² the project’s adverse impacts will outweigh any alleged benefits, which will necessarily result in the Commission’s denying the requested certificate authorization.

In support of this Protest, PC Connection states as follows:

I. BACKGROUND

A. PC Connection

PC Connection is a Fortune 1000 company, with more than 1900 employees and annual revenues of approximately \$2.6 billion. It has three offices in New Hampshire, including its corporate headquarters located at Route 101A, 730 Milford Road, Merrimack, New Hampshire, 03054-4631, which also houses the Telecommunications and Data Center.³

The lion's share of PC Connection's employees, more than 1000 people, work at the data center, which serves the computing and connectivity needs of a community of more than 2000 employees geographically dispersed throughout the United States. In support of the corporate national solution provider mission, and as the technology center for a multi-billion dollar organization, the data center leverages vendor partnerships from industry leading technology firms to enhance the user experience for customers, employees, and partners. Some key aspects of the data center include the following:

- More than 600 server environments and more than 200 Terabytes of managed storage supporting mission critical applications, including
 - o Enterprise Resource Planning environment and supporting applications for core business processes that support Sales, Finance, Distribution, and Product Management for more than 1000 users;
 - o Customer Resource Management environment supporting a salesforce of more than 700 account managers in all aspects of the sales cycle;
 - o Master Data Management environment that serves as the system of record for customer data and supporting operations;
 - o Website environment providing continuous access to digital properties supporting business-to-business interactions for small and midsize businesses, State, Federal, Local, and Education business segments representing 15 percent of total revenue (greater than \$250 million); and
 - o Support for collaboration environments including email, Intranet, backup and recovery, application development, and security infrastructure.
- Network infrastructure connecting eight geographically dispersed call center, warehouse, and sales office operations, including
 - o Internet access and connectivity for critical cloud based applications supporting Human Resources, Marketing, and Product Management;
 - o Secure access for more than 300 remote home user and mobile enabled employees; and
 - o Call center functionality for more than 700 account managers, providing all phone access, call routing, and voicemail functionality.
- Service Desk operations, in a 7 x 24 x 365 model, supporting enterprise problem resolution, technology requests, and provisioning.
- Technology center of excellence for evaluating and deploying next generation solutions in accordance with the Enterprise Architecture roadmap for addressing critical business issues.

In short, the data center provides vital services to PC Connection, its customers, and partners: without the data center services, PC Connection cannot function.

B. TENNESSEE'S NED PROJECT

On November 20, 2015, Tennessee filed its Application requesting NGA Section 7 certificate authorization to construct, install, modify, operate, and maintain certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, referred to as the Northeast

Energy Direct Project (“NED Project” or “Project”). The NED Project is comprised of two components, a Supply Path Component and a Market Path Component. The Supply Path Component facilities include approximately 174 miles of pipeline facilities in Pennsylvania and New York, construction of three new compressor stations and modifications to one existing compressor station, construction of two new meter stations, and various appurtenant facilities. The capacity of the Supply Path Component facilities will be 1.2 Bcf per day.

The Market Path Component facilities include approximately 188 miles of mainline pipeline facilities in New York, Massachusetts, and New Hampshire, approximately 58 miles of lateral and pipeline looping (five laterals located in Massachusetts and New Hampshire, and one pipeline loop in Connecticut), construction of six new compressor stations, construction of 13 new meter stations and modification of 14 existing meter stations, and various appurtenant facilities. The capacity of the Market Path Component facilities will be 1.3 Bcf per day.

As currently configured, a portion of the pipeline facilities of the Market Path Component would be located adjacent to the northern portion of PC Connection’s headquarters and data center in Merrimack, New Hampshire. Pipeline construction near the Telecommunications and Data Center could disrupt services and threaten the ability of PC Connection to conduct business. On multiple occasions and in multiple venues, PC Connection has raised these concerns with Tennessee. Tennessee’s Application includes several changes that have been incorporated into the Project scope since the filing of the second draft Environmental Report on July 24, 2015 in the pre-filing process for the Project.⁴ Some of the changes include re-routing the pipeline’s Market Path Component. Regrettably, none of the changes address PC Connection’s concerns. As a result, PC Connection is forced to file this Protest to Tennessee’s NED Project.

II.

AS CURRENTLY CONFIGURED, TENNESSEE’S NED PROJECT WOULD SIGNIFICANTLY AND ADVERSELY IMPACT PC CONNECTION

A. CERTIFICATE POLICY STATEMENT

The Commission’s Certificate Policy Statement provides guidance for evaluating proposals to certificate new construction.⁵ The policy statement establishes criteria for determining whether there is a need for a proposed project and whether the proposed project will serve the public interest. In particular, when evaluating a certificate application, the Commission must “determine whether the applicant has made efforts to eliminate or minimize any adverse effects the project might have . . . on landowners and communities affected by the route of the new pipeline.”⁶ Thus, the Commission balances the public benefits against the potential adverse consequences:

The more interests adversely affected or the more adverse impact a project would have on a particular interest, the greater the showing of public benefits from the project required to balance the adverse impact. The objective is for the applicant to develop whatever record is necessary, and for the Commission to impose whatever conditions are necessary, for the Commission to be able to find that the benefits to the public from the project outweigh the adverse impact on the relevant interests.⁷

B. TENNESSEE’S NED PROJECT WILL HARM PC CONNECTION

A portion of Tennessee’s NED Project -- the Wright, NY to Dracut, MA 30-inch pipeline segment -- would abut the north side of PC Connection’s headquarters and data center. As such, construction and operation of the proposed pipeline threatens disruption of services and activities at PC Connection’s data center. A loss or disruption of these operations (at any scale) for a technology-based company, such as PC Connection, will result in irreparable damages to the services provided to PC Connection’s clients; diminish customer confidence in the company’s ability to perform on their behalf; and will mar the stellar reputation that the company has built its success upon for the past thirty six years. PC Connection takes very seriously its fiduciary responsibility -- to shareholders, customers, and employees -- to protect the infrastructure of PC Connection and to maintain its earned position, in a very competitive market place.

In particular, the proposed pipeline route in New Hampshire would harm PC Connection in at least four different ways. First, pipeline construction could interrupt PC Connections in several ways. Construction could interfere with essential subsurface utilities. The seismic impact of construction techniques could harm extremely sensitive technology in the data center. Construction would produce increased noise levels that would disrupt work, as well as impair traffic and parking needs for customers and more than 1,000 employees.

Second, the presence of the pipeline along the bounds of PC Connection's property will impair the company's ability to upgrade essential subsurface telecommunications, to meet the ever-evolving technology required to meet the needs of our customers.

Third, a 30-inch, high pressure pipeline running adjacent to PC Connection's headquarters and data center would result in diminished property value. The gas line easements would not only impair the company's ability for future site development to accommodate current occupants, but also adversely impact any repurposing of the subject property for future occupants.

Fourth, the project would diminish life safety standards for all PC Connection employees, customers, and neighbors in Merrimack, NH, given that the proposed pipeline would extend along the northern bounds of the property and that both vehicular access/egress paths to the property are also along the northern bounds of the property. Pennichuck Brook and related wetlands block all other possible alternative means of emergency access/egress to the site. In the event of a pipeline compromise, there is the potential for emergency egress by occupants (as well as access by emergency responders) to be blocked by the events likely to follow a pipeline compromise.⁸

CONCLUSION

"Tennessee believes its proposed facilities have been designed in a manner that will minimize the impact on landowners and the environment."⁹ Unfortunately, Tennessee's belief is not supported by the facts: the seismic impact of constructing Tennessee's proposed facilities will threaten sensitive technology in PC Connection's data center and impair the company's ability to maintain and upgrade necessary subsurface telecommunications connections. Indeed, unless Tennessee's proposed pipeline route is changed to eliminate the harm to PC Connection, the benefits of the NED Project cannot outweigh the adverse impact on PC Connection.

WHEREFORE, for the reasons discussed more fully above, PC Connection respectfully requests that the Commission consider this Protest when it reviews Tennessee's certificate application and, unless the NED Project's route is modified to address PC Connection's concerns, deny the requested certificate authorization or, alternatively, explore the issues during a technical conference or establish an evidentiary hearing to determine, among other things, whether Tennessee designed its proposed facilities to minimize sufficiently the impact on landowners (including PC Connection) and the environment.

Footnotes:

1 PC Connection filed a timely motion to intervene on January 14, 2016.

2 See, e.g., Comments of the Town of Merrimack, Docket No. PF14-22-000 (Oct. 26, 2015).

3 Other offices are located in Florida, Illinois, Massachusetts, Ohio, Maryland and South Dakota.

4 On October 2, 2014, the Commission in Docket No. PF14-22-000 approved Tennessee's use of the pre-filing procedures for the NED Project. As part of the pre-filing process, Tennessee submitted drafts of Resource Reports 1 and 10 for the Project on November 5, 2014. On December 8, 2014, Tennessee filed a revised draft of Resource Report 1, which reflected the adoption of two major route alternatives for the Market Path Component. On March 13, 2015 and July 24, 2015, Tennessee submitted the first and second drafts, respectively, of the Environmental Report (Resource Reports 1 through 13) to the Commission.

5 Certification of New Interstate Natural Gas Pipeline Facilities, 88 FERC ¶61,227 (1999), order on clarification, 90 FERC ¶61,128, order on clarification, 92 FERC ¶61,094 (2000).

6 88 FERC at p. 61,745.

7 Id. at p. 61,749.

8 Public opposition to the project is likely to result in disruptive activities throughout construction. The close proximity of the pipeline (to the PC Connection facility) will place PC Connection in the immediate vicinity

of public protests, and will compound the impairment to PC Connection's effectively conducting business.
9 Tennessee's Application at 97.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	susantheberge@icloud.com	

Basis for Intervening:

I am filing as an Intervenor, opposed to the Northeast Energy Direct (NED) project, because of the following interests that may be directly affected by the outcome of the proceeding:

I am a co-founder and Steering Committee member of Climate Action NOW <http://climateactionnowma.org>. Climate Action Now is a people powered, grassroots Western Massachusetts based organization dedicated to building a powerful, unstoppable climate justice movement. We work in our communities and in collaboration with diverse partners across the region to educate, advocate, and mobilize for climate action.

I am the mother of two adult children who have chosen to live and raise a family in Western Massachusetts because of their love for this region. I am the grandmother of a toddler; the more I study the science of climate change the more I am haunted by the gut wrenching knowledge that if we continue business as usual my granddaughter's life will be a living hell.

I am filing as an Intervenor against the NED project on behalf of my granddaughter and all the other beings with no voice in decisions that will determine whether or not they will have a livable planet upon which to grow up and raise families of their own.

I am filing as an Intervenor because I am a resident of Massachusetts. Our state leaders passed The Massachusetts Global Warming Solutions Act, enacted in 2008, which establishes a comprehensive plan for addressing the threat of climate change to the Commonwealth. This law requires greenhouse gas emissions to be reduced between 10 and 25 percent below 1990 levels by 2020 and mandates that greenhouse gas emis-

sions be reduced 80 percent below 1990 levels by 2050. In order to do this it requires that climate change impacts be considered in decisions by state agencies, boards, commissions, and authorities, including permitting and licensing decisions. This means that any environmental impact statement must take into account the impact on climate change.

Rigorous research has enlightened us as to the significant climate change impacts of methane (CH₄) gas. Natural gas and petroleum systems are the largest source of methane emissions from industry in the United States. In fact, methane is the primary component of natural gas. Methane is emitted to the atmosphere during the production, processing, storage, transmission, and distribution of natural gas. New research points to the underreporting of methane leaks due to faulty measurement tools. A study by researchers with the National Oceanic and Atmospheric Administration (NOAA) in late 2012 reconfirmed earlier findings of high rates of methane leakage from natural gas fields that utterly vitiate any climate benefit of natural gas, even when used as an alternative to coal.

Previous findings showed leakage of 4% methane leakage over a Colorado gas field and the new findings have more than doubled that to 9%. A new study Anthropogenic Emissions of Methane in the United States points out that that emissions of the potent greenhouse gas methane from industrial activities in the United States are vastly higher than previous estimates and appear to be 1.7 times higher than estimated by the Emissions Database for Global Atmospheric Research and 1.5 times higher than reported by the Environmental Protection Agency

I am filing as an Intervenor based on my interest as a taxpayer, nature lover, and frequent visitor to protected public land in Massachusetts. I am deeply concerned about the threat this project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution. This includes Notchview Reservation in Windsor, the West Mountain Wildlife Sanctuary in Plainfield, and other private and public conservation land as well as the Connecticut and Westfield Rivers and their watersheds. In all, over 100 parcels of public conservation land, protected by Article 97 would be affected were this pipeline ever to be built.

I am filing as an Intervenor because I am a land trust donor, visitor, and neighbor to protected land owned by the Massachusetts Audubon Society, The Trustees of Reservations, Mt Grace Land Conservation Trust, and Kestrel Land Trust (to name a sampling). The building of this pipeline would violate the purpose of my donations.

I am filing as an Intervenor because of my interest as an electric ratepayer; Kinder Morgan/Tennessee Gas seeks to have my electric utility (Eversource) as a project shipper, which, in turn, would seek to recover costs associated with the project from we, the ratepayers. Given the well-documented questions and concerns (as evidenced by the many comments FERC has received) about the viability and need for this project, as well as the continued financial viability of Kinder Morgan, I am concerned that if this project is approved, and Kinder Morgan goes into bankruptcy or financial failure that I, as a ratepayer to one of KM's debtors, will be left responsible. (e.g.<http://www.forbes.com/sites/christopherhelman/2015/12/07/kinder-morgan-collapse-will-force-dividend-cut-says-gadfly-analyst/>).

I am neither an elected official nor do I have wealth or political influence. But what I, along with so many others in Western Massachusetts and in the climate justice movement do have, is a determination that is deep in our souls and that will fuel us to do what it takes to prevent Kinder Morgan from building this pipeline which would carry methane leaking fracked-gas, a substance that will literally add fuel to the fire of global warming.

The environmental impacts of this proposed pipeline include the destruction of homes, wells, conservation areas, farms and threatened habitats. This proposed pipeline is a ticking time bomb and I can assure you that the people of Western Massachusetts will stand together to protect our environment. We will organize tirelessly by stop this pipeline from ever being built.

Basis for Intervening:

PC Connection, Inc. is a technology company whose corporate headquarters and data center are located in a building on land adjacent to the proposed pipeline facilities of Tennessee Gas Pipeline Company, LLCs (Tennessee). The data center contains sensitive computer facilities that may be adversely impacted by Tennessee's construction activities, and the presence of a 30-inch, high pressure pipeline along the bounds of the property could impair the company's ability to upgrade essential subsurface telecommunications facilities. As such, PC Connection has unique and substantial interests in these proceedings, which cannot be adequately represented by any other party. PC Connection, therefore, is an interested party in these proceedings, whose intervention and participation is in the public interest. Accordingly, PC Connection respectfully

moves to intervene with full rights to participate as a party in these proceedings.

20160114-5371

Motion to Intervene of James L Rodger and Jeanne E. Sable

Jan. 14, 2016

James L. Rodger,
Jeanne E. Sable
160 Dunton Rd.

Fitzwilliam, NH 03447

We are retired property owners living in Fitzwilliam, NH, where we enjoy organic gardening, nature walks, photography and more. Jeanne has served for many years as secretary to the Fitzwilliam Conservation Commission and is advisor to The Sustainability Project, a regional 501(c)(3) nonprofit organization whose mission is to promote a love of nature, environmental stewardship, caring communities and ways of living that deepen our understanding of the interconnected web of life. The numerous meetings, workshops, informs our conviction that the proposed NED fracked gas pipeline would negatively impact our environment, health, well being and way of life even though we are not abutters of this project.

We live on Dunton Road, roughly two miles away from the proposed pipeline route. But our property line lies roughly 1200 feet east of the southern section of Scott Brook, known as Lower Scott Brook after it exits Stone Pond. It meanders south along a popular rail trail on to Royalston, Mass., where it becomes Priest Brook. The Scott/Priest Brook natural drainage system enters the Millers River in Massachusetts. This is all part of the important Connecticut River watershed¹, making what happens upstream extremely significant.

The upper portion of Scott Brook flows to us from Scott Pond, which Kinder Morgan/Tennessee Gas Pipeline hopes to traverse with a fracked gas pipeline. This would most likely be done via horizontal directional drilling (HDD) underneath the pond, due to the sensitive nature of that environment. Immediately south of the pond is a stratified drift aquifer. Associated wetlands are widespread throughout the area. We know that wetlands help to reduce floods by acting like a sponge, slowing runoff from upland areas and releasing water slowly, reducing peak flood flows downstream. Wetlands also provide essential habitat for wildlife and recharge essential groundwater resources.

In addition to the massive amount of tree cutting anticipated for the pipeline corridor itself, TGP/KM claims it would need to clear a minimum 200 by 250 foot workspace to support HDD operations, build access roads, extend driveways for pipe handling and create other “false ROW’s”². Experts consulted for a previous project in Fitzwilliam explained in their hydrology report that, “Denudation of surface increases surface water runoff and decreases groundwater recharge. . . Siltation alters stream course, impacts habitat, and can translate to wetlands where streams discharge.”³ Even without new construction and heavy equipment, Scott Pond Road and other unpaved roads in the area are known to become impassable during our notorious spring “mud season”. The loss of trees and disturbance of soils would exacerbate that problem, perhaps even impeding access for emergency vehicles.

Upland from Scott Pond we see evidence of granite ledges that most likely would require extensive blasting to install a pipeline.

“The use of explosives to blast bedrock at mines, quarries, or construction sites has contaminated groundwater in multiple locations in New Hampshire”, reports the NHDES Drinking & Groundwater Bureau. “Commercial explosives generally consist of a nitrate based oxidizer with a fuel and are generally in the form of a fuel oil and ammonium nitrate; they may also be found in other forms such as gels, slurries, and emulsions.”⁴ The granite itself can also release arsenic, radon, and numerous other toxins.

Another hazard of the NED project, cited by the EPA in a report regarding an unrelated proposal, could be “the possibility that the installation of underground piping or utility trenches could create preferential pathways for groundwater flow”⁵. It is not unreasonable, then, to deduce that the NED pipeline could channel water tainted by blasting chemicals, nitrate, diesel fuel, or other contaminants along the pipeline trench,

directing that pollution into Scott Pond, Scott Brook, on downstream to Stone Pond, Lower Scott Brook and the entire Connecticut River watershed. This could most certainly affect our health and that of our neighbors. This is a perfect example of “the interconnected web of life” mentioned earlier in this letter.

The water that we drink, wash in, use to irrigate our organic garden vegetables—even the water that the cows drink to produce fresh milk from the farm next door, all comes from wells that tap deep into the cracks of the Concord granite bedrock beneath us. We cannot rest assured that contaminants from the proposed NED project two miles away will not make their way down Scott Brook, be absorbed into nearby wetlands, released into aquifers and transported via cracks in the bedrock to our wells. This is NOT a remote possibility.

“Where the groundwater comes from and where it goes are not evident at the surface, and often even hydrologists who study these water supplies are unable to precisely say what groundwater is doing. There is little doubt, however, that groundwater ultimately originates at the surface of the earth and then flows, under the pull of gravity, downward to recharge the aquifers. This recharge may be direct, coming from the land directly above the aquifer, or indirect, flowing via some other route beneath the surface.”⁶ To gamble that our precious water will not be affected by what happens upstream is irresponsible.

We have other concerns as well. James is a retired pipeline instrument and control systems technician and electrician who worked for the Plains-All American Pipeline Co., overseeing pipeline operations from central New Mexico through Arizona, to the California line for eleven and a half years. From this experience, he knows that pipelines routinely leak, often undetected. He’s experienced the noise and smells associated with compressor station operations, pigging facilities and metering stations. He is also well aware that additional compressor stations are often added in between those originally sited for such projects as demand increases, despite not having been part of the original plan. Since Fitzwilliam lies roughly midway between Winchester and New Ipswich, NH, the two closest compressor station locations proposed, that we know of, and the Eversource electrical substation is already in Fitzwilliam on the ROW where the pipeline would be co-located, we have good reason to suspect that a compressor station may be coming to our town sooner or later if this project goes forward. Such a facility would impact the whole town, destroying our tourist industry that is so important to our local B&B’s, inns, restaurants, shops, resorts and other businesses. And country-loving residents like us, who would no longer wish to live here, would be unable to sell our homes. Meanwhile, we would likely be burdened with higher electric rates, our tariff for hosting this behemoth of a delivery system for dirty fuel headed largely to foreign ports. These outcomes would affect us directly in a big way.

We must say no to these commercial interests who would risk our drinking water, property values, environment, and peace of mind for their own profit. For this reason, **we are filing for intervenor’s status** on this project.

Sincerely,

James L. Rodger

Jeanne E. Sable

-I am filing a motion for intervention status on FERC docket 16-21 based on my residence at 385 montague rd, Wendell MA 01379. This property abuts property through which the pipeline passes in an alternate plan, and is within the blasting zone.

-My interest will be directly affected by the outcome of the proceeding as I am the home/land owner of the property and bought this property 1 year ago to raise healthy livestock and organic fruits and vegetables to feed myself and my 4 year old daughter. The proposed pipeline is a threat to our drinking water, our clean air, and will be a constant threat to our safety.

- I am participating in the public interest as a public consumer.

Basis for Intervening:

To whom it may concern,

I am a Dracut resident living relatively close to the proposed compressor station and stand in opposition of that the NED project for the following reasons:

- The number of facilities and the amount of construction and road closures associated with the project.
- My children attend the Dracut Public School system and I have concerns of a pipeline being built near a school system.
- When I purchased my home in 1998 I picked Dracut for its small-town, country and farm environment. I fear that a structure such as the compressor station will potentially devalue my property and change Dracut from a rural to industrial township.
- My family purchases produce from both Brox Farm and Saja Farms and I'm worried that the industrial complex associated with the compressor station could lead to contaminated soils and water supplies which feed the local farms as well as my own private well used for showering, washing food and drinking.

Thank you for the opportunity to comment.

>We must seek other forms of energy, renewable sources of energy, to get us off the fossil fuel system that we now are so heavily addicted to. It is contributing to climate change that is going to destroy us sooner

rather than later.

FERC, just say NO to Kinder Morgan's Application for a Certificate Public Convenience and Necessity (NED Project), Docket # CP-16-21.

From the January 8, 2016 edition of Living on Earth:

> CURWOOD: There's been a lot of talk about expanding natural gas production around the world to help address the threat of climate disruption, people saying the equivalence here compared say to coal means that natural gas is a better bet, a better bridge. Your assessment?

> INGRAFFEA: That's an absolutely incorrect, unscientific assessment. All of the latest peer-reviewed scientific literature indicates that if the leakage of methane, natural gas, into the atmosphere worldwide is greater than about three percent of the total production of natural gas in the world, it's the dirtiest of all fossil fuels. Because when you burn methane, you get carbon dioxide, which we know is primary greenhouse gas, but when you don't burn it and leak it - as we're seeing it in Aliso Canyon - it's even worse, because methane is a much potent greenhouse gas than carbon dioxide. So all of the scientific literature published in the last few years - and this question has only been addressed in the last few years - points to that roughly three percent cutoff. And again, all the peer-reviewed literature that's been published in the last few years shows that in the US alone, the leak rate is greater than three percent. So, in the US we should not be converting coal-fired electricity generating plants to natural gas. We're going in the wrong direction. We're making climate change worse, not better, and of course, when we look across the world, we like to pride ourselves as being the best at everything, and of course, our leak rate is "low", you can only surmise what the leak rate of methane would be in other countries where there is not such tight regulatory control. So, no, I do not in any way, means or form, ascribe to, believe, buy into the notion of natural gas being a bridge fuel or a down-ramp to a clean renewable energy future. It's scientific nonsense. People in the industry know it. People in the scientific community know it. Unfortunately, our political leaders have to make decisions based on something other than science.

> CURWOOD: Anthony Ingraffea is the Dwight C. Baum Professor of Engineering at Cornell University.

20160114-5385

Motion to Intervene of Jaimye L Bartak

Docket #CP16-21-000

Description of Intervenor (Jaimye Bartak)

I am a resident of 61 James Street, Greenfield, MA. I do not live in the direct path of the pipeline, however me, my husband and daughter, and other members of my immediate family stand to be substantially impacted.

The proposed path of the Northeast Energy Direct Pipeline is slated to pass less than X mile north of 329 Upper Road in Deerfield, MA. This is the house that I grew up in; that my father grew up in; that my grandmother and grandfather first bought in the 1940s; that my mother currently owns and lives in today with my stepfather; and that me and my sister stand to inherit. It is also where my 22-month-old daughter often visits. We are also electric ratepayers and Berkshire Gas customers. We may be forced to pay for this pipeline, despite no guarantees or even likelihood that we will ever see any return on that investment in the form of decreased utility rates.

Finally, as taxpayers of Massachusetts, we have contributed to the preservation of the open space, agricultural, and recreational land that will be destroyed by this project, even though such land was supposed to be permanently protected from industrial uses such as the NED project.

I strongly and vigorously oppose this project. It represents outright, government {FERC}-facilitated corporate theft of public and private property and resources for the enrichment of a very few, at the great expense

of everyone else. It is also the “poster-child” of backwards-looking and obsolete energy policy.

Description of Impacts

My first concern with this project is the safety of my immediate family. My mother and stepfather reside at 329 Upper Road in Deerfield, which is located in the “potential impact radius.” My husband, daughter, and sister are there multiple times a week. Should there be a rupture in the pipeline, anyone in the house at the time would be immediately incinerated. Kinder Morgan’s national safety record inspires no confidence that the pipeline will be inspected and maintained other than in the most basic, remote manner that saves them the most money, leaving my family at higher risk of harm and in constant worry. In addition, my mother’s house is served by a private well. At this location in Deerfield the pipeline will presumably be headed further underground in order to cross under I-91 and the Deerfield River, potentially impacting the home’s water supply with pollution and altered composition.

Barring any explosions, the placement of the proposed pipeline will also have physical and economic impacts on the property me and my sister stand to inherit. Rather than co-locate, the pipeline and associated construction sites will expand the existing right-of-way owned by Eversource, located X mile north of the house, by at least 50 feet, if not more - this means that essentially all of the trees, many of which are very large and mature, will be cut down north of my mother’s house, dramatically altering the surrounding landscape. Trees shape the character of neighborhoods, and numerous studies have correlated the presence of mature trees with higher property values. With so many trees cut down, the rural nature of the surrounding landscape will be lost, reducing the appeal and thus property value of the house. The microclimate will become warmer in summer due to lack of shade, and invasive species such as Japanese knotweed will be able to proliferate while wildlife such as birds and deer will be driven away. Many of these trees are also located on steep slopes, increasing the potential for erosion and damage to the road in this area. Damage to Upper Road not only presents a concern in terms of emergency access but also one of economics, as the impacted portion of Upper Road is the main route for customers of Clarkdale Fruit Farms. The Clarks are our neighbors and the viability of their fruit farm stand benefits the neighborhood in terms of land protection, scenic views, and vibrancy.

I also have concerns about the impacts of pipeline construction (drilling vibrations, etc.) on the structural integrity of the house. The wood-frame house was built c. 1880 and the cellar is constructed of fieldstone.

As a ratepayer of both Berkshire Gas and Eversource, I have large concerns about the fact that we may be forced to pay for this pipeline (in addition to the price we are already paying through degraded landscape and environment) on our utility bills. Kinder Morgan continues to claim that this project will result in reduced energy prices, but there is nothing in writing to guarantee that, or even to indicate a likelihood of this. As a forced investor of this project, the only guarantee and likelihood I can decipher is a higher utility bill due to the tariff we will be charged for a project that will only address a supposed “reliability” problem that occurs for approximately 20 hours/year. This is absurd. This project is clearly being built for exportation of natural gas, which will result in higher gas prices for us at home. What’s more, Kinder Morgan has the audacity to try and make us pay for it. FERC will be engaging in gross negligence of its duty if it allows this arrangement, and this project, to pass.

As a taxpayer in Massachusetts, I am impacted by the NED’s project intent to condemn permanently protected open space and recreational land that has been protected and stewarded with taxpayer dollars. To allow this to happen for a project whose public interest is clearly questionable and dubious, at best, is to set a dangerous precedent that could lead to further industrialization of protected land, and undermine the public trust.

Finally, this project impacts me in that it perpetuates an over-reliance on fossil fuels, which will lead to increased air, water, and soil pollution; the loss of trees that sequester carbon and provide habitat for wildlife; and increased severity of climate change. In an age when we are already experiencing the impacts of climate change, overbuilding a huge natural gas pipeline for such a flimsy reason (20 hours!) is inexcusable. How will we explain this poor use and abuse of resources to our grandchildren, when we already knew what the

consequences of pumping methane into the atmosphere would be all along?

Protest/Comment

In sum, the NED project is misguided and highly destructive, and will impose significant year-round impacts onto the public and private landowners in exchange for 20 hours of increased “reliability” per year. As an urban planner, the NED project strikes me as akin to the massive overbuild this country engaged in with highways in the 20th century. Curiously enough, in my profession we now find ourselves removing underutilized highway overpasses and trying to promote alternative modes of transportation to mitigate the destructive impacts highways have had on the environment and our cities and towns. But in the context of the NED project, we already know what the consequences of building this monstrosity will be, and we don’t have as much time to ignore them - climate change is already happening at a faster rate than scientists anticipated.

This project represents the past, not the future. We are making good progress in Massachusetts in reducing our reliance on fossil fuels, which is not only beneficial for Massachusetts residents but for the nation as a whole. FERC must not let a few ex-Enron executives at Kinder Morgan disrupt this progress and steal from their fellow citizens (again) just so they can get even richer by selling American gas to foreign markets. Because at the heart of it, that’s really what this project is all about.

Standard for Intervention

I, Jaimye Bartak, satisfy the standards for intervention under the Commission’s regulations. As discussed above, I am directly impacted by the proposed project, and no other individual or organization can adequately represent my and my family’s interest in this proceeding. I respectfully request that the Commission grant this Motion to Intervene.

Contact Information

The following individual should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Jaimye Bartak
61 James Street
Greenfield, MA 01301
413-835-1942
jaimye.bartak@gmail.com

Conclusion

Wherefore, in light of the foregoing, I respectfully request that the Commission (1) grant this motion to intervene and (2) allow the intervenor to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,

Jaimye Bartak
1-14-16

CERTIFICATE OF SERVICE

Wherefore on this January 14, 2016, I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission’s electronic service list in this proceeding, in accordance with Commission regulations.

Jaimye Bartak
jaimye.bartak@gmail.com

20160114-5388

Submission Description: (doc-less) Motion to Intervene of Curtis L. Douglas under CP16-21-000.
Submission Date: 1/14/2016 4:17:36 PM Filed Date: 1/14/2016 4:17:36 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party	Signer (Representative)	Other Contact (Principal)
Individual	nopipelinehere@gmail.com	

Basis for Intervening:

I am opposed to the proposed NED pipeline project and wish to file a motion to intervene in the application process. I am an abutter whose property, given the currently proposed routing of the pipeline, would be significantly impacted by its construction. Specifically:

1. The currently proposed routing would result in a condemnation and taking of my property via Eminent Domain proceedings.
2. The currently proposed routing would place the pipeline within twenty-five (25) feet of my home and result in any resulting permanent operating easement running through a portion of the house.
3. The currently proposed routing would place the pipeline within sixty-five (65) feet of the only source of potable water on my property (a private well), placing my only water source well within the construction right-of-way and at significant risk of contamination or other adverse impact both during and following construction and installation.
4. The currently proposed routing would place my entire property, home, and family within the incineration zone for a distance of more than five hundred (500) feet in either direction should an incident occur.
5. The currently proposed routing, as documented in the most recent TGP/KM EIS, will necessitate the removal of roughly 75% of all trees on my heavily wooded lot and permanently alter the current vista from virtually every point on my property.
6. The currently proposed routing would, during construction, result in my electric service lines and my only point of ingress/egress to the property lying within the construction right-of-way, subjecting both to frequent interruption whenever it is deemed necessary by the various construction crews.
7. Given the heavily sloped topography of my property, the currently proposed routing would result in significant flooding and soil erosion as a result of the clear cutting of literally hundreds of trees.
8. The currently proposed routing and its impact to my home and property would, beyond the shadow of a doubt, have a strongly negative impact on the value of that home and property and strip out a significant portion of the equity I currently have in the home.

Curtis L. Douglas
Richmond, NH

20160114-5391

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
Northeast Energy Direct Project)	

**MOTION TO INTERVENE OF
BERNARD T. MARTIN, JR.**

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Bernard T. Martin, Jr.

122 Sunset Avenue
La Grange, Illinois, 60525
708-724-6507
btmartin@ameritech.net

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

1. My interest as an owner of a parcel of property over which the proposed pipeline will cross, rendering the parcel useless for all practical purposes, in particular the environmental purpose of preserving it as unimpeded open forest and field. This purpose has been maintained by myself and former family owners for generations.
2. My interest as a land owner with property in relatively close approximation to Market Path Mid Station 4, to be located in New Ipswich, New Hampshire. The effect of this compressor station on the air quality and noise interference in the region will be detrimental to the highest and best use of my property, the property of my surrounding neighbors, and the surrounding community as a whole. It will have a negative impact on ecological and human health in our part of the Monadnock Region. and in particular to the Souhegan watershed and scenic waterway which lies between my property and the proposed compressor station.
3. My interest as a taxpayer, neighbor and visitor to land protected for public use in New Hampshire, including, but not limited to, the land described in paragraph 2 above, and the public trail which is constituted by the old right-of-way of the Boston and Maine Railroad, which trail adjoins my property. I am concerned about the threat this project poses to all land which allows public access for recreational purposes in New Hampshire, and particularly in the Monadnock Region.

All visits to our treasured ancestral farmland areas are now bittersweet. My family has purposely left this property vacant in field and woods for generations, as an investment in the environmental future of the Monadnock Region. It has been an investment in clean air, clean water, and the sounds of nature, rather than the sounds of industry. The Petitioner has not shown adequate reasons to trade in this investment in environment for an intrusive pipeline.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of the region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to surrounding communities and property owners. Other means of meeting the region’s energy needs should be pursued. As a property owner, and invested person of interest, I can bring valuable information and perspective to this proceeding.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Bernard T. Martin, Jr.

January 14, 2016

20160114-5392 Motion to Intervene of Eliza Klein

I am a stakeholder in this matter because I am directly impacted by climate change.

20160114-5399 Motion to Intervene of Keswick Farm / Robert T. & Jean P. Ford

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct Project (NED)

Motion to Intervene and Protest of Keswick Farm, Robert T. Ford and Jean P. Ford proprietors (hereinafter “Keswick Farm”), Upper Gap Mountain Road, Fitzwilliam, NH 03447

Keswick Farm is directly and negatively impacted by the proposed pipeline in the above proceeding, the

destruction and loss of farmland caused by its installation and the dangers ,economic loss, lost business activity, and lost property value. Keswick Farm operations include horse training and riding lessons on outdoor areas and trails, organized trail rides and walks, organized hikes, sheep and llama wool and livestock production, and wool products. NED will directly and negatively impact Keswick Farm in several ways, including but are not limited to the following: (1) the farm structures, pastures, riding rings, and stables are within close proximity to the pipeline and the proposed route will cross sections of farmland, (2) temporary construction areas are located on farmland and will negatively impact surrounding dirt roads, trails and pastures, (3) Keswick Farm is vulnerable to structural damage and landslides, loss of drinking water aquifers and water quality, and is within the pipeline blast radius, (4) Keswick Farm will be negatively impacted by the loss of forested areas, loss of quiet enjoyment and tranquility, and the loss of sound buffers during and after construction, as well as numerous other safety hazards (such as being within a blast radius) including chemical releases in the air and ground due to the pipeline's location adjacent to a high voltage substation, and (5) Keswick Farm property and trails will be disrupted and forcibly taken by eminent domain proceedings, (6) the pipeline constitutes a wrongful breach of IRS regulations, charitable trust protections as well as other perpetual protections for conservation land, and (7) Keswick Farm property lines have been inaccurately represented and misidentified on the maps filed with FERC.

Keswick Farm questions the need for the pipeline relying on numerous reports, including the Massachusetts Attorney General's independent study, and question the pipeline's location through untouched virgin forests such as ours and other pristine conservation land, as compared to a more appropriate location along existing pipeline corridors and other hardscape/roadway infrastructure.

For these reasons, Keswick Farm requests that FERC grant this Intervenor request and/or reject and deny the Northeast Energy Direct Project application.

Individual	Stolz.george1@gmail.com	

Basis for Intervening:

I am a resident of Temple NH. As such the location of the New Ipswich Compressor Station presents a negative change to the quality of my life. Temple's rural agrarian quality of life will be forever changed by the installation of the pipeline and its associated station. It will harm our air quality, negatively impact our flora and wildlife in addition to straining our aquifers with the hydrostatic testing process and our hearing with inadequate (cheaply done) noise protection. I am not anti energy. The majority of my professional career was spent in the energy construction field, building large scale power generation (Wind, Solar and Gas Turbine stations), Electric Transmission and Distribution and Gas Distribution.

What set these projects apart from NED is that they benefitted the area in which they were built. They did not wantonly destroy the area in which they were built with false "co-location", but used existing highway arteries or developed state, county and town lands for the construction path. Not one project hijacked a persons land or living with eminent domain. I reserve my right to comment as an intervenor.

Basis for Intervening:

- I am a landowner who would have my property seized by eminent domain
- I am a landowner directly impacted by the by the pipeline route.
- I am a resident who lives in the "blast radius" I would be at physical risk.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.
- I have kids whose health I am concerned about.

20160114-5419

{Motion to Intervene of Mark Shoemaker}

We reside at 1208 Nassau Averill Park Road which across the street from the proposed compressor station location and have the following legitimate concerns.

We are concerned about air quality due to 41,000 HP turbines generating exhaust. My wife suffers from COPD and asthma at this time and there is no doubt that if the compressor station is built at the Clarks Chapel location it will affect her overall health.

We also own three parcels of property that would be directly affected by the proposed compressor station and pipeline route. Not only would the compressor station be located across the street from our residence, we own two other parcels that border the power line and are in the direct path of the proposed pipeline in which a portion would be seized by eminent domain.

In the past 9 years we have built two new house located behind my house, one for my daughter and family and the other for my son and his family. We have 5 grandchildren below the age of 10 that live there and would be affected by the location of the proposed compressor station.

We are concerned with the continuous noise of compressor station, 24-7.

We are concerned with noise and pollution from blowdowns.

We are concerned with night light that will illuminate nighttime skies.

We are concerned with subsonic vibrations that can subconsciously affect health.

We are concerned about any chemicals or toxins released into the ground that will end up in our well.

We are concerned with traffic, noise, air pollution and numerous disturbances during construction.

We are concerned with the property value of our house being extremely close to a compressor station.

We are concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.

We are concerned with the industrialization of the neighborhood. The only things that are comfortable living next to 41,000 HP compressor stations is other heavy industry not populated residential areas.

There is no doubt that we would hear, smell, feel, and see the effects of the proposed compressor station. With all the available published studies and other well documented facts that list all the human health hazards and environmental effects who in their right mind wouldn't object to such a disastrous project.

Basis for Intervening:

I live in Castleton on Hudson, NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a resident who lives in the "blast radius" and my daily commute crosses directly over the proposed pipeline route numerous times per day so I would be at physical risk should there be a pipeline rupture and/or my egress would be disrupted.

I am also a resident whose source of drinking water, an aquifer, is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline its local compressor station, and perhaps other facilities.

I am a member of an impacted community who has concerns about various impacts to the local economy, my local environment, disruption of local aesthetics and possible local health impacts from the pipeline, the compressor station and their emissions and possible accidents.

I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project such as breaching waterways, cutting trees, disrupting wildlife, disrupting hunting and fishing, and other outdoor pursuits.

I maintain a backyard orchard and garden which I use to feed family, friends and neighbors and I do not wish to see any new additional pollutants from pipeline or compressor emissions affecting the quality and quantity of my produce.

Individual	annetfrench@yahoo.com	

Basis for Intervening:

I am a directly impacted landowner. The proposed path crosses my land and negatively impacts my physical health, financial well-being and quality of life. I purposely moved from a large city to a rural area. I worked for years to afford to purchase forested property near by to state protected land. I built a modest home because that is the quality of life that I want. The pipeline will decrease my property value. It will create negative health impacts. I have well water and the construction and operation may pollute the water table and water shed. The proposed path crosses a road (Windsor Rd) that is the main access into my dead-end road (Adams Rd, Hinsdale)- the construction across Windsor Road will create a detour that brings me in the opposite direction from mail, other essential services, my work, and town for many miles. There is no piped gas available to homeowners in my rural area and the benefits of directly using gas energy are not available to us. Yet, if approved, I can be required to pay for the construction through an increase in electric rates. That is grossly unfair and unethical.

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street NE
Washington, DC 02426

**Re: Tennessee Gas Pipeline Company, L.L.C.
Northeast Energy Direct Project: Docket No. CP16-21-000
Town of Stockbridge's Comments on Application**

Dear Secretary Bose:

The Town of Stockbridge respectfully submits these comments on the referenced application of the Tennessee Gas Pipeline Company, L.L.C. (the "Company")^[1]

In its Application, the Company has identified various alternative routes for the Wright to Dracut Pipeline Segment that would cross through Stockbridge.^[2] The Town has significant concerns regarding the impacts of the pipeline on its local environmental and scenic resources. These concerns should be fully explored and addressed by FERC in the preparation of its environmental impact statement.

Specifically, rerouting the pipeline through Stockbridge may significantly disturb the Kamposoa Bog Drainage Basin, an area of critical environmental concern (ACEC).[3] ACECs “are those areas within the Commonwealth where unique clusters of natural and human resource values exist and which are worthy of a high level of concern and protection.[4] According to the Massachusetts Department of Environmental Protection, “[t]he Kamposoa Bog ACEC contains one of the Commonwealth’s most significant rare species habitats.”[5] The relatively small ACEC provides habitat for at least 19 state-listed rare species.[6] Highly significant archaeological resources are also located within the Kamposoa bog.[7] FERC must therefore meaningfully consider the impacts of any pipeline route that would disturb this environmental and historical state treasure.

The proposed alternative routes also cross Lake Mahkeenac, known more commonly as the Stockbridge Bowl, a Massachusetts Great Pond.[8] Accordingly, any proposed alternative through the Stockbridge Bowl must comply with the licensing requirements of M.O.L. c.91, §19.

The Stockbridge Bowl is not only a valuable ecological resource for the region, but it also offers numerous recreational opportunities of residents and tourists alike. FERC’s review must consider both the ecological and economical impacts to the Berkshire communities of siting the pipeline through this area.

Thank you for your careful consideration of these comments.

Yours truly,
J. Raymond Miyares
Town Counsel
Town of Stockbridge

Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. Ij 385.212and 385.214(2007), Vwe, name here, file this motion to intervene in this proceeding. On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”)filed its application under tj 7 ofthe Natural Gas Act, 15 U.S.C. Ij 717f, and tj 157 of FERC’s regulations, 18

I COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Scott A. Mugford
21 Bam Road
978-618-0522
smugford726comcast.net

II INTEREST OF PETITIONER

The proposed pipeline by Kinder Morgan will directly affect my family dt me. The location for this pipeline is to run dhectly through my backyard, roughly 30-40 feet from where my two chilihen (ages 9 snd 11)play dt swim in our swimming pool. We are also fearful ofthe compressor station that is to be constructed about 1 mile from our home, and roughly two miles from our chilihen’s elementary school. We would be downwind from this proposed site, and the Methane 6’c other toxic chemicals that would come from this station would have detrimental health impacts on not only my family, but also on the other families in our neighborhood. My family dt I are pleading that you consider putting a halt to the proposed pipeline dt compressor station from coming to this area of Dracut, Massachusetts. I have important information and perspectives to bring to this proces, consideration of which will serve the public interest.

III CONCLUSION

Wherefore, I, Scott A. Mugford, respectfully request that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 15th day of January, 2016.

Scott A. Mugford

Robert E. Stalknecht
519 Baptist Corner Road
Ashfield, Ma. 01330
413-628-4086

BEFORE THE UNITED STATES FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC)
A division of Kinder Morgan) Docket No. CP16-21-000
Northeast Energy Direct Pipeline)

AMENDED MOTION TO INTERVENE OF Robert E. Stalknecht IN REFERENCE TO THE NORTHEAST ENERGY DIRECT (NED) PIPELINE

Pursuant to rule 214 of the Federal Energy Regulatory Commission’s Rules of Practice and Procedure, 18 C.F.R.385.214, I (Robert E. Stalknecht) lile this Motion to Intervene in the above-captioned proceeding. I have significant concerns regarding the environmental, safety, and socioeconomic impacts of the NED pipe-line project. The short and the long-term impacts that the proposed project could have on my property and in my community are profound. I seek to intervene on the NED Project to monitor the progress of the proceed-ings and expect to take a position against the project.

To the Commissioners:

As an impacted landowner applying for intervenor status in the process for CP16-21000, I would like to bring to your attention a number of facts and issues concerning my property that has been included in the proposed route.

My property at 519 Baptist Corner Road abuts Electric Company property, next to a “substation”. The property line is less than 10 feet from my driveway. The current map shows this parcel as a staging area, to be taken away from me. Doing so would deny access to my home, divert a stream, that runs under the driveway, and encroach on the designated wetland.

I have not given permission for ANY ONE to be on my property for any reason including surveying.

Respectfully submitted,

Robert E. Stalknecht

Sullivan Family, New Ipswich, NH.

There is no need for a new gas pipeline coming through southern New Hampshire. This is not just my opinion. Please read the following article by Joe Mahoney published in “The Daily Star”.

It would be a miscarriage of justice if FERC approves the Kinder Morgan/TN Gas Pipeline/NED project slated to come through Southern New Hampshire Docket #CP16-21-000.

If this project is approved by FERC, Ferc will be condemning the people that live in New Ipswich & Temple, the two towns that are going to be the most impacted by the compressor station, to a life of noted health impacts related to respiratory, neurological & cardiovascular body system breakdowns.

Joe Mahoney | The Daily Star, Oneonta, N.Y.

A new study commissioned by an importer of liquefied natural gas challenges the notion that new natural gas pipelines are needed for the New England market, contending that demand for the product is expected to decline and noting that the region will benefit from a diversification in power generation resources.

The report, issued by Energyzt Advisors LLC and commissioned by France-based GDF Suez, comes at a time when parts of Delaware, Schoharie and Chenango counties have found themselves on the pathways of two controversial projects — the Constitution Pipeline and the Northeast Energy Direct (NED) pipeline.

Proponents of both projects have maintained they are needed by energy users in the Northeast and would help to curb gas price fluctuations during heating-season months.

But the Energyzt report concluded: “Even during extreme winter conditions, new pipeline capacity is not required to meet New England natural gas demand needs given existing infrastructure, current market conditions and policy initiatives.”

In related news, As New England freezes, natural gas stays cheap.

GDF has not been a neutral party on the Federal Energy Regulatory Commission proceedings involving the NED project that would parallel Interstate 88 before heading east into Massachusetts and New Hampshire.

GDF, which operates LNG facilities in Massachusetts, has refused to allow Kinder Morgan surveyors to have access to its land in Northfield and Erving, Mass., the Greenfield Recorder newspaper reported Thursday.

The report also echoed the contentions of local pipeline foes by suggesting some of the gas moved in proposed pipelines would end up being sent to LNG export facilities in the Canadian Maritimes, with New England benefiting from an anticipated increase of Canadian hydroelectric power.

Also this week, among the documents sent to FERC on its review of the NED project was a report by the Southwest Pennsylvania Health Project that summarized potential health impacts from natural gas compressor stations. The NED project would result in two new compressors in the town of Schoharie and one in

Franklin.

While no epidemiological studies have been conducted on those living near compressors, the report said, public health surveys have noted health impacts related to respiratory, neurological and cardiovascular body systems.

Karen St. Arnaud, Dracut, MA.

I am writing a general comment into the Federal Energy Regulatory Committee.

I was told by a FERC employee that I was required to send a Motion to Intervene document to EVERY-ONE on a Service List for a specific docket. I have evidence of this exchange of information. I attempted to complete this task in order ensure my Motion to Intervene adhered to this FERC regulation. I was only able to send one email to 500 recipients because my email provider restricts emails being sent to more than 500 recipients. This process didn't sound correct to me so I reached out to FERC again to help clarify the process. After multiple phone calls and email exchanges it was conveyed to me that I was required, per FERC Intervener regulations, to send my Motion to Intervene to the 'Applicant' ONLY. The FERC employee helped me identify that 'Applicant' and I sent one email to 4 recipients. I was also informed that ANY subsequent document I sent into FERC regarding this document number MUST be sent to everyone on the Service List. The Service List is currently at 2,500+ emails.

ISSUE #1: I am extremely concerned about my personal information being shared in a public email forum. My Motion to Intervene letter, along with my husband and parents, contained personal information such as my full name and address along with my email and family information (such as how many children live in my home, what school they attend, etc.). I feel the requirement to send this data to the Service List is a direct violation of the Consumer Privacy Protection Act. All of my private information was shared due to this FERC employee stating it was REQUIRED in order for my Motion to Intervene to be accepted. I do not know all the email recipients on that list and my data can be seen by anyone. I am VERY concerned that some may use this data in a malicious way. At least the information on the FERC website requires a login and password in order to access this public data. This entire process should be contained within the FERC website.

Issue #2: If a homeowner, such as myself, wants to send an eComment on the FERC website I am told I must send that comment to the entire Service List. As I mentioned above, this type of document contains personal and private information. I am also not able, due to my email providers limitations (which several email providers adhere to), to send one email to over 500 recipients. What FERC is requesting homeowners to do is unattainable! Basically, you have put in place a requirement that essentially removes any homeowner the ability to send eComments and other filings AFTER they become Interveners.

Issue #3: The FERC regulation to contact all 'Applicants' after filing a Motion to Intervene should be included within the 'wizard' process on the FERC Website. It is grossly misleading to state the Motion to Intervene is 'Submitted and Complete' when an additional step is required in order to adhere to the FERC regulation to contact all 'Applicants'. An additional step should be added in the wizard to include this information (for example: 'In order to complete your submission you are required to contact the application associated with this document. The Applicant email address is listed below. Please 'click here' to send your Motion to Intervene to the Applicant.). This is a HUGE miss from a technical standpoint and should be immediately updated on the FERC website. How is a user expected to know they haven't adhered to the Motion to Intervene process if the 'rules/explanation' for this process is located on one page and the actual filing process doesn't include this valuable piece of information.

Please fix these issues immediately. I have a call into the Attorney General's office to let them know of my concerns. Thank you.

20160115-5002

Phyllis J Ellefsen, East Greenbush, NY.

I am opposed to the NED pipeline proposed in Rensselaer County New York. I am against the pipeline because of the health and environmental dangers these pipelines and compressor stations cause.

The people in this area value our healthy and quiet environment and have worked hard to keep our neighborhood and state clean. We have invested time, money and a lot of effort in keeping our state clean. We have dredged The Hudson River of toxins, we have regulations to protect our natural resources in the Adirondack Mountains and Lake George resort area. This area of the Hudson River is a spawning area for several species of fish. This part of the Hudson River is also an estuary. Our upstate air is currently free of the toxins that will be introduced by fracking and compressor stations. We rely on wells for our household water. Any disturbances to the aquifer would damage the only water supply we have.

We are fearful for our health and the health of our children. We are worried for our environment. I want to protect myself, my family and the people of New York from these dangers. Records show that these pipelines and compressor stations cause terrible dangers ---explosions, leaks, gas emissions, toxin emissions, and noise pollution. Another issue of concern is public safety ...putting an industrial size facility in a rural area.

20160115-5003

Melinda Tuhus, Hamden, CT.

I am writing to oppose Kinder Morgan's Tennessee Pipe Line's proposed expansion of a loop pipeline through Metropolitan District Commission watershed lands in West Hartford. It is an accident waiting to happen and we've seen plenty of "natural" gas accidents lately, like the one in Southern California that's the biggest environmental disaster since the BP explosion in the Gulf of Mexico in 2010.

Several studies show that with all the gas leaks at every stage in the process, gas may be no cleaner than coal from a climate perspective.

I've hiked often in this beautiful watershed. It's pristine land that protects a critical public water supply and a major recreation area. Just because there's an existing pipeline (built around 1950 to specifications that would never be approved today) doesn't mean it's okay to build another one.

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual _____ bridget@caretakerfarm.org

Basis for Intervening:

I live on a small scale, sustainable farm that has been protected through the conservation efforts of the state and a local land trust. I am also a member of the MA Audubon Society and the Trustees of Reservations, and have donated money to these agencies to support their conservation initiatives. I am therefore extremely alarmed that lands could be removed from conservation or made inaccessible to farmers in order to build the NED pipeline. If this pipeline were to be built, the health of this protected land, selected for its environmental value, would be negatively impacted. The idea that a private company would be able to utilize this protected land represents a violation of the public's trust.

As a ratepayer, I am alarmed that the utilities will seek to charge ratepayers for the cost of this project of dubious value. I believe that our efforts and taxpayer dollars should go first to conservation measures to

reduce useage, repair work to plug existing gas leaks, and investments in renewable energy that will meet our energy needs without jeopardizing our environment. It is not ethical that MA residents should bear all the risks of this unnecessary project.

I am a resident of Greenville, NH and live one mile from the NED pipeline. My house is three miles from the New Ipswich compressor station, and I travel past it on Rte 45 at least four times per week. I am concerned about spills, leaks, and pollution of the air, earth and water.

I also live at a community land trust, where we care deeply about preserving the woodlands of New Hampshire. We do not need this pipeline; we prefer to get our energy from renewable sources. Please reconsider, and do NOT build it here.

January 14,2016

We are Angelo A. Santoro and Lee Santoro, husband and wife who own property with a residence at 368 Van Tassel Road in Franklin, NY. 13775. We oppose the Northeast Energy Direct project and have several interests that may be affected as a result of this project.

Our property consists both of open fields and wooded areas through which the NED pipeline would cross. It would split our property in half, essentially devaluing it considerably if not deeming it worthless. The proposed "Constitution" pipeline will be co-located to the proposed NED pipeline just to the north. NO cumulative studies have been done for these two pipelines. This is unacceptable and needs attention! Several of our trees would be cut for the pipeline. Trees give us clean air and hold water in place. Without trees there is no life. In addition to our trees, an historic one-room schoolhouse foundation would be jeopardized as well as our historic stone walls both in our fields and woods and one hundred year old daffodil bulbs would be destroyed.

Contamination to our water may occur both with blasting and construction near our water well and in close proximity to the Bissell Hill Springs, the sole water supply for one of our neighbors and also the emergency water supply for the Village of Franklin including our school. There is no life without water. We also have two ponds on our property. Our woods are full of wildlife some of whose homes will be destroyed. We are members of the Audubon Society and enjoy watching a multitude of birds in our present woods. Danger of

leaks and explosions may occur. Kinder Morgan does not have a good safety record. They will use a lower grade material in our area for their pipe. Our insurance companies have said they will not cover such events as leaks and explosions or anything to do with the pipeline or any fracking infrastructure should our home or any of our property or lives be destroyed. Will you? The proposed NED project also proposes a 50,500 horse power compressor station within 1/2 mile of our home and property. This is extremely dangerous and harmful to our and our family's health. Studies which resulted in New York State's fracking ban revealed it was MORE DANGEROUS to live around a compressor station than to live around a fracking well itself. DO YOU CARE ABOUT US???

SOME OF THE CONCERNS OF LIVING NEAR THIS COMPRESSOR STATION WOULD BE

- .close proximity to residence 1/2 mile
 - .release of carcinogens including benzene , toluene, and formaldehyde
 - .release of methane attributing to global warming
 - .Noisy jet like noise during blow downs
 - .Blow downs will release much larger amounts of VOCs and methane
 - .Constant noise of facility including cooling pads
 - .Increased truck traffic
 - .Odorant injection facility(mercaptan storage of 6,000lbs on site) Toxic, flammable
 - .Smell of mercaptan
 - .Fear of explosion, fire
 - .Fear of evacuation Where does one go? Who pays for housing, pets to be boarded, meals, lost time at work . Do you pay?
 - .Further devaluation of house and property added by existence of compressor station nearby.
 - .Hard to sell property. No mortgage to buyer and who would want to live in such a high risk area?
 - .Vibrations
 - .health affects of release of chemicals , noise,industrialization, etc.
- .THIS FACILITY DOES NOT BELONG SANDWICHED BETWEEN TWO ELEMENTA-
RY SCHOOLS!!!!!!!!!!!!!!!!!!!!!! IT DOES NOT, REPEAT NOT, BELONG IN A RESIDENTIAL
AREA!!!!!!!!!!!!!!!!!!!!!!**

We purchased this property for its beauty , scenic mountain views, peacefulness, rural area, and hunting among other things. We have worked long and hard to obtain this beautiful property. This project will destroy all we have worked hard to obtain . We will not allow survey permission therefore we will incur costs of eminent domain proceedings should it come to that. Eminent domain is illegal for private profit which is the absolute case here. This gas is not needed. This project is not needed. **DO NOT LET THIS PROJECT PASS GO!!!!!!**

Because no one else can represent our interests we request that the FERC accept our submission for intervention in the Northeast Energy Direct project.

Basis for Intervening:

There are so many disadvantages to this. There's absolutely no benefit for us at all. If this neighborhood can use the pipeline then that may be a different story considering if it's a little further away from the property.

It's way too close to the property that calls for safety hazard.

Property value will surely go down.

Noise and traffic for a very long period of time near or right on our property.

May lose portion of property to easement act.

I own property close to the proposed New Ipswich compressor station and am concerned that it will adversely affect the air quality, water quality in my neighborhood as well as add high noise levels. I believe this will be bad for my family's health and will also cause the value of our property to go down.

20160115-5018

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
North East Direct Pipeline Project)	

AMENDED MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, the Town of North Reading, file this amended motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7

of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual, whose name, address, and email should be placed on the official service list maintained by the Secretary:

Town Administrator Michael P. Gilleberto
Town Hall
235 North Street
North Reading, MA 01864
978-664-6010
mgilleberto@northreadingma.gov

II. INTEREST OF PETITIONER

Based on plans filed by TGP, the NED project will pass through the Town of North Reading in a route of over 3 miles, crossing at least 40 unique parcels of land. Construction, operation and maintenance of the Pipeline would adversely impact the Town of North Reading in the following ways:

1. Expose the Town to public safety risks associated with natural gas, including explosion, pollution, ground contamination, and/or groundwater contamination.
2. Expose the Town to potential pollution of drinking water wells, including a well located within a few hundred feet of the proposed route.
3. Potentially reducing property tax revenues by reducing the valuation of private and other property, which could cause an increase in tax rates to make up for the lost revenue.
4. Adversely impact wetlands, do harm to regional habitat and species due to gas leakage, thereby negatively impacting the quality of life.
5. Reduce the amount of open space in Town by utilizing existing open space parcels for the pipeline route.
6. Reduce the value of Town-owned land by siting on or near such land. Please refer to the attached comments of the North Reading Town Engineer, and the attached descriptions of the potential impact of the pipeline upon Town-owned land.
7. Potentially limit the use of Town-owned land and/or public ways for the siting of utilities. Please refer to the attached comments of the North Reading Town Engineer, and the attached descriptions of the potential impact of the pipeline upon Town-owned land.
8. Cause undue stress upon property owners and residents in Town, potentially affecting the health, well-being, and/or productivity of said owners/residents.

Accordingly, the Town of North Reading has a direct and substantial interest in the above proceeding, as the Town will be directly impacted by the proposed project. The Town may be adversely affected or bound by a decision in this proceeding, and no other party can adequately represent the Town's unique interests. Further, the Town of North Reading's intervention is in the public interest, because the Town is responsible for the protection of the health and safety of all of its residents.

III. CONCLUSION

Wherefore, I, Michael P. Gilleberto, Town Administrator for the Town of North Reading, respectfully request that the Commission to grant the Town of North Reading's Amended Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 14th day of January, 2016.

Town Administrator Michael P. Gilleberto

Town Hall
235 North Street
North Reading, MA 01864
978-664-6010
mgilleberto@northreadingma.gov

Town of North Reading
Massachusetts

Department of Public Works

January 4, 2016

MEMORANDUM

To: Michael Gilleberto, Town Administrator
From: Department of Public Works
RE: Kinder Morgan Pipeline-Infrastructure Impacts

Per your request, we have reviewed the proposed Kinder Morgan pipeline route, specifically the affected Town owned parcels, for any potential impacts to the Town's existing and proposed infrastructure. We have examined these issues from both a technical and strategic perspective.

From a technical standpoint, we do not believe the proposed gas pipeline will present any conflicts with our utility lines that cannot be overcome. The gas pipeline will cross existing waterlines in the vicinity of the West Village Water Treatment plant, Main Street/Route 28, and Park Street. These crossings may not require relocations depending upon the depth of the gas pipeline. The Town should notify FERC that Kinder Morgan's design and construction of the proposed gas pipeline must not be allowed to adversely affect the Town's ability to operate its water distribution system. The same is true for our existing storm water system.

We do not anticipate any impacts with MWRA water, based upon the current concept of connecting to Reading. However, we would expect possible impacts to future sewerage within the Main Street corridor and Route 62; Salem Street in Wilmington. As with our existing utilities, the extent of the impacts would be directly related to the depth of the proposed gas pipeline. Since both utilities; North Reading's and Kinder Morgan are conceptual, specific resolutions and costs associated with such cannot be determined at this time. The Town should make FERC aware that the installation of sanitary sewerage within the Main Street corridor by the Town must not be burdened, from an economic standpoint, by the presence of a high pressure gas transmission line.

It should be highlighted that the impact of the gas pipeline to proposed infrastructure on one parcel would be catastrophic. Map 36/lot 66, I 66R Chestnut Street, has been identified as a potential site for onsite wastewater disposal. This parcel is the large open tract to the south of our DPW facility at 166 Chestnut Street. It was mentioned in our 2008 Comprehensive Wastewater Management Plan and is currently included in our Draft Environmental Impact Report (DEIR) as a disposal site.

The proposed routing of the gas pipeline and easement bisects this parcel. Extensive studies have been done to identify areas for groundwater discharge and only a few have been identified. The loss or any reduction in usable area of this site will cripple the Town's efforts to construct a viable wastewater system. The Town has identified the goal of providing sanitary sewerage to specific businesses and residential areas as crucial to the Town's economic well-being and quality of life. This point needs to be brought to FERC's attention referencing specific plans, reports, and funding that has been invested by the Town to date.

There are some other considerations as well. These may be considered strategic and involve two town owned parcels; Map 6/Lots 2 & 9, 0 Off Lowell Road and 0 Back River Lot respectively; and the three previously mentioned rights of ways (Main Street/Route 28, Lowell Street, and Park Street).

Map 6/Parcel2 is adjacent to the Berry property, which the Town has recently taken ownership. The Town is considering development options for the Berry property and is concerned with impacts and effects the loca-

tion the pipeline may have on providing utilities and other amenities for this site. FERC needs to be made aware that the development of the Berry parcel is a crucial part of the Town's future economic growth and cannot be limited by Kinder Morgan's proposal.

Map 6/Parcel 9, which abuts Map 6/Parcel 2, contains a portion of an old rail bed. Old rail beds are sometimes preferred routes for utilities and other uses for a variety of reasons, including, but not limited to, minimal wetland impacts, minimal grade issues, elimination of work in the street, etc., which lessen the cost of construction significantly. The Town may wish to "reserve" this parcel for future infrastructure.

The roadways mentioned are not Town owned parcels, but rights of way. Any crossing of Park Street will require a local street opening permit, This permit could be conditioned in such a manner that it would protect the Town's interest. However, the Main Street/Route 28 right of way is under MassDOT jurisdiction and the Salem Street (Lowell Street) pipeline crossing is under Wilmington jurisdiction. Regardless, it should be anticipated that the costs to operate and maintain our utilities, both existing and proposed, in the vicinity of a proposed gas transmission pipeline will increase due to additional safety requirements, size of pipeline, etc.

Town Counsel has recommended that our comments to FERC reflect what the Town wants, without regard to legal issues at this time. Therefore, we have revised our responses to include our concerns outlined above for the two parcels in the Kinder Morgan "Feedback Forms for Residents". We have created three new "Feedback Forms" for the affected rights of way. All concerns should be echoed in the upcoming "Draft Environmental Impact Statement". Hopefully, this will ensure the FERC decision and approved plans are consistent with N011h Reading's interests.

Town of North Reading Feedback Form for Residents

{above title omitted in following}

As you may know, Kinder Morgan is proposing to install a gas pipeline, along with a permanent easement area 25' in either direction of the pipe, through a portion of North Reading. The town is interested in receiving feedback from residents whose property may be impacted by the pipeline and easement route as it is proposed. The enclosed map has been created from information provided to us by AECOM, an engineering company working with Kinder Morgan. Please provide any information you can about your property, as requested below. The town will share comments with Kinder Morgan for their consideration as they evaluate the pipeline route. Thank you for taking the time to provide your feedback.

{above abbreviated in following to "As you may know, Kinder Morgan is proposing..."}

Name(s): Town of North Reading, MA

Address: o Off Lowell Road

Map/Lot/Parcel (if known): 213/06/02

Please describe any features on or near your property that you believe may affect, or be affected by, an underground gas pipeline or an easement area (buildings, accessory buildings such as sheds; pools; wetlands or water bodies; power lines; underground features such as fuel storage tanks or utility lines; flammable materials; or anything else that concerns you):

{above abbreviated in following to "Please describe any features on or near your property..."}

*Water Supply-Proximity to Town Well-Aquifer Protection Zone

Proximity to Wetland Resource Areas

FEMA Flood Zone AE and Regulatory Floodway

Existing gravel haul road-used by recreational users (dirt bikes, fishermen, etc)

Please comment on any other concerns you may have about the proposed pipeline route and easement area; as it relates to your property:

{above abbreviated in following to "Please comment on any other concerns ..."}

Parcel is adjacent to the former Berry property which the Town has taken ownership rights from the Commonwealth of Massachusetts. Potential impacts may limit uses of future proposed development.

The Town is also concerned future infrastructure, specifically sanitary sewerage, may be excluded from crossing this parcel from a physical and/or economical perspective.

*Ref-USGS 2014 Aerial Photo KM Plan dated 11/17/2014,rev10/20/2015

Thank you!

{As you may know, Kinder Morgan is proposing...}

Site of DPW Facility-Considered a “critical facility” in the Town’s Hazard Mitigation Plan

{Please comment on any other concerns ...}

RMID substation is adjacent to this parcel. It is also considered a “critical facility”.

The proposed routing of the Tennessee Gas pipeline would be directly through this area. As extensive studies have been done in town to identify areas for groundwater discharge & that very few Suitable sites were identified, the loss of the DPW Complex site Would cripple the Towns efforts to Install a wastewater system. The Town leadership has identified this as a critical goal for the town and would have adverse economic impacts on the Town.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual champoux@crocker.com

Basis for Intervening:

I have many environmental concerns related to the proposed pipeline. These include but are not limited to its impact on wildlife, including endangered species, pollution of air and water, noise and light pollution, and the destruction of acres of forest.

A large area of the watershed for my water source (East Northfield Water Company Reservoir) would be impacted by the pipeline and compressor station, putting the continued purity of our water in jeopardy. The proposed compressor station building site sits on primary watershed for Northfield.

The pipeline runs through miles of unspoiled land, land that is used by hikers and tourists, as well as by residents. The compressor station would border a much-used hiking trail with spectacular views. Its presence would destroy the beauty of the area and would discourage needed tourism.

The compressor station and much of the pipeline would be in steeply graded areas, crossing many pristine streams and vernal ponds--few of which are acknowledged in Kinder-Morgan's application. Erosion and pollution of vital water sources, some of them habitat for rare and endangered species, are serious concerns.

Moreover, Massachusetts has dedicated itself to replacing greenhouse gas producing energy sources with clean energy. This pipeline is not needed to supply the Commonwealth's energy needs and its construction would run counter to the direction our state has chosen, and the will of its people.

20160115-5020

Docket – CP16-21-000 – Application for a Certificate of Public Convenience and Necessity (Northeast Energy Direct Project)

Motion to Intervene Pursuant to Commission Rules 385.214(b) filed electronically on 1/8/2016 by Julia Stockwell, Townsend, Massachusetts in CP16-21-000

<jvstockwell@yahoo.com>

Basis for Intervening:

I get it, without the pipelines your commission and commissioners are out of a job, What you do not get is that you are placing our country in grave danger and risking the lives and health of the very individuals who elect you to be responsible and denying the inevitable. The time has come that natural gas and oil are becoming obsolete and you are promoting a dying industry. You need to listen to the news regarding Oklahoma and the sudden frequency of the earthquakes they are experiencing and possibly you will understand what "fracking" is doing to our country not withstanding the environmental and danger issues.

The question everyone is asking of you, is this particular pipeline necessary. I believe you have heard from the majority of individuals both educated in the environmental and scientific fields and the local residents affected by this pipeline proposal, the answer is an outstanding "NO". The recent study by the Massachusetts Attorney General entitled "Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas" found that the Commonwealth's energy needs can be met well into the future without this project and its imports, through renewable energy sources, energy efficiency improvements, LNG and dual fuel plants.

I am a landowner in Townsend, Massachusetts directly affected by the Fitchburg lateral proposed by Kinder

Morgan and this project. In looking at the map of the proposed line at our town office, the lateral lies adjacent to the power line on the northwest side until it reaches my property, Townsend Maps 7-8-0 and 8-10-0. For some reason, the proposed path of the pipeline loops about 100 to 200 feet to the northwest of the power lines on my property and returns to align with the power lines after traversing my property. In actuality, it still traverses my property since I own approximately 15 acres northwest of the power lines. The thirty-five acres affected by the pipeline lateral is under Classified Forest, Chapter 61 in the State of Massachusetts which constitutes my retirement income. The property is only limited harvested on a twenty-year time frame to ensure potential growth for future years. Prior to harvesting, it is maintained in a natural habitat for wildlife and provides oxygen and clean air to our environment. If you do not know, it takes about twenty years or more to produce a marketable tree. I certainly do not become rich from the harvest as the hiring of a forester and taxes greatly reduce any profit. However, it does provide a benefit to the community in keeping it in Chapter 61. I fervently have denied access to survey my property several times in returned letters to the Gordon and Rees Attorney firm for Tennessee Gas Pipeline Company and in two of the letters, certified and first class mail, actually threatened by the Attorney James L. Messenger, "Tennessee reserves all rights to seek an order from the Massachusetts Department of Public Utilities to access your property for surveys". My ancestors have been in this country since the early 1600s and fought in the Revolutionary War for the rights and freedom we have today. If you think I will not fight to save New England from this pipeline, then you do not know the spirit of New Englanders. May I remind you the Revolution began in Massachusetts. Therefore, since I am directly impacted by this Fitchburg Lateral Line, and it is not a necessity for the New England states, I oppose this proposed pipeline under Docket number CP16-21-000 and will fight in the courts if it comes to taking my property by eminent domain.

Julia Stockwell, Townsend, Massachusetts

20160115-5021

{Motion to Intervene of Katja Sienkiewicz}

FERC Docket number CP16-21

Basis for Intervening:

I live within 8 miles of the proposed New Ipswich compressor station.

For these reasons I am strongly opposed to the NED pipeline proposal:

I am concerned that the pipeline would be a daily hazard to those who live and work around it.

I am concerned the pipeline would cause excessive toxic emissions from compressor stations to poison the water and air, putting innocent people's health and lives at risk.

I am concerned the pipeline would cause excessive light and noise pollution from compressor stations.

I am concerned the pipeline would cause long-term damage to the beauty and health of nature preserves and wildlife in our area.

I am concerned the pipeline would lower property values because no one wants to live in a potential danger zone.

I am concerned that the rural towns along the pipeline route are not equipped for the burden of the potential dangers associated with this volatile pipeline.

I am concerned the pipeline would negatively impact tourism in the area and result in a depressed regional economy.

Filed Date: 1/15/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

hereby moves to intervene as a full party in the above captioned docket.

I. MOTION FOR INTERVENTION AND INTERESTS OF INTERVENOR

The SEC is a duly constituted public body charged by law with, inter alia, issuing certificates relative to the siting and construction of energy facilities in the State and determining the terms and conditions of any certificate. RSA 162-H:4. The SEC was created for the purpose of providing “review, approval, monitoring, and enforcement of compliance in the planning, siting, construction, and operation of energy facilities...” in the State of New Hampshire. RSA 162-H:1. Its duties include “[evaluating] and [issuing] any certificate ... for an energy facility, [determining] the terms and conditions of any certificate issued [by the SEC], [monitoring] the construction and operation of any energy facility granted a certificate...to ensure compliance with such certificate” and enforcing the terms of any certificate. RSA 162-H:4, I (a)-(d).

On November 20, 2015, Tennessee Gas Pipeline Company, LLC (“Tennessee”) filed an application with the Federal Energy Regulatory Commission (“FERC”) seeking a certificate of public necessity and convenience to construct and operate a natural gas pipeline and related facilities known as the Northeast Energy Direct project (“NED Project”). A portion of the NED Project is proposed to cross approximately 70 miles in New Hampshire. If Tennessee’s application is granted, a significant new energy facility will be sited in the State of New Hampshire.

Accordingly, as the public body responsible for regulating the siting and monitoring of energy facilities in the State of New Hampshire, the SEC has a direct and substantial interest in this proceeding. The SEC’s intervention in this docket will not cause prejudice to, or additional burdens on, any other party to the proceedings, and will not cause any disruption to the proceedings.

The SEC has not yet received any application relative to the NED Project but Tennessee has indicated that it plans to file an application with the SEC.¹ As a quasi-judicial body that has not had an opportunity to perform its own review, the SEC currently neither supports nor opposes the NED Project. To preserve its impartiality, the SEC does not intend to take any positions on procedural or substantive motions before FERC prior to the final decision of the SEC. The SEC moves to intervene to obtain party status and preserve its rights to participate in the review process, including the ability to seek judicial review of any final decision on Tennessee’s application where necessary to protect the interests of the State of New Hampshire and to the extent such decision may be inconsistent with any findings or decision of the SEC.

II. PLEADINGS AND SERVICE CONTACTS

Service of all pleadings and other filings in this proceeding should be addressed to the following persons, whose names should be placed on the official service list prepared by the Secretary in this docket:

Pamela Monroe
Administrator
New Hampshire Site Evaluation
Committee New Hampshire
21 South Fruit Street, Suite 10
Concord, NH 03301

Brian W. Buonamano
Assistant Attorney General
Bureau of Civil Law
Department of Justice
Office of the Attorney General
33 Capitol Street
Concord, NH 03301

III. CONCLUSION

WHEREFORE, the New Hampshire Site Evaluation Committee respectfully requests that the Commission grant this motion to intervene and grant the SEC full party status in this proceeding.

Footnote:

¹ On November 16, 2015, Tennessee submitted a filing to the SEC stating Tennessee’s intention to submit an application and provided notice of the pre-filing public information sessions required by RSA 162-H:10, I.

Dated this 14th day of January, 2016

Respectfully submitted,

State of New Hampshire
Site Evaluation Committee
By its attorneys,
Joseph A. Foster
Attorney General
Brian W. Buonamano
Assistant Attorney General

Individual	Deliah@DeliahRosel.com	

Basis for Intervening:

I live in Conway, MA and want to intervene in the proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because 1. the Community Supported Agriculture Farm which grows my organic vegetables all summer and for winter storage is directly south and in the wind pattern of the proposed release valve that would emit toxic fumes that would be absorbed by the vegetables grown there, impacting negatively on my health. 2. The swath of destruction during construction and after altering conservation lands and diminishing wildlife habitat will reduce my enjoyment of the natural beauty of our state. The approval of the proposed fracked gas pipeline through Massachusetts overrides our State's rights and our State's mandate to protect the health and safety of our people, our property, our wildlife and our conservation lands. Allowing thinner thickness of pipes, with less heavy duty welds in rural areas because less people would be killed in case of an 'accident', is a blatant disregard for my life and the lives of my neighbors.

Basis for Intervening:

I am a resident of Plainfield, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I live .5 miles from the proposed pipeline route and am concerned about the effects of blasting on

the foundation of my house as well as my quality of life. In addition, I have concerns about my water quality should the pipeline leak. I moved to this community to enjoy the wilderness and quiet which I fear will be greatly disrupted by the pipeline during and after it's construction.

20160115-5029

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Project)

**MOTION TO INTERVENE OF
KENNETH W. BERTHIAUME & CAROL A. BERTHIAUME**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure, 18 C.F.R §385.214, we (Kenneth W. Berthiaume & Carol A. Berthiaume), file this motion to intervene in the above captioned proceeding. We seek to intervene in opposition to the Northeast Energy Direct Project ("NED Project") proposed by Tennessee Gas Pipeline Company, LLC, a subsidiary of Kinder Morgan, Inc.

Communications concerning these proceedings should be directed as follows:

Kenneth W. & Carol A. Berthiaume
52 Fryeville Road
Orange, MA 01364
(978) 575-0552
kwberthiaume@hotmail.com

As initial route homeowners, we have never been informed by Kinder Morgan or Tennessee Gas Pipeline Company, LLC that we were no longer directly impacted, and while the route appears to be constantly shifting, it is unclear if this lack of communication was intentional. We have lived in our home for over 40 years and heat exclusively with wood primarily obtained from our property. The initial NED Project route would have destroyed a portion of our forest and subsequent source of heat.

Further, our land shares a common boundary point with Article 97 Conservation Land, which was/may still be (?) impacted. We are very concerned with regard to the threat that the NED Project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution and oppose any taking of said land for private gain.

We are vehemently opposed to the forcible taking of private property by eminent domain for private gain. Our home is located downwind of a proposed compressor station that will produce harmful toxic emissions and atmospheric pollution. Further to this point, in relatively close proximity and also downwind of said compressor station is a major drinking water resource for the largest metropolitan area in Massachusetts.

We are further in opposition to this NED Project as it has been determined that there is no need for this NED Project now or 5, 10, 15 years into the future as indicated by the study recently published in November 2015 by the Analysis Group, Inc. (AGI) on behalf of the Massachusetts Office of the Attorney General (AGO). Further, the NED project directly conflicts with the Massachusetts Global Warming Solutions Act and will deter the growth of clean renewable energy.

As previously stated to FERC both verbally at multiple scoping sessions and in writing, Massachusetts already has unused infrastructure that was commissioned in 2008 and 2010 respectively (Northeast Gateway and Neptune deepwater ports), and cannot afford additional overbuild at the expense of the environment, homeowners and ratepayers.

We respectfully request that the Commission grant this motion to intervene as a party with full rights to par-

ticipate in all further proceedings.

Respectfully Submitted,

Kenneth W. Berthiaume

Carol A. Berthiaume

Individual jls0419@hotmail.com

Basis for Intervening:

I live in Nassau, NY, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I live across the street from the proposed compressor station site and I am located in the incineration zone. I live in my home, that we took pride in building ourselves, with my husband and two children. We also live next door to family where our three nieces live. To think that we could be living across the street from a compressor station terrifies me. Not only are there health impacts we could be subjected to but also our property value would be diminished. Please take into consideration all the people that would be impacted by this site especially all the children that live so closely. There are many alternate locations that should be utilized.

Basis for Intervening:

In order to reduce the devastating affects of fossil fuels on our planet we need to reduce our use dramatically. Building a new pipeline costs taxpayers and our government billions of \$ that could better be spent on renewable energy that would not poison our planet and would create over 22.000 permanent jobs for Ma. residents. By not building the pipeline Kinder Morgan will be helping our children and our planet.

Basis for Intervening:

Sandisfield Taxpayers Opposing the Pipeline (STOP) of Sandisfield, Massachusetts requests intervenor status in this docket for the following reasons:

1. We are citizens and taxpayers in the Commonwealth of Massachusetts and given the large number of public lands this project will “take”, we are materially affected.
2. We are interveners in CP14-529 and we maintain that these two projects are being illegally segmented and that they are in fact two parts of one whole.

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	andersmike1968@gmail.com	

Basis for Intervening:

I oppose the Northeast Energy Direct pipeline. The environmental damage proposed by this pipeline greatly outweighs the benefit to “public need”. As an abutter to a property directly affected by this pipeline, I am not considered “directly affected”. That is why I wish to intervene in this project.

20160115-5034

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
North East Energy Direct Pipeline Project)	

MOTION TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, JOSEPH M. DIGIAMMO AND CAROLYN M. DIGIAMMO, both of Andover, Essex County Massachusetts, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Joseph DiGiammo
11 Jordyn Lane
Andover, MA 01810
978-494-3147
jdigiammo@gmail.com

II. INTEREST OF PETITIONER

We have a direct interest in the outcome of the proceedings. Construction, operation and maintenance of the Pipeline would directly and adversely impact us follows:

- 1) Our home, as well as all the other homes in our neighborhood, is in the direct path of Segment N, the Lynnfield Lateral. We own and reside at 11 Jordyn Lane, Andover, Massachusetts. Our home is in a single family residential zone. Although our street is consistently named on publicly available maps, it has never once been given a name on any map filed by the applicant to date. We are deeply disturbed by this fact.
- 2) At present our home is identified as Lot MA LL 55.07 on the Map named Segment N, Lynnfield Lateral Alignment sheet TE-SEG_N-005 and on construction drawing LA-SEG_RES-006. Our back yard abuts the back yard of other homes shown on the same maps both on Jordyn Lane and Cardigan Road. Our back boundary coincides with the Andover-Tewksbury Town line and immediately borders an undeveloped, substantially sized, environmentally sensitive wetlands area which provides access to another undeveloped Tewksbury lot zoned for Office Research with a residential overlay district.

Our side and back yard are thickly wooded by mature trees and in their natural, forested state, as are the back yards of all our neighbors. There are 2 very large areas of known area of wetlands on our property, one on the side and one on the back. Tennessee Gas has indicated these wetlands on the map as WPI- 2775 and WPI-2776. Immediately on the other side of our back boundary, are also more large protected wetlands areas, in Tewksbury. One is a large one shown as WPI-2774, and a smaller one, WPI-2770. Next to the last two, still on the other side of our boundary there is a large pond, know as Ames Pond, with respect to which our subdivision enjoys the benefit 1977 drainage easement into the pond. Although this large Pond is “cut off” on the current map and is not properly identified on the maps in this Application filing, it was shown in full and designated a “Pond” in the July filing. The truth of this pond is that it is historically significant. It was formed about 150 years ago when General Adelbert Ames dammed the Meadow Brook stream to create a wildlife preserve on his estate. By law, it has a 100 foot riverfront protection buffer around it.

In actuality, this area around our home and throughout our neighborhood is all wetlands and conservation land protected from clear cutting and other construction under state and local laws. Our home, and the rest of this neighborhood, sits in the Groundwater Protection Overlay District for Andover, which abuts the Groundwater Protection Zone in Tewksbury. It also sits in a Mass DEP Zone II wellhead aquifer protection Area.

The wetlands areas are shown in blue which means the information on the map is based on aerial photographic perception. Given the density of mature trees throughout here, it is impossible for any such aerial survey of the wetlands representation to be accurate as to the full magnitude. Therefore, the maps they have filed may understate and be misleading. The surveys required to produce accurate mapping to support the application have not been conducted so the maps they have filed here are incomplete and inaccurate. The maps are, in reality, “fabricated”. Kinder Morgan and Tennessee Gas should not be allowed to file these unfinished maps as if they were factual. Their doing so constitutes an unfair and deceptive act and practice under Massachusetts Consumer Protection Law MGLc 93A.

The forested wetlands area behind our home, in conjunction with the forested areas behind the other homes along the proposed path, form a contiguous wildlife corridor and breeding habitat for the wildlife migrating between the Shawsheen to the Merrimack Rivers. Our location in this corridor is less than 1 mile from Article 97 lands which are shown a lots MALL 76.00 and MA LL 77.00 on Alignment Sheet TEG-SEG_N-006. These Article 97 lands are NHESP rare species habitats and Bio2 core habitats and they are mid way between the Shawsheen and the Merrimack Rivers. This is a very valuable resource wildlife corridor which will be destroyed by the path of the pipeline. This corridor allows wildlife , including rare species, to travel between the Merrimack and Shawsheen river, both of which are NHESP rare species habitats.

The setting of our home is private, quiet and natural, while our neighborhood is one of natural beauty and balance. We share it with many wildlife mammals. The mature trees and other vegetation shield us from any future development of the office park. These things have great value as is proven by the fact that the

homes in this section of town have the highest resale values.

According to the plans, Tennessee Gas (TGP) intends to install 24", 1460 psi pipeline in, around and across the property line of our back yard. TGP intends to clear cut a swath through more than one extremely large, protected wetlands resource area. It will then continue on through the other neighborhood back yards and ultimately bisect the Article 97 Conservation lands and other rare species habitats, that we described above.

According to the Construction Plan, LA-SEG_N-RES-006, during construction, the safety fence will be erected less than 7 feet from our home. Under this plan, TGP will deprive us of the use of our back yard. When finished, the actual pipeline will be less than 57 feet from our home. The information provided to the public is deficient in that the construction plan does not designate the distance limit of the actual work area, but, according to our calculation, any trench they open will be 37 feet from my home.

Although in their resource reports, KM/TGP have represented that they will narrow the work areas through wetlands, the map shows that the Temporary work easements and clear cut swath behind our home (and our neighbors' homes) is actually widened and will be up to 115 feet wide. It will come within 45 feet of our home. The permanent easement will be 50 feet wide while the finished pipeline will be 75 feet from our home, which puts us (and our neighbors) well inside the "Blast" or "incineration zone". We will hear the high pressure gas being pumped through the line and the pigging when cleaning occurs. We will lose our trees, our sound buffer, our privacy, our beautiful view. All of the trees that give our neighborhood its character will be permanently eliminated. The wetlands will dry out. The wildlife habitat will be eliminated and we will be deprived of the enjoyment of watching the animals who inhabit and travel through the corridor daily. After construction our view will consist of nothing more than grass or invasive weeds. Our trees will be replaced by yellow posts clearly marked "Danger High Pressure Pipeline" separating us from our neighbors. The path of the pipeline will threaten our aquifers and well heads and jeopardize our water supply.

The value of our property will be diminished. The health and safety of our family and neighbors will be endangered. The construction of this pipeline will irreversibly destroy what we have. The value of the entire neighborhood will be adversely impacted. It will essentially convert a residential zone to an industrial use.

2) We are approaching retirement and this home is our only major asset. Our equity here was to be our retirement. We were depending on our equity to survive. The value of our property will be diminished by this pipeline path. In fact, the resale value of our property has already been diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive us of our retirement funds.

3) The construction of this pipeline will permanently impede and disrupt our drainage easement, causing the Jordyn Lane Neighborhood to flood.

4) During construction, we will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of privacy. Our neighborhood is well known to consist of ledge so substantial blasting would be inevitable. This will endanger the structural integrity of our home, of the other homes in our neighborhood, and adversely impact our health and sanity, as well as our use and enjoyment of our property. It will unconscionably disrupt the wildlife.

5) According to the plans, TGP intends to clear cut and trench across both Route 133 and Bellevue Road, Andover at Kendall Road, Tewksbury. The first renders a major road to other important places, including the highway, unusable. The second makes the alternate route impossible. They both make coming to and going from our home almost impossible. There are no reasonable alternate routes for us to travel in those directions. This creates a great risk for us and other homeowners should we need emergency responders. We will be greatly inconvenienced and endangered.

6) Furthermore, in addition to being property owners we are customers and rate payers. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Massachusetts has an LG facility in Everett that has been sitting unused. The Attorney General's independent study has established that there is no need for this additional NED infrastructure. This pipeline is not necessary at all to service New England. This Lynnfield Lateral is not necessary for

providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience.

7) From day one we have refused to give the Applicant permission to survey our property. Given that they are using photographic images to depict the wetlands in and around our property, it is clear they never bothered to survey in person. We again prohibit them from entering our property. We do not trust them to provide any impartial evaluation here. Any such entry by them will be considered a criminal trespass. Again, the applicant should not be allowed to file an application with fabricated mapping. They had a chance to conduct actual surveys to make real maps by going to the DPU. They did not take it. They opted, instead, to file fake maps.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, We, Joseph M. DiGiammo and Carolyn M. DiGiammo, respectfully request that the Commission to grant our Motion to Intervene as a party with full rights to participate and comment in all further proceedings.

Respectfully submitted this 14th day of January, 2016.

Joseph M DiGiammo and Carolyn M. DiGiammo
11 Jordyn Lane
Andover, MA 0181

Basis for Intervening:

Kinder Morgan has been non transparent about their pipeline routes, and has changed them 3 times. With a FERC recommendation that would be a fourth change. KM still retains the right to revert to any previous route. Who is paying for this pipeline? Is it really needed? Will this gas be used for export? These questions have not been answered.

We also have many environmental and health concerns.

Basis for Intervening:

I oppose the proposed project to build a pipeline.

As a resident of the impacted area I believe the environmental damage will be significant, causing harmful chemical fallout which will be harmful to the abundant wildlife and to the beautiful habitat in which they presently reside. Our watersheds will be heavily inundated when one considers the overall dimensions of this project. The swath of destruction to create this pipeline will be unreal to all who live and breathe in the affected area. As a result my family and friends will suffer physically and mentally.

As a resident of the impacted area I believe the economic fallout will be considerable. Over the last many years the area has been transforming from a manufacturing environment to a more service oriented setting. The natural beauty of the impacted area has provided for an increasing tourist trade that will certainly be damaged by the execution of this pipeline proposal. Jobs will be lost and the potential for new enterprises will be limited, especially in communities such as Northfield and Deerfield, MA. As a result my family and friends will find it harder to make a decent living.

As a resident of the impacted area I believe that I and my neighbors will suffer financially with the development of this project. Once built the area will lose some of its attraction as a wonderful natural environment, as a result, values will depreciate. As a matter of understanding our little section of the world has been hurting economically and this project will do nothing to help our cause. We do not need this added negative dimension. My neighbors and I will not benefit directly or indirectly with the development of this project...

As a resident of the impacted area I believe there are better alternatives. Our area over the last many years has become a greener world. By using new strategies to conserve our resources and to utilize those resources more efficiently, many of us believe we are making headway to minimize the use of carbon fuels. This project is a slap in the face to what we hope to achieve. As citizens of this proud country a project like this would be perceived as a further disconnect between government and the people governed...

I oppose this project in any way, shape, or form.

Thank You

Basis for Intervening:

I've heard no compelling argument that justifies building a pipeline. It would be short-sighted and irre-

woodlands and the way of life they provided. We are farmers, hunters, foresters and homesteaders. This pipeline will bring pollution, noise and interfere with the habitat of our wild animals and birds. Not far from my home there is a pair of nesting bald eagles. Destroying our farms and woodlands will not provide any kind of national security.

20160115-5040

{Motion to Intervene of Richard Komita}

I live in Franklin, NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a landowner directly impacted by the pipeline route / compressor station.

I am a resident whose source of drinking water will be crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities. The effect on our spring fed ponds could be devastating too. The proposed compressor station will be located within two miles of our home. The amount of toxic gases that will be emitted into the air and chemicals leeching into the soil will not only the health of those in the "sacrifice zone" but the entire energy infrastructure will destroy the environment we live in.

I am a resident who lives in the "blast radius" and it will eliminate the main access road to our home. The location of the blast site will also endanger the foundation and the structure of our home and even expose us to physical risks.

I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

I strongly object to the proposed pipeline and energy infrastructure (Compressor Station, Power Station and other facilities)!

Sequent Energy Management, L.P.
Sequent Energy Management, L.P.

kmccoy@aglresources.com

crusso@aglresources.com

kwatson@aglresources.com

Basis for Intervening:

Pursuant to Rule 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”), 18 C.F.R. § 385.214, Sequent Energy Management, L.P. (“Sequent”) hereby moves to intervene in this proceeding.

Sequent is a limited partnership organized and existing under the laws of Georgia and a wholly-owned subsidiary of AGL Resources Inc. Its principal place of business is located at 1200 Smith Street, Suite 900, Houston, Texas 77002. Sequent purchases and sells natural gas, and provides asset management services to local distribution companies, producers and generation facilities throughout the United States.

On November 19, 2015, Tennessee Gas Pipeline Company, L.L.C. (Tennessee) submitted an application to the Commission in Docket No. CP16-21-000 for a certificate of public convenience and necessity to construct new natural gas pipeline system located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, and to abandon certain facilities, as part of the Northeast Energy Direct Project (NED Project). According to Tennessee, the NED Project will expand Tennessee’s existing, extensive pipeline system in Pennsylvania, New York, and New England, connecting low-cost, domestic natural gas supplies from northern Pennsylvania to New York and New England markets.

As a firm shipper on Tennessee’s pipeline system, Sequent has a direct and significant interest in the outcome of this proceeding that cannot be adequately represented or protected by any other party. Accordingly, Sequent submits that its intervention is in the public interest and in accordance with Commission regulations. Thus, the Commission should grant Sequent permission to intervene in this proceeding.

Basis for Intervening:

I’m a home-owner in Ashfield, MA and feel strongly that a natural gas pipeline running through our town will degrade our environment and decrease the value of our property and make our community less appeal-

ing to current and future residents. I also believe that as a society, our continue reliance of fossil fuels is short-sighted and destructive. Our state should be supporting clean, renewable energy solutions, not working to line the pockets of oil and gas companies.

Basis for Intervening:

I am a resident of Massachusetts and wish to intervene in this proceeding to oppose the NED pipeline. I have multiple interests which may be directly affected by the outcome of the proceeding.

1. Investment in new long term fossil fuel infrastructure will interfere with local carbon emission reduction goals. This project will in the future, and has already, impeded development of renewable energy resources. Local utilities have terminated contracts with proposed renewable energy sources to become customers/partners of new gas pipeline projects.
2. Pipeline routes have been proposed which jeopardize my town's public and private drinking water supplies.
3. Considering prevailing wind patterns, my home will frequently be downwind of proposed compressor station sites which jeopardizes my family's health since there are known toxins emitted from compressor stations.
4. Use of eminent domain to take private and public land for a second right of way when Kinder Morgan already has one that could be used is wrong.

Basis for Intervening:

I live on 2 Star Terrace, which is off of Route 9 in Schodack. I want to intervene in this proceeding to oppose the NED pipeline. I have an interest because one of the sites being considered for the compressor station is on Route 9 close to me. I have concerns about chemical releases that may affect my family's health.

My source of drinking water is crossed by the proposed route so my drinking water supply is at risk from the construction and/or operation of the pipeline. The aquifer in Schodack is a precious resource, and very vulnerable since it is more of a surface aquifer. The entire town depends on this aquifer for its drinking water.

I have concerns about the impact of a compressor station and pipeline on property values in the Town of Schodack. Even if the compressor station is not near me, I care about my neighbors and their health. My greatest concern is for the environment and especially the environment of Schodack, our parks, forests, and wildlife. Barbara Spink

Thank you for your consideration of my household's motion to intervene.

As residents of Whittier Place, we are very concerned about the impact of this project on our neighborhood as well as the surrounding neighborhoods and the town of Merrimack as a whole. The disruption caused by this project before, during and after any actual construction will be extensive and long lasting for the residents of Merrimack and will certainly have negative impacts on our quality of life, property values and sense of security that we have enjoyed in our town.

The amount of opposition to this project by the residents, business owners and the town council has been overwhelming. It is unfortunate that Merrimack has been chosen to shoulder a significant amount of the burden of this project for no tangible benefit to the town or its residents. In fact, this has had the opposite effect on the town, which has already expended extensive time and resources to educate itself and its residents about the NED project and will be forced to continue to do so for the foreseeable future. These costs pale by comparison to those that we will incur should this project continue.

As residents of Merrimack, it is unfortunate that we are being put in a position to absorb significant costs related to the NED project without many, if any, of the benefits.

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	marthajlynch@verizon.net	

Basis for Intervening:

I am a resident of Plainfield, MA and am horrified that the Pipeline would even be considered in our town. Many other interveners have listed a lot of the technical reasons why this project should not go through. I would like to intervene because I feel that this project is a classic example of might vs right, and the losing side is the state of our democracy.

I live in Plainfield because of the relative lack of pollution, noise, and commercial enterprises. I love the quietude, the sighting of frequent wildlife in our protected lands. There remain fewer and fewer places in MA where this is the case. Our culture has defiled the entire planet and those of us who are fortunate enough to live in a town like Plainfield, know what there is to lose.

So, along comes a company that wants to move dirty gas through our lands. I feel confident that their ultimate goal is to increase their personal wealth. And, I would imagine that many of those who are trying to push this along, already make a reasonable income. Greed. It has spoiled many a river, a town, a country. Now they want to take away our right to have protected lands, and instead offer to fill our quiet skies with booming noises, to intrude on our waters and the not so farfetched possibility that our ground waters may become poisoned.

The negative possibilites are endless. Fire, pollution, noise, threats of sullyng our waters, etc. And now it is time to remember that this isn't really about getting our energy needs filled. This is about wealthy men wanting more. They don't give a rat's ass if we have our electrical needs met. They want what big business always wants, money, money, money.

It also seems clear that the main design is to export the dirty gas across the seas.... and what of our rivers and now, our oceans?

This is a critical juncture as our governments struggle to pull us back from the brink of destruction from global warming. It is a time that we may not be offered again. That is why we need to focus on alternative means of living on this planet. The know how is there, waiting for us to end our reliance on fossil fuels.

Kinder Morgan and their cohorts are focused on the past ways of doing things. And, unfortunately, time is running out. This is a time for new ways of looking at the world, our planet. These are the days when men

and women of courage need to stand up and resist the greedy, oily, barons of our past, and move on towards what is good and right.

Please take my words into consideration and when it comes time to make a decision, think of your loved ones, remember the children who will inherit this earth.

20160115-5055

Docket No. CP16-21-000

Tennessee Gas Pipeline Company, L.L.C., A subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline

MOTION TO INTERVENE IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure, 18 C.F.R. §385.214, I file this Motion to Intervene in the above-captioned proceeding.

I oppose the project because approval and the consequent construction of the NED pipeline would amount to destruction and degradation of the unspoiled rural area upon which I depend to attract visitors to our licensed Bed and Breakfast (Kenburn Orchards). The impact on the overall environment, economy and quality of life for residents and visitors to the region would be significant. Therefore, I seek party status to protest the proposed pipeline, and fully protect my interests.

STATEMENT OF INTEREST

A. Description of Impacts

I will be directly impacted and harmed by the proposed project because

the economic health of our farm and Bed and Breakfast is directly dependent upon the influx of visitors who come to western Massachusetts throughout the year to enjoy the pristine, scenic and undisturbed natural surroundings—open land, farm fields and orchards, farm stands, forests, and the rural, small-town environment. The construction disturbance and ongoing presence of a major gas pipeline will adversely affect essential tourism and recreation, and therefore our income. Presence of the pipeline will deter tourists from visiting the area and staying at my Bed and Breakfast.

Pipeline development is contrary to the wishes of our residents, as expressed Shelburne Open Space and Recreation Plan, Town Meeting vote and the position taken by our selectmen in our behalf. The pipeline would cut through and fragment wildlife corridors and habitats expressly cited for protection. The pipeline would pass through and along highly sensitive ecosystems, wetland resource areas, vernal pools, cold river fisheries, areas of critical habitat for rare species, protected forests, prime farmland and permanently protected open space.

B. My Motion to Intervene Must Be Granted

I satisfy the standard for intervention under the Commission's regulations. As discussed above, I am directly impacted by the proposed project, and no other individual or organization can as adequately represent my unique interest in this proceeding as I can. Accordingly I respectfully request that the Commission grant this Motion to Intervene. Failure to grant my motion, and that of other citizens affected by the pipeline, will serve to confirm the belief of many of us that FERC serves only the wishes of large energy companies, and does not respect the concerns of the very people most affected, and certainly harmed by questionable projects not in our interest.

II. CONTACT INFORMATION

The following should be added to the Official Service List, with all notices and communications in this proceeding addressed to me as listed below:

Name: Susan T. Flaccus, Owner
Kenburn Orchards
Address: 1394 Mohawk Trail
Shelburne, MA 01370
Phone: 413-625-6116
Email: Susan@kenburnorchards.com

III. PROTEST/COMMENTS

A. TGP's application and its Environmental Reports are incomplete and information is missing on the exact location and construction of the pipeline as well as its effects on aquifers and other vital resources. Missing details make it difficult if not impossible for me, other property owners and town officials to know how to assess the actual project impacts. However, we do know that the pipeline will cross farmlands and lands now legally protected from development, thereby inevitably harming the environment, the opportunities for recreation in natural areas, and the wildlife who live in the area, and the people who live here.

B. TGP has not yet made a compelling case that there is a need for additional pipeline capacity to serve Massachusetts' energy needs. I support the proposal that FERC simultaneously review all pipeline proposals now before it collectively, not individually. Such a side-by-side review will show how much additional gas infrastructure, if any, is needed in Massachusetts and the New England region, and which measures for meeting regional energy needs create the least economic and cultural impact and environmental damage. When such a review is complete, I believe it will be clear there are more effective methods of meeting our energy needs than building a new pipeline. Failure to evaluate all proposals together will indicate a disregard for a coordinated energy program designed in the best interest of our citizens

C. Massachusetts Attorney General Maura Healey commissioned a study that has made a compelling case that the NED Pipeline is not needed. I concur and urge FERC to consider this recently completed study in its evaluation of whether the this pipeline even provides a public benefit to Massachusetts residents and whether there is any justification whatsoever for the taking of property the destruction of the environment, and the economic impact it will have on the areas traversed.

D. TGP has not made a compelling case that the need, if there is one, could not be better served by less intrusive, more sustainable and lower cost methods. The NED Pipeline should not be approved by FERC without establishing that the pipeline is the most effective means of meeting the intermediate and long-term energy needs of the states through which the pipeline passes, and that the pipeline is consistent with the goal of less dependence on fossil fuel and a move toward sustainable energy. Without such assurances it is certain that we who lie in the path of the pipeline will soon be left with the detritus of the infrastructure which will be overbuilt, obsolete, and an unnecessary assault on our environment.

E. I and other Massachusetts residents and customers of Eversource should not be required to pay for a gas export pipeline through infrastructure cost transfers embedded in long-term gas contracts. Should FERC approve the pipeline project, FERC must specifically reject the pass-through of infrastructure costs to ratepayers for any pipeline it approves, particularly if such a pipeline is transporting gas for export as it appears to be.

F. I believe the most efficient and lowest impact means of meeting our region's energy needs is to invest in energy efficiency and sustainable energy technologies such as solar and geothermal. In addition, there are many small, but effective steps that can be taken by all of us including maximizing the effect of building insulation, development and use of more efficient appliances and industrial processes, residential and commercial solar generation, co-generation and re-use of waste heat. Repairing leaks in the current gas infrastructure must be a priority as the prevention of leaks will provide an immediate increase in the amount of natural gas already available. In summary, it is possible to make our current gas infrastructure more than adequate to transition the region toward a renewable energy future.

IV. CONCLUSION

Therefore, in light of the foregoing, I respectfully request that the Commission GRANT this motion to intervene and allow me to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,
Susan T. Flaccus

Climate Action Now Western Massachusetts susantheberge@icloud.com

Basis for Intervening:

Climate Action NOW (CAN) <http://climateactionnowma.org> is a people powered, grassroots Western Mass based organization dedicated to building a powerful, unstoppable climate justice movement. We work in our communities and in collaboration with diverse partners across the region to educate, advocate, and mobilize for climate action. Climate Action Now is filing as an intervenor, opposed to the project, because of the following interests which may be directly affected by the outcome of the proceeding:

One purpose of CAN is to fight to protect our air, water, forests, farms and other natural resources. Air and water know no boundaries; we all have a stake in protecting these precious natural resources. Gas that is leaked during the process that drills and brings gas to market and the potent toxic chemicals that are used in the fracking process create air and water pollution, increase global warming and pose a danger to natural resources and public health.

Rigorous research has enlightened us as to the significant climate change impacts of methane (CH₄) gas. Methane has 84 times the global warming potential of carbon dioxide over 20 years. Natural gas and petroleum systems are the largest source of methane emissions from industry in the United States. In fact, methane is the primary component of natural gas. Methane is emitted to the atmosphere during the production, processing, storage, transmission, and distribution of natural gas. New research points to the underreporting of methane leaks due to faulty measurement tools.

The NED project puts at risk the commitments made by the State of Massachusetts in the Global Warming Solutions Act (2008) requires that greenhouse gas emissions be reduced between 10 and 25 percent below 1990 levels by 2020 and 80 percent below 1990 levels by 2050. In order to do this it requires that climate change impacts be considered in decisions made by state agencies, boards, commissions, and authorities, including on permitting and licensing.

The nearly 1500 people connected with Climate Action Now include taxpayers, nature lovers, and visitors to protected public land in Massachusetts. We are deeply concerned about the threat the NED project poses to public land including land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution. In all, over 100 parcels of land protected by Article 97 would be affected were this pipeline ever to be built.

Many of us are land trust donors, visitors, and neighbors to protected land owned by the Massachusetts Audubon Society, The Trustees of Reservations, Mt Grace Land Conservation Trust, and Kestrel Land Trust (to name a sampling). The building of this pipeline would violate the purpose and spirit of our donations and would break our hearts.

Climate Action Now welcomes the findings of the Massachusetts Attorney General's report, Power System Reliability in New England: Meeting Our Electric Resource Needs in an Era of Growing Dependence on Natural Gas.

“This study demonstrates that we do not need increased gas capacity to meet electric reliability needs, and that electric ratepayers shouldn't foot the bill for additional pipelines,” (Attorney General) Healey said in a statement. “This study demonstrates that a much more cost-effective solution is to embrace energy efficiency and demand response programs that protect ratepayers and significantly

reduce greenhouse gas emissions.” (State House News Service).

In summary Climate Action Now, as an organization committed to protecting our environment, has many reasons as described above to be included as an Intervenor in this project. We are united in our opposition to all new fossil fuel infrastructure because we know that we cannot address climate disruption without immediately reducing and soon eliminating our dependence on fossil fuels. Now is the time to put all of our resources into energy efficiency, conservation and renewables. We are running out of time.

RE: Docket No. CP 16-21-000

Tennessee Gas Pipeline

Northeast Energy Direct Project

To Whom It May Concern:

I would like to file as an intervenor related to Docket No. CP 16-21-000. I am the Vice President of the Consistory of the First Reformed Church of Bethlehem in Selkirk NY and I also live within 1/4 mile of the proposed pipeline that will be going through the forest and nature preserve on the church property.

The church has existed on this property since 1763 and in 1795 Stephen Van Rensselaer sold this property to the First Reformed Church of Bethlehem. Our property has been registered on the National Register of Historic Places since 11/25 2002 under reference # 02001398.

Our forest and nature preserve contain wetlands, walking trails, Eagle Scout projects and have been the site of archeological digs. Native American artifacts have been found on this property. Elmwood Cemetery abuts the other side of our forest property.

As a member and officer of the First Reformed Church of Bethlehem and a property owner who stands to have the health and well-being of my family and neighbors negatively impacted, I am seeking intervenor status.

Sincerely,

Deborah J Weisheit

Individual	dpinney1@myfairpoint.net	

Basis for Intervening:

I would like to file as an intervener on the Tennessee Gas Pipeline/Northeast Energy Direct Pipeline project proposed by Kinder Morgan.

I am a landowner directly affected by this massive overbuild of infrastructure pipeline. I am adamantly OP-POSED to this project.

I am intervening to protect my rights to contest this project in all local town, county and state regulatory proceedings as well as in any Federal proceedings including but not limited to the FERC "process".

I am also intervening to protect my right to take this matter to court in any and all jurisdictions that may apply.

I and my family will be harmed directly by these following issues:

- > Our property value will be lowered
- > The resale of my property will be hindered by the location of this pipeline.
- > Any parcel that I may wish to subdivide for sale will not be marketable at fair market price.
- > The use and enjoyment of the acreage will be restricted by virtue of the pipeline.
- > The reality that additional infrastructure including compressor stations, metering stations, pig launching stations can be added at any time causes a stressor that will not go away if this pipeline is built.
- > Have to endure the equipment, blasting, increased traffic, etc. on and around my property.
- > Have to be concerned with the loss of potable water from my bedrock wells
- > Lose the view due to cutting for this greenfield project.
- > Have only one means of egress as I live on a dead end road.
- > Have to use my retirement funds for attorney fees.
- > I will still pay taxes on land whose use has been confiscated from me.

My community will be harmed by this pipeline. I am part of this community. I have lived in one county and in site of Mount Monadnock my entire life to date.

- > There is the danger that sensitive aquifers will be contaminated by construction procedures. There is additional danger that they will be contaminated by leaks or worse a catastrophic explosion.
- > Our community does not have the emergency resources to prepare for and eventually handle an emergency.
- > This area depends on tourists from Massachusetts and Connecticut for a large part of our economy. They leave their state to get away from the overbuild that this pipeline will inflict on our area.
- > Roads will be damaged by heavy equipment whose owners will invoke the federal aspect to circumvent all local rules in place that protect roads in certain seasons when they are most vulnerable.
- > Jobs for construction will not be local. Resources will be necessary to police the out of state workers who will have no respect for or connection to our community.

There is not benefit to the people of the state.

The NED pipeline is not being built in isolation. There are six other projects already proposed. This is a massive overbuild of pipeline capacity. This project is touted to help alleviate the worldwide natural gas shortage abroad. It is touted to help alleviate the worldwide geopolitical benefits. I do not intend to be a geopolitical pawn.

Our nation has sent thousands of young men and women abroad to protect our national interests. Some cynics like myself will suggest that these soldiers were wounded or died for the fossil fuel industry. They were told that there are bad people who want to come to our towns from abroad, take our property, rape our wives and daughters, brainwash us to accept their ideology, and to see the world through their eyes.

Now there is an invader coming from a foreign place (Houston), imposing their value that natural gas is good upon us, taking our lands and changing the very culture we value. **TAKING PROPERTY FROM INDIVIDUALS BY A PRIVATE CORPORATION FOR THEIR PRIVATE GAIN IS AND ALWAYS WILL BE WRONG.**

Assuming that if the cost for a five billion dollar pipeline were instead used to purchase LED light bulbs at a cost of \$3.00 each, we could purchase 1,666,666,666 bulbs. This is one way that we could reduce electrical consumption and meet the new world climate standards being suggested.

I implore you to not allow this project to move forward. I have lived in New Hampshire, the Live Free or Die state since birth. I have reflected many times over the last year what that meant to the revolutionaries of our early nation.

I request that you grant my motion to be considered as an intervener in this process. I would consider anything else to be yet another indignity to me and all of the hundreds and thousands of people adversely afflicted by this process.

I continue "to be determined" to stop this project.

Dana Pinney

20160115-5064

{Motion to Intervene of Roseann Slomowitz}

I live in Franklin, NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a landowner directly

impacted by the pipeline route / compressor station.

I am a resident whose source of drinking water will be crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities. The effect on our spring fed ponds could be devastating too. The proposed compressor station will be located within two miles of our home. The amount of toxic gases that will be emitted into the air and chemicals leeching into the soil will not only the health of those in the "sacrifice zone" but the entire energy infrastructure will destroy the environment we live in.

I am a resident who lives in the "blast radius" and it will eliminate the main access road to our home. The location of the blast site will also endanger the foundation and the structure of our home and even expose us to physical risks.

I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

I strongly object to the proposed pipeline and energy infrastructure (Compressor Station, Power Station and other facilities)!

Roseann Slomowitz
527 Bissell Road
Franklin, NY 13775

Individual	suezyanne@aol.com	

Basis for Intervening:

I am a landowner in New Ipswich NH. We built our house in 1983 and planned on staying here forever. An 80 HP compressor station is supposed to be built one mile from my house. I am very concerned about the emissions that will be released and how it could affect my health. I have asthma. My doctor has advised me to move if we can. Well since the value of our home will decrease if the compressor station goes in it will be hard to sell our house and buy another one. My husband and I worked hard to build our house and were looking forward to retirement. Now we feel like we are being forced to move and it has become our worst nightmare. If we can sell our house we will not be able to buy what we have built here. I do not feel that this is right.

If this pipeline is approved another concern is that will be paying for the installation of it through higher electric bills. Why should we have to have this forced on us when it is not needed and pay for it too.

I am also concerned that if there are any gas leaks or fires as far as this pipeline goes who is going to be able to handle it properly. We have volunteer fire departments. They will not be able to handle a disaster.

There have been enough disasters involving pipelines lately that have me convinced that this pipeline project should NOT happen. Is money more important than our health?

I have never been so disgusted with what I seen going on in Southern NH for the past year.

All of us should be concerned enough to keep our world clean & healthy. I will continue to fight to keep this NED pipeline from going through my town or anyone else's.

I am concerned about my health - I am also concerned about the health and safety of all of my friends and neighbors.

Basis for Intervening:

I live in Northfield, MA and wish to intervene in CP16-21 to oppose the NED pipeline. The natural resources and beauty of the area, along with the cultural and historic significance of the affected land, have been well documented. From native peoples to some of the earliest European settlers in the region, Northfield has an important history that has been consciously preserved and valued, and has also committed large areas for outdoor recreational use. With a lot of community effort and planning, land has been put aside and pro-

B) What about pollution from chemicals to health, water, food, etc. (Humans, animals, milk, farms, schools). Short and long term? What about land value, taxes, roads, and streams, wells, damages? And things we don't know now?

C) What happens when Pennsylvania's supply of natural gas runs out? Would New York State reopen the books on fracking?

And for what? A claim that New England needs cheap heating fuel? Everything that I have read in the papers say that New England does not need or want the gas or the pipelines, etc. However, over seas countries do and will pay a higher price for it than the USA customers. As for local companies that the pipeline said would move, if they didn't get cheaper gas, the fact is most companies move because of the higher price for doing business here than overseas wages, healthcare, unions, transportation, government, etc.

And because here in upstate NY we're a mostly rural area of farms, small towns, and small land owners, very few people, if any would receive gas, etc. The pipeline companies know that the town boards have money troubles, so they promise things with grants for new equipment, jobs for local workers, lower taxes, gas for towns, fix damaged roads, etc.

The government is a part of big business. When the banks made bad loans who bailed them out? Who bailed out the car companies. When we lose money from investments, etc... who bails us out?

"Eminent domain" should not be used by the government against private land owners, so big business can make more profit.

Because no one else can represent my interests I am asking the FERC for intervener status in the Northeast Energy Direct project.

Individual	cosmolaviola@gmail.com	

Basis for Intervening:

My name is Cosmo LaViola, I am resident of Savoy, Massachusetts and I am opposed to the NED Pipeline. I live approximately 5 miles from the compressor station that is planned to be located in Windsor. In addition, I work in Windsor at the Notchview Reservation, a 3,200 acre parcel of land that draws visitors from all over the Northeast and beyond. The proposed pipeline will cross this property and will have significant impacts to this area, which is known for its' pristine landscape and nature, remarkably clean air, high quality drinking water, and general peace and quiet.

The NED Pipeline project will impact my family and I through air pollution, water pollution, light pollution, and noise pollution. The concerns we have are as follows:

1. We are concerned about the water quality and the associated health effects from pollutants and toxins that will get into the watershed and groundwater system.

- The compressor station and pipeline will sit at the headwaters of the Westfield River watershed; a pristine watershed that has two out of three branches certified as drinkable water. The pipeline will inevitably cause this watershed, including ground water and wells to become polluted.

2. We are concerned about the air quality and the associated health effects from pollutants and toxins that will be expelled into the air.
 - Compressor stations emit numerous air pollutants that are known carcinogens and cause numerous health problems for those living within a ten-mile radius of the station.
3. We are concerned about the noise pollution that will become a daily part of life and its' associated health effects.
 - The noise pollution as well as subsonic vibrations of compressor stations are known to have negative physical and psychological effects on those living and/or working nearby.
4. We are concerned about the light pollution and the associated effects on the quality of life.
 - This area is said to be one of the best places in the nation to view the stars and has large populations of fireflies. Light pollution is the number one cause for firefly population declines in the US; furthermore, light pollution has a large impact on many species' biological rhythms and migratory patterns.
5. We are concerned about the impact of this pipeline and the associated compressor stations on the greater climate.
 - This compressor station will release significant greenhouse gases, including large amounts of Methane, which has a comparative impact on climate change of more than 25 times that of Carbon Dioxide. In a time when we have major climatic concerns and pipeline disasters, such as the Porter Ranch gas leak, we need to ask ourselves why we are willing and/or even interested in investing in pipelines, instead of considering much safer and better renewable alternatives.
6. We are concerned about the potential overriding of Article 97, and the compromising of critical habitats and conservation lands.
 - Numerous studies show that upwards of 40% of the proposed pipeline route crosses critical habitat. This will cause significant impacts to local ecosystems.
7. We are concerned about declining property values and the impact on organic farming.
 - With all of the known health and pollution effects of pipelines and their associated components, it is clear that property values will inevitably decline. In addition, the effects of the pollution on farming are of great concern.
8. We question the actual need for this pipeline.
 - Other than the fact that Tennessee Gas Pipeline Co. LLC has stated that there is a need for this pipeline, there has been little evidence shown in support of that argument. Every major independent study has shown that this pipeline project is not needed and that there are better ways to address the region's energy needs through energy efficiency and investing in renewable energies.
9. We believe there are better energy alternatives on a local, regional, and national level.
 - By investing in natural gas, we invest in a technology that:
 - is already past its' prime
 - runs the risk of major methane leaks
 - consumes and pollutes our water, an invaluable resource
 - displaces renewable initiatives
 - is virtually not regulated at all by the federal government
 - In light of the outcome of the recent international climate summit in Paris and the known fact that climate change is a real threat to our world, we should be halting investments in non-renewable energies at this time, and instead, investing in, and focusing on, energy efficiency and converting our energy system to renewable technologies.
 - According to the Political Economy Research Institute at the University of Massachusetts-Amherst, Invest-

ment in natural gas has the lowest level of job creation of all energy sectors.

- It is projected that by the year 2020, the price of solar will be equal to or less than all other forms of energy, including natural gas.

- The Solutions Project at Stanford University has developed a legitimate energy plan for every state by which they utilize 100% renewable energy.

10. We are concerned that the ratepayers will bear the cost of the construction of this project.

- Everything that has been released publicly states that this project will fall on the ratepayer's shoulders. The companies that will benefit from the pipeline should be the ones paying for it, not the ratepayers.

In the end, it is inevitable that there will be a negative impact on water and air quality, an increase in noise and light pollution, and in turn a negative impact on the health of the residents along the pipeline's path. This is inexcusable, especially when there is no proven need for the NED pipeline, and much better alternatives available if there was a true need.

Hearing, seeing, smelling, and tasting this pipeline will largely impact the quality of rural life for everyone along its' path and in the greater region, and those costs are far too high of a price to pay.

Sincerely,

Cosmo LaViola

Basis for Intervening:

To Whom it may concern:

I am filing as an intervener for the pipeline project. I am a home owner in North Reading MA whose land will be directly affected by the proposed pipeline. I personally do not believe this pipeline project is needed and believe the negatives do not out way the positives in any way shape or form. The beautiful landscape, the wild life that calls this habitat home will all be destroyed. It will be dangerous for our drinking water. It will be unsafe for my children to play outside in their backyard. I am hoping that myself along with others will be able to come together to stop this mistake in its track before our landscape is destroyed forever.

Please consider the already existing yet under utilized pipelines that are not even at half of their capacity. Why destroy even more wildlife habitat by cutting down thousands of trees and other vital landscape. Why not use what we have. We should be looking into actual sustainable energy sources one that will not produce harmful by products nor destroy the environment in the construction process. I urge you to consider other avenues to the energy needs of the state and country, ones that create less problems especially for the citizens of all of these affected communities both directly in the path of this monster pipeline as well as those who will be affected indirectly through the air we breath, the water we drink.

I can't imagine looking into my backyard and not seeing the deer grazing, the fisher cats, coyotes, beavers, chipmunks, countless birds, wolves, foxes, all going about their lives. It would be such a shame for this to be destroyed over such a controversially useless to us, pipeline. Please find another solution to the energy demand.

Thank you,
Cheryl Tierno

Basis for Intervening:

1. I am a member of an impacted community: the town elementary school, which serves as an emergency shelter for our town is in the burn zone.
2. I enjoy the out of doors and do not want any state or town public parks or forests or conserved lands which have been set aside for the people and wildlife to be impacted by any activities of this commercial project.
3. We moved here for the quality of life that includes quiet, clean air and water and any reduction in that quality must be mitigated to preconstruction levels.
4. I am a donor to land conservation organizations and the purpose of my donations would be violated if the project is allowed to take easements over land that is meant to be protected forever.
5. I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase in my bill relating to NED cost recovery. As an Eversource ratepayer, I do not want to end up paying for the constructions, operation or decommissioning of any aspects this project.

20160115-5076

Submission Description: (doc-less) Motion to Intervene of Darrell J Scott under CP16-21-000. NED co-location of pipeline with 345kV power transmission lines
Submission Date: 1/14/2016 9:21:57 PM Filed Date: 1/15/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	djscott.ned.project@gmail.com	

Basis for Intervening:

NED co-location of pipeline with 345kV power lines

The proposed co-location of the NED 30 inch pipeline with a 345kV 3 phase power line is problematic in regards to pipeline longevity. It is proposed to run adjacent and parallel to the existing HVAC power lines for many miles. The existing right-of-way was never intended for a buried pipeline.

Problem number 1:

The ROW crosses Kidder Mountain in New Ipswich, Fletcher Granite quarry in Mason, and historical quarries in Milford, and is not conducive to bury a pipeline safely below the frost line. It also traverses numerous ledges and outcroppings with very steep pitches and crosses a steep gorge over the Souhegan River. These slopes will be difficult to cover with fill that will not wash away without using hard fill that will damage the pipeline coating designed to protect it from corrosion.

Problem number 2:

Pipelines will corrode due to metal ionizing in the soil and the resulting electrical current flowing from the pipe into the ground. This will occur anywhere the pipeline coating allows metal contact to the soil. Pipeline corrosion is mitigated with DC cathodic protection electrical circuitry that reverses the direction of electrical current such that it flows from the ground into the pipe. This protection system requires constant monitoring for effectiveness and maintenance for proper operation.

Problem number 3:

The close proximity of and running parallel to the 345kV power transmission lines will induce AC currents which will interfere with the DC cathodic mitigation systems and create its own AC current flow to corrode pipes. Again, this affect can be mitigated with additional electrical circuits and monitored for induced AC voltages, but this also requires constant monitoring and maintenance. Lightning strikes to the power lines and phase-to-ground faults from electrical power disruptions can induce very high currents in nearby buried pipelines, can degrade pipeline protective coatings, and can cause severe corrosion in the pipe.

Problem number 4:

Kinder Morgan representatives have stated at public hearings in NH, that less expensive thinner walled pipes are used in rural areas. This will reduce the expected lifetime of this gas pipeline due to corrosion. This increases the need for constant monitoring and maintenance.

Conclusion 1:

As a minimum the pipeline operator must make available to the state of NH and all townships the pipeline passes through, its plans for corrosion mitigation detailing how industry standards for current densities will be met given the proximity to the HVAC transmission lines, soil and geology conditions, typical and peak transmission line currents, and what monitoring will be in place to ensure the protection systems have not been compromised. This report should have sufficient detail such that the state or towns can have an industry consultant review its adequacy to ensure pipeline safety.

Conclusion 2:

Kinder Morgan has chosen this new preferred pathway along the HVAC ROW in NH not because it is the safest and shortest path, but to give the false impression that no new ROW will be taken. In truth, to build this pipeline safely thru NH, will require a new ROW at a distance from the power lines. Such a new ROW could be better located in more suitable topography.

Basis for Intervening:

I live in Housatonic, MA and want to intervene in this proceeding to oppose the Northeast Direct pipeline. I am an electric ratepayer of National Grid, an energy supplier who has contracted for this pipeline and I expect to see an increase on my bill as a result of the Northeast Direct pipeline construction cost being passed along to electric power consumers. I am not an investor of this project and I resent, as a tax -payer and US citizen, being made a funder of a project I do not support. I am, in fact, invested in Green Energy stocks for solar, wind and bio-mass energy projects and do not support the expansion of fossil fuel production and its resultant deleterious green house effects.

Furthermore, I am a nature conservationist donor who does not want town, state parks, forests, rivers and fragile estuaries to be harmfully impacted by the construction of these pipelines. Please be aware the Housatonic River that runs through my town and along my property has a delicate ecosystem. The dangerous chemicals used in the extraction of fracked gas cannot be completely eliminated prior to the transmission process. Any gas emission blow offs from compressor stations rises into the air where contaminants can be dispersed by the wind and be resettled along this fragile area. These gases are poisonous and flammable.

I am deeply concerned about the natural preservation of our lands, the health of our farmlands, dairy cattle, clean water sources and air quality. After learning about multiple compressor station explosions in the Marcellus Shale area of northern Pennsylvania, I am convinced this is a dangerous proposition. The pipeline construction and the resultant transmission of chemically poisonous, high-pressured fracked gas represent a step backward in the preservation of land and resources which cannot be reclaimed after the damage is done.

I stand in opposition.

Basis for Intervening:

I am effected by this project since it passes through my small rural town, Mason, NH, with the mainline, a lateral, plus a nearby compressor station. I am concerned about how this project will affect my town, my property and me financially as a ratepayer and taxpayer.

A major concern is our well which is a private/dug well and suseptible to ground issues. Kinder Morgan has said they will only repair wells damaged by their operations, within 50 feet of their operations, but their plan calls for blasting which can easily alter aquifers, causing well damage and loss over a far greater area. I am seeking assurances that Kinder Morgan will be required to fix or drill a new well if ours becomes contaminated (samples to be drawn before and after operations) or has a reduction in water pressure. I am also wary of KM's plan since the route keeps changing and although my property is not currently within it's path it could change as we have seen happen many times already. I want to know all they plan in case it does run through my property. Another concern is what the nearby compressor station would mean for our area. Our town has been mentioned as a possible site as well as our neighboring town of New Ipswich. How safe is this station and what air and noise issues could be an issue? I want assurances that our air quality and noise levels will be monitored prior to construction and that Kinder Morgan will be required to put in place mitigation that will keep the air quality and noise at pre-operation levels. And finally financially I am affected as a tax payer and elctric ratepayer. Studies show that pipelines lower property values. We are a small town so lower property values will cost all of us. As an electric ratepayer any tariff imposed to finance this project could be passed on to me.

Basis for Intervening:

I am a resident whose source of drinking water is in close proximity to the proposed route so my drinking water supply is at risk due to the construction and/or operation of the pipeline

I live in East Schodack NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which will be directly affected by the outcome of the proceeding.

I am a landowner directly impacted by the pipeline route / compressor station. I live within 2/10s of a mile from the proposed route that crosses Rice Road. I have been in the hamlet for for 30 years. I have walked or run over 3000 miles on Rice, 3 to 5 days a week. It's a peaceful road. I live in the "blast radius" so me and my family will be at physical risk due to the project.

This project puts corporate profits and greed ahead of the landowners that have spent years on their properties raising their families and improving their land . This will devalue the land greatly and put the families at risk.

This project cannot go through me and my neighbors will do everything legally possible to stop this project. Please make the right decision.

Ray Ludwig , East Schodack NY

Basis for Intervening:

I live in Northfield, MA and wish to intervene in CP16-21 to oppose the NED pipeline. I am concerned about possible impacts to property values throughout the town as a result of the NED pipeline, along with a compressor station, being sited here. I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery. I am a property owner who chose to move from Boston to a quiet, safe, beautiful rural town that has clean air, water, and other natural resources that are now potentially jeopardized in the name of corporate profit. I am a parent who cares about the future of his children's health and the hometown we have chosen for them. I am a cancer survivor who is concerned about long-term environmental impacts of the NED project.

Many local residents, including myself and my family, have chosen to live in this area because of the quality of life and environment, both of which are now at risk due to the power of a large corporation and the industry lobby. It is imperative that these "ordinary" people have a voice.

I live in Greenville NH and I am VERY concerned regarding the proximity of the planned compressor station to our town reservoir/drinking water located in our next door town of Temple NH. Additionally this station would be less that 1 mile form the center of our town, down wind to the fumes and particulate released in the air. We have a volunteer fire department as do all the surrounding towns and combined they could NEVER respond to an emergency involving the proposed pipeline/compressor station. The results would be catastrophic!

Basis for Intervening:

I am a homeowner residing on a street lateral to the proposed pipeline. I moved to this area and particularly this street because of the large amount of protected forests that I enjoy walking through with my wife and new child. The pipeline would destroy a large amount of the area that I walk through. I bought my home just prior to the problems with the economy, and shortly after the sale the value of my home fell. Years later and numerous home improvements the value of my property is still lower than what I had initially paid. If the pipeline is installed the value of my property will again decrease. I also have concerns that my homeowners insurance will increase or that my home will be un-insurable. I also obtain my water from a well on my property. I am very concerned that an underground pipeline would divert water away from my well. There is no public water access on my street and I am sure that it would be very expensive to have water lines installed. Also, when the pipeline is installed they are going to use heavy construction equipment, that will likely have small leaks and will create the potential to pollute my water supply. Furthermore I have read many negative comments about leaks in existing pipelines and in existing Kinder Morgan pipelines. I am not at all impressed with Kinder Morgans track record of accountability or their disregard for peoples homes, protected wildlife areas or businesses. The Kinder Morgan project is an un-necessary addition of gas into this area that will not be directly sold to home owners. Instead it will be sold to electrical utilities that should be working on switching to natural sustainable resources. The vast amount of gas will not be sold to utility companies, it will be sold to customers outside the country. The Kinder Morgan project is a money making scheme, that is being disguised as a necessity so that they can take peoples property by eminent domain, destroy forests, and can have rate payers pay for the project. I think it is disgusting that a business is going to be able to pass off the costs of it's expansion to individuals. Please do not approve their proposal.

I can lose part of my land by eminent domain if this project goes through. The pipeline is proposed to go directly at the edge of my property and I do not have a lot of land. The disruption to my life will be unbear-

able. We will have increased traffic on our road (it is a short road ending in a cul de sac. Normally it is a peaceful place), noise pollution, air pollution from all the trucks. I worry about what this project will do to the drinking water in our well years down the road and whether all the digging will cause my foundation to crack or disrupt my well and septic. I see no benefit from this project except for KM. KM cannot take my land by eminent domain unless there is a benefit to the citizens of Lunenburg and there is definitely no benefit to Lunenburg. Our property value will go down and I will not feel safe with a gas line running behind my house. This project is a horrible idea designed only to line the pockets of KM, with no regard for the residents of our road.

danielboothpipeline@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact us as follows:

1) Our house abuts the direct path of the proposed pipeline. Specifically, we are shown as lot MA LL 74.00 on Segment N, Lynnfield Lateral, Alignment Sheet TE-SEG_N-006. We are located at the end of a quiet cul-de-sac, Regis Road in Andover MA which has a significant amount of conservation land to the left of the property. Due to the fact we are on a cul-de-sac, our property is in the shape of a triangle with our backyard being the Andover /Tewksbury town line. The Andover/Tewksbury town line is the path of the proposed 24” Lynnfield Lateral pipeline and runs the distance of our back yard, 100’s of feet.

Our house is situated towards the back of our lot and very close to the proposed pipeline. The TE-SEG_N-006 map shows the Temporary Workspace and the Additional Temporary Workspace areas completely overtaking our house. In addition the proposed Permanent Easement overtakes our back deck and our children’s playground. This Easement and Temporary Workspace area will result in the destruction of our home due to the close proximity of our house to the proposed Lynnfield Lateral.

My wife and I have future plans to put in a swimming pool for our children in our backyard which will be permanently removed with construction of this pipeline. We also have discussed plans to expand our home with the addition of a family room off the back of the house where the existing deck is today. These plans will never be able to come to pass with the construction and permanent easement of this 24” Lynnfield Lateral.

In addition, our required Title 5 septic system is located in the pipeline construction area and would be permanently damaged and would have to be moved costing 10’s of thousands of dollars to my wife and I to relocate.

2) Along the proposed path of this pipeline we have a heavily wooded area with very mature trees. This trees serve as a screen between our home and the houses in Tewksbury, giving our property a very private backyard. With the resulting clearcutting of these trees our property value will be greatly diminished with a very wide and exposed area of which no construction can take place and no privacy between us and several neighbors.

This long strip of heavy wooded area also serves as a deer run for deer and several other animals which we often observe. We are very concerned about the new path that the deer will need take during and after the construction of this pipeline.

3) The entire area of our property is sitting on ledge. This was seen during the construction of our septic system some years ago. There is not enough soil to dig to the required depth without blasting. With our home being so close to the proposed Lynnfield Lateral, the required blasting would result in permanent damage to our home and foundation.

4) If this pipeline is approved for construction we will be permanently and unnecessarily impacted by this event. The pipeline will put our three children and us inside the “Blast” or “incineration zone” due to the close proximity to our home. Explaining this to children will be difficult and we will not be able to sleep at ease for the rest of the time we stay in this house following construction. Do to the close proximity we are likely to hear high pressure gas being pumped through the line and periodic helicopter noise when the line is checked by the Tennessee Gas Pipeline Company.

5) Our home is one of our major assets. The equity of our home is important to our financial future and quality of life. We believe that the value of our property will be greatly reduced as a result of this 24” pipeline being constructed on our lot. The value of our property has been reduced already as a result of the news of this pipeline project. We are depending on the value of our property for our future retirement and quality of life.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, Daniel Booth and Purvi Booth, respectfully request that the Commission to grant our Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 14th day of January, 2016.

Daniel and Purvi Booth

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	aeserrao@citlink.net	

Basis for Intervening:

I am a private citizen who lives in Franklin, New York and want to intervene in this proceeding to oppose the Northeast Energy Direct (NED) pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a member of an impacted community and have concerns about various impacts to our environment, health, aesthetics of our beautiful rural area, home and property values, local economy and community destruction. I have lived in Franklin, NY for more than 30 years of my life and do not have an alternative residence, therefore this is my one and only home for me and my family which consists of a husband and two sons. My two sons attend Franklin Central School which is located in the Village of Franklin and only a few miles from the proposed NED pipeline and proposed 50,500 hp compressor station.

I am also a resident expected to be in the "blast radius" since my daily commute crosses over the proposed pipeline route and by the proposed compressor station, therefore I will be at physical risk.

Because no one else can represent my interest, I am asking the FERC to accept my motion to intervene.

I am filing at a stakeholder in the matter of this pipeline. I was born in Mason NH, am a lifelong resident of the state and have lived in Temple NH for the last 20 years. I am also the Town Clerk. This pipeline threatens the safety of our children first and foremost. Temple Elementary School is in the Incineration zone of the huge compressor station that is proposed on the Temple border in New Ipswich. The school also functions as our emergency shelter. So we will have no where to go if a disaster occurs. Air quality is a huge concern for the whole area. Farmers in the area will no longer be able to sell their stock and produce be-

cause of the poison being pumped into the air by the compressor blow off. Noise and light pollution are also a problem. We choose to live in a quiet country town because we like to see the stars and hear ourselves think! Eminent domain is to be used for the public good not the public detriment and corporate greed.

Thank you for your time,

Wendy Drouin
Temple NH

This project will permanently divide and scar the forest preserve of my church (The First Reformed Church of Bethlehem). Additionally, the safety record of Kinder Morgan is less than optimal and I'm not confident that the pipeline will be safe. Also, evidence suggests that the gas traversing the pipeline may be for export...So what is the benefit to United States citizens.

As a student of natural resources conservation in the Commonwealth I am invested in the sustainable use and ultimate preservation of our nation's natural resources and the pristine condition of our land and water. The installation of a natural gas pipeline through our state is an irresponsible action that in no way should be permitted. The pipeline is not necessary as a supply of energy and would place a burden on all taxpayers in the state of Massachusetts. Citing Attorney General Maura Healey, it would be more beneficial as a people to invest in sustainable energy and practice energy efficiency. Further, the installation of a natural gas pipeline would cause destruction (immediate and lasting) to our many present ecological systems. In addition to present disruption, the presence of a gas line would leave thousands of miles of property, private, state and protected; at risk for further and irreversible damage caused by leaks, explosions and other pollution associated with the occupation of pipelines. With limited upfront benefits that pale in comparison to those possibly achieved through sustainable energy use, an allocation of construction and operation expenses

es to the public (whereby stakeholders the Tennessee Gas Company pay nothing), definite disruption of our Commonwealth's natural environment and the dire risk of permanent destruction of this land, the permission of the installation of a natural gas pipeline in the state of Massachusetts is an egregious and immoral ignorance of the best interests of its citizens.

Individual paddyflatfarm@gmail.com

Basis for Intervening:

Dear FERC:

Joan and I were drawn to Ashfield in the year 1975 for its sheer beauty and the comity of its people. We first rented, then purchased Paddy Flat Farm at 314 Norton Hill Road in 1980. We've been here 40 years, having raised Tristan, a Master Electrician living in Plainfield, MA, and Mackenzie, a Financial Adviser in Portland, ME.

Paddy Flat Farm was built in 1790, 225 years ago; and we feel like stewards, custodians in a long lineage. When you contemplate the beautifully constructed stone walls and the chestnut post-and-beam construction of this great old home and the adjoining fields, where the chickadee and the blue jay still fly this time of year, the concept of a fossil fuel pipeline in our backyard is a sin, a travesty!

Tristan, our Electrician son, can't keep up with the demand for his services to implement solar paneling. Western Mass is going solar and to drill a pipeline through this pristine landscape for fossil fuels is just a great mistake.

Kinder Morgan proposed (according to the grapevine), depositing their infrastructure of trucks and equipment, etc. on the STEADY LANE FARM, now belonging to Nort and Janet Clarke. I spoke with Janet last week and she's utterly opposed to the idea.

Their farm abuts our, specifically our orchard of Peach, Pear, Cherry and Plum trees. Joan and I are adamant in our opposition to this project impacting our farm operation in any way. We are going to implement solar Electricity panels at Paddy Flat Farm in the near future as already have many of our neighbors, including the Clarkes at Steady Lane Farm.

Sincerely,

Joan & Joel Arsenault

re: Tennessee Gas Pipeline Company, L.L.C., Docket No. CP16-21

From Mason (NH) Pipeline Committee

RE: Protection from the Health Impacts of Compressor Stations is Lacking – **Baseline Air Quality Studies Needed Near Proposed Compressor Sites**

Dear Secretary Bose:

The health effects of gas pipeline compressor stations have been documented by EPA, the SW Pennsylvania Health Project, environmental chemist Wilma Subra of Earthworks, and Dr. Curtis Norgaard, Boston pediatrician. These researchers find the following medical conditions prevalent in individuals living in close proximity to compressor stations:

- * More than half the people suffer from respiratory impacts, throat and nasal irritation, weakness and fatigue and muscle pains.
- * Close to half the people suffer from vision impairment and sleep disturbance.
- * 42% suffer from allergies, eye irritation, and sinus problems.
- * 39% suffer from joint pain, breathing difficulties and severe headaches.

The chemicals detected in the air near compressor stations are associated with these medical conditions.

The chemicals of most concern are three carcinogens -- benzene, formaldehyde and radon -- as well as nitrogen dioxide and fine particulates (PM2.5). PM2.5 acts to increase deep lung absorption of air pollutants. Other volatile organic compounds (VOCS) and hazardous air pollutants (HAPS) are emitted by compressor stations. The mixture of these chemicals in the air people breathe contributes to an array of negative health effects.

Subra has documented acute and chronic health impacts experienced by people living and working near compressor stations. **In addition to the above prevalent conditions, many people suffer the following acute impacts:**

- * Nausea, vomiting
- * Dizziness, light-headedness
- * Irregular heartbeat
- * Depression, anxiety

Serious chronic long-term impacts that have been documented are:

- * Damage to Liver, Lung, Kidney, Cardiovascular system
- * Damage to Developing Fetus and Reproductive system
- * Mutagenic Impacts and Developmental Malformations
- * Brain impacts and Damage to Nervous system
- * Aplastic Anemia
- * Leukemia, and Changes in Blood Cells and Blood Clotting Ability

From EPA Office of Inspector General: (Report No. 13-P-0161, Feb, 20, 2013, page 3)

“EPA Needs to Improve Air Emissions Data for the Oil and Natural Gas Production Sector”

Table 2: Health impacts of significant pollutants emitted from upstream oil and gas production activities

Greenhouse gases (methane/carbon dioxide)	Potential health impacts related to climate change will vary, but threats include increased incidence of serious infectious disease, extreme temperatures that lead directly to loss of life, and warmer temperatures that can increase air and water pollution and result in human health impacts.
NOx and VOCs, which contribute to groundlevel ozone	Health impacts may include reduction of lung function, inflammation of airways, aggravation of asthma, increased susceptibility to respiratory illnesses (e.g., pneumonia and bronchitis) and premature death. Vulnerable populations (e.g., people with lung ozone disease, children, and the elderly) are especially at risk.

Fine particulate matter (PM 2.5)	Health impacts may include worsening of lung function, asthma attacks, bronchitis, increased susceptibility to respiratory infections, and premature death.
Air toxics including benzene, toluene, ethylbenzene, and xylenes	Health impacts from short-term exposure may include skin and sensory irritation, central nervous system problems, and respiratory problems. Health impacts from long-term exposure may include problems with kidney, liver, and blood systems. For example, benzene is a human carcinogen and health impacts from shortterm exposure may include drowsiness, dizziness, headaches, and irritation of the eyes, skin, and respiratory tract. Long-term exposure has been linked to various blood disorders, reproductive effects, and increased incidence of leukemia.

EPA is aware of these health problems associated with compressor stations and other fracked gas infrastructure, but other than gathering more data to document these problems EPA has failed so far to establish air quality standards to protect people exposed to fracked gas infrastructure emissions. Neither does NHDES appear to have air quality standards that would be protective. Both agencies consider compressor stations to be “minor” emitters, based on the National Ambient Air Quality Standards (NAAQS). These standards measure pollutants in tons per year averages, a totally inadequate measure for pollutants that may vary wildly over the course of a day or week -- from nothing at all to peaks many times the EPA limit. Human health is much more affected by frequency and duration of peak pollutant emissions, not annual averages. (Madison County NY Dept of Health Comments to FERC, Docket CP14-497, 10/15/2014)

Compressor stations have wide variations in their emissions from day to day and over the course of a day. Averaging pollutants in tons per year allows KM/TGP to say they meet EPA’s air quality standards, while masking the extreme peaks of pollutants that compressor stations frequently emit.

It is a shame that EPA has so far failed to establish relevant air quality standards to adequately protect human health from compressor station emissions.

In southern NH the NED gas pipeline proposes a huge 41,000 HP compressor station that would affect air quality and human health in the towns of New Ipswich, Greenville, Temple, Mason, and Rindge. TGP has mapped 13 proposed alternative sites in or near these towns for Market Path Station 4. In addition, Market Path Station 3, also 41,000 HP, is proposed for MA or NH: 3 of its proposed alternative sites are located in Winchesster, NH.

Baseline air quality in compressor station impacted areas needs to be established before NED is constructed, to determine air quality impacts from the proposed compressor stations.

Ground level air sampling for benzene, formaldehyde, fine particulates (PM2.5), nitrogen dioxide and radon needs to be done on a periodic (perhaps monthly) basis throughout the year before construction begins, at sites near all sensitive receptors within 2 miles of all proposed compressor locations.

Mason Pipeline Committee asks FERC to require Tennessee Gas Pipeline Co. to fund air quality baseline studies that meet the above parameters in all areas where compressor station are proposed along NED’s entire route, to gather baseline data on the air pollutants listed above. These studies should be done by independent contractors who have not previously worked for KM/TGP and do not anticipate doing so.

When private project developers apply to permitting agencies, they are often required to fund relevant studies by independent contractors to gauge the project’s impact. Please apply these sensible standards to the NED project.

Sincerely,

Liz Fletcher

Monadnock Mountain Breeders	info@monadnockbreeders.com	

Basis for Intervening:

Company: Monadnock Mountain Breeders

Business established: 2014

Business type: Premier APR NH Berner Dog Breeders

Sebastian Barthelmess studied Doctorate of Veterinary Medicine at Ross Graduate University.

Business address: 424 Temple Road 03071-3444

Basis for Intervening:

Our business address is within 1/4 of the proposed compressor station

We are concerned with recent evidence of health impacts on animals living near a compressor station from multiple reports in Pennsylvania and Minisink NY (reference <http://stopmcs.org>)

We breed Bernese Mountain Dogs and have litters several times a year. We are located in the WATER-SHED district directly where Kinder Morgan has proposed a 20 acre compressor station site.

Our young whelping puppies are extremely sensitive to environmental conditions and toxins that a bitch (mother) may ingest and bring back when nursing. Parvo can wipe out an entire litter from just a few bacteria brought into proximity from outside sources (construction workers from out-of-state, surveyors, inspectors). We have few neighbors and a large lot of land and conservation land bordering which creates an ideal environment to raise Berners.

The breed is also very protective of puppies, and easily agitated by trespassing Kinder Morgan surveyors (which we have several cases of and a police report). We are mostly concerned about the health of our dogs at this point. But from a business perspective, we are worried about losing puppies as each puppy is worth several thousand dollars (\$1500 each, plus stud, whelping costs, and veterinary expenses). Furthermore we have an 18 person waiting list for puppies currently and any change in the environment which even temporarily effects litters could have all our contracted buyers pull out if we cannot meet demand. Our business and reputation would be destroyed instantly.

Lastly, we are concerned with electric rate hikes due to tariffs or other sources as we rely on electric heat in our garage in the winter to keep the puppies at the 85 degree temperature required for survival at that vulner-

We are opposed to this pipeline because we do not feel it is necessary based on studies of energy demand, and we feel that it is risky/irresponsible to the environment.

Attorney General Maura Healey requested an independent research study be conducted to assess the supply and projected demand for energy. The summary of this research is that this pipeline is not necessary. As a family, we made the choice to invest in a roof top solar array on our house this past year. Although it was a significant financial struggle, and will continue to challenge our budget for years to come, we are delighted to be able to commit to a renewable energy future for our home and family.

The studies amassing information about the air, water and soil contamination point to the irreversible effects such a project would have on miles of conservation land in our area, watershed habitats, drinking water supply, and untold air pollution effects.

Here are two relevant quotes:

The greatest wealth is health-unknown

“Health is like money, we never have a true idea of its value until we lose it.” ~Josh Billings

These quotes remind us of wisdom of the natural world and the importance of respecting and protecting our natural environment. Once we have overstepped our boundaries we will be unable to reverse our actions.

We are nearing a point of no return in terms of climate change. It is irresponsible to allow further construction of systems that push planet Earth in the direction of further climate change. Instead, money needs to be spent in developing improvements in renewable energy, and education and legislation need to be put in place to promote conservation.

Please take a moment to get up from your desk and look outside. This is a beautiful world we live in, and I would like to think that our children and grandchildren will have similar opportunities to live their lives. How could we be so greedy that we ruin a beautiful future for them?

rsahr23@yahoo.com
518-766-3419

Docket No. CP16-21

I live in the town of Nassau in Rensselaer County, New York, and I want to intervene in this proceeding to oppose the NED pipeline. My home is 4.5 miles from the proposed site of the compressor station (and even closer to the route of the pipeline). I am very concerned that my family and I would be adversely affected by toxic gas emissions and could potentially be harmed by a break in the line or by an explosion. These toxins include carcinogens such as methane, neurotoxins and endocrine disrupters which would also contaminate our organic gardens on which we depend for much of our food.

Not only would our health and safety be jeopardized, we would also see a great loss in the value of our property. Additionally, our plan to leave our home and land to our children, where they could continue enjoying its peaceful, pristine setting, would be compromised.

Furthermore the NED project would create loud noise and light pollution that would adversely affect my home business, especially during blowdowns. I am a Healing Touch Certified Practitioner. Healing Touch (HT) is an alternative therapy that can complement traditional medicine or that can stand alone. HT works on physical, mental, emotional and spiritual issues by facilitating the ability of patients to heal themselves. Quiet is an essential ingredient in this kind of work because clients have to be able to focus inwardly without being shocked by loud noises.

A fourth concern is the fact that the route of the pipeline will go dangerously close to both the Dewey Loeffel superfund toxic waste site on Mead Road and the proposed site for a hard rock mine near the intersection of State Routes 66 and 43. Kinder Morgan is not addressing the very real possibility of destabilizing these two dangerous situations.

Above all I am outraged that, should the pipeline go in, no one would be held accountable for all the damages my neighbor's and I would incur.

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual robert.larochelle@hotmail.com

Basis for Intervening:

Robert Larochelle seeks to intervene because the Larochelle's residence stands 400' feet from the pipeline, and is therefore vulnerable to structural damage during construction, as well as ongoing safety hazards after the project is completed. Further, the Larochelle's land lies within the right of way corridor for the KM/TGP pipeline, thus exposing the property to condemnation if the certificate is granted.

Basis for Intervening:

I am opposed to the building of the Northeast Energy Direct pipeline.

My family has lived in the Town of Warwick, Massachusetts for the past thirty-five years. Warwick is east of and shares a boundary line with Town of Northfield. The proposed route of the pipeline is through Northfield and then through Warwick. In addition Northfield is a proposed site for a compressor station. The prevailing wind in this part of the country is from the west. A concern that I have is the content of the gas that will be vented at the compressor station.

What is the chemical makeup of this gas? How often will it be vented? What is the volume of each venting event? Is the compressor station monitored during an event? What is the monitoring looking for?

I have been following closely Kinder Morgan's proposal in regards to the building of the NED pipeline. I feel that I can provide valuable information on this issue and other environmental concerns that the public may have.

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual elap@fairpoint.net

Basis for Intervening:

I, Eric LaPier, hold a direct stake in the outcome of the FERC ruling on the matter of the Northeast Direct

Pipeline (NED) per the Code of Federal Regulations (CFR) Title 18, Chapter I, Subchapter X, Part 385, Subpart B, Rule 214 (Intervention), paragraph (b)(2)(ii)(A) and paragraph (b)(2)(iii). I live directly across from a proposed gas compressor facility located in the Town of Nassau, NY. I also believe that it is in the public interest to deny the application to install a natural gas pipeline.

Increasing evidence is available indicating a negative impact to environmental and health safety in the vicinity of an operational gas compressor stations. One such publication is the "Summary on Compressor Stations and Health Impacts" dated February 24, 2015 and issued by Southwest Pennsylvania Environmental Health Project. Data collected in this study indicate large variance in VOC emissions over time near gas compressor stations. Some of the data points collected exceed health safety standards for a variety of compounds at multiple sites. It is important to know what chemicals will be produced, transported and released during normal operation (including blowdowns) as the chemical composition of the gas varies by extraction point. Without a complete list of chemicals released, it is impossible to know the exposure and thus the impact to human and animal health. It cannot be said with certainty that these stations are safe (particularly when there is evidence of unsafe concentrations of known carcinogenic and toxic chemicals).

Chemical release is not the only environmental and health safety effect of a compressor station. There is also the effect of light and sound pollution. The lights are expected to run constantly (at night) as is the turbine that maintains line pressure. Due to this, wildlife in the area will suffer habitat disruption as will I.

My home is located in a rural, residential zone. My house is also well within the proposed compressor station "incineration zone". This means that there is a significant opportunity for injury to myself and family should we be home during an incident at the proposed station. I have the choice of not being home or accept increased risk of bodily harm due to proximity.

A recent study conducted by the Massachusetts Attorney General concludes that there is no need for additional gas infrastructure to meet the electricity demand of New England during peak winter usage. If the gas is not to be used locally, then the intended destination must be foreign export. It is genuinely un-American to enact eminent domain for the sole purpose of generating profit for an entity. The taking of private land under eminent domain is reserved for projects involving "public use". Exported resource projects are hard to define as having positive public gain.

Due to the negative health and environmental safety issues, the valuation of my property will certainly decrease. In my opinion this constitutes theft. The transfer of my assets to a corporate entity with no compensation.

For these (and other) reasons I oppose the installation of the NED pipeline and request status as an "intervener".

20160115-5105

Submission Description: (doc-less) Motion to Intervene of SUSAN P JACOBS under CP16-21-000.

Submission Date: 1/14/2016 10:00:59 PM Filed Date: 1/15/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	rmspj1@verizon.net	

Basis for Intervening:

Pursuant to Rule 214 of the Federal Energy Regulatory Commission, I, Susan P. Jacobs and my husband, Richard M. Jacobs, both retired, respectfully move to intervene in the Northeast Energy Direct Pipeline project.

We live at 565 Worthington Road in Windsor, Massachusetts. We have lived here for twenty-five years, and operated a Bed & Breakfast out of our home for seven of those years. Guests were drawn here for many rea-

sons, but the most often cited were the fresh air, the ability to see the stars, and the peace and quiet - all of the things that drew us to settle in this area. We grow our vegetables organically, eating them fresh throughout the growing season, and freezing them to enjoy all winter.

Our children and grandchildren are frequent visitors, enjoying with us the advantages of living in the country - sledding in the winter, picnics and hiking in the summer, and bird-watching year-round.

We are strongly opposed to the NED Pipeline project for the following reasons:

1. We are electric ratepayers who, if this project is approved and Kinder Morgan secures my electric utility as a project customer, expect to see an increase in our bill to fund the construction of this line;
2. Our home is located two miles downwind of the proposed compressor station, the toxic emissions from which would negatively impact our fresh air, our health and our ability to grow our own healthy vegetables;
3. The light pollution and noise from the compressor station will have a serious impact on the peace and quiet we currently enjoy, as well as our ability to see the stars;
4. If this project is approved, the value of our property will be negatively impacted, making it much more difficult if not impossible to sell if we are unable to continue living here;
5. We are frequent visitors to Notchview Reservation in Windsor, MA (a part of the Trustees of Reservations) which is also very close to the compressor station and through whose lands the pipeline route is proposed to go;
6. Any state-protected lands, such as Notchview, set aside for the enjoyment of people and preservation of wild life habitat should not be used or taken for a commercial project such as NED;
7. Like everyone else living in Windsor, our only water source is a well. We are very concerned about potential damage to the aquifer and our well due to the blasting that is Kinder Morgan's preferred method to trench through bedrock to lay the pipeline and build the compressor station;
8. Windsor is a very small, rural community of 879 souls. Our municipality has a part time Police Department, a volunteer Fire Department, and two small, family owned convenience stores. We have no traffic lights, and only thirteen street lights. We are not equipped to deal with a catastrophic event, such as a failure or explosion along the pipeline or in the compressor station.

For the foregoing reasons, we, Susan P. Jacobs and Richard M. Jacobs respectfully request that the Federal Energy Regulatory Commission allow this Motion to Intervene. We further request to be added to the Official Service List: Richard M. and Susan P. Jacobs, 565 Worthington Road, Windsor, MA 01270-0068. Phone: 413-684-3191. Email: rmspjl@verizon.net

20160115-5106

MDC

The Metropolitan District

January 14, 2016

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street NE, Room 1A
Washington, D.C. 20426

Re: Comments on Tennessee Gas Pipeline - Northeast Energy Direct Pipeline Project
FERC Docket #CP16-21-000

Dear Secretary Bose:

The Metropolitan District (the "MDC" or the "District") is appropriately concerned about the Northeast Energy Direct Project (NED Project) gas transmission line proposed by the Tennessee Gas Pipeline Company, L.L.C. and Kinder Morgan. This project has the potential to directly impact the District's critical public water supply watershed lands and drinking water reservoirs at its West Hartford and Reservoir #6 facilities.

These facilities include, among other things, dams, water transmission pipelines, and underground tunnels. As a result, the MDC Board of Commissioners is taking a deliberate and judicious approach in its consideration of the Tennessee Gas/Kinder Morgan proposal. As part of its deliberations, the MDC Board will consider information and data that is provided to it, in part by Tennessee Gas/Kinder Morgan, and, in part, developed in the course of its own due diligence. It is the intent of the MDC Board to fully consider all pertinent information so that it makes a well-educated and fully-informed decision at the appropriate time. Accordingly, at this time, the MDC has not determined a position either in favor of or in opposition to the Tennessee Gas/Kinder Morgan proposal. Nevertheless, the comments contained in this correspondence are very similar, if not identical in some respects, to comments which the MDC filed in the predecessor proceeding (FERC Docket #PF14-22-000); the purpose of this filing is to ensure that these comments are properly recognized in the current proceeding.

The MDC provides potable water services to over 400,000 people in the greater Hartford area. The MDC is a public, non-profit, municipal corporation consisting of eight member towns, which include Hartford and the seven adjacent towns. Protecting the health and integrity of our public water supply reservoirs and watershed lands is our highest priority.

The Tennessee Gas Company's NED Project - Proposed 24" Pipeline Segment S 300 Line CT Loop, as we understand, would be constructed through public water supply watershed lands in Farmington, West Hartford and Bloomfield, spanning a distance of approximately 6 miles running north-south. It would pass directly through the watersheds of MDC-owned Reservoirs #2, 3, 5 & 6. The majority of this watershed property (over 2,000 acres) is owned by the MDC. Given the proximity of MDC property to these water resources, this property is classified in Connecticut as Class I or Class II watershed property, all of which is highly and closely regulated by the State of Connecticut Department of Public Health (DPH) (Conn. Gen. Stat. §25-37).

In the opinion of the MDC, the Tennessee Gas Company's Resource Reports (issued in November 2015) do not adequately address or consider this important designation, nor do they adequately address or evaluate the potential long and short term impacts to MDC's public drinking water reservoirs or water supply watersheds. In addition, the project details provided by Tennessee are incomplete in terms of potential alternatives and are not site-specific with regard to construction plans and mitigation measures that would be implemented for the installation of the 300 Line CT Loop across these important public water supply watershed lands.

In view of this, MDC has requested that Tennessee Gas/Kinder Morgan address these concerns as soon as possible and that MDC be afforded the opportunity to review results of all field surveys and other information that is gathered on-site. The MDC has allowed Tennessee Gas/Kinder Morgan access to the MDC property for the sole purpose of conducting survey activities.

The protection of drinking water supplies is critically important to our state and to our citizens. Given the lack of information currently available to the MDC, the MDC must express the concern that the proposed project may conflict with Connecticut's drinking water protection goals. Absent adequate protections, the project could have significant ramifications both, during and after construction activities. The MDC suspects that a significant amount of water-shed land area would be required for the actual work on the pipeline and for temporary work space, pipe and equipment storage yards, as well as the construction of temporary and permanent access roads for contractors and equipment to reach the 6-mile long stretch of pipeline.

Construction of the pipeline will potentially disturb surface and ground water flows along the 6-mile stretch, and may alter drainage patterns, which could impact the watersheds' quantity and quality of water reaching our drinking water reservoirs. Associated concerns include soil erosion and runoff, the extent and type of blasting required, fuel and other hazardous material spills, spread of invasive plants, increased use of chemicals such as fertilizers and herbicides, and other matters of potential concern to public health and safety. In addition, the proposed project occurs on watershed lands that are open to public and heavily used for recreation throughout the year, and, therefore, ensuring the health and safety of our visitors is also a vital concern.

In view of the above, the MDC requests that the Tennessee Gas Company be required to address the following concerns, and that the MDC Board be afforded the opportunity to fully review and comment on Tennessee's responses prior to the issuance of a FERC certificate of public convenience and necessity:

1. Tennessee Gas Company's numerous Resource Reports only consider resources and impacts within a narrow corridor of land where the pipeline is proposed to be built. These reports do not identify, nor do they address, potential impacts to drinking water supply watershed areas or MDC's public water supply reservoirs. The Resource Reports are not site-specific and detailed enough to fully evaluate potential impacts to MDC watershed lands and water supplies.

a. We therefore request that watershed drainage areas be identified, mapped (illustrating the water supply protection area and the source location) and evaluated to determine potential construction impacts on public health, safety and water quality. This information must be site specific to MDC lands, including the location and description of the 24 or so streams and other wetlands that are proposed to be crossed as part of the project. The alternative route options examined should be explained as to why they were not selected.

b. We request that detailed construction plans, procedures, environmental controls and mitigation measures, as well as restoration methods be identified by drainage area for each of the 24 or so proposed stream crossings and any additional wetlands crossings that are proposed for MDC's public water supply watershed lands. The specific methodology to be used for each stream crossing must be addressed.

2. We request that detailed construction plans, procedures, environmental controls, mitigation and restoration measures, as well as post construction monitoring procedures and maintenance protocols, be developed that are site specific and customized to address existing conditions on our watershed lands and also reflect the necessity of protecting MDC's drinking water supplies for the future. Overall, the following basic information is requested for evaluation:

a. Detailed plans showing the proposed location, width and depth of the new pipeline with the level of specificity which will allow the MDC and State regulatory agencies the opportunity to conduct a meaningful review;

b. Such plans should include, but not be limited to, the type and grade of pipe to be used, back fill material and the depth to which it will be buried and the height to which it will be filled for each specific site along the route, with special consideration for planning future vehicular access across the pipeline;

c. The size and specific locations of the existing permanent easements, proposed permanent easements, temporary work spaces and any additional temporary workspaces that will be needed. This includes all construction work areas: staging areas; pipe and equipment storage yards; contractor yards; storage locations for hazardous materials, including chemicals, fuels, lubricating oils; timber yarding and log storage areas; borrow and disposal areas for woody debris and other unwanted vegetation, etc.;

d. The types of hazardous materials, herbicides and other chemicals, fuels, lubricating oils, explosives, etc., to be used on-site during construction, and their specific locations and storage methods. The plans for treatment of wastewater discharges and disposal of construction waste, dredge spoil, and other materials must also be addressed;

e. The specific spill prevention and emergency response plan to be used on-site, including the protocols for reporting spills, leaks (and other emergencies) to the Connecticut Department of Energy and Environmental Protection ("DEEP"), the Connecticut DPH and the MDC, as well as local fire departments;

f. The extent to which blasting will be required, as well as the methods used, and its impact on hydrography and water supplies. Areas of geotechnical concern also must be identified;

g. The site specific plans to be implemented for erosion and sediment control, and storm-water runoff, including site specific erosion and sediment control practices that will be used before, during and after construction activities to reduce runoff and the pollutants in runoff;

h. The mapped location and extent of proposed tree clearing (including an estimation of board foot

volumes by species) and other vegetation planned for removal as part of all construction activities, and the location of access points where logging equipment, emergency vehicles and other heavy equipment could safely cross the pipeline after completion of construction;

i. The plans for accessing the construction site and a map showing the location of any proposed new roads and any existing roads. The MDC's current position is that access for construction and maintenance activities should be restricted to the existing easement area granted to Tennessee Gas by the MDC in 1952, long before enactment of the Federal Clean Water Act and state statutes and regulations regarding classification and regulation of watershed lands;

k. The site specific plan for invasive species management for MDC water supply lands and surface waters. The plan should document the BMPs that will be used to prevent the spread of invasive species between work sites, including the potential transport from withdrawal water sources to the receiving waterbody during hydrostatic testing. Preventing the spread of invasive species is crucial to health of watershed lands;

j. The location and extent of any recreational trails crossed or impacted by the project's construction activities, including any of MDC's roadways or trails, and any areas of the National Scenic Trail System (Metacomet Trail);

I. The proposed sources of hydrostatic test water, the quantity required the methods for withdrawal, the type of contaminants contained in the discharge water, proposed treatment methods and locations of discharges and any waste products generated. The MDC submits that MDC water resources will not be available for such uses. In addition, any such use and/or discharge would be subject to the DEEP and DPH re-view and permitting process;

m. The long-term right-of-way maintenance techniques planned for the project and how they will impact watershed lands; including gates, fencing and other security measures; vegetation management techniques; and long-term maintenance of water runoff and soil erosion issues on steeply sloping pipeline corridors or those impacted by heavy recreational use; and

n. An examination of alternative gas pipeline routes, including the existing gas pipeline corridor as well other existing public utility rights-of-way, which may be utilized to accommodate the proposed project that may minimize potential environmental impacts.

3. In addition, the MDC requests that water sampling and testing be undertaken in key locations as determined by MDC to establish baselines for water quality and existing flow rates in its water supply watersheds. In addition, MDC requests that water quality monitoring be continued through the duration of the project to assess potential contaminants associated with the pipeline construction and operation. In the event of water supply contamination, Tennessee Gas should identify the procedures that will be implemented to remediate the situation and indemnify the District from any direct or indirect consequences resulting from such contamination.

4. Based on rough calculations, the MDC believes that the new gas pipeline may disturb up to 250 acres of its watershed property, all of which is closely regulated by the CT DPH. Specifically, Conn. Gen. Stat. §25-37c provides that there are three classes of property owned by water companies: i) Class I property which is within 250 feet of a reservoir (heavily regulated); ii) Class II property which is watershed property that is not Class I property (closely regulated); or iii) Class III property which is property that is off the watershed (minor regulation). Based on maps the MDC has seen, it appears that all of the proposed activity will occur on either Class I or Class II watershed land.

The regulations promulgated by DPH (Conn Reg. Sec. 25-37d-1 et seq.) provide that a water company shall NOT "... sell, lease, assign or otherwise dispose of or change the use of any watershed lands, and any off-watershed Class II lands ... without a written permit from the Commissioner of Public Health." The grant of an easement for these purposes falls within these parameters. The regulations further provide that only a water company may apply for the permit; it is questionable whether a third party such as Tennessee Gas could apply on its own behalf. Any application filed is reviewed by a team of experts consisting of representatives

from DPH, the Department of Energy and Environmental Protection, the Office of Policy and Management, and, if warranted, outside consultants. These experts would advise the DPH Commissioner on whether there is a significant adverse impact resulting from the proposed activities.

If an application to allow for a change in use of this property were filed, the DPH Commissioner's consideration is focused on the potential impact on the water source and whether the activity would disturb the critical lands which support the Class I water source. Whether a public hearing is held is a factor of whether there is a finding by the Commissioner of significant adverse impact by the proposed activities. This ultimately is a judgment of the DPH. In addition, as noted above, depending on the specific proposed construction and as-associated activities, it is possible that CT DEEP review and approval may be necessary.

In summary, the MDC currently lacks the fundamental information that will enable MDC policymakers to make fully-informed decisions, regarding the Tennessee Gas/Kinder Morgan proposal. Responses to the inquiries posed herein, among other things, will assist the MDC, as well as the CT DEEP and DPH, in the respective deliberations that will be forthcoming. It is absolutely essential that the MDC be provided accurate and complete information.

We look forward to receiving insightful answers to our questions and concerns. Thank you for your attention, and do not hesitate to contact me if you have any questions.

Sincerely,

THE METROPOLITAN DISTRICT

R. Bartley Halloran

District Counsel

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual jgdprimo@gmail.com

Basis for Intervening:

To the Federal Energy Regulatory Commission:

I am a landowner in Stephentown, New York and have been for more than 50 years. My land is directly bordering the proposed NED pipeline and I seek to intervene in this proceeding to defend my rights as a landowner in the face of an unnecessary and potentially destructive project. I submit that that the project will cause irreversible damage to my property and to my property values. I submit that the project will permanently harm the environment through which it passes, including wetlands adjoining my property which have been used by migrating birds since before Tennessee Gas/Kinder Morgan existed. Having this pipeline next to my property is like living with a buried bomb, waiting for it to explode.

So I seek to intervene because I am directly and adversely affected by this unneeded pipeline. I am also aware that the Kinder Morgan, the owner and sponsor of this project is in deep financial difficulties and is therefore an inappropriate party to apply for the permit; it has cut its dividend by 75% and it can no longer use its stock as security for bond financing. Furthermore, Canada has rejected Kinder Morgan as a pipeline

sponsor because Kinder Morgan was unable or unwilling to meet the Canadian environmental requirements. Would FERC have lower standards than our neighbor to the north? I very much doubt it.

Respectfully submitted,

Jessica G. Davis, M.D.

20160115-5110 Glenn and Laura Bertrand

We are directly affected landowners in the proposed route of the Northeast Energy Direct (NED) Project. The proposed route takes the pipeline approximately 150 feet upslope from our home and cuts a swath through 52 acres of our tree farm. Building this in the proposed route will cause irreparable damage to our trees, wildlife habitats, the aesthetics and the value of our property. The right of way for the Constitution Pipeline which was taken by eminent domain parallels the NED route 500 feet further to the north.

The placement of the pipeline will cause irreparable damage to our wells and the numerous springs found on our property. Many of these springs feed wetlands adjacent to our 8 acre pond. Erosion and runoff from pipeline construction will cause sedimentation to occur in these sensitive areas.

We are also deeply concerned about the safety of the pipeline. We do not believe that gas pipelines are safe. Construction of this pipeline will forever disfigure the landscape and degrade the quality of our water and wildlife habitats. It will destroy our potential income from timber and maple sugar production. It will create an unacceptable safety hazard. We are opposed to the construction of the pipeline.

20160115-5111

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C

Docket No. CP16-21-000

**MOTION TO INTERVENE AND OPPOSITION
OF Jenelle Braga of DRACUT, MASSACHUSETTS**

I Jenelle Braga, file a motion to intervene in this proceeding.

I'm seeking to intervene in oppsition to the Northeast Energy Direct Project, proposed by Tennessee Gas Pipeline Company, LLC, a subsidiary of Kinder Morgan Inc.

I am further intervening because of Kinder Morgan has failed to notify me and others who are within the proximity of those who should have received notice of the proposal form Kinder Morgan.

Basis for Intervening:

I would live within 1400 feet from the proposed compressor station with my husband and two children ages 8 and 4. I reside at 63 Dadak Dr, Dracut, Mass,01826.

My family and I along with my neighbors will hear, smell, feel, the effects of the compressor station. We live in a new constructed development with 20 homes. There are 20+ children in our neighborhood and they all attend campbell elementray school that will also be affected.

My family along with my neighbors are very worried for the health and safety of our children.

These are some of the concerns I have:

The air quality due to 24,000 HP turbines generating exhaust.

The continuous noise and pollution from the blow-downs from the compressor station.

The chemicals or toxins released into the air and ground.

The noise, air pollution and numerous disturbances during construction.

The property value of our house being extremely close to a compressor station.

A natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.

For these concerns, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

Thank you,

Jenelle Braga
63 Dadak Dr
Dracut, Ma 01826

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
LatestLinux, Inc.	seb@latestlinux.com	

Basis for Intervening:

Company: LatestLinux, Inc.

Business established: 1999

Business type: Software and IT Consulting services

Business address: 424 Temple Road New Ipswich, NH 03071

Basis for Intervening:

Our business address is within 1/4 of the proposed compressor station and 30” pipeline. We oppose this pipeline as our board has concerns with the following:

- Interference the compressor station emissions would have with our proposed large solar panel installation to decrease costs as we are a software engineering firm and rely on electricity.
- Potential higher utility bills as calculated by the Municipal Coalitions and warned by extensive research.
- There is no benefit to us as we are not gas customers
- Fewer clients to service as many established customers and local people are selling homes or have already left town.
- Risk to our investments in the “likely case” of catastrophic failure of the compressor station and/or the methane pipeline itself (citing many recent US DOT reported gas pipeline explosions)
- Our Board of Selectman has unanimously agreed to oppose this pipeline as it is overall “bad for our town”.
- Risk to our health and employees health as per Concerned Health Professionals of New York:

- Sheila Bushkin-Bedient, MD, MPH
- Larysa Dyrszka, MD
- Yuri Gorby, PhD
- Mary Menapace, RN
- Kathleen Nolan, MD, MSL
- Carmi Orenstein, MPH
- Barton Schoenfeld, MD, FACC
- Sandra Steingraber, PhD

And research compounded on these sites:

- <http://fracdallas.org/docs/compressorstations.html> &
- <https://pennsylvaniaallianceforcleanwaterandair.wordpress.com/the-list/>

The overwhelming evidence and nearly unanimous opposition to this pipeline in our town makes this clearly a bad deal for New Hampshire and business owners.

Our board has voted and LatestLinux, Inc. will do everything in its power to oppose this pipeline.

20160115-5115

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)	

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, John Booth and Patricia Booth, of 12 Regis Road, Essex County, Andover, MA 01810, file this Motion to Intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7

of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

John Booth and Patricia Booth
12 Regis Road, Andover, MA 01810
978-470-2307
pcboothpipeline@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact us as follows:

- 1) Our house abuts the direct path of the proposed pipeline. Specifically, we are shown as lot MA LL 75.00 on Segment N, Lynnfield Lateral, Alignment Sheet TE-SEG_N-006. We are located at the end of Regis Road in Andover MA which is a cul-de-sac street which has conservation land behind the house.
- 2) We selected our property because of the house that the lot was on, wooded and quiet. We purchased this home 31 years ago as our retirement home and are now in our 80's. We have made improvement to the property and are now in the process of installing a new septic system which could be impacted by the construction of this pipeline
- 3) We also have a tennis court in our back yard which is located on the corner of the property closest to where the pipeline will be constructed. We are very concerned about damage that the tennis court could incur as a result of the construction process. The tennis court would be in the temporary work easement area which would result in permanent damage to the court.
- 4) On the corner of the lot where the proposed pipeline will be constructed is a thickly wooded area with full mature trees. This forested area provides a path for deer to cross between the conservation land and a corridor which leads down the proposed pipeline path on the south side of Regis Road. We are very concerned about the safety of the deer and what path they will take following and during the construction of this pipeline.
- 5) The proposed construction area of our property also contains a perennial stream which would be disrupted and we are very concerned about the new direction the stream would take following the construction of the pipeline.
- 6) Our home is one of our major assets. The equity of our home is important to our financial future and quality of life. We believe that the value of our property will be greatly reduced as a result of this 24" pipeline being constructed on our lot. The value of our property has been reduced already as a result of the news of this pipeline project. Being in our 80's we depend on the value of our property to support our continued retirement and quality of life.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, John Booth and Patricia Booth, respectfully request that the Commission to grant our Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 14th day of January, 2016.

John Booth, Patricia Booth
12 Regis Road, Andover, MA 01810
978-470-2307

Basis for Intervening:

I live in Merrimack, New Hampshire, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or to other facilities; I am a member of an impacted community who has concerns about various impacts to the local economy, environment, aesthetics and health; and I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

Individual	SUESNIDE@COMCAST.NET	

Basis for Intervening:

I am intervening because the aquifer which serves the wells in Pelham NH will be polluted from the leaking pipeline. I am intervening because the air quality in our part of NH is the poorest and will be further degraded with the toxins released into the air from the pipeline. It is not a 'Public Convenience' to require the residents of four states to pay for the construction of the Northeast Energy Direct pipeline.

Individual _____ anne@lolalux.com

Basis for Intervening:

I am filing a Motion to Intervene because I oppose the Kinder Morgan Northeast Energy Direct pipeline project, CP 16-21-000, and my interests will be directly affected by it. Namely:

- As an electricity ratepayer: My utility, National Grid, is being solicited as a customer on this project and will seek to recover its costs from ratepayers. In addition to the possible tariff on utility ratepayers, the massive overbuild in this proposal suggests that extra capacity would be used for markets overseas, driving up domestic energy prices.

-As a taxpayer, neighbor and visitor to protected public land in Massachusetts: I am very concerned about the threat this project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution.

- As a land trust supporter, visitor and neighbor to The Trustees of Reservations' Notchview Reservation in Windsor: The environment, health, and natural beauty of this pristine area is directly threatened by the Kinder-Morgan pipeline and the associated compressor station proposed for Windsor.

- As a resident of the Town of Williamstown, MA (which borders on Hancock and Lanesborough): Our neighbor towns send children to our schools and hold jobs in our town. If their health, well-being, and property values suffer as a result of the pipeline, the ensuing economic hardship and potential population decline will impact our town's economy and the quality of our schools, too. Likewise, residents of Williamstown enjoy food grown on organic farms and family farms in Hancock and Lanesborough, including Mighty Food Farm and Lakeview Orchard. The quality of our local food supply would be directly impacted both by the environmental disturbance associated with the installation of the pipeline, and with its ongoing operation and potential failure in the form of leakage or explosion. I am also concerned about the possibility of gas fumes blowing toward our town from blow-off valves and compressor stations located along the pipeline route.

The public record indicates that Kinder Morgan's modus operandi is to do whatever it takes to get pipelines approved and installed as quickly as possible, cut corners on construction and maintenance, and simply pay the fines later.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued. This project will increase our state's reliance on fossil fuels, in direct opposition to our statutory goals under the Massachusetts Global Warming Solutions Act, and it will have a deleterious impact on our efforts to combat climate change and transition to renewable energy.

Individual r.wyon2010@gmail.com

Basis for Intervening:

I am sending this Intervention to the NED pipeline for several important reasons:

I am an electric ratepayer and I do not want an increase to my bill. I agree with Attorney General Maura Healey who stated in her 11/18/15 report on the pipeline: "This study demonstrates that we do not need increased gas capacity to meet electric reliability needs, and that electric ratepayers shouldn't foot the bill for additional pipelines."

The second reason I oppose the pipeline is because it would increase health costs to children who live in the compressor station vicinity: higher incidents of nosebleeds, asthma, rashes, headaches. I have learned that one of the documented gases the compressors emit is Benzene, which is associated with childhood leukemia.

I have learned from Dr. Curtis Norgaard who studies areas around compressor stations that there are serious impacts of particular pollutants. They emit such as nitrogen oxide and formaldehyde. Apart from the increased respiratory problems due to the NO, it's the formaldehyde (CH₂O), which has more potential for health danger. This toxic gas becomes a cancer hazard at 0.08 micrograms per meter and is toxic at 10-49 micrograms per meter. It can cause cancer of the nose and throat as well as leukemia. Air quality tests around an existing compressor station in PA measured formaldehyde at a peak of 61 micrograms at about 800 meters from the station. All this evidence comes from Dr. Norgaard, who has been testifying on behalf of denizens of the Monadnock area in southern New Hampshire where the KM pipeline has been routed.

I also frequently visit the area of Western Mass where I enjoy hiking and cycling. I oppose the NED pipeline and compressor station because I appreciate the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

Finally, I am a donor to Trustees of the Reservation, a land conservation organization, and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

I am asking the FERC to consider all these reasons that the NED should not proceed; it is against my interests and the interests of all the people of Massachusetts who have the right to live in an environment the does not unnecessarily become toxic and carcinogenic, a state where public parks and forests are protected, a state where extra financial burdens for unnecessary construction of gas pipelines should not be placed on the rate payers.

20160115-5124

I am filing a motion to intervene with every fiber of my being. My husband's family land (since the king's grant) is in jeopardy. Our 1842 farmhouse which sits near the Merrimack River between rich farmlands, including the largest Organic Farm in the state, abuts an area that had been labeled "Lewis Goffe Conservation Land" for decades. Our lot has sat through the flood of 1936 and the Mother's Day Floods of a few year's back. Our lot was recently subdivided and our daughter and son in law built an ecofriendly home with geothermal RIGHT NEXT TO the proposed pipeline. Of course, there was no mention of this beforehand as they struggled to push through the process with the planning board. My two granddaughters would

be living in the incineration zone. The whole point of them staying here and building in town was to raise their family the way we all have: in a beautiful, wholesome farming town with fresh air and clean water, and a safe environment. My son is building on the lot between this year... We all have well water, as most of the people in this area have. The water table is high in Litchfield, and our groundwater we are VERY concerned about. The homes that we have invested our entire lives in and for will be compromised and not worth a thing. We cannot pick up and move! This is our home! I strongly oppose this for health, safety (across a river?), economic and so many other reasons. It is unacceptable for you to force us to compromise the fabric of our lives for the almighty dollar. Shame on all of you if you allow this.

Deborah A Leary

Individual	larry.rosenberg@gmail.com	

Basis for Intervening:

1. I want to see humanity continue to be able to live in a climate that is conducive to human well-being. Approval of the Kinder-Morgan NED project would push Massachusetts toward even greater reliance on burning natural gas than is already the case. This is exactly the opposite direction from the direction we need to be taking, which is developing solar, wind, hydro, and geothermal energy projects as quickly as possible.
2. I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.
3. I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

20160115-5126

UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)	

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.P.R. § 385.212 and 385.214 (2007), I, Brenda M. Kline, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of PERC's regulations, 18 C.P.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), PERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to:

Brenda Kline
106 Meadow Creek Drive
Dracut, Massachusetts 01826 b.ayotte@comcast.net

II. INTEREST OF PETITIONER

information with the community.

As The NED pipeline project will undoubtedly have a significant impact on my community before, during, and after its construction, and I file this motion to intervene so that I may continue to actively monitor this issue and assist in both educating and representing the needs and opinions of my community.

III. CONCLUSION

Wherefore, I, Brenda M. Kline, respectfully request that the Commission grant my motion to intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 14th day of January, 2016.

Brenda Kline
106 Meadow Creek Drive
Dracut, Massachusetts 01826

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party	Signer (Representative)	Other Contact (Principal)
Individual	cslieben2@gmail.com	

Basis for Intervening:

Position on the NED Project

I am a resident of Plainfield Massachusetts, and I am opposed to the Northeast Direct (NED) project.

Interest in the NED Project

As a ratepayer of a regulated electric utility, I risk economic harm if the utility enters into long term contracts for NED pipeline capacity. The Massachusetts Attorney General's commissioned study (Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas) clearly documents there are lower cost alternative solutions to solve the wintertime electric reliability issue.

As a property owner in neighboring Cummington, MA, I risk economic harm even though no NED infrastructure is planned for Cummington. The proposed compressor station location only three miles west of the Cummington boundary in Windsor will undoubtedly cause a disproportionate decrease in property values for nearby Cummington homes. Since the town of Cummington will receive no pipeline infrastructure tax benefit, the reduction in tax base will have to be offset by an increase in residential tax rate. Thus, my property being eight miles distant (incurring less devaluation) will incur an increased tax bill.

As a Massachusetts resident and taxpayer, I have a vested interest in lands conserved under Article 97 of the Massachusetts Constitution, either through direct ownership or purchase of conservation restrictions. Clearly the use of any Article 97 land for NED infrastructure, temporary or permanent work areas is outside the intended uses of these conserved lands. Any such use (particularly to benefit a private company) is unacceptable, without approval via the prescribed legislative procedure.

This project would contribute to the proliferation of fossil fuels, and the resulting acceleration of global

climate change, potentially harming all inhabitants of this planet.

A significant portion of this pipeline is being proposed to share a corridor with High Voltage Alternating Current (HVAC) electric transmission lines. This combination poses a unique safety concern, endangering inhabitants and visitors in proximity to these areas. Kinder Morgan (KM) has yet to explain the AC Mitigation implementation that will be utilized for the extensive distances where the pipeline runs parallel with, and in close proximity to high voltage transmission lines. Will KM be able to guarantee that even under transient conditions, such as faulted transmission circuit, or lightning strikes, that damage to the pipeline will not occur? Potential damage includes creating a pipe coating holiday, structural loss of pipe steel through arcing, and destruction of installed active DC Cathodic protection systems. While the conductive and inductive interference due to normal electric transmission line operation, and even a faulted condition, may be modeled with reasonable confidence, it may be impossible to characterize the worst case lightning scenario. The collocation of this gas pipeline with electric transmission lines appears to pose an unnecessary risk to the host communities. I respectfully request that before any permit is issued, the full details of the proposed AC mitigation system be submitted for public access, and review by an independent consultant. I respectfully request that the AC Mitigation design be completed, design details made public, and review by an independent consultant be completed before any permit is issued.

For the foregoing reasons, I respectfully request that my motion to intervene be granted.

Potter's Heart, DBA	sales@pottersheart.com	

Basis for Intervening:

Company: Potters Heart, DBA

Business type: Production Pottery Studio

Business address: 424 Temple Road 03071

Basis for Intervening:

Our business address is within 1/4 of the proposed Midstation 4 compressor station in the town of New Ipswich, NH.

-I am concerned with recent evidence of health impacts living and working so close to a enormous methane-gas compressor station and high-pressure fracked-gas pipeline.

-I work in my basement, use water from our dug well, and any Radon leaks caused from blasting would be undetected until I might become sick.

-Any potential chemical spills at the compressor station storage site would run directly downstream (Richardson pond is fed from runoff from the proposed 20 acre compressor station lot and the stream runs right through our property and by our well and wetlands).

-I work on very small margins and any potential electric rate increases (as I use an electric kiln) or tax hikes due to town attrition from a flood of potential abatements would put me out of business.

-Lastly, with all this gas that we've been told "NH needs", where is the "natural" gas-line to my home so I could convert my kiln to gas instead of electric for economic efficiency? Liberty Utilities has stated they have no intention of servicing my property.

-This area stands to bear all the risk and burden and reap none of the rewards. This private corporation

(though publicly traded) pipeline has no business in this Town, this State, or New England.

I will continue to oppose it and stand in the gap to intervene against this pipeline.

Basis for Intervening:

I strongly oppose the proposed pipeline project, for many reasons. First of all, climate change is the greatest threat that our world faces and fracked gas contributes heavily to climate change. Secondly, I am concerned about health risks for those who live along the pipeline and for those who live near fracking. Thirdly, as a ratepayer I am deeply offended that I would have to fund something as abhorrent as the pipeline. Lastly, as a physician and a mother of 2 young children, I oppose additional fossil fuel construction for the health and welfare of the next generation as I think we should do everything that is possible to make sure they inherit a healthy planet and livable climate. Please email me for additional information on the negative health impacts of fracking, fossil fuel pipelines and climate change. Thank you.

Basis for Intervening:

I live in Townsend, Massachusetts], and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because...

- I am a landowner in Townsend, which was on the original route of the NED pipeline and the site of a compressor station. Although Kinder Morgan has moved the route over the border into New Hampshire, Townsend is still directly impacted by the pipeline: a lateral pipeline is proposed from Mason, NH through Townsend and into Lunenburg. In addition, it is possible Kinder Morgan will change the NED pipeline back to the original route.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.
- I am a member of an impacted community who has concerns about various impacts to the local economy, environment, aesthetics, and health.
- I am a Unitil electric ratepayer who, if KM secures Unitil as a project customer, expects to see an increase on my bill relating to NED cost recovery.
- I am a Unitil gas ratepayer who expects the price of natural gas to substantially increase if the NED pipeline becomes the path for gas to reach LNG ports for shipment to foreign markets.
- I am a former Townsend Conservation Commissioner who worked to protect and preserve the rural character of our town.

Individual	wendy@juchnevics-freeman.com	

Basis for Intervening:

We, Wendy and Renee Juchnevics-Freeman, at 45 Rumrill Road, New Ipswich, NH 03071 respectfully move to intervene in CP16-21. The NED pipeline will traverse approximately 450 feet from our home and through the stratified drift aquifer from which our well draws water. This well provides water for our home and our farm, Sleepy Brook Farm, and the pipeline will likely impact both the flow and water quality. Since New Ipswich relies 100% on private wells, contamination of our well will prevent our ability to live on or farm our property. In addition, a compressor station is proposed for New Ipswich. The air pollution from the compressor station will likely have a direct impact on our swine breeding program. We strive for a stress free environment for our animals which is proven to provide for a higher quality of pork and chicken. The noise pollution from the compressor station will likely have a direct impact on the quality of the meat we produce.

We are also electric rate payers. Since most of the natural gas from NED will be exported and very small percentage of the gas will be used by NH residents and businesses, we oppose any tariff on our electric rates due to the construction of NED.

Finally, no natural gas distribution is planned for New Ipswich so we and our community will not see any benefits from the project.

For these reasons, we oppose the NED project and motion to intervene.

Basis for Intervening:

I am strongly opposed to the Kinder-Morgan pipeline. Although I live in Cambridge I frequently make trips to the Berkshire area and enjoy the beauty of state conservation lands, for example the pristine Spectacle Pond in Otis. The proposed pipeline comes far too close to this special and fragile area of natural beauty as well as many others along the way. Kinder Morgan has a track record of blatantly doing whatever it takes to get pipelines installed and approved as quickly as possible and then pays whatever fines are incurred as a result. I do not want to see any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. What does it mean to "conserve" land if not to protect it from depredation from a company that continues to show blatant disregard and disrespect for the people and natural resources of this region? The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to the surrounding communities. Far less harmful and disruptive means of meeting our energy needs should be pursued.

Basis for Intervening:

I am requesting intervenor status opposing the Kinder Morgan/Tennessee Gas Pipeline/Northeast Energy Direct (NED) project docket #CP16-21.

My family owns land that will be adversely affected by the construction of this proposed pipeline and the proposed location of MID compressor station #4. Our land, a registered Tree Farm located in Sharon and Temple NH, is within a one mile of the proposed pipeline and within three miles of the proposed MID compressor station #4 in New Ipswich, New Hampshire.

I am concerned that this project will have an adverse effect on our property values.

I am concerned that this project could have on adverse effects on the quality of the water and air. The proposed compressor station, with its toxic emissions, and the pipeline, with possible leaks, could contaminate the local water supply and/or affect the air quality in the area.

I am concerned about the noise, particularly during blow downs. I know that this sounds exaggerated, but it is known locally that this area is like a huge amphitheatre with the sound bouncing off the cliffs that are located on the south side of Temple Mountain.

I am concerned about the light "pollution" that may be present in the nighttime sky. It may destroy this wondrous view of the starlit sky. Come and see it for yourself.

I am concerned about the possibility of an accident involving high-pressure gas that could cause catastrophic results.

But I am mostly concerned with the possible adverse long-term effects to the health of my kids and my grand kids and for the health of all my neighbors and their kids. Many of us have lived here for generations.

I am concerned that there are not enough local, regional and even national common good benefits from this project to justify subjecting us to these dangers.

I am also very concerned for the landowners that will have the pipeline on their property because of claims of "eminent domain" which is supposed to be utilized only if the project is for the greater good, but I feel that this project overall negatively impacts the local community and the primary beneficiary of this project is a private company, which is not the 'greater good.'

Thank you for your attention and consideration.

Basis for Intervening:

I, Velitchka LaPier, hold a direct stake in the outcome of the FERC ruling on the matter of the Northeast Direct Pipeline (NED) per the Code of Federal Regulations (CFR) Title 18, Chapter I, Subchapter X, Part 385, Subpart B, Rule 214 (Intervention), paragraph (b)(2)(ii)(A) and paragraph (b)(2)(iii). I live directly across from a proposed gas compressor facility located in the Town of Nassau, NY. I also believe that it is in the public interest to deny the application to install a natural gas pipeline and the compressor stations that come along with it.

Increasing evidence is available indicating a negative impact to environmental and health safety in the proximity of an operational gas pipeline and compressor stations. A recent Harvard study “Methane emissions from natural gas infrastructure and use in the urban region of Boston, Massachusetts”, published in the journal Proceedings of the National Academy of Sciences, Feb 17, 2015 quantifies emissions of methane, a powerful greenhouse gas, from natural gas installations in urban areas. The amount of methane lost over a year in the study area is worth \$90 million, the authors wrote. The study found an overall leak rate of 2.1 percent to 3.3 percent in the region, compared with the 1.1 percent estimated by Massachusetts’ official state greenhouse gas inventory. The study suggests that natural-gas-consuming regions may be larger sources of methane to the atmosphere than it is currently estimated and represent a huge environmental risk as well as being a significant resource loss.

Another publication is the “Summary on Compressor Stations and Health Impacts” dated February 24, 2015 and issued by Southwest Pennsylvania Environmental Health Project. Data collected in this study indicate large variance in VOC emissions over time near gas compressor stations. Some of the data points collected exceed health safety standards for a variety of compounds at multiple sites. It is important to know what chemicals will be produced, transported and released during normal operation (including blowdowns) as the chemical composition of the gas varies by extraction point. Without a complete list of chemicals released, it is impossible to know the exposure and thus the impact to human and animal health. It cannot be said with certainty that these stations are safe (particularly when there is evidence of unsafe concentrations of known carcinogenic and toxic chemicals).

My home is located in a rural, residential zone. My house is well within the proposed compressor station “incineration zone”. This means that there is a significant opportunity for injury to myself and family should we be home during an incident at the proposed station.

There are number of public documents disclosing safety violations and accidents, related to Kinder Morgan pipelines, causing property damage, environmental pollution and safety hazards to people. Examples of such occurrences just in 2015, include but are not limited to:

- On March 2, a Kinder Morgan Tennessee Gas Pipeline leaked due to equipment failure, causing \$281,890 of property damage in Marshall, Mississippi. (PHMSA operator data, <http://primis.phmsa.dot.gov>., accessed 1/4/2016)

- On March 20, a pipe owned by Kinder Morgan subsidiary Southern Natural Gas failed in Rolling Fork, Mississippi, and on March 23, another of that subsidiary’s pipes failed due to equipment malfunction in Augusta, Georgia, causing \$311,785 in property damage. (PHMSA operator data, <http://primis.phmsa.dot.gov>., accessed 1/4/2016)

- On April 13, a Kinder Morgan/Natural Gas Pipeline Co. of America pipeline exploded and burned near Borger, Texas. One home was evacuated, but, there were no injuries. The explosion, caused by equipment failure due to environmental cracking, caused \$455,000 in property damage. (Natural gas pipeline fire near Borger extinguished,” at <http://www.newschannel10.com/story/28788786/natural-gas-pipeline-fire-near-borger-extinguished>, accessed 2016.01.04 and PHMSA operator data, <http://primis.phmsa.dot.gov>., accessed 1/4/2016.)

- On June 9 in Moorehouse Parish, Louisiana, Kinder Morgan’s Tennessee Gas Pipeline equipment failed due to environmental cracking and leaked, causing \$73,395 in property damage. (PHMSA operator data, <http://primis.phmsa.dot.gov>., accessed 1/4/2016).

- On June 18, in Victoria Texas, Kinder Morgan’s Tennessee Gas Pipeline pipe failed due to external corrosion and caused \$159,346 in property damage. (PHMSA operator data, <http://primis.phmsa.dot.gov>.).

- On August 3, two individuals were injured in Falfurrias, Texas when a natural gas pipeline operated by Kinder Morgan ruptured and exploded due to external corrosion, with \$191,498 in property damage. Later investigation showed that the pipe split along an ERW seam. (“Sheriff’s Office: Natural gas pipeline ‘explosion’ forced 150 Falfurrias families from their homes”. Valley Central. Retrieved 2015-08-21.), (http://primis.phmsa.dot.gov/comm/reports/enforce/documents/420151009H/420151009H_Corrective%20Action%20Order_08062015.pdf).

A recent study conducted by the Massachusetts Attorney General concludes that there is no need for additional gas infrastructure to meet the electricity demand of New England during peak winter usage. If the gas is not to be used locally, then the intended destination must be foreign export. It is genuinely un-American to enact eminent domain for the sole purpose of generating profit for an entity. The taking of private land under eminent domain is reserved for projects involving “public use”. Exported resource projects are hard to define as having positive public gain.

Due to the negative health and environmental safety issues, the valuation of my property will certainly decrease. In my opinion this constitutes theft. The transfer of my assets to a corporate entity with no compensation.

For these reasons I oppose the installation of the NED pipeline and request status as an intervener.

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION

_____)
Tennessee Gas Pipeline Co., LLC)
Northeast Energy Direct Project)
_____)

Docket No. CP16-21-000

MOTION TO INTERVENE OF THE NEW HAMPSHIRE PIPELINE AWARENESS NETWORK

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214, the members of New Hampshire Pipeline Awareness Network (“NHPLAN”), hereby move to intervene in the above-captioned proceeding. NHPLAN seeks to intervene in

opposition to the Northeast Energy Direct Project (the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc.

COMMUNICATIONS AND SERVICE

The name and address of the person upon whom all communications concerning this proceeding should be served are as follows:

David J. Moloney
NHPLAN
56 Pierce Lane
Hollis, NH 03049
(603) 365-8081
moloney@progress.com

IDENTITY AND INTERESTS OF THE PETITIONERS

New Hampshire Pipeline Awareness Network (NHPLAN) is an organization whose members are represented in all 20 New Hampshire towns (the TOWNS) impacted by the Northeast Energy Direct Project (NED Project) as proposed by Tennessee Gas Pipeline Company (the Company), a wholly owned subsidiary of Kinder Morgan, Inc. The TOWNS, all located in New Hampshire, include: Winchester, Richmond, Fitzwilliam, Troy, Rindge, New Ipswich, Mason, Merrimack, Brookline, Milford, Amherst, Litchfield, Londonderry, Greenville, Temple, Hudson, Hollis, Pelham, Salem and Windham. Many of our members own directly affected properties or are abutters. Many others expect that their communities will face adverse socio-economic impact in relation to the construction, maintenance and utilization of the proposed NED pipeline project.

In addition to the residents of directly impacted towns, NHPLAN is also supported by members from surrounding communities such as Swanzey, Sharon and Wilton where concerns include devaluation of the New Hampshire landscape, health impact from compressors and other stations, the taking of public and private property by eminent domain, and the Company’s repeated failure to demonstrate sufficient need for their NED project. We see the likelihood of substantial adverse impact to our communities, our environment, and our state’s energy future. Our members collaborate online, participate regularly in NHPLAN meetings and activities, support government, community, group and individual awareness initiatives to oppose the NED project and demonstrate its lack of benefit to New Hampshire.

Much of the affected area in New Hampshire is rural and some of it is impoverished and lacking sufficient internet services. To date the Company has done a poor job of adequately informing the public of the overview and details of the project in their rush to file an application in the last quarter of 2015. Open Houses conducted by the Company have included outdated maps, poor lighting and ambiguous and conflicting answers to questions posed by residents of the TOWNS, including affected property owners. In addition, the Company has not sufficiently notified all affected property owners and the latest filings include yet more changes to the proposed route. These insufficiencies on the part of the Company have been well documented in the pre-filing docket PF14-22-000.

The NED project requires enormous time and dedication to download and study documents, comment on dockets and research unfamiliar subjects such as the complexities of the Natural Gas Act. It is the mission of NHPLAN to share information about the NED project with participating member representatives who then disseminate to residents and stakeholders located in the TOWNS they represent. We speak on behalf of residents and stakeholders of its member TOWNS who are unable to voice their concerns and their opposition to the NED project during this review. These are residents and stakeholders residing in the TOWNS that are directly affected by the outcome of the review process including but not limited to the drafting and finalization of an Environmental Impact Statement (EIS.) NHPLAN works to notify the un-notified, to answer the unanswered, to bring awareness to the misinformed and help simplify project and procedural complexity for those who able to participate.

We believe the proposal for the NED project takes New Hampshire and New England dangerously off course from the green economy we need for our future. We think the project's risks, costs and harms are highly unnecessary. We understand this excessive overbuild is wasteful and motivated by export profits. We insist that additional tariffs on ratepayers and the taking of property by eminent domain would be unjust. We want solutions that address the winter reliability problems New England experiences rather than the "energy crisis" hoax Kinder Morgan, Inc. deceptively promotes.

We know there are much cheaper and much cleaner alternatives to solving our specific energy demands in New England. We believe that compliance with the Clean Power Plan and with other regulations will make the cost of producing a unit of energy from fossil fuels greater than the cost of producing from renewable sources or the cost savings obtained through energy efficiency programs. We foresee that the rate at which cleaner sources of energy are adopted will quickly overtake the limited economic benefits of 20 year gas infrastructure commitments and will leave stranded costs for ratepayers within the commitment period. We can demonstrate that LNG utilization as an alternative to significant new pipeline capacity is a far more cost effective interim solution for the Northeast. We believe that of all the incremental and large scale pipeline projects proposed, the NED project represents the worst choice for New Hampshire and New England. Beyond the economic benefits of clean energy, the EPA predicts that the final targets of the Clean Power Plan could produce climate and health "co-benefits" upwards of \$50 billion in 2030 and the overcapacity of the NED project is not aligned with these goals or benefits. The CO2 reductions and other emissions improvements are believed to help avoid climate-related costs such as property damage, declining agricultural production and water shortages. The risk of long term catastrophic loss has yet to be mitigated and the situation cannot be improved with the implementation of the NED project. Projects of this magnitude do not incrementally support renewable sources but rather thwart, delay and discourage necessary paradigm shifts toward renewable energy models.

CONCLUSION

For the reasons set forth above, NHPLAN has "an interest which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) and its "participation is in the public interest" pursuant to 18 C.F.R. § 214(b)(2)(iii). NHPLAN is in a unique position to represent its interests and the interrelated interests of its members and their constituents which cannot be adequately represented and protected by any other party.

WHEREFORE, for the foregoing reasons, NHPLAN respectfully requests that its motion to intervene be granted.

Respectfully submitted,

David J. Moloney, President
Duly Authorized for NHPLAN

20160115-5141

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I Shawn P. Lucien, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Shawn P. Lucien,
56 Cart Path Road, Dracut, MA 01826
978-455-1619
Shawn.lucien11@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

- First of all the one Metering stations would be in my backyard 300 yards behind my home.
- The proposed Compressor station, with air and noise pollution is less than a mile from our homes.
- Kinder Morgan is updating a pipeline running through my property
- The blasting from Brox Industries are a major concern of public safety with the pipeline in our area.
- Loss of property value
- Being able to enjoy my backyard and surrounding area with my infant daughter and wife if out worrying about air quality or noise pollution.
- Family values and neighborhood activities.
- Added noise and damaged lands and roads from major construction around our town.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Shawn P. Lucien, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 15th day of January, 2016.

Shawn P. Lucien
56 Cart Path Road
Dracut, MA 01826

20160115-5142

Motion to Intervene of Temple, NH Conservation Commission

January 10, 2015

Ms. Kimberly Bose, Secretary
Federal Energy Regulatory Commission (FERC)
888 First Street NE, Room 1A
Washington, DC 20426

MOTION TO INTERVENE IN

FERC Docket: CP1621 ... Kinder Morgan (KMI)/Tennessee Gas Pipeline (TGP) Northeast Energy Direct (NED) Proposal

The proposed Northeast Energy Direct (NED) pipeline project (FERC docket CP1621) including the compressor station in New Ipswich, NH would be along the southern border of Temple, NH and on top of aquifers used by Temple, NH residents. The compressor station will be emitting exhaust Temple residents will be breathing. The construction of the project and the presence of the compressor station will permanently affect the wildlife in the area of southern Temple, NH.

As a conservation commission for the State of New Hampshire, we are dedicated to protecting the natural resources of our town, and have taken an oath to that effect. New Hampshire state law (RSA 36A: 2) authorizes the creation of conservation commissions “for the proper utilization and protection of the natural resources and for the protection of watershed resources” within their respective towns. We, the undersigned, find that the Northeast Energy Direct (NED) pipeline project (FERC docket CP1621) threatens to damage these resources in many ways. Furthermore, if approved in its current form, the project threatens our ability to perform our duties in the future. We therefore believe our responsibility requires that we oppose the project for the reasons described herein.

Impact on Future Conservation Efforts . As currently proposed, the NED pipeline will cross at least 34 conservation properties in 15 New Hampshire towns. Most of the land being crossed by this project was acquired either by gift or by fee purchase authorized by the relevant towns. The protection of this land was made possible by citizens, voters, and donors who believe strongly that New Hampshire’s natural environment is worth protecting now and for future generations.

In many cases, money used to protect these lands came in part from state funds created for this purpose. In particular, the Land Conservation Investment Program (LCIP, established by RSA 221A, since repealed) and the Land and Community Heritage Investment Program (LCHIP, established by RSA 227M) have both provided public matching funds without which some of these lands would have been lost to development. The intent of these laws is clear, as illustrated by this excerpt from RSA 227M (emphasis added):

*The general court finds that **in order to maintain New Hampshire’s quality of life and economic vitality for its citizens** , growth and development should be balanced with careful protection of the state’s most important natural, cultural, and historical resources.*

***Permanent protection of these resources** , through acquisition of lands, buildings, and other physical assets, or interests in these assets, must be accomplished along with their planned longterm stewardship. ... The intent...is to conserve and preserve this state’s most important natural, cultural, and historical resources... **for the primary purposes of protecting and ensuring the perpetual contribution of these resources to the state’s economy, environment, and overall quality of life** .*

Going still further, both programs create a public trust that bestows upon the State of New Hampshire the responsibility to protect these lands in perpetuity (emphasis added):

Resource assets acquired under this chapter through the use of the trust fund for the program shall be held in public trust and used and applied for the purposes of this chapter . Notwithstanding any other provision of law relating to the disposal of publiclyowned real estate, no deviation in the uses of any resource asset so acquired to uses or purposes not consistent with the purposes of this chapter shall be permitted . —RSA 227M:14

It’s worth noting that the law does provide for an exception to this mandate. Specifically, RSA 227M: 13 allows for these lands to be used for minor adjustments to state highways. However, the exception includes a strong qualifier: “Approval shall not be granted if reasonable and prudent alternatives exist nor if individual or cumulative approvals are likely to materially impair the conservation or preservation purposes for which the parcel was originally protected.” This wording makes clear that even in the case of an allowed exception, conservation concerns take priority.

Also germane is Article 12a of the New Hampshire State Constitution which states:

No part of a person's property shall be taken by eminent domain and transferred, directly or indirectly, to another person if the taking is for the purpose of private development or other private use of the property.

Because NED is a private development project, Article 12a applies. This article is not specific to conservation land but rather applies to all real property within the state. Thus, unlike the LCIP and LCHIP programs, it provides some protection for lands currently being considered for conservation, or for which conservation plans are underway but not yet finalized. Several properties along the pipeline route fall into one of these two categories.

Citizens of New Hampshire have a right to expect these commitments to be upheld, and could lose faith in such protections if NED is allowed to proceed as planned.

The immediate destruction of this land, and the effects on adjacent land, watersheds, and wildlife habitat is bad in itself; we describe these effects in the remainder of this letter. Beyond that, we expect that the loss of even part of this land to a private (i.e., nongovernmental) forprofit project by a private company (Kinder Morgan and its affiliate Tennessee Gas Pipeline) will undermine the towns' and state's ability to acquire such protected lands in the future. It seems reasonable to ask why anyone would give such a gift, or authorize such a purchase, if a key justification for such acts—perpetual protection—can be so easily dismissed in direct violation of state law?

Completion of this project as currently planned will send the strong message to the conservationminded public that state laws can be ignored and protected land taken for private use if a private corporation wishes to use that land for a profitmaking venture.

Impact on Water Resources . NED has the potential to adversely affect groundwater and surface water along the proposed route. Both resources are of great concern.

Groundwater is a vital resource in all areas of human habitation, and particularly so in southern New Hampshire where a large proportion of citizens rely on private wells as their sole water supply. Some towns do have public water, but those public supplies are themselves fed from inground wells.

Approximately 18 miles of the planned pipeline route (25% of the total length in New Hampshire) lie within known stratified drift aquifers, yielding 320 acres of pipeline rightofway (ROW) within aquifer boundaries [i] . Approximately 9 miles of the pipeline route (13%) is planned to pass through soils where blasting is likely to be required. 1, [ii] Some of these potential blasting zones are near or within these stratified drift aquifers. The remainder of the likely blasting zones are equally troubling, lying within or near the bedrock aquifers from which many private wells derive their water.

Surface waters too are at risk. The pipeline ROW will directly disturb approximately 440 acres 1 of known [iii] wetlands across southern New Hampshire. Among their many irreplaceable environmental services, these wetlands collect rainwater that ultimately contributes to aquifer recharge. Additionally, 70 water bodies (streams, brooks, rivers, ponds, and lakes) of varying size will be crossed.

The potential impacts from NED to water resources within these critical and sensitive areas include:

- Well contamination from nitrites or nitrates introduced during blasting. [iv]
- Well contamination from previously bound naturally occurring pollutants (such as arsenic and radon) released by blasting. 4
- Loss or reduction of well output through changes in bedrock channels caused by blasting. (Many private wells are bedrock wells, although the exact proportion of wells fed from bedrock aquifers and stratified drift aquifers is unknown.)
- Contamination through prolonged herbicide use to control vegetation in certain parts of the ROW. [v]
- Contamination through fluids leaked from construction vehicles operating in wetlands and above aquifers, or fluids spilled during fueling or maintenance. [vi]
- Direct disruption of hydrology through soil disturbance (dig and fill), particularly in wetlands where

necessary soil layering takes centuries to develop and is difficult to recreate once disturbed.

- Direct disruption of hydrology through changes in topology, affecting runoff patterns and rainwater accumulation needed to recharge aquifers.
- Direct drawdown of aquifers due to hydrostatic testing that might require more water than many of these aquifers normally produce. [vii]
- Erosion and sedimentation during construction of water crossings affecting fish and stream life. [viii] , [ix] Of special concern is the time period between when construction ends and vegetative cover is reestablished. With personnel no longer regularly onsite, the beginnings of erosion can go unnoticed and develop into serious problems that could have been prevented if caught early.
- Increased ground temperature in the vicinity of the pipeline, changing the thermal characteristics of traversed water bodies and potentially affected associated biological communities.

In summary, the cumulative effect on groundwater and surface waters of temporary (during construction) and permanent (postconstruction) disruption within these areas is potentially great, yet difficult if not impossible to predict. In our view, the potential (and unproven) benefits of the project are insufficient to justify the risk involved.

Impact on Wildlife Habitat . Twenty-four miles of the proposed pipeline route, nearly onethird of its total length in New Hampshire, passes through wildlife habitat rated by the New Hampshire Wildlife Action Plan as “highest ranked” within New Hampshire or our biological region. [x] This habitat is outstanding for its highquality streams, productive wetlands, and unfragmented forests that sustain a great variety of wildlife species, some of them rare, others threatened or endangered. Healthy fish and wildlife populations that support traditional activities such as fishing and hunting depend on New Hampshire’s highestranked wildlife habitat.

In total, the proposed pipeline will directly (i.e., within the planned ROW) affect 421 acres of this important resource (the area of indirect effect will be much larger), destroying forest buffers that shade trout streams, obliterating vernal pools needed for amphibian reproduction, disrupting natural wildlife corridors that connect feeding with breeding areas, choking streams with sediment from long stretches of exposed soils, diminishing the wetlands’ ability to function by compacting wetland soil with heavy equipment, threatening the health of wetland species with the use of herbicides for ROW maintenance, and introducing invasive species that outcompete native wildlife foods.

Impact on Air Quality . Potential adverse effects on air quality come in two forms:

1. Direct release of methane into the atmosphere, and
2. Additional air pollutants released at compressor stations as a side effect of burning hydrofractured gas to provide power.

Regarding the first point, methane is a potent greenhouse gas. When burned it produces about half as much carbon dioxide as coal or oil, but when released in its raw form, the effect is far from benign. According to the Environmental Protection Agency, methane has a “global warming potential” twenty times that of carbon dioxide over 100 years [xi] . Methane loss has been measured in distribution systems, and at compressor stations (via leaks and deliberate “blow downs”), valve stations, and metering stations along supply lines. Methane loss from leaks in production, storage, and transmission systems is well documented, and recent studies show the amount lost due to leaks is greater than previously thought. [xii] , [xiii] , [xiv] , [xv] , [xvi] The exact amount of methane lost to “fugitive emissions” remains an elusive figure but no study of the problem finds the amount is zero. On the contrary, estimates on the high end approach 8% of total annual shale gas production volume [xvii] , and loss from a single compressor station blowdown releases on average 15,000 cubic feet of methane [xviii] . Of course, predicting how much gas will escape from the NED pipeline in particular is almost impossible. But given what is known about gas leaks in general, it is unrealistic to think that NED will not contribute to this problem.

As a charter participant in the Regional Greenhouse Gas Initiative (RGGI), New Hampshire has a demon-

strated commitment to addressing this issue. Supporting projects like NED would contradict the fundamental principle underlying RGGI.

Regarding the second point (air pollution at compressor stations), numerous reports exist of air pollution near compressor stations (where “near” means as far away as one to two miles). Some pollutants (most notably nitrogen dioxide, which contributes to groundlevel ozone production) are produced by burning natural gas. Others (known as “air toxics”, some of which are known carcinogens) such as benzene, toluene, ethylbenzene and xylene are presumed to be mixed with the methane as a byproduct of hydraulic fracturing [xix] and are released along with fugitive emissions of methane. Collectively, these and other pollutants contribute directly to adverse health effects such as asthma and other respiratory illnesses, eye, ear, and throat irritation, headaches, cognitive complaints, and many other maladies. [xx] , [xxi] , [xxii] , [xxiii]

Adding to our concern is the fact that a portion of the proposed pipeline route lies within a region already identified as a “nonattainment area” (NAA) which fails to meet ambient air quality standards defined by the U.S. Environmental Protection Agency. [xxiv] Introducing a known source of air pollution—one that could release measurable quantities of a significant greenhouse gas [xxv] — would undermine the very standard that established this area as an NAA and under these circumstances seems unconscionable.

Given these data, we think it’s clear that NED has the potential to adversely and measurably affect air quality at both a local and a global level. As with our previously stated concerns about impacts on water quality, the precise degree of impact is impossible to predict—although we know it won’t be zero—but the lack of proven benefit from NED to potentially affected communities seems poor reason indeed to proceed with the project given these very real risks.

Other Impacts

Construction Impacts . In addition to the construction-related issues already described, construction activities can trigger additional adverse effects including:

- Removal of biological material along the ROW leaving bare mineral soil, a habitat conducive to establishing invasive plants such as Japanese knotweed and oriental bittersweet. These invasive species outcompete native species and reduce the biodiversity essential to a healthy ecosystem.
- Introduction of invasive plants through plant materials inadvertently brought to the site on construction equipment or within fill material. That is, not only will this project create sites conducive to establishing invasive plants, it has the potential to deliver those plants to the sites.
- Fugitive dust and diesel exhaust from trucks and heavy equipment on roadways (southern New Hampshire has many miles of dirt roads which are often the only means of access to planned construction sites). Both pollutants contribute to or exacerbate respiratory problems. [xxvi] , [xxvii] Indeed, according to the U.S. Environmental Protection Agency, diesel exhaust is already a concern in New England: “Pollution from diesel engines is a widespread problem across New England and it significantly contributes to air pollution...”. [xxviii]

Farmland Impacts . Some evidence suggests that soil disturbance and increased ground temperature in the vicinity of natural gas pipelines (gases in general release heat when pressurized) contributes to longterm yield reductions. [xxix] The proposed pipeline route includes almost 28 miles that cross important farmland soils within New Hampshire. [xxx] Although a small percentage of this land is currently under cultivation, the degradation of these soils will have longlasting effects on agricultural potential.

Noise Impacts . Federal guidelines establish a maximum daynight average noise level for compressor stations of 55 dB at the closest noisesensitive area [xxxi] and we have no doubt that NED compressor stations will comply with this nominal statutory requirement. However, averages can be misleading. For this particular impact, we believe that peak noise level is a more relevant and important metric because the loudest noises at compressor stations occur sporadically (such as during blow downs), not continually.

Peak noise levels of 100 dB have been measured in the vicinity of compressor stations. [xxxii] For comparison, the nominal requirement of 55 dB is roughly equivalent to the sound produced by a modern dishwasher.

In contrast, 100 dB is about as loud as a jackhammer.

Noise alone is sufficient to cause health problems including hearing impairment, cardiovascular and other physiological effects, mental health effects, and sleep disturbance. 34 Here, sleep disturbance is of particular concern. Because compressor stations operate 24 hours a day, the potential exists for nighttime sleep disruption. Inadequate sleep is a proven cause of many health problems, and chronic sleep loss “has serious consequences for health, performance, and safety.” [xxxiii]

Evidence suggests that the difference between a loud noise and the ambient noise level is a more important factor in sleep disturbance than the absolute magnitude of the loud noise [xxxiv] , [xxxv] , 36 This fact is another reason we believe peak noise is more important than average noise in this case. Much of the pipeline route in New Hampshire passes through decidedly rural areas where the typical nighttime noise level is around 35 dB. In these circumstances, a nighttime noise of 100 dB would be jarring indeed (being perceived as roughly 90 times louder than the background noise) and is easily loud enough to disturb sleep in most people. 35, [xxxvi]

Also of concern is the lowfrequency noise (LFN) produced by compressor stations. [xxxvii] Lowfrequency noise (below 100 Hz) has been linked to numerous psychological, emotional, and physiological complaints. 34, [xxxviii] , [xxxix] In some ways, LFN can be worse than noise at higher frequencies. In particular, LFN need not be considered “loud” to cause annoyance and irritation, and is found to be more difficult to ignore than higher frequency noise. [xl]

In addition to the potential psychological and physiological effects of loud noise on humans, evidence suggests that wildlife might also be adversely affected by loud noise. Laboratory experiments show reactions in some animals similar to those of humans after prolonged exposure to loud noise. Other studies show that anthropogenic noise can interfere with vocalization and communication in some species, leading one author to conclude that “The inability of creatures to successfully communicate or otherwise employ their auditory senses is detrimental to the longterm survival of these displaced creatures and the overall biological integrity of the environment.” [xli]

In Conclusion

Perhaps it’s true that New England needs more energy. However, New Hampshire, as a net exporter of electricity, does not. New Hampshire’s recently completed Ten Year Energy Strategy identifies what the state does need to prepare for the future, that being (among other things) electric grid improvements (including increased use of sustainable energy sources such as wind and solar power) and improved energy efficiency. Efficiency improvements in particular yield the cheapest, cleanest, most plentiful energy source with no adverse environmental effects. And New Hampshire has much room for improvement here; it lags behind neighboring states in adopting energy efficiency measures. [xlii]

What New Hampshire does not need is an expensive, short-term fossil-fuel fix that diverts us from energy efficiency and energy alternatives and simultaneously destroys wetlands and wildlife habitat, disrupts farmlands, degrades water quality, adds to air and noise pollution, and directly contradicts the legal mandate to hold above all else our precious conservation lands in the public trust.

The Temple Conservation Commission of Temple, New Hampshire believes that the protection of our natural resources is a fundamental right, and that this private taking of these natural resources not only violates this right but is an egregious act against our constitutional guarantee to be protected by the State for the “enjoyment of...life, liberty, and property.” [xlili]

In closing, we acknowledge that energy unquestionably contributes to our quality of life. But the natural environment is the source of that life. Surely nothing is more important than protecting the source.

Basis for Intervening:

Many reasons: I am an electric ratepayer who doesn't want an increase to my bill due to new pipelines. Mass. A-G Maura Healey's 11/18/15 report on the pipeline states "This study demonstrates that we do not need increased gas capacity to meet electric reliability needs, and that electric ratepayers shouldn't foot the bill for additional pipelines." Pipelines also cause health problems for children who live in the compressor station vicinity: higher incidents of nosebleeds, asthma, rashes, headaches; also, one of the documented gases the compressors emit is Benzene, which is associated with childhood leukemia. (Information from Dr. Curtis Norgaard, who studies areas around compressor stations as well as impacts of particular pollutants they emit such as nitrogen oxide and formaldehyde. Apart from the increased respiratory problems due to

the NO, it's the formaldehyde (CH2O), which has more potential for health danger. This toxic gas becomes a cancer hazard at 0.08 micrograms per meter and is toxic at 10-49 micrograms per meter. It can cause cancer of the nose and throat as well as leukemia. Air quality tests around an existing compressor station in PA measured formaldehyde at a peak of 61 micrograms at about 800 meters from the station. All this evidence comes from Dr. Norgaard, who has been testifying on behalf of denizens of the Monadnock area in southern New Hampshire where the KM pipeline has been routed.)

To Whom it may Concern,

As an electric utility rate payer in Ma, I am opposed to the northeast energy direct pipe line, I feel it is not wright to have a fee for construction passed on to my bill for a project that is largely overbuilt and unnecessary with new Canadian power lines and energy alternatives coming to our state.

The taking of private and public land that has been protected in perpetuity for wild life preservation, endangered species habitat and agricultural use is unjust. I understand the company offers to buy and give back land of equal or greater value. This is simply not possible to replace contiguous tracts of land.

Taking of public and private land by force of eminent domain by a private for profit company, not showing the actual true need is wrong, unjust, and unnecessary in this case.

20160115-5146

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline,)	Docket No. CP16-21-000
a subsidiary of Kinder Morgan)	
Northeast Energy Direct Pipeline)	

**MOTION OF THE TOWN OF MASON, NEW HAMPSHIRE TO INTERVENE
IN OPPOSITION TO THE TENNESSEE GAS NORTHEAST ENERGY
DIRECT (NED) PIPELINE**

I. INTRODUCTION

On November 20, 2015, Tennessee Gas Pipeline, a subsidiary of Kinder Morgan filed an application under Section 7(c) of the Natural Gas Act, 15 U.S.C. § 717f(c), for authorization to construct and operate the Northeast Energy Direct (NED) project, a \$5.2 billion enterprise consisting of a (1) Supply Path Component, comprised of 40 miles of looped pipeline in northeast Pennsylvania, a 132-mile, 30inch pipeline that runs from Troy, Pennsylvania to Wright, New York and one modified and three new compressor stations and a (2) Market Path Component comprised of 188 miles of pipeline from Wright, New York to Dracut, Massachusetts, six new compressor stations and five delivery laterals in Massachusetts and New Hampshire, including a lateral that will cut through the center of the Town of Mason, New Hampshire.¹

As the pipeline winds its way from Northeast Pennsylvania to New England, it will slash through dozens of streams, hundreds of acres of wetlands and forests as well as lands held in conservation trust and set aside

from development. All told, construction and operation of the pipeline will utilize 10,957 acres of land, with an additional 2397 acres for above-ground compressor stations.² Meanwhile, dozens of rural communities in the project's path will be forced to serve as involuntary hosts to high-pressure pipelines or pollutant-emitting compressor stations, and put up with heightened safety risks, increased liability, diminished property values and added stress on fire and rescue services which will act as first responders in the event of a pipeline incident. In particular, the Town of Mason is disproportionately impacted by 3.91 miles of 30-inch mainline pipe passing through the north section, a 5.08 mile extension of a 12-inch lateral line bisecting the middle, and plans to site two appurtenant facilities, a mainline valve and pig launcher within Town Limits.³ As of the date of the application, the NED Project is woefully undersubscribed. According to the Application, the Market Path Component of the NED Project has a total capacity of 1,332,500 dt/day, but only 552,261 dt/day -- or 41 percent -- is committed under what the Applicant claims are binding precedent agreements. For the Supply Path Component, the Applicant claims to have executed precedent agreements for 751,650 dt/day -- or roughly 61 percent of the Supply Path Component's capacity of 1.2 million dt/day. And while Tennessee Gas asserts that it is "confident" that it will be able to attract additional customers from electric distribution companies, additional firm contracts have yet to materialize.⁴

Given the lack of need for the project coupled with the extensive adverse impacts, the Town of Mason seeks to intervene in opposition to the NED Project. This motion to intervene is timely filed pursuant to Rule 214 of the Commission's Rules of Practice and Procedure, 18 C.F.R. § 385.214 (stating that interventions are timely when filed within period specified in public notice) and 18 C.F.R. § 157.10(a)(2) (permitting intervention to challenge environmental impacts through deadline for comment on the draft environmental impact statement (DEIS)).

III. STATEMENT OF INTEREST FOR MOTION TO INTERVENE

A. Description of the Town of Mason

The Town of Mason is located in Hillsborough County, New Hampshire, just north of the Massachusetts state line. The Town of Mason, a small town with a population of 1363, is a rural community by design, with no commercially zoned district. The town encompasses 24 square miles of heavily forested land which raises concerns for forest fires. The Town's 2015 operating budget was \$1.884M with \$65,314 funding for

the all-volunteer Fire Department and Emergency Medical Services. The small Police Department is budgeted at \$322,069. The nearest hospital is 15 miles away and the nearest exit ramp to an interstate highway is 18 miles. The largest businesses include three restaurants and one gun shop.

B. Grounds for Intervention

1. Description of pipeline impacts to the Town.

The NED Project will directly and adversely impact the Town. A 3.91 mile segment of the mainline pipeline will cross through the Town between mileposts 8 and 11, while the 5.08 mile Fitchberg Lateral extension runs right through the center. In addition, two appurtenant facilities, a mainline valve and pig launcher within Town Limits.⁵ The pipeline will pass through heavily forested areas, residential properties and farms, and in close proximity to many homes – which raises safety concerns sufficiently serious to warrant their disclosure by Tennessee Gas in its 2014 SECT 10-k filing.⁶

Not only will the NED Project jeopardize the health and safety of Town residents, but it will also damage natural resources and recreational sites in and around the Town. Both the mainline and lateral pipelines will cross parcels of Land Conservation Investment Program (“LCIP”) lands and other lands held in conservation trust. The following conservation lands are impacted:

Affected Conservation Land (references to Hillsborough County Registry of Deeds Book/Page):

Fifield Tree Farm Conservation Easement	508.1 acres	Book 7992 page 0276
Spaulding Brook Conservation Land	163.3 acres	Book 5301 page 0868
Mason Railroad Trail	94.4 acres	Book 3438 page 0422
Mitchell Hill Conservation Land	93 acres	Book 6188 page 0843
Doonan Conservation Easement	12.5 acres	Book 5301 pages 0874

Land conservation has long been a goal of the town of Mason. The town’s 1981 Comprehensive Plan set forth these policies:

- to preserve, protect and improve, where appropriate, the historic, recreational and scenic resources of the town;
- to provide for the recognition, management and protection of agricultural, forest and water resources that are vital to an overall land use plan and the well-being of the community;
- to provide for the preservation of those natural resources which give the town much of its beauty and rural atmosphere;
- to provide opportunities for recreation commensurate with the developing needs of the town by encouraging gifts of private land or the public use of open spaces by private owners.⁷

These goals were re-affirmed in the 2007 Mason Master Plan Update (at 6), in particular the goal to “encourage the use of conservation easements with willing landowners to protect high priority lands.”

Ironically, these lands which have been set aside and protected from commercial developments will now be ravaged by a pipeline -- which is far worse than a shopping mall or townhouse enclave. The pipeline will cross the Mason Rail trail several times, a recreational corridor used for hiking, biking, horseback riding, snow shoeing, cross country skiing and snowmobiling.

The NED project will also saddle the Town with added financial costs. It is unlikely that the NED project will have staff on the ground monitoring the pipeline 24/7, 8 and therefore, the Town’s small volunteer fire and rescue departments may be called upon to serve as first-responders, which in turn may require specialized training to enable them to address the catastrophic damage caused by a ruptured 30-inch pipeline.⁹ Moreover, because Tennessee Gas – by its own admission (albeit in its SEC 10-k filing and not the Certificate Application) - does not carry sufficient insurance coverage against “the inherent risks normally associated with those operations, including pipeline ruptures, explosions, pollution, release of toxic substances, fires and adverse weather conditions,”¹⁰

In exchange for increased risk, the Town derives no benefits whatsoever from the NED Project. The Fitchberg Lateral Line that cuts through the Town will deliver gas to Massachusetts, and does not supply either the Town or the state of New Hampshire. Nor will the Town benefit from the 3000 new jobs that Tennessee claims will be created: even assuming that local workers will actually fill these positions,¹¹ at best, they are short-term and do not outweigh the longterm cost of irreparable destruction of conservation lands, reduced property values and decreased tax-base.

2. The Town Satisfies the Standard For Intervention

Given the NED Project' considerable direct impacts on and within the Town, the Town satisfies the criteria for intervention under Rule 214(b) of the Commission's Rules of Practice and Procedure, 18 C.F.R. §214(b). Intervention will enable the Town to protect its interests and avoid or minimize harm to its residents. The Town's unique interests – particularly its interest in preserving the rural character of the community under its comprehensive plan, protecting its conservation lands and ensuring property rights and safety of its residents which are compromised by the pipeline -- are not adequately represented by any other parties in this proceeding. Absent a grant of party status, the Town's interests will go unprotected. Finally, as a public governmental body, the Town's participation is in the public interest under Rule 214(b)(2)(iii).

Accordingly, the Town asks the Commission to grant its intervention in the NED Pipeline Proceeding.

IV. GENERAL COMMENTS

The Town is currently undertaking a detailed review of the Application, Resource Reports and maps and plans to file a set of more detailed comments in the next six to eight weeks. For now, the Town will briefly describe some of its most significant objections to the NED Project.

A. The Applicants Have Not Demonstrated A Need for the Project

Under the Commission's Certificate Policy Statement. The Commission's Certificate Policy Statement requires an applicant to demonstrate a need for the proposed project.¹² Where a proposed project – such as the NED Project -- has significant adverse effects on the environment and private and municipal property rights, the amount of evidence necessary to establish the need for a proposed project is heightened.¹³ Under the Certificate Policy Statement, a showing that project capacity is fully subscribed under precedent agreements with unaffiliated entities will satisfy the test for need under the Certificate Policy Statement.¹⁴

As noted earlier, the NED Project is far from fully subscribed. In fact, for the Market Path Component – which runs through the Town - only 41 percent of the capacity is under contract.¹⁵ Moreover, several of the contracts – including the one with Liberty Utilities, the company supposedly supplying gas to New Hampshire – are not probative of need under the Certificate Policy Statement because the customers are affiliates of the pipeline sponsors, and thus have incentive to subscribe to the pipeline because they stand to benefit financially if the project is built.¹⁶ Where a pipeline is not fully subscribed, the Certificate Policy statement allows a showing of need through alternative evidence of market demand for the project. Here too, the NED Project falls short. According to a 2015 Department of Energy Report, only 54 percent of current pipeline capacity is being used – and higher utilization of existing interstate natural gas pipelines will reduce the need for new pipelines.¹⁷ Moreover, while the DOE Report finds that at most, 8.4 bcf/d are needed, the Commission is currently considering applications for 48 bcf/d.¹⁸ Even the Commission's own projections from its March 2015 State of the Market Report likewise show that by 2016, sufficient pipeline capacity will be in place to handle Marcellus production.

{chart omitted}

Chart from FERC State of Markets Presentation (March 2015) at 8 online at <http://www.ferc.gov/CalendarFiles/20150319162231-A-3.pdf> (lines show growth in pipeline capacity)

Because Tennessee Gas failed to demonstrate a need for the project – either in New Hampshire specifically, or throughout the region, the Commission must reject the proposed pipeline.

B. Collocation Does Not Offer Any Benefits

The Commission encourages collocation when doing so will minimize project impacts.¹⁹ Here, Tennessee Gas' proposal to collocate the pipeline within powerline easements will exacerbate rather than mitigate project impacts.

Tennessee Gas states that the 71 miles of pipeline in New Hampshire will be co-located within an existing utility powerline easement.²⁰ According to Table 8-1.3 in Resource Report 8, the EVERSOURCE right-of-way (ROW) is 170 feet wide, and Tennessee Gas will use 30 feet of the existing ROW for construction of the pipeline, and 20 feet of the existing ROW as the permanent easement for operation of the pipeline. However, because a standard easement for a 30-inch pipeline is 50 feet, placement of 20 feet of the easement within the existing EVERSOURCE ROW still leaves a full 30-feet outside the EVERSOURCE easement. In other words, Tennessee Gas' scheme would expand the existing 170-foot wide easement to 200 feet – thus encumbering an even larger portion of the impacted parcels.

Yet bad as Tennessee Gas' purported collocation proposal is, it gets worse – because Tennessee Gas cannot even guarantee that it will be able to place even 20 feet of the pipeline easement in the EVERSOURCE right-of-way. This is because Tennessee Gas is still negotiating with EVERSOURCE and other power companies the potential overlap of the pipeline easement with the powerline ROW.²¹ Tennessee Gas does not explain what will happen if EVERSOURCE refuses to share its ROW, but it is not difficult to guess what Tennessee Gas' Plan B would be:²² to lay the full, 50-foot pipeline easement parallel to the power line ROW, thereby creating a 220-foot easement. The “co-location” plan will impact every residence abutting the powerline easement by reducing the vegetation between homes and the power lines. Some residents will lose all the visual screen between their home and the power lines.

After nearly two years since the inception of the pre-filing process, there is no excuse for Tennessee Gas' failure to negotiate an agreement with EVERSOURCE to secure use of the ROW. Unless Tennessee Gas can demonstrate that its proposed collocation route is feasible, the Commission should simply reject the Tennessee Gas' application as it is a waste of both the Commission's and the public's time to review an option that is ultimately infeasible.

C. Kinder Morgan's Financial Problems

Since the Application was filed, reports have emerged of TGP's parent, Kinder Morgan's financial difficulties, including sharp drop in stock prices and decreased dividends to investors.²³ Because the Natural Gas Act requires the Commission to find that a company “is able and willing properly to do the acts and to perform the service proposed (15 U.S.C. §717f(e)), the Applicant must provide additional information regarding its ability to finance this project without subsidization by ratepayers. In addition, recent concerns about Kinder Morgan's financial performance raises the question of whether it will have the ability to adequately pay for the extensive remediation for damage to property and crops caused by pipeline construction or to fund removal of the pipeline in the event that it is no longer needed for service – a scenario that is more likely than not given that the pipeline is undersubscribed. The Commission should therefore direct Tennessee Gas to develop a plan – either posting a bond, or creating and funding a “Remediation and Decommissioning Fund” as assurance that these costs will be covered.²⁴ Without these assurances, the Commission must deny the application.

V. CONCLUSION

For the foregoing reasons, the Town of Mason, New Hampshire asks the Commission to (1) GRANT its motion to intervene in opposition and (2) REJECT or DENY Tennessee Gas' application for the NED Project. The Town of Mason reserves the right to supplement this motion to intervene with additional comments, and to request a formal hearing on the application if it is not summarily rejected.

Respectfully submitted,

21 See Resource Report 8, Table 8.1.3, nt. 3.

22 Generally, under existing Commission practice, project sponsors are allowed to move the pipeline location anywhere within a 200-foot study corridor even after the certificate is issued.

23 See Critics Worry Over the Financial Viability of NED Pipeline, Union Leader, December 11, 2015, online at <http://www.unionleader.com/apps/pbcs.dll/article?avis=UL&date=20151211&category=NEWS05&loper=151219832&Ref=AR&template=printart>

24 The Commission has stated that it will consider requiring creation of a decommissioning fund for hydroelectric projects on a case by case basis. See Policy Statement on Project Decommissioning at Relicensing,” 60 Fed. Reg. 340 n.1 (Jan. 4, 1995). The Commission could consider extending this practice to gas pipeline certificates.

CERTIFICATE OF SERVICE

Wherefore on this 15th day of January I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission’s electronic service list in this proceeding, in accordance with Commission regulations.

Basis for Intervening:

I row, canoe, and kayak on the affected section of the CT river, have been enjoying the river for the last 20 years. Last summer I put in at Whittemore Ferry Rd in Deerfield and rowed upstream, as I regularly do. This is a beautiful section of the river with farmlands on both sides. It is mostly shallow, so inaccessible to motor boats, which makes it even more wonderful to paddle. The pipeline company had apparently strung a wire across the area where they plan to drill pipeline under the river. This was a hazard to small boaters, as it was at neck level and there was no way people in small boats would know it was there. It was an warning to me that the pipeline company had little regard for the potential effects that its use of the land would have. I can’t imagine that the industrial drilling operations to put the pipeline under both the Deerfield and Connecticut rivers would not permanently despoil the natural setting that we currently enjoy.

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First St. N.E., Room 1A
Washington, DC 20426

Re: Docket No. 16-21-000; Tennessee Gas Pipeline Company, L.L.C. Northeast Energy Direct Project

Dear Secretary Bose:

As indicated in a letter to you dated July 16, 2015, The New York State Department of Agriculture and Markets would like to be a cooperating agency for the purpose of producing an Environmental Impact Statement for the Tennessee Gas Pipeline Company, L.L.c. proposed Northeast Energy Direct Project.

Our specific interest is agricultural land and we would like to have input on routing issues, construction methods, mitigation measures and restoration techniques.

Thank you for the opportunity to work directly with the FERC staff on this project.

Sincerely,

Matthew J. Brower
Agricultural Resource Specialist

Basis for Intervening:

I oppose the proposed pipeline: I object to it as an electric ratepayer, a taxpayer, a neighbor and visitor to protected public land in Massachusetts. It would imperil our food, water, and air.

I object to it as a person deeply concerned about climate change and the large-scale extraction, combustion and release of natural gas into the atmosphere, which directly affects all beings on this planet.

I ask that everyone concerned with these decisions take as long of a view as he or she can, realizing that short-term benefits must not outweigh long-term consequences in the future. It is a chance to be wise elders for the present and the future and I deeply support any impulses any leaders have in this direction. You are not alone, if you are considering options that are less immediate, fewer material gains, and preparing for future health and prosperity of all kinds.

Basis for Intervening:

I live in Hinsdale, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly impacted by the pipeline route because I am a landowner directly impacted by the pipeline route which crosses my property.

I am also a resident of Hinsdale who lives in the "blast radius" as well as commutes daily to Northampton, Ma that crosses over the pipeline and passes a proposed compressor station so I would be at physical risk. As a member of an impacted community, Hinsdale, MA, I have grave concerns about the various impacts to the local economy, adverse impacts to the environment, serious impact to the aesthetics to the town and potential serious health concerns.

I am also an electric ratepayer who, KM secures my electric utility as a project customer, who expects to see an increase on my bill relating to NED cost recovery.

In addition, I enjoy the outdoors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. Furthermore, I am a donor to Mass Audubon and the Trustees of Reservations, both land conservation organizations and purpose of my donations, for many years, would be violated if this project is allowed to take easements over land that is meant to be protected for ever.

Basis for Intervening:

I am becoming an Intervenor against this project because it will unnecessarily burden Dracut, Massachusetts, its landowners, its wildlife, and its residents. The scale of this project is enormously excessive with regard to the amount of energy that would be needed to meet projected demand. There are several more suitable and less intrusive and damaging projects available, and by becoming an Intervenor, I am supporting the most appropriate of those and rejecting this project. I personally will be affected because my house, friends, and family reside within one half mile of the proposed compressor station location, which means that we would likely be killed in the event of an accident with the station. Even if an accident does not occur, the noise and emissions of the compression station will damage the health and happiness of all life around it. This project is excessive, unnecessary, extremely harmful, and is clearly an attempt by Kinder Morgan to save itself financially rather than to improve the world. For these reasons, I stand in full opposition to this project as an Intervenor.

20160115-5158

UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE AND COMMENTS OF ENGIE Gas & LNG LLC

Pursuant to Rule 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”), 18 C.F.R. § 385.214, ENGIE Gas & LNG LLC (“ENGIE LNG NA” f/k/a GDF SUEZ Gas NA LLC) hereby moves for leave to intervene in the above-captioned proceeding. In support of its motion, ENGIE LNG NA submits the following:

I. INTERVENOR

ENGIE LNG NA imports liquefied natural gas (“LNG”) from various international sources through the Distrigas Everett Import Terminal’ (also the “Terminal”) and resells the LNG in liquid and natural gas vapor form to customers located throughout the northeastern United States. ENGIE LNG NA customers include local distribution companies, gas marketers, commercial and industrial consumers, and electricity generation plants.

ENGIE LNG NA is today capable of delivering significant peak day natural gas supply to the New England market and has done so for local distribution company (“LDC”) and other customers for over 40 years.

ENGIE LNG NA is uniquely capable of meeting the flexible gas needs of natural gas fired generation capacity in New England. These deliveries can be made from the Everett Import Terminal and/or the Neptune Deepwater Port -- LNG receiving facilities that are part of the portfolio of U.S. operations owned ultimately by ENGIE S.A. ENGIE S.A. is a leading purchaser and supplier of LNG to the United States and countries around the world, and has a proven history of safety, reliability, and innovation. These assets are optimally located in New England and are well situated to provide supplies of natural gas to New England consumers during peak times. Services can be provided from either facility with no need for additional infrastructure.

Since receiving its first shipment of LNG in November 1971, the Everett Import Terminal has served as a driving force in the adoption of this safe, clean-burning fuel in North America. In the 1970s, the Terminal was employed to mitigate New England's regional energy crisis. For more than 40 years, it has been the primary supplier of LNG to a network of 46 utility-owned, above-ground LNG storage tanks that support New England's peak-shaving natural gas storage needs. ENGIE LNG NA can draw on a diverse, global portfolio of LNG under the control of ENGIE S.A. to provide a high degree of supply reliability.

The Terminal is capable of processing in excess of 210 Bcf of LNG per annum. Under existing firm and interruptible transportation contracts, ENGIE LNG NA delivers regasified LNG from the Everett Import Terminal directly into the two existing interstate natural gas pipelines serving New England using back haul capacity. Back haul capacity is normally underutilized during non-peak periods, but during times of peak demand the ability of the pipelines to back haul gas actually increases which in turn enables ENGIE LNG NA to transport even more regasified LNG on the pipelines. The Terminal also is directly connected to one of the largest LDC systems in the region allowing for the deliveries of regasified LNG to supplement or displace interstate pipeline gas supply.

Because of the Terminal's location at the far end of the pipeline grid, regasified LNG from the Everett Import Terminal is transported on AGT and TGP almost exclusively on a back haul basis. The Terminal is capable of injecting regasified LNG up to the maximum allowable pressure of these interstate pipelines and at rates ranging from zero to 31,200 MMBtu per hour. With such capabilities, Terminal output can support the eastern end of the TGP and AGT systems on a standalone basis on peak or other days. The Everett Import Terminal has provided operational support to the natural gas pipeline grid during times of potential crisis, such as on extreme cold days, operational offline-trips, and when portions of the system have been taken offline for repairs.

LNG has played and can continue to play a crucial role in protecting the region from natural gas price spikes on the spot market if utilities contract for LNG. This was demonstrated during the winter of 2014 when the region was protected from extreme spikes in natural gas prices thanks in large part to additional LNG supply imports. This LNG has been credited with directly contributing to energy prices falling in comparison to 2013.

The ability to vary natural gas send-out from an hourly rate of zero to more than 31,000 MMBtu per hour at discharge pressures matching the maximum allowable operating pressures of the receiving pipeline systems is a capability that the Terminal can and has provided on an informal "no-notice"/non pre-scheduled basis to AGT, TGP and Boston Gas. If either AGT or TGP provide a "no-notice gas service" to their customers, the Everett Import Terminal has proven its capability to backstop this type of service. ENGIE LNG NA can sell this type of service today.

The Everett Import Terminal's proven record of operation reflects the highest degree of reliability and deliverability into the New England region:

- ~ The Terminal has exclusively supplied regasified LNG for sale to the largest gas fired power plant in the Northeast Massachusetts and Boston load zone region since 2002.
- ~ Over 1,100 cargoes of LNG have been imported into New England over the Terminal's 44 years of operation, including receiving 67 in one year.
- ~ The Terminal has demonstrated its ability to offload ships during inclement weather conditions, including receiving and offloading a vessel during the blizzard on January 27, 2015.

~ The Terminal's berth, located on the Mystic River in Everett MA, is in an isolated deep water location with predictable tides, currents and weather conditions.

When considering all operating contingencies and conditions in the context of comparing the delivery of natural gas by vessel to delivery by pipeline compressor station, deliveries of regasified LNG are just as, if not more, reliable when considering all pipeline compression spurious and critical failure frequencies? Moreover, the events affecting pipeline compressor failures differ from those that might affect a ship delivery; accordingly, coincident failures are unlikely, which means the utilization of LNG supply sourced from the Terminal as LNG or natural gas vapor increases the overall reliability of the natural gas supply grid in New England.

II. COMMUNICATIONS

All communications should be addressed to the following persons:

* Persons designated to receive service pursuant to Rule 203 of the Commission's Rules of Practice and Procedure, 18 C.F.R. § 385.203.

III. BACKGROUND

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. ("TGP") filed an application in the above-captioned proceeding pursuant to Sections 7 (b) and 7 (c) of the Natural Gas Act and Part 157 of the Commission's regulations seeking authorization to construct and operate the Northeast Energy Direct Project. The application seeks, among other things, to modify existing compression equipment and construct and operate new pipeline and compression facilities in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut, and abandon certain facilities.

IV. MOTION TO INTERVENE

To provide service to certain of its customers, ENGIE LNG NA has contracted for firm transportation service on the TGP system. Accordingly, ENGIE LNG NA will be directly affected by the outcome of this proceeding. ENGIE LNG NA's interests in this proceeding cannot be adequately represented by any other party. ENGIE LNG NA's participation is therefore in the public interest.

V. INITIAL COMMENTS

ENGIE LNG NA has no vested interest in and is not opposed to pipeline projects that are properly sized to serve LDC load growth and generally in the public interest. However, ENGIE LNG NA does not believe the entirety of the Northeast Energy Direct Project as proposed is in the public interest. The energy sector is undergoing profound changes. This energy transition is a worldwide shift that is gathering pace, with the development of renewable and carbon-free energy sources, energy efficiency, customized energy decisions, and a digital revolution that has the potential to radically change the way people consume energy.

ENGIE LNG NA believes the overexpansion of gas transmission lines in New England, proposed to be funded by electric ratepayers, is in large part propelled by the price spikes that occurred during the so-called "polar vortex" of 2013. Analysis has shown, however, that these spikes occurred because of poor contract planning. Indeed, the winter of 2014 that followed was just as harsh yet prices did not spike to the same extent because the market was better prepared with LNG and other alternatives to support consumption peaks in the region. 3

Financing TGP's proposed Northeast Energy Direct Project at the expense of electricity ratepayers in New

England is not in the public interest, especially in light of (i) structural changes to the ISO New England wholesale electricity market, such as its Winter Reliability Initiative program used during winter 2014 and winter 2015 to support fuel oil and LNG supply contracting for generating capacity, and ISO New England's "Pay-for-Performance" program set to take effect in June 2018 designed to address the potential peak day gas supply issue faced by electricity generators and consumers in New England, and (ii) existing infrastructure already in place, such as the Everett Import Terminal, that can provide a solution now that involves a lower cost investment, less disturbance to the environment, and ultimately places a smaller financial burden on the ratepayers of New England.

TGP asserts that its Northeast Energy Direct Project filing targets a need for additional natural gas infrastructure necessary to meet winter heating demand of LDCs and demand from natural gas-fired electricity generators that typically do not contract for firm pipeline capacity. TGP states that the Project is expected to provide significant benefits to energy consumers in the region in the form of lower natural gas and electricity prices because it allows greater access to shale gas production a few hundred miles away, while enhancing resiliency and redundancy and operational flexibility of the natural gas network. ENGIE LNG NA believes saddling New England ratepayers with the cost and environmental impact of the Northeast Energy Direct Project, when other potential solutions have not even been tested to see if they can resolve what essentially has amounted to a challenge for approximately 30 days a year during the two most recent winters, is the equivalent of using a wrecking ball to pound in a nail.

Electricity ratepayer funding of a long-term payback infrastructure expansion would be an expensive proposition given the circumstances where need exists for only certain peak days during winter months. Moreover, a recent study procured from Energyzt Advisors, LLC (the "Energyzt Study") by ENGIE LNG NA's domestic parent company, GDF SUEZ Energy North America, reflects that the electricity system maintained required reserve margins during recent extreme weather conditions despite plant unavailability, pipeline system pressurization issues and limited imports." And during the challenging weather of the past two winters, a lack of sufficient natural gas pipeline capacity was not the real struggle according to this study; there is more than adequate natural gas delivery infrastructure in the region. Rather, it was the lack of commercial arrangements to access the existing infrastructure that created the issue. The study supports market-based initiatives to encourage utilization of existing infrastructure in the most cost-effective way as opposed to building new pipelines funded by regulated electric ratepayers. Many of this study's findings are supported by the Massachusetts Attorney General's study of electric reliability in New England through 2030.5 ENGIE LNG NA believes it is very difficult if not impossible to predict the domestic price of the new source of natural gas supply to which TGP suggests New England consumers would have access, even if abundant. Over 4 Bcf per day of natural gas is slated to be exportable from the Gulf Coast of the United States beginning in 2016 and steadily increasing until 2020. Another 800,000 MMBtu per day is slated to be exportable from the Cove Point, Maryland facility around the 2017-18 timeframe. To ignore the potential price impact these exports could have on the Marcellus shale gas is short-sighted, regardless of whether, as TGP asserts, such shale gas will be more freely accessible as a result of locking in long-term higher pipeline rates to fund the Northeast Energy Direct Project. Even if natural gas prices could be mitigated during winter periods as a result of installing excess pipeline capacity, there is no certainty that the fixed expense of investing billions of dollars in pipeline infrastructure will not overburden the economic benefits of this new source of supply as a result of all the cost recovery required during non-peak periods when natural gas supply and capacity is already sufficient.

A more measured and cost-effective approach to the type of peaking gas problem New England faced over the last two winters (and it is arguable whether this peaking problem will occur with any frequency in future winters) would be to utilize existing infrastructure and leverage market design improvements first and only if such efforts fail to then consider alternatives that involve saddling consumers with a long-term bill for new infrastructure that isn't yet proven to be necessary. ENGIE LNG NA asserts that LNG has and can continue to play a crucial role in protecting the region from natural gas spikes on the spot market and ensure sufficient generation capacity and load response if utilities and generators contract for LNG and natural gas

vapor under the Pay-for-Performance program.

This past winter, the region was protected from spikes in natural gas prices thanks in large part to 39 Bcf of LNG supply into the region from various providers, including over 20 Bcf through the Terminal. This LNG has been credited with contributing to energy prices falling by more than 20 percent for many customers. This result -in the face of a more extreme winter in 2014 than the so-called “polar vortex” winter of 2013 (when measured -by snowfall and heating degree days)- demonstrates that market structure and preparation can be and should be relied upon first to solve the potential peak-day problems that might develop again in the future before burdening electricity ratepayers with unnecessarily subsidizing natural gas infrastructure. According to the Energyzt Study, even with only 50% of the historical average of LNG flows into the New England market in the winter of 2014 and the dispatch of dual-fuel units, reserve margins were maintained and natural gas prices and volatility reduced, when compared to the winter of 2013, by nearly one-half.⁶

VI. CONCLUSION

WHEREFORE, for the foregoing reasons, ENGIE LNG NA respectfully requests that the Commission grant its motion to intervene in the captioned proceeding.

Respectfully submitted,

Marc Silver

Footnotes:

- 1 The Everett Import Terminal, located in Everett Massachusetts, consists of an LNG ship berth, LNG storage tanks capable of holding 3.4 Bcf of LNG, installed regasification facilities capable of delivering in excess of 1 Bcf per day of natural gas, LNG truck loading/unloading facilities nominally rated at 100 trucks per day or roughly 100,000 MMBtu, and delivery interconnects with the Boston Gas, Algonquin Gas Transmission (“AGT”) and Tennessee Gas Pipeline (“TGP”) systems. In its operating history, the maximum single-day quantity of natural gas delivered directly from the Everett Import Terminal to Boston Gas was 233, 239 MMBtu, to the AGT interconnect was 276,309 MMBtu and to the TGP interconnect was 162,188 MMBtu. Its maximum vaporized gas delivery day was 737,750 MMBTU.
- 2 OREDA 4th Edition (2002). Critical pipeline compressor failure rate is 166.07 per 106 hours and spurious stop rate is 37.34 per 106 hours. The Terminal has experienced a single failure to deliver event in its 44 years of operation.
- 3 It is also noteworthy that Federal Energy Regulatory Commission recently initiated an inquiry into the transmission rates charged by ISO New England in Docket No EL16-19-000. According to a story in the New Hampshire Union Leader, the reliability build out following the blackout events in 2004 has saddled New Englanders with the highest electric transmission costs in the nation. See “New England Electric Rates to be Investigated”, New Hampshire Union Leader published January 9, 2015. With a portion of the expansion capacity included in the Northeast Energy Direct Project being proposed as a remedy to the winter 2013 price spikes that were driven by the polar vortex, there may be parallels to be drawn between the long-term investment an oversized pipeline expansion project would hoist on non-traditional ratepayers and the high electricity transmission rates New Englanders already pay. This is worth considering when the partial use of existing infrastructure and market-based policy alternatives have already demonstrated an ability to mitigate natural gas price spikes.

CERTIFICATE OF SERVICE

I hereby certify that I have this day served the foregoing document upon each person designated on the official service list compiled by the Secretary in this proceeding.

Dated at Boston, MA this 15th day of January, 2016.

Marc Silver

20160115-5159

CONNIE CHEN, DRACUT, MA.

Dear Federal Energy Regulatory Commission:

As a resident of the town of Dracut, Massachusetts, I've been noticed about constructing a new 36-inch natural gas pipeline with it's accompanying 23,000HP compressor station proposed by the Kinder Morgan – Tennessee Gas Corporation through the Town of Dracut.

As a resident and a parent of a newborn, who lives within 1,000 feet from gas pipeline, I am so concerned about exploitation, leakage, and environmental damage, especially compressor station, which are high threats to human's lives. I can see enough evidence of impacts from the type of pipeline, which already killed many people. In addition, I hate to see many houses raise "For Sales" signs, which is a big impact to the property values.

I believe the technology is moving so fast and many clean energy options, such as solar panel, are preferable for current and future times.

Would you please carefully consider the concern and impacts of such the pipeline project, do we need it, is it a good option, how does it change the global environment?

Please do not ruin our lives, our environment, our homes, our town, and our children.

Sincerely,

Connie Chen

Basis for Intervening:

I strongly oppose the proposed pipeline project, for many reasons. First of all, climate change is the greatest threat that our world faces and fracked gas contributes heavily to climate change. The world’s carbon budget cannot afford this pipeline. Secondly, I am concerned about health risks for those who live along the pipeline. Thirdly, as a ratepayer I am deeply offended that I would have to fund something as abhorrent as the pipeline.

20160115-5164

Connecticut Fund for the Environment

January 15, 2016

Secretary Kimberly D. Bose
Federal Energy Regulatory Commission
888 First Street, NE, Room 1A
Washington, DC 20426

Re: Proposed Northeast Energy Direct Project, Tennessee Gas Pipeline, L.L.C./Kinder Morgan (FERC Docket No. CP16-21-000)

Dear Secretary Bose,

Connecticut Fund for the Environment writes to supplement its earlier comments on the proposed Northeast Energy Direct Project (NED Project) dated September 15, 2015.

The Proposed Pipeline 300 Line CT Loop would be constructed through public drinking water supply watershed lands owned by the Metropolitan District Commission (MDC). In its comment letter dated August 28, 2015, MDC focuses on numerous deficiencies in the Resource Reports and Environmental Reports

submitted to FERC. This watershed land serves as the major source of the public drinking water supply to Hartford, and the towns of Windsor, East Hartford, West Hartford, Newington, Wethersfield, Bloomfield and Rocky Hill, Connecticut. Under state public health law enacted to protect drinking water, the MDC must determine if it is appropriate to seek a permit from the Commissioner of the Department of Public Health (Commissioner) to authorize a change in use of this highly protected property. The Commissioner must then take evidence and commence administrative proceedings to determine whether the construction of a portion of the proposed pipeline through this property would be protective of public health and public drinking water supplies. It would be highly inappropriate for any determination to be made by FERC concerning the proposed location of the 300 Line CT Loop until the MDC, the public, and the Commissioner have received the information requested in the MDC's August 28, 2015 comment letter. This analysis is the minimum required. MDC, the public, and the agencies that are charged with protecting Connecticut's public drinking water must have adequate time to make a well-reasoned determination of the potential impact this project may have.

Pursuant to Connecticut law, the Commissioner of Public Health must issue a permit to allow the change in use of these highly protected watershed lands to allow the construction of the 300 Line CT Loop through the MDC property. The purpose of such permit is to safeguard the purity and adequacy of the public drinking water supplies. Conn. Gen. Stat. § 25-32 et seq. Should the MDC seek such a permit, the Commissioner must weigh numerous factors including, any significant adverse impacts that this proposed project will have on the purity and adequacy of the public drinking water supply.

The Connecticut Department of Energy and Environmental Protection (DEEP) must also make numerous determinations to which this information is relevant. The proposed project requires several permits to be issued by the Commissioner of DEEP including, a Clean Water Act 401 Water Quality Certificate, R.C.S.A. § 22a-354i1 to 22a-354i10; a Stormwater Discharge Permit, Conn. Gen. Stat. 22a-430; and a Water Diversion Permit, Conn. Gen. Stat. 22a-366, et seq.

Therefore, FERC should take no action on the proposed location of the 300 Line CT Loop until such time as TGP has provided the requested information that was lacking in the previously filed Resource and Environmental Reports and until such time as the Commissioner of Public Health has had an opportunity to exercise his statutory duty to make a determination regarding the protection of this public drinking water supply.

Respectfully submitted,

/s/ John M. Looney

Staff Attorney

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.

Docket No. CP16-21-000

Docket No. PF14-22-000

MOTION TO INTERVENE OF LANDOWNER

Now comes the Allen-Chase Foundation, (hereinafter known as "Eaglebrook School"), and move to intervene in the approval of the pipeline project as proposed in the above noted caption by the Federal Energy Regulatory Commission pursuant to Commission Rules 38S.214(b) and 157.10

Eaglebrook School is a junior boarding school located in Deerfield, Massachusetts educating approximately 250 middle school age students in a residential campus. Eaglebrook School is a Charitable Corporation

established under the laws of Commonwealth of Massachusetts. It has a paramount responsibility to seek to protect the safety and well-being of its student body, faculty and staff.

Eaglebrook School seeks to intervene both as a land owner whose land is subject to a taking by eminent domain and as an interested Non-Governmental Organization whose interests are likely to be infringed upon because of its close proximity to the proposed pipeline.

Eaglebrook School is an injured party as the envisioned pipeline project has identified three parcels of land owned by Eaglebrook School that are subject to potential eminent domain takings. Portions of each of the three parcels are located within the anticipated rights of way and subject to condemnation if a certificate is granted. The proposed pipeline is also located in close proximity to Eaglebrook School's 250 students and its employees and presents potential safety and security risks. Numerous other parcels including classrooms, dormitories and faculty residences owned by Eaglebrook School are in close proximity to proposed pipeline project. Eaglebrook School submits it is an entity that has a direct interest in the proceeding. This intervention is timely filed.

For more contact information please enter Eaglebrook School below on the official service for docket nos. CPI6-21-000 and PF14-22-000, for all pleadings filings and correspondence in the proceeding should be served on the following:

Attorney John J. Stobierski
Stobierski & Connor
377 Main Street
Greenfield, MA 01301
413-774-2867
john@stobierski.com

Eaglebrook School also is concerned about the risks associated with this pipeline to its students and staff who may occupy the property both within and outside the incineration zone.

These parcels are used on a daily basis to carry its educational mission of the academic, athletic and outdoor programs. Students and employees study life science, recreate and host athletic competitions on these parcels. Eaglebrook School also allows neighbors to use the parcels to exercise, walk their pets and various other outdoor activities. The pipeline would jeopardize the continued use of these parcels due to the inherent risks posed by a natural gas pipeline.

These parcels have also been identified as a viable site for a photovoltaic (pv) array to provide up to 70% of Eaglebrook School's electric demand. Eaglebrook School is working towards constructing this array on these sites and has begun the local permit process with the Town of Deerfield. The construction of the pipeline would limit, interfere, alter and possibly even eliminate the option of installing a photovoltaic array.

Eaglebrook School seeks to intervene to monitor the proceeding and address potential impacts on its staff, its students, its property and its educational mission both within and outside the proposed right of way. Eaglebrook School opposes the proposed pipeline as it is currently designed. By intervening in the proceeding, Eaglebrook School will have access to Tennessee Gas Pipeline Company, LLC's filings which will enable the Academy to provide more detailed comments on safety enhancement or alternative routing scenarios. Intervention is necessary to enable Eaglebrook School to check and safeguard its land, including potentially significant archeological sites, its students and its staff and to defend itself from encroachment by Tennessee Gas Pipeline Company, LLC.

At this point Eaglebrook School does not have adequate information to provide a thorough and complete basis for its opposition, but reserves the right to do so in later comments as more information on the right of way boundary emerges, the nature and extent of the significance of its property and the health and safety concerns emerge.

During this proceeding Eaglebrook School may seek to verify that Tennessee Gas Pipeline Company, LLC can locate the proposed Northeast Energy Direct Project within or adjacent to the existing rights-of-way;

and, further Eaglebrook School may investigate whether appropriate pre-filing and application protocols were followed.

If Eaglebrook School is not permitted to intervene in this proceeding, it is highly likely to be adversely affected and bound by action taken in this proceeding without having had an opportunity to be heard.

Wherefore, for the foregoing reasons Eaglebrook School respectfully requests that it be permitted to intervene in these proceedings and that it be granted all the rights of a party thereto, including the right to notice of, and to participate in, all hearings and other proceedings.

Respectfully Submitted,
Allen-Chase Foundation also known as
Eaglebrook School,
By Its Attorney,
John J. Stobierski, BBO # 549222

CERTIFICATE OF SERVICE

I hereby certify that this document filed electronically through the FERC online system will be sent electronically to the registered participants as identified on this 15th day of January, 2016.

John J. Stobierski

20160115-5166

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC

)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF THE NEW HAMPSHIRE
DEPARTMENT OF TRANSPORTATION**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's (the "Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the New Hampshire Department of Transportation ("NHDOT"), by and through its attorneys, the New Hampshire Office of the Attorney General ("OAG"), hereby moves to intervene as a full party in the above captioned docket.

I. MOTION FOR INTERVENTION AND INTERESTS OF INTERVENOR

NHDOT is a duly constituted department of the State of New Hampshire charged by law with the planning, development and maintenance of the state's transportation network and the safe and efficient operation of state highways and railroad corridors for the benefit of the public. NHDOT further owns lands and rights-of-way for current and future use as highways and railroad corridors, and regulates the use and/or crossing of state highways, railroad corridors and rights-of-way by public and private utilities.

On November 20, 2015, Tennessee Gas Pipeline Company, LLC filed an application with the Federal Energy Regulatory Commission ("FERC") seeking a certificate of public necessity and convenience to construct and operate a natural gas pipeline and related facilities known as the Northeast Energy Direct project ("NED Project"). A portion of the NED Project is proposed to cross approximately 70 miles in New Hampshire, including numerous state highways, railroad corridors, rights-of-way, and other lands owned or controlled

by NHDOT. If Tennessee's application is granted, the NED Project may result in significant impacts to state highways, rights-of-way, railroad corridors and other NHDOT property.

Accordingly, as the state office charged with the safe and efficient operation of state highways and railroad corridors for the benefit of the public, and as an affected property owner, NHDOT has a direct and substantial interest in this proceeding, and no other party can adequately represent NHDOT's interests. NHDOT's intervention in this docket will not cause prejudice to, or additional burdens on, any other party to the proceedings, and will not cause any disruption to the proceedings.

NHDOT neither supports nor opposes the NED Project, and moves to intervene to obtain party status and preserve its rights to participate in the review process, including the ability to seek judicial review of any final decision on Tennessee's application. At this time NHDOT does not request a formal hearing in the docket, but reserves the right to request a hearing at a later date as allowed by the Commission's Rules and Regulations.

II. PLEADINGS AND SERVICE CONTACTS

Service of all pleadings and other filings in this proceeding should be addressed to the following persons, whose names should be placed on the official service list prepared by the Secretary in this docket:

Victoria Sheehan
Commissioner
New Hampshire Department of Transportation
John O. Morton Building
7 Hazen Drive
PO Box 483
Concord, NH 03302-0483

Basis for Intervening:

- 1) I am a member of an impacted community, and have concerns as to the negative effects the proposed pipeline will have on the local economy, environment, aesthetics, property values, and the health of the community. I own property that I purchased for its pristine beauty; I fear the pipeline will cause permanent scarring and contamination in the mediate vicinity of the property, resulting in a decrease in the value of my property and the enjoyment I derive from it.
- 2) I am a ratepayer to Eversource, whose rates have already increased because of this project and will increase again to cover cost recovery if Kinder Morgan secures them as a Pipeline customer. I understand that western Massachusetts already has among the highest electrical rates in the country. The proposed pipeline will impose an even greater burden on consumers, including myself, if built.
- 3) I donate to land conservation organizations in the area whose properties adjoin the proposed Pipeline. My donations would be violated if this project is permitted to take easements over land protected in perpetuity. Moreover, once conservation land is spoiled, it cannot be replaced and the wildlife living on it will be adversely affected.
- 4) For the reasons stated above, I believe I will be irreparably harmed if the proposed pipeline is constructed. Accordingly, I oppose the approval and construction of the proposed pipeline and ask that the FERC deny and prevent its construction.

Basis for Intervening:

I am opposed to the NED pipeline because it will reduce the value of my property (I live within 2 miles of the proposed route) and detrimentally affect the quality of life in my town. Conway is chiefly an agricultural community that relies on sustainable and sound use of land resources and this pipeline project will undermine our rights and responsibilities to the land we live on. Furthermore, building new infrastructure to support a dirty, highly polluting and unsustainable energy source like fracked gas is wasteful and short sighted.

Basis for Intervening:

Because this pipeline is WRONG! It destroys people's land and livelihoods without their consent and further reinforces our country's dependence on fossil fuels. We know that fossil fuels are contributing to climate

change but the only reason we aren't acting quicker is because of the toxic power this industry has over our government. We need to fight to get change!

20160115-5177

{Motion to Intervene of Michele Watson}

Basis for Intervening:

I am a resident of Merrimack, NH specifically Whittier Road. My family is applying as interveners in Docket CP16-21-000 because we will be directly impacted by this project in a number of ways including but not limited to:

1. Land/homeowner
2. If built, the quality of life in our neighborhood will be decreased significantly during construction and will be changed forever. We are original homeowners and purchased in this neighborhood with specific expectations regarding our surroundings which this pipeline would negatively change
3. The proposed route crosses our town's watershed and there is evidence that this could pose a great risk to our town's water supply
4. I am currently a Liberty Utilities ratepayer and am concerned that I could be forced to pay for this pipeline through my utility rates
5. Our town (Merrimack, NH) is identified as the location of a meter station, which I am concerned that it will negatively impact the quality of life for the residents of Merrimack NH.

Basis for Intervening:

As a residential tax payer of Temple NH, I wish to intervene in the Proposed Tennessee Gas Pipeline. As a home owner in a watershed district, I wish to intervene based on the potential pollution and contamination such a project could bring to our town, and specifically our well water, as well as the contamination and disruption of wetlands and conservation land. As a real estate agent, I wish to intervene on the basis of reduced

property values and desirability of this region to potential home buyers, which will directly affect my ability to provide for my family and pay my bills. Your approval of this project is not in the best interests of the citizens of New England, and the project in and of itself is an unnecessary behemoth, that will not directly benefit anyone but Kinder Morgan's bank account.

Individual cam@agileair.com

Basis for Intervening:

FERC's stated mission is to "Assist consumers in obtaining reliable, efficient and sustainable energy services at a reasonable cost through appropriate regulatory and market means."

My mission for the past 20 years has been to assist residents in maintaining our prized rural character through appropriate regulatory and private means. To assure them of reliably clean air and water, open space and sustainable farming at a reasonable cost.

I live in Temple, New Hampshire which is located at the brink of a section of the proposed Kinder Morgan pipeline route through southern New Hampshire, and the proposed compressor station in particular.

Some intervenors have presented facts showing lack of need. Dr.Curtis Nordgaard of Boston Children's Hospital presented information showing the enormous health risks. Others have presented facts showing the only beneficiaries of this venture will be Kinder Morgan, its shareholders and profiteers along the flow to foreign markets.

I serve on our planning board and last year the town approved an ordinance to protect our aquifers and ground water. A "dark skies" type light ordinance also passed.

Temple is the headwaters for several streams that flow to the Greenville Reservoir, situated in Temple, but is the drinking water resource for the town of Greenville. Which, like our elementary school is perilously close to the proposed site of the compressor station. Some streams flow to the Souhegan River which is a protected river under RSA 483. Temple is in its watershed and several roads near the proposed sitings have large signs placed by our Department of Environmental Services, warning of a watershed area which must be protected.

Although New Hampshire air suffers as a recipient of smoke from mid-western industrial stacks, for the most part our air is fresh, clean and smells good. Our forests help clean the air while offering some protection from climate change.

There is a permanent conservation easement on my land on the south side of Temple Mountain which overlooks the proposed pipeline placement. Although I am several miles from the site I will not be spared from fumes and noise. Over the years I have worked with and donated to a number of conservation organizations in New Hampshire and Massachusetts, some of which hold conservation easements designed to protect in perpetuity the very lands destined for destruction under Kinder Morgan's plans.

Can so many miles of open country, wetlands, wildlife, farms and homes really be written off as mere sacrificial areas?

People who live and work in cities think nothing of streets continually dug up left and right for installation of sewer and water pipes, electrical lines, cable and gas lines. The noise, smells and general chaos are part of the city experience. It is possible that FERC's commissioners are accustomed to that atmosphere and pay

no mind. But I wonder if any one of them perhaps has spent a week or weekend at a quiet country location; or, if they perhaps own a country place, can they imagine the sudden appearance of big yellow machines, with big noise and smells, careering through their back yard, neighbor's lawn, nearby farmers' fields?

President Obama (who I believe appointed several of the commissioners) bravely stopped the XL Pipeline which, like this one would have devastated acres of useful land, to carry some of the world's dirtiest and most poisonous oil to the port. Another venture with no benefit to the owners of the destroyed land, but to the benefit of Alberta Tar Sands, producers of tar sand oil!

The President has recently returned from Paris. At a meeting which exposed the awful truth about climate change, its causes and possible consequences, and brought many players to the table with intentions to act, the President, respecting science, is sworn to do something about it.

"Natural Gas" is touted as a panacea for climate change concerns, a fix all for naughty coal and ugly oil – but long before it will reach New England, back in Pennsylvania at its source, there's nothing "natural" about it. It is fracked gas. Forced from other privately owned land and in the process damaging the genuinely natural attributes of that area: clean air, clean water and a hope of being free from life changing noise and toxic fumes.

Finally, there is the matter of eminent domain:

June 23, 2006, President George W. Bush signed Executive Order 13406 "Protecting the Property Rights of the American People": it is the "policy of the United States to protect the rights of Americans to their private property". Takings by the Federal Government are limited to "situations in which the taking is for public use, with just compensation, and for the purpose of benefitting the general public." It does not appear that this Kinder Morgan venture satisfies these requirements.

Proposed "takings" only "compensate" for property directly impacted. New Hampshire is a right to farm state, and Temple has been taking steps to assure farmers their work and products are welcome.

But what happens to the farmer on whose land no pipeline is actually buried and on whose land the compressor station will not physically be sited – yet because his land abuts these sites he will lose nearly 100% of the value of his farm: who will buy contaminated hay? How can his cattle qualify as "organic"? and if no farm, who would want to build homes there – the customary fate of fallow fields.

The bitter irony? This farmer already "gave" much of his ancestral farmland for the construction of the aforementioned reservoir – but at least that had a legitimate and recognizable public purpose.

I hope FERC will indeed "be open and fair to all participants" and not feel that approval of this project will demonstrate "regulatory certainty through consistent approaches and actions.

Basis for Intervening:

We are homeowners at 20 Blueberry Hill Rd., Dracut, MA. We purchased this property in March of 2014. At that time, we were unaware of any pipeline proposal for the area. Shortly thereafter in April 2014, we received a letter asking us to grant permission for Kinder Morgan to survey our land. We did not approve. In subsequent mailings, the company tried to convince us to allow them to come on the property. We never granted them any authority to do so. In the summer of 2015, we saw surveying crews in the open land that

abuts our property, They came for several days and flags were left on the outer boundaries of our property. Soon after, we received letters stating that there has been a change in their plans and they were going to relocate the proposed compressor station site to another area.

This area that they have chosen is about one mile away from the original site. Essentially, this means that our home as well as the entire Parker Village neighborhood, Meadow Creek, Broadway Rd., and many other homes and businesses are still at risk. We as homeowners are concerned about our health and safety. Dracut has seen much growth in residential development and this project is harmful to the people who have made this town their home. To put so many lives at risk for a project that does not provide benefit to the citizens of Dracut is irresponsible of Kinder Morgan.

Joan & Mark Makarewicz

20160115-5185

UNITED STATES OF AMERICA
BEFORE
THE FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)

Docket No. CP16-21-000

**SUPPLEMENTAL COMMENTS OF
BAY STATE GAS COMPANY
d/b/a COLUMBIA GAS OF MASSACHUSETTS**

Pursuant to the Federal Energy Regulatory Commission's ("Commission") January 4, 2016 Notice of Extension of Comment Date, Bay State Gas Company d/b/a Columbia Gas of Massachusetts ("CMA" or "the Company") hereby submits the following supplemental comments for the Commission's consideration.

CMA is a local distribution company engaged in the business of buying, selling, and distributing natural gas to more than 300,000 retail customers in the Commonwealth of Massachusetts. These services are subject to the regulatory jurisdiction of the Massachusetts Department of Public Utilities ("MDPU"). CMA sought leave to intervene in this proceeding and submitted initial comments on December 18, 2015, as a member of the New England Local Distribution Companies. CMA now submits these supplemental comments in order to address certain company-specific concerns.

This case involves an application by Tennessee Gas Pipeline Company, L.L.C. ("Tennessee") for a certificate of public convenience and necessity authorizing it to construct, own, and operate a pipeline facility known as the Northeast Energy Direct ("NED") Project. CMA has executed a precedent agreement for pipeline transportation capacity on that project. The Company did so because its demand forecast, which is regularly reviewed and approved by the MDPU, shows a need to procure incremental firm transportation capacity in order to serve the needs of its customers.

In approving CMA's precedent agreement with Tennessee, the MDPU found that the Company had "identified a need for incremental capacity to ensure reliability and deliverability of natural gas," and that "the proposed acquisition of capacity on the NED project will enable the Company to meet its short- and long-term requirements." Bay State Gas Company d/b/a Columbia Gas of Massachusetts, D.P.U. 15-39 (Mass. D.P.U., August 31, 2015), at 48. The MDPU further found that the proposed agreement would "enhance the reliability, flexibility, and diversity of the Company's supply portfolio." *Id.* Finally, the MDPU concluded that:

. . . [T]he Company has established that, based on both price and non-price factors, the NED project represents the most viable, reasonably available alternative for the Company to meet its current and forecasted customer requirements in a least-cost, reliable manner.

Bay State Gas Company, D.P.U. 15-39, at 40.

In view of these considerations, CMA submits that Tennessee's proposed NED Project is clearly in the public interest. Acquiring capacity on that project will enable the Company to meet its forecasted needs and provide reliable supplies of natural gas to its customers at a lower cost. CMA therefore supports the pro-

posed NED Project and urges its prompt approval.

Respectfully submitted,

Individual	cathybert@me.com	

Basis for Intervening:

I live in Deerfield, Massachusetts, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest that may be directly affected by the outcome of the proceeding because of:

1. HEALTH and SAFETY: the proposed route crosses through my town, 5 miles from my home and I would drive over it on my commute to work. I am concerned about the safety of this pipeline, from toxic emissions to risk of groundwater contamination to the possibility of a leak or explosion. I also know that the small emergency services in our rural town are not equipped to deal with a pipeline accident. And Kinder Morgan's safety record is not reassuring.
2. ECONOMIC: The economy in Western MA is dependent upon tourism – people come here to enjoy the history and the natural beauty. Also, as an electric ratepayer, I expect to see increased electric bills to cover this project. I am particularly concerned about Kinder Morgan's precarious financial situation; the short life expectancy of Marcellus shale production, and the rapid growth of alternative energy sources. Many people feel that we will be left holding the bag for this a huge, expensive, and unneeded infrastructure project.
3. QUALITY OF LIFE. Like most of the locals, I live here for a reason. The fresh air, outdoor recreation, clean water, and locally grown food are of great importance to me. This proposed pipeline would destroy our rural quality of life .
4. I am a member of the Trustees of Reservations, Mass Audubon, and Atlas Farm Market. I have invested in protecting and conserving our natural treasures. The proposed pipeline crosses or runs near many protected field, forests, and farmlands. These lands are protected IN PERPETUITY, under MA article 97.

5. Most importantly, at a time when we are facing the possibility of catastrophic and irreversible climate change, to go ahead with this project would be irresponsible.

For these reasons, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

MUNICIPAL COALITION AGAINST THE PIPELINE
NH MUNICIPAL PIPELINE COALITION
NORTHEAST MUNICIPAL GAS PIPELINE COALITION

January 15, 2016

Chairman Norman Bay
Federal Energy Regulatory Commission
888 First Street NE
Washington, DC 20426

Dear Chairman Bay:

Northeast Municipal Gas Pipeline Coalition, Municipal Coalition Against the Pipeline, and NH Municipal Pipeline Coalition are regional groups of municipal officials who meet to review and assess the potential impacts of Tennessee Gas/Kinder Morgan's (TGP/KM) Northeast Energy Direct (NED) project on FERC Docket CP16-21. Our communities represent forty (40) municipalities, home to over 390,000 people in 1 Massachusetts and New Hampshire. We write today for two reasons:

1. To share our frustration over the current TGP/KM application (CP16-21) process, and
2. To ask for a response to our November 20, 2015 letter to you asking that Federal Energy Regulatory Commission (FERC) combine the proposals for additional gas pipeline capacity in New England into one consolidated FERC review.

We were disappointed that FERC chose to accept and notice the TGP/KM application after issues were raised about its completeness including a December 2, 2016 letter² from the six Regional Planning Commissions representing our region. After the December 21st and December 30th responses to comments and environmental information requests, it is even more apparent that the application was not complete and will not be complete until at least the end April 2016 when TGP anticipates further submittals. The response to comments that TGP/KM did provide tended to be nonspecific and not useful to communities trying to assess potential impacts. Attorney Vincent DeVito summed up the situation well in a December 30, 2015 quote in the Greenfield Recorder³:

"TGP's response is a continuation of its tactic of asking FERC and its stakeholders to wait until they

gather more information. It is clear their filing was premature and that it remains grossly inadequate. Traditionally, filings are more fully baked before being presented to FERC. Filings buttressed mostly by forward looking statements may placate corporate shareholders but do not meet the requirements of FERC .”

It appears to us and our constituents that TGP/KM is making a mockery of FERC’s pre-filing process by not adhering to the commitments it requires. We would like to hear from you how FERC plans to hold TGP/KM accountable to provide the information needed by our communities and your staff to give adequate and timely consideration to this proposal with its substantial implications as is consistent with the Commission’s regulations.

On November 20, 2015 we wrote to you to ask that FERC combine the proposals for additional gas pipeline capacity in New England into one consolidated FERC review. This should include Tennessee Gas/Kinder Morgan’s Northeast Energy Direct (NED), Tennessee Gas/Kinder Morgan’s Connecticut Expansion (CEP), Spectra’s Atlantic Bridge, Spectra’s Access Northeast, Portland Natural Gas Transmission System Continent to Coast (C2C) projects, existing and planned LNG infrastructure, and any other natural gas infrastructure proposal currently before FERC, whether in the pre-filing, or formal application phase, or being considered at the same time as the above pipeline proposals. Perhaps our letter was overshadowed at FERC by the TGP/KM application submittal later in the day. We are still waiting for a response to share with our citizens.

Thank you for your time and consideration. We look forward to hearing your response.

The undersigned coalitions,

Jed Proujansky, Selectman, Northfield and Municipal Coalition Against the Pipeline, including Ashfield, Conway, Deerfield, Gill, Leverett, Montague, New Salem, Northfield, Orange, Warwick and Wendell MA.

Tad Putney, Brookline Town Administrator, Chair of New Hampshire Municipal Pipeline Coalition, including Amherst, Brookline, Fitzwilliam, Greenville, Litchfield, Mason, Merrimack, Milford, New Ipswich, Pelham, Richmond, Rindge, Temple, Troy and Winchester.

Stephen C. Themelis, Pepperell Board of Selectmen, cochair of Northeast Municipal Gas Pipeline Coalition, and

Stuart Schulman, Groton Board of Selectmen, cochair of Northeast Municipal Gas Pipeline Coalition, and

Cathy Richardson, Dracut Board of Selectmen, cochair of Northeast Municipal Gas Pipeline Coalition, including Andover, Ashby, Dracut, Dunstable, Groton, Littleton, Lunenburg, Lynnfield, North Reading, Peabody, Pepperell, Tewksbury, Townsend, and Wilmington MA, and Brookline, NH.

Footnotes:

{Motion to Intervene of Jennifer Peaslee}

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we, name here, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Provide your name,
address,
phone number
email address

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Provide paragraphs on how construction of the pipeline will adversely impact you: (You may put your reasons here in the body, or on a separate sheet called "Exhibit A", with wording here stating : "See Exhibit A, attached and made a part hereof by reference")

e.g. how might it affect your home and family

how it might affect natural resources important to you and how it will impact your enjoyment of those natural resources

how it might affect your work

how it might affect the ways you use your property

how it might impact your community and how that will adversely impact you.

I have important information and perspectives to bring to this process, consideration of which will serve the

public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this _____ day of _____, 201____.

Basis for Intervening:

I am a home owner in Hadley MA. I understand that our energy demands indicate that we need more gas lines to New England. However, we cannot simply ignore the pollution implications of fracked natural gas. The investment would be better spent on fixing leaks in our current infrastructure and increasing fuel efficiency. As a rate payer I do not want to be forced to subsidize this project that is not good for New England and not good for the environment. I am proud of what Massachusetts has been able to do so far to increase efficiency and support solar power.

Basis for Intervening:

I live in Richmond, Massachusetts and request the right to intervene in this proceeding to oppose the Tennessee Gas Pipeline Company, L.L.C.(TGP)Northeast Energy Direct Project (NED). I have an interest which may be directly affected by the outcome of the proceeding as an abutting landowner, an electric rate payer of Massachusetts, and as a citizen of the United States.

The originally proposed NED route was slated to pass approximately 100ft from my kitchen door. The currently proposed route for NED skirts my town altogether. However, TGP is now reconsidering running it through Richmond, in the event they decide to reroute NED to cross the state alongside I-90. In this scenario, TGP proposes constructing a new pipeline along a corridor of existing gas pipelines that run through Richmond. This corridor of existing pipelines runs through property that has been in my family since 1845,

Individual taimichal@earthlink.net

Basis for Intervening:

We do not need any more fossil fuels such as oil. These pipelines will leak oil into the ground as well. We do need more solar power and wind power and non toxic means to create energy

Individual rwlindsay@gmail.com

Basis for Intervening:

This project is not needed, but rather weatherization and solarization of our communities can employ more people and displace the need for a massive new gas pipeline that would snake through farms, private lands, and protected forests and wetlands. Overall this project is a resource drain that will lead to further fossil fuel dependency and the destruction of our natural resources.

20160115-5201 Motion to Interevene of Glenn and Laura Bertrand

We are directly affected landowners in the proposed route of the Northeast Energy Direct (NED) Project. The proposed route takes the pipeline approximately 150 feet upslope from our home and cuts a swath through 52 acres of our tree farm. Building this in the proposed route will cause irreparable damage to our trees, wildlife habitats, the aesthetics and the value of our property. The right of way for the Constitution Pipeline which was taken by eminent domain parallels the NED route 500 feet further to the north.

The placement of the pipeline will cause irreparable damage to our wells and the numerous springs found on our property. Many of these springs feed wetlands adjacent to our 8 acre pond. Erosion and runoff from pipeline construction will cause sedimentation to occur in these sensitive areas.

We are also deeply concerned about the safety of the pipeline. We do not believe that gas pipelines are safe. Construction of this pipeline will forever disfigure the landscape and degrade the quality of our water and wildlife habitats. It will destroy our potential income from timber and maple sugar production. It will create an unacceptable safety hazard. We are opposed to the construction of the pipeline.

As no one else can represent our interests in this matter, we are filing this motion to intervene.

Individual cavinemily@yahoo.com

Basis for Intervening:

I am a resident of Plainfield Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. My property is approximately one mile from the proposed NED Pipeline route. Not only would the value of my property be directly negatively impacted by this project, but as a citizen of Massachusetts, I

and all other Massachusetts citizens would be impacted by the effects of the construction and maintenance of this project on protected lands and by the violation of Article 97 of the Massachusetts constitution if these protected lands are sacrificed for commercial use. Farmlands, forests, and town and state parks are valuable and irreplaceable public resources, and humans and wildlife would be severely negatively impacted by the loss and degradation of such resources, which is why our state passed this important legislation for the benefit of its citizenry in the first place.

It is my understanding that our State Attorney General has issued a report stating that Kinder Morgan and Berkshire Gas have not demonstrated adequate domestic need for this project and there is strong evidence that the true motive of these energy companies is to profit from overseas markets for natural gas. Members of the Healthcare community have spoken to local residents about the serious public health threats posed by the compression stations and other infrastructure required for this proposed project. American citizens must not be required to sacrifice their health and freedom and the right to the unimpeded use of their parks and wildlife preserves for the profits of the energy industry.

Furthermore, climate scientists have warned us that we are not keeping up with an adequate time-line for phasing out our over-use of fossil fuels if we, as the human race, are serious about preserving the life and health of our species and of the entire biosphere of planet Earth. It is past time for our government to lead the way in making the transition to new and safer sources of energy, and as regulators of energy production in our country, FERC should be one of the most active entities in promoting this transition, despite the economic and political power of the current energy industry.

I live in Averill Park, within about 1.5 miles of the proposed compressor station. I am worried about the quality of my drinking water. I am heartsick at the prospect of acres and acres of lights at the compressor station destroying the rural character of my country home, and blot out the stars in the nighttime sky. I believe the surrounding woodlands are going to be destroyed by leaking methane and other toxins that will be seeping from the pipeline. We do not need this extra gas and we will receive no benefits from it--only risk. I have 30 acres of forested land and am a good steward. I hear coyotes and owls at night. I do not want to hear the unceasing thrum of a compressor station. This is our land. It is our home. It isn't right that it can just be wrested from us by a huge out-of-state company that puts profits before people. Please help us protect our homes.

Basis for Intervening:

I've been a resident of Williamsburg, Massachusetts, for over thirty years. I am strongly opposed to the NED Pipeline, which would make an industrial gash through the most beautiful, unspoiled, healthy ecosystem in the state. These are also some of the strongest, healthiest communities in the state, since in rural areas people need to cooperate with and support each other; the farms feed people throughout the region. The areas in question directly provide me and my family with recreation, conservation of water and wildlife, and a deep connection to the natural landscape. The ravages of construction, the presence of such an intrusive infrastructure, the insult of overriding local values for corporate profit, and the lack of value for—indeed the damage of—the affected communities and ecosystems combine to make this a project I must vehemently protest.

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR REPRESENTATIVE MICELI TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, James Miceli, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Representative James R. Miceli
MA State House, Room 237
Boston, MA 02133
617-722-2305
James.Miceli@mahouse.gov

II. INTEREST OF PETITIONER

As State Representative for the 19th Middlesex District, I act on behalf of the constituents of the towns of Wilmington and Tewksbury. The property of numerous residents in these communities have come under threat by the proposed Lynnfield Lateral portion of the pipeline. I have heard from a great many of these constituents, who stand wholly opposed to the idea of the pipeline and believe it represents a severe obstacle in preserving the sanctity of their property. The pipeline threatens to not only endanger land in the towns of Wilmington and Tewksbury, but also violate Article 97 of the Massachusetts Constitution and serve as a burden to residents across the state. I request that my name be added to the list of interveners so that I may remain wellinformed on the status and best address the needs of my constituents. I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, James R. Miceli, respectfully requests that the Commission grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 15th day of January, 2016

James R. Miceli
State Representative
MA State House, Room 237
Boston, MA 02133
617-722-2305

StopNED info@stopned.org

Basis for Intervening:

Basis for Intervening:

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy regulatory Commission (the "Commission") promulgated at 18 C.F.R. 382.212 and 385.214, StopNED respectfully (1)

moves to intervene in the Tennessee Gas Pipeline Company, LLC Docket #: CP16-21-000, regarding the application (the “Application”) of Tennessee Gas Pipeline Company, LLC (the “Company”) for a certificate of public convenience and necessity for the Northeast Energy Direct (“NED”) project, and (2) protests the proposed project as well as the Commission’s acceptance of an incomplete application.

StopNED is a grassroots coalition of leaders of impacted communities in Massachusetts and New Hampshire which have organized to oppose the NED fracked gas pipeline project. Our mission is to provide education about the negative health, safety, environmental, and economic impacts from the pipeline, to oppose ratepayer forced risk-taking of funding the construction of fossil fuel infrastructure, and other forms of opposition support while at the same time pursuing legislation for a clean energy future of reduced reliance on fossil fuels, increased efficiency, expanded renewable technologies, and mandated repairs of existing infrastructure.

StopNED seeks to intervene in opposition to the proposed NED project. StopNED’s interests that may be directly affected by the outcome of the proceeding include:

- The pipeline is not in the interest of the public good. It directly and negatively impacts our member communities.
- Our communities have passed Non-binding Resolutions in opposition to the pipeline. Our Resolutions identify the concerns expressed by our communities related to their rights to clean air, clean water, and a future with a reduced reliance on fossil fuels.
- Our communities are now represented on two different Alternative routes, the Massachusetts Alternative Route and the Massachusetts Route 2, Article 97 Co-Location Hybrid Alternative Route. Our presence on alternative routes puts us squarely in the sights of this pipeline project.
- Many conservation and agricultural parcels are put at risk within our communities due to this proposal. Some of these parcels are permanently protected by the Commonwealth of Massachusetts, some by the municipalities, and some by private landowners. All actions taken to preserve these lands were intended to be permanent meaning into perpetuity, not until a commercial entity came along to take it.
- StopNED has spent countless hours working with directly and indirectly impacted residents, leaders of directly impacted communities, and legislators of impacted constituencies to stop the Kinder Morgan Tennessee Gas Pipeline.

Pursuant to 18 CFR 157.10(a)(1), StopNED respectfully requests a formal hearing on the Application, including the environmental impacts of and public need for NED.

StopNED is applying to intervene in the interest of the public good. Our interests cannot be adequately or completely represented by any other party and in accordance with the Commission’s Rules of Practice and Procedure, we believe we satisfactorily meet the conditions for intervention because our participation is in the public interest. We have a direct and substantial interest in the outcome of this proceeding. Therefore, StopNED requests that the Commission grant this motion to intervene.

Basis for Intervening:

I strongly oppose the proposed pipeline project, for many reasons. First of all, climate change is the greatest

threat that our world faces and fracked gas contributes heavily to climate change. The world's carbon budget cannot afford this pipeline. Secondly, I am concerned about health risks for those who live along the pipeline. Thirdly, as a ratepayer I am deeply offended that I would have to fund something as abhorrent as the pipeline.

Basis for Intervening:

I live in Merrimack, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because...

- I am a landowner directly impacted by the pipeline route / compressor station.
- I am a resident who lives in the "blast radius" [or whose daily commute crosses over the proposed pipeline route] so I would be at physical risk.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.
- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health.
- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.
- I am gas ratepayer of Liberty who has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts).
- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan").

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. §

214(b)(2)(ii) include:

As a Contingent Property Owner: I am the spouse of an estate beneficiary of the owner of the property located at 529 Main Street, West Townsend, Massachusetts. The proposed pipeline will cut directly across this property and includes plans to use several acres of the property for construction, storage, and a staging area. This acreage produces three crops of hay per year. The proposed removal of all top-soil will not only render these fields unable to produce hay, but the Company plans to construct and operate a work-site and Valve Station in the field. The extremely close proximity to proposed construction would make the property unlivable during construction. One of the specific functions of these valve stations is to release gas into the air. This will negatively impact upon the health of any resident at the property and reduce the value of the land. The release of dangerous gases, the lights, sounds, and smells after construction will greatly diminish the usability and value of the property.

As a Consumer: My interest as an electric ratepayer, inasmuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from rate-payers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), the Company is proposing to build a pipeline to meet capacity requirements which do not exist and will never materialize and which will in all likelihood be used primarily to export liquid petroleum. This competing demand for our limited energy resources will likely drive the domestic cost of energy upward. This will be compounded by the likelihood that this massive proposed overbuild will result in unutilized capacity by New England utility companies which will pass the cost of this unused capacity to local rate payers.

As a Massachusetts property owner and taxpayer: I object to the proposed Pipeline because it will destroy land which has been set aside as a land trust and protected by Article 97 of the Articles of Amendment to the Massachusetts State Constitution. FERC does not have the authority to violate the Massachusetts Constitution nor does FERC have the power or authority to grant the Company the right to violate the Massachusetts Constitution. FERC should set aside the pipeline application by the Company until such time as the Massachusetts Legislature has voted to approve release of all impacted areas under land trust for use by Kinder Morgan.

As an ecologically conscientious citizen: The proposed pipeline will destroy protected wetlands, breeding grounds for endangered wildlife, and destroy vast acres of state parks. Many sections of the pipeline, including the valve station they want to build in my mother-in-law's field, are in flood plain where there are deep floods of several feet and massive ice-dams which make any pipeline or valve station extremely susceptible to damage and ecological catastrophe.

WHEREFORE, for the foregoing reasons, I respectfully request that my Motion to Intervene be granted.

Respectfully submitted,

20160115-5226

Basis for Intervening:

My primary reason for intervening is that I am a land/homeowner affected by the proposed construction of the NED pipeline, as well as the compressor station proposed to be built in New Ipswich, NH and within a mile of my home. I am concerned about a variety of issues that are related to the 1) construction i.e. noise,

potential disruption of natural aquifers and wells 2) the pipeline itself i.e. the depth at which it will be buried in areas known to have very deep frost lines, the lower quality and size of the proposed pipe, potential for explosions, leaks and other issues known to happen in gas pipelines, taking of land by eminent domain, disruption of conservation lands, potential impact to wildlife 3) the compressor station i.e. noise, health impacts of particulates dispersed by compressor stations, etc.

Mostly as a homeowner within a small distance from the pipeline and compressor station, I am concerned about the potential health effects, negative impacts on our property values and pollution of our water and air.

Basis for Intervening:

To start, we do not need this pipeline for our energy needs as the Attorney General of Massachusetts Maura Healy has stated based on extensive research. Even if we did have additional energy needs we should be focused on expanding our renewable energy resources. We should not be building a fossil fuel infrastructure when there are excellent alternatives and our planet is in or on the cusp of being in crisis. In addition we should all be apprehensive that a for profit company will take, by eminent domain, private and public land some of it protected land, wetlands and our watershed etc. for a dangerous pipeline that we do not need. These pipeline infrastructures are dangerous to our health, well being and property when things are going as planned and devastating when things go wrong, as we see in the Porter Ranch area of California right now. The size of this project as well the Maritimes & Northeast pipeline in Maine applying to reverse the direction of their pipeline which would bring this gas to export facilities in the Canadian Maritimes, has huge red flags that this gas will be exported. Exporting this gas along with the tariff on our electric bills that we will be charged to ultimately pay for this pipeline will surely mean that we will be paying more rather than less for gas/energy if this is allowed to happen.

The Berkshires, the area that I live in, has an economy that is dependent on our scenic beauty, countryside, wildlife, fresh air, farms, etc. This pipeline will emit toxins, methane, produce light and sound pollution at compressor stations that will adversely affect our economy as well as the health and well being of the people and wildlife who live here. It would be extraordinarily shortsighted to proceed with this pipeline.

Basis for Intervening:

I am a resident of Merrimack, NH specifically Whittier Road. My family is applying as interveners in Docket CP16-21-000 because we will be directly impacted by this project in a number of ways including

but not limited to:

1. Land/homeowner
2. If built, the quality of life in our neighborhood will be decreased significantly during construction and will be changed forever. We enjoy our quiet, peaceful neighborhood with our 3 young children and moved here 4 years ago to be away from all that the construction of the pipeline will bring.
3. The proposed route crosses our town’s watershed and there is evidence that this could pose a great risk to our town’s water supply
4. I am currently a Liberty Utilities ratepayer and am concerned that I could be forced to pay for this pipeline through my utility rates
5. Our town (Merrimack, NH) is identified as the location of a meter station, which I am concerned that it will negatively impact the quality of life for the residents of Merrimack NH.

II. NHMPC’S INTERESTS WOULD BE IMPACTED BY THE PROJECT

Interests of the NHMPC

The above matter concerns an application for the construction of the Northeast Energy Direct natural gas pipeline and other facilities (referred to herein as “NED” or “Project”) proposed by TGP, a subsidiary of Kinder Morgan, Inc. Over 70 miles of the pipeline will traverse through the Towns within the right of way of public streets and on other property owned by the Towns.

NHMPC is an unincorporated association of New Hampshire municipalities located along the route of the Project in New Hampshire and formed with the purpose of preserving and protecting the interests of member municipalities and residents, including health and welfare, and safety. NHMPC is opposed to the Project and Company's application for a certificate of public convenience and necessity filed with the Commission (the "Application").

NHMPC includes, among other things, municipalities that would be directly impacted by the proposed NED route; municipalities whose watersheds would be impacted by the Project; municipalities that would have compressor stations located within their border or nearby; and a municipality with a superfund site in proximity to the route. NHMPC also includes members who are ratepayers of a local distribution company who have sought or are seeking approval for precedent agreements and would be subject to rate impacts should the Project become operational. The Coalition seeks to prevent negative economic and environmental impacts associated with the Project, and the overbuilding of gas infrastructure given the alternatives, including existing gas pipelines, liquid natural gas, renewable energy sources and enhanced efficiency.

This Project will fundamentally damage the Towns and the entire southern region of New Hampshire, and constitutes a wholly unnecessary and unjustifiable energy option with unreasonable and extensive destructive impacts. The NHMPC and its Towns have already voiced many of these concerns about the Company and its proposed Project in comments submitted in Docket No. PF14-22, as well as in individual Town petitions to intervene in this docket, and these are incorporated herein by reference.

Accordingly, NHMPC's intervention is necessary to enable the Towns to preserve their public and private natural resources, and to protect their residents, businesses, and associated properties from damage and harm. The Project directly burdens and adversely impacts each of the Towns and would irrevocably alter the cultural heritage, community character, and scenic resources of the entire region as well. NHMPC has a direct and material interest in the outcome of this Application that cannot be adequately represented by other parties to this proceeding. Obtaining party status is critical to the NHMPC's ability to fully represent the identified Towns' interests, advocate in opposition to the Project, and recommend necessary protective measures should the Project be approved.

The NHMPC's Direct Interests Are Recognized by the Natural Gas Act

Under the Natural Gas Act (the "Act"), FERC must determine whether the proposed NED pipeline "is or will be required by the present or future public convenience and necessity."¹ Applying this standard, "the Commission will approve an application for a certificate only if the public benefits from the project outweigh any adverse effects."² Assessing the need for a proposed pipeline is a critical part of this balancing test, and the Commission has charged itself with considering "all relevant factors reflecting on the need for the project." *Id.* at 61,747. In doing so, FERC must address "whether the applicant has made efforts to eliminate or minimize any adverse effects the project might have on the existing customers of the pipeline proposing the project, existing pipelines in the market and their captive customers, or landowners and communities affected by the route of the new pipeline." *Id.* at 61,745. Regarding the latter group, FERC has stated that:

landowners whose land would be condemned for the new pipeline right-of-way, under eminent domain rights conveyed by the Commission's certificate, have an interest, as does the community surrounding the right of-way. The interest of these groups is to avoid unnecessary construction, and any adverse effects on their property associated with a permanent right-of-way.

Id. at 61,748.

FERC has recognized the explicit rights of landowners and communities in this proceeding and their direct interest in avoiding adverse effects of the Project. The Towns and their citizens are the landowners and the communities with property that would be directly impacted by the Project.

FERC must balance those adverse effects against public benefits of the proposal. *Id.* at 61,745. "To demonstrate that its proposal is in the public convenience and necessity, an applicant must show public benefits

that would be achieved by the project that are proportional to the project's adverse impacts." Id. at 61,748. "Vague assertions of public benefits will not be sufficient," See id. at 61,748; see also Millennium Pipeline Co., 141 FERC ¶ 61,198 at P 14, n.18 (2012). ("The more interests adversely affected or the more adverse impact a project would have on a particular economic interest, the greater the showing of public benefits from the project required to balance the adverse impact"). Id. at P 19.

In this particular case, the Applicant has submitted "vague assertions". As noted below, there is no demonstrated need for the Project, and the Company's assessment of alternatives is flawed and self-serving. Moreover, fundamental assessments with respect to the route, co-location and upgrading existing pipelines are inadequate and incomplete. NHMPC submits that the Project would create numerous and significant project impacts on the Towns with no demonstrable public benefits.

III. TGP'S APPLICATION IS DEFECTIVE AS FILED

TGP's Application is Premature and Should be Rejected

On December 7, 2015, the Commission accepted TGP's Application and set a January 6th, 2016 deadline for motions to intervene that was subsequently extended to January 15, 2016. On December 8, 2015, the Commission noted significant deficiencies in the Company's Application and issued an information request, noting, among other things, that the Company "did not fully provide adequate data for alternative comparisons" in its Application as required by the Minimum Filing Requirements ("Minimum Filing Requirements") under 18 C.F.R. 380, Appendix A and 18 C.F.R. 380.12(1)(2)(ii). Moreover, the Coalition is aware of many significant route and ancillary facility changes that have occurred since the Application was filed and accepted. These, and other violations of the Minimum Filing Requirements as noted in this docket, should have barred the Commission from accepting the Application and warrant its rejection at this time. As such, this proceeding should properly be terminated, and the docket closed until further action by the Commission.

TGP Has Not Adequately Evaluated the Need for and Alternatives to the Project

TGP's Application fails to demonstrate that the markets it proposes to serve cannot be adequately served by increased use of clean, renewable energy sources, or alternatively, by a combination of renewable energy sources, existing generation, other resources such as LNG, and existing pipeline infrastructure (pipeline infrastructure is discussed below). The Company's submittal falls short of the information required to allow for a "rigorous" exploration and "objective evaluation" as required in this process. See 40 C.F.R. § 1502.14(a). Consideration of alternatives is "the heart of the environmental impact statement", because it compels agencies to "present the environmental impacts of the proposal and the alternatives in comparative form, thus sharply defining the issues and providing a clear basis for choice among options by the decision maker and the public." Id. The Commission has recognized the need to give appropriate consideration to the enhancement of competitive transportation alternatives, the possibility of overbuilding, subsidization by existing customers, the applicant's responsibility for unsubscribed capacity, the avoidance of unnecessary disruptions of the environment, and the unneeded exercise of eminent domain in evaluating new pipeline construction. See Algonquin Gas Transmission, LLC, 150 FERC ¶ 61,163, at P 7 (2015).

FERC's environmental analysis of the Project therefore must also contain a detailed and substantive discussion of the "No-Action" alternative and the environmental impacts of other reasonable alternatives to the NED Project, including alternatives that would avoid or mitigate the environmental impacts of the Project.

TGP provides only a cursory review of alternative energy sources, concluding that any given alternative source is not a preferred or viable alternative to the natural gas transportation capacity to be supplied by the NED project. TGP's analysis is fundamentally flawed by its failure to even consider the aggregate contribution of renewable sources. The Company's approach ignores that the development and implementation of renewable energy sources and state energy efficiency programs and demand reduction efforts will reduce the need for and/or amount of additional pipeline capacity. Compounding this flawed analysis is TGP's superimposition of a natural gas framework as a complete substitute for evaluating alternative energy sources—the Company mistakenly assumes that other alternatives should be evaluated as a replacement for energy deliv-

ered by the Project; the Company does not analyze whether incremental gas capacity is needed and the role of alternatives will play in the reduction in the demand for gas delivered from the pipeline. The Company simply used incorrect assumptions and FERC should require a detailed analysis of need.

In addition, although TGP concedes in its “No-Action” discussion that other pipelines and companies can resolve alleged pipeline transportation capacity constraints, it fails to analyze the comparable environmental impacts of those other projects. The Coalition believes that the impacts from the NED pipeline, assuming *arguendo* that any new gas pipeline is required, are much greater than comparative impacts from other pipeline alternatives. While TGP has acknowledged that some environmental impacts may always remain³, it has not undertaken any review of comparative impacts or whether in fact this pipeline is needed given other pipeline projects under development.⁴ FERC, in order to fulfill its obligations under NEPA, must therefore conduct an independent evaluation of need and the “No-Action” alternative and not simply accept TGP’s flawed analysis.

Moreover, the Massachusetts Attorney General’s Office undertook a study which evaluated options to address regional electric reliability in New England, including natural gas capacity needs, through 2030⁵ (“AG’s Report”) and determined that the Project is not needed to serve electric reliability needs in the region and is more costly than alternatives. Among other things, a key finding of the study (and contrary to assumptions made by TGP in its filing) was that the reliability of New England’s power system can and will be maintained over time, including during periods of peak winter demand, without adding any new interstate natural gas pipeline capacity to service the New England region.⁶ The findings of this report, coupled with TGP’s inadequate consideration of alternative energy sources, provide the basis for rejecting TGP’s application, or alternatively, evaluating the underlying issues during an evidentiary hearing.

In short, the Coalition opposes the NED Project as an unnecessary overbuild of gas infrastructure, particularly given less impactful alternatives. The meager market response of the Project Shippers (“Shippers”) to the Applicant’s proposal underscores a lack of need and the availability of alternatives for the project.⁷ Moreover, many Shippers have not adequately evaluated alternatives to the Project, including LNG⁸ have contracted for replacement capacity and not new capacity.⁹

The Project is the Most Destructive Pipeline Alternative

As noted above, as part of its “public convenience and necessity” determination under the Act, FERC must consider “logical alternatives which might serve the public interest better than any of the projects outlined in the applications.” See *Northern Natural Gas Co. v. Federal Power Comm’n*, 399 F.2d 953, 973 (D.C. Cir. 1968). Indeed, FERC should reject proposals when alternative proposals would better serve public convenience and necessity, even when the agency lacks the authority to mandate the alternative. *City of Pittsburgh*, 237 F.2d 741,756 n. 28.

In accordance with those principles, FERC must specifically identify any alternative that would not involve the extensive greenfield development of a new gas infrastructure corridor through areas untouched by gas development or pipeline construction. Among other considerations, this requires robust analysis of alternatives that (1) co-locate with currently existing pipeline rights-of-way, and (2) improve/upgrade existing pipelines, either through looping or pipeline replacement.

a. Co-locating with Existing Rights-of-Way

FERC has an admitted “general preference for utilizing ‘routing along existing road or utility rights-of-way, whenever possible, over creating a new greenfield pipeline right-of-way.’” See *Texas Eastern Transmission, LP*, 131 FERC ¶ 61,164, at P 64 (2010) (citing *Islander East Pipeline Co.*, 102 FERC ¶ 61,054, at P 133 (2003)). The “use of existing utility corridors for pipeline construction is preferred over the creation of new utility corridors.” See also, *Portland Natural Gas Transmission System Maritimes & Northeast Pipeline, LLC & Portland Natural Gas Trans. Sys.*, 83 FERC ¶ 61,080, at 61,395 (1998).

FERC has made it clear that it seeks to avoid the unneeded exercise of eminent domain. 88 FERC ¶ 61,227, at 61,737. Accordingly, to eliminate or minimize adverse impacts to landowners and the environment, and

hence demonstrate public necessity and convenience under Act, an applicant must consider co-locating its route with existing rights-of-way. See, e.g., National Fuel Gas Supply Corp., 150 FERC ¶ 61,162, at P 17 (2015) (concluding that the Certificate Policy Statement’s requirement that pipeline companies seek to minimize the need to rely on eminent domain is satisfied where a company co-locates on an existing pipeline right-of-way).

Here, TGP’s co-location proposals are misleading. TGP claims the centerline of the pipeline will be installed generally within five feet outside an existing power line easement boundary but can present no assurance that the pipeline will actually be co-located. It specifically notes that the centerline of the pipeline could be located anywhere: “within an existing powerline easement, less than five feet from the existing power line boundary, or further than five feet from the existing powerline boundary [emphasis added]”.¹⁰ In short, the centerline could be located anywhere.

TGP also fails to mention that power companies may reject their co-location proposals entirely, or in many cases have restrictive easements on the land over which the power lines travel, or do not actually own the underlying land. In reality, the uncertainties of TGP’s co-location proposals suggest that the NED pipeline is functionally a greenfield project. Although promoted as a “Power Line Alternative” it traverses through rural areas of New Hampshire with very little opportunity for co-location. Accordingly, FERC should seek to review and require TGP to review alternative pipeline proposals that are truly co-located.¹¹ The Coalition objects to the current proposal as a greenfield proposal with unnecessary and adverse impacts on the Towns that fails to fully evaluate truly co-located options.

b. Upgrading Existing Pipelines

FERC must consider the use of existing pipelines as an alternative to the construction of the Project. 15 U.S.C. § 717f(e); see also, Northern Natural Gas Co., 399 F.2d at 973. FERC is authorized, under Section 7(a) of the Act to require existing pipelines to improve or expand. 15 U.S.C. § 717f(a). *Panhandle Eastern Pipe Line Co. v. Federal Power Comm’n*, 204 F.2d 675, 683 (3d Cir. 1953) (holding that 15 U.S.C. § 717f(a) authorizes the Commission to, “if necessary or desirable in the public interest, direct [a pipeline company] to improve its facilities by their rehabilitation and repair, or even reconstruction, to the extent necessary to restore them to their original designed and approved capacity or former actual capacity”). FERC is obligated to consider alternatives that might involve the enlargement of an existing pipeline. *City of Pittsburgh*, 237 F.2d at 756 n. 28 (“The existence of a more desirable alternative is one of the factors which enters into a determination of whether a proposal would serve the public convenience and necessity. That the Commission has no authority to command the alternative does not mean that it cannot reject the proposal.”). FERC must consider alternatives that include looping existing pipelines or replacing older, smaller diameter pipelines with larger diameter pipelines to meet the combined need of the existing pipeline and Project. The possibility of upgrading existing systems must be given serious consideration, given the magnitude of the proposed Project. FERC should not accept at face value TGP’s assessment of this option, and instead should investigate the potential for the improvement and use of existing systems further at an evidentiary hearing on TGP’s Application.

IV. THE ADVERSE IMPACTS OF THE PROJECT OUTWEIGH PUBLIC BENEFITS

Given the lack of need, the existence of alternatives and the failings of the Company’s analysis as set forth above, it is clear that TGP has not demonstrated any Project benefits. And certainly there is no benefit to the Towns with the greenfield construction of a major gas infrastructure project overwhelming their rural communities.

The adverse and damaging impacts of the Project are real and inevitable. The Project sacrifices the Towns along the proposed pipeline route, and FERC is responsible for determining whether such collective disenfranchisement is warranted, given the alleged benefits. No such showing can be made in this case.

TGP makes no attempt to acknowledge or even describe the serious impacts that will be felt by landowners and the surrounding communities from the Project. The filing only establishes superficial data points from a

TGP defined universe of routes and alternatives, and provides no meaningful analysis for how specific impacts on landowners will be mitigated or outweighed by any alleged public benefits of the NED project. The Application virtually ignores that the Project has been met with staunch landowner and community opposition, a glaring irony that undermines any discussion of “public benefit” from TGP. The chorus of opposition to the Project by the Coalition contradicts TGP’s claim that NED will serve the public, and instead illustrates an unsettling proposition of intrusive pipeline construction—this Project in these Towns will cause grave and unnecessary damage to communities and to the environment.

As noted below, the construction, operation and maintenance of the Project would, among other things, damage water resources and aquifers, create unwarranted health and safety problems, and damage property values. Moreover, the damage to communities from the construction and operation of compressor stations is even greater, with threats of significant air and noise pollution and additional health risks.

Sensitive Water Resources Will Be Adversely Impacted

The Towns have an obligation to protect public and private drinking water supplies in the region as well as preserving and protecting all sensitive water resources. Damage to water resources is inevitable from pipeline construction, resulting largely from stream crossings and construction in sensitive areas near aquifers. Moreover, many of the homes and businesses along the route have private wells and septic systems that require protection from construction activities. The NED pipeline will cut through numerous water bodies, wetlands and aquifers along its route across New Hampshire and potentially compromise, among other areas, the following:

- Souhegan River, which it will cross six times
- Brooks and streams (22 in 15 towns)
- Aquifers (13)
- Ponds/lakes (11, largest, Scott Pond, is 134 acres)
- Wetlands (over 27, numerous vernal pools)
- Municipal water systems (serving over 500 people, including the Temple Elementary School)
- Private wells (serving in excess of 600 people)
- Numerous watersheds, including the headwaters of Tully Brook, East Asheulot, Miller River, and Middle Connecticut

Among many foreseeable impacts, blasting, horizontal drilling and other construction operations would impact many of these water resources. For example, the technique of “cutting” these important water bodies involves excavation and blasting of the streambed, which effectively splits them apart. This results in irreparable damage, destroying habitat for sensitive aquatic species, creating erosion and sedimentation, flood risks, and impairing water quality. Moreover, these water resources are necessary to sustain the larger community, its lives and businesses. Local economies in the Towns that rely upon the preservation of waterway resources for potential tourism are threatened by the Project. Communities and residents have an invested interest in protecting the rivers in which they fish, swim, and rely on as their drinking water source. Of particular concern is the hydrogeology of the region, where a massive underground pipeline corridor could serve as a conduit for groundwater contamination between aquifers, river basins and other water resources that would otherwise be isolated from one another.

Project construction presents unacceptable risks to both ground and surface drinking water supplies within the Towns. If construction intercepts the water table, direct contamination of local aquifers could occur and dewatering activities could cause local drawdowns of water table elevation. Even if construction activities do not directly intercept the water table, chemicals from construction fluids, herbicides, and spills may enter the water table through porous soils overlying local aquifers. Storm water runoff also increases the risk of transporting chemicals into surface drinking water supplies. Of particular concern is the fact that a majority of the Towns’ residents rely upon private wells for their water supply, and New Hampshire has relatively

high levels of arsenic in soil and arsenic and radon in well water.¹² FERC must ensure that the construction of the Project will not damage water resources in the area.

TGP cannot simply assert that activities will be compliant with local requirements; instead, it must provide specific plans for ensuring protection of municipal ground and surface drinking water supplies. The informational gaps in TGP's Application make it impossible for FERC or the public to understand and evaluate the NED Project's expected adverse impacts to drinking water supplies. The Coalition submits that the risks to water supply and other important environmental considerations outweigh any possible benefits of this Project and the Application should be rejected and, alternatively, these important impacts should be evaluated at a hearing. As part of any further consideration of the Application, and among other things, FERC must require TGP to set forth all applicable state and local provisions, its plans for compliance, and its site-specific plans for ensuring the protection of each drinking water supply source potentially affected.

Community Health, Safety, Welfare Will be Adversely Affected

Pipeline safety hazards are well documented, and their impacts extend beyond the risk of physical injury. The socioeconomic well-being of Towns are inextricably burdened by the presence of a pipeline, both internally and externally. Town residents are faced with threat of fatal accidents by an invasive pipeline routed through their communities that also deters others from purchasing property near the pipeline. The Coalition objects to the Project as an unwarranted and unacceptable safety risk creating negative property valuation impacts.

There is an undeniable stigma attached to living near a pipeline, one that compounds subsequent to each dangerous pipeline failure. A recent report by Synapse Energy Economics, Inc. commissioned to review reports released by Atlantic Coast Pipeline analyzed the relevant literature and found that:

Research by Boxall, et al. (2005) and Hansen, et al. (2006) show nearby pipelines may have negative impacts on property values, particularly following catastrophic events like the explosions cited above. The Forensic Appraisal Group, LTD, found that the negative impact on property values could be "up to 30% or more of the whole property value." Resale value is also a concern, particularly in states that require disclosure of potentially hazardous conditions. Reduced property values would lead to lower assessed real estate values and, therefore, lower tax revenues.¹³

There are also questions over whether local communities have the resources available to respond to pipeline emergencies. For example, in the town of Temple, the pipeline interferes with established emergency protocols. Fully automated compressor stations (discussed in detail below), operate without any staff present on site and are of particular risk and concern. In the event of emergency, local fire departments, often volunteer based, would be overwhelmed and would need to rely upon remote TGP resources for assistance, a response under such circumstances that would be speculative at best.

Compressor Station Emissions and Noise Will Have Adverse Effects

TGP proposes to construct and operate one (or more) large compressor station(s) in Temple, New Ipswich and/or Winchester. Additionally, TGP has proposed to build a compressor station in Dracut, Massachusetts, the site of which is located less than a mile away from Pelham. These Towns in particular would be adversely impacted by the unacceptable health risks to the public created by compressor station emissions including particulates and other toxins, noise and safety. As noted below, compressor stations emissions are particularly hazardous and operational sound levels are well beyond acceptable limits. The Coalition is opposed to the siting and operation of compressor stations in or near any Town location.

Emissions

Air pollution discharges from compressor blowdowns release large amounts of toxic chemicals into the atmosphere, including nitric oxides, volatile organic compounds, carbon monoxide, particulate matter, benzene and formaldehyde. Along with radioactive materials and other unknown compounds, these contaminants are forcefully pushed up in the air during blowdowns and carried in any direction by the wind for miles, landing on anyone and anything. A single compressor station can emit tens of thousands of pounds

of toxic formaldehyde into the atmosphere annually. The negative effects of airborne formaldehyde occur at very low levels. Exposure to as little as 0.1 to 2 parts per million causes irritation of the eyes, nose and throat. At 5 to 10 ppm, people experience cough, tightness of the chest and eye damage. At 20 ppm breathing becomes difficult, at 30 ppm there is severe injury to the lungs. At 100 ppm, a concentration of just one one-hundredth of a percent (0.01%), formaldehyde is immediately dangerous to life. The National Institute for Occupational Safety and Health recommends an exposure limit of 0.016 ppm.¹⁴

Children are more susceptible to these toxins. The EPA emphasized that pursuant to Executive Order 13045 on Children's Health and Safety, FERC should "identify and assess any environmental health and safety risks that may disproportionately affect children".¹⁵ In light of this guidance, it seems incomprehensible that TGP has proposed to build a compressor station within 1/2 a mile of an elementary school in the Town of Temple. The Coalition is extremely concerned about the specific impacts of compressor stations on its children and community. As part of its investigation and in hearing, FERC should explicitly explore and address "the potential direct, indirect, and cumulative impacts of the proposed project on children's health, including consideration of prenatal exposures".¹⁶

Noise

TGP relies upon federal guidelines that establish a maximum day-night average noise level for compressor stations of 55 decibels (dB) as the dispositive measures of noise pollution. The Company states in a resource report that the U.S. Environmental Protection Agency ("EPA") identified 55 dB as a "threshold for outdoor noise residential areas".¹⁷ Notwithstanding TGP's reliance, the EPA explicitly cautioned against using this number as a federal standard:

"There was a great deal of concern during the preparation of this document that the levels identified would be mistakenly interpreted as Federal noise standards. The information contained in this document should not be so interpreted. The general purpose of this document is rather to discuss environmental noise levels requisite for the protection of public health and welfare without consideration of those elements necessary to an actual rule-making. Instead, the levels identified here will provide State and local government as well as the Federal Government and the private sector with an informational point of departure for the purpose of decision-making".¹⁸

Ignoring this important caveat, TGP asserts that since many towns along the route do not include numeric criteria within their nuisance based provisions, the FERC criterion i.e. 55 dB, should be applied instead.¹⁹ TGP's analysis understates the harm. Peak noise levels are a more relevant and important metric because the loudest noises at compressor stations occur sporadically such as during blowdowns, not continually.

Peak noise levels of 100 dB have been measured in the vicinity of compressor stations. For comparison, the nominal requirement of 55 dB is roughly equivalent to the sound produced by a modern dishwasher. In contrast, 100 dB is about as loud as a jackhammer. Noise alone is sufficient to cause health problems including hearing impairment, cardiovascular and other physiological effects, mental health effects, and sleep disturbance. Compressor stations operate 24 hours a day. Nighttime sleep disruption during blowdowns is inevitable and damaging. Inadequate sleep is proven to cause many health problems and chronic sleep loss has serious consequences for health, performance, and safety.

Also of concern is the low-frequency noise produced by compressor stations. Low-frequency noise (below 100 Hz) has been linked to numerous psychological, emotional, and physiological complaints. Low-frequency noise is documented to be worse than noise at higher frequencies. Sound does not need to be considered "loud" to cause annoyance and irritation. Low-frequency noise is found to be more difficult to ignore than higher frequency noise.

Consequently, Temple, New Ipswich, Winchester and Pelham would be directly and adversely impacted by the proposed compressor station. FERC should investigate at hearing TGP's assumptions with respect to compressor station safety and operation to ensure that the emissions, noise and other impacts from the facility will not adversely affect health and safety of the residents.

Areas of Particular Concern Will be Impacted

The Project will impact other significant resources in Southern New Hampshire including Rhododendron State Park, a designated National Natural Landmark and New Hampshire's only designed botanical Park, which is located in Troy and traverses Richmond and Fitzwilliam. In addition, the Project will be constructed within 110 feet of the Troy Mills Superfund Site, an environmentally sensitive area, also located in Troy. This Superfund Site is a complicated matrix of ground water and monitoring wells and is particularly at risk from the effects of nearby construction. Drilling, blasting or digging may interfere with ground water flow which is an essential component of the clean-up process. NHMPC is particularly concerned with Project impacts on these sensitive areas and with TGP's failure to adequately assess the potential impact of the Project.

V. CUMULATIVE IMPACTS SHOULD BE EVALUATED

FERC is required to review the "impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions."²⁰ FERC must examine the cumulative impacts²¹ as well as the direct and indirect impacts.²² This requires FERC to assess the Project's potential impacts and alternatives in light of the other existing and proposed natural gas infrastructure in the region. As FERC has recognized, "Proposed actions with potential cumulative impacts may mandate the preparation of a regional or comprehensive impact statement." See *Columbia Gas Transmission, LLC*, 148 FERC ¶ 61,138 at P 27 (2014) (emphasis omitted). The Coalition urges FERC to assess cumulative impacts of the Project.

As part of its review, FERC should undertake a programmatic environmental impact statement ("EIS") of all regional proposed gas pipeline projects and a review of non-environmental issues. Such a review would allow for identification and evaluation of alternatives that lessen cumulative impacts for the entire region. See *Kleppe v. Sierra Club*, 427 U.S. 390, 410 (1976) ("Only through comprehensive consideration of pending proposals can the agency evaluate different courses of action").

FERC is well aware of the multiple competing pipeline proposals in this area. See generally AG's Report for a discussion of the competing proposals. When multiple proposals are pending in the same region, a separate environmental review for each project prevents the serious risk that a federal agency will overlook important alternatives that could avoid or minimize impacts for the region as a whole. The Commission can only rationally evaluate any viable alternative in the context of a complete understanding of the demand for natural gas, the capacity of existing pipelines, and the proposed capacity of new pipelines—in other words, a programmatic EIS, including a review of non-environmental factors.

In recent guidance, the Council on Environmental Quality provided the following examples, which are relevant here, that justify the preparation of a regional or programmatic EIS: "[s]everal similar actions or projects in a region or nationwide (e.g., a large scale utility corridor project)," and "[a] suite of ongoing, proposed or reasonably foreseeable actions that share a common geography or timing, such as multiple activities within a defined boundary (i.e., Federal land or facility)."²³ See *Del. Riverkeeper Network v. FERC*, 753 F.3d 1304, 1319 (D.C. Cir. 2014) (finding FERC's environmental assessment deficient in failing to include "any meaningful analysis of cumulative impacts", and reaffirming that such an analysis must identify cumulative impacts of proposed and reasonably foreseeable actions that are expected to have impacts in the same area or be triggered by the proposed action). See *Kleppe v. Sierra Club* 427 US. at 410 ("when several proposals for . . . actions that will have cumulative or synergistic environmental impact upon a region are pending concurrently before an agency, their environmental consequences must be considered together."); See also, *Tenakee Springs v. Clough* 915 F.2d 1308, 1312 (1990) ("[w]here there are large scale plans for regional development, NEPA requires both a programmatic and site-specific EIS"). Such a review here would minimize the risks of excess capacity, overbuilding, unnecessary eminent domain and excessive ratepayer costs. The Coalition submits that FERC should undertake a detailed review of cumulative impacts and require a programmatic EIS.

VI. REQUEST FOR HEARING

Pursuant to 18 C.F.R. § 157.10(a)(1), the Coalition respectfully requests a formal hearing on the Application, including the environmental impacts of and public need for the Project. The Coalition submits that an evidentiary hearing will show that the Project is not needed, that viable and less impactful alternatives are available, and that the significant health and environmental impacts associated with the Project outweigh any alleged benefits. In short, the Coalition submits that the adverse effects of the Project substantially outweigh the public benefits of the proposal and the Project does not serve the public convenience and necessity and a hearing is warranted.

VII. CONCLUSION

For the reasons stated above, the Coalition opposes the Application and the Project, and has an interest which may be directly affected by the outcome of this proceeding and its participation is in the public interest. The Coalition is in a unique position of representing the interests the municipalities along the Project route in New Hampshire.

Wherefore, for the foregoing reasons the Coalition respectfully requests that FERC:

- (i) grant its motion to intervene and protest;
- (ii) require a full evidentiary hearing to resolve contested issues of fact regarding the need for the Project and to balance of public benefits and adverse impacts of the Project; and
- (iii) grant such further relief as may be required.

NEW HAMPSHIRE MUNICIPAL PIPELINE COALITION

1 15 U.S.C. § 717f(e).

2 Certification of New Interstate Natural Gas Pipeline Facilities, 88 FERC ¶ 61,227 at 61,750 (1999), clarified, 90 FERC ¶ 61,128 (2000), further clarified, 92 FERC ¶ 61,094 (2000).

3 See Resource Report 10, 10-2. "Given the constrained pipeline transportation capacity situation in the Northeast U.S., without the proposed Project, other natural gas transmission companies will be required to increase their capacity and construct new facilities to meet the existing and growing demand for the additional natural gas transportation capacity. Such actions will only result in the transference of environmental impacts from one project to another but will not eliminate such impacts in their entirety."

4 For example, alternatives along the existing 200 line, together with modifications to existing laterals, could be designed incrementally to accommodate the actual subscribed capacity on the Market Path segment.

5 Power System Reliability in New England: Meeting Electric Resources Needs in an Era of Growing Dependence on Natural Gas, Analysis Group (2015).

6 Id.

7 Only approximately 0.55 Bcf/day have been subscribed as firm commitment for this Project.

8 In New Hampshire for example, Shipper Liberty Utilities wholly failed to evaluate LNG as an alternative to the Market Path segment and proposes to replace 50,000 Dth/day of existing capacity on its Concord Lateral with Project capacity. Only 65,000 Dth/day of its requested 115,000 Dth/day of Project capacity represents new capacity on NED.

9 Overall, actual new, non-replacement, state-approved capacity contracted for by Shipper Liberty and other LDCs is only 264,302 Dth/day, a totally insignificant level of demonstrated need on a 1.3 Bcf/d pipeline. NHMPC submits that such a small amount of new capacity confirms that there is no market need for this Project.

- 10 Resource Report 1, 1-3.
- 11 In addition, FERC should require TGP to calculate the total acreage, by each Town, that will be impacted (both temporary and permanent) within the existing, cleared utility right-of-way and the total impacted acreage, for each Town, that will be outside of the existing, cleared right of way (both temporary and permanent).

20160115-5246

Submission Description: (doc-less) Motion to Intervene of Molly Hale under CP16-21-000.

Submission Date: 1/15/2016 10:51:11 AM Filed Date: 1/15/2016 10:51:11 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	hellomolly@comcast.net	

Basis for Intervening:

As a resident of western Massachusetts, I am filing for intervenor status for several reasons. As a utility customer, I would be affected by higher utility rates that would be expected because export of most of the gas carried by the pipeline would reduce the gas supply thereby increasing its cost.

If higher utility rates were due to switching to renewable energy sources, this might be an acceptable burden for me. But in the case of the pipeline I am staunchly opposed to paying MORE for increased use of fossil fuels. As a global citizen and a mother, I have a stake in the well-being of my son and the livability of the

world he (and I) inhabits. I'm deeply concerned that global warming caused by unabated burning of said fossil fuels will create a world of unprecedented strife for near-future generations, including food shortages, climate refugees fleeing flooded coastal cities, and life-threatening extreme weather events.

As a citizen of Massachusetts, I also have a stake in my expectation that the Commonwealth upholds its commitment to the 2008 Global Warming and Solutions Act. The GWSA requires that greenhouse gas emissions be reduced to between 10 and 25% below 1990 levels by 2020 and 80% below 1990 levels by 2050. Sourcing fossil fuels from out of state, such as fracked gas from the Marcellus shale, is in conflict with the intentions of the GWSA.

Furthermore as a citizen of the Common Wealth of Massachusetts, I am a stakeholder in the Conservation Restrictions, Agricultural Preservation Restrictions, and public lands owned by the Commonwealth. If the legal agreements protecting these lands are negated, that diminishes my benefits and those of all other Massachusetts citizens.

For these reasons I request that I am granted intervenor status in this case.

20160115-5250

Submission Description: (doc-less) Motion to Intervene of Caitlin Mayo under CP16-21-000.

Submission Date: 1/15/2016 11:02:29 AM

Filed Date: 1/15/2016 11:02:29 AM

---------------------	--------------------------------	----------------------------------

Individual	mrscmscott2016@gmail.com	
------------	--------------------------	--

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan").

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

As a Contingent Property Owner: I am an adult child of an estate beneficiary of the owner of the property located at 529 Main Street, West Townsend, Massachusetts. The proposed pipeline will cut directly across this property and includes plans to use several acres of the property for construction, storage, and a staging area. This acreage produces three crops of hay per year. The proposed removal of all top-soil will not only render these fields unable to produce hay, but the Company plans to construct and operate a work-site and Valve Station in the field. The extremely close proximity to proposed construction would make the property unlivable during construction. One of the specific functions of these valve stations is to release gas into the air. This will negatively impact upon the health of any resident at the property and reduce the value of the land. The release of dangerous gases, the lights, sounds, and smells after construction will greatly diminish the usability and value of the property.

As a Consumer: My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from rate-payers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), the Company is proposing to build a pipeline to meet capacity requirements which do not exist and will never materialize and which will in all likelihood be used primarily to export liquid petroleum. This competing demand for our limited energy resources will likely drive the domestic cost of energy upward. This will be compounded by the likelihood that this massive proposed overbuild will result in unutilized capacity by New England utility companies which will pass the cost of this unused capacity to local rate payers.

As a family member of a Massachusetts property owner and taxpayer: I object to the proposed Pipeline because it will destroy land which has been set aside as a land trust and protected by Article 97 of the Articles of Amendment to the Massachusetts State Constitution. FERC does not have the authority to violate the Massachusetts Constitution nor does FERC have the power or authority to grant the Company the right to violate the Massachusetts Constitution. FERC should set aside the pipeline application by the Company until such time as the Massachusetts Legislature has voted to approve release of all impacted areas under land trust for use by Kinder Morgan.

As an ecologically conscientious citizen: The proposed pipeline will destroy protected wetlands, breeding grounds for endangered wildlife, and destroy vast acres of state parks. Many sections of the pipeline, including the valve station they want to build in my field, are in flood plain where there are deep floods of several feet and massive ice-dams which make any pipeline or valve station extremely susceptible to damage and ecological catastrophe.

WHEREFORE, for the foregoing reasons, I respectfully request that my Motion to Intervene be granted.

Respectfully submitted,

20160115-5251

Submission Description: (doc-less) Motion to Intervene of Donna Themeles under CP16-21-000.

Submission Date: 1/15/2016 11:03:08 AM Filed Date: 1/15/2016 11:03:08 AM

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	dmthemeles@comcast.net	

Basis for Intervening:

I object to the NED Pipeline Project Docket #CP16-21-000.

I am a resident of Dracut within a half mile of the proposed pipeline and compressor station. I am concerned about the pollution of air, land, and water created by the construction and operation of a facility like this.

We have well water. If lead and other pollutants weep into our well, then our source of water is lost.

We purchase much of our meats and produce from natural and organic farmers in close proximity to the proposed site of this project.

I object to the expansion of pipeline and fossil fuel sources of energy in general and would ask you to prevent this and pursue clean sources of energy such as solar, wind, and geothermal.

Thank you,

Donna Themeles

This competing demand for our limited energy resources will likely drive the domestic cost of energy upward. This will be compounded by the likelihood that this massive proposed overbuild will result in unutilized capacity by New England utility companies which will pass the cost of this unused capacity to local rate payers.

As a family member of a Massachusetts property owner and taxpayer: I object to the proposed Pipeline because it will destroy land which has been set aside as a land trust and protected by Article 97 of the Articles of Amendment to the Massachusetts State Constitution. FERC does not have the authority to violate the Massachusetts Constitution nor does FERC have the power or authority to grant the Company the right to violate the Massachusetts Constitution. FERC should set aside the pipeline application by the Company until such time as the Massachusetts Legislature has voted to approve release of all impacted areas under land trust for use by Kinder Morgan.

As an ecologically conscientious citizen: The proposed pipeline will destroy protected wetlands, breeding grounds for endangered wildlife, and destroy vast acres of state parks. Many sections of the pipeline, including the valve station they want to build in my field, are in flood plain where there are deep floods of several feet and massive ice-dams which make any pipeline or valve station extremely susceptible to damage and ecological catastrophe.

WHEREFORE, for the foregoing reasons, I respectfully request that my Motion to Intervene be granted.

Respectfully submitted,

20160115-5253

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)

Docket No. CPI6-21-000

PROTEST OF
NORTHEAST ENERGY SOLUTIONS, INC.

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, Northeast Energy Solutions, Inc. (“NEES”) timely moved to intervene in the above-captioned proceeding.

As opposition was not filed to NEES’ motion within 15 days after it was filed, NEES is a party to the above-captioned proceeding. Further, pursuant to Rule 211 of the Commission’s Rules of Practice and Procedure, 18 C.F.R. § 385.211, NEES herewith: (1) protests the Commission’s acceptance of Tennessee Gas Pipeline Company, LLC’s (“TGP”) defective application (the “Application”); and, (2) requests a formal hearing on the Application.

1. In support of this motion, NEES states, as follows: The exact legal name of the Movant is as set forth in the above, unnumbered paragraph. NEES is a multi-jurisdictional nonprofit corporation comprised of energy, land, environmental, end-user, and related economic interests. Uniquely, NEES, through its founding members, represents over 101,000 individuals in Massachusetts and New York who collectively own or hold conservation restrictions on over 46,211 acres of land in the Massachusetts. NEES also includes municipalities and a state legislator among its members. NEES is an educational resource and advocacy group (before state and federal government officials) that works to ensure that economically viable and environmentally responsible energy projects account for its member’s collective and respective interests. NEES was founded to represent its members in providing energy infrastructure analysis and advocacy regarding the economics of energy projects and transactions in the Northeastern United States.

2. The name and mailing address of the person upon whom all communications concerning the proceeding should be served is:

Vincent DeVito, Partner
Bowditch & Dewey, LLP
300 New Jersey Avenue, NW, Suite 900
Washington, DC 20001
Telephone: 617-757-6518
Fax: 508-929-3019
vdevito@bowditch.com

3. On or about November 20, 2015, TGP filed the Application pursuant to sections 7(b) and 7(c) of the Natural Gas Act, and the Commission regulations thereunder, seeking authority to: (i) construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut; and (ii) to abandon certain facilities, all as part of a proposed Northeast Energy Direct Project (“NED”). The proposed NED is comprised of two components:

a. Supply Path Component: Comprised of the proposed facilities from Troy, Pennsylvania to Wright, New York, including approximately 174 miles of pipeline facilities in Pennsylvania and New York, the proposed construction of three new compressor stations and modifications to one existing compressor station, further construction of two new meter stations, and purported appurtenant facilities.

b. Market Path Component: Comprised of proposed facilities from Wright, New York to Dracut, Massachusetts. These proposed facilities include approximately 188 miles of mainline pipeline facilities in New York, Massachusetts, and New Hampshire, laterals located in Massachusetts and New Hampshire, and Connecticut), proposed construction of six new compressor stations, 13 new meter stations and modification of 14 existing meter stations, and purported appurtenant facilities.

4. The Commission issued a Notice of Application for the Application on December 7, 2015.

5. NEES respectfully requests that this proceeding be terminated and the Application be dismissed as the Application is incomplete and inaccurate for the reasons more fully set forth herein.

6. The Application is not minimally commensurate with the complexity of the proposal and its potential for

environmental impact and does not meet the minimum mandates of 18 C.F.R. § 380; therefore, the Application must be rejected. More specifically the Application lacks the following:

- a. A detailed description and thoroughly location map of the project facilities;
- b. A description of all facilities not under the Commission's jurisdiction that would be built in connection with the proposed project;
- c. Current and original U.S. Geological survey topographic maps showing the project facilities;
- d. Plot or site plans of compressor stations showing the location of the nearest noise-sensitive areas, within 1 mile;
- e. A complete description of construction and restoration methods;
- f. A full list of the permits required for construction across surface waters.
- g. A complete list of the names and address of all affected landowners and certify that all affected landowners will be notified as required in § 157.6(d);
- h. An accurate list of perennial surface waterbodies crossed by the proposed project and their water quality classification;
- i. An accurate list of waterbody crossings that may have contaminated waters or sediments;
- j. A complete list of watershed areas, designated surface water protection areas, and sensitive waterbodies crossed by the proposed project;
- k. An accurate table identifying all wetlands crossed by the project, and the total acreage and acreage of each wetland type that would be affected by construction;
- l. A thorough discussion of the construction and restoration methods proposed for crossing wetlands, accompanied by a comparison to the Wetland and Waterbody Construction and Mitigation Procedures;
- m. A comprehensive description of the proposed waterbody construction, impact mitigation, and restoration methods to be used to cross surface waters accompanied by a comparison to the Wetland and Waterbody Construction and Mitigation Procedures;
- n. Original National Wetlands Inventory ("NWI") maps or the equivalent state wetland maps that show all proposed facilities and include milepost locations for proposed pipeline routes;
- o. A full list of all U.S. Environmental Protection Agency or state-designated aquifers crossed;
- p. An accurate classification of the fishery type of each surface waterbody that would be crossed, including fisheries of special concern;
- q. A complete description of terrestrial and wetland wildlife and habitats that would be affected by the project;
- r. A full description of the major vegetative cover types that would be crossed and the acreage of each vegetative cover type that would be affected by construction;
- s. An accurate description of the effects of construction and operation procedures on the fishery resources and proposed mitigation measures;
- t. A thoughtful evaluation of the potential for short-term, long-term, and permanent impact on the wildlife resources and state-listed endangered or threatened species caused by construction and operation of the project and proposed mitigation measures;
- u. A complete list of all federally listed or proposed endangered or threatened species that potentially occur in the vicinity of the project accompanied by a discussion of the results of the consultations with other agencies and survey reports;
- v. A full list of all federally listed essential fish habitat ("EFH") that potentially occurs in the vicinity of the project and the results of consultations with NMFS;
- w. A significant description of biological resources that would be affected, accompanied by a descrip-

- tion of the impact and any mitigation proposed to avoid or minimize that impact;
- x. An accurate discussion of cultural resources consultations;
 - y. A full description of existing socioeconomic conditions within the project area for major aboveground facilities and major pipeline projects that require an EIS;
 - z. An accurate description quantifying the impact on employment, housing, local government services, local tax revenues, transportation, and other relevant factors within the project area for major aboveground facilities;
 - aa. A complete list of mineral resources and any planned or active surface mines crossed by the proposed facilities;
 - bb. A full list of any geologic hazards to the proposed facilities;
 - cc. A thoughtful discussion of the need for and locations where blasting may be expected;
 - dd. A comprehensive description of how drilling activity by others within or adjacent to the facilities would be monitored;
 - ee. A complete list, description and grouping of the soils affected by the proposed pipeline and aboveground facilities;
 - ff. An accurate determination of the acreage of prime farmland soils that would be affected by construction and operation;
 - gg. A thoughtful description of potential impacts on soils;
 - hh. A full list of proposed mitigation to minimize impact on soils, accompanied by a comparison with the Upland Erosion Control, Revegetation, and Maintenance Plan;
 - ii. An accurate classification of and quantification land use affected by:
 - i. Pipeline construction and permanent rights-of-way.
 - ii. Extra work/staging areas.
 - iii. Access roads.
 - iv. Pipe and contractor yards; and
 - v. Aboveground facilities
 - jj. Identification of all locations where the pipeline right-of-way would at least partially coincide with existing right-of-way, where it would be adjacent to existing rightsof-way, and where it would be outside of existing right-of-way;
 - kk. Detailed of typical construction right-of-way cross-section diagrams showing information such as widths and relative locations of existing rights-of-way, new permanent rights-of-way, and temporary construction rights-of-way;
 - ll. A complete list of all planned residential or commercialbusiness development and the time frame for construction;
 - mm. An accurate list of special land uses;
 - nn. A full list of all land administered by Federal, state, or local agencies, or private conservation organizations;
 - oo. An accurate list by of all natural, recreational, or scenic areas, and all registered natural landmarks crossed by the project;
 - pp. A complete list of all facilities that would be within designated coastal zone management areas and the necessary consistency determination or evidence that a request for a consistency determination has been filed with the appropriate state agency;
 - qq. A list of all residences that would be within 50 feet of a construction rights-of-way or extra work area;

- rr. A list of all designated or proposed candidate National or State Wild and Scenic Rivers potentially crossed;
- ss. A detailed description of measures to visually screen aboveground facilities, such as compressor stations;
- tt. A demonstration that applications for rights-of-way or other proposed land use have been or soon will be filed with Federal land-managing agencies with jurisdiction over land that would be affected by the project;
- uu. An accurate description of existing air quality in the vicinity of the project;
- vv. An accurate quantification of the existing noise levels at noise-sensitive areas and at other areas covered by relevant state and local noise ordinances;
- ww. A full list of any nearby noise-sensitive area by distance and direction from the proposed compressor unit building/enclosure;
- xx. A thorough list of any applicable state or local noise regulations;
- yy. An accurate calculation of the noise impact at noise-sensitive areas of the proposed compressor unit modifications or additions, specifying how the impact was calculated, including manufacturer's data and proposed noise control equipment;
- zz. A thoughtful and sincere explanation or discussion of the effect of energy conservation or energy alternatives to the project;
- aaa. A comprehensive examination of system alternatives considered during the identification of the project, accompanied by detailed and documented rationale for rejecting each alternative;
- bbb. An accurate list of major and minor route alternatives considered to avoid impact on sensitive environmental areas, accompanied by a sufficient comparative data to justify the selection of the proposed route;
- ccc. A detailed description of how the project facilities would be designed, constructed, operated, and maintained to minimize potential hazard to the public from the failure of project components as a result of accidents or natural catastrophes;
- ddd. A complete and detailed list of all the engineering materials.

7. The Application does not meet the mandates of Waters of the United States Rule.' More specifically, on Friday, August 28, 2015, the federal government began enforcing the Waters of the United States Rule ("Rule") which expands federal jurisdiction over small waterways, like streams and wetlands. The Rule broadens the Environmental Protection Agency's scope under the Clean Water Act and essentially defines "waters of the U.S." to include virtually any wet area, including rain-fed, temporary pools and areas close to any other body of water with a connection to a navigable waterway. Unfortunately, the potential impact of the new Rule was never disclosed, discussed or raised by TGP during the scoping hearings. The Rule opens numerous questions as to federal jurisdiction and landowner responsibilities. In fact, as a result of the Rule, a landowner could potentially be liable for nearly \$40,000 per incident per day in the form of a fine by the Environmental Protection Agency for a pipeline breach attributable to TGP. As such, the Application is defective and must be rejected until the potential impact of the Rule is addressed. Moreover, the failure of TGP to disclose the Rule and its potential impact during the public process and in the Application further discredits TGP's self-purported transparency and assertions of governmental and public cooperation. For this reason alone, the Application must be rejected.

8. The Application does not meet the mandates of the Commission's Policy Statement in Cost Recovery Mechanisms for Modernization of Natural Gas Facilities, Docket No. PLI5-1-000, 151 FERC ~ 61,047 (2015). More specifically, the Policy Statement, which became Effective October 1, 2015, is largely ignored in the Application. Among other items, the Application does not fully define a proposed cost recovery mechanism that will protect captive customers from cost shifts if the pipeline loses shippers. As such, and

for other reasons, ratepayers are not potentially protected from recovery mechanisms that would produce unjust and unreasonable rates, or shift costs to captive customers. That notwithstanding, the Application boldly requests significant flexibility and procedural advancement based only upon forward statements, conjecture, and yet to be filled promises of a better Application in the future. The Application must be rejected.

9. NEES respectfully requests that a formal hearing on the Application be scheduled in accordance with 18 C.F.R. § 157.10(a)(I).

10. The material facts raised in this Protest are in dispute and cannot be resolved on the basis of a written record. The enormity of the written record in this matter does not allow for the same level of efficient and targeted deciphering of precise material facts that would be available in a trial-type evidentiary hearing. In fact, the comprehensive stitching together of material facts required for analysis of the Application is nearly impossible without direct, inperson, party interaction, beyond of a paper chase. For instance, in recent responses to the Commission's request for additional information, TGP frequently stated that further information will be provided in the future and that the Application should be accepted on that vaporous promise. Doing so will result in the proceeding becoming an avalanche of paper accommodating TGP's strategy of processing paper in which material facts can be lost, blanked and contradicted. The intervenors are not on equal footing to develop and produce the equivalent enormity of a written record as TGP. However, a trial-type evidentiary hearing would put NEES on equal footing with TGP. A paper record cannot supplant an oral narrative in this proceeding. The numerous aspects of material facts that are of jurisdictional import to the Commission cannot be judiciously and artfully presented by mere pleadings. Naturally, FERC could narrow or tailor any such hearing in accordance with the Commission's substantial discretion/ Alternatively, the Commission should set the issues raised by NEES for a technical conference, with staff participation, to determine whether an evidentiary hearing is required.

WHEREFORE, for all of the aforementioned reasons, NEES respectfully requests the relief sought herein be granted.

Footnotes:

- 1 While the Waters of the United States Rule is currently under judicial review, the Application must take its requirements into account as it the Rule may be judicially effectuated during this proceeding.
- 2 See, e.g., *Questar Pipeline Company*, 140 FERC, 61,040 at P 11), *Southern Union Gas Co. v. FERC*, 840 F.2d 964, 970 (D.C. Cir. 1988)

Catalyst for Regional Progress

pvpc

Timothy W. Brennan, Executive Director

BEFORE THE UNITED STATES
 FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	
A subsidiary of Kinder Morgan)	Docket No. CP16-21-0000
Northeast Energy Direct Pipeline)	

MOTION TO INTERVENE OF THE PIONEER VALLEY PLANNING COMMISSION

Pursuant to Rule 214 of the Federal Energy Regulatory Commission’s {“Commission”} Rules of Practice and Procedure, 18 C.F.R. §385.214, the Pioneer Valley Planning Commission files this Motion to Intervene in the above-captioned proceeding.

I. Description of Intervenor

The Pioneer Valley Planning Commission {“PVPC”} is the regional planning organization for the 43 cities and towns in Hampshire and Hampden Counties, Massachusetts. PVPC is a governmental substate district established under the authority of the Massachusetts General Laws Chapter 40B. In addition to coordinating, advocating, and implementing regional planning goals, PVPC provides technical assistance to municipalities and towns. PVPC also addresses large-scale projects that impact multiple communities, serving as a resource for the impacted communities as well as providing comments and input during environmental review and other public processes in the interests of the impacted communities and the region.

The proposed Northeast Energy Direct {NED} project has both direct and indirect impacts across PVPC's region. Direct impacts are most concentrated in Plainfield, which will be traversed by the centerline of the proposed project across the entirety of town from east to west. The project is also proposed to be located very close to the border of another member community, Cummington, and both towns are potentially impacted by the siting of a compressor station just over the border in neighboring Windsor.

A metering station is to be located in PVPC's member community of Longmeadow as part of the proposed project as well.

PVPC has concerns about the local and regional environmental, economic, and safety impacts of this project. To the extent known about the proposed NED project at this time, PVPC does not take a position. PVPC seeks intervenor status to monitor the progress of and information submitted for the proceeding, as some project information submitted by the applicant has remained incomplete or in evolution as of this motion. For example, on December 31, 2015, Tennessee Gas submitted an alternative route analysis (upon request of the Commission) that considered routing the project along the existing "200 line" and Massachusetts Turnpike corridor, which would place the project within the boundaries of several more of PVPC's member communities.

II. Description of Impacts

The proposed project would cross acres of protected forest and open space, and impact protected agricultural lands, all of which presently contribute to the health of the PVPC region's economy and environment. Deforestation on protected lands, loss of wildlife habitat, water quality impacts on watersheds, impacts on home values and the tourism industry, and the loss of agricultural land to construction activities in these towns are concerns of local and regional scope for Pvpc.

Based on publicly available data, PVPC prepared updated GIS mapping and a data summary analysis on the impacts of the proposed pipeline route in Plainfield and the associated metering station in Longmeadow per project data provided by AECOM, a subcontractor to Tennessee Gas, dated November 2015. The summary identified several potential resource impacts, including permanently protected open space, rare and endangered species habitat (e.g. MA Natural Heritage and Endangered Species Program (NHESP) Priority Habitat Areas), unfragmented forests, active and protected farmland, and water bodies.

Drinking water supplies are located close to the proposed project centerline in Plainfield in the form of at least three private drinking wells. In addition to public health concerns, harm to local drinking water supplies would have a disproportionately negative impact on the economic health of rural Plainfield, which has a population of approximately 605 people (U.S. Census, 2009-2014 American Community Survey 5-year Estimate).

The proposed project is slated to co-located along an existing utility right-of-way in Plainfield, but colocation does not preclude expansion of the existing right-of-way. In Plainfield expansion of the utility corridor could impact a protected wildlife management area that is known NHESP Priority Habitat for rare species; serves as public recreation land; and contributes to the water quality of the nearby Westfield River in Cummington, which has federal Wild & Scenic designation. Loss of forestland in this area has both local and regional impacts in terms of environmental degradation and the potential economic losses related to tourism. In addition, the location of the nearby compressor station in Windsor could produce noise and air quality impacts that influence tourism and the real estate economy in Plainfield and Cummington.

A construction yard for the proposed NED project is currently identified for a farmland parcel in Plainfield protected with an Agricultural Preservation Restriction. Working farmlands are a key to the PVPC region's economy. Conversion to industrial use, even temporary, could have long-term impacts on the land's agricultural viability. The loss of Article 97-protected land for a project of this nature also sets uncharted precedents for other permanently protected lands throughout the state that impacts PVPC and its member communities' past and future land protection efforts.

In locations outside of PVPC's region, the proposed project is slated to cross the Westfield and Connecticut

Rivers. These two rivers are critical regional natural resources that PVPC, in partnership with its member communities and state and federal government, has invested significant effort over several decades to restore and protect. PVPC has concerns about the horizontal drilling process proposed to traverse these rivers, as well as the proposed project's impacts on tributaries of the Connecticut and Westfield rivers. Potential water quality impacts such as bank destabilization, pollution and erosion are of particular concern to PVPC, since they not only impact the immediate project area but communities located downstream on these rivers in PVPC's region as well.

Finally, another impact in PVPC's region includes a moratorium on new customers by Berkshire Gas and Columbia Gas companies, which impacts several member communities that serve as job centers for the region {Hadley, Amherst, etc.}. These local distribution gas companies cite the need for the NED pipeline as justification for the moratorium, which has changed the course of many small and large-scale development projects. The lack of access to natural gas has economic ripple effects on both the ratepayers and communities throughout the entire PVPC region.

III. Standard for Intervention

PVPC satisfies the standards for intervention under the Commission's regulations. As discussed above, PVPC's region is directly impacted by the proposed project, and no other individual or organization can adequately represent PVPC's regional interest in this proceeding. PVPC's intervention is also in the public interest because it represents the interests of governmental bodies, and its area of responsibility includes impacts discussed above as well as others that may arise in the proceedings. PVPC respectfully requests that the Commission grant this Motion to Intervene.

IV. Contact Information

The following individuals and entities should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Timothy W. Brennan, Executive Director

Address: Pioneer Valley Planning Commission, 60 Congress Street, First Floor, Springfield MA 01104

Phone: 413-781-6045

Email: tbrennan@pvpc.org

Name: Jaimye Bartak, Senior Planner, Environment and Land Use

Address: Pioneer Valley Planning Commission, 60 Congress Street, First Floor, Springfield MA 01104

Phone: 413-781-6045

Email: jbartak@pvpc.org

V. Conclusion

Wherefore, in light of the foregoing, the Pioneer Valley Planning Commission respectfully requests that the Commission {1} grant this motion to intervene and {2} allow the intervenor to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,

Timothy W. Brennan

Executive Director

Pioneer Valley Planning Commission

CERTIFICATE OF SERVICE

Wherefore on this January 15, 2016, I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission's electronic service list in this proceeding, in accordance with Commission regulations.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	annatmaclay@gmail.com	

Basis for Intervening:

I am a mother and farmer who lives in Conway, near where the proposed NED pipeline would pass through, and near one of the proposed blow-off valves. I would be devastated if this project came to reality. I don't know how our farm could carry on or how we would continue to live here.

The dangers of pipelines are known and frightening and undeniable. What they carry is toxic, and leaks and explosions happen all the time. Venting happens as a matter of course. The cost of construction is huge in the short term, in terms of capital invested, disruption of peace and land, and the undermining of the peace of mind of those who live nearby, not to mention loss of property value. It is also huge in the long-term, environmentally and health-wise, from start to finish, from the damage done to both the earth and to communities and individuals by fracking, to the damage of likely eventual leaks into air and groundwater, to possible explosions, not to mention the standard venting of the lines, and the multifaceted damage to the communities through which it would pass, just by being put in and by the nature of it being there.

I do not see that any perceived need for more natural gas could justify the damage that would be done by putting in this pipeline. The proposition is unconscionable, and the manifestation of it would be for the short-term benefit of the owners and shareholders of the company, and not for the public good in any short or long term way.

20160115-5257

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Project)

MOTION TO INTERVENE OF
Guy R. Johnson

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan"). Communications concerning this proceeding should be served upon me as follows:

Guy R. Johnson
1014 Mason Rd
Wilton, NH 03086
508-284-6902

Guyrj33@hotmail.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

- My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a blow torch to light a candle. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England’s ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.
- My interest as a taxpayer, neighbor and visitor to protected public land in Massachusetts and New Hampshire.
- My interest in the exact nature of the compressor stations and the emissions from those compressor stations. Data regarding construction, emissions, noise pollution and light pollution have not been disclosed by Kinder Morgan.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower pipeline are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Guy R. Johnson

January 15, 2016

20160115-5259

Submission Description: (doc-less) Motion to Intervene of John v. Lochhead under CP16-21-000.

Individual	jacklochhead@comcast.net	

Basis for Intervening:

We own 250 acres near the pipeline. Our concern, however, is not about damage to our land. We are concerned that building additional fossil fuel infrastructure can only damage the planet. We need to stop all such construction now.

This pipeline is based on a lie. The lie that our area needs more access to gas fuel. The pipeline could satisfy ALL of our electric power needs assuming that ALL current sources of electricity were discontinued. We do not need to double our electric power supply within the time frame of this pipeline. It is clear that the purpose of the pipeline is to supply Europe. To make Massachusetts electric rate payers pay for this pipe line is simply corporate theft.

My wife and I supply all of our electric needs with solar. Many of our neighbors are moving in the same direction. The pipeline is already out of date and not needed.

Any road tour of our area will reveal a huge number of anti pipeline signs. The local population is not going to tolerate the building of this pipeline no matter what FERC decides. It is not going to happen. But what

might happen could be very unsettling to the stability of government authority. Approving this route could be the last decision FERC ever makes.

Kinder Morgan is not a reputable company. It has direct links to Enron. The Federal government should have only one connection to Kinder Morgan and that would be via the FBI.

20160115-5260

Basis for Intervening:

January 15, 2016

Kimberly D. Bose, Secretary
Nathaniel J. Davis, Sr., Deputy Secretary
Federal Energy Regulatory Commission
888 First Street, N.E.
Washington, DC 20426

RE: Motion to Intervene

Kinder Morgan/Tennessee Gas Pipeline, LCC - Northeast Energy Direct –
Docket #CP16-21-000

Dear Ms. Bose and Mr. Davis:

This letter will serve as our intent to file for individual intervenor status in opposition to the Kinder Morgan/Tennessee Gas Pipeline Company, LLC (KM/TGP) Northeast Energy Direct (NED) transmission gas pipeline (Docket #CP16-21-000).

We are residents of Merrimack, NH for over 40 years and want to intervene in this proceeding to oppose the NED pipeline. Currently KM/TGP have proposed multiple routes through Merrimack. With the current route not in the “co-location” area with power lines but running along highways, through businesses, our town aquifers, private property, as well as less than 1000’ from our elementary school. We believe that we will be directly affected by the outcome of this project as our water supply is crossed by the proposed route which means our drinking water will be jeopardized with the construction of the pipeline and all that goes along with this construction. Destruction of private and conservation land, town roads over utilized which the taxpayers will be responsible for repairing, as well as the devaluation of our property.

Also, we are dismayed at the way KM/TGP continues to mislead the public. Especially with the fact how they state they are unaware of any of the gas being exported overseas. Currently, there is an approved (7/17/2015) DOE Docket 15-33-LNG for Bear Head that states the gas will be exported from Dracut, Ma (via the NED project if approved) to Nova Scotia to be converted to LNG for shipment overseas.

We are deeply opposed to a private company being granted the right to build a pipeline project of this magnitude with the use of eminent domain for private gain.

We prefer clean air and pure water over dirty gas.

Best regards

Julie and Walter O’Brien
Merrimack, NH residents

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

been changed leaving no time for land owners to understand what is happening to them as Kinder Morgan's people swoop in on them like vultures trying to negotiate deals. These calculating moves on the part of Kinder Morgan do not go unnoticed, nor without response. Their latest hot little number is slipping a new map with three proposed sites for a compressor station in Winchester, NH, a town that is already struggling under the weight of this proposal, and now to be taken advantage of further like a target on Kinder Morgan's game board.

We have clean energy solutions already in use, exploding in popularity. The energy field labor force already possesses the skills to transition to safer, healthier, clean energy jobs with bright futures. Their health and safety will be exceedingly increased by leaving the dying industry of fossil fuels.

New Hampshire is not only ready, but already boldly moving forward, promoting choices that will increase job and energy security. The people do not want this project. The state does not need this project. This is a political play against our will and we will continue to oppose this project.

REASONS TO OPPOSE THE NED PIPELINE:

- Poisoned air and water
- Soil, farm & food contamination
- Increased release of radon gas from blasting into granite
- Contaminated drinking water, wells, aquifers, streams, rivers, lakes, wetlands
- Life threatening health impacts to children, families, fracked gas workers
- Increased #climate change impacts
- Being needlessly locked into a fossil fuel future
- Leaks, explosions and the incineration zone
- Environmental impacts, destruction of pristine lands, wildlife habitat, corridors, migration zones and fragmenting wildlife habitat
- Taking of private land, protected and conservation land, state and national parks and historic and private homes, churches and schools by eminent domain
- Loss of insurance coverage of our homes and land due to pipelines, compressor stations, fracking and frackquakes
- Lost value to our homes and land
- Loss of rural community character, scenic vistas
- Loss of peace of mind, quiet, and dark night skies
- Dangerous, poison gas spewing, light emitting, noisy, unsightly compressor and metering stations
- Paying on our utility bills for a pipeline we don't want or need
- 17 directly impacted and countless other impacted towns in NH and all along the pipeline route
- At least 5 directly impacted states: PA, NY, CT, MA, NH
- Massive financial corporate media spin confusing the public
- Collusion and deceptive practices of large corporations including the unethical business practices and backroom deals between the utilities and gas companies involved
- Kinder Morgan's abhorrent safety record marred by repeated leaks, explosions and other disasters, promising so-called safe, clean energy to uninformed consumers
- The plummeting stock prices and looming junk bond status of Kinder Morgan, Inc.
- Fracked gas is not natural and agreeing to a pipeline makes us complicit in crimes against our neighbors in the fracking fields of PA.
- Environmental, social, racial, economic, cultural injustice of enormous energy corporations too big and too

protected to control

- This project is in opposition to NH's state climate plan
- This project is in opposition to President Obama's Clean Power Plan.

Renewable energy is not only available, but booming in New Hampshire and the other states along the proposed route of the NED project. The parties involved know this and are working in a desperate race against time. They are working in an unpopular, unhealthy, dying industry and want to lock us into fossil fuels for the next twenty or thirty years while opposing 20 year solar caps stating that is too long to lock us into solar.

My historic 1850 home sits within 1 mile of the planned route of the NED pipeline and a metering station. A property in proximity to mine is an organic farm of great value to the community. My farm home has well water and my property is a protected area for wildlife, and I enjoy walking at Scott Pond which would be destroyed by construction of the pipeline.

The town of Fitzwilliam has invested in a prime wetlands study and early data indicates that we have extremely high value wetlands. We are not going to allow Kinder Morgan to disturb all that is dear to us, changing our town's rural culture forever.

For all of these reasons, the "List of the Harmed", and because of all that is and has already been done to those impacted by fracking nationwide and across the globe, I oppose the NED pipeline.

Basis for Intervening:

I am writing as a landowner of acreage on Hawks Rd in West Deerfield; this land abuts the Herron Farm which lies on the path of the proposal; the Herron family is one of the intervenors in this proceeding.

I am worried about the effect a pipeline if this size will have on my own land and the entire region surround-

ing it. Since 1968 when my husband and I purchased this property we immediately initiated steps with the government forestry program and the USDA services to ensure the health and well-being of this land. Currently this property is under Chapter 61 constraints ; it is also under the Franklin Land Trust stipulations; and there is an ongoing USDA conservation program attached to the use of his land. In addition there is an active sugarbush that is being used currently by a prominent maple farm in Deerfield and is a source of income for me (my husband is deceased).

For all the years I have lived in this region I have been impressed and gratified by the extent to which local people, farmers' groups, town governments, state government programs, land and wildlife conservationists, and land trust officials have come together with high caliber expertise, high purposefulness, and a willingness to take a longterm view of our region's future. The proposed pipeline threatens this future; it threatens the livelihood of local farmers, it threatens the accomplishments of many years of cooperation between residents and local governments to preserve the extraordinary assets this region holds; it threatens the quality of land and water we all benefit from; it threatens the safety of the people living here. Specifically, it threatens the Deerfield River area which I know intimately, having spent summers swimming in the river, visiting the South River state land, including a waterfall.

Those of you planning and potentially supporting this proposal cannot possibly understand the immensity of personal and collective violation we feel when contemplating the largest and smallest impacts of the gas pipeline on our lives.

CITY OF PITTSFIELD

DEPARTMENT OF PUBLIC WORKS & UTILITIES, CITY HALL, 70 ALLEN STREET, PITTSFIELD, MA 01201 413-499-9330

**BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION**

Tennessee Gas Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct

**MOTION TO INTERVENE OF
THE CITY OF PITTSFIELD, MASSACHUSETTS**

The City of Pittsfield (City) is a municipality incorporated under the laws of Massachusetts. The proposed Northeast Energy Direct Pipeline (proposed pipeline) crosses a City owned public drinking water transmission main located in the Town of Hinsdale and a few miles of the watershed associated with the Cleveland Brook Reservoir. The City owned Cleveland Brook Reservoir is the primary drinking water supply for the City and the Town of Dalton.

Pursuant to Commission Rules 385.214(b) and 157.10, the City of Pittsfield moves to intervene in the above captioned proceeding. This intervention is timely filed.

I. CONTACT INFORMATION

Please enter the City of Pittsfield below on the official service list for Docket No. CP 16-21- 000. All pleadings, filings and correspondence in this proceeding should be served on the following:

Bruce I. Collingwood, Commissioner
City of Pittsfield
70 Allen Street
Pittsfield, MA 01201
413-499-9330
bcollingwood@pittsfieldch.com

II. MOTION TO INTERVENE

The City of Pittsfield is directly impacted by the proposed pipeline. The pipeline, as currently proposed, will cross a City owned public drinking water transmission main located in the Town of Hinsdale and a few

miles of the watershed associated with the Cleveland Brook Reservoir. The

The City owned Cleveland Brook Reservoir is the primary drinking water supply for the City and the Town of Dalton.

Further, the City of Pittsfield also joins in the Motion to Intervene filed by the Berkshire Regional Planning Commission (BRPC), which has also been acting on behalf of several local municipalities through which the proposed pipeline could pass through or impact to protect their common public interests. The BRPC filed scoping comments with PERC on October 15, 2015 (accession no. 201510155279; docket no. PF14-22-000), which comments are incorporated herein by reference. The BRPC continues to coordinate the dissemination of information to the municipalities including the City.

The City of Pittsfield, Massachusetts, seeks to intervene to monitor the progress of the proceeding and address potential effects to City'S public water system in close proximity to the proposed pipeline.

WHEREFORE, for the foregoing reasons, the City of Pittsfield requests that the Commission GRANT this motion to intervene.

Respectfully submitted,

Bruce 1. Collingwood, Commissioner

Basis for Intervening:

I am signing on an an intervenor because protecting the biosphere is everyone's business. It is in my interest as a human being to try to prevent the destruction of the life-support system of this planet - a system which is currently facing the threat of a "death by a thousand cuts" from petroleum extraction and transportation projects like this one. This proposed pipeline - and the fracked petroleum gas it carries and the methane, etc. it will release - jeopardizes both the air and water surrounding the homes, schools, and businesses of people who are my friends, neighbors, and students. It represents the unjust taking of peoples' property: the real land on which their homes and lives are situated. Instead of helping to repair global climate change and the myriad disasters that this is causing, building the NED pipeline would make the problem even worse. As a citizen who cares about my fellow human beings, the commonwealth, and the environment, I am obligated to oppose the Northeast Energy Direct Project.

20160115-5273

Submission Description: (doc-less) Motion to Intervene of Joseph M Lannan under CP16-21-000.

Basis for Intervening:

MOTION TO INTERVENE OF LANDOWNER

My name is Joseph Lannan and am the member/owner of 736 Milford Rd. LLC located at 736 Milford Rd. in Merrimack, New Hampshire, 03054. I move to intervene in the approval of the pipeline project as proposed by Tennessee Gas Pipeline Company, L.L.C., Docket CP16-21 and Docket PF14-22 by the Federal Energy Regulatory Commission pursuant to Commission Rules 385.2149b0 and 157.10

My property consists of 2 acres adjacent to New Hampshire State Highway Rt.101A with an estimated 37000 vehicle per day usage (within the incineration zone). The property is being directly affected by the pipeline. Approximately 80 % of the property is being affected. This includes the pipeline itself, Proposed Permanent Easement, Temporary Workspace, Additional Temporary Workspace and Access Roads. Also I am receiving an additional curb cut from Rt 101A to the property that will be totally affected. About the only part it does not affect is the existing building on the property. The proposed pipeline would make it impossible for any business to operate at this location.

My immediate problem is that I have been negotiating with a buyer of the property for months now before ever hearing of the proposed pipeline. I actually found out about the pipeline through a friend just back in October, 2015. She also is affected by the pipeline and when she was following the map submitted to FERC of the proposed route she noticed it ran directly through my property (designated as NH WD 379.00 on FERC Map in Merrimack NH). She was then nice enough to notify me. Please note the proposed pipeline was moved east to Merrimack just a short time before the official filing by Kinder Morgan. I had not been notified by any Kinder Morgan Representative at all but I had no problem finding them. A letter was sent to me on November 10, 2015 (over a month after my finding out) by Kinder Morgan regarding the pipeline. I never received it. It was sent to the wrong address. I notified them and had it emailed to me .

My concern is that I am about to sign documents with the buyer at which time I will be disclosing about the proposed pipeline. I am very concerned my buyer may have major concerns regarding the purchase due to the proposed pipeline. If they were to back out due to the pipeline it forces me to remarket the property under the new situation including the proposed pipeline. This could possibly render a million dollar plus property unmarketable at this point. This property represents my retirement so I would hope you'll understand my concern and my need to intervene. Please note this proposed route was NOT in place prior to my negotiations with my buyer. I have been actively marketing the property for nearly two years with a large sign posted on the property. However I was told by Kinder Morgan they thought the property was abandoned.

Additionally, from an ecological outlook, my property is adjacent to a large aquifer and wells supplying the Town of Merrimack their drinking water. This is only partially shown on the map submitted to FERC.

I know for a fact of other potential routes that the pipeline could take that would not have the same negative impact of the present proposed route. I would hope my intervening would allow discussion on this.

I Joseph Lannan as Owner/member of 736 Milford Rd. LLC oppose the proposed pipeline as it currently designed. By intervening in the proceeding I will have access to Tennessee Gas Pipeline Company, LLC's filings which will enable me to provide more detailed comments on safety or alternative routing scenarios.

If I am not permitted to intervene in this proceeding, it am highly likely to be adversely affected and bound by action taken in this proceeding without having an opportunity to be heard.

Wherefore, for the foregoing reasons I Joseph Lannan owner/member of 736 Milford Rd. LLC respectfully request that I be permitted to intervene in these proceedings and that I be granted all rights of a party thereto, including the right to notice of, and to participate in, all hearings and other proceedings. This intervention is timely filed.

Respectfully Submitted,

Joseph Lannan

Basis for Intervening:

I am opposed to the gas pipe line project proposed by Kinder Morgan. I am an Ashfield, MA resident. I was drawn to live here because of the hundreds of acres of forest, farmland, beautiful waterways, and wildlife. This project will affect all the tourism businesses based on these attributes. The organic farm I help support in nearby Conway will be downwind of a blowout valve that releases harmful chemicals several times a year. Farm animals and wildlife will be affected as well as residents. We who will bear this, don't need this gas. The proposed pipeline route is not necessary for our residents. We have

the gas we will need for our future, the only benefit is for a private company's profits.

I am also a donor to the Franklin Land Trust and Trustees of Reservations. It is not right for a private company to take land protected for farm or public use to use for its own,

and ruin a very unique and beautiful part of Massachusetts. And there is the real effects to our health, concerning our drinking water, and the chemical emissions. Without a doubt

this will also effect the resale value of our properties when we are ready to sell.

Individual	13brianl@comcast.net	
------------	----------------------	--

Basis for Intervening:

To whom it may concern:

I am writing about the Pipeline and compressor station to be located in Dracut, MA. Being in close proximity of this station I have several concerns. They include health, safety, security, and financial.

After doing some research on these type compressor stations I have discovered some very serious health issues for the contaminants released (methane) during the blowouts that happen at least weekly. After inquiring with Kinder Morgan about the releases and possible VOC's we received no information or at least no clear answer to what we will be exposed to.

Safety and security concerns are blatantly obvious. A pipeline of this magnitude located in a residential area with a school located so close is pretty scary. There is also an active quarry that blast daily so close to the pipeline. How can our safety be assured? This will also be an unmanned station that leaves security

very compromised.

We are also told there will be a constant noise level of 50 decibels and 24 hour lighting. This will certainly change the local wildlife habitat and vegetation. This level of noise will have a significant negative impact on this area. Please keep in mind there are several farms that raise organic vegetables and hormone free, grass fed cattle as well.

Being an Environmental, Health, and Safety Manager, I am aware of the dangers such a facility possesses. The ground water (we all have wells), the air, the vegetation and natural habitat. This location was selected as a convenience and profit opportunity to a large corporation with no consideration of the many impacted families that will suffer from health, safety, and financial devastation. The question of the need for this cannot be clearly answered and beyond that the question of such a location. Many beautiful and historic sites will suffer from this plan. So many of us desperately need your help and support to stop this project and save our community as well many other communities. There are far too many risks and threats of human well being if this were to happen. Please force this company (Kinder Morgan) to go back and devise other plans. To the best of our knowledge this line would most certainly be used for export and profit and not support this region. The con's far outweigh the pros for this project. This community would never recover from the damage this will cause. The loss of home values, farms shutting down, security issues and little municipal support to cover emergencies and most of all the safety and health of the residents in this community.

Kinder Morgan has deceived and neglected to share appropriate information to the abutters and the town. It appears they have purposefully tried to keep information or keep everyone in the dark about their plans or at least some details of it. Please research and investigate the process that has been done here and it will be clear to you. Force Kinder Morgan to review and come up with a better plan.

Thank you for allowing me the opportunity to voice my feelings on this project.

Best Regards

Brian Levesque

20160115-5280

Brenda Landes, Pittsfield, MA.

As a resident of Berkshire County, Massachusetts, and a voter, and a home owner and a parent, I wish to state my opposition to the proposed Kinder Morgan pipeline project for piping fracked gas through my county and the adjoining counties and states. It is environmentally unsound, both from its origin and the mode of transport, it will not end up being sold in the US and more specifically in the Northeast but overseas and I do not believe that it will provide a substantial number of new permanent jobs to the area. This is wrong and stupid and will only benefit the shareholders of the Tennessee Gas Pipeline Co, not the local residents and definitely not our environment. Please do not approve this project.

20160115-5281

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of) Docket No. CP16-21-000
Tennessee Gas Pipeline Company, L.L.C.)
Northeast Energy Direct Project)

MOTION TO INTERVENE OF THE BENEVENTO COMPANIES

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Benevento Companies ("Benevento" or the "Company") files this motion to intervene in this proceeding with respect to its property at 900 Salem Street, Wilmington, Massachusetts ("Quarry Site").

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for construction and operation of the proposed Northeast Energy Direct Pipeline Project (the “Project” or “NED”), FERC Docket No. CP 16-21-000. The Project will be located on the Quarry Site as set forth herein.

II. INTEREST OF PETITIONER

A. The Benevento Quarry

Benevento is a family owned and operated aggregate-based material supply company started by Michael Benevento in 1934. The Company operates with locations in Wilmington, MA (headquarters), Georgetown, MA as well as Plaistow, NH and provides integrated aggregate, asphalt, ready mixed concrete, and recycling services to numerous customers in New England. The Quarry Site location consists of 350 acres and employs over 120 people.

The Quarry Site is an active quarry (since 1950) and produces the stone that the Company requires in order to operate its asphalt and ready mix concrete facilities. TGP intends to use a power line corridor for the Project that will bisect the Quarry Site. The Quarry Site is also proposed to be a staging area for Project construction. 1

The production of stone is done by the daily drilling and blasting of granite. The blasting takes place approximately 250 feet from the power line easement that is the proposed route for the Project. An average blast fractures 16,000 tons of rock in less than 3 seconds. The hazardous process creates significant vibration and safety is obviously a paramount concern. As noted below, the Company is concerned that the placement of the NED pipeline on or adjacent to the Quarry Site will adversely impact and compromise the safe operation of the quarry and result in a reduction of our operations and/or some risk of closure of our facilities. In addition, the Company is concerned that the construction and operation of the NED Project would interfere with our operation of drainage ponds and with state and local requirements and permits. Specifically, the Company will be directly impacted and damaged by the Project as set forth below.

B. Project Impacts

Wetlands Impacts

There are significant wetlands northwest of the NED pipeline/power line right-of-way that feed into Martin Brook (which bisects the Quarry Site). The pipeline will implicate the wetlands and cross Martin Brook. In addition, there is a drainage pond for quarry dewatering on the Quarry Site. The drainage pond functions to filter solids that result from quarry operations. The pond rests on fractured granite and we have concerns that construction, maintenance and operation of the pipeline would allow water from other areas to drain into the pond and/or water from the pond to drain into the quarry. The Quarry Site also has two ponds on the southwest side of Martin Brook used for stone wash--suspended solids from stone are allowed to settle out and are removed by a drag line. The drainage pond and other two ponds (referenced below as “Quarry Ponds”) are integral components of the day-to-day operations of the quarry. The quarry operation and associated

discharges and runoff are regulated by and subject to Storm Water and NPDES permits.

Impacts from the Project on the wetlands and the Quarry Pond include but are not limited to: filling of wetlands/other resources for pipeline construction and/or operation; temporary impacts to wetlands and Quarry Ponds resulting from access to wetland areas for construction purposes; indirect impacts, such as clearing impacts resulting in a change (either permanent or temporary) of cover type within a wetland and/or damage to or sedimentation in Quarry Pond; and indirect impacts resulting from erosion or sedimentation into wetlands, Quarry Ponds or waterbodies.

Construction Impacts on the Quarry Site

The quarry (by definition) has many areas of rock and granite in close proximity to the planned route. The quarry would be impacted by vibration, debris, and substrata movement associated with Project construction. Moreover, these impacts will be compounded by any blasting required at the Quarry Site as part of any construction and would affect the Quarry Site structures and infrastructure, Quarry Ponds, irrigation wells, and operations.

Operational Impacts

The Quarry Site is an active operational quarry employing hundreds of people undertaking industrial activities related to extraction, production and processing of granite, gravel and asphalt. At any given time, the site is filled with trucks, numerous third party contractors and vendors. The Quarry Site serves as an important regional resource of asphalt, concrete, gravel and sand (among other products) and is relied upon by numerous cities and towns, state governments, and residential, commercial and industrial entities as a source of raw materials and finished products. Benevento has an important role in the regional economy. The Company is concerned that Project construction, operation and maintenance activities (and the proposed use of the site as a staging area as noted below) will interfere and adversely impact commercial activities of Benevento at the Quarry Site. In addition, the Company is concerned that its blasting operations, a fundamental requirement of its operation, will be restricted in some manner by the proposed close proximity of the Project (a high pressure natural gas pipeline) to the Quarry Site.

Staging Area Impacts

TGP proposes, based upon information presented in the most recent Resource Report Map, to establish a staging area on the Quarry Site. The Company believes that the use of the Quarry Site as a staging area will limit and adversely impact operational activities, and will further impact wetlands and other water resources at the Quarry Site.

Accordingly, the Company submits that it will be adversely impacted by the Project and it has important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

For the reasons stated above, Benevento has an interest which may be directly affected by the outcome of this proceeding and its participation is in the public interest. Wherefore, for the foregoing reasons the Company respectfully requests that FERC grant its motion to intervene.

Footnote:

1 The Company submitted Scoping Comments on October 16, 2016 in the related docket PF14-22-000 and those comments are incorporated herein by reference.

Essex National Heritage Commission bills@essexheritage.org

Basis for Intervening:

The Essex National Heritage Commission respectfully requests that the Federal Energy Regulatory Commission accept this filing and grants a motion to intervene in Docket #: CP16-21-000, the Tennessee Gas Pipeline Company, LLC.

The Essex National Heritage Commission is the congressionally designated manager of the Essex National Heritage Area (Essex County) in northeastern Massachusetts. The Essex National Heritage Area was created by an act of the United States Congress in 1996. The Essex National Heritage Commission is a nonprofit corporation organized in accordance with general laws of Massachusetts. Its mission is to preserve and enhance the historic, cultural, and natural resources of the Essex National Heritage Area. The 500 square mile region is home to 34 cities and towns and over 740,000 residents.

The Lynnfield, Peabody, and Haverhill laterals sections of the Northeast Energy Direct Pipeline are proposed to be constructed within the Essex National Heritage Area. The pipeline will pass through ecologically sensitive waterways and forested land, wildlife habitat, conserved open space and recreational resources (trails), and within close proximity to historic resources listed or eligible for listing in the National Register of Historic Places. In addition, the pipeline will impact schools, public facilities, roadways, and residential and commercial areas.

As a regional, non-regulatory entity the Essex National Heritage Commission is deeply concerned about project's adverse impacts on the region's economy and quality of life.

Basis for Intervening:

I'd like to use this platform to share my thoughts on the NED Pipeline.

AGAINST THE NORTHEAST ENERGY DIRECT PIPELINE

I've repeatedly wondered, "would I be one of the individuals against the Transcontinental Railroad?" There was great reason to protest at the time for sure – the impact on the land and wildlife, the treatment of Native American residents, the working conditions for laborers, the environmental repercussions of construction and use. But I don't think I would have renounced it. I would have recognized the growth of our nation and the great boons that would come from its coast-to-coast union. I would have supported the best proposal with the greatest reward and the least harm.

The NED Pipeline is not the best proposal with the least harm. It does not reflect our nation's best interests now or in the future. The Transcontinental Railroad was a moral endeavor for our country that in reality caused excessive harm. So much so that it can be argued your agency, FERC, along with other government agencies were created decades later to regulate and protect the nation from such harm. I ask that you do that now and regulate against the NED Pipeline.

Unlike the railroad, this pipeline doesn't bring with it any higher reasoning for its creation. As you know, there is already a pipeline along its proposed route. In addition to being proven unnecessary, the NED Pipeline will no doubt cause excessive harm to the residents of the heavily populated North East. As a resident of the North East, I ask you to do what your agency was created to do and protect me and those around me from the enduring destruction of the NED Pipeline. Thank you.

I live in the town where the pipeline goes through. It crosses many roads that I travel, I have friends who's kids attend schools near the pipeline and it cuts across the aquifer that my well is connected to. I oppose the project because it is dangerous to my community, the environment and increases the use of fossil fuels, which cause climate change. We must reverse the use of fossil fuels to save our planet.

20160115-5287

Connecticut Public Utilities Regulatory Authority

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)

Docket No. CP16-21

**COMMENTS OF
THE CONNECTICUT PUBLIC UTILITIES REGULATORY AUTHORITY
AND THE CONNECTICUT OFFICE OF CONSUMER COUNSEL**

The Connecticut Public Utilities Regulatory Authority (“Connecticut PURA”) and the Connecticut Office of Consumer Counsel, by and through Elin Swanson Katz, Connecticut Consumer Counsel (“CT OCC”) intervenors herein, pursuant to the Notice issued December 7, 2015, as extended January 4, 2016, hereby comment on the November 20, 2015 Application by Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) for a certificate of public convenience and necessity, pursuant to Sections 7 (b) and 7 (c) of the Natural Gas Act for its Northeast Energy Direct Project (“the Project”). Connecticut PURA and CT OCC support the building of more natural gas pipelines into New England, but request that more support be provided for a few specific assumptions underlying the proposed Project.

COMMENTS

The Project is designed to bring new shale natural gas supplies to the underserved New England market. The Project consists of two components: 1) the Supply Path Component with a maximum design capacity of 1.2 billion cubic feet (“Bcf”) per day comprised of facilities from Troy, Pennsylvania to Wright, New York, and 2) the Market Path Component, which includes new facilities in Connecticut, with a maximum design capacity of 1.3 Bcf per day comprised of facilities from Wright, New York to Dracut, Massachusetts. Several Connecticut entities have entered into precedent agreements for service over the Project. The estimated total cost of both components is \$5.2 billion. Tennessee is requesting issuance of a certificate order for the Project during the fourth quarter of 2016 and proposes to commence construction activities in January 2017, in anticipation of placing the Project facilities in-service by November 2018 (with the exception of a proposed pipeline loop in Connecticut, which will be placed in-service by November 2019).

The New England region in general, and Connecticut in particular, suffers from high utility prices. Connecticut PURA and CT OCC support the construction of new pipeline facilities that could bring New England ratepayers much needed rate relief by providing access to lower cost shale natural gas supplies. The Project could be part of the solution to that problem. Given the \$5.2 billion price tag, Connecticut PURA and CT OCC nonetheless submit that the Federal Energy Regulatory Commission (“FERC”) should carefully analyze the Application, and that the record herein could benefit from additional data and analysis.

Market Support For the Project. As Tennessee explains, under FERC’s Certificate Policy Statement,¹ the threshold question in establishing the public convenience and necessity for a project is whether that project can proceed without subsidies from existing customers.² While Tennessee claims that the Project has “significant market support,” it has executed precedent agreements for only 552,262 Dth per day (out of the design capacity of 1.3 Bcf per day) of the Market Path Component and 751,650 Dth per day (out of a design capacity of 1.2 Bcf per day) for the Supply Path Component; to date, Tennessee only has contracts for approximately half of the proposed capacity of the Project.

Tennessee claims that the cost of the Project that it will ultimately construct and operate will be fully supported by contracts for incremental capacity on the Project. Application at 92, 100. In light of the lack of contracts to support the entire capacity of the Project, Tennessee requests that it be permitted to construct and operate the Project in phases as firm contracts are executed. Id. at 100-103. Thus, while Tennessee is seeking certificate authorization for all of the Project facilities required to transport gas at full design capacity, it is also seeking authority to phase-in the Project facilities and its associated capacity and to ramp-up construction as required to meet contract demand. Id. at 101. Given the lack of market support to date for substantial portions of the Project’s design capacity, it is essential that FERC ensure that Tennessee will in fact be at risk for the costs of any unsubscribed capacity.

To that end, additional data and analysis is needed with respect to the proposed phasing of the Project. First, Exhibit Z-5 sets out the scope of the facilities, costs of the Project, and the initial recourse rates that would result if the Project is phased-in.³ That two-page exhibit provides only minimal cost of service data for four capacity scenarios for the Project’s two components. Page two of Exhibit Z-5 gives some indication of

what mainline, looping, and compression facilities will be required in each of the proposed phase-in capacity scenarios. Since Tennessee relies on the phase-in to ensure that only facilities that have contract support will be constructed,” FERC should ensure that the facility and cost assumptions underlying the phase-in proposal line up with the contracts and services underlying each phase. To that end, the record would benefit from a complete explanation of the service and load assumptions (including the load locations and pressures) underlying the facilities Tennessee claims will be needed for each capacity phase.

Recourse Rates. To date, all of the shippers taking service under the Project have opted for negotiated, rather than recourse, rates. FERC permits pipelines to negotiate individualized rates which, unlike discounted rates,” are not constrained by the maximum and minimum rates set forth in the pipeline’s tariff. 8 However, FERC requires that pipelines permit shippers the option of paying the traditional cost-of-service recourse rates in their tariffs, instead of requiring them to negotiate rates for any particular service.” FERC relies on the availability of recourse rates to prevent pipelines from exercising market power by assuring that the customer can revert to the just and reasonable tariff rate if the pipeline unilaterally demands excessive prices or withholds service.1” In this instance where the new capacity is not fully subscribed, it is important that any recourse rates be properly developed in order to provide the necessary check on the pipeline’s market power during the negotiation of any additional negotiated rate contracts.

Recourse rates are also important because FERC’s general policy is that interruptible and firm transportation authorized overrun rates are designed to be equivalent to a 100 percent load factor derivative of the maximum firm transportation cost-based rate and are to be charged based on usage. Thus, even though the firm Project shippers to date have all opted for negotiated rate contracts, the recourse rates remain important because they are the basis for the rates for any interruptible service that will be provided. At least two elements of Tennessee’s proposed recourse rates would benefit from additional scrutiny.

First, Tennessee projected operation and maintenance (“O&M”) expenses “based on historical cost factors on the Tennessee system for similar facilities.” Application at 36. Given that O&M is projected to be over \$26 million a year if both components are constructed at full capacity levels (see Exhibit Z-5 at 1 line 7), the record would benefit from additional support for the O&M projections.

Second, in developing its recourse rates, Tennessee proposes to impute interruptible volumes equal to approximately one percent of the projected firm volumes. Tennessee claims that for the 12 month period ending December 31, 2014, its interruptible service was approximately 0.51 % of the firm volumes transported. Id. The numerous proposals to increase natural gas fired electric generation in New England, which need natural gas but do not always contract for firm pipeline capacity, call into question the reasonableness of the one percent imputation level of interruptible service. Consequently, the record would benefit from additional support for the proposed imputation level.

CONCLUSION

Connecticut fully supports additional pipeline capacity so that New England residents and electric generators have comparable access to domestic natural gas as loads located south of the Wright, New York interconnect. The current level of information provided in the application is insufficient for this Commission and the parties to fully evaluate the economic foundations for this Project, and thus the Connecticut PURA and CT OCC respectfully request that further information and evidentiary support be provided.

WHEREFORE, the Connecticut Public Utilities Regulatory Authority and the Connecticut Office of Consumer Counsel respectfully request that the Federal Energy Regulatory Commission take these comments into account in analyzing the Application before it in this proceeding.

Footnotes:

1 Certification of New Interstate Natural Gas Pipeline Facilities, Statement of Policy, 88 FERC ~ 61,227, at p. 61,748, modified by, 89 FERC ~ 61,040 (1999), order clarifying statement of policy, 90 FERC ~ 61,128, order further clarifying statement of policy, 92 FERC ~ 61,094 (2000) (“contracts or precedent agreements always will be important evidence of demand for a project”) (“Certificate Policy Statement”).

2 Application at 91.

3 As revealed in the two-page exhibit, the economies of scale of the proposed phase-in are not surprising for such

a capital-intensive investment. For the Supply Path Component, the total cost of service for the Project's current level of firm contracts (0.7 Bcfl/day) is \$286.2 million, whereas for the total capacity sought (1.2 Bcf/day), the total cost of service is \$370.4 million, or only \$84.2 million additional. Exhibit Z-5 page 1, line 11. In other words, the costs are heavily front-loaded. If the remaining capacity is not actually constructed, the economics of the smaller Project are much less attractive because the initial Phase of the Project would bear disproportionate costs. The Market Path Component reflects greater economies of scale, namely the total cost of service for the Project's current level of firm contracts (0.7 Bcf/day) is \$626.4 million, whereas the total cost of service for the entire Project (1.3 Bcfl/day) is only \$87.1 million more, or \$713.5 million. Id.

4 Application at 8.

5 For example, Tennessee expresses its belief believes that its newly proposed PowerServe Firm Service will provide both the basis, and the incentive, for the execution of long term firm transportation contracts by EDCs, gas-fired generators, and other market participants to meet the critical needs of gasfired electric generation in the Northeast and New England in particular. Application at 24. The PowerServe open season materials are set forth in Exhibit Z-3 to the Application. Those materials make clear that any PowerServe service will involve non-rateable takes, which presumably will impact the amount of service which can be provided and the facilities necessary to provide the service.

6 Alternatives to Traditional Cost of Service Ratemaking for Natural Gas Pipelines, 74 FERC ~ 61,076 at p. 61,241, reh'g denied, 75 FERC ~ 61,024 (1996), petitions for review denied sub nom. Burlington Resources Oil & Gas Co. v. FERC, 172 F.3d 918 (D.C. Cir. 1998) ("Alternative Rate Policy Statement"); Natural Gas Pipeline Negotiated Rate Policies and Practices; Modification of Negotiated Rate Policy, 104 FERC ~ 61,134 (2003), order on reh 's and clarification, 114 FERC ~ 61,042 (2006), dismissing reh 's and denying clarification, 114 FERC ~ 61,304 (2006).

7 See Northern Natural Gas Co., 105 FERC ~ 61,299 at PP 18-19 (2003) (clarifying the distinction between discounted and negotiated rates).

8 See 18 C.F.R. § 284.10(c)(5).

9 A recourse rate is a cost of service based rate for natural gas pipeline service that is on file in a pipeline's tariff and available to customers who do not negotiate a rate with the pipeline company.

10 Alternative Rate Policy Statement at ~61,238-42.

RE: AECOM Information Request for Tennessee Gas Pipeline Company, LLC (NED Project) FERC Docket Number: PF14-22 - updated route

Dear Ms. Ferry

Thank you for the opportunity to respond to the Information Request that was submitted to the Town of Merrimack on November 11, 2015 by AECOM on behalf of the Tennessee Gas Pipeline Company, LLC. As you know, the Merrimack Village District is responsible for providing potable water to 25,000 residents in the Town of Merrimack, New Hampshire. All of our water resources are derived exclusively from groundwater that is pumped from a series of high-yielding wells sited in three stratified drift aquifers. On an annual basis, we provide approximately 800,000,000 gallons of clean, potable water to our customers. The intent of this letter is to make it clear that the proposed pipeline route would directly cross very sensitive environmental areas, which would include designated protected aquifers, Wellhead Protection Areas, and surface water bodies that contribute recharge to the District's potable groundwater resources.

Tennessee Gas Pipeline Company, LLC is in process of siting a pipeline route (identified as the NED Project) through the Town of Merrimack. The proposed route of the NED gas pipeline (Figure 1 - Digitized from the maps attached to the November 11, 2015 AECOM letter) crosses through the center of one of the principal aquifers utilized by the MVD, known locally as the Witches Brook Aquifer. The Witches Brook Aquifer provides 33% of the MVD's groundwater capacity and is located in the towns of Amherst, Hollis, and Merrimack. The proposed pipeline route crosses this Aquifer and passes through a portion of the designated Wellhead Protection Area for three major MVD Production Wells. The MVD wants to emphasize the importance of this regional Aquifer as a source of potable water for thousands of people in the local area. The

District is fully opposed to the siting of a petroleum product pipeline through these sensitive groundwater supply areas and specifically in such close proximity to its Production Wells.

In addition, the proposed pipeline route is located within a quarter mile of the MVD Wellhead Protection Area for several other MVD Production Wells located in the Naticook Brook Aquifer. The MVD currently operates two Production Wells (MVD-2 and MVD-3) that pump groundwater from this Aquifer, providing approximately 50% of the MVD's water supply capacity. This Aquifer is protected by the Town of Merrimack through an Aquifer Protection Overlay District and the contributing area for the two Production Wells is a registered Wellhead Protection Area (WHP A) with the State of New Hampshire.

The MVD has a mutual aid agreement with Pennichuck Water Works, Inc. to provide water in the event of an emergency when the MVD cannot meet demand. The proposed natural gas pipeline route crosses through a large swath of land that is part of the watershed for the surface water that Pennichuck Water relies on to meet the needs of its 86,000+ customers.

In summary, the proposed natural gas pipeline route crosses directly through the Wellhead Protection Area for the Witches Brook Aquifer and passes within a quarter mile of the Naticook Brook Aquifer. Together, these two Aquifers provide 83% of the groundwater resources available to the MVD. Finally, the proposed pipeline is also located within the surface watershed for Pennichuck Water Works, Inc., a mutual-aid emergency water supplier to the MVD. In total, approximately 83% of MVD's total water capacity is derived from the District's existing Production Wells that are located within close proximity to the proposed pipeline route. Loss of use of either of these Aquifers would have catastrophic consequences for the MVD and on our ability to provide a reliable source of drinking water to the residents and businesses in the Town of Merrimack. The MVD remains opposed to the placement of the gas pipeline in any area where our public wells derive their groundwater resources from and any areas where recharge to these wells occur.

Sincerely,

Ronald Miner, Jr.
Superintendent

20160115-5291

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we, Michael Petterson, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Michael Petterson,
63 Cart Path Rd. Dracut, Ma. 01826,
978-987-6244, pettersonfta@yahoo.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Provide paragraphs on how construction of the pipeline will adversely impact you:

I am writing to express my concern with the gas pipeline project proposed in Dracut, Ma proposed by Kinder Morgan. I am totally against the project for multiple reasons. I am against the project due to possible health concerns for my family and friends and I. I am also worried about safety concerns and property value concerns. I believe this project will have negative impact on my neighborhood and Dracut as a whole. I am submitting this with my motion to intervene.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Michael Petterson, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 15th day of January, 2016.

Michael Petterson
63 Cart Path Rd.

UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY
REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we , Denise and Juan Diaz , file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Denise and Juan Diaz,
27 Cart Path Road Dracut, MA 01826
978-996-0832
vdenise@yahoo.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Our neighborhood (Farm Gate Estates in Dracut, MA) has a little over 60 houses – mostly made up of young families, with small children. We have two young children; 3 years old and 3 months old.

Recently our neighborhood has been titled the “epicenter”, of where the newly proposed Kinder Morgan pipeline would end and connect.

Our reasons of concern are the following:

- The proposed Compressor station, with air and noise pollution is about a mile from our homes
- Possibility of Kinder Morgan updating a pipeline running through my yard
- Local Brox blasting and concern of public safety with pipelines in our area
- Metering stations in our neighbor’s backyards (right down the street)
- Loss of property value
- Tariffs forced on regional ratepayers to cover the costs of the pipeline
- Added noise and damaged lands and roads from construction around our town

If this were to go through a much-loved quiet neighborhood community, with local farms to get food and fresh country air to breathe would be forever changed.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this Friday January 15, 2016.

Denise and Juan Diaz
27 Cart Path Road

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	roy2098@yahoo.com	

Basis for Intervening:

The NED project is totally inappropriate for this region for many reasons at many levels:

- a) A permanent despoilation of a relatively pristine environment that is located 165 miles from New York City and 100 miles from Boston -in other words, it is close and nearby to these major metro areas and is worthy of serious preservation and conservation.
- b) The rural towns traversed by the proposed pipeline are in no way capable of handling a disaster scenario - we are talking about towns of less than 2,000 population each with their own individual fire and health departments. By the way, county government was done away with here 20 years ago.
- c) Most residents of these towns depend on individual wells for their water needs - A major excavation project of this scope has the potential to permanently contaminate and change underground waterways.
- d) The blowoff valves also pose a health hazard as the compounds expelled may contain known (and unknown) carcinogens and other substances not compatible with a healthy life.
- e) Property values of those near the pipeline have already been very negatively compromised - no one wants to live close to such a pipeline or its attendant valves and compressors.
- f) This is an area with proven dedication and embrace of alternative energy technologies. The project is a gross insult in that instead of encouraging further use and development of these technologies, it furthers development and use of legacy and traditional fossil fuels - and, without a morsel of any kind of direct benefit to the local population.
- g) Continuing with f) above, it appears gas the pipe will transport is primarily directed at export markets without any consideration for "common good" at all. Who profits from the export of the gas? Kinder Morgan LLP, a corporation and its shareholders. So they get to despoil beautiful virgin territory solely for the purpose of making a profit? Again, where is the "common good" to us locals?
- h) Because of the for-profit nature of this proposed pipeline, it becomes very hard to trust any kind of demonstrated need provided by the company, other than that of their need for profit. It is also difficult to believe some of the utilities that may have been coerced into siding with Kinder Morgan. Alternative energy generation is not considered anywhere in their analyses...
- i) There are existing pipelines that currently carry gas into our region. If more gas supply is determined to be warranted - by non-interested 3rd parties - then these existing pipelines are the ones that should be expanded, even if the cost is greater: simply "slashing and burning" through this virgin territory (please re-read section a) above) is abundantly not acceptable solely because it is the cheaper alternative.

In conclusion, I believe this project exists primarily for the benefit of Kinder Morgan LLP and its subsidiaries. Destroying a pristine area proximal to two major northeast population centers makes little sense particularly when existing pipelines exist and could be expanded - these are already disturbed and developed land areas. It does nothing - zero - to further development and usage of alternative energy technologies; and actu-

ally contributes to the opposite effect - with the added “bonus” (sarcasm intended) of adding to the release of great quantities of carbon into the atmosphere via the ultimate burning of the gas. It has no benefit really to the very local residents who have to live with it each and every day and who could actually be victims of potential catastrophic events or subtle but deadly health hazards.

Please do not build this pipeline!

fohp@friendsofharoldparker.org

II. BACKGROUND

Friends of Harold Parker State Forest is a non-profit organization formed to preserve, enhance and protect the natural and historic resources of Harold Parker State Forest. FOHP represents the interests of all legal visitors to Harold Parker State Forest.

Harold Parker consists of numerous forested parcels across five towns, including the 5.3-acre Flint Lot, located along the border of Andover, MA and Tewksbury, MA.

Together with conservation land owned by the Town of Andover and the Town of Tewksbury, the Commonwealth’s Flint Lot contributes to an 84-acre conservation area, consisting of forested uplands and swamp-land, and several hydrological connections.

The parcel contains a trail used by residents of Tewksbury and Andover for passive recreation such as walking, running and dog-walking.

Tewksbury and Andover town assessor data does not include the Flint Lot. Rather, it is shown as part of the abutting town conservation land.

The MassGIS “Protected and Recreational OpenSpace” dataset includes the Flint Lot. However, the exact location of the parcel is not shown correctly. Our research indicates that the parcel lies in the path of the pipeline. Refer to the attached map and Northern Essex Registry of Deeds Book 374 Page 56 for a description of the lot location. Although the aforementioned deed describes the parcel as located in Andover, due to a change in the town boundary the parcel is now located partly in Tewksbury and partly in Andover.

III. MOTION TO INTERVENE

FOHP is an incorporated 501(c)3 organization comprised of citizens, property owners, abutters and neighbors devoted to preserving, enhancing and protecting the natural and historic resources of Harold Parker

State Forest. FOHP represents the interests of all legal visitors to Harold Parker State Forest. As such FOHP has both (1) “an interest which may be directly affected by the outcome of the proceeding” pursuant to Rule 214(b)(2)(ii); and (2) its “participation is in the public interest” pursuant to Rule 214(b)(2)(iii).

FOHP’s concerns include, but are not limited to:

- The destruction and fragmentation of this forested conservation area.
- Disruption of wetland and upland habitat of the blue-spotted salamander (*Ambystoma laterale*), a Species of Conservation Concern in a designated Natural Heritage & Endangered Species Program (NHESP) Priority Habitat of Rare Species and Estimated Habitat of Rare Wildlife known as Bio-Map2 Core Habitat 2601.
- Use of Article 97 land for a non-public purpose.
- Limitation on access and use of existing recreational trails.

Due to the multi-town, multi-use nature of Harold Parker State Forest, FOHP has a direct and material interest in the outcome of this application and proposed project, which cannot be adequately represented by other parties to this proceeding. FOHP has important information to contribute which will serve the public interest.

For the foregoing reasons, Friends of Harold Parker State Forest respectfully requests that intervention in the above-captioned proceeding with full rights to participate in all further proceedings and to submit comments be granted.

Dated: January 14, 2016

Respectfully submitted,

Friends of Harold Parker State Forest, Inc. Board of Directors

Bob Anderson	Frank Lane
Glen Aspeslagh	Helena Minton
Jill Burns	John Perrone
Nancy Fenton	Andy Sherman

Basis for Intervening:

We are abutters to property through which the Fitchburg lateral of the proposed Northeast Energy Direct pipeline is slated to pass. In addition, our house is approximately one mile from the proposed route of the Northeast Energy Direct pipeline itself. Therefore we am concerned citizens of the town of Mason, New

Hampshire.

Given that the geology underlying this area is granite (which decades ago supported several quarries), and that blasting for a new cellar hole around the corner from us resulted in loss of a well approximately 1,350 feet away, we are concerned that the blasting which will be required for installation of the Fitchburg lateral approximately one-quarter mile from our home will adversely effect our private well, and

Given that the actual route will not be decided until construction begins, and that Kinder Morgan has historically failed to notify affected property owners, yet still has requested permission to proceed, and

Given what we currently know about climate change, any project of this magnitude which would expand and prolong our dependence on fracked gas can only exacerbate damage to our environment. Therefore we are concerned citizens of Planet Earth.

We respectfully request to be registered as interveners in this project.

Basis for Intervening:

I am a resident of Merrimack, NH specifically Whittier Road. We are applying as interveners in Docket CP16-21-000 because we will be directly impacted by this project in a number of ways including but not limited to:

1. Land/homeowner
2. If built, the quality of life in our neighborhood will be decreased significantly during construction and will be changed forever. We are the original owners of our home, and we purchased in this neighborhood with specific expectations regarding our surroundings which this pipeline would negatively change
3. The proposed route crosses our town's watershed and there is evidence that this could pose a great risk to our town's water supply
4. I am currently a Liberty Utilities ratepayer and am concerned that I could be forced to pay for this pipeline through my utility rates
5. Our town (Merrimack, NH) is identified as the location of a meter station, which I am concerned that it will negatively impact the quality of life for the residents of Merrimack NH.

Basis for Intervening:

In good conscience I must intervene regarding the Kinder Morgan's NED. It will cause our electric bill to rise, but even more serious are the effects on the health of families who live in that vicinity. They will develop serious illnesses from the formaldehyde, nitrogen oxide, and benzene. There is actually no need for greater gas capacity. This proposal is bad for people and must not be endorsed.

Thank you.

Margaret K. Schramm

I am opposed to the proposed pipeline for the reasons listed below. My sole residence is located at 732 Beldingville Rd in Ashfield MA, in a location which I estimate to be between 1000 and 1500 feet south of the proposed East-West trajectory of the pipeline. Over recent months, it has become evident that the proposed project is being advanced without due attention being given to:

- (1) the need for the project from a medium and long-term perspective; in particular, little or no effort has been given to identifying alternative solutions to Massachusetts and New England energy needs over that time frame;
- (2) alternate pipeline routes, for example the Masspike corridor;
- (3) health and safety concerns to households (like mine) located in proximity to the proposed route;
- (4) the impact on important local land use and conservation interests -- as well as property values - which (in our American democracy) are entitled to priority in the absence of compelling public interests which are evidently absent here.

Basis for Intervening:

I strongly oppose this project. I am a Whately resident who crosses the pipeline route daily on my commute to work in Greenfield, and I would be at physical risk. I am an electric ratepayer who, if Kinder Morgan secures Eversource as a project customer, expects to see an increase on my bill relating to NED cost recovery. I spend a great deal of time outdoors enjoying nature, and I do not want any state or town public parks or forests, which have been set aside for citizens and wildlife, to be impacted by this commercial enterprise. I am a supporter of the Franklin Land Trust, and the purpose of my donation would be violated, should this project be allowed to take easements over protected land. I understand that catastrophic climate change is driven by the use of fossil fuels, and I believe it is the responsibility of every person to refuse the development of new fossil fuel infrastructure.

Basis for Intervening:

My name is Aimee Gelinias M.Ed and I am the Director and Founder of the Tamarack Hollow Nature and Cultural Center, a 32 acre, non-profit conservation and environmental education organization in Windsor, MA dedicated to "Inspiring environmental and cultural awareness, appreciation and stewardship". The proposed NED pipeline and compressor station would be within a 5-mile radius of this sensitive high elevation boreal forest which is considered a rare habitat in Massachusetts by the Mass Wildlife Division. This high elevation forest and drowned lands watershed habitat is very sensitive to climate change depending on clean air and steady cool temps to maintain the unique ecosystem typically found in northern Vermont and

Canada. Our conservation area abuts the Trustees of Reservations Notchview Reservation, which is part of the proposed pipeline route. As a naturalist educator, I have led many treks in the Hume brook area where the proposed route lies and have witnessed the abundant wildlife activity that would be disrupted if a pipeline were to be placed in that location. Both Notchview and Tamarack Hollow protect the Drowned Lands, a massive high elevation watershed plateau that feeds the Housatonic, Hoosic and Westfield (Connecticut) river watersheds. This is a very unique and widespread wetland area that is home to rare plants and wildlife with its pristine spring waters and snow/rain fed waters. The proposed pipeline would cut across this plateau putting all three watersheds in harms way from both construction and potential leaks or explosions due to the extreme weather and low temps we experience at this 2000+ foot elevation gain. In addition, cancer-causing chemicals typically found in fracked gas such as benzene would be released during periodic blow-downs raining chemicals across this pristine wilderness area. We are gravely concerned about this project's impacts to our livelihood, our ecosystem and the health of the air, water and ourselves. We are opposed to the pipeline project and the proposed compressor stations along its route. We believe that FERC has a responsibility to research thoroughly alternative energy sources that are both sustainable and ecologically sound such as wind, solar and hydropower. The climate change summit recently held in Paris spoke volumes for where the citizens of the world are at, we must act now to swiftly change gears about how we acquire energy or we will suffer the grave consequences of poisoning our water, air and health for the future of our planet. We implore FERC to make the right choice and to stop this horrendous proposed pipeline project and put our resources and energy into the sustainable energy industries of the future before its too late.

Regards,

Aimee Gelinis M.Ed
Director and Co-Founder
Tamarack Hollow Nature and Cultural Center
Windsor, MA

Basis for Intervening:

We also have a home in Conway, MA, one of the towns through which the proposed pipeline would pass. Our address is 94 S. Ashfield Road, Williamsburg, MA 01096. I oppose the pipeline because it is not necessary to supply the area with sufficient energy, it risks pollution of the surrounding areas and noise and light pollution near the compressor stations, would involve eminent domain and public spending (including increases for ratepayers) for private profit, could raise rates for natural gas in the area because of inclusion in the world natural gas market which is priced higher, and would encourage and stimulate additional fracking in the formerly pristine and beautiful Allegheny Plateau, particularly in Bradford and Susquehanna Counties, in northeastern Pennsylvania.

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____
Individual _____ elisabeth736@comcast.net _____

Basis for Intervening:

I, Elisabeth Armstrong-Bushey, live at 736 River Road in Deerfield, MA 01342. My family and I have lived here for more than 30 years. I am DIRECTLY IMPACTED by the proposed NED Tennessee Gas/Kinder Morgan pipeline, as the proposed pipeline route is expected to cross my property! I am applying for Intervenor status for the following reasons:

Kinder Morgan has not demonstrated that there is an actual need in New England for additional Natural Gas. The recent study done by Attorney General Maura Healey concluded that New England does not need additional natural gas pipeline infrastructure to meet peak winter energy demand. Energy efficiency and “demand response” would be the best solution over the next 15 years for both consumers and the environment. There are some “demand response” storage tanks in Western Massachusetts with more that have been approved but not yet installed. These potentially rate reducing steps have not been taken because they do not lead to increased profits. The public interests need to be protected.

Additionally, there is no doubt that most of the gas in this proposed pipeline would be exported. Overseas, gas costs a lot more, and our local markets would have to compete on a global scale, so we would have to pay the increase in energy costs that would result from exporting natural gas.

Kinder Morgan has a horrendous safety record, and my family and I would be living in the Incineration Zone! Our neighbors have worked for decades to get a toxic dump railroad yard cleaned up. Now the pipeline is proposed to go under the rail yard undoing decades of state and federal work! My property value would plummet. Who would want to live in a place where their life would be in constant jeopardy? Furthermore, I have a shallow well. Homes in Deerfield cannot be sold without potable water, so the water quality of my well also determines the value of my home.

The proposed pipeline aims to take 27,400 acres of conserved land in 25 Massachusetts towns. The Commonwealth of Massachusetts bought our development rights, under Article 97 of our state Constitution, which states, in part, “The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historical, and esthetic qualities of their environment...Lands and easements taken or acquired for such purposes shall not be used for other purposes.” As Massachusetts taxpayers, we paid for all conserved land in our state. Why should land protected for long-term public health and conservation purposes be sacrificed for short-term private financial gain?

As an outdoors person and animal lover I walk my dogs daily in the beautiful forested hills around my home, which include Conservation Lands. Many of our most scenic spots will be grossly impacted by this proposal. These are currently magnificent areas teeming with wildlife. How would leaks be detected? Would the gas pool in low areas suffocating small animals until a spark sets it off?

The Deerfield River and surrounding pristine area is home to many animal species including bear, deer, beaver and other small mammals, great blue heron, and our National symbol, the formerly endangered bald eagle. There is no way to guarantee the protection of these species and our water quality against the very real possibility of a conflagration which would bring death and environmental destruction to our spectacular natural environment! What takes a moment to pollute can take decades to abate!

Sincerely,

Elisabeth Armstrong

Washington, DC 20426

Re: Tennessee Gas Pipeline Company, L.L.C., Docket No. CP16-21-000
Northeast Energy Direct Project

Update to Landowner Mailing List

Dear Ms. Bose:

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) filed with the Federal Energy Regulatory Commission (“Commission”) a certificate application in the above-referenced docket for the Northeast Energy Direct Project (“Project”).

On December 21, 2015, Tennessee filed an updated landowner list pursuant to Section 157.6(d)(5) of the Commission’s regulations, 18 C.F.R. § 157.6(d)(5)(2015), which included corrected addresses for landowners whose notification mailings were returned to Tennessee as undeliverable. Subsequent to that filing, Tennessee made additional updates to the landowner list, and filed another updated list adding additional landowners on January 6, 2016. In the filings on December 21, 2015 and January 6, 2016, Tennessee stated that it would file an additional update to the landowner list, to include addresses for landowners whose notification mailings were returned to Tennessee as undeliverable, or where Tennessee located a new address for an affected landowner.

Tennessee now provides the additional update to include landowner notification mailings that were returned to Tennessee as undeliverable, or where a new address was added to the list. The attached spreadsheet contains tabs for each component of the Project. Tennessee has highlighted address rows to indicate letters that were returned or where the address changed. There are three categories of address changes, denoted by the following highlight colors: (1) letters returned as undeliverable by the post office (yellow highlight); (2) letters returned because landowner refused delivery (orange highlight); and (3) landowners who requested a change in address (green highlight).

Tennessee requests that the attached landowner list be accorded privileged and confidential treatment, pursuant to Section 388.112 of the Commission’s regulations, 18 C.F.R. § 388.112 (2015), and has marked the list with the legend “Privileged and Confidential - Do Not Release”.

In accordance with the Commission’s filing requirements, Tennessee is submitting this filing with the Commission’s Secretary through the eFiling system. Tennessee is also providing a copy of this filing to the Office of Energy Projects.

Respectfully submitted,

TENNESSEE GAS PIPELINE COMPANY, L.L.C.

Basis for Intervening:

I am a landowner in the town of Richmond, Massachusetts and request the right to intervene in this proceeding to oppose the Tennessee Gas Pipeline, L.L.C. (TGP) Northeast Energy Direct Project (NED). My family has lived in Richmond since 1962 and over the course of my lifetime, I have observed the unwelcomed installation of 2 (two) additional pipelines that parallel the original one that was placed circa 1951. The 1951 pipeline lies approximately 75 feet south of the back deck of my current home. In early 2014, TGP requested permission to survey my land for the purpose of placing a fourth line north of the 1951 pipeline. I denied them access. The well that provides my drinking water is approximately 25 feet south of my back deck, placing it between my back deck and the location of the 1951 line. If TGP were to place a new pipeline north of the 1951 line, it would necessitate the relocation of my well (there is no other reasonable place to drill a well on my lot); and, possibly take my house by eminent domain.

During the survey phase of the NED project, TGP representatives remained somewhat diplomatic when suggesting the possibility of alternative solutions such as pipeline overlays. However, most of the 2.5 acres where I reside consist of my backyard where the pipelines are located, and the addition of one more pipeline in any configuration, would further impede the use of any remaining land for enjoyment. Furthermore, should a fourth pipeline be installed south (even partially south with an overlay) of the most recently installed line (early 1990s); it could possibly impact the land and septic field of the property that abuts my lot. The primary reason for my stringent opposition to placing another pipeline is that there simply is no more room on an already crowded very small building lot. I must continue to advocate for the welfare of my land, the worth and value of my property and for the health and safety of my family and myself.

I understand that Richmond is no longer impacted by Tennessee's preferred route (derived from a letter from Kinder Morgan to the Town of Richmond, dated 12/17/14, RE: Tennessee Gas Pipeline Company, L.L.C.- - Northeast Energy Direct Project). I also understand that TGP has now been charged with the task of identifying alternate routes and that Richmond is being actively discussed as a viable alternate route.

My family and I have had to endure the noise and disruption associated with the blasting and construction of two of the three currently existing pipelines and I am adamantly opposed to the notion of installing a fourth line that will transmit fracked gas (possibly containing residual chemicals used at fracking wells) and possibly other substances such as airline fuel. I live with the idea every day that I truly do not know what is flowing in those pipes, literally in my back yard. I am not convinced that the 1951 pipeline has been adequately maintained, nor am I convinced that the other two pipes are operating in accordance with complete safety protocols. I am seldom made aware of maintenance attempts ON SITE by TGP. Of particular concern, is that during mild winters and early spring, I can see evidence of all 3 (three) lines in the ground by readily observing thawed soil tracks all the way down the hill into the field. It has been suggested to me by individuals I deem reputable, that the gas is probably too hot or moving too fast, or both, and that the depth of the pipes might also be called in to question. Therefore, adding a fourth line of high-pressured gas poses a new threat to an already potentially volatile situation.

To say that I am concerned about leaks and explosions, and the contamination of my drinking water, the stream at the base of my land, and air, is an understatement at best. In addition to the three pipelines in my

backyard, my home and land exist in close proximity to the valve/pigging/meter station, MLV256. This entire area of Richmond has been grossly affected by the demands of pipeline installations. Should another high-pressured pipeline be installed, I question whether “blow offs” would become routine, thus spewing toxic chemicals into the air. Furthermore, I question the safety of the pipelines themselves, whether old or new, due to accidental irregularities in pressure and leaks of all types due to erosion and/or human error. I am also concerned that an accident could occur during the construction of a fourth pipe due to the need for more blasting and the heavy weight of ongoing commercial traffic that runs through the major intersection where currently 3 (three) pipelines are placed almost directly beneath. Said intersection consists of the highway that abuts my property and is very close to my house.

In addition to being further encroached upon by another pipeline, eminent domain issues and safety issues (living so close within the blast radius), I am very concerned about the environmental impact to my and surrounding lands (some of my acreage is “estimated or priority habitat” under the Massachusetts Division of Fisheries & Wildlife, Natural Heritage Endangered Species Program). It should be noted that my family and I own an additional 15+ acres consisting of the location of my childhood home and surrounding fields (also believed to be within the blast radius).

In conclusion, I respectfully request that the Federal Regulatory Commission grant me intervener standing for the Northeast Energy Direct project.

Respectfully submitted,

Melanie Masdea-Dignum

Basis for Intervening:

i would like to intervene as a ratepayer and as a resident living near the area that the pipeline would go through in my town. i do not think my electric rates will go down and i am also concerned about pollution, including noise pollution, and affect and destruction of natural areas and therefore i am against the northeast energy direct pipeline being built.

20160115-5324

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)	

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Matthew McConnell and Brenda McConnell of 219 River Rd, Essex County, Andover, MA 01810, file this Motion to Intervene in this proceeding. On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for

the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000.

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Matthew McConnell and Brenda McConnell
219 River Rd, Andover, MA 01810
(978) 685-5511
mcconnellpipeline@gmail.com

II. INTEREST OF PETITIONER

We strongly oppose this project and the construction, operation and maintenance of the NED pipeline would adversely impact us as follows:

1. This Infrastructure is not necessary. Massachusetts has all the infrastructure it needs. In fact if gas companies in Massachusetts worked to repair existing known leaks, extra capacity would be gained and the residents and rate payers would not pay for unnecessary losses and would be safer. Additionally, Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Andover has been a strong participant in the Solarize Mass Program. It successfully executed a Solarize Andover program. Also, Massachusetts has an LG facility in Everett that has been sitting unused, but which could be called upon to meet the needs of any days where there is high demand. The Attorney General's independent study has clearly established that there is no need for this additional NED infrastructure. This pipeline clearly is not necessary at all to service New England.
2. Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience. By this time it has become quite clear that the true purpose of this oversized pipeline is to transport fossil fuels to Canadian and US coastal areas for sale and export to foreign markets, all at the expense of US rate payers. Massachusetts does not need this new pipeline infrastructure. It does not meet the criteria of serving the greater good and does not meet the definition of eminent domain and our rights under the constitution of the United States of America.
3. The destruction of precise lands and resources, within this path route there are wetlands, rare and mature trees, valuable historic stone walls and ancient artifacts, vernal pools, AVIS Article 97 protected lands and a variety of rare and protected plants and animals. Our wetlands also contribute to and serve to feed the drinking water supply for the Town of Andover.
4. The original route of the Lynnfield Lateral was proposed run right in my side yard. If this Application is approved, and the route of the Lynnfield Lateral moved back to the original route, we will be permanently and unnecessarily adversely impacted. The permanent clear cut easement will be 50 feet wide, while the temporary work easement will be as wide as 165 feet. The finished pipeline will be about 50 feet from our home. This puts our family as well as our entire neighborhood, well inside the "Blast" or "incineration zone". Our family will hear the high pressure gas being pumped through the line and the significant noise when cleaning occurs. We will lose our trees, our sound buffer, our privacy, our beautiful, natural views. All of the mature trees that give our neighborhood its character will be permanently eliminated. Our neighborhood will never be the same. Regarding my family's safety, the proposed gas pipe was slotted to run approximately 50 feet from my children's bedroom. As you know a leak or explosion to this line will be devastating and my wife and I are worried about what we will do if this proposed route is changed back to the original as we will most likely not remain in the house. We will be forced to sell and as the property value will definitely be reduced, purchasing a single family home that is not within 50' of the gas line will be impossible. I would like to point out that there is an alarming amount of devastating incidents (see below) with similar sized gas lines, of which some are buried 30'

below grade. Yes, 30' and they still cause massive destruction, so I am afraid to think of what it will look like if there is an incident with the new line that is 3' deep approximately 50' from my children's bedroom. The path of the pipeline will deprive us of privacy, disturb and dry out wetlands and ground water, and put our health at risk.

- a. http://en.wikipedia.org/wiki/List_of_pipeline_accidents
- b. http://www.twincities.com/localnews/ci_25838227/gas-pipeline-explodes-nortwestern-minnesota-none-hurt
- c. http://bismarcktribune.com/bakken/natural-gas-explosion-reported-near-tioga/article_d4f90b48-9333-11e3-a757-0019bb2963f4.html
- d. http://www.omaha.com/news/natural-gas-line-blast-near-fremont-neb-leads-to-evacuation/article_6a6f7a0f-338e-521c-8415-942547d953f5.html

- g. <http://www.newson6.com/story/23192889/no-injuries-from-pipeline-explosion-fire-in-pittsburg-county>

5. The value of our property will be diminished by the construction, operation and mere presence of the pipeline path. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive our family of our single largest investment and retirement asset.

III. CONCLUSION

Wherefore, We, Matthew McConnell and Brenda McConnell respectfully request that the Commission to grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Respectfully submitted this 15th day of January, 2016.

Matthew McConnell, Brenda McConnell

Submission Description: (doc-less) Motion to Intervene of CITIZENS AWARENESS NETWORK, INC under CP16-21-000.

Submission Date: 1/15/2016 12:50:11 PM Filed Date: 1/15/2016 12:50:11 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____
CITIZENS AWARENESS NETWORK, INC hancockbranch@gmail.com

Basis for Intervening:

The Citizens Awareness Network (CAN) is a 501 c3 not for profit membership organization registered in the Commonwealth of Massachusetts. Since 1992 CAN has been working to promote sustainable energy development throughout New England. CAN has more than four thousand members in the region, with a significant number residing in Western Massachusetts.

The application for the Northeast Energy Direct Project for a Certificate of Public Convenience (CP 16-21) is of great concern to our organization and our membership. Many of our members reside in the area of

Western Massachusetts that is the proposed corridor for the pipeline. The Citizens Awareness Network opposes the issuance of the Certificate of Public Convenience.

In addition to having a significant number of members residing in the proposed pipeline corridor who are opposed to the construction and operation of the pipeline; the Citizens Awareness Network has had a long-standing interest in promoting sustainable energy development in the New England Region. CAN does not support the construction of energy infrastructure that is intended to promote and increase the use of finite fossil fuels. At a time when serious concerns regarding climate change and the extraction practice of hydro-fracking are at the forefront of the energy debate in the United States CAN feels it is unconscionable for the natural gas industry to be building massive infrastructure to be used to increase the use of fossil fuels. CAN would rather see time and resources devoted to promoting and developing non-fossil energy resources and infrastructure. On that basis we oppose the issuance of the requested issuance of the Certificate of Public Convenience contemplated in docket #CP16-21. On the basis of our interest in the proceeding we request that the Commission grant our request to intervene in the proceeding

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
---------------------	--------------------------------	----------------------------------

Individual	harrison_irwin@verizon.net	
------------	----------------------------	--

Basis for Intervening:

I am writing as a Town of Conway resident to formally request Intervener Status in reference to this filing. As a Conway Resident I feel the following issues are important to consider in the deliberations about the propose gas pipeline running through our town.

- 1) Living not all that far from the propose location of a Blowdown Valve , I am deeply concerned about the effects this will have on our local air quality. My wife already has Asthma and I do not see why her condition worsened by unhealthy natural gas releases when they occur. I also have concerns about industrial scale accidents at this valve or anywhere along the pipeline route.
- 2) The Conway forests and wetlands though which the pipeline will run are special environmentally sensitive areas. Besides being noted for their scenic beauty, these woods provide habitat for innumerable animals, including larger mammals such as Moose, Bear, and Deer. In addition, the Bear and the Deerfield Rivers will be adversely impacted. The Deerfield, in particular, is known nationwide as a prime trout fishing river because of the purity of it's watershed and yet the pipeline is planned to go directly underneath this beautiful clean river.
- 3) I am concerned about the unfair burden my neighbors & community will be carrying because of the erosion of their property values by the pipeline installation.
- 4) I do not feel the need for this pipeline has been demonstrated by the private, profit-motivated interests who want it. Numerous state officials including Massachusetts Attorney General Maura Healey have questioned its necessity (see: http://www.sentinelandenterprise.com/news/ci_28801154/gas-pipeline-under-fire-amid-energy-demand-debate). Should a pipeline be deemed necessary for New England's gas supply, I believe the business interests behind this pipeline have not given due consideration to alternate routes with less environmental impact.

In short, why cut through the beautiful woodland habitat which has grown up over the decades for the sake of this pipeline.

20160115-5329

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of _____) Docket No. CP16-21-000
Tennessee Gas Pipeline Company, L.L.C.)
Northeast Energy Direct Project)

**MOTION TO INTERVENE OF DRs. AUJLA, COREY AND HOFFMAN
AS JONES AVENUE INTERVENORS**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, Drs. Jatinder and Pardeep Aujla (“Aujla”), Mark and Anna Corey (“Corey”), and Philip and Christine Hoffman (“Hoffman”), of Dracut, Massachusetts, individually, and collectively as Jones Avenue Intervenors (“Jones Avenue Intervenors”), hereby submit this timely motion to intervene in the above-captioned proceeding. The Jones Avenue Intervenors, as noted below, will be substantially and adversely impacted by the construction by the Tennessee Gas Pipeline Company, L.L.C. (“Company”) of a natural gas transmission pipeline, a compressor station and other facilities known as the Northeast Energy Direct project (“Project”).

I. IDENTITY AND INTERESTS OF PETITIONER

The Jones Avenue Intervenors are all residents of Dracut, Massachusetts. Dracut Massachusetts is the terminus of the main pipeline in Massachusetts. Overall, the pipeline will extend approximately 15 miles through the Town, including laterals. In addition to the pipeline, the Project will also include a compressor station, meter station and ancillary equipment.

The Jones Avenue Intervenors reside on Jones Avenue as follows:

1. The Aujla’s reside at 209 Jones Avenue, Dracut Massachusetts.
2. The Corey’s reside at 215 Jones Avenue, Dracut, Massachusetts. The Corey’s also have a farm known as the Corey Pride Farm (“Farm”) at that location.
3. The Hoffman’s reside at 203 Jones Avenue, Dracut, Massachusetts.

The Jones Avenue Intervenors will be impacted by construction and operation of the Project, particularly the compressor station. Their homes, neighborhood, Farm and children's schools are all in close proximity to the Project and the compressor station and will be adversely impacted by toxic emissions from the compressor station. In addition, construction and operation of the Project will have an adverse impact on, among other things, water and wetland resources, animal life, crops, health and safety, and property values.

As detailed below, Jones Avenue Intervenors are concerned that the compressor station will produce harmful air and noise pollution, be detrimental to health, and negatively impact the value of their homes and the Farm.

Adverse Health Impacts of the Compressor Station

The proposed compressor station is located approximately only .4 miles from Jones Avenue and the Farm and approximately only 1.4 miles from the neighborhood elementary school (the school has 400 students, grades pre-k-6). The Jones Avenue Intervenors, the Farm and the school are all within the area of emissions and noise from the compressor station.

Health Impacts from Toxic Emissions

There are known hazards and health impacts associated with the presence of a compressor station—the Company has confirmed in its filings that up to one hundred tons of toxins, volatile organic compounds, and carcinogens would be emitted by the compressor station each year. This includes discharges of such harmful carcinogens and heavy metals including benzene, lead and formaldehyde. There is no safe exposure to any of these emissions. Benzene is known to contribute to bone marrow suppression and can lead to leukemia. Lead is harmful to people with compromised kidney function, and can be the difference between Stage 3-4 CKD and hemodialysis. Methane through exposure to sunlight makes formaldehyde. This element is a known carcinogen leading to nasal sinus and nasopharyngeal cancer. On the other spectrum, it causes upper and lower respiratory track irritation which is a contributing factor to childhood asthma. Studies have shown that a significant amount of methane is leaked from these compressor stations even when the facility is not running. The more methane that is produced/leaked, the more available for this catalytic reaction to form formaldehyde.

In addition, particulate matter is released during blow downs and given the size of the particles, is of significant concern to respiratory tracks. Children, who spend a longer period of time outside, are particularly at risk for interstitial lung disease and asthma.

In short, the Jones Avenue Intervenors are concerned about the significant health risks associated with the compressor station in Dracut, particularly for their children. The health literature indicates that compressor stations are linked to increased frequency of pollution-related symptoms such as nosebleed and headaches and more frequent rates of chronic diseases including asthma. Moreover, people at risk and subject to chronic conditions such as asthma, heart disease or chronic obstructive pulmonary disease are likely to require medical treatment due to increased levels of toxic discharges.

Noise Related to Compressor Stations

In addition to the serious health implications noted above, noise from the compressor station is a serious concern as well. Compressor stations are loud and disruptive, as peak noise levels of 100 decibels (dB) have been measured in the vicinity of compressor stations. 100 dB is about as loud as a jackhammer. Noise alone is sufficient to cause health problems including hearing impairment, cardiovascular and other physiological effects, mental health effects, and sleep disturbance. 4

Negative Impacts to Property Values and Farm Use

Property Values

It is beyond dispute that the pipeline in Dracut and the proximity to the compressor station will negatively impact property values. The close proximity of the Jones Avenue Intervenors' properties to the Project, and particularly to the compressor station, will lower the value of the homes, and particularly impact resale

value.

The Farm

The Corey Pride Farm specializes in producing grass fed beef, pasture raised turkeys, and free range chicken eggs. The Farm's business relies upon a chemical free, steroid free, antibiotic and stress free natural environment for its livestock. The Farm's meats, poultry, eggs, and fruits and vegetables are all produced without chemicals or chemical by-products. The Farm sells to clients who may be chemically sensitive, have autoimmune disorders or otherwise are concerned about their overall health and well-being.

The Farm is concerned that toxic discharges from the compressor station and from the construction and operation of the Project will pollute the air and soil at the Farm and ultimately contaminate the animals, pastures, and crops. Most significantly, emissions from compressor stations blowdowns, can become deposited on cropland and pastures via weather patterns, polluting the soil, animals, and also the food it produces. Lead is a particular concern - grazing cattle are at the most risk for lead poisoning and even minimal exposure is harmful since cattle will ingest any form of lead it encounters. Chickens ingesting lead suffer from respiratory illness and pass the lead through to the eggs which renders them unhealthy for human consumption. Lead poisoning is a dual threat because humans who consume the tainted meat and eggs are at risk. Moreover, constant noise pollution emitted from the compressor station may have a detrimental effect on the animals at the Farm, as it increases their stress levels. Finally, pipelines are also often maintained by aerial spraying and the spraying of these herbicides can be harmful to livestock and crops as well.

The Farm's business, dependent upon a chemical free product, would be irrevocably damaged by the Project. The Project threatens to severely disrupt the natural environment that is crucial to the successful operation of the Farm. In short, the livelihood of the Farm is jeopardized by this Project, as the Project will damage the essential resources critical to running the Farm—clean land and air, and healthy productive animals. Moreover, the Project undermines efforts of the Farm to market its natural agricultural practices, as the mere presence of a nearby compressor station pumping out toxic emissions may taint the Farm and its products.

Accordingly, Jones Avenue Intervenors, as Dracut residents in close proximity to the compressor station and the Project, with homes and businesses that may be damaged by the Project, have an interest which may be directly affected by the outcome of this proceeding and their participation is in the public interest.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individuals should be included on the service list for this docket, and all communications should be sent to:

20160115-5333

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
North East Direct Pipeline Project

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Dennis and Sheryl Ryan, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Dennis & Sheryl Ryan
2 Helenwood Ln
Averill Park, NY 12018
dsryan21@gmail.com

II. INTEREST OF THE PETITIONER

We are filing a motion for intervention status on FERC docket CP16-21-000 (Tennessee Gas Pipeline Company, L.L.C. Northeast Energy Direct (NED) Project) based on our residence at 2 Helenwood Ln., Averill

Park, NY 12018.

The property is located on Burden Lake, due North, and within one mile of the 41,000 HP compressor station proposed for Clark's Chapel Road, in the Town of Nassau. This property is enjoyed by our entire family, including 12 adults and 14 young children. The prevailing winds for the majority of the year are from the South. Therefore, all air-borne pollutants, particulate matter, toxins and odors emitted by the compressor station will directly affect the air and surface waters of our property. Being located downwind and in such close proximity to the compressor station, we will hear, smell, feel, see and potentially taste the effects of the compressor station operations.

In addition, we have the following concerns:

Diminished air quality resulting from the exhaust of the 41,000 HP turbines, and believe the emissions from this compressor station could endanger our health and the health of our family.

Continuous 27/7 noise generated from the compressor station, plus the extreme additional noise and pollution resulting during blowdowns and periods of maintenance.

Light damage to dark night skies created by lighting from the compressor station complex. Our property, and that of many neighboring properties, is oriented with only a southerly view. Our view of the nighttime sky and stars will be destroyed.

Risk of explosions and other natural gas infrastructure incidents that would require evacuation of residents within a substantial area around the compressor station and potential destruction/damage of property and lives.

Impacts on our well. We rely on our well for drinking water and are particularly concerned about any chemicals or toxins released into the ground from Compressor Station operations that may migrate into our aquifer. We also have concerns about the blasting for this pipeline, which could impact the quality and output of our well.

Traffic, noise, air pollution and related disturbances that will greatly affect the roads and infrastructure of our small rural community during and after construction.

Industrialization of this rural residential community and economic consequences of reduced property values as a result of being located in the shadow of a compressor station. Residents forced to sell to safeguard their health would lose their life's investment.

Misleading statements made by KM/TGP. Throughout the public hearings and through public materials it was represented that the pipeline was to be "co-located", defined then as within the existing corridor/ROWS with existing public utilities; this is not true. Documented evidence in the form of the construction plans, shows that the pipeline will not be "colocated" but in fact will require the creation of new parallel corridors that extend 50ft – 100ft from the exiting corridors/ ROWs.

The construction and "temporary" construction sites will unnecessarily and permanently devastate hundreds of acres of valued conservations lands and private properties. This includes the removal of hundreds of mature trees, whose value goes well beyond the physical tree, by helping protect the wetlands that feed the drinking water supplies and adding substantial value to our property values which we will never recoup during our natural lives. Temporary construction zones create permanent destruction.

We oppose the NED Pipeline project and have SERIOUS concerns about the health impacts it will generate.

III. CONCLUSION

We, Dennis and Sheryl Ryan, respectfully request that the Commission grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Dennis & Sheryl Ryan
2 Helenwood Ln.
Averill Park, NY 12018
dsryan21@gmail.com

Basis for Intervening:

FERC Docket number CP16-21

Basis for intervening:

I live less than 2 miles from the proposed New Ipswich compressor station.

I am completely opposed to the NED pipeline proposal for these reasons:

I am concerned that the pipeline compressor station—both in daily operation and at the planned and un-planned times of its necessary “blowdowns”— would emit poisonous substances into the water and air of our region, endangering our health and in the long run (or quickly in the event of an accident) our lives.

I am concerned about excessive noise and light pollution from the compressor station.

I am concerned that the pipeline would negatively impact birds, animals and other wildlife in our area, and and would damage and deface our carefully preserved natural lands.

I am concerned that the pipeline would change this area from notably beautiful to exurban ordinary, in a way that would negatively impact tourism, a major source of income for the state which will only be more important in the future.

I am concerned that unjust use of Eminent Domain would harm average citizens who have worked hard for their land.

I am concerned that the pipeline would lower property values all along its route, and especially properties anywhere near compressor stations. Who wants to live in or near an “Incineration Zone”?

I am concerned that local fire departments and emergency services are not in any way equipped or prepared to respond adequately to the kinds of emergencies potentially produced by volatile pipelines and compressor stations.

I am concerned that citizens of this state who use electricity (virtually all of us) might be burdened with a tariff to pay for the NED pipeline.

I am concerned that the pipeline would be a soft target for terrorism, due to the pipeline’s size, high pressure, volatility, and unpatrolled corridor.

20160115-5339

Submission Description: (doc-less) Motion to Intervene of Daniel Cohen under CP16-21-000.

Basis for Intervening:

My name is Daniel Cohen and I am the Co-founder of the Tamarack Hollow Nature and Cultural Center, a 32 acre, non-profit conservation and environmental education organization in Windsor, MA dedicated to “Inspiring environmental and cultural awareness, appreciation and stewardship”. The proposed NED pipeline and compressor station would be within a 5-mile radius of this sensitive high elevation boreal forest which is considered a rare habitat in Massachusetts by the Mass Wildlife Division. This high elevation forest and drowned lands watershed habitat is very sensitive to climate change depending on clean air and steady cool temps to maintain the unique ecosystem typically found in northern Vermont and Canada. Our conservation area abuts the Trustees of Reservations Notchview Reservation, which is part of the proposed pipeline route. Our Director has led many treks in the Hume brook area where the proposed route lies and she has witnessed the abundant wildlife activity that would be disrupted if a pipeline were to be placed in that location. Both Notchview and Tamarack Hollow protect the Drowned Lands, a massive high elevation watershed plateau that feeds the Housatonic, Hoosic and Westfield (Connecticut) river watersheds. This is a very unique and widespread wetland area that is home to rare plants and wildlife with its pristine spring waters and snow/rain fed waters. The proposed pipeline would cut across this plateau putting all three watersheds in harms way from both construction and potential leaks or explosions due to the extreme weather and low temps we experience at this 2000+ foot elevation gain. In addition, cancer-causing chemicals typically found in fracked gas such as benzene would be released during periodic blowdowns raining chemicals across this pristine wilderness area. We are gravely concerned about this project’s impacts to our livelihood, our ecosystem and the health of the air, water and ourselves. We are opposed to the pipeline project and the proposed compressor stations along its route. We believe that FERC has a responsibility to research thoroughly alternative energy sources that are both sustainable and ecologically sound such as wind, solar and hydropower. The climate change summit recently held in Paris spoke volumes for where the citizens of the world are at, we must act now to swiftly change gears about how we acquire energy or we will suffer the grave consequences of poisoning our water, air and health for the future of our planet. We implore FERC to make the right choice and to stop this horrendous proposed pipeline project and put our resources and energy into the sustainable energy industries of the future before its too late.

Regards,

Daniel Cohen
Co-Founder, Clerk
Tamarack Hollow Nature and Cultural Center

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	fredsnell@gmail.com	

Basis for Intervening:

Basis for Intervening:

1. I am a land owner within 500 feet of an alternative route for the 24 inch Lynnfield Lateral of the Kinder-Morgan / Tennessee Gas NED pipeline. I am concerned about health and safety for my family since the proposed alternative route crosses my next door neighbor’s land. I purchased my property for its pristine beauty; I fear the pipeline will cause permanent scarring and contamination in the immediate vicinity of the property, resulting in a decrease in the value of my property and the enjoyment I derive from it.
2. I am also a member of an impacted community, Andover Massachusetts, and have concerns as to the

negative effects the proposed pipeline will have on the local economy, public safety organizations, the environment, aesthetics, property values, and the health of the community. The area of West Andover in which I live is directly downwind from the proposed 23,000 hp compressor station in Dracut. Also downwind are the Andover Wood Hill and High Plain schools as well as the economically disadvantaged City of Lawrence.

3. I am a ratepayer to National Grid, whose rates will likely increase to cover cost recovery if Kinder Morgan secures them as a Pipeline customer. I understand that Massachusetts already has among the highest electrical rates in the country. The proposed pipeline will impose an even greater burden on consumers, including myself, if built. There are other more cost effective alternatives that can avoid locking New England into this enormous fossil fuel infrastructure for a half century. These include reforming the natural gas market place, use of Canadian hydro power, use of existing LNG facilities for the 10 to 30 days of winter when peak gas consumption occurs, wind, solar, and utility-grade battery storage. This pipeline is not needed and therefore does not serve the public interest. A fall 2015 study commissioned by the Massachusetts Attorney General also supports a lack of need for this pipeline.

4. Climate change seen as top threat to the global economy according to experts of the World Economic Forum as reported on page C7 of the Boston Globe on 1/15/2015. The proposed pipeline would greatly hinder achievement of the state's greenhouse gas reduction targets established in the Massachusetts Global Warming Solutions Act. The region is already over-dependent on natural gas for electric power production. I fear the economic and emotional consequences of such climate change to me and my descendants.

5. I donate to land conservation organizations in the area whose properties adjoin the proposed Pipeline. My donations would be violated if this project is permitted to take easements over land protected in perpetuity. Moreover, once conservation land is spoiled, it cannot be replaced and the wildlife living on it will be adversely affected.

For the reasons stated above, I believe that the residents of my town and state and I will be irreparably harmed if the proposed pipeline is constructed. Accordingly, I oppose the approval and construction of the proposed pipeline and ask that the FERC deny and prevent its construction because it is clearly not in the public interest.

Individual	PPAOofNH@aol.com	

Basis for Intervening:

The Pelham Pipeline Awareness Outreach Subcommittee is a volunteer organization developed to provide information, education, and support to families and landowners in Pelham NH, who are affected by the proposed Kinder Morgan Northeast Energy Direct (NED) Natural Gas Transmission Pipeline Project (FERC Docket #CP16-21-000). We represent and serve over 500 families who are direct abutters and who are located in the Incineration Zone as well as all of the over 13,000 residents of Pelham NH. We seek to intervene because we are directly impacted by the proposed pipeline. This proposed pipeline cuts through the middle of town and has severe impact on all of its residents. We have great concerns regarding this impact due to: 1. Massive vegetation and tree loss and its impact on wildlife(including threatened species identified to be located in the town), recreation and carbon capture; 2. Disruption due to construction(including the impacts on traffic, potential pollution, soil destruction and water diversion); 3. Safety as it applies to poten-

tial accidents and explosions and the inability of our town services to address them and provide emergency response; 4. Health impacts due to potential pollution of water sources and air emissions from pipeline and infrastructure leakage and blowdowns. Further, regarding health, while the Dracut MA compressor station is not in our town, it is less than a mile from our border, we are in it's air-shed and have concerns relative to the medical and environmental issues that can result from exposure to air pollutants from this and other pipeline infrastructures. In addition to these above mentioned concerns we are also very concerned about the impact of this pipeline on our aquifer and the wetlands and water bodies that the pipeline crosses which supports all of the private wells(which most residents have) in Pelham. Finally the economic impact to our town is also of grave concern. As rate payers we have grave concerns that this overbuilt, for export pipeline will cause rates to increase. As landowners we are concerned about the impact that this highly industrialized infrastructure will have on our property values and insurance and the character of our town and the southern NH region as a whole. These concerns therefore are not just local but regional, national and global. This massive, costly, industrialized infrastructure must be carefully assessed because of it's potential to move us from diversification of energy as recommended and outlined in our NH energy plan, and into further reliance on fracked gas, while encouraging the production and release of the potent greenhouse gas methane. All of which is of concern to us because we want a healthy community in Pelham and the region for future generations.

Basis for Intervening:

I am a resident of Merrimack, NH specifically Whittier Road. My family is applying as interveners in Docket CP16-21-000 because we will be directly impacted by this project in a number of ways including but not limited to:

1. Land/homeowner
2. If built, the quality of life in our neighborhood will be decreased significantly during construction and will be changed forever. We are original homeowners and purchased in this neighborhood with specific expectations regarding our surroundings which this pipeline would negatively change
3. The proposed route crosses our town's watershed and there is evidence that this could pose a great risk to our town's water supply
4. I am currently a Liberty Utilities ratepayer and am concerned that I could be forced to pay for this pipeline through my utility rates
5. Our town (Merrimack, NH) is identified as the location of a meter station, which I am concerned that it will negatively impact the quality of life for the residents of Merrimack NH.

20160115-5345

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
Northeast Energy Direct Project

Docket No. CPI6-9-000
PFI4-22-000

MOTION To INTERVENE OF FOOD & WATER WATCH

On November 20, 2015, the Federal Energy Regulatory Commission (“FERC”) issued a notice of application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct (NED) Project (“Project”), FERC Docket No. CPI6-29-000. As stated in FERC’s Notice of Application, Tennessee Gas Pipeline Company, LLC (“TGP”) seeks, among other things, authorization to construct pipelines facilities and all appurtenant facilities as well as stations in New York, Connecticut, New Hampshire and Massachusetts. In accordance with Rule 214 of FERC’s Rules of Practice and Procedure, 18 C.F.R. § 385.214, Food & Water Watch (“Intervenor”) respectfully move for the Commission to grant intervention in the above-captioned matter. While the Intervenor has included some substantive comments in this motion, the Intervenor may also submit more substantive comments at a later date.

I. COMMUNICATION AND CORRESPONDENCE

Service in this proceeding should be made upon, and communications should be directed to the following persons:

Alex Beauchamp, Northeast Region Director Food & Water Watch
68 Jay Street, Suite 713
Brooklyn, New York 11201
713 943-9085
abeauchamp@fwwatch.org

Nisha Swinton, Senior Organizer, New England States Food & Water Watch
533 Congress Street
Portland, Maine 04101
207619-5845
nswinton@fwwatch.org

II. INTERVENORS

Food & Water Watch is an international non-profit organization that works to ensure that the food, water, and fish that humans consume is safe, accessible, and sustainable. To that end, Food & Water Watch promotes policies that will maintain the environmental integrity of our drinking water supplies, rather than put them at risk of degradation. Food & Water Watch has over 265,300 supporters in states where the Project is proposed, including in Connecticut: 19,250 supporters, in Massachusetts: 35,850 supporters, in New York: 126,000, in New Hampshire: 8,500 supporters, in Pennsylvania: 60,100 supporters, in Rhode Island: 5,000 supporters and in Maine: 10,600 supporters.

III. GROUNDS FOR INTERVENTION

The Intervenor opposes the Project. We and our supporters are extremely concerned about TGP’s application and the impacts this Project, if approved, will have on local communities and the environment. Members and supporters of Food & Water Watch and the constituents we serve live in the areas that will be directly impacted by the Project. The pipeline and its associated facilities will cut through five states and a number of sensitive watersheds and potentially impact two more through contracts with local gas distribution companies. Food & Water Watch Local Coordinator, Karina Wilkinson has already raised environmental, public health, and safety concerns in scoping comments filed on October 16, 2015. The issues raised in the comments include improper segmentation, need for a full review of cumulative impacts, concerns about export, and climate change.

No Need For the Project

As a threshold matter, the Intervenor questions the necessity of the Project. Massachusetts Attorney General Healey recently released a report, “Power System Reliability in New England,” finding that new gas pipelines and infrastructure are not needed for electric reliability in New England and would impose a burden on ratepayers as well as prevent Massachusetts and the region from reaching greenhouse gas emissions targeted reductions. 1

We are concerned that as domestic natural gas demand and prices remain low, the expanded capacity requested under this Project will be used to supply gas from the Marcellus Shale to proposed export facilities instead of offering any benefit to the people who have to live most with the many detrimental impacts of this Project. The communities and our members impacted by this proposed pipeline infrastructure will not see environmental or economic benefits as a result of the Project.

Massachusetts Attorney General Healey submitted comments on the pre-filing application of Kinder Morgan for the Northeast Energy Direct project including:

“The AGO’s attached comments call on FERC to undertake a full assessment of the need for the NED pipeline in conjunction with other natural gas pipeline proposals for the region ... Specifically, the AGO’s scoping comments:

Insist that FERC undertake a full evaluation of the nature and extent of the regional need for new gas capacity. The AGO urges FERC to consider the results of the AGO’s Regional Electric Reliability Options Study, prepared by the Analysis Group, to evaluate options to address regional electricity reliability in New England, including natural gas capacity needs, through 2030.

Propose that FERC combine its NEPA reviews of several pending New England pipeline projects into a single process (a combined Environmental Impact Statement) to avoid piecemeal review, to utilize a common analysis of regional gas demand, and to compare each projects’ impacts and benefits.,,2

In his December 30, 2015 letter to FERC³, Massachusetts Senate President Rosenberg raised the issue of whether the Project will interfere with the targets outlined in the Massachusetts Global Warming Solutions Act to reduce greenhouse gas (GHG) emissions to 80% below 1990 levels by 2050 and 10% to 25% by 2020. For this reason, Senate President Rosenberg states,

“Therefore, I strongly suggest that FERC consider the Commonwealth’s legal framework as a threshold determination for need prior to initiating any environmental review of the NED project. And, pursuant to the public interest standard, FERC should consider the interest of Massachusetts’ citizens in establishing an energy sector based substantially on reduced emissions and clean and renewable energy as an initial test for determining whether any proposed project is in the public interest.”

There is wide consensus, among elected officials, state entities and impacted community members that this project is not needed to provide for any immediate or local energy concerns. Therefore, we do not believe the Project is in the public interest.

Environmental Impacts

Impacts Resulting from Fracking

This pipeline will carry gas from the Marcellus Shale, drilled using the technique known as hydraulic fracturing (“fracking”). The Project is designed to provide gas produced from the Marcellus Shale to New England and Eastern Canada. At a time when there is mounting evidence of the dangers inherent to fracking for natural gas, and given that the long-term productivities of Marcellus Shale gas wells are unknown, it is unwise to approve a proposal that will encourage such a practice in fragile ecosystems and populated areas. FERC must examine in its review of the proposed pipeline all secondary and cumulative impacts the Project will have, including encouraging the expansion of fracking in the region.

Drinking Water and Watershed Impacts

As a national organization championing clean water for all, Food & Water Watch opposes projects that have the potential to adversely affect watersheds and, in particular, drinking water supplies. The Project has the potential to adversely affect the watershed and supply of the Quabbin and Watchusett Reservoirs in Massachusetts, which supply water to 48 communities including 42 in the Greater Boston area.

TGP also proposes to construct the pipeline on protected Class I and II areas owned by the Metropolitan District Commission in West Hartford, Connecticut, where several reservoirs are in operation, providing drinking water to some 400,000 people.

For the reasons outlined above, among others, Food & Water Watch opposes the project.

IV. CONCLUSION

The Intervenor has considerable interest and is invested in protecting the environmental and public health of the areas in which the Project is proposed. The Intervenor's intervention in the Project application process is in the public interest as required by 18 C.F.R. §385.214(b)(2)(iii). No other party in this proceeding will be able to adequately protect these interests. Accordingly, the Intervenor has a direct and substantial interest in the outcome of this application process.

For the reasons set forth above, the Intervenor respectfully requests that this Motion to Intervene be granted and that we be permitted to participate, with the full rights of a party, in the above-captioned proceeding before FERC.

Basis for Intervening:

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct Project

MOTION TO INTERVENE OF ROBERT T. DILLBERGER

We hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. We seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon us as follows:

Mason Conservation Commission

16 Darling Hill Rd., Mason, NH 03048

603-878-2070

cc.mason.nh@gmail.com

The interests of the Mason Conservation Commission “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) are many. Our concerns are well-expressed by a position paper we adopted in the Fall of 2014, reproduced in its entirety here:

Because the pipeline project proposed by Kinder Morgan and associated companies furthers the nation’s investment in and reliance on natural gas obtained through hydrofracking, an environmentally destructive and unsustainable practice,

Because the pipeline by virtue of excessive capacity is clearly intended to supply gas primarily for export and is therefore only incidentally of benefit to NH citizens,

Because the pipeline plan calls in part for herbicide use, even within wetlands, to keep the right-of-way clear, such protracted use being potentially harmful to the environment in general and Mason’s water supply in particular,

Because burying the pipeline will in Mason required extensive blasting that could adversely affect private wells, the town’s only source of drinking water,

Because of the potential loss of or disturbance to designated conservation lands and known uncommon wild life habitat along the pipeline route,

Because the pipeline extends New Hampshire’s use of fossil fuel with the potential to further degrade the planet’s atmosphere through carbon and greenhouse gas emission,

And because further investment in fossil fuel infrastructure directly contradicts the course of action outlined

in “The New Hampshire Climate Action Plan” aimed at reducing carbon emissions in the state by 80% compared to 1990 levels by the year 2050,

The Mason Conservation Commission opposes the Northeast Energy Direct project.

WHEREFORE, for the foregoing reasons, we respectfully request that my motion to intervene be granted.

Respectfully submitted,

Conservation Commission of Mason, New Hampshire

Basis for Intervening:

Walter A. Carrington, Ph. D.

100 Byfield Road Ashburnham, MA 01430

I am a resident of Ashburnham, Massachusetts, a town in northern Worcester County bordering New Ipswich, NH.

I would like to intervene in CP16-21-000. I am opposed to this pipeline.

Air Pollution: Air pollution from the construction phase of this pipeline will place sensitive individuals at risk of harm and death. These individuals include those with asthma or other respiratory diseases and individuals with cardiac disease. This air pollution will consist of dust from construction and exhaust from construction equipment. Exhaust from diesel equipment is especially dangerous to these individuals. These sensitive individuals are protected by the Americans with Disabilities Act. If this pipeline is constructed, large pumping stations will increase air pollution both in the vicinity of these stations and in the region. Natural gas leaks will also cause air pollution. These leaks will also be a major contribution to climate change because natural gas is a powerful green house gas.

There is no need for this pipeline. The justification for the pipeline has emphasized the need for more natural gas for electrical generation. There is no such need. Improvements in energy efficiency and production of wind and solar electric that are already occurring are making increased natural gas for electric generation unnecessary. The commitment to purchase of natural gas by electric utilities in the grid will increase long term costs to consumers throughout the region. This commitment will impede the development of alternative energy and efficiencies and thereby contribute to climate change.

Article 97 of the Massachusetts Constitution states that:

“The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historic, and esthetic qualities of their environment; and the protection of the people in their right to the conservation, development and utilization of the agricultural, mineral, forest, water, air and other natural resources is hereby declared to be a public purpose.”

As a citizen of Massachusetts I wish to breath clean air and utilize the natural, scenic, historic, and esthetic qualities of their environment. This pipeline will interfere with all these rights.

I am a consumer of electricity so will be affected by increases in costs. I frequently hike, ski and snow shoe on public lands and byways in the path of the pipeline and will be adversely affected by the construction and operation of the pipeline. I have asthma, and am protected by the Americans with Disabilities Act and

related state and federal laws. I insist on my right of access to public lands, parks and public byways during construction and operation of this pipeline without impairment of my ability to breath.

Basis for Intervening:

My land, located in Stephentown, NY lies in the path of the proposed NED pipeline and I am opposed to the project for the following reasons:

The path of the proposed pipeline through my property , on the southeast shoulder of the Rensselaer Plateau, includes riverside habitat (Randall Brook) To my knowledge, no study to assess the environmental impact of clear cutting mature growth conifer forest along the Randall Brook, or any other parcels through the Rensselaer Plateau.

My affected parcel is part of the “greenspace” of a proposed 5 lot subdivision. I will incur substantial economic devaluation of this project. The path of the NED will destroy the most beautiful component of the greenspace. The aesthetic and ecological value of this land - mature growth river bank hemlocks and other trees - will be lost forever.

The groundwater supplying future and existing wells of my 2 existing homes and future proposed homes (all sites are within 1500 ft of the path) will be put at risk due to blasting of rock.

I am a full time resident of Stephentown, NY and will always be affected by the future negative impacts of the NED if constructed. These include the health risks associated with construction and operation of the pipeline and compressor station. Such risks include air pollution, ground water pollution, ecological degradation and general environmental degradation of our community. I will also be subject to the dire consequences of potential explosions.

The history of pipeline construction has demonstrated that landowners are not adequately compensated. Land compensation should not be based on “pre pipeline values”. It should be based on commodity value over the life of operation. Landowners deserve generous annual compensation.

Basis for Intervening:

I have informed myself through readings and meetings on the Kinder Morgan NED application and I now affirm my opposition to their proposal to build this Northeast Natural Gas Pipeline. I live in Shelburne, MA, and want to intervene in this proceeding in opposition. The entire region is negatively impacted. The pipeline is not needed, because other alternative energy resources are coming on line and should be encouraged by FERC. FERC ‘s mandate is out of date; I agree with MA Senate President Stanley Rosenberg that FERC needs to urgently deal with 21 century energy issues with 21st century knowledge and understanding and therefore allow its early 20th century regulations to be upgraded to promote conservation, alternative energies, and citizen’s rights to protect their environment, which in our case is one of the crowning jewels of our nation; we have worked hard to enact state preservation measures, we keep ourselves informed; we practice conservation; and above all we encourage sound practices for all that safeguard local and national standards for health, clean air, safe water, and a robust diversified economy that includes small farms that will be directly and destructively negatively impacted if FERC decides in favor of the KM application. Though my property does not sit on the proposed route I live close to it, I live surrounded by farms, livestock; and I practice conservation on all levels that I can. The aquifer that my well water draws from will in all grim probability be negatively impacted; I am healthy because I live here where I can practice optimal environmental conversation within my means to do so. My entire community and the communities around me will be economically and environmentally adversely affected; people will lose their houses, their livelihoods, our

recreational resources, our precious wetlands, rivers, brooks, streams, meadows, hills, and wildlife habitats as we have maintained and promote them and continue to do so. We ratepayers will be stuck with the cost, not Kinder Morgan. My research leads me to believe that KM's motive is to ultimately sell liquidated gas to foreign markets, one of them being Spain. That is deceit pure and simple and we won't stand for that. The MA attorney general's report concludes that our region does not need this pipeline; FERC must not decide in favor of a Houston energy conglomerate that is motivated by the profits they can deliver to their shareholders on infrastructure; they don't give a damn what erosion of land, health, and economy they leave behind; they don't care that we want to build diversified energies that provide us with a healthy outcome for all. FERC overseers, we are told, are guided by the corporations that support the agency; it's time to show us that they are guided by we the citizens, who have educated ourselves to commit to opposition. Many years ago I bought my rugged piece of land and from the start resolved to be a good steward of its resources, its wild animals, birds, insects, and any creature that goes bump in the night. I have followed organic principles, I brought my daughter up on 4-H principles to honor the people and land around her; as an adult she has the memories of loving her flock of sheep, goats, chickens, and foraging in the woods for edible foods (and fairies). This pipeline all for padding the pockets of outsiders will undo everything that I have worked for and supported in this community. I stand with my community brothers and sisters to convince FERC to listen to all of us for we know what we are talking about. Thank you!

20160115-5356 Motion to Intervene of Peter J Feitner

I am a resident of Cummington Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. My property would be adversely effected, as would my personal health and safety. Not only would the value of my property be directly negatively impacted by this project, but as a citizen of Massachusetts, I and all other Massachusetts citizens would be impacted by the effects of the construction, operation, and maintenance of this project on protected lands and by the violation of Article 97 of the Massachusetts constitution if these protected lands are sacrificed for commercial use or industrial development. Farmlands, forests, and town and state parks are valuable and irreplaceable public resources, and humans and wildlife would be severely negatively impacted by the loss and degradation of such resources, which is why our state passed this important legislation for the benefit of its citizenry in the first place.

It is my understanding that our State Attorney General has issued a report stating that Kinder Morgan and Berkshire Gas have not demonstrated adequate domestic need for this project and there is strong evidence that the true motive of these energy companies is to profit from overseas markets for natural gas. Given that "public need" has no genuine role in this application, any and all submissions presented by or on behalf of Kinder Morgan should be suspect in nature and given the utmost level of scrutiny.

Additionally, members of the Healthcare community have spoken to local residents about the serious public health threats posed by the compression stations and other infrastructure required for this proposed project. American citizens must not be required to sacrifice their health and freedom and the right to the unimpeded use of their parks and wildlife preserves for the profits of the energy industry.

Furthermore, climate scientists have warned us that we are not keeping up with an adequate time-line for phasing out our over-use of fossil fuels if we, as the human race, are serious about preserving the life and health of our species and of the entire biosphere of planet Earth. Pursuing this costly and unnecessary project is yet another example of for profit corporations ignoring the moral and ethical civic duties we all share to care for our communities and the natural world that sustains us all. Giving Kinder Morgan a pass in order that they make profit for their shareholders has no moral basis.

One more point of criticism regarding your role as a governmental agency and the policy structures that you operate under, I have to say that any agency policy or guideline that is written in such a way as to imply a clear requirement that is certainly not fully in compliance with the original purpose of the policy (or the agency), is not worth a damn. To write that a corporation needs only be able to show "significant" actions taken towards compliance" in order to gain federal approval has clearly been penned at the behest of the corporate world. You should be ashamed to suggest that your processes are regulatory in nature if the bar or

compliance is only pointless words on paper.

It is past time for our government to lead the way in making the transition to new and safer sources of energy, and as regulators of energy production in our country, FERC should be one of the most active entities in promoting this transition, despite the economic and political power of the current energy industry. You are in a position to change the world for the better and should reject this project and truly any others of such nature. We will not change our human habits as long as you continue to make it possible for corporations to create fiction for profit and you affix your stamp to that. Do a better job.

I would like to be an intervenor on the NED Tennessee gas Pipeline as I am concerned about the cumulative effects of the Constitution Pipeline and the NED following the same route at times only 50 feet apart. The environmental impact to our area if flooding occurs can be catastrophic, once all the trees are removed along the combined ROW of these two pipelines.

Basis for Intervening:

INTERVENTION TO STOP THE NORTHEAST ENERGY DIRECT PIPELINE.

I AM FILING AS AN INDIVIDUAL TO REQUEST FERC STOP TO CONSTRUCTION OF THE NORTHEAST ENERGY DIRECT FRACKED GAS PIPELINE. I AM A HOMEOWNER IN WINDSOR MASSACHUSETTS, AND WOULD LIVE LESS THAN 2 MILES FROM THE PROPOSED COMPRESSOR STATION. THE PIPELINE, IN IT'S PROPOSED LOCATION WOULD RUN THROUGH WET LANDS THAT ARE UNDER AND ADJACENT TO THE HIGH POWER LINES AND WOULD DISRUPT VERNAL POOLS IN THE AREA. THE EXCAVATIONS AND LEACHING OF TOXINS FROM THE PIPELINE WOULD DISRUPT SENSITIVE ECOSYSTEMS AND LEAD TO CONTAMINATION OF LOCAL GROUND WATER. OUR AREA IS KNOWN FOR ITS NATURAL, UNDEVELOPED BEAUTY, IS A MECA FOR STAR GAZERS AS IT HAS ONE OF THE LAST TRULY DARK SKIES IN MASSACHUSETTS AND IS A HOME TO MANY SPECIES NOT COMMONLY FOUND IN MASSACHUSETTS, FROM MOOSE TO AMERICAN CHESTNUT TREES. THE LIGHT AND SOUND POLLUTION FROM A COMPRESSOR STATION WOULD RUIN THIS. THE AIRBORNE TOXINS FROM THE COMPRESSOR STATION WOULD CAUSE HEALTH ISSUES FOR THOSE WHO LIVE DOWN WIND OF IT AND THE MERE PRESENCE OF A PIPELINE WOULD LOWER PROPERTY VALUES THROUGHOUT OUR AREA. MANY OF US WHO LIVE IN AREAS LIKE WINDSOR HAVE MOVED

HERE TO FIND A HOME WHERE WE CAN LIVE AWAY FROM THE NOISE, LIGHTS AND SMELLS OF THE CITY, GROW OUR OWN FOOD AND LIVE A LIFE CLOSER TO NATURE. UNFORTUNATELY MOST OF US DO NOT HAVE THE FINANCIAL RESOURCES TO SELL OUR HOMES AT A LOSS AND MOVE ELSEWHERE, DISRUPTING OUR EMPLOYMENT, OUR CHILDREN'S SCHOOLING AND OUR LIVES. THE KINDER MORGAN SAFETY TRACK RECORD IS ABYSMAL, THE PEOPLE MOST AFFECT BY THIS PIPELINE WILL SEE NO BENEFITS FROM IT AND IN FACT WILL SUFFER HARM FROM IT AND THE ENVIRONMENT WILL SUFFER HARM FROM IT. NOW IS A TIME WHEN OUR COUNTRY SHOULD BE INVESTING IN RENEWABLE FORMS OF ENERGY, INCLUDING WIND AND SOLAR, NOT INVESTING IN A POLLUTING FOSSIL FUEL THAT WILL ULTIMATELY BE EXPORTED TO EUROPE, FOR THE ENRICHMENT OF A PRIVATE COMPANY.

Basis for Intervening:

I live in a town with a proposed Compressor station that could have massively negative impacts on local health for the population of the surrounding towns, as well as the health for the local flora and fauna. The information listed in the application to FERC is lacking many details to ensure that all local parties will be informed enough, nor are the safety precautions adequate for the scope of this proposed project.

20160115-5362

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF THE NEW HAMPSHIRE
DEPARTMENT OF RESOURCES AND ECONOMIC DEVELOPMENT**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's (the "Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the New Hampshire Department of Resources and Economic Development ("DRED"), by and through its attorneys, the New Hampshire Office of the Attorney General ("OAG"), hereby moves to intervene as a full party in the above captioned docket.

I. MOTION FOR INTERVENTION AND INTERESTS OF INTERVENOR

DRED is a duly constituted department of the State of New Hampshire charged by law with, inter alia, the protection and responsible management of natural resources and the state's parks and forests. Through the Division of Forests and Lands, DRED is the steward of New Hampshire's forested resources and the manager of the state's forests and related resources including exemplary natural communities and threatened and endangered native plants. Through the Division of Parks and Recreation, DRED preserves, protects

and stewards New Hampshire's natural, recreational, and historic resources, including state parks, recreation trails, historic sites and related resources for the continued responsible use and enjoyment of the New Hampshire's citizens and visitors.

On November 20, 2015, Tennessee Gas Pipeline Company, LLC filed an application with the Federal Energy Regulatory Commission ("FERC") seeking a certificate of public necessity and convenience to construct and operate a natural gas pipeline and related facilities known as the Northeast Energy Direct project ("NED Project"). A portion of the NED Project is proposed to cross approximately 70 miles in New Hampshire, including state forests, state parks, and recreational trails under DRED's management as well as non-state properties under DRED's oversight for Federal program compliance. If Tennessee's application is granted, the NED Project will result in significant impacts to these state resources.

Accordingly, as the state office charged with the protection and responsible management of state forests, exemplary natural communities, threatened and endangered native plants, state parks, and recreation trails, DRED has a direct and substantial interest in this proceeding, and no other party can adequately represent DRED's interests. DRED's intervention in this docket will not cause prejudice to, or additional burdens on, any other party to the proceedings, and will not cause any disruption to the proceedings.

DRED neither supports nor opposes the NED Project, and moves to intervene to obtain party status and preserve its rights to participate in the review process, including the ability to seek judicial review of any final decision on Tennessee's application. At this time DRED does not request a formal hearing in the docket, but reserves the right to request a hearing at a later date as allowed by the Commission's Rules and Regulations.

II. PLEADINGS AND SERVICE CONTACTS

Service of all pleadings and other filings in this proceeding should be addressed to the following persons, whose names should be placed on the official service list prepared by the Secretary in this docket:

Eric Feldbaum
Community Recreation
Alternate State Liaison Officer
Division of Parks and Recreation
New Hampshire Department of Resources
and Economic Development

Individual	siri@echohilldesign.com	

Basis for Intervening:

As a resident of Pepperell, Massachusetts and a neighbor of Townsend, MA and the state of New Hampshire, currently in the preferred NED pipeline route, the impact of this project not only be very direct, but extremely devastating as well. Threats of pollution and destruction to our drinking water and protected open spaces, air and noise pollution from compressor stations, and residents losing rights to their own lands through eminent domain are only a few of the many reasons that I intervene.

The Town of Pepperell is currently on two alternate routes. Three aquifers are threatened by the pipeline. Residents' properties are threatened, as are multiple areas of permanently protected open spaces. Conservation lands are deeply threatened along the entire route in Massachusetts, New Hampshire and New York.

Municipalities representing hundreds of thousands of residents along the proposed routes have approved resolutions against the proposed pipeline for many of these reasons and more.

The need for this project has not been demonstrated, and as Massachusetts's AG Maura Healey's recent report, 'Increased Gas Capacity Not Needed to Meet State's Electric Reliability Needs' shows, the need is not there.

Basis for Intervening:

I live in the town of Orange, Massachusetts, a town directly below the proposed compression station slated for Northfield, Massachusetts. There are numerous reasons for my wish to intervene, including my town's drinking water which is at risk by the construction and emissions from this proposed project. Such a project will negatively affect the economic and environmental health of my community. As an electric ratepayer, I object to the likely increases this will have on my electricity bill.

Basis for Intervening:

I am a resident of Plainfield and property owner. My home is close to the planned pipeyard on Rt. 116 on the Waryaz property. Not only will the pipeline bring dangers of leaking and effects on ground water, but the pipeyard itself will compact and thus damage the soil of this protected agricultural land, effect wildlife and residents' enjoyment of the environment and mean an extra load on town roads of heavy equipment, generating expense for a small town with limited income.

20160115-5366

{Motion to Intervene of Amazing Flower Farm}

Amazing Flower Farm
202 Poor Farm Road
New Ipswich, NH 03071
(603) 878-9876
www.AmazingFlowerFarm.com

RE: Docket No. CP16-21

January 15, 2016

I am Ara Lynn. I live and own a thriving small business in New Ipswich, NH. I am a participating contributor to the local economy, and my business Amazing Flower Farm employs several people in an area where

local jobs are not abundant. I want a “No Build” decision on the NED Pipeline Project for the following reasons:

Being a successful small business, I keep a close connection with my customers and can back this up with hard data. Approximately 48% of my customers live in New Ipswich. Including New Ipswich, 68% of my customers come from towns directly impacted by the pipeline: Amherst, Brookline, Fitzwilliam, Greenville, Mason, Milford, Rindge, Troy. I include Temple as well because it is so close to the compressor station that Temple’s real estate values are also directly impacted by the NED project. According to studies, real estate values will probably recover within a few years after pipeline construction has been completed; however, that is not the case in towns affected by compressor stations.

It is well-known within the horticulture industry that sales are tied to a healthy real estate market as well as to the weather. The proposal of the NED Pipeline project has already negatively affected the real estate market in towns in the path of the pipeline, and especially in New Ipswich where the compressor station is to be sited. Amazing Flower Farm has already felt its impact on sales. I am very concerned that the trend will continue and worsen if this project is approved.

While I do not live directly abutting the pipeline, my farmland is close enough to be affected by pollution caused by pipeline leaks, accidents, and normal blowdown events at the compressor station depending on the weather pattern at the time. This is of particular relevance because our vegetables (sold in local restaurants) are organically grown. Our poultry is direct-marketed for food consumption. In addition some of my employees live in areas where they will be susceptible to drinking water pollution caused by project construction and compressor station problems.

Having invested 30-plus years in my farm, building infrastructure and a loyal customer base for both our poultry and horticulture products, it is infeasible for me to re-locate. For these reasons, I am interested in and would be affected by Applicant’s filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for North-east Energy Direct.

Ara Lynn, owner, Amazing Flower Farm

The Order of Bards, Ovates, and Druids Lectarsh@aol.com

Basis for Intervening:

I represent The Order of Bards, Ovates, and Druids (OBOD) as the Steward of a Sacred Grove that is located roughly 1 mile away from the proposed pipeline. As the Steward of this Sacred Grove, I am concerned about the environmental impact that a (fracked) gas pipeline will have to the surrounding areas, along with the potential effects of such a large proposed compressor station being located so close as well. Where the Sacred Grove is considered a place for peace, meditation, and seasonal celebration for the members of OBOD within this region, the proposed compressor station and subsequent pipeline would have detrimental impacts to how and if this space could continue to be utilized.

Individual	jay@trovato.com	

Basis for Intervening:

This pipeline does not belong in Dracut. It is not needed and there are many health risks to our community. The proposal wants to build a compressor station within 2 miles of my home, and a metering station on Article 97 conservation land right in my neighborhood, which is shared ownership by myself and all my neighbors. Our children use this conservation land to play with their friends. There are hiking trails, biking trails, and open fields where they play baseball and football. To take this away to install a metering station will be a disgrace, not to mention the health risks that come along with it.

There have been many studies correlating illnesses among residents within close proximity to the compressor stations that like the one proposed to be constructed right in my town. Along with the noise and air pollution that go along with it, this is not needed and will be a great burden on the town of Dracut, and any other town that this pipeline goes through. I'm very nervous about the health risks and the value of my home if this project becomes a reality.

How do we tell our children that the land we own and that they play on all year long is to be replaced by a gas pipeline and industrial site that they must stay away from due to risk of them getting hurt or sick? It makes me sick just thinking about this after how much we spent to buy our dream home in an amazing neighborhood with so many children. The neighborhood we live in consists of 50+ homes, most with children under the age of 10, all at risk of losing a part of their neighborhood, and future risk of health problems.

Please find another place for this pipeline in a non-populated area, or eliminate it completely. There is no benefit to the Northeast as the gas from this proposed pipeline is to be sold and shipped overseas. This is not needed for the Northeast, and not needed for Dracut.

Individual	michaelbarrettnh@gmail.com	

Basis for Intervening:

My family and I reside in Temple, New Hampshire which is located near the pipeline and compressor station, as applied for and proposed, to be situated in New Ipswich, New Hampshire. I also visit a religious center that is located along the gas pipeline route and in close proximity to the proposed New Ipswich compressor station. I also own several properties in Temple, New Hampshire. I remained concerned about the health impacts of the compressor station and its proximity to an elementary school, my properties, and the lack of detailed information regarding the environmental and health impact of the toxic gases released by the compressor stations, and the lack of detailed information regarding alternate pipeline and compressor station location assessments.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In re:)
Tennessee Gas Pipeline Company, L.L.C.) Docket No. CP16-21-000

**REQUEST TO BECOME ENVIRONMENTAL COMMENTER
OF THE
CONNECTICUT RIVER WATERSHED COUNCIL, INC.
IN THE ABOVE APPLICATION
TO BUILD NORTHEAST ENERGY DIRECT PROJECT PIPELINE**

The Connecticut River Watershed Council, Inc. (herein “CRWC”) hereby submits a request to become an environmental commenter in the above referenced application for a license to construct and operate pipeline and compression facilities in New York, Massachusetts, Connecticut, and New Hampshire as part of the Northeast Energy Direct Project (NED Project), as submitted on November 20, 2015, and pursuant to the Commission Notice dated December 7, 2015 and extension dated January 4, 2016.

I. Statement of Interest

CRWC is a nonprofit watershed organization that has an interest in protecting environmental values that directly and indirectly support the state, regional, and local economies and quality of life in the project areas in Massachusetts, Connecticut, and New Hampshire. The project will impact a wide swath of the watershed, and we are concerned with impacts to water bodies and habitat for terrestrial and aquatic species in our watershed. We also are concerned about the impacts to recreation, agriculture, land preservation, and the local economy. While there is one crossing of the Connecticut River mainstem proposed, there are many more crossings of other waterbodies, and the cumulative effect may be very large on our watershed. The Connecticut River mainstem was recognized by the federal government in the 1990s when the river was designated an American Heritage River and the watershed a National Fish and Wildlife Refuge and most recently in 2012 as the first National Blueway by Secretary of Interior Ken Salazar.

II. Description of CRWC

The Connecticut River Watershed Council, Inc. (CRWC) is a nonprofit citizen group that was established in 1952 to advocate for the protection, restoration, and sustainable use of the Connecticut River and its four-state watershed. The Council’s members are concerned about the environmental impacts of the construction and operation phases of the proposed project. CRWC has been an active stakeholder participating in many FERC proceedings related to hydropower licensing. CRWC filed scoping comments on this proposed project on October 16, 2015.

III. Statement of Position and Comments on Application for License

CRWC opposes the building of this pipeline. In our view, the negative impacts to the environment outweigh the benefits. Many intervenors have submitted convincing arguments against the need for the pipeline, including the study prepared for the Massachusetts Attorney General’s office, the letter submitted by the Franklin Regional Council of Governments, and the motion to intervene submitted by the Conservation Law Foundation. A project of this magnitude covers such a wide area that mitigation of the impacts will be impossible and extremely difficult to oversee.

CRWC will be reviewing the application materials and future filings to better understand and prepare comments on the environmental impacts of the proposed project.

IV. Service and Communication

All other communications concerning the above-referenced project should be made to:

20160115-5373

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Project)

PROTEST OF EDWARD C. DOW JR.

Edward C. Dow, Jr. hereby files this protest of the above-captioned matter, pursuant to Rule 211 of the Commission's Rules of Practice and Procedure (18 CFR 385.211), and requests a hearing on the issues presented herein, due to the Federal Energy Regulatory Commission's acceptance of an incomplete application, the applicant's incomplete responses to the Commission's request for additional information, and the denial of due process to interested parties due to the Commission's actions.

As Mr. Dow timely moved to intervene pursuant to Rules 212 and 214 and no opposition was filed within 15 days, Mr. Dow is a party to this matter.

The name and address of the person upon whom all communications concerning this proceeding should be served are as follows:

Edward C. Dow, Jr.
30 E. Susquehanna Ave. Unit 9
Towson, MD 21286
(240) 483-7705
edwarddow2014@gmail.com 2

BACKGROUND

1. The Application

On November 20, 2015, Tennessee Gas Pipeline Company, LLC ("TGP" or the "Company") filed with the Commission an Application (the "Application") pursuant to sections 7(b) and 7(c) of the Natural Gas Act and the Commission's regulations thereunder, seeking authority to (i) construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, and (ii) to abandon certain facilities, as part of the Northeast Energy Direct Project ("NED" or the "Project"). This Project is proposed to add over 400 miles of pipeline in five states; nine new compressor stations with over 360,000 horsepower (hp) in four states; 1.3 billion cubic feet per day (Bcf/d) of firm capacity, though it appears that market participants have subscribed for substantially less than half of the capacity; all at a cost now estimated at \$5.2 billion to be charged to TGP's shippers, and

ultimately, their ratepayers (to the extent capacity is contracted for by regulated utilities).

The two proposed components of the NED project are as follows: (1) the Supply Path component, comprised of facilities from Troy, Pennsylvania, to Wright, New York (the “Supply Path”), and (2) the Market Path component, which is comprised of facilities from Wright, New York, to Dracut, Massachusetts (the “Market Path”).

As of the date of the filing of the Application, the board of directors of TGP’s parent, Kinder Morgan, Inc., had not authorized capital for or otherwise approved the Supply Path.¹ Proposed Supply Path facilities include: (i) approximately 174 miles of pipeline facilities in Pennsylvania and New York of which approximately 41 miles would be looped, (ii) three new compressor stations totaling 153,500 horsepower (hp), (iii) modifications to one existing compressor station, (iv) two new meter stations, and (v) various appurtenant facilities.

Proposed Market Path facilities include: (i) approximately 188 miles of mainline pipeline facilities in New York, Massachusetts, and New Hampshire, (ii) approximately 58 miles of lateral and pipeline looping, including a total of five delivery laterals in Massachusetts and New Hampshire, and one pipeline loop in Connecticut, (iii) six new compressor stations totaling 207,600 hp, (iv) construction of 13 new meter stations, (v) modification of 14 existing meter stations, and (vi) various appurtenant facilities.

2. The Commission’s acceptance of the Application and Request for Information

On December 7, 2015, the Commission accepted TGP’s application and set a January 6th, 2016 deadline for motions to intervene. However, on December 8, the Commission issued an Information Request, noting, among other things, that the Company “did not fully provide adequate data for alternative comparisons” in its Application, as required by the Minimum Filing Requirements (“Minimum Filing Requirements”) under 18 C.F.R. 380, Appendix A and 18 C.F.R. 380.12(1)(2)(ii). The Commission required a response from TGP within twenty days, by December 28, 2015.

3. Electronic Systems Downtime and the Commission’s Extension of the Deadline

From December 24 to December 27, 2015, and December 31, 2015 to January 3, 2016, the Commission’s eFiling and eComment systems were unavailable. On January 4, 2016, the Commission extended the deadline from January 6, 2016 to January 15, 2016.

4. TGP’s Response to the Request for Information

TGP filed a response to the Commission’s Request for Information on December 28, 2015, which contained “Tennessee’s responses to 26 of the 28 comment letters identified in Question 1 of the Commission’s Information Request.” However, this initial response did not include answers to Questions 2 through 9 of the request, instead stating that “Tennessee will submit responses Questions 2 through 9 no later than December 31, 2015.” These additional responses were filed on December 30, 2015.

DISCUSSION

1. The Commission improperly accepted TGP’s incomplete application

As noted in the Commission’s December 7 request for information, the original application did not meet the Minimum Filing Requirements (“Minimum Filing Requirements”) under 18 C.F.R. 380, Appendix A and 18 C.F.R. 380.12(1)(2)(ii). Other violations of the Minimum Filing Requirements have been previously noted by other parties. These violations should have barred the Commission from accepting the Application. As such, this proceeding should properly be terminated, and the intervention and comment deadline should be voided.

In particular, TGP’s failure to provide complete information on alternative sites in its initial application has deprived intervenors and potential intervenors the information necessary to know whether they have basis to move for intervenor status, thereby depriving them of their due process rights.

Additionally, TGP’s response to the Commission’s request for information is incomplete. The January 4,

2016 Motion to Intervene of the Franklin Regional Council of Governments (“FRCOG Motion”) states the following:

The Cumulative Impact Assessments presented in the Resource Reports are still deficient and provide limited quantitative assessment of water quality, critical wildlife habitat, fisheries or rare and endangered species impacts caused by construction and clearing of forested areas [...]. Approximately 11,000 acres of land will be disturbed by the project yet on Page 2-157 of Resource Report 2, the proponent states that “the cumulative effect on groundwater, surface water, sensitive waters, and wetlands resources will be temporary and minor.”

The FRCOG Motion further states that “The data, assessments, and discussion of cumulative impacts presented in the Resource Reports are not adequate to provide a foundation for the Cumulative Effects analysis that is required under [the] National Environmental Policy Act (NEPA)” and cites a decision by the DC Circuit stating that a meaningful assessment of cumulative impacts must identify:

[T]he area in which the effects of the proposed project will be felt; (2) the impacts that are expected in that area from the proposed project; (3) other actions – past, present, and proposed, and reasonably foreseeable – that have had or are expected to have impacts in the same area; (4) the impacts or expected impacts from these other actions; and (5) the overall impact that can be expected if the individual impacts are allowed to accumulate.

In further support of the argument that TGP’s application is incomplete, please find attached and incorporated as **Exhibit A** the Protest of Northeast Energy Solutions, Inc., which, in paragraph 6, lists fifty-six (56) items missing in the application.

TGP refers to these incomplete and insufficient Resource Reports in response to many questions in TGP’s response to the Commission’s request for information. The Commission must compel TGP to provide a complete response to all requirements before accepting the application and vacate the acceptance of the incomplete application.

Additionally, TGP has failed to adequately show that any land taken in the process will truly be for public use, as TGP even admits that only a portion of the proposed Market Path capacity (.5 bcf/day out of 1.3) will be utilized for public interest. According to numerous studies, including the Attorney General of Massachusetts, this capacity is completely unnecessary and has been challenged as excessive and beyond the needs of the public. The excess capacity is, at minimum, unnecessary, and without committed subscribers or any evidence of future demand, only suitable for export of petroleum products, a use distinctly not in the public interest.

2. Proceeding with the application process will deny due process to those impacted

The Commission’s actions on proceeding with the acceptance of the application despite the deficiencies highlighted by both the Commission itself and by several commenters, intervenors, and protestors serves to deny due process to those who may be impacted by the pipeline’s proposed and/or alternative routes. In *Baldwin v. Hale*¹, the Supreme Court said:

Parties whose rights are to be affected are entitled to be heard; and in order that they may enjoy that right they must first be notified. Common justice requires that no man shall be condemned in his person or property without notice and an opportunity to make his defense.

Here, the “parties” are to those whose property may be impacted by the proposed and/or alternative routes, and the “rights” are all administrative and judicial procedures afforded to those who would have otherwise been notified had TGP submitted a complete application.

IMPACT

1. People, communities, and organizations that will be impacted by the pipeline’s proposed route and/or alternative routes may be unaware of the potential impact due to the application being incomplete.
2. As the application is missing crucial information relating to environmental and other impacts along the

proposed and alternative routes, those impacted cannot assess the impact of the pipeline, cannot determine whether to be in favor of or opposed to the pipeline, cannot determine if they will be financially impacted by the pipeline, and therefore cannot determine whether or not they have a right to intervene.

CONCLUSION

1. The Commission should reverse their acceptance of TGP's application until TGP submits a complete application compliant with all required regulations, including but not limited to the Minimum Filing Requirements.
2. The Commission should not begin the period of time for comment and intervention by impacted and potentially impacted parties to review and respond to a complete application. Therefore, any deadline for comment and intervention should be no sooner than 30 days after the application is completed.

REQUEST FOR RELIEF

Mr. Dow hereby requests a public hearing and a ruling on this matter and the following relief from the Commission:

Immediately suspend TGP's application until such time that TGP provides all information requested by the Commission and required by statute and regulation.

Should the above relief requested not be granted, Mr. Dow reserves the right to comment, request an evidentiary hearing, and to appeal the decision of the Commission.

Footnote:

1 68 U. S. 233

January 16, 2016

Edward C. Dow, Jr.
30 E. Susquehanna Ave., Unit 9
Towson, MD 21286 8

CERTIFICATE OF SERVICE

I hereby certify that on this 16th day of January, 2016, the foregoing Protest of Edward C. Dow, Jr. was electronically served on all parties on the Commission's electronic service list in this proceeding, in accordance with Commission Regulations.

Edward C. Dow, Jr.

Basis for Intervening:

I am an 18 year resident of Merrimack, NH specifically on Findlay Way. My family is applying as interveners in Docket CP16-21-000 because we will be directly impacted by this project in a number of ways including but not limited to:

1. Land/homeowner/abutter to project
2. If built, the quality of life in our neighborhood/home will be decreased significantly during construction and will be changed forever. We are original homeowners (designed and built here) and purchased in this neighborhood with specific expectations regarding our surroundings which this pipeline would negatively change.
3. The proposed route crosses our town's watershed and there is evidence that this could pose a great risk to our town's water supply
4. I am currently a Liberty Utilities ratepayer and am concerned that I could be forced to pay for this pipeline through my utility rates
5. Our town (Merrimack, NH) is identified as the location of a meter station, which I am concerned that it will negatively impact the quality of life for the residents of Merrimack NH.
6. I am against this pipeline going through my town and specifically my neighborhood.

Basis for Intervening:

My husband and I have been a home and landowner in Ashfield for 28 years. We have raised three children here. We cut our own wood, raise our own food and have a view across the pasture to Mount Monadnock. We are blessed to live in this pristine environment. The pathway of the proposed pipeline would cross Hawley Road, about a mile away, and would threaten this pristine environment. This is a route I travel every day. I am concerned about polluting this wonderful community in which we live.

As a ratepayer, I object to any financial consequences of this project. I do not believe that we need this energy. And I have no trust that the information provided by the company is thorough and accurate.

I am a resident of Plainfield and property owner at 31 East St. My home is very close to the planned pipeyard on Rt. 116 on the Waryaz property. Not only will the pipeline bring dangers of leaking and effects on ground water, but the pipeyard itself will compact and thus damage the soil of this area, which has been a farm for many decades and is protected agricultural land. It will also effect wildlife and residents' enjoyment of the environment and mean an extra load on town roads of heavy equipment, generating expense for a small town with limited income.

Tennessee Gas Pipeline Company, L.L.C.
Northeast Energy Direct

Docket No. CP16-21-000

Subject: **Motion to Intervene** – Northeast Energy Direct

Timothy O’Toole – Resident of Impacted Community
89 Bullock Rd. Richmond, NH, 03470
(518)524-0704
Tim_0@yahoo.com

I am a resident of Richmond, NH respectfully request to intervene in this proceeding in opposition to the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding:

- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to paying TGP for their own NED pipeline project through increased gas fees due to their capacity usage contracts with KM (TGP). And it may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts of the gas company.
- I am a resident whose watershed is crossed by the proposed route and could have my drinking water supply impacted by construction and/or operation.
- I am a member of an impacted community concerns about various impacts to local economy/environment/aesthetics/health [any specifics you want].

Across our nation (and the world), the fracking industry that would be served by the proposed pipelines is destroying water supplies and aquifers, ecosystems, state and national lands, wild habitats and the creatures that depend upon them, communities, and lives, and therefore it must be ended.

The construction of this pipeline would bring additional hazards to the people of Richmond, NH, a community that prides itself upon, and economically depends upon: pristine healthy forests, clean pure waterways, and unspoiled natural views, for outdoor sportsmen, nature tourism, and ecosystem study.

The hazards from this pipeline, and the haphazard record of its owners, would include:

- additional emissions of methane and its associated chemical residues from the processes by which it was extracted;
- risk of long term health impacts from those chemicals, known carcinogens, neurotoxins and endocrine disruptors;
- greatly increased risk of pipeline rupture, fire or explosion due to the high pressure at which the pipelines are planned to run once the expansion is complete;
- risk to extensive damage from said fires or explosions due to the inability of this small community’s emergency response team to adequately address the situation, and due to the distance of the town from TGP’s main offices in Agawam, MA and Nassau, NY, the most likely sources of emergency trained and equipped to respond to these very specific hazards;
- risk of decreased property value as evidenced in other areas in this state and nearby states, where pipeline proposals have rendered properties “unsellable” by real estate professionals.
- removal of permanently protected land from that permanent protection in violation of our state constitution and ordinances;
- increased contribution to climate change and its related hazards of extreme and unpredictable weather events
- TGP’s errors and omissions and outright misstatements of fact in its New Hampshire and Massachusetts ENF give me no confidence in the assurances it makes in this filing to protect the environment and safety of our town and my immediate surroundings. My concern for what TGP may do and the

damage it may inflict is valid and TGP's plan is not acceptable.

Thank you.

Basis for Intervening:

My name is Bettyann Johnsen. I reside at 1995 E. Schodack Rd., Castleton, NY 12033. I am opposed to the NED - Northeast Energy Direct Pipeline for the following reasons:

- I am a resident who lives in the "blast radius" so I would be at physical risk.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.
- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health [any specifics you want, or not].
- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

20160115-5382

{Motion to Intervene of Lorraine Cassista}

Basis for Intervening:

I am a landowner of two properties in Dracut, Massachusetts. One is our home and the other is our business. We have invested everything in this community since 1982.

Our home is located less than 1.21 mile radius from the proposed compressor station. Besides the contamination already on the proposed property, we will be subject to downstream contamination of our well and air quality, not to mention noise and potential light pollution. The value of our home, and possibly our business, will be decreased substantially. Our quality of health, finances and life will be negatively impacted.

The pipeline is bad enough but when you add the size and distance of the compressor station and metering station, the health and financial impacts are even greater. The VOC's, NOx's and other compounds commonly emitted are toxic, carcinogenic or neurotoxic with the likely potential of causing major adverse short-term and long-term effects to our health and the health of the our neighbors and animals in the area.

We will be subject to Blowdowns which can last from 20 minutes to 2-3 hours from 12-40 times a year. This will be disturbing enough during the day and may interfere with sleep at night as well.

With the ongoing frequency of pipeline accidents and Kinder Morgan's long list of safety violations, we further object to this project going through our community. It will put us and our neighbors at increased risk of harm and damage our ecology and way of life here in Dracut.

Both my husband and I are licensed chiropractic physicians and cannot, in good conscience, support this project. We are in the health field because we want to improve people's health, not destroy it.

I live in Merrimack, NH and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because

I am a landowner directly impacted by the pipeline route / compressor station.

- I am a landowner who would have my property seized by eminent domain.

- I am a resident who lives in the “blast radius” and whose daily commute crosses over the proposed pipeline route] so I would be at physical risk

- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.

- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health].

- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

- I am gas ratepayer Liberty has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts).

20160115-5392

RETAILERS ASSOCIATION OF MASSACHUSETTS

January 15, 2016

Norman C. Bay, Chairman
Federal Energy Regulatory Commission
888 First Street, NE
Washington DC 20426

RE: eFiling Docket PF14-22

Dear Chairman Bay,

The Retailers Association of Massachusetts (RAM), established in 1918, is a statewide trade association of approximately 4,000 member companies. Our membership ranges from independent, “mom and pop” owned stores to larger, national chains operating in the general retail, restaurant and service sectors of the retail industry. The retail industry in the Commonwealth is the backbone of our local Main Streets, supporting over 928,000 jobs and operating in more than 73,000 brick-and-mortar establishments.

RAM respectfully requests the Federal Energy Regulatory Commission to approve the proposed Kinder Morgan pipeline expansion, also known as the Northeast Energy Direct Project.

Massachusetts continuously ranks among the nation’s top five states in cost of electricity—nearly doubling the rate of other states in some cases. This cost disparity hinders our ability to be competitive in many industries including retail and impedes economic growth, hampering any efforts made to promote new job growth and profitability for small businesses.

RAM recognizes that there is no one solution to this problem and therefore supports the Commonwealth pursuing a long term, comprehensive energy strategy designed to establish a diverse, sustainable, and yet affordable energy market for the future. However, an integral part of such a transition is ensuring reliable

and affordable energy for today's ratepayers by taking advantage of all available resources. This requires a bridge fuel that is environmentally friendly, reliable and cost effective. RAM supports expansion of the region's natural gas supply to serve as such a bridge fuel.

Natural gas is a safer and environmentally sound alternative to our current oil and coal energy production and, with sufficient infrastructure improvements, is a more reliable alternative than both traditional resources and new renewable options available at this time. In emergency situations, the ability of natural gas plants to come online in a relatively short period of time makes them more reliable and cost effective than both traditional plants which require a ramping up of production and renewables which may be unable to produce under certain circumstances (e.g. solar cannot produce at night or when weather conditions interfere with panels). As any delay or inability to produce energy during an emergency increases potential risks to public safety, sound public policy would call for the adoption of the most efficient and reliable source of production source available—natural gas.

RAM wants nothing more than to assist retail industry growth in Massachusetts leading to job creation, investment and increased economic activity. On behalf of RAM and its 4000 members, I respectfully request the Commission to support the proposed pipeline projects which will lower energy costs and improve emissions in our region as we transition towards a more sustainable marketplace.

Thank you for your consideration of these comments. Please feel free to contact RAM directly with any questions or concerns.

Respectfully,

Jon B. Hurst
President

Basis for Intervening:

I am a resident and landowner in Montague, Massachusetts. I retired here 13 years ago to be an active member of the community. I have lived in seven states and more towns over my lifetime and have always actively lived to respect and enrich the land for all. Here in Montague we garden in our back yard and I have bought two tracts of organic farm land to keep this remarkable fertile Connecticut River valley soil in production at reasonable prices for young farmers. I am also a contributor and Board member of a local land trust with owned and facilitated properties on the pipeline route.

The pipeline would put the irrigation for the farmland I own at risk from possible pollution of the streams which which feed the two rivers my land abuts and uses for irrigation. I also am concerned about fallout from air pollution from construction and operation of the pipeline, especially the compressor station which is downwind from us. It also runs through our watershed for our drinking water.

As a taxpayer and Town Meeting member, I understand the increased risk of running a combustable pipeline through a unique and highly combustable pine woods, the Montague Plains. This pipeline puts our town, situated on the edge of the Plains, at risk for a fast, hot fire. Neither our town nor the state have the equipment to respond to such an event, putting our town at risk for widespread devastation.

As a taxpayer, I do not see how we can fund the ongoing safety requirements of a pipeline, including demands made on fire, police, and DPW departments. We are a poor town with already stretched resources

and many infrastructure repair and replacement needs. Diverting revenue to pipeline needs will particularly harm the many low income residents in town.

Finally, I am deeply committed to reducing the negative impacts of burning fossil fuels. I have a life history of conservation efforts and here I serve on the town Energy Committee and have worked to cut energy use and meet MA's future goals. I am also quite aware of the negative impacts of pipelines and the extraction process are having on other areas of the US and on our air worldwide. There are better alternatives and it is critical we turn our money and efforts to those, and protect our resources.

Basis for Intervening:

I live in the Berkshires and am friends with numerous people who will be directly affected homeowners. One lives within the "sacrifice zone" where if there was a fire or explosion no one would be able to rescue them and their lives would be "sacrificed". I have been to and video-recorded numerous meetings where Kinder Morgan made their case for both the need for and safety of the proposed expansion, and I am far from convinced that their claims about either are accurate. This project will have an ENORMOUS impact on communities, the land, and the water, and therefore it should be proven beyond doubt that the pipeline is both necessary and safe. I have been in the energy efficiency and renewable power industries for for 22 years. We have made enormous gains in these areas during this time, but in reality we've only scratched the surface, and between accelerated efficiency measures and stepped-up renewable power generation, the need for additional imported fracked gas would simply not exist. It is obvious that this issue is largely about the ability of gas companies to move their product to export terminals for shipment overseas, and this does not warrant the enormous destruction, community upheaval, and environmental degradation that will occur in order for these companies to achieve their revenue goals.

Basis for Intervening:

I live in Plainfield MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a landowner directly impacted by the proposed pipeline route. I own 175 acres and about a half-mile of my upper boundary is the right-of-way with the power lines of WMECO/Eversource. My drinking water is from a shallow cistern fed by a natural spring that runs down my hill and is pumped into the house. The construction and/or operation of the pipeline could put my drinking water supply at risk. There are ancient Native American stone mounds in several locations on the property as well as early American settler stone foundations that would

be disturbed by blasting or construction vehicles.

I am at risk of having my property seized by eminent domain. I am concerned about my home's property value decreasing and my electric bill increasing. I abut the Mass Audubon West Mountain sanctuary and am in the process of putting 150 acres of my land under conservation restriction with Mass Audubon. I am concerned about environmental impacts to the wildlife, brooks and streams, and my own health as well as the aesthetic beauty of and public access to the natural areas that are protected by various other organizations and state/town holdings such as The Trustees of Reservations, Dubuque State Forest, Deer Hill reservation, etc.

I also have donated substantial amounts of money to the Trustees, Mass Audubon and both the Franklin Land Trust & Hilltown Land Trust and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

I am completely opposed to this pipeline through New England, in fact to any and all pipelines! Pipelines are not safe! Mankind does not plan for the unexpected, or the least scenario, even though that scenario will threaten the planet, and life on the planet! Our materials do not hold up well through time, and there is already a large history of disasters, leaks, accidents! I oppose this pipeline primarily because it will be fracked gas! fracked gas is dirty, and dangerous! Kinder Morgan! You have no right to take people's lands, threaten wildlife and ecosystems for your own dirty profit! This pipeline is truly unnecessary! More and more folks and businesses are converting to the use of cleaner energy...solar, wind, hydro, which reduces the need for these fracked gasses! You intend to take over land, threaten all these communities, and send this to another country! It is not even for the benefit (?) of the very Americans you wish to push around!?

Individual	njmchampoux@gmail.com	
------------	-----------------------	--

Basis for Intervening:

Construction of the NED pipeline would impact my life in many ways. To begin with, I am a citizen of Massachusetts. Our Commonwealth has worked to limit our contributions to global warming and is working hard to intensify this effort with the approval of the vast majority of voters. The pipeline proposal is an offense against the expressed will of the voters of this state—including myself.

It also flies in the face of reason, tying us firmly to the destructive fuels of the past while simultaneously wreaking destruction upon hundreds of acres of forest, the very source that can most help combat the causes of global warming.

As currently planned, the pipeline would slice through many public lands set aside “in perpetuity” for the people of this state and the nation. Many of these lands were donated by citizens, either through direct land transfer or through cash donations. Along with many of our neighbors, our family regularly donates to land trusts to purchase land parcels for the state, lands to be preserved forever for our descendants. Their seizure by Kinder-Morgan would violate the laws of Massachusetts, the good faith financial sacrifices of its citizens, and the dictates of honor.

The pipeline also intersects sites of cultural significance. In Northfield these include one of the earliest home sites in this town, while down the road in Deerfield the pipeline would run directly through an ancient Pocumtuck Indian village, a site painstakingly excavated and preserved by the University of Massachusetts archaeology department.

I have other particular and local concerns. The miles of forest to be laid waste in Northfield comprise some of the loveliest unspoiled land in our state, attracting hikers, tourists, and residents who, like myself, settled here for the area’s tranquil beauty and for the birds and abundant wildlife that beauty shelters. The pipeline would be a scar upon this pristine landscape, and it would run directly through numerous environmentally sensitive areas (many of which are not acknowledged in Kinder-Morgan’s application)—clear mountain streams, vernal ponds, steep mountainous slopes, and the habitat of several rare and endangered species.

The compressor station proposed for Northfield is slated to be built on one of the most beautiful sites in the area, bordered by a well-used hiking trail with spectacular tri-state views. It is also one of the most vulnerable sites in the area, on a steeply graded mountain slope which, if deforested, would be a serious erosion risk. The area typically experiences heavy snowfall in winter and violent and frequent summer thunderstorms, making erosion an even greater risk. The access road for emergency vehicles is long, steep, and treacherous in bad weather. It is also a road of striking natural beauty. To “improve” it would be to destroy a place treasured by generations of Northfielders.

Moreover, the compressor station and much of the pipeline would be constructed upon a vital watershed for Northfield. Its construction could alter groundwater flow patterns. Any accident risks polluting four public water supplies and numerous private wells. A large area of the watershed for my own water source, the East Northfield Water Company Reservoir, is directly impacted by the pipeline and compressor station.

Constructing the proposed compressor station and the pipeline on such sensitive sites would put our natural environment, our safety, and the purity of our water and air at risk. Even for a worthy cause with citizen support, such a degree of risk would be indefensible.

As a resident and property owner in Ashfield, MA I will be directly and negatively effected by this pipeline!! Property values will plummet (already people can't sell their houses even with the prospect of the pipeline). Water supplies will be effected and there will be MAJOR and EXTREME environmental damage! This is indisputable. Public lands will illegally be taken over - land that was identified as PRESERVED as conservation land and protected from industrial purposes. As an avid hiker and snowshoer, my well-being will be effected. It also would go near or under our beloved lake that children and adults use every day in the summer and for ice fishing in winter, threatening our safety.

Of course, health issues is a major concern - in the building of the pipeline and in the event of a leak. This is inevitable.

Kinder Morgan is misrepresenting the need and demand for the pipeline. Rates will increase.

The natural beauty of Ashfiled - one of the main reasons why people choose to live here - will be ruined!

20160115-5405

Submission Description: (doc-less) Motion to Intervene of Mina Takahashi under CP16-21-000.

Submission Date: 1/15/2016 2:28:25 PM

Filed Date: 1/15/2016 2:28:25 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

ticipating in public hearings and workshops; speaking to students, civic organizations, and other stakeholders; and holding seminars and symposia—all to ensure that fossil fuels are kept in the ground, and that clean energy solutions reach all communities.

IV. Background

In Docket No. CP16-21-000, Tennessee Gas Pipeline Company, LLC (“TGP”) has applied for authorization under Sections 7(b) and 7(c) of the NGA (i) to construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, and (ii) to abandon certain facilities—all as part of the NED Project. The Project’s design capacities of 1.2 and 1.3 billion cubic feet per day are intended to supply fracked gas from Pennsylvania shale fields to gas-burning electric generators and other end users in the above listed states and Maine and Rhode Island. The Commission’s Notice of Extension of Comment Date for Docket No. CP16-21-000 states that motions to intervene are due on or before January 15, 2016.

V. Intervention

Sierra Club contends that approval of TGP’s application is inconsistent with the public interest and will not serve the public convenience and necessity. Sierra Club seeks to intervene in this proceeding because, if the application is granted, Sierra Club and its members will be immediately and permanently harmed by the economic, environmental, and other impacts of the NED Project.

First, Sierra Club and its members have informational interests in public disclosure and comprehensive analysis, pursuant to the National Environmental Protection Act (“NEPA”) and other law, of all direct, indirect, and cumulative environmental, cultural, social, and economic consequences of the Project and of reasonable alternatives to the Project.

Second, Sierra Club and its members have substantive interests that will be adversely affected by the following NED Project impacts, if TGP’s application is granted:

- The increases in climate-disrupting greenhouse gas pollution due to the NED Project spurring the extraction and burning of many billion cubic feet of fracked gas from Pennsylvania shale fields.
- The direct, indirect, and cumulative environmental impacts of the NED Project’s construction and operation on Sierra Club’s members who live, work, or engage in recreational activities in the Project area and nearby communities.
- The upstream environmental impacts of expanded natural gas extraction and infrastructure construction induced by the NED Project adding transmission capacity.
- The downstream environmental impacts of gas transmission and combustion.
- Impacts on aesthetics and recreational opportunities, including fishing and wildlife viewing, that Sierra Club and its members enjoy within the vicinity of the NED Project area.
- The economic impacts of the NED Project and the environmental damage it causes, including but not limited to the costs of: potential increases in electric utility bills; impaired ecosystem services; lost property value; harm to tourism, recreation, agriculture, and other non-extractive industries; and increased demands on local social services.

Sierra Club has demonstrated the vitality of its interests in many ways. For instance, Sierra Club runs national advocacy and organizing campaigns, including its Beyond Coal campaign and its Beyond Dirty Fuels campaign, to reduce our dependence on natural gas and other fossil fuels, and to promote clean energy—in countless venues. These include regulatory and permitting processes concerning hydraulic fracturing activities and pipelines, as well as other energy related matters, in the seven states directly impacted by the NED Project.

Sierra Club is particularly concerned about the adverse effects that the construction and operation of the proposed NED Project would have on the waterbodies, wetlands, watersheds, habitat, and ecosystems that would be traversed by the pipeline. As proposed, and made clear by myriad other intervenors, the NED Proj-

ect could adversely affect many sensitive freshwater wetlands, riparian vegetation, and freshwater fisheries, and could negatively impact the recreational, aesthetic, and commercial interests of Sierra Club’s members. There is evidence that the NED Project is not needed to serve demand in the Northeast, so all of these impacts can be avoided by FERC’s denial of the application.

Moreover, Sierra Club’s members living in the region that is underlain by the Marcellus Shale formation likely will experience hydraulic fracturing activities intensify as a result of the NED Project. Based on prior experience in the Marcellus, the expansion of drilling and related infrastructure can be expected to industrialize previously rural communities, fragment formerly intact forests and fields, degrade major water bodies and their watersheds, and cause serious air pollution, loud noises, foul odors, and crushing traffic—to name just a few of the documented problems. Members living near the proposed NED Project route will have to contend with the pollution and nuisance caused by the operation of a major transmission pipeline, its supporting facilities, and the gas extraction that it spurs. In addition, Sierra Club’s members throughout the country will be burdened by increased climate change harms caused by the Project.

In short, Sierra Club and its members have informational interests in disclosure pursuant to NEPA and other vital environmental, economic, aesthetic, and recreational interests that will be directly and adversely affected by the NED Project. Those interests will not be represented by any other party and therefore will not be adequately protected unless Sierra Club is permitted to intervene and to participate as a party in this proceeding. Finally, Sierra Club’s participation in this proceeding will lead to better informed decision-making and more reliable protection of affected public resources. Sierra Club therefore satisfies the conditions for intervention both as representatives of interested consumers and because their participation is in the public interest. See 15 U.S.C. § 717n(e); 18 C.F.R. § 385.214(b)(2).

WHEREFORE, Sierra Club respectfully requests that the Commission grant this motion to intervene and authorize Sierra Club to participate fully as a party in this proceeding.

Footnote:

¹ Pursuant to Rules 212 and 213(a)(2) of the Commission’s rules, 18 C.F.R. §§ 385.212, 385.213(a)(2), Movants respectfully move for permission to respond to any answer that may be filed in opposition to their Motion to Intervene.

January 15, 2016

20160115-5407

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)

Docket No. CP16-21-000

**COMMENTS OF THE
CONNECTICUT INDUSTRIAL ENERGY CONSUMERS**

The Connecticut Industrial Energy Consumers (“CIEC”), an ad hoc coalition of industrial and large commercial end-users which collectively employ thousands of Connecticut workers at numerous locations throughout the State, hereby submit these comments in response to the application for a certificate of public

convenience and necessity to construct, install, modify, operate, and maintain certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, referred to as the Northeast Energy Direct Project, filed by the Tennessee Gas Pipeline Company, L.L.C. with the Federal Energy Regulatory Commission (“Commission”) on November 20, 2015.¹

As further described herein, in light of the critically-important nature of interstate gas pipeline capacity availability for reliability and energy affordability, CIEC supports approval of the Northeast Energy Direct Project. Increasing the availability of interstate natural gas capacity through the approval of the Northeast Energy Direct Project will, among other things: (a) help to alleviate recurrences of massive price spikes such as those experienced during the past few winter periods; (b) increase reliability and availability of pipeline capacity to serve New England’s growing reliance on gas-fired generation resources to meet electricity demands; (c) increase availability of firm gas service to all customers, including commercial and industrial customers, especially in capacity-constrained regions of New England; and, (d) assist in furthering State policies of increasing availability of gas service and increasing the deployment and utilization of combined heat and power and other distributed energy resources.

As the Commission is keenly aware, the past few winter periods produced a multitude of multi-day duration cold snaps that significantly pushed the capabilities of the gas and electric systems to maintain affordable reliable service. These events highlight the constrained nature of New England’s natural gas system, especially as it relates to the availability of interstate pipeline capacity. As has been repeatedly observed, recent winter market outcomes were not necessarily the result of an inadequate supply of natural gas. Instead, the resulting market outcomes were caused by the relative lack of adequate pipeline capacity to transport natural gas from its production sources to load centers and other areas in need of gas supply. Such inadequate transport capability resulted not only in astounding levels of interruptions in constrained areas, but also historically high electricity prices.

The increased demand for natural gas caused by the severe cold weather events, combined with inadequate natural gas pipeline capacity in different regions of New England, has resulted in a significant increase in the number of service interruptions.² Such significant levels of interruptions cause major problems for energy-intensive large commercial and industrial customers. Customers currently receiving interruptible service and otherwise unable to obtain firm service or adequate alternative fuel supplies experienced frequent and prolonged interruptions. In some instances, the frequency and duration of interruptions forced businesses in New England to curtail operations on multiple occasions, costing millions of dollars in lost production and wages. In addition, contrary to the determined efforts to reduce their respective carbon footprints, in order to operate, many businesses were required to burn fuel oil or other alternative back-up fuels to continue operations.³ Commonly, however, the environmental permits applicable to such businesses limit the amount of back-up oil that can be used without the risk of significant penalty. Moreover, new environmental regulations being implemented in the coming years may further limit the opportunity to operate on alternative back-up fuels, thereby increasing reliance on, and demand for, natural gas in New England. In many instances, the inability to utilize alternative fuel sources due to environmental and/or economic restrictions will force more commercial and industrial customers to require firm gas service, placing additional constraints on an already taxed system.

In addition to gas service issues, consumers experienced record high electricity prices in winter periods that severely impacted energy affordability and significantly undermined the economics of business activities in the region. In fact, during the 2013/2014 winter period, the average wholesale electricity prices, as reported by the Independent System Operator, Inc. of New England (“ISO-NE”), exceeded \$250 per MWh – 100 percent higher than the average price for 2011.⁴ Such historically-high prices resulted in unprecedented energy costs for consumers. For many energy-intensive facilities, the costs incurred during the first two months of 2014 alone exceeded their annual energy budgets, resulting in, among other consequences, significant losses, deferment or cancellation of capital projects at facilities in the region, and the shifting of internal investments originally targeted for New England to other regions.

The pressing importance of addressing the region’s gas capacity issues is likely to grow in the near future

given: (i) the ongoing conversion of the region's aging electric generation fleet and the potential for additional generation resource retirements in the near-term for economic, environmental, regulatory or other reasons; (ii) New England's overall growing reliance on production by gas-fired generation to meet its electric load requirements;⁵ (iii) State initiatives and policies to expand availability of gas to residential customers and increase deployment of distributed energy resources; and (iv) the implementation of environmental requirements that may further limit access to, and availability of, alternative fuels, such as oil and coal, in favor of natural gas. Moreover, as other neighboring regions undertake actions in an attempt to address their own pipeline capacity limitations, such efforts could further reduce the availability of pipeline capacity to Connecticut.

CONCLUSION

The pressing importance of addressing the region's gas capacity issues is likely to grow in the near future. In light of the critically important nature of interstate gas pipeline capacity with respect to reliability, energy affordability and the ability to achieve certain of the region's energy initiatives, approval of the Northeast Energy Direct Project would be a positive step.

For all of these reasons, CIEC respectfully requests that the Commission approve Tennessee Gas Pipeline Company, L.L.C.'s application for a for a certificate of public convenience and necessity to construct, install, modify, operate, and maintain the Northeast Energy Direct Project.

Footnotes:

- 1 On January 4, 2016, the Commission issued a "Notice of Extension of Comment Date" in Docket No. CP16-21-000 extending the deadline to submit comments until January 15, 2016. CIEC submits these comments pursuant to that Notice.
- 2 According to Figure 7 of the 2014 Integrated Resources Plan for Connecticut ("IRP"), the number of days where interruptible capacity is unavailable has increased more than 200% since 2010 – 89 days to 349 days. (IRP at 24.)
- 3 It is beyond dispute that the existing pipeline constraints have had an adverse impact on natural gas prices. As the IRP recognizes, the number of days in which the New England basis differential was greater than \$2/MMBtu has increased over 50% since the winter of 2010/2011, with the number of days with a basis over \$10/MMBtu significantly rising to 28. (IRP at 27.)
- 4 IRP at 29. The total wholesale generation cost of serving electric load in New England for the winter of 2013/2014 was over \$5 billion, compared to \$5.2 billion for all of 2012.
- 5 More than 50% of New England's electricity needs are now generated with natural gas, compared to only 5% in 1990 and 15% in 2000, with even more growth in natural gas-fired generation anticipated. (IRP at 22.)

Individual jmarrapese@gmail.com

Basis for Intervening:

I am a homeowner in Deerfield, Massachusetts. I invested my life savings into completing a Deep Energy Retrofit of my 1977 ranch house, in order to conserve energy and rely on clean, solar power. It remains my intent to live the remainder of my life in this community.

Construction of the NED pipeline would mean that I would be situated less than 5 miles from the pipeline. I am concerned about my family’s safety, given that Kinder Morgan is proposing to use material for the pipeline that is less durable, and more affordable, than the safest pipeline material available. I am concerned about the potential for the pipeline to leak, and to leach toxic chemicals into the groundwater we use for drinking water and watering crops.

20160115-5409

UNITED STATES OF AMERICA
Before the
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of:

Tennessee Gas Pipeline, LLC

Docket No. CP16-21-000

**SUPPLEMENTAL COMMENTS IN SUPPORT
OF THE BERKSHIRE GAS COMPANY**

The Berkshire Gas Company (“Berkshire” or the “Company”) hereby submits its supplemental comments in support of the application submitted by Tennessee Gas Pipeline, LLC (“Tennessee”) to construct and operate the Northeast Energy Direct Project (“NED Project”). 1

Tennessee filed its application to construct and operate the NED Project pursuant to Section 7 of the Natural Gas Act (“NGA”) on November 20, 2015. Tennessee’s application states that the NED Project will provide up to 1.3 Bcf per day of firm capacity. Berkshire has signed precedent agreements for NED Project capacity. Specifically, Berkshire has signed a precedent agreement for 14,650 dekatherms per day (“dthld”) of capacity on the NED Project’s Supply Path Component and 28,840 dthld on the Market Path Component. Berkshire is an LDC in western Massachusetts and needs the NED Project capacity to serve high priority retail load. Berkshire has experienced (and forecasts to continue to experience) significant demand growth and needs additional capacity from the NED Project to provide reliable, cost effective service to existing and potential new customers.

Tennessee is Berkshire’s only interstate pipeline supplier, serving the Company’s service territory which is comprised of noncontiguous “Eastern” and “Western” Divisions. Berkshire’s Eastern Division is served solely by a lateral that extends from Tennessee’s mainline at Southwick, Massachusetts to a point in Northampton, Massachusetts. This so-called “Northampton Lateral” is fully subscribed.

Berkshire participated in a Tennessee upgrade to the Northampton Lateral which was approved by the FERC in Docket No. CP11-36-000 on August 24, 2011. The upgrade was placed into service on November 1, 2012; however, the additional capacity is exhausted after only three years. As a result, Berkshire has been forced to impose a moratorium on the provision of natural gas service to new customers or the provision of

incremental service to existing customers in its Eastern Division. The NED Project Market Path Component will provide additional capacity, along a new pipeline route, to Berkshire's Eastern Division and, therefore, will permit the Company to lift the moratorium on new or incremental gas services in that region,

As noted above, the NED Project Market Path Component will provide Berkshire with a second feed from a major interstate pipeline into both divisions of its service territory in western Massachusetts. This second pipeline facility will significantly enhance reliability of service in case of pipeline outages. In addition, the new pipeline will mitigate certain pressure constraints on Berkshire's system, further enhancing service reliability and eliminating the need for certain distribution system enhancements. As an Anchor Shipper, Berkshire will receive significant - and permanent - operational enhancements.

The Commonwealth of Massachusetts has enacted legislation in order to promote economic development opportunities and expand natural gas service.³ The NED Project will assist Berkshire in its efforts to meet the goals of the Massachusetts legislation. Given the capacity constraints Berkshire is currently experiencing, the NED Project is essential to Berkshire's efforts in this regard.

The use of natural gas also provides significant environmental benefits when compared to the use of coal or oil and facilitates efficient technologies, such as combined heat and power projects. The NED capacity will be used, in large part, to serve new customers converting from oil heating to natural gas, which will reduce greenhouse gas emissions and contribute towards the goals of the Massachusetts Global Warming Solutions Act ("GWSA").⁴

It is important to note that Berkshire requires the NED Project capacity even after taking into consideration demand reductions from its aggressive energy efficiency programs. The Company has always recognized energy efficiency resources as an important component of its overall resource plan and their role in deferring the need for the acquisition of incremental resources. Through its Green Communities Act, the Commonwealth of Massachusetts has a statutory mandate to achieve all cost-effective energy efficiency and recently earned the #1 ranking for the fifth consecutive year in the American Council for an Energy-Efficient Economy's ("ACEEE") 2015 State Energy Efficiency Scorecard. Berkshire has championed these efforts by offering a comprehensive range of nationally recognized and award-winning energy efficiency programs to its retail customers for more than two decades. Further, the Company is an industry leader in this area, receiving awards from the ACEEE for Exemplary Energy Efficiency Programs and the United States Environmental Protection Agency's Energy Star Partner of the Year Award - Energy Efficiency Program Delivery.

With respect to the Supply Path Component of the NED Project, Berkshire's precedent agreement provides for transportation from the heart of the Marcellus production region to Wright, New York. From a strategic perspective, Berkshire believes that the NED Supply Path capacity would assist in providing reliable, least-cost service to retail customers and would enhance the diversity of supply available by reaching the prolific Marcellus and Utica supply regions. The Marcellus and Utica production areas have substantial supplies of natural gas at low prices and are expected to continue to grow. The NED Project's Supply Path Component will permit Berkshire to take advantage of these production regions and of advantageous price projections for supplies on Tennessee's 300-Line in Pennsylvania and Ellisburg, Pennsylvania storage areas. The current interstate pipeline infrastructure is insufficient to bring these gas resources to the New England markets, leading to prices that are higher relative to the rest of the Northeast.

In addition to the commodity savings made available, as an anchor shipper, Berkshire has received favorable contract terms which will provide long-term savings to retail customers. Customers will also see increased savings as Berkshire will be able to reduce its reliance on high-priced winter peaking resources. Historically, Berkshire has relied on liquefied natural gas, which can be subject to international pricing pressures during peak times, and which must be delivered to western Massachusetts by truck.⁵ Further, the NED Project displaces the Company's need for citygate delivered resources, which resources have been increasingly difficult to acquire, offer limited flexibility, and command substantial premiums on the secondary market.

Given the benefits associated with the NED Project, the Commission should promptly approve Tennessee's application to construct and operate the Project.

Footnotes:

- 1 Berkshire is a member of the New England LDCs. The New England LDCs moved jointly and severally to intervene in this proceeding on December 18, 2015. The New England LDCs also filed comments in support of Tennessee's NED Project at that time.
- 2 Application of Tennessee Gas Pipeline Company, LLC for a Certificate of Public Convenience and Necessity to Construct, Install, Modify, Operate and Maintain Certain Pipeline and Compression Facilities and to Abandon Facilities, filed November 20, 2015 in the above-referenced docket.
- 3 See Chapter 149 of the Acts of 2014. This legislation also included provisions to address leaking and aging distribution system infrastructure in Massachusetts. Accordingly, Berkshire implemented an accelerated replacement program with the goals of improving safety and infrastructure reliability, and reducing greenhouse gas emissions and lost and unaccounted-for gas.
- 4 The Commonwealth of Massachusetts enacted the GWSA in 2008 to provide a framework for reducing heat-trapping emissions and set targets for a 25% reduction in Greenhouse Gas Emissions ("GHG") by 2020 and an 80% reduction by 2050.
- 5 The ability to reduce the use of trucked-in LNG will also enhance service reliability in western Massachusetts.

Respectfully submitted,

THE BERKSHIRE GAS COMPANY

Basis for intervening:

I live less than 2 miles from the proposed New Ipswich compressor station.

I am completely opposed to the NED pipeline proposal for these reasons:

I am concerned the pipeline would cause excessive toxic emissions from compressor stations to poison the water and air, putting innocent people's health and lives at risk.

I am concerned the project would lead to excessive light and noise pollution from compressor stations.

I am concerned the pipeline would cause long-term damage to the beauty and health of nature preserves and wildlife in our area.

I am concerned the pipeline would cause a proposed tariff to be forced on energy ratepayers.

I am concerned that the rural towns along the pipeline route are not equipped for the burden of the potential dangers - such as forest fires in the event of an explosion or fire at the compressor stations or the pipeline itself.

I am a land/home owner in Greenville, NH, a little more than 1 mile away from the area of the proposed compressor station in New Ipswich, NH. I am deeply concerned about the possible pollution/contamination this compressor station can cause, especially in such close proximity to the reservoir that provides our drinking water. I am also concerned about the health risks posed to me and my family from the air pollution that can come from the compressor station. I do not feel that Kinder-Morgan has adequately addressed the concerns of the residents that this will be affecting, nor do I feel they have provided sufficient reassurance

that the air quality will be monitored and kept at pre-operation levels. There is no benefit to the residents of Greenville/New Ipswich, or the residents of New Hampshire for that matter, to having this pipeline and compressor station.

20160115-5415

UNITED STATES OF AMERICA
Before the
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of:
Tennessee Gas Pipeline, LLC

Docket No. CP16-21-000

**SUPPLEMENTAL COMMENTS IN SUPPORT OF
LIBERTY UTILITIES (ENERGYNORTH NATURAL GAS)
CORP. d/b/a LIBERTY UTILITIES**

Liberty Utilities (EnergyNorth Natural Gas) Corp. d/b/ Liberty Utilities (“EnergyNorth”) respectfully submits these supplemental comments in support of the application filed on November 20, 2015, by Tennessee Gas Pipeline, LLC (“Tennessee”) to construct and operate the Northeast Energy Direct Project (the “NED Project”),” Tennessee’s application proposes to provide up to 1.3 Bcf/d of firm capacity.’ EnergyNorth has signed a precedent agreement for up to 115,000 dekatherms per day (dth/d) of NED Market Path Component capacity.

EnergyNorth is an LDC serving retail customers in New Hampshire. EnergyNorth needs additional capacity to serve its high priority retail customers in northern New England. EnergyNorth’s most recent demand forecast, approved by the New Hampshire PUC, demonstrates that EnergyNorth will not have sufficient capacity to serve customers in New Hampshire on a design day by 2018.

After consideration of various options to obtain additional interstate pipeline capacity, EnergyNorth determined that the NED Project provided the most cost effective option for EnergyNorth’s customers. Approximately 46% of supplies delivered to EnergyNorth’s system using interstate capacity are delivered through the major interconnect located at Dracut, Massachusetts. The Dracut interconnect historically reflects natural gas prices that are among the highest in North America. The NED Project will provide EnergyNorth with access to supplies from various regions. For example, using its NED capacity, EnergyNorth will be able to purchase gas produced in the low-cost Marcellus and Utica regions and transport that gas directly to its LDC system. EnergyNorth’s retail customers have paid some of the highest rates for natural gas over the past few winters and the NED Project will provide those customers with lower gas costs and decreased price volatility.

In addition, EnergyNorth will receive significant operational benefits once Tennessee places the NED Project facilities in service. Currently, all gas delivered to EnergyNorth’s citygate is transported through a single lateral, the Concord Lateral. Capacity on the Concord Lateral is fully subscribed. The NED Project provides additional reliability for EnergyNorth’s customers through a new interconnect that will provide a secondary feed to EnergyNorth’s LDC system. The new interconnect will reduce congestion on the Concord Lateral, provide flexibility, and increase reliability. Moreover, as an anchor shipper, EnergyNorth will receive significant - and permanent - operational enhancements.

Because the Project provides much needed, cost-effective capacity, EnergyNorth respectfully requests that the Commission promptly approve the Application.

Berkshire Environmental Action Team, Inc. (BEAT) jane@thebeatnews.org

Basis for Intervening:

Berkshire Environmental Action Team, Inc. (BEAT) is a 501(c)3 non-profit organization whose mission is to protect the environment for wildlife. We do this by helping people take action to protect the environmental quality of our land, air, water, and wildlife habitat.

BEAT is filing this motion to intervene, in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10), in opposition to the construction of the Connecticut Expansion pipeline by Tennessee Gas Pipeline company (TGP) in the public's interest.

The construction of this pipeline would cut down existing mature forest, remove permanently protected land from that permanent protection in violation of our state constitution, threaten wetlands and waterways, threaten rare and endangered species and other wildlife habitat, fragment wildlife habitat and decrease the continuity of forest cover that aids wildlife movement, spread invasive species, and contribute to climate change. And this is just one piece of the massive pipeline build-out to the northeast. The public and our regulators need to know the full, cumulative impacts of this build-out of natural gas infrastructure. Massachusetts has been a leader in energy efficiency while growing our clean energy economy - a combination that has worked well both environmentally and economically. We believe there are much better ways to meet our energy needs including further gains in energy efficiency, demand generation, and renewable generation.

Additionally, FERC should require an accelerated timeline for companies to fix their leak-prone pipes. In the northeast 25% of the existing natural gas infrastructure appears to be old, leak-prone pipes that, according to a spokes person from National Grid, the companies can't properly account for due to their age and being acquired from many different companies over the years. This proposed pipeline would violate the Massachusetts Global Warming Solutions Act and lead to a dramatic increase in greenhouse gas emissions in the state and in the northeast.

For more than 10 years, BEAT has been working to protect the environment from pollution and to ensure that wildlife has a way to move throughout our landscape. Wildlife needs to be able to move to fulfill their daily, seasonal, and dispersal needs. Now with climate change, which will be exacerbated by this pipeline and by the increase in greenhouse gas emissions which it will bring, the need to be able to move to find new suitable habitats has become more acute. Protecting unfragmented forests and ensuring stream crossings (places where roads cross over streams and rivers) are built to allow fish and wildlife to pass safely under the road are two of our priorities. This pipeline would further fragment our forests including land that is permanently protected under Article 97 of our state Constitution. This pipeline is highly likely to spread and introduce more invasive species, thus degrading native species wildlife habitat. In the event of leaks of methane or possible rupture and explosion, this pipeline has the potential to cause major harm to air, land, and water, including rare species and other important wildlife habitat.

BEAT is in a unique position and no one else can represent our interests. BEAT has both (1) an interest which may be directly affected by the outcome of the proceeding pursuant to Rule 214(b)(2)(ii); and (2) its participation is in the public interest pursuant to Rule 214(b)(2)(iii).

Basis for Intervening:

I live in a town with a proposed compressor station. The state of New Hampshire, along with all of the towns along the proposed route, do not need this pipeline, nor the gas it will contain. The negative impacts will not be outweighed by any potential gains by anyone other than the corporations that own the gas and the pipe. The potential health risks to the locals should never be considered acceptable to a monetary gain for others. If the pipeline is approved and eminent domain is utilized, the lives of all those along the route will have just been considered forfeit to a corporation. A price will have been placed on my head, along with all those who are impacted, all sold into slavery with the only potential escape being to buy a new home in another location, away from projects like this. I would have to hope that a Government agency, the same government that I served two tours in the Middle East for, would let me live my life in peace and not force-

fully take my land, my peace, and my sanity from me.

I am a resident and landowner in the Southern Tier of New York State. I have family and friends who live in close proximity to the proposed Northeast Energy Direct Pipeline, and I live in proximity to the proposed Constitution Pipeline, which would share the same greenfield through parts of New York State.

The Northeast Energy direct imperils the lives and livelihoods of my family, their communities, their livelihoods and the future of their children.

As such, I wish to be an intervenor as outlined by FERC so that I may stand in defense of my family and the land we share.

Sincerely,

Trellan Smith

Basis for Intervening:

My name is Mary Hannah Parkman. I am a resident of Pittsfield, MA and a customer of Berkshire Gas. I grew up in Berkshire County and I've stayed here to enjoy the beautiful natural resources. The route of the Kinder Morgan/Tennessee Gas Northeast Energy Direct (NED) pipeline is proposed to run through my city's watershed.

I am filing as an intervenor because the quality of my water, air and the lands I enjoy will be directly effected by the proposed pipeline. Fracked gas from this pipeline could plausibly carry neurotoxins from the fracking fluids and radon gas from the wells themselves. These chemicals will be released into the atmosphere at regular intervals via a number of compressor stations less than 25 miles from my house. No study has been done on the safety of the gas that would be pumped from these fields into New England homes via the pipeline and released into the air. If there was ever a leak or explosion the effects to human health would be catastrophic.

Furthermore, my future, health and quality of life will be effected. I am 35 years old and I am worried about my future. Massachusetts made a commitment to reduce its carbon footprint by passing the Global Warming Solutions Act. The pipeline proposal disregards the GWSA, with moral, legal, and economic consequences.

With the levels of CO2 in the atmosphere well above 350 parts per million, the level scientists believe is the safe level for human health and civilization, we have a responsibility to do everything in our power to use our planet's resources wisely. It would be irresponsible to put quick solutions, profits and deals with short term gain for the few before the preservation of our land, air and water.

It is uncertain how climate change will affect the place I live, my livelihood, my health, my loved ones. But one thing is for sure, the NED pipeline will only put more methane in the atmosphere from every phase of the project and worsen the effects of climate change for me, the people of the commonwealth as well as people around the world.

Sincerely,

Mary Hannah Parkman

Basis for Intervening:

My 500+ acre property at 388 Black Brook Rd. in Mason, New Hampshire, is, in its entirety, under a Conservation Easement granted by The State of NH in 2008. The laws of The State of New Hampshire, governing Conservation Easements, do not allow for a pipeline of any kind to pass through Conservation Easement protected property.

This property has been in my family since 1959 and we have acted as responsible stewards to preserve and protect it since then. The Conservation Easement preserves this land for the enjoyment of all people. The proposed North East Direct Pipeline would run absolutely counter to the efforts made so far to conserve this land. The East/West main line as well as the North/South spur line are proposed to invade and scar this property. I do not approve of this pipeline in any way and deny Kinder Morgan/Tennessee Gas Pipeline access to this property. Taking of the land will have to be by Eminent Domain in the case of the pipeline project being approved.

Basis for Intervening:

My family and I own a home that abuts the Tennessee Gas Pipeline. We live within the "blast zone" and potentially very close to the compressor station, should the company finalize its location. Living near this pipeline and all of its components will be hazardous to our health and well-being of our children, ourselves, and anything living within its path. We bought our brand new home only 6 years ago with the intent of rais-

ing a family here and becoming part of a small rural community, we perceived as safe. This pipeline threatens everything we have worked so hard for. We will be forced to either live in an unhealthy environment, where research shows that we will be at increased risk of an assortment of medical ailments or be forced to sell our home, whose value will most definitely decrease because of this. Please DO NOT approve the NED pipeline. There is no demand for this fuel, and it is destroying thousands of lives that lay in it's path, including my own.

Basis for Intervening:

I strongly oppose the proposed pipeline project, for many reasons. First of all, climate change is the greatest threat that our world faces and fracked gas contributes heavily to climate change. The world's carbon budget cannot afford this pipeline. Secondly, I am concerned about health risks for those who live along the pipeline. Thirdly, as a ratepayer I am deeply offended that I would have to fund something as abhorrent as the pipeline.

20160115-5432

UNITED STATES OF AMERICA
Before the
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of:

Tennessee Gas Pipeline, LLC

Docket No. CP16-21-000

**SUPPLEMENTAL COMMENTS IN SUPPORT OF
WESTFIELD GAS & ELECTRIC LIGHT DEPARTMENT**

Westfield Gas & Electric Light Department ("Westfield") hereby submits its supplemental comments in support of the application submitted by Tennessee Gas Pipeline, LLC ("Tennessee") to construct and operate the Northeast Energy Direct Project ("NED Project"). 1

Tennessee filed its application to construct and operate the NED Project pursuant to Section 7 of the Natural Gas Act ("NGA") on November 20, 2015. Tennessee's application states that the NED Project will provide up to 1.3 Bcf per day of firm capacity.ⁱ Westfield has signed precedent agreements for Project capacity. Specifically, Westfield has signed a precedent agreement for 2,000 dekatherms per day ("dthld") of capacity on the NED Project's Supply Path Component and 2,000 dthld on the Market Path Component.

Westfield is a municipally-owned LDC located adjacent to Tennessee's 200-Line in western Massachusetts. The NED Project has provided Westfield its first opportunity in decades to add supplemental capacity to our upstream portfolio that is linked to a robust supply source in an effort to serve high priority and growing retail load. Tennessee is Westfield's only major interstate pipeline supplier and, as such, there is no viable alternative project available to directly serve Westfield. Westfield is experiencing load growth and needs additional capacity from the NED Project to provide reliable, cost effective service to existing and potential new customers.

The Commonwealth of Massachusetts has enacted legislation in order to promote economic development opportunities and expand natural gas service. 3 The use of natural gas also provides significant environmen-

tal benefits when compared to the use of coal or oil and facilitates efficient technologies, such as combined heat and power projects. The NED Project will assist Westfield in its efforts to assist the Commonwealth of Massachusetts in meeting its environmental goals.

With respect to the Supply Path Component of the NED Project, Westfield's precedent agreement provides for transportation from the heart of the Marcellus production region to Wright, New York. From a strategic perspective, Westfield believes that the NED Supply Path capacity would assist in providing reliable, best cost service to retail customers and would enhance the diversity of supply available by reaching the prolific Marcellus and Utica supply regions. The Marcellus and Utica production areas have substantial supplies of natural gas at low prices and are expected to continue to grow. The NED Project's Supply Path Component will permit Westfield to take advantage of these production regions and of advantageous price projections for supplies on Tennessee's 300-Line in Pennsylvania and Ellisburg, Pennsylvania storage areas. The current interstate pipeline infrastructure is insufficient to bring shale gas to the New England markets leading to prices that are higher relative to the rest of the Northeast.

Given the benefits associated with the NED Project, the Commission should promptly approve Tennessee's application to construct and operate the Project.

Footnotes:

- 1 Westfield is a member of the New England LDCs. The New England LDCs moved jointly and severally to intervene in this proceeding on December 18, 2015. The New England LDCs also filed comments in support of Tennessee's NED Project at that time.
- 2 Application of Tennessee Gas Pipeline Company, LLC for a Certificate of Public Convenience and Necessity to Construct, Install, Modify, Operate and Maintain Certain Pipeline and Compression Facilities and to Abandon Facilities, filed November 20, 2015 in the above-referenced docket.
- 3 See Chapter 149 of the Acts of 2014.

Basis for Intervening:

I am opposed to the proposed Kinder Morgan/Tennessee Gas Pipeline Northeast Energy Direct pipeline proposal to the extent known. My interests, which may be directly affected by the outcome of the proceeding, are as follows:

As a taxpayer, assistant Scoutmaster to a very outdoors-oriented Boy Scout troop, and visitor to numerous public lands in New England, I am offended that public land is being taken for the benefit of this corporation, and I am concerned about potential environmental damage from gas leaks or habitat interruption.

I am an electric ratepayer, and, if my utility becomes a project customer, I would expect to see my electric rates rise as Kinder Morgan attempts to recover pipeline costs. Passing on these costs to local ratepayers is especially egregious, given that it is likely that the vast majority of gas traveling through this pipeline would be for the export market and not for local consumption. Thus, I would be expected to pay costs externalized by this company, for a service I would not receive.

Since oil and natural gas prices are at historic lows, destabilizing the fossil-fuel market, it seems foolish to approve a new pipeline for a company that may realize negative economic impacts, while ratepayers are tasked with paying for a project that may cease to be economically viable.

As agreed upon at the recent Paris climate summit, the world needs to turn quickly towards non-fossil-fuel energy sources in order to maintain a livable planet. It goes without saying that increasing pipeline capacity works against the goal of a sustainable ecosystem.

As a taxpayer and U.S. citizen, I am offended that “eminent domain” is being used by a public entity for a project that is 1) not in the public interest, and 2) almost purely to generate profits for this company. I believe that individual and public-property rights should be preserved in all but the most pressing demonstration of public need.

Kinder Morgan has a well-established track record of cutting corners and leaving environmental degradation in its wake, and it is not a neighbor that I want to invite further into my “neighborhood.”

Thank you,

Nancy Grossman

20160115-5436

UNITED STATES OF AMERICA
Before the
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of:
Tennessee Gas Pipeline, LLC

Docket No. CP16-21-000

**SUPPLEMENTAL COMMENTS IN SUPPORT OF
CONNECTICUT NATURAL GAS CORPORATION AND
THE SOUTHERN CONNECTICUT GAS COMPANY**

Connecticut Natural Gas Company and The Southern Connecticut Gas Company (jointly “CNG and SCG”) hereby submit their supplemental comments in support of the application submitted by Tennessee Gas Pipeline, LLC (“Tennessee”) to construct and operate the Northeast Energy Direct Project (“NED Project”).¹ Tennessee filed its application to construct and operate the NED Project pursuant to Section 7 of the Natural Gas Act (“NGA”) on November 20, 2015. Tennessee’s application states that the NED Project will provide up to 1.3 Bcf per day of firm capacity.ⁱ CNG and SCG have signed precedent agreements for Project capacity. Specifically, CNG has signed a precedent agreement for up to 34,500 dekatherms per day (“dthld”) of capacity on the NED Project’s Supply Path Component and 10,000 dthld on the Market Path Component. SCG’s precedent agreement provides for up to 51,500 dthld of Supply Path capacity and 15,000 dthld of Market Path capacity.

CNG and SCG are experiencing significant demand growth in Connecticut and have contracted for additional capacity from the NED Project to support such growth in a reliable, cost effective manner. Demand growth is also being supported by the State of Connecticut’s 2013 Comprehensive Energy Strategy (“CES”) plan that, among other things, calls for an expansion of the natural gas distribution systems in the State and encourages the provision of natural gas service to approximately 280,000 additional residents and businesses over a long term horizon.³ One of the CES’ primary objectives is to “align Connecticut’s energy future with the emerging opportunity provided by shale gas for a lower-cost, less-polluting, and domestically available (and thus more reliable) foundation for society’s energy needs.” The percentage of homes heated by natural gas in Connecticut is lower than the New England region and nationwide average and a large portion of Connecticut buildings do not have natural gas access. The CES also recognizes the environmental benefits of natural gas are also significant indicating that an equivalent amount of natural gas burned in lieu of fuel oil for heating can reduce NOX emissions by 20-50%, SOx emissions by up to 99%, and carbon dioxide emissions by 25-27%.

CNG and SCG have contracted for the NED Project capacity for future design day additions and for operational needs. The NED Project will provide a new pipeline feed to the region and has the ability to expand further to serve the needs of New England over the longer term. As anchor shippers, CNG and SCG will receive significant - and permanent - operational enhancements.

With respect to the Supply Path Component of the NED Project, CNG and SCG’s precedent agreements provide for transportation from the heart of the Marcellus production region (and Ellisburg, Pennsylvania gas storage area) to Wright, New York. The Wright capacity requirements for CNG and SCG are based upon upstream feeds for a portion of three downstream contract types: (1) additional capacity needed to support Tennessee’s Connecticut Expansion (Docket No. CPI4-529) targeted to be in-service by November, 2016; (2) capacity needed to support the NED Market Path Component; and (3) capacity CNG and SCG currently have under contract on Iroquois Gas Transmission System, L.P. that is currently not supported by upstream capacity on TransCanada pipeline system. From a strategic perspective, CNG and SCG believe that the NED Supply Path capacity would assist in providing reliable, best cost service to retail customers and would enhance the diversity of supply available by reaching into the prolific Marcellus and Utica supply regions. The Project also permits CNG and SCG to decrease reliance on the important Wright, New York interconnect into Iroquois, which has been susceptible to price volatility. The Supply Path Component of the Project will also significantly enhance the supply situation at Wright.

Given the benefits associated with the NED Project, the Commission should promptly approve Tennessee’s application to construct and operate the Project.

Footnotes:

¹ CNG and SCG are members of the New England LDCs. The New England LDCs moved jointly and severally to intervene in this proceeding on December 18, 2015. The New England LDCs also filed comments in support of Tennessee’s NED Project at that time.

2 Application of Tennessee Gas Pipeline Company, LLC for a Certificate of Public Convenience and Necessity to Construct, Install, Modify, Operate and Maintain Certain Pipeline and Compression Facilities and to Abandon Facilities, filed November 20,2015 in the above-referenced docket.

3 The CES was established by law in Public Act 11-80.

Basis for Intervening:

To Whom It May Concern:

This letter is to notify you that I am filling as an Intervenor with the Federal Energy Regulatory Commission (FERC) to OPPOSE the Northeast Energy Direct (NED), Liquid Natural Gas (LNG) pipeline project that Kinder Morgan is proposing to construct, operate and maintain in Dracut, Massachusetts.

My wife and I have lived at 11 Pelczar road in Dracut, MA for seven (7) years. My home is with in the

incineration zone (300 ft) of an existing LNG pipeline that was installed 60 years ago in 1955. I also reside within a mile of the contaminated former EXXON petroleum storage site at 970 Broadway Road. The ground water contamination caused by that site was detailed in a letter and proposal reviewed at a meeting of the Dracut Board of Health on April 1, 1982 and is fully documented at the Mass DEP website:

[Http://pubic.dep.state.ma.us/fileviewer/DefaultScanned.aspx?documented=24154](http://pubic.dep.state.ma.us/fileviewer/DefaultScanned.aspx?documented=24154)

My most critical concerns regarding the installation of any new pipelines and the construction of pipeline-related facilities in my neighborhood or in the proximity of my home are the following:

a. If FERC approves Kinder Morgan's proposed NED pipeline as currently designed, my home will be within a mile of their compressor station at 970 Broadway Road, and within a 1000 feet of their metering station near Cart Path Road, further INCREASING the possibility that ,y home will be damaged or destroyed and lives injured or lost in the event of a LNG pipeline-related catastrophe.

b. The (now) very purpose water into my home is supplied by a well that I own and maintain. I am extremely concerned that the blasting and digging related to Kinder Morgan's proposed construction at the 970 Broadway Road compressor station could very likely disrupt the aquifer and /or cause a migration of toxic chemicals into my well, rendering it useless and/or poisoning my drinking water!

c. There are no independent verified or verifiable studies that asses the impact of compressor blow outs on air quality and the overall health of people (with medical conditions such as asthma or other respiratory conditions), animals and plants living in the vicinity of a LNG compressor station. FERC should demand these studies be done before any consideration is given to this project.

d. Lastly as a homeowner, I am also a taxpayer and I am seriously concerned about the loss of real estate tax revenue resulting from the devaluation of homes (both existing and proposed new developments) that are essential to the continued funding of our exceptional schools, police and fire departments, and other community services.

Basis for Intervening:

As an individual, I strongly believe that these power line is unnecessary and detrimental to humans, habitat and animals which should all be protected instead of the glutenous bottom lines of corporations. New England is a very special place and it takes extraordinary efforts to protect it. More money--the money that would be used to build this powerline--should be used to develop renewables, including batteries.

In addition, the cost of the powerline will be born by the ratepayers--ME! This is unfair and unjust.

Basis for Intervening:

I am a resident of Merrimack, NH. I live at 33 Whittier Road. My family is applying as interveners in Docket CP16-21-000 because we will be directly impacted by this project in a number of ways including but not limited to:

1. Land/homeowner
2. If built, the quality of life in our neighborhood will be decreased significantly during construction and will be changed forever. We have been homeowners for 11+ years and purchased in this neighborhood with specific expectations regarding our surroundings which this pipeline would negatively change
3. The proposed route crosses our town's watershed and there is evidence that this could pose a great risk to our town's water supply
4. I am currently a Liberty Utilities ratepayer and am concerned that I could be forced to pay for this pipeline through my utility rates
5. Our town (Merrimack, NH) is identified as the location of a meter station, which I am concerned that it will negatively impact the quality of life for the residents of Merrimack NH.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	wdmmoylan@gmail.com	

Basis for Intervening:

I am concerned that the pipeline's compressor station would: (a) cause unacceptable toxic emissions in water and air, jeopardizing my children's health and mine; (b) cause unacceptable noise and light pollution and thus severely diminish my quality of life; (c) irrevocably damage the value of my property; and (d) create a source of imminent danger of explosion and fire to my property.

I am concerned that the pipeline would: (a) put all towns and homes within proximity in danger of explosions and fire too overwhelming to be controlled by local emergency services; (b) cause enduring damage to protected land and water, and to wildlife; (c) unjustly claim Eminent Domain; (d) diminish the Quality of Life of everyone living and working around it.

I request you take into account the financial health of the applicant. Their financial resources do not bode well for (a) completion of the project once started, for (b) adequate maintenance of the compressor station or pipeline, or (c) for covering future costs of environmental accidents.

20160115-5455

Nancy Moen, Mount Vision, NY.

this is a comment to intervene in the above project. It is in direct alignment with thw Constitution Pipeline and will cause double the damage to water and land .

Basis for Intervening:

- My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a superhighway to solve occasional congestion at a rural traffic light. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England's ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices. This is even more disturbing when we consider that the Spectra AIM project has already been approved; together these projects bring far more gas into the region than we could ever possibly need.
- My interest as a taxpayer and visitor to protected public land in Massachusetts. The NED pipeline is proposed to cross through protected land from the Berkshires to the North Shore, and through numerous watersheds and public drinking water supplies. I am very concerned about the threat this Project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution. The public record indicates that Kinder Morgan's modus operandi is to do whatever it takes to get pipelines approved and installed as quickly as possible, cut corners on construction and maintenance, and simply pay the fines later.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued. I have been studying this proposal since it first became public, and I can bring valuable information and perspective to this proceeding.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

20160115-5463

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
Northeast Energy Direct Project)	

**MOTION TO INTERVENE OF
MICHAEL LEONARD SKALSKI**

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Michael L. Skalski
24 Baptist Corner Road
Ashfield, MA 01330
(413) 834-4500
standiskalski@yahoo.com

I strongly object to the Project for many reasons. My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include, but are not limited to:

- My interest as a property owner in Franklin County, Massachusetts. I own five separate pieces of property in Franklin County towns, each of which will be directly affected by the proposed route of the Project pipeline and its construction:
 - o 24 Baptist Corner Road., Ashfield, MA
 - o 4 Pleasant Avenue, Deerfield, MA
 - o 44 Munns Ferry Road, Northfield,
 - o 247 Main Street, Shelburne Falls, MA
 - o 251 Main Street, Shelburne Falls,

My financial interests as a property owner and taxpayer will be directly affected by the proposed Project as a result of decreased property values and increased tax burdens to cover the costs associated with the Project, such as increased local emergency response preparedness needs, I have made significant financial and social investments in these communities and I cannot afford to have my property values drop as a result of the proposed Project, nor do I wish to see my neighbors and communities so needlessly uprooted.

- My interest as an electric ratepayer, inasmuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the project from ratepayers,
- My interest as a citizen and resident of Western Massachusetts. I am concerned that this Project will lead to a loss of air and water quality, both along the direct route of the pipeline and as a result of the ultimate processing and use of the fracked natural gas. I am concerned about this Project’s plan to expand the delivery of non-renewable fossil fuels in the form of fracked natural gas that contributes to greenhouse gas emissions and global warming. Furthermore, I am concerned about the impact this Project will have on conservation areas, wildlife habitat, local watersheds, and other natural resources.

WHEREFORE; for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Michael L. Skalski

Basis for Intervening:

I am a ratepayer in Massachusetts and I believe this project will increase my rates. I am opposed to ratepayers paying for this pipeline through a tariff.

I am an outdoor enthusiast, and I utilize our Article 97 lands along the pipeline route.

I am opposed to the taking of Article 97 lands for the building of this pipeline, and I have testified before the MA Committee before the Joint Committee on State Administration and Regulatory Oversight in opposition to House Bill 3690 put forth by Representative Garrett Bradley (D – Hingham).

I work for an environmental protection organization and have devoted by my career and untold thousands of hours of volunteer time over 30 years to environmental protection and the conservation of natural lands for future generations and for wildlife. The NED pipeline propose by Kinder Morgan will degrade and destroy many protected areas and for what? Nothing we need.

I stand up for my son and for the children of this planet who depend on use to ensure that they HAVE a planet on which to grow old and raise their children, and future generations. Global warming is real - it is a major threat to the future of life on this planet. Building the NED pipeline will prolong the inevitable need for us to move away from fossil fuels immediately.

Basis for Intervening:

I am concerned that this project will result in my financial support, as a rate-payer, for its construction.

I am concerned about the local air quality resulting from the construction of the proposed 41,000 HP Compressor Station at New Ipswich.

I am concerned about the location of the 41,000 HP Compressor Station and the resulting negative health impact and negative quality of life impact on the immediate neighborhood, including the Temple Elementary School, which is adjacent to the proposed station site.

I am concerned about the project's negative impact on the day-to-day operation of the Temple Elementary

School resulting from the necessary withdrawal of students from the school's programs in order to avoid potential harmful health effects.

I am concerned about the financial impact of the required emergency planning to support this infrastructure on our town's emergency response departments.

I am concerned that this project is un-necessary to alleviate problems associated with sporadic excess energy demands in New Hampshire.

I am concerned that this project adds to an infrastructure that supports the continued release of sequestered carbon, exacerbating the problem of climate change at a time when we should be investing in renewable energy sources.

Basis for Intervening:

I am filing as a property owner, resident, taxpayer, utility rate-payer and elected Town Meeting member in the Town of Montague, which is on the proposed path for the Northeast Energy Direct pipeline. In addition to my individual status as an individual I am chair of the town's Finance Committee. The qualification level for so large an infrastructure project should be very high, and this application fails to meet that standard;

* The expansion of a natural gas distribution network contradicts and inhibits initiatives from the State of Massachusetts, Franklin County, and the towns within this (and adjoining) counties which seek to promote energy conservation and a commitment to renewable energy sources.

* The proposed route, and any likely alternative routes, would adversely affect property values and scope-of-use by property owners, and severely impair conserved and agricultural land in this state, both on this route and in surrounding areas.

* The safety of pipeline operations has been called into question by historical leaks, fires and explosions in other states. The population density and geologic features of Massachusetts make safety concerns more urgent and risk mitigation essential.

* Asserted public need and convenience should be met first by elimination of leaks in existing lines, in the interests of both public safety and avoidance of disruptive and unnecessary excavation and ongoing operations.

* In evaluating the need for energy resources in the eastern United States FERC should more actively explore alternative energy sources (conservation and renewables, as well as efficiency of current delivery channels).

* Applicant's filing does not ensure that the alleged increase in supply will remain in the US, nor does it guarantee that the benefit of this pipeline installation will accrue to those who will bear the costs, direct and indirect, of its installation and operation. The costs include emergency response to heightened safety risks, environmental degradation, decrease in agricultural and cultural assets, etc.

I Adam Mattson, am an individual filing as an intervener against the NED/Tennessee Gas Pipeline project. Our home is in the town of Temple which we built 17 years ago moving from a city with congestion and air pollution. We wanted to bring up a family in a quiet rural neighborhood in a safe environment, which will be no more. Our home will be 1/2 mile from the suggested site of 41,000 HP Compressor Station along with the pipeline. This will be destroying our rural area, dark nights getting destroyed by light pollution, our health and those both old and young living in Temple will be destroyed causing cancer by the pollution from the compressor station – who will pay for that? Our kids who attend Temple Elementary School which will be less than 1/2 mile from the suggested location of the compressor station putting all staff and children at health risks from the compressor station, which the school is also used as the Town’s emergency shelter – how can this be even suggested when something happens how can our children be evacuated quickly when the school district is in Peterborough at least 45 minutes from the school. Where do local residents go in an evacuation as our shelter is the school? I am concerned for our home value diminishing with both the pipeline and the compressor station. I am concerned for our well water being contaminated with construction of the pipeline and compressor station. Our rural town will not be rural anymore with this industrial building placed in the middle of where both residential homes and farmland.

The prospect of being made to host a major industrial infra-structure in our pristine historical landmarked town is the stuff of a horror movie. Particularly at a time when oil and gas have become obsolete and redundant.

Tennessee Gas Pipeline Company owned by Kinder Morgan has informed 50% of the property owners in South Worcester that they may wish to appropriate our land for the construction of the Northeast Energy Direct Project. There are several reasons that this is a terrible idea. First of which is the fact that much of the out-lying land is located in a flood-plain which regularly floods both on the surface and from ground-water flowing beneath the surface particularly when the snow pack melts and during hurricanes.

Not a safe environment for a major gas pipeline given the likely scenario of breaks and explosions over time in the pipe-line. Kinder Morgan already has several major law suits filed against it for shoddy pipeline construction in Troy, NY and Western Massachusetts. FERC why would any responsible public agency support a company with such an irresponsible track record.

I am a film-maker and a choreographer who has two major projects that are scheduled to be completed in the next two years. Part of my property includes a studio which cannot be easily moved. The noise and disruption caused by the construction of a major industrial infra-structure whether near or with-in our small town would be devastating.

RE: Electronic Filing: CP16-21 Northeast Energy Direct Project
Tennessee Gas Pipeline Company, LLC
Connecticut Department of Public Health's Comments

Dear Secretary Bose:

Thank you for the opportunity to provide comments to the Federal Energy Regulatory Authority ("FERC") on the Northeast Energy Direct Project ("NED") as proposed by the Tennessee Gas Pipeline, LLC ("Tennessee"). The Connecticut Department of Public Health ("CT DPH") is concerned with the proposed construction on, and the proposed crossing of the natural gas pipeline through, a public drinking water supply watershed in the Connecticut towns of Bloomfield and West Hartford. Moreover, the CT DPH is concerned with the proposed construction on, and the proposed crossing of, 5.7 miles of Class 1 and 2 water company owned land within these watershed areas as owned and managed by the Metropolitan District Commission ("MDC") ("water company land"). The MDC public water supply reservoirs provide public drinking water to over 400,000 people in the greater Hartford area with over ten municipalities reliant upon these reservoirs for their daily public drinking water supply and therefore the protection of water company land is vital to the public health.

In Connecticut, public drinking water supply watershed areas have been protected and preserved for public health and water quality protection. Numerous unique state laws and policies exist that provide Connecticut's watershed areas with special protections. Each of these laws has preserved Connecticut's special watershed areas to assure long term public drinking water quality and to protect public health. Use of these watershed lands for commercial purposes is inconsistent with state policies and the original intent of the water company laws. To that end, in a November 2000 formal Connecticut Attorney General opinion to the CT DPH, U.S. Senator Richard Blumenthal, at that time Connecticut's Attorney General, stated:

"Watershed lands are among Connecticut's most precious natural resources - a legacy for future generations that we have a responsibility to preserve and protect. Besides their vital role in protecting the purity of the state's water supplies, the natural beauty of these lands, undisturbed and tranquil, provides a refuge and respite from development and commercialism. These pristine lands are irreplaceable; once developed they are forever lost."

A specific watershed protection Connecticut law as administered by the CT DPH is a requirement for a change of use permit pursuant to section 25-32 of the Connecticut General Statutes (Conn. Gen. Stat.). This law requires a water company who wishes to move forward with any change of use of water company land to apply to the CT DPH for a permit prior to moving forward with construction. The Connecticut water company land statute restricts the type of actions allowed on water company land. Proposals specific to public water supply purposes are generally allowed. Under Conn. Gen. Stat. section 25-32, MDC would be required to apply to the CT DPH for a change of use permit prior to any construction on their water company land.

Given the concerns expressed by the CT DPH for the protection of the public drinking water supply watershed lands, including water company land, and the water supply, the CT DPH respectfully recommends and requests that:

1. All other route alternatives be fully vetted prior to deciding on a final pipeline route, traversing a public drinking water supply watershed should be seen as a last resort for a pipeline crossing;
2. During the review of alternatives, the vetting process must be fully cognizant and respectful of Connecticut's public health laws that protect the public drinking water supply, including the requirements and restrictions under Conn. Gen. Stat. section 25-32; and
3. Any order issued by the FERC with respect to the portion of the NED in Connecticut require that Conn. Gen. Stat. section 25-32 be complied with and permits under such section be obtained.

It is without question that Connecticut's water company land laws are unique and have afforded the state

of Connecticut with the highest level of public drinking water quality in the country. These laws were in place in the 1970s and strengthened in 1980 in order to assure that the over 100,000 acres of water company land are protected and remain in a natural state. Coupled with numerous other source water protection laws, Connecticut has a unique and strong investment in the preservation of its public drinking water supply and the protection of public health. It is with that background that the CT DPH requests that FERC and Kinder Morgan, Tennessee's parent company, strongly consider other routes and alternatives versus the use of public drinking water supply lands in Connecticut.

The CT DPH offers to FERC and Tennessee its technical assistance in the review of alternatives, discussion and application of Connecticut public health law, and the protection of public health and Connecticut's public drinking water supply.

The CT DPH respectfully requests an opportunity to supplement or revise these comments.

Sincerely,

Lori J. Mathieu
Public Health Section Chief
Drinking Water Section

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Senator Barbara L'Italien, Senator Kathleen O'Connor-Ives, Representative Diana DiZoglio, Representative Linda Dean Campbell, Representative Frank A. Moran, Representative James J. Lyons, Jr., Representative James R. Miceli, and Representative Colleen M. Garry file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Senator Barbara L'Italien
Second Essex & Middlesex District
Massachusetts State House, Room 413-C
Boston, Massachusetts 02133
Barbara.LItalien@masenate.gov
(617) 722-1612

Senator Kathleen O'Connor-Ives

II. INTEREST OF PETITIONER

As elected Senators and Representatives of the communities of Andover, Amesbury, Boxford Dracut, Haverhill, Lawrence, Merrimac, Methuen, Newburyport, North Andover, Salisbury, Tewksbury, Tyngsborough, and Wilmington located in northern Essex and Middlesex counties in Massachusetts, we have actively participated in the FERC process as it pertains to the proposed Northeast Energy Direct (NED) pipeline project. Over the past year, we have communicated with hundreds of constituents from our respective districts and fully intend to closely monitor the development of the NED pipeline project so as to ensure that residents of our communities have access to relevant, up-to-date information throughout the next phases of this process.

The NED pipeline project will undoubtedly have a significant impact on our districts before, during, and after its construction, and we jointly file this motion to intervene so that we may continue to actively monitor this issue and best represent the needs and opinions of our respective constituencies, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, Senator Barbara L'Italien, Senator Kathleen O'Connor-Ives, Representative Diana DiZoglio, Representative Linda Dean Campbell, Representative Frank A. Moran, Representative James J. Lyons, Jr., Representative James R. Miceli, and Representative Colleen M. Garry respectfully request that the Commission grant our motion to intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 15th day of January, 2016.

Senator Barbara L'Italien

20160115-5491

Susan Eastwood, Hartford, CT.
Dear FERC,

Clean Water Action Connecticut is a national organization with over 10,000 members in Connecticut that works to ensure that all our citizens have access to clean water, clear air and a healthy environment. We are very concerned about the possible impacts of the proposed Kinder-Morgan pipeline which is slated to pass through critical water company lands in the greater Hartford area.

The pipeline would cross nearly six miles of land belonging to the Metropolitan District, which provides drinking water to hundreds of thousands of residents. This watershed land is protected under state law to ensure that our sources of drinking water remain unpolluted and safe to drink. Natural gas pipelines can and do leak and contaminate the air and nearby water sources. Many cases have been in the news, including the current disaster in Porter Ranch CA. Closer to home, in Medford, MA, a suburb of Boston, 249 leaks have been documented*. There may also be negative impacts on wildlife and on recreation in the watershed, which now provides some of the best hiking and bird watching in the state.

The protection of the public water supply is our highest priority. The construction of a new pipeline on lands set aside to protect drinking water sets a dangerous precedent.

We strongly agree with Jack Looney, attorney for CFE/Save the Sound, who said, "There's always alternative routes for gas pipelines but there's no alternative to clean drinking water for the population in Hartford."

We urge you to investigate alternative routes or reconsider this project altogether. There is no good reason to approve a pipeline path that would endanger the water supply for a major metropolitan area and would undermine the state's legal protections for drinking water.

Thank you for this opportunity to comment.

Anne Hulick
State Director

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct Project

MOTION TO INTERVENE OF KAELA LAW

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project proposed by Tennessee Gas Pipeline Company, LLC , a subsidiary of Kinder Morgan, Inc. Communications concerning this proceeding should be served upon me as follows:

Senator Kevin Avarad District 12 Nashua NH , 03063, 603-521-7657 avardsenate@gmail.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

-Filing to intervene as a resident of the city of Nashua and District 12 , NH directly impacted by the Northeast Energy Direct project.

20160115-5495

Submission Description: (doc-less) Motion to Intervene of Julie Dow under CP16-21-000.

Submission Date: 1/15/2016 3:33:31 PM Filed Date: 1/15/2016 3:33:31 PM

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	juliedow70@yahoo.com	

Basis for Intervening:

As an effected land owner, we are strongly against this project for multiple reasons to include:

-The safety and health of my family, especially given Kinder Morgan’s safety and legal history.

-The destruction of my property and home.

-The destruction of a small family cemetery located on my property.

-The destruction of wildlife on my property which includes deer, moose, bear, bobcats, just to name a small few.

-No proven need for this project.

My husband has served multiple deployments overseas. We purchased our dream house here in Rindge. Kinder Morgan has no grounds to take that away from us.

20160115-5496

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
North East Direct Pipeline Project

Docket No. CP16-21-000

MOTION TO INTERVENE OF MASSACHUSETTS RIVERS ALLIANCE INC.

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. 385.212 and 385.214, I, Julia Blatt, Director on behalf of the Massachusetts Rivers Alliance, Inc., file this motion to intervene in this proceeding.

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Julia Blatt, Executive Director
Massachusetts Rivers Alliance
14 Beacon Street
Suite 607
Boston, MA 02108
857-445-0208
juliablatt@massriversalliance.org

II. THE INTERVENOR

The Massachusetts Rivers Alliance Inc. is a statewide not for profit corporation which functions as a coalition of organizations and individuals with a mission to protect and restore Massachusetts' rivers and streams. Founded in 2007, the organization works to strengthen statewide water policy with a focus in four areas: water quality, stream flow, habitat and implementation of green infrastructure.

III. INTERESTS OF THE INTERVENOR

Construction, operation and maintenance of the Pipeline would adversely impact the rivers and streams and contributing watersheds, habitats, aquifers and public drinking water resources which we are charged to protect. The proposed project would be constructed through several watersheds, cross rivers and streams in more than 100 locations and traverse many miles of contributing wetlands and aquifers. As Massachusetts' leading statewide advocate for these critical resources, it is clearly in the public interest that The Massachusetts Rivers Alliance be granted intervention status in this proceeding.

IV. CONCLUSION

Wherefore, I, Julia Blatt, on behalf of the Massachusetts Rivers Alliance respectfully requests that the Commission to grant my Motion for the Massachusetts Rivers Alliance Inc. to Intervene as a party with full rights to participate in all further proceedings in this matter.

Respectfully submitted,

Julia Blatt
Executive Director

Dated January 11, 2016

20160115-5497

Submission Description: (doc-less) Motion to Intervene of Michelle Curtis-McMahon under CP16-21-000. Filing as a resident whose home directly borders the Nassau, NY compressor station site as part of the Northeast Energy Direct Pipeline.

Submission Date: 1/15/2016 3:27:47 PM Filed Date: 1/15/2016 3:27:47 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	poetemt322@peoplepc.com	

Basis for Intervening:

I am a life long resident of the Nassau, NY area and have lived in my home for the last 15 years. My home directly borders the site currently listed as the preferred location of a 41000 HP compressor station in the town of Nassau, NY. I chose to live in this home that has been in my family since 1947 because I value liv-

ing in a rural community where I can grow my own vegetables, raise chickens, enjoy outdoor activities such as hiking, horseback riding, and boating within steps of my own home. At this time there are no industrial complexes within the community I have chosen to live with my family. I am concerned that the introduction of an industrial complex such as the compressor station will have a dramatic impact in the form of noise and air pollution. It is likely that blasting of the land where the pipeline and compressor station are sited will occur, and as my homes sole source of water is a well that would be 1000 feet from the compressor site, I am concerned that my well could be damaged or its water quality compromised during this process affecting my ability to provide water for my family but also the horses and chickens that call this property home. Blow downs will subject my family and animals to abnormally high noise levels once the station is up and running, and the two horses that reside on this property are likely to spook possibly harming themselves. At the same time, the animals and my family would be subject to particulate and gases vented from the blow down which could have adverse impacts on our health. My home is just over 1000 feet from the compressor station site and is within the buffer/ incineration zone. I am concerned that my chosen way of life, including clear, dark nights, and peaceful days will be forever altered by the addition of this industrial complex within a rural, residential community in the form of noise from the running of compressor components and 24/7 lighting at the complex. With my home so close to the site there is no possible way for the station lighting to not impact the natural darkness of the area that residents currently enjoy.Noise levels are likely to be amplified by the natural hills that surround the compressor station location. Sounds echo for miles in this area. The health and safety of my family and neighbors may be directly placed at risk should this project proceed.

20160115-5503

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline (TGP), a wholly)	
owned subsidiary of Kinder Morgan)	Docket CP16-21
Northeast Energy Direct Pipeline)	

**PETITION OF THE FRANKLIN REGIONAL COUNCIL OF GOVERNMENTS (FRCOG) FOR
A FORMAL EVIDENTIARY HEARING ON NEED FOR THE NORTHEAST ENERGY DIRECT
PIPELINE**

Pursuant to Rules 157.10 and 212 of the Commission’s Rules of Practice and Procedure (18 C.F.R. §157.10 and 18 C.F.R. §212), the Franklin Regional Council of Governments (FRCOG), respectively petitions the Commission to conduct a formal evidentiary hearing¹ to resolve disputed material issues of fact concerning the present and future need for the Northeast Energy Direct Pipeline Project (NED) proposed by Tennessee Gas Pipeline (Tennessee Gas or Applicant) in its application for a certificate under Section 7 of the Natural Gas Act, 15 U.S.C. §717f(e). As described in its Motion to Intervene filed on January 4, 2016, FRCOG is the Regional Planning Commission for 26 communities in Franklin County, Massachusetts, of which eight will be directly impacted by the proposed NED Project. FRCOG has not yet taken a position on the Project, but will do so once it has completed its review of the NED application - but seeks a formal hearing as a forum to resolve the conflicting positions on project need and to enable the public to better understand the project.²

The question of need for the NED project is particularly controversial. Currently, the NED Project is substantially undersubscribed, even after Tennessee Gas’ decision to downsize the pipeline from 36 inches to 30 inches.³ In addition, Tennessee Gas’ assessment of future demand directly conflicts with a study on need for gas commissioned by the Massachusetts Attorney General⁴ and other credible industry studies.⁵

Moreover, EPA’s recent release of its final Clean Power Plan regulations injects additional uncertainty into the already complicated process of forecasting future power need and raises the stakes on the importance of accuracy. On the one hand, some take the position that underestimating future gas demand may contribute to reliability problems or increased electric costs as fossil-fuel plants are taken off-line under the Clean Power

Plan without adequate gas supply for substitute generation.⁶ On the other hand, equally troubling results flow from overbuilding, since excess pipeline capacity may lock states into reliance on gas-fired generation to the detriment of renewables⁷ and burden impacted landowners with abandoned pipeline infrastructure and higher rates associated with excess capacity. Given the sharp controversy over whether the NED Project is actually needed, and in light of the pipeline's long-term impacts on landowners and ratepayers and potential consequences for regional energy choices, if the Commission is inclined to approve the pipeline, a formal hearing is required to resolve the factual dispute over the need for the NED Project.⁸

II. THE COMMISSION MUST HOLD A HEARING TO EVALUATE THE NEED FOR THE NED PROJECT, BECAUSE NEED IS A MATERIAL ISSUE OF DISPUTED FACT.

The Natural Gas Act contemplates the possibility of formal evidentiary hearings in Section 7 certificate proceedings. The Natural Gas Act expressly provides that the Commission "shall" set certificate matters for hearing (15 U.S.C. §717f(c)(1)(B)), while Rule 157.10(a)(1) instructs persons seeking intervention to "specifically state" whether a formal hearing is sought on the application. 18 C.F.R. §157.10(a)(1). The Commission must hold a hearing where there are material issues of disputed fact inappropriate for resolution based on paper submissions⁹ -- and can expect reversal on appeal for failure to do so.¹⁰ As discussed next, the question of project need satisfies that criteria for an evidentiary hearing.

A. The Issue of Need Is Material to the Commission's Certificate Decision.

First, a hearing is required only for resolution of disputed facts material to the Commission's decision.¹¹ The issue of project need is not merely material, but absolutely essential to the Commission's decision on the certificate.

Under the Natural Gas Act, the Commission must determine that a project "is or will be required by the present or future public convenience and necessity;" otherwise, it must deny the certificate application. 15 U.S.C. §717f(e). Similarly, the Commission's Policy Statement requires applicants to demonstrate a need for the proposed project.¹² As the Commission itself explains:

[W]e do not believe the public interest is served by granting a section 7 certificate for construction where no market is in evidence. A section 7 certificate confers powers of eminent domain on the recipient, and construction of facilities necessarily will result in some environmental disturbance.¹³

Accordingly, because a finding of need is a pivotal factor to granting a certificate, the question of need for the NED Project is a material issue.

B. The Issue Of Future Need Is Disputed In This Proceeding.

Second, the requirement for a hearing is triggered only when a material involves questions of disputed facts.¹⁴ A party requesting a hearing must identify the factual issues in dispute with specificity, as the Commission may disregard a hearing request based solely on "allegations or speculations without an adequate [factual] proffer to support them."¹⁵

In this proceeding, the record is rife with factual disputes concerning both the need for, and benefits of the NED project. Set forth below is a list of disputed facts that require resolution through an evidentiary hearing:

Disputed Fact No. 1: Whether current precedent agreements show a need for the project.

The Commission's Certificate Policy Statement allows applicants to demonstrate project need based on a showing of contracts to support the project. Consistent with the Certificate Policy Statement, Tennessee Gas claims that its current long-term contracts are proof of regional need for the project.¹⁶

At best, project is only partially subscribed -- with only 61 percent of the supply path capacity and 41 percent of the market path capacity committed under precedent agreements.¹⁷ And the percentage of committed capacity may shrink further if pending challenges to the Massachusetts Department of Public Utilities decision approving precedent agreements with Boston Gas, Bay State Gas and Berkshire Gas succeed.¹⁸ The Commission should therefore set for hearing the disputed issue of whether the partially subscribed proj-

ects are adequate to show a need for the project, as Tennessee Gas claims.

Disputed Fact No. 2: Whether Tennessee Gas’ claims of future subscriptions show a need for the project.

Perhaps recognizing that a 41 percent subscription rate will not support a finding of need, Tennessee Gas also asserts that “it is confident” that it will attract additional contractual commitments for the pipeline from electric distribution companies.¹⁹ The Commission is also required to evaluate both the present and future need for a project.

Not only is there a factual dispute over whether there is a current need for the project, but also, whether there will ever be a future need. Although Tennessee Gas expresses confidence over future prospects, the reality is that in the two years that the project has been in the works, Tennessee Gas was unable to fully subscribe the project. In fact, Tennessee Gas was forced to downsize the project from 36 inches to 30 inches because of insufficient demand. Thus, the Commission should set for hearing the issue of whether there is a future need for the project, as well as the likelihood that Tennessee Gas will ever fully subscribe the project.²⁰

Disputed Fact No. 3: The project is needed to ensure electric reliability and reduce electric costs.

Tennessee Gas also attempts to justify project need by claiming that it will contribute to reliability of the electric system at a time when more stringent emissions requirements are giving rise to plant shut downs and help reduce electric costs.²¹ At least three reports directly dispute Tennessee Gas’ claims.

- The Massachusetts AG Report, Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas released in November 2015, ²² which concluded that “the region is unlikely to face electric reliability issues in the next 15 years and additional energy needs can be met more cheaply and cleanly through energy efficiency and demand response;
- A report by Skipping Stone entitled Solving New England’s Deliverability Problems Using Storage and Market Incentives (2015)²³ which concluded that a “big pipeline” solution to the region’s winter deliverability problems – would result in dramatic underutilization of the pipeline the large majority of the year, and would not be cost effective. The Skipping Stone report instead recommends use of LNG capacity and gas demand response measures to address electric reliability;
- The Department of Energy’s Report on Natural Gas Infrastructure (February 2015), which noted that “Policy changes [to relieve high electric costs] underway include modifications to ISO forward capacity market incentives to better align resource performance and flexibility and FERC’s proposed reforms to improve the coordination and scheduling of natural gas pipeline capacity with electricity markets.”²⁴

In light of the significant – and complex -- factual dispute over whether the NED Pipeline is needed to reduce electric costs and improve reliability, the Commission must hold a hearing to resolve this issue.

C. A Paper Hearing Is Not Appropriate for Resolution of the Issue Of Need

Even where material issues of fact are in dispute, the Commission is not required to hold a hearing if it can resolve the disputes based on paper submissions.²⁵ Here, a paper hearing will not suffice for several reasons.

First, an assessment of Tennessee Gas’ need for the project will inevitably involve determinations regarding the credibility of several claims – such as its “confidence” in its ability to fully subscribe the project. Credibility determinations are typically reserved for adjudicative fact-finders²⁶ and appropriately resolved through live testimony.²⁷ Second, given the level of public participation in this matter, “a trial-type hearing would help citizens to better evaluate this project.” ²⁸ In fact, in one controversial matter involving the proposed Iroquois Pipeline, the Commission convened an evidentiary hearing to address both the need for the project and expected rates based on “the unprecedented level of public comment, input and concern” and a desire “for public policy reasons, to give all parties in the proceeding another opportunity to air their concerns.” ²⁹ These same considerations apply with equal force here.

III. CONCLUSION

There are substantial factual disputes regarding the need for the NED Project – either to serve present and future customers or to reduce electric rates and enhance reliability. Meanwhile, the pipeline’s long-term impacts on the environment, landowners and ratepayers in FRCOG member communities and throughout the region and potential consequences for regional energy choices are substantial. Accordingly and for the reasons discussed in this Petition, FRCOG petitions the Commission to hold a formal hearing to resolve the factual dispute over the need for the NED Project prior to granting a certificate for the project.³⁰

Respectfully submitted,

Linda Dunlavy, Executive Director

Footnotes:

- 1 This Petition uses the terms “formal hearing” or “evidentiary hearing” interchangeably to refer to an on-the-record hearing conducted before an administrative law judge in accordance with the Subpart E of Part 385 of the Commission’s Rules of Practice and Procedure, and with an opportunity for discovery, presentation of testimony and evidence and cross-examination. 2

CERTIFICATE OF SERVICE

Wherefore on this 15th day of January 2016 I caused to be served the foregoing Petition for a Formal Evidentiary Hearing electronically on all parties on the Commission's electronic service list in this proceeding, in accordance with Commission regulations.

Linda Dunlavy, Executive Director

20160115-5507

Submission Description: (doc-less) Motion to Intervene of Yvonne Thurston under CP16-21-000.

Submission Date: 1/15/2016 3:37:07 PM Filed Date: 1/15/2016 3:37:07 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party	Signer (Representative)	Other Contact (Principal)
Individual	ymthurston@verizon.net	

Basis for Intervening:

The pipeline will cause contamination of our well water and other unknowns to such.

Also a hazard to our living environment regarding health, air quality, pollution, noise pollution and other unknown and untested hazards to our living environment.

Negative impact (serious) to wild life.

20160115-5511

Donald Clendaniel, Averill Park, NY.

On the map referenced below, I am requesting the pipeline be moved from the south side of the current National Grid right of way to the north side of the right of way, as was presented in maps from 12/2014.

By locating the pipeline on the south side of the right of way at this section it will result in the removal of hundreds of trees on private property, and on park and recreation property. It will also result in the removal of an established water route which is unlikely to be restored. By moving the pipeline to the north side of the National Grid Right of way no private land will be impacted. Land on the north side of the right of way belongs to National Grid. Moving the pipeline to the north side of the right of way also avoids the wetlands shown on the attached map.

20160115-5513

Submission Description: (doc-less) Motion to Intervene of Maxine B Bogash under CP16-21-000.

Submission Date: 1/15/2016 3:40:50 PM

Filed Date: 1/15/2016 3:40:50 PM

Basis for Intervening:

To Whom it may concern:

My name is Maxine Bogash and I reside at 19 Elm Street, (PO Box 467), Nassau, NY, 12123.

I am compelled to intervene in the proceeding to oppose the NED pipeline since I have interests which will be directly affected by the outcome of this proceeding because of the following reasons:

- 1) I am a member of an impacted community who has concerns about various serious negative consequence of this commercial project upon our local environment, economy, real estate values and upon the health and safety of our citizens.
- 2) As a senior citizen with asthma, I am especially concerned about the serious negative impacts to our air quality since the only air quality monitoring tower in my county of Rensselaer was shut down by federal and state authorities on December 31, 2012.
- 3) I am an outdoor enthusiast and also a retired nature educator. As such, I do not want our community's beautiful Town of Shodack Park which has been set aside for the people and wildlife to be impacted by any activities of this commercial project.
- 4) My small Town of Nassau has already been disastrously and perhaps, irrevocably damaged by the GE-Dewey Loeffel Landfill, a Superfund (toxic) site twice the size (46 K tons of liquid toxic waste) of Love Canal, just a very few miles from the proposed compressor station site. This existing toxic burden should be more than ANY community is forced to bear without having to risk even the potential of further environmental degradation and health risks from yet another commercial project that poses serious concerns.

20160115-5514

Caroline Zuk, Dracut, MA.

January 15, 2016

Federal Energy Regulatory Commission

Attention: Kimberly Bose, Secretary

Ref: Docket# CP16-21-000

Dear Kimberly,

The proposal by Kinder Morgan/Tennessee Gas is not making sense to so many residents.

It would seem that your agency would take into account not just the complaints and commentaries from affected residents along the proposed route, but also take heavily into account the actual need for a project of this type.

Despite studies, data submissions, and the like, it appears that no one has performed "exploratory" data in Dracut, MA or other communities to see what the long term health effects and impact on soils, air, underground aquifers will be over the next 10 years or more.

Protection of a community involves much more than seeing to it that installation procedures and design specifications are met or that EPA standards are observed during install.

Common sense indicates that with the knowledge we now have at our fingertips regarding cutting edge sustainable “green” energy solutions and the public’s awareness and cooperation to employ such solutions (businesses as well), we should be looking to reduce/eliminate the need for fossil fuel base solutions altogether.

With mounting evidence of climate change and the realization that there is NO restoration plan for environments and ecosystems which took millions of years to establish, it would seem that government agencies such as the Federal Energy Regulatory Commission should be leading the campaign for alternative energy solutions that make good sense for everyone, for now and for future generations.

This gasoline proposal by a private, for-profit company, is beyond ridiculous. It is too large, too complicated, and too expansive and places an unfair fiscal burden, unnecessary health risks, terrible safety risks, irreversible environmental risks, risks to children, risks to prime land (especially working farms involved in wide scale food production) and much more, on those affected.

Thank you for all that you are doing to carefully examine our commentaries and see the work everyone has done to bring key problems to your attention which appear to be insurmountable.

It is our hope that the Federal Energy Regulatory Commission will toss this project right off the table. It just doesn’t work.

Please feel free to contact me directly if you would like more details about our community and the issues we will face if this project moves forward.

Respectfully,

Caroline B. Zuk (Team Leader, Dracut Pipeline Awareness Group)
100 Old Parker Road
Dracut, MA 01826

United States of America

Before the Federal Energy Regulatory Commission

Northeast Direct Project of Tennessee Gas Pipeline Company LLC A division of Kinder Morgan

Docket NO CP16-21-000

Motion to Intervene: James F. Craven

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (FERC) promulgated at 18 C.F.R. 385/212 and 385.214, I James F. Craven of 22 West Meadow Road, West Townsend Massachusetts 01474, individually and as Trustee for the Lockbrook Realty Trust, hereby respectfully move to intervene in the proceeding as listed above.

I am an impacted property owner. The pipeline, specifically the Fitchburg Lateral Line will go through the middle of my 38+ acre farm. The placement of a pipeline on this or nearby farmland will have a negative

impact on me, my family, neighbors, other town residents and those that travel on our scenic roadways.

The pipeline will deforest an 85-200 section of trees (the range is given because the Kinder Morgan plan lacks specificity) between this property and the main town road. Despite if it was the lesser amount this is still a negative impact. The result will be exposure of my farm in a manner that changes the livability of my property

This farm produces hay and corn for animals and in the past has yield vegetables. The disruption of the top soil during construction will degrade the vitality of the soil and impact my ability to farm the property and produce animal feed for food for humans. The ability to farm organically will be lost forever.

The proposed pipeline appears to infringe on my well and a vernal pond. Further the path is in an area between two brooks and an aquifer recharge area. Distribution from excavation, drilling, and pipe placement is sure to disrupt the water.

The pipeline crosses an area in which my woodworking shop once stood. This building lost to a fire has yet to be rebuilt. The pipeline will prevent me from rebuilding and me or my family using the section of property for our business. Further, at our farm we formerly raised horses; members of my family have an interest in again running this business. The pipeline would prevent a barn with and indoor arena and stalls from being built. This loss of use means a loss of yearly income.

The noise and disruption from the construction will negatively impact my quiet enjoyment of my property. The parcel adjacent to me is proposed to have a valve station. The valve station will be a permanent detriment to my property due to its proximity. The ongoing health hazard related to the release of gas is also of great concern.

The siting of the pipeline in several locations is in the flood plain making it susceptible to damage with catastrophic outcomes. Townsend, like many small towns is not equipped or trained to manage a large critical incident caused by pipeline failure. The preparation for such an incident will be a constant fiscal burden to the town.

Along its path, the pipeline will destroy protected wetlands, endangered wildlife habitats, state parks, and home.

This pipeline is one of many coming through our state and the need for gas appears to be grossly overstated. Further the pipeline does not serve any public good for those along its path and therefore its only purpose appears to be the financial benefit of Kinder Morgan.

For these reasons, along with many others, I request to be granted intervener status.

All correspondence should be sent to:

James F. Craven

Basis for Intervening:

Representative Stephen Kulik

State House, Room 238

Boston, MA 02133

617-722-2380

stephen.kulik@mahouse.gov

I represent the First Franklin District in the Massachusetts House of Representatives. The district consists of 19 small rural communities in Franklin, Hampden, and Hampshire counties. Six of the towns that I represent would be directly and negatively impacted by the route of the proposed Kinder Morgan Northeast Energy Direct (NED) pipeline project: Plainfield, Ashfield, Shelburne, Conway, Deerfield, and Montague. I am directly affected by this project as it will negatively impact my constituents. Therefore, I have an interest which may be directly affected by the outcome of the proceeding.

I am opposed to the NED project for the following reasons: it will present threats to public health and safety in both the host and surrounding communities; it will present environmental threats to water quality (including public and private drinking water supplies), wetlands, forests, natural habitats, air quality, and agricultural lands; it will increase the use of a fossil fuel in Massachusetts and conflict with the energy efficiency and clean air goals set forth in the state's Global Warming Solutions Act; it will be located on publicly owned conservation lands which are protected in perpetuity against such use by Article 97 of the Amendments to the Massachusetts Constitution; it will reduce property values in communities which I represent, causing economic hardship to residents and local governments; the NED project has not demonstrated a need for this additional natural gas capacity in either my legislative district or elsewhere in Massachusetts.

I therefore respectfully request that my motion to intervene be granted in this Docket No. CP16-21. I wish to be informed of all proceedings in this case through my contact information provided above.

Basis for Intervening:

Dear FERC:

As you are addressing the public need and benefits that this pipeline is required to address, I submit that it does not benefit my town, indeed any of the towns along the route. We, in this area, are apparently way ahead of Kinder Morgan and the fracked gas industry because in so many ways, we represent the leading edge of the green economy. We are trying in our individual ways to protect our environment. We may not be experts in energy production, but we are not fools. We know what the chemicals are that go into fracking. Conway is slated for a blow-down valve just a couple of miles up the hill. Particulates and methane will surely settle down the hill to the river and our beloved community farm. I will then have to drive a half hour each way to get vegetables that have been trucked in from the south or California (or Mexico!). This makes no sense.

It particularly makes no sense when gas infrastructure and right-of-ways already exist on the southern tier of Massachusetts. Berkshire Gas, a subsidiary of the Spanish company, Iberdrola, is basically holding Berkshire Gas customers hostage with no new or expanded service. Yet, Berkshire Gas will not fix its leaks. Nor will it offer customers conservation alternatives. If there is a need for increased capacity for Massachusetts, why not go the route of upgrading and conserving the transmission that is already in place? Many people feel that the answer is that the fracked gas, in the long run, is actually meant for export. Which in no way

benefits the ratepayers in Massachusetts. It is only a corporate shell game to make money for the bottom line and gas industry shareholders. The stakeholders in this pipeline—communities like mine—will be left to pick up the pieces. In fifty years when the pipelines, long since abandoned because the fracked gas boom-let has passed, begin to corrode and leak their toxic waste, Kinder Morgan will certainly not be around to fix the problem. (Just recently, we saw out west how a long-abandoned mine lost its toxic sludge to a river. And even more recently, we see how a methane leak due to antiquated infrastructure and the lack of federal regulation in Porter Ranch, California has displaced thousands.)

And what will we in the northern tier of Massachusetts be left with if NED goes through? Despoiled agricultural and conserved land; wetlands and animal habitats disturbed and polluted; pipelines containing toxic chemicals under our rivers; noise, air and light pollution. This pipeline will never benefit us, and in the long run, it will not benefit the Commonwealth of Massachusetts. What would benefit the energy needs of Massachusetts would be Berkshire Gas fixing its current infrastructure and modernizing its transmission. Or adopting liquefied natural gas as an alternative as we move toward a green economy when all the buildings at UMass might use geothermal heating and cooling or solar power on the roofs of their buildings.

I keep wondering, ‘Where is the green economy?’ It’s the only sustainable solution. I’ve come to the conclusion that individuals are more than happy to make sacrifices toward that end. What we in northern Massachusetts are not willing to do, is to make sacrifices that take us backward. It is not a rational position to add more chemicals to an environment that is already ailing from the ignorance of that approach. Just because they can frack, does not mean it is a wise approach to energy needs (see: earthquakes in Oklahoma; polluted watersheds in Pennsylvania). And transporting this gas through pristine land just spreads the damage.

Where is the green economy? Since individuals are willing to go forward, what we need from the government and the regulators is leadership. Please be leaders in this instance. Require Berkshire Gas to end the moratorium, fix the leaks, conserve and offer alternatives. And please: reject this backward-looking pipeline that will have unalterable adverse impacts on our beautiful, precious expanse of the Commonwealth. On my home.

Sincerely,

Marlene Znoy

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC

)

Docket No. CP16-21-000

**NOTICE OF INTERVENTION OF THE
NEW HAMPSHIRE PUBLIC UTILITIES COMMISSION**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (the “Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the New Hampshire Public Utilities Commission (“NHPUC”), by and through its counsel, F. Anne Ross and Alexander F. Speidel, New Hampshire Public Utilities Commission, 21 South Fruit Street, Concord, New Hampshire, 03301, respectfully files this Notice of Intervention (“Intervention”) in the above captioned docket.

I. NOTICE OF INTERVENTION

Under New Hampshire law, the NHPUC is the state commission designated by statute with jurisdiction over the service and safety of natural gas pipelines and related facilities operated within the state. N.H.R.S.A. §§ 374:1 et seq. It is, therefore, a “state commission” under the Commission’s regulations, 18 C.F.R. § 1.101(k). Further, the NHPUC’s interests are directly affected by the outcome of this proceeding. Accordingly, the NHPUC hereby gives notice of its intervention pursuant to Rule 214(a)(2) of the Rules of Practice and Procedure of the Commission, 18 C.F.R. § 385.214(a)(2), and respectfully requests that the Commission

recognize the NHPUC as an intervenor in this proceeding, with all rights attendant thereto.

NHPUC has a direct and substantial interest in this proceeding, as approximately 70 miles of the project and related facilities are proposed in New Hampshire. NHPUC intervenes in this docket solely to obtain party status and to preserve its rights to participate in any review process, including the ability to seek judicial review or enforcement of any final decision on the underlying application. NHPUC neither supports nor opposes the project and its intervention should not be interpreted as indicating that NHPUC will ultimately take a position on the project, though NHPUC reserves its right to do so. Regardless of whether NHPUC ultimately takes a position on the project, NHPUC reserves its right to continue to bring issues within NHPUC jurisdiction to the attention of the Commission through public comments.

I. PLEADINGS AND SERVICE CONTACTS

The persons to whom correspondence, pleadings, and other papers in relation to this proceeding should be addressed and the persons whose names are to be placed on the Commission's official service list are designated as follows pursuant to Rule 203, 18 C.F.R. § 385.203:

Alexander F. Speidel, Esq.
NH Public Utilities Commission
21 South Fruit Street Suite 10
Concord, NH 03301
(603) 271-6016
alexander.speidel@puc.nh.gov

F. Anne Ross, Esq.
NH Public Utilities Commission
21 South Fruit Street Suite 10
Concord, NH 03301
(603) 271-6005
f.anne.ross@puc.nh.gov

Randall S. Knepper
NH Public Utilities Commission
21 South Fruit Street Suite 10
Concord, NH 03301
(603) 271-6046
randy.knepper@puc.nh.gov

II. CONCLUSION

For the reasons stated above, the NHPUC hereby files this notice of intervention and respectfully requests that the Commission recognize the NHPUC as a full intervenor in this proceeding, with all the rights attendant thereto.

Dated: January 15, 2016 Respectfully submitted,

F. Anne Ross, Esq.
Alexander F. Speidel, Esq.
New Hampshire Public Utilities Commission 21 South Fruit Street Suite 10
Concord, NH 03301
(603) 271-2431 (telephone)
(603) 271-3878 (fax)
f.anne.ross@puc.nh.gov alexander.speidel@puc.nh.gov

CERTIFICATE OF SERVICE

I hereby certify that I have this day served a copy of the foregoing document either by first class mail or electronic service upon each party on the official service list compiled by the Secretary in this proceeding.

Dated at Concord, New Hampshire, this 15th day of January, 2016.

Alexander F. Speidel, Esq.
New Hampshire Public Utilities Commission
21 South Fruit Street Suite 10
Concord, NH 03301

20160115-5520

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we, name here, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Edmund F. Brady, Jr.
462 Methuen Street
Dracut, MA 01826
978-455-5928
Brady27@comcast.net

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Provide paragraphs on how construction of the pipeline will adversely impact you: (You may put your reasons here in the body, or on a separate sheet called “Exhibit A”, with wording here stating: “See Exhibit A, attached and made a part hereof by reference”)

The proposed pipeline by Kinder Morgan will directly effect my family, wife and 6 year old son by being no more than a 1/2 mile from my home. I am more worried about the compressor station that is also being proposed to be built roughly I mile away from my home. The methane and other toxic elements that will be spewed into the air from the compressor station will effect the health and wellbeing of me and my family. I ask that you please consider stopping the proposed pipeline and compressor station from entering Dracut, MA as it is an area that is not only home to over 200 children under the age of 10, but also located within 1 mile of elementary schools and less than a mile from a rock quarry company that frequently does active blasting

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 15th day of January , 2016

Edmund F. Brady, Jr.
462 Methuen Street

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C

Docket No. CP16-21-000

**MOTION TO INTERVENE AND COMMENTS
BY STONE MOUNTAIN, LLC**

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure for the Federal Energy Regulatory Commission (“FERC” or “Commission”), 18 C.F.R. §§ 385.212 and 214 (2015), and the Commission’s Notice of Application dated December 7, 2015, Stone Mountain, LLC (“Stone Mountain”), hereby moves to intervene and submit comments in support of the proposed pipeline route in the above-captioned proceeding.

Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) is requesting Commission authorization to construct and operate an interstate natural gas pipeline as part of the Northeast Energy Direct Project. The currently proposed route for this pipeline will pass through land owned by Stone Mountain (the “Stone Mountain Property”). This property contains many unique and significant environmental, historical, and recreational resources. Before filing its application, Tennessee proposed a pipeline route through the center of the Stone Mountain Property that would have caused significant damage to these resources; however, after a collaborative review by both Tennessee and Stone Mountain, Tennessee proposed a route in its November 20th certificate application that while still crossing the Stone Mountain Property, would minimize the impacts on these resources. Stone Mountain therefore files this motion to intervene and comments in support of the currently planned route for the NED Pipeline.

* Designated to receive service pursuant to Rule 2010 of the Commission's Rules of Practice and Procedure, 18 C.F.R. § 385.2010 (2015).

II. BACKGROUND: STONE MOUNTAIN & THE PROPOSED PIPELINE ROUTE

A. The Stone Mountain Property.

1. Environmental Resources.

The Stone Mountain Property consists of more than 2,000 acres of pristine environmental habitat in the Cheshire County towns of Winchester and Richmond, New Hampshire. Stone Mountain acquired the Stone Mountain Property from the family of A.R. Sandri in 2009. Mr. Sandri began acquiring the parcels that comprise the present day Stone Mountain Property in the 1930s. Large portions of the timber forests on the Stone Mountain Property have never been harvested, meaning that there are many very large, mature trees, some of which are over 100 years old.

The age of the forest and the fact that the property is a relatively large contiguous parcel combine to create favorable habitats for a variety of species. An analysis of rare species was conducted by Stone Mountain's forestry consultant, Landvest, and included in a 2012 Forest Management Plan for the Stone Mountain Property (the "Forest Management Plan"). Relevant portions of the Forest Management Plan are attached hereto as Exhibit A. Additionally, the New Hampshire Natural Heritage Bureau has documented several varieties of rare or significant plant and animal species that reside on or near the Stone Mountain Property, including the Carolina Cranesbill, the Jefferson Salamander, and the Northern Black Racer. See Exhibit A at p. 6. Finally, Stone Mountain retained Integral Consulting to conduct an environmental analysis of the Stone Mountain Property and the impact of potential pipeline routes through the property. Integral determined that the Stone Mountain Property provides an exceptional habitat for the Northern Long-Eared Bat, various migratory birds and the Bald Eagle, in part due to the many tall, mature trees on Stone Mountain Property. See Environmental Report of Integral Consulting (Excerpts), attached here as Exhibit B. Similarly, the Stone Mountain Property has large tracts of Hemlock-Hardwood-Pine Forests, some of which contain large, mature trees. The New Hampshire Natural Heritage Bureau has described such forests as being of "very high importance" to New Hampshire. *Id.* at p. 3.

The Stone Mountain Property also has a mix of water resources, including perennial brooks, wetland complexes and seeps, springs and vernal pools. Virtually any pipeline route through Stone Mountain Property will impact one or more of these water resources in some way.

Since being acquired by Stone Mountain in 2009, the property has been managed by Landvest pursuant to the Forest Management Plan. The Forest Management Plan requires that any timber harvesting be conducted in a sustainable manner, that the property is managed in a way that maintains or improves wildlife habitats, and that the property's unique environmental and historical resources be preserved for future enjoyment. See Forest Management Plan (Exhibit A) at p. 2. Accordingly, Stone Mountain has conducted only minimal harvesting of timber and always within the framework of the goals of the Forest Management Plan. The longterm viability of the forest resource has always been paramount.

2. Historical Resources.

The Stone Mountain Property also includes a variety of significant historical and cultural resources. There is a homestead on the property that dates to the 1840s and has been restored to maintain its original look and historical character. In addition, there are many structures dating from the late 1700s when the property was a working farm. These include stone cellars, building foundations, and a large array of stone walls throughout the property. *Id.* at p. 3. Stone Mountain actively preserves and maintains these resources through its Forest Management Plan and as stewards for the property's long and important history.

3. Recreational and Community Resources.

The Stone Mountain Property includes an extensive trail network that provides access to several scenic vistas and countless other points of interests. See Stone Mountain Trail Map, attached as Exhibit C. Although the property is technically private property, Stone Mountain has allowed the public to utilize these trails for multiple recreational purposes, including hiking, biking, snowshoeing, skiing, hunting, and snowmobiling.¹ For example, the local snowmobile club (which has over 300 members) has been given permission to use one of the Stone Mountain trails for snowmobiling.

The trail network located between the peaks of Scott Mountain and Stone Mountain is particularly popular as it affords several scenic views of the old-growth forests and other sites of natural beauty within the property.

B. The Proposed Pipeline Route Through the Stone Mountain Property.

During the pre-filing process, Tennessee originally proposed a pipeline route that ran through the middle of the Stone Mountain Property. The original route ran near the historic homestead, right through the vast trail network, and through many acres of old-growth, mature forests that have remained virtually untouched. The original route would have cleared a new swath of land through some of the most impressive portions of the Stone Mountain Property, and would have had negative impacts on the enjoyment of the Stone Mountain trail network especially.

In response to the original route proposal, Stone Mountain contacted Tennessee and began a dialogue regarding route alternatives. This dialogue included conversations between attorneys on both sides, as well as on-the-ground meetings and site visits. Eventually, Tennessee proposed moving the pipeline route to the eastern portion of the Stone Mountain Property, thereby avoiding significant portions of the mature, old-growth forests, trail system, the historic buildings, and other pristine natural areas. This is precisely the type of collaborative effort envisioned by the Commission when it established its pre-filing procedure. It is this eastern route across the Stone Mountain Property that is now included in Tennessee's application as the current pipeline route.

III. MOTION TO INTERVENE

Stone Mountain moves to intervene in the above-captioned proceeding pursuant to Rule 214 of the Commission's Rules of Practice and Procedure. Because the current route of the pipeline will go through the Stone Mountain Property, Stone Mountain has a direct interest in this proceeding that is not adequately represented by any other party to this proceeding.

IV. COMMENTS IN SUPPORT OF THE PROPOSED ROUTE

A. The Stone Mountain Property Contains Unique Environmental, Historical and Recreational Resources.

As described in the Background section above, the Stone Mountain Property is a unique and significant resource for southern New Hampshire. It contains large tracts of old-growth, mature forests that provide vital habitat for a number of rare and significant plant and animal species. Multiple New Hampshire agencies have recognized these species and their habitat as vitally important to New Hampshire. The property also has an historic homestead and many other historical structures dating from the 1700s, including cellars, barn foundations, and a series of stone walls. Finally, the property has an extensive trail system and has been used by the general public for a wide range of recreational activities such as hiking, snowshoeing, hunting, and horse-back riding.

B. Other Intervenors Have Mischaracterized the Stone Mountain Property.

In a December 6, 2015 letter to FERC, the Town of Richmond Board of Selectmen criticized Tennessee's decision to change the pipeline route through southern New Hampshire. See Comments of Town of Richmond Board of Selectmen, FERC Dkt. No. CP16-21 (filed Dec. 17, 2015). In its letter, the Board of Selectmen describes the original route as going through "vacant logging land," whereas the new route goes through a "residential and historic area." Both of these descriptions are inaccurate.

The Stone Mountain Property is much more than vacant logging land. Stone Mountain has worked with Integral Consulting (a highly reputable environmental consulting firm) and with Tennessee to understand the environmental impacts of the pipeline and to identify a less impactful option.

In addition, the new route still lies almost entirely on Stone Mountain Property until it meets an existing utility right-of-way farther north. Thus, this is not a situation where a private landowner negotiated to move a pipeline off its land and onto the land of third parties. On the contrary, Stone Mountain worked with Tennessee to find a route on the Stone Mountain Property that allowed Tennessee to accomplish its goals while also minimizing the impact to the Stone Mountain Property. This is exactly the type of collaboration that FERC should encourage between landowners and pipelines and is consistent with Stone Mountain's Forest Management Plan and the long-term goals of preserving the Stone Mountain Property.

C. Stone Mountain Supports Tennessee's Proposed Pipeline Route Because It Minimizes the Negative Impacts of the Pipeline on the Unique Resources Found Within the Stone Mountain Property.

If it were truly up to Stone Mountain, there would be no pipeline through southern New Hampshire. However, Stone Mountain recognizes that whether to allow a pipeline is ultimately up to FERC.

If the application is granted, however, Stone Mountain supports this aspect of the proposed route because it minimizes the adverse consequences on the environmental, historical, and recreational resources found within the Stone Mountain Property. One major advantage of the proposed route is that it follows an existing timber right-of-way through a portion of the Stone Mountain Property. By co-locating on an existing right-of-way, the proposed route will avoid unnecessary habitat fragmentation and cause less overall environmental disturbance than would be the case if Tennessee had to remove forests for an entirely new route.

The route reduces the overall impact on the Stone Mountain Property while significantly reducing or eliminating the impact on Stone Mountain's neighbors. The benefits of this route include:

1. Avoiding large areas of mature, old-growth forests, thereby preserving these pristine habitats for the plant and animal species that depend on them;
2. Avoiding habitat fragmentation and unnecessary environmental disturbance by co-locating on an existing right of way where possible;
3. Avoiding most of the network of trails, in particular, the trail system between Scott Mountain and Stone Mountain; and

4. Avoiding the historic homestead and many of the historical structures found on the Stone Mountain Property.

Because of these considerations, Stone Mountain supports the pipeline route currently proposed by Tennessee.

V. CONCLUSION

Wherefore, Stone Mountain, LLC respectfully requests that if FERC approves Tennessee's application in the above-captioned proceeding, FERC's authorization be conditioned on Tennessee utilizing the pipeline route proposed in its application, specifically for the portion of the pipeline that will pass through the Stone Mountain Property.

Footnote:

- 1 Stone Mountain recently posted no trespassing signs on the Stone Mountain Property; however, this was only in response to the planned pipeline route. Stone Mountain continues to grant access for recreational purposes to members of the public by request.

Basis for Intervening:

I am AGAINST this pipeline! Natural gas contributes significantly to CO2 emissions and hastens climate change on two fronts. It is a fossil fuel. It produces methane which is a powerful greenhouse gas. The practice of fracking to obtain the gas is a huge health risk for our people. The practice involves large volumes of water being mixed with a variety of chemicals some of which are known to be toxic and carcinogenic. These chemicals get into the gas and everyone is exposed especially fracking personnel and those living near the pipelines. The construction of this pipeline is a massive disruption of forest, farm and wet lands as well as residential communities. There is the significant risk of pipe rupture along the route with explosion, fire and possible fatalities. For these reasons , I am strongly against the build of this pipeline. Thank you. Basis for Intervening:

Dear FERC,

As a concerned physician, homeowner and resident of New Ipswich, NH (population approximately 5000), I would like to file a motion against the NED project. If approved, a NED project would result in the construction of a compressor station located only several miles from my home with numerous deleterious effects on the lives of these small communities.

As a advocate for my health and those of my community, I am concerned about the negative health risks a natural gas pipeline would create. Specifically, I am concerned about the effects on toxicity and quality my deep well water as well as increased risks for pulmonary and cardiovascular outcomes.

The construction of a pipeline in this small community would cause permanent destruction to the lives of many residents and valuable local wildlife. As a homeowner, I am also very concerned about the negative effects of the NED natural gas pipeline on my home's property value.

Please accept my motion to intervene against docket number cp16-21.

Sincerely,

Kevyn To

20160115-5525

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, RICHARD S. HOUGH of Mason, Hillsborough County, New Hampshire, do file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Richard S. Hough
700 Starch Mill Rd
Mason, NH 03048
603-878-4184
rick.hough.pipeline@gmail.com

II. INTEREST OF PETITIONER

I am opposed to the construction of the Northeast Energy Direct Project as this pipeline will directly and adversely affect me, my family, my neighbors, and my town.

I am a resident of Mason, NH. Portions of my property are less than 1,000 feet from the proposed route of the 30" NED mainline. My property is also in close proximity to the proposed Fitchburg Lateral.

I am concerned that the construction and operation of the NED project will expose myself, my family and many other members of the public to unpredictable risks associated with (but not limited to) inconvenience, noise, destruction of property, loss of enjoyment, health risks associated with planned and unplanned release of toxic chemicals, methane and other pollutants. We would also be exposed to risk of physical injury and/or significant inconvenience in the event of a construction or operational accident near our home. I am concerned that our town's roads could easily be damaged as many are not designed to handle the heavy truck traffic associated with construction of this project. In addition, I am concerned that this project could decrease the value of my property due to my proximity to the pipeline.

I am concerned that the blasting required to lay this pipe in areas near my home where there is significant granite ledge could threaten the aquifers that feed my private well as well as those of my neighbors. I am concerned that the construction of this pipeline could threaten perhaps thousands of private wells along the proposed NED route, as private wells are ubiquitous throughout southern New Hampshire, and many other regions along the proposed pipeline route.

I am concerned that Kinder Morgan/Tennessee Gas Pipeline is suffering from ongoing significant financial pressures which bring into question their ability to safely construct this project, maintain sufficient emergency response preparedness, and to direct sufficient funds to the ongoing maintenance of this pipeline for at least the next 20 years. I am also very concerned that any construction or operational accident could easily overwhelm our town's volunteer first responders thus putting myself and the citizens of our town at risk of injury or death.

I believe that it is likely that a significant portion, if not the majority of the natural gas to be transported through this pipeline will be exported out of the country. That portion of gas that is exported would represent NO PUBLIC BENEFIT to the citizens of New England, yet we will be forced to endure the adverse effects of this project. These exports could even drive gas prices up due to increased competition for the supply of gas. It is interesting that when Kinder Morgan/TGP has been questioned about the export issue, they profess that they have no control over how the gas is used as they are just a transportation company. Yet, in the next breath, they are very happy to assure everyone that this pipeline will drive down gas prices

(and thus electricity prices) in New England – an interesting conclusion for an organization that is “just a transportation company” with no control over how the gas would be used.

I believe that the use of eminent domain for the acquisition of permanent and temporary easements necessary for the construction and operation of the NED Project represents an unjust, unethical, and perhaps even unconstitutional taking of private and public lands in a manner that primarily benefits a private corporation.

III. CONCLUSION

For all the above reasons as well as others I do not have time to enumerate here, I am interested in and would be affected by the Applicant’s filing. My interests cannot be adequately represented and protected by another party. I therefore respectfully request that the Commission grant my Motion to Intervene in this proceeding.

Basis for Intervening:

I live within half-a-mile of the proposed pipeline route. We are surrounded by granite shelf and any excavation requires blasting and drilling. The amount of blasting and its proximity to my home will cause damage to the foundation and fractures in the vertical walls. Also, the path crosses areas which house the aquifers for our drilled wells. Blasting in these areas will damage and possible contaminate our only water sources.

As a consumer of electric power, my provider is not buying power from Tennessee Gas, so there would be no advantage to residents of Londonderry, or this area of NH to have the NED pipeline constructed.

For the above reasons, I oppose the construction of the NED pipeline.

Basis for Intervening:

I live within 8 miles of the proposed New Ipswich compressor station.

For these reasons I am strongly opposed to the NED pipeline proposal:

I am concerned that the pipeline would be a daily hazard to those who live and work around it.

I am concerned the pipeline would cause excessive toxic emissions from compressor stations to poison the water and air, putting innocent people's health and lives at risk.

I am concerned the pipeline would cause long-term damage to the beauty and health of nature preserves and wildlife in our area.

I am concerned the pipeline would lower property values because no one wants to live in a potential danger zone.

I am concerned the pipeline would unjustly impose Eminent Domain on average citizens who have worked hard for their land.

I am concerned the pipeline would cause a proposed tariff to be forced on energy ratepayers.

I am concerned that the rural towns along the pipeline route are not equipped for the burden of the potential dangers associated with this volatile pipeline.

Bradley H. Jones, Jr.
State Representative
Minority Leader

January 15, 2016

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street, NE, Room 1A
Washington, DC 20426

Re: Tennessee Gas Pipeline Company, L.L.C., Docket No. PF14-22-000
Northeast Energy Direct Project

Dear Secretary Bose:

I am writing to reiterate my strong concerns about – and continued opposition to – the proposed Tennessee Gas Pipeline Northeast Energy Direct (NED) Project, which includes the so-called “Lynnfield Lateral” (Project Docket Number PF14-22-000).

I represent the Twentieth Middlesex District, which is comprised of communities whose residents will be directly impacted by the proposed pipeline, as well as neighboring communities. As I have indicated in my prior correspondence on this subject, my constituents in Lynnfield, North Reading and Reading are particularly concerned about the potentially harmful environmental impact this project will have on local waterways and wetlands.

Another concern which has not been adequately addressed by Kinder Morgan is the extent of the disruption the proposed pipeline will create not only on privately-owned land, but also on land that has been designated as protected open space under Article 97 of the state Constitution. In addition, significant concerns remain about the potential public health and safety risks associated with the proposed pipeline.

Since 2014, Massachusetts has required utility companies to be more transparent in reporting natural gas leaks in their pipelines and working to repair those leaks. According to a recent report by the Home Energy Efficiency Team, nearly 20,000 “potentially dangerous and environmentally damaging leaks” have been identified within the existing distribution system. The proposed pipeline would only add to this widespread problem at a time when we should instead be focused on correcting the existing deficiencies within the state's pipeline infrastructure.

The planned pipeline construction also runs contrary to the state's continuing efforts to shed its reliance on

fossil fuels and to pursue a wider range of clean and renewable energy sources, including hydro, solar and wind power. Legislation is currently pending before the Massachusetts Legislature that would raise the state's net metering cap to encourage more solar energy projects around the state. Massachusetts currently generates about 950 megawatts of solar power, but has set a goal of generating 1600 megawatts by the year 2020.

Increasing the net metering cap will provide an incentive to reach this goal by allowing more solar projects to move forward. However, building the proposed gas pipeline would seriously undermine these efforts, as well as efforts to promote other clean energy sources.

Given the many unanswered questions and widespread concerns surrounding this proposal, I would respectfully urge the FERC to reject the proposed Tennessee Gas Pipeline Northeast Energy Direct (NED) Project.

Thank you in advance for your consideration of my concerns. Please feel free to contact me if I can be of any further assistance in this matter by calling me at 617-722-2100 or e-mailing me at Bradley.Jones@MAHouse.gov.

Sincerely,
Bradley H. Jones, Jr.
Minority Leader

Basis for Intervening:

I am a landowner in Deerfield, Massachusetts. I am respectfully requesting intervenor status. Our family and home are directly effected by this proposed pipeline since we are within 500 feet of the proposed pipeline in the defined as the incineration zone. We are highly concerned about the safety, economic impact and environmental impact to our family and neighbors. The issue of need for this pipeline has clearly not been made, especially with the reports released from the Massachusetts Attorney General.

The proposed pipeline proposal is inadequate to address the safety of homeowners living near the pipeline, especially those of us in the defined incineration zone. We live in a rural area with limited first responder support and we have not seen an effective disaster recovery plan in the event of a rupture in our area. We

have seen first hand the tragedy of a natural gas fire in San Bruno, California where many deaths and injuries occurred along with long lasting negative economic impact to the region. We cannot let this occur. One death or injury is not worth the cost of this pipeline especially when other energy alternatives are available and the case of need in the area is clearly not made.

Please grant me permission to intervene in the proceedings.

Best regards,

Jaime Reloj

20160115-5532

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Northeast Direct Project of
Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

**MOTION TO INTERVENE AND COMMENTS OF A PRIVATE CITIZEN
FROM WINDSOR MA.**

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”) promulgated at 18 C.F.R. § 382.212 and § 385.214, Sharon A. Sutter respectfully moves to intervene and provide comments in the above- captioned proceeding.

Basis and Grounds for Intervention

I live within 1 mile of the proposed compressor station. I rely on a clean environment to: farm organically to homestead, and raise organic produce as a livelihood.

Therefore, Sharon A. Sutter requests intervenor status because I would be directly impacted by this project. My gardens would no longer be considered organic with the level of emission pollutants in the air and water, and the products would no longer be considered safe. My life style and livelihood would be inalterably destroyed. My property values would be seriously diminished. My well water put in risk of contamination

Pursuant to Commission Rules 385.214(b) and 157.10, Sharon A. Sutter moves to intervene and file comments in the above proceeding. This intervention is timely filed.

Contact Information

Please enter Sharon A. Sutter on the official service list for Docket No. CP16-21-000. All pleadings, filings and correspondence in this proceeding should be served on the following;

Sharon A. Sutter, 975 East Windsor Road , Windsor MA 01270 413-684-4744 sasutter@verizon.net

Motion to Intervene

Sharon A. Sutter seeks to intervene because she will be directly impacted by the proposed 41,000 horsepower compressor station (possibly doubling in size at the option of the developer). I would be impacted by: compressor station emissions, ground water (well water) contamination during construction and from subsequent pollution, structural damage from blasting during construction, loss of livelihood and devaluation in property values; thus diminishing the town’s tax base.

Sharon A. Sutter opposes this proposed project for the foregoing reasons. Sharon A. Sutter requests that the Commission GRANT this motion to intervene and comments.

Respectfully submitted,

Sharon A. Sutter 975 East Windsor Road, Windsor MA 01270

Basis for Intervening:

Natural gas is mostly methane, a powerful greenhouse gas. Natural gas has climate change impacts both as methane, when it leaks from pipelines and drilling sites, and when it is burned and turns to CO2. Pound for pound, methane has more than 20 times the greenhouse gas impact of CO2 over a 100-year period. Let's step into the 21st century with clean energy (wind and solar). Now, not later.

Filing Party/Contacts:

Filing Party Signer (Representative) Other Contact (Principal)

Individual zapdazzle@yahoo.com

Basis for Intervening:

I am a Massachusetts homeowner, ratepayer, and citizen of the Commonwealth. I am a practitioner of Vipassana meditation and a supporter of the Dhamma Dhara Vipassana Meditation Center in Shelburne Falls. I care about nature as a spiritual and health resource for humans, and as an entity deserving of care and preservation in its own right. And perhaps most importantly, I am a mother of a six year old child, and as such I am passionately concerned about the effects of greenhouse gasses on the habitability of our planet. In all of these roles, I have a vested interest in the outcome of the decision regarding the proposed Tennessee Gas Pipeline. Therefore I am applying for intervenor status.

As a homeowner in Massachusetts and citizen of the Commonwealth, I am gravely concerned about the Public Health and Safety issues involved in the issue of the proposed pipeline. The pipeline brings the hazards of possible leaks and/or explosions and high levels of noise.

As a ratepayer of National Grid, I am fundamentally opposed to paying, through my electricity bill, for the transport of a huge amount of fracked gas that would ultimately be excessive for the needs of Massachusetts and would be shipped overseas for profit at our expense. Furthermore, opening up the overseas market would increase the cost of fracked gas, driving utility expenses up.

The Dhamma Dhara Vipassana Meditation Center is situated near the proposed pipeline route. This is a thriving spiritual center where over the years thousands have come to learn a meditation technique that helps to develop one's ability to be calm, aware, and equanimous. This center is important to me, I am a donor to this center, and I am concerned about the proposed pipeline's impact on this important place.

Finally, as a mother of a six year old child, I care passionately about the not-too-distant future of this planet. Methane is a very powerful greenhouse gas, and would greatly exacerbate the serious and immediately urgent problem of climate change. We cannot afford to invest in more fossil fuel technology because of the peril that continuing to do so creates for our children. I speak for the future of those who will be facing this tremendous challenge, because they are too young to speak for themselves. This is what parents do.

For these reasons I am applying for intervenor status. Thank you,
Laura Friedland-Kays

January 15, 2016

Ms. Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street NE, Room 1A
Washington, D.C. 20426

Subject: Docket Number CP16-21 Northeast Energy Direct Pipeline Project

Dear Secretary Bose:

In my capacity as an **intervenor** in opposition to the Northeast Energy Direct Pipeline Project, I may claim economic hardship, where utilities such as my own Columbia Gas of Massachusetts will seek to charge rate-payers for the cost of pipeline capacity. I may complain of the likely increased additional cost of gas, where the pipeline's gas will be exported to foreign markets. I can inveigh that I am impacted by socio-economic consequences to my neighbors who are situated in the path of the proposed project, as, for example, where I buy the food that organic growers produce. I can say I am a donor to the Franklin Land Trust, whose work of protective stewardship of land will be harmed if the pipeline is to go through. I may say I would like to visit land that is now preserved, and rivers and streams that would be damaged, and if I am not to have experience of these treasures firsthand, it remains immensely important to me that they are there, and safe.

All of these considerations I can express, and I believe they all have merit such that you should listen to them. However, I have a concern that weighs still more strongly in my evaluation of the proposed pipeline; and this is that the pipeline will increase the use of hydraulic fracturing technologies that are currently used without accountability, with effects on natural resources that have yet to be widely recognized, much less assessed. Under current law, I understand that developers have no responsibility for the harms of hydraulic fracturing. I apprehend that, somewhere down the line, someone must address the ongoing harms; and if businesses will not be accountable, it will fall to the taxpayer to pay the bill for whatever redress is possible. I would stress that no possible remedies will ever make the users of the land and water whole again for their losses.

There is a further consequential harm from the increased use of hydraulic fracturing, in that it predisposes many people to continue the use of a carbon-intensive fuel that must be phased out as soon as possible, for the sake of all life on earth.

Yours Sincerely,
Mary H. Hall

Basis for Intervening:

I am registering as a Trustee of the Charles W Fifield III Revocable Trust (Federal ID# 20-6216569) which contains the property referred to below, in order to intervene regarding docket # (CP16-21), the North East Direct Pipeline proposal.

My 500+ acre property at 388 Black Brook Rd. in Mason, New Hampshire, is, in its entirety, under a Conservation Easement granted by The State of NH in 2008. The laws of The State of New Hampshire, governing Conservation Easements, do not allow for a pipeline of any kind to pass through Conservation Easement protected property.

This property has been in my family since 1959 and we have acted as responsible stewards to preserve and protect it since then. The Conservation Easement preserves this land for the enjoyment of all people. The proposed North East Direct Pipeline would run absolutely counter to the efforts made so far to conserve this land. The East/West main line as well as the North/South spur line are proposed to invade and scar this property. I do not approve of this pipeline in any way and deny Kinder Morgan/Tennessee Gas Pipeline access to this property. Taking of the land will have to be by Eminent Domain in the case of the pipeline project being approved.

Basis for Intervening:

I own a 50 acre farm off of River Road in Deerfield, less than 1/8 of a mile from a proposed pipeline location. In this letter, I focus my concerns regarding the proposed location of pipeline on 2 locations: 1) at the southern end of the East Deerfield Railyard, located at the junction of Deerfield and Connecticut Rivers, and 2) adjacent to an active rock quarry.

Railyard concerns - I am Deerfield's Hazardous Waste Coordinator, and have worked with the neighborhood and Select Board for decades to get more than 12 hazardous waste sites cleaned up or stabilized under the Massachusetts Contingency Plan (MCP) at the railyard. Some key features of concern are the new & old fueling stations, locomotive repair shop, fuel tank farm and contaminated aquifer (which has the potential to contaminate the land and rivers if there is an incident). The location at the railyard where the pipeline location is proposed is under the area's only potentially productive aquifer, which is currently contaminated with perchloroethylene. This aquifer is undergoing a clean-up under the MCP to bring it up to drinking water standards. Currently residents in this area have to either obtain water from the town next door, or bring in water as local wells are contaminated with arsenic from the red rock. We need this aquifer to stay intact to keep the arsenic localized, and to someday utilize the water supply once it is cleaned up.

We are greatly concerned that activities related to either installation, and/or the accidents related to the operation of the pipeline could pose a major threat to this site, and adjacent environmentally sensitive areas that are subject to state and federal protections. Not only could it undo decades of mitigation work and cause extensive migration of contaminants that are either localized or stabilized through structural, chemical or administrative controls, it could threaten the the short nosed sturgeon, the only federally endangered species in the Connecticut River, whose spawning area is located adjacent to the railyard (in the immediate vicinity of the proposed pipeline path). Other rare species identified by the MA Natural Heritage & Endangered Species

program located in this immediate area are the bald eagle, dwarf wedge mussel, Atlantic salmon.

An incident could also disturb land that that Pan Am is proposing to install an activity use limitation (deed restriction) to prevent disturbing contamination remaining in the ground throughout the 129 acre railyard. An explosion in or near the railyard could disturb these areas, causing contaminated soil and groundwater to be distributed into Connecticut and Deerfield Rivers, impacting water quality on 2 rivers, and adjacent state and federally protected lands, railyard, and adjacent prime agricultural farmlands and residential area.

In addition, an accident in the yard could damage rail cars with hazardous cargo, potentially spilling it into 2 rivers and distributing it throughout area, causing explosions, chemical fires, contamination, etc. There is also a huge fuel storage tank farm with an above ground storage tank of 100,000 gallons located on site for fueling locomotives, in addition to tanks for heating fuel.

Aside from identified contaminants of chlorinated solvents, petroleum products, PCBs, antifreeze, asbestos, lead, mercury, etc. there are potentially a number of other unidentified contaminants in the soil at the railyard. The MCP is release driven, thus the rail company is not required to test for everything, only contaminants related to a spill. The following information is excerpted from <http://www.epa.gov/reg3hwmd/bfs/regional/industry/railyard.htm> that outlines typical contaminants found at railyards: Waste streams and potentially affected environmental media (of railyards):

Typical contamination includes degreasing solvents, PCBs from engines and electrical equipment, arsenic from railroad ties, heavy metals, mercury from burning coal ash, leakage from hazardous cargo, etc. Since most newer train engines use diesel fuel, diesel range organics (DRO) may be a common contaminant of the surface and subsurface soils and shallow groundwater in engine fueling areas.

Quarry Concerns - The pipeline is also proposed to be located adjacent to an active quarrying operation within a 1/2 mile of our house. There is concern that the blasting that at times has rocked houses more than 1/4 to 1/2 a mile away, will damage joints in the pipeline located not only in the quarry, but in the surrounding area. If this scenario doesn't damage the pipeline during a blast, it would increase the potential for a catastrophic accident over time as the pipeline is subjected to impacts from the blasting over time.

Summary of my concerns as Deerfield's Hazardous Waste Coordinator and resident of over 20 years - The fact that Kinder Morgan is even considering locating the pipeline near such these sites illustrates extremely poor judgment on their part. In addition to environmental issues, disrupting operations at a major rail hub that serves the north, south, east and west rail lines has implications for impacting transportation throughout the northeast.

Although, the location of the pipeline near these sites could prevention measures (e.g. soil and water management plans, OSHA construction and worker management plans due to AUL, DOT and FRA construction requirements, SPCC plan, etc.) for catastrophic events, etc., nothing could truly protect this area from a pipeline explosion, nor mitigate its impacts. It would devastate an aquifer, the 2 rivers, homes, prime farmland, endangered species, a major rail hub, etc. I request that the pipeline not be built.

20160115-5539

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
A division of Kinder Morgan Energy Partners
Northeast Energy Direct Pipeline

Docket No. CP 16-21

**MOTION TO INTERVENE OF
NORTHFIELD AGAINST THE PIPELINE**

Northfield Against the Pipeline is a coalition of landowners whose interests are affected collectively by the proposed project which includes 242 acres of land being reserved for a compressor station, 8.5 miles of proposed pipeline, and roadway widening. While individual landowners will be filing to represent their per-

sonal interests, the fragmentation and degradation of the community is an effect suffered by the collective neighborhood.

Pursuant to the Federal Energy Regulatory Commission Rules of Practice and Procedure, 18 CFR § 385.214(b), Northfield Against the Pipeline moves to intervene in the above captioned proceeding in the public's interest. This intervention is timely filed.

I. CONTACT INFORMATION

Please enter Northfield Against the Pipeline on the official service list for Docket No. CP 16-21. All pleadings, filings and correspondence in this proceeding should be served on the following:

Northfield Against the Pipeline

Julia Blyth [liaison]

276 Old Wendell Rd.

Northfield, MA 01360

email address: nfldnopipe@gmail.com

II. INTEREST OF PETITIONER

Kinder Morgan/TGP filed their formal application for Northeast Energy Direct (NED) on November 20, 2015 in Docket No CP16-21 for a Certificate of Public Convenience and Necessity, pursuant to the Natural Gas Act, 15 U.S.C. § 717f, and 18 C.F.R. §§ 157.1 et seq. In its Application, Tennessee Gas Pipeline Co. (TGP) requests authorization to construct, modify and expand natural gas infrastructure through western Massachusetts.

The Town of Northfield is a small, rural community in Franklin County, Massachusetts consisting of 3,023 residents. If this project is approved the Town will reluctantly play host to approximately 8.5 miles of pipeline and a 41,000 hp compressor station, a pigging launcher and receiver, and a mainline blowdown valve on 242 acres of mostly previously undeveloped land. The proposed project will directly impact 31 property owners and more than 100 property owners within 0.5 miles of the pipeline.

The proposed pipeline would be located in areas of the Town zoned for residential, agriculture, and forestry and is largely comprised of farmland and forest with sensitive habitat areas and other natural resources.

Collectively, in the abrupt shift from a small rural town to an industrial one, Northfield residents will be affected by the loss and degradation of environmental habitat, the destruction of cultural resources, the lowering of public and private property values, and the loss of the peaceful enjoyment of our property and public lands. Our community losses, while related to our individual losses, go beyond our standing as individuals. The infrastructure of mutual support that makes our rural existences pragmatically possible and fulfilling will be degraded as people with the means to leave our community do so. The ensuing socio-economic inequality, a process already begun, will further degrade our tax base and mutual support systems. These support systems include a tool lending library, a green energy committee, a public library robustly energetic with programming, a well-used trail network, and a neighborhood listserv. In addition to the effects of landowners' exodus, informal systems of support have already been affected by this project, as neighbors become polarized by the project and it has shifted our collective focus from each other and enjoyment of our natural surroundings to politics and protection of the same.

As a group, our interests go beyond individual landowner's rights or the town's municipal interests, to the protection and enjoyment of a carefully constructed long-term network of mutual support, which is threatened by this project, and without which our lives will be much more difficult and expensive to maintain in this small, rural community.

The economic and public health of rural residents is closely tied to the health and viability of the region's natural resource base. Further, the NED pipeline project is proposed to be sited in an Environmental Justice Area in the northern portion of Northfield. The pipeline and compressor station are expected to impact air and water quality and may generate noise pollution. The pipeline also has the potential to impact private

property including private wells and septic systems within the Town.

Fire protection is provided by an all-volunteer fire department, with forest fire support from the State. While a portion of Northfield is served by hydrants, the areas proposed to be impacted by the NED plans are not. Most of the roads cited by Tennessee Gas are rural two-lane, some one-lane; in some cases they are unpaved, and with small bridges which are not suitable for heavy construction equipment or increased traffic.

As proposed, the pipeline would cross the New England National Scenic Trail twice and come within one hundred feet of it in another place, all within the town of Northfield. The compressor station buildings would be sited less than one-third mile from the trail as proposed. There are only 11 National Scenic designated trails in the country, and the impact to this one cannot be overstated. Residents in town hike the trail, maintain it, and enjoy meeting and doing business with out-of-town hikers who come to enjoy the fantastic panoramic views and quiet woodlands that the New England Trail provides.

The pipeline and compressor station are a bad fit for a small rural town, and our losses would be both individual and collective. Hence, we are petitioning to be admitted as a collective group which can advocate for our position against the pipeline.

For the reasons set forth above, Northfield Against the Pipeline has “an interest which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) and its “participation is in the public interest” pursuant to 18 C.F.R. § 214(b)(2)(iii).

III. CONCLUSION

WHEREFORE, for the foregoing reasons, the Northfield Against the Pipeline requests that the commission GRANT this motion to intervene.

Respectfully submitted,

Julia Blyth, liason

Basis for Intervening:

As a citizen and resident of Ashfield, Massachusetts, I will be directly affected by the Northeast Energy Direct Project (“Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”).

I oppose the Project for environmental, social, economic, moral and ethical reasons. The Company has failed to provide sufficient evidence that the proposed Project is either necessary or convenient — it is certainly neither necessary nor convenient to me personally, nor does it provide clear benefits (economic or otherwise) to other citizens of the region which the Project purports to serve.

I oppose the Project because I am concerned about its impact on the environment, local waterways and watersheds, air quality, wildlife, and other natural resources. The proposed path of the Project pipeline will pass directly through the wetlands and watershed that feed Ashfield’s drinking water aquifer and emergency water supplies. The construction of the proposed Project will severely disrupt the natural watershed and the ecosystems that help keep our drinking water clean. Furthermore, the proposed transportation of fracked natural gas across this region, and through Ashfield, is dangerous and unnecessary. Ashfield is not equipped to handle any kind of pipeline failure, pollution, or contamination event, nor can the Company provide adequate compensation or remediation in such an event. Our towns, communities, and natural resources are valuable and irreplaceable assets.

I oppose the Project because I am concerned about its impact on local communities and economies. I have settled in Ashfield because I love the town and I love the community here. The proposed Project would displace many of my neighbors and friends, and many others will be forced to relocate their families for fear of the health and safety hazards that living near the proposed pipeline would present. Furthermore, the Project will bring no meaningful direct or indirect economic benefits to this region or to my community, but it will instead place a significant financial burden on the citizens of this region by seeking to recover the (as yet uncapped) costs of the project from electric ratepayers.

I oppose the Project on moral and ethical grounds because the Project clearly is not meant to serve the public, but instead intends to disrupt lives, communities, and ecosystems while also placing significant financial burdens on the people of this region. I am also opposed to the Project’s proposed expansion of the delivery of non-renewable fossil fuels in the form of fracked natural gas that will contribute to greenhouse gas emissions and exacerbate climate change. The Project gives no thought for the quality of life of future generations that will have to deal with the problems arising from climate change. Cleaner energy technologies exist, and less destructive alternatives to this Project would present more viable alternatives.

I strongly urge you to reject the Company’s proposed Project for all these reasons.

Sincerely,

Devon G. Castillo

Basis for Intervening:

I have been informed of the severe devastation this would cause not only us, but our environment as well. I would very much like if we could find another way. Please stop the pipe line

The Town of Hancock does not have a municipal water supply. Therefore, each homeowner is served by an individual well or spring. It is known that many of Kinder Morgan's pipelines are leaking, and that those leaks continue unabated. Contamination of one's drinking water source is of utmost concern.

During construction of a pipeline, blasting or vibrations caused by heavy equipment removing soil and rock can disturb and damage nearby wells and foundations. Some of these are centuries-old foundations of historic homes. Potential damage to wells and foundations is a major concern.

In addition to the historic buildings, there is a town cemetery near the pipeline corridor and a slave or Native American burial site nearby this border town. These are properties to be respected and undisturbed.

Local opposition to the proposed pipeline is not a selfish act. A study commissioned by the Massachusetts Attorney General shows the need for this pipeline does not exist. Northeast Energy Solutions and others have challenged the financial model of the project. ISO's original forecast of New England's electricity load for 2015 was so inaccurate that New England Power Pool voted not to support it. New Jersey-based Northeast Energy Solutions rightfully questions why UIL Holdings Corp., parent company of Berkshire Gas Company, is enforcing a moratorium on adding new natural gas customers in parts of its coverage area while pledging to lift the moratorium if the gas pipeline is built, without disclosing their own financial investment in the pipeline. This certainly is cause for concern about public interest and public trust of a utility subject to regulation, and reason for those with legitimate concerns to stand in opposition. The excuse for building this pipeline came from elsewhere, not from these affected states. For the sake of the people living in New York, Massachusetts and New Hampshire and not for the pockets of Kinder Morgan and its investors, please reject this pipeline proposal.

In light of the foregoing, I respectfully request that the Commission grant this motion for the Hancock Historical Commission to intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 15th day of January 2016,

Marjorie Feathers, Chairman
Hancock Historical Commission
c/o Marjorie Feathers, Chairman
P. O. Box 1042
Hancock, MA 01237

Basis for Intervening:

I live with my family in Nashua, NH and my 65 year-old mother lives within a short distance of the proposed NED pipeline route in Temple, NH. My family and I have a direct interest in this proceeding and wish to intervene in opposition to the NED pipeline for the following five reasons:

- 1) We are members of an impacted community that may be adversely affected in economic, environmental, and public health terms, and we do not feel these publicly-voiced concerns have been adequately or satisfactorily addressed by Kinder Morgan to date.
- 2) We are electric and gas ratepayers who, if Kinder Morgan secures our electric or gas utilities as project

customers, may see an increase in our utility bill in connection with NED and the likelihood of new infrastructure being built that exceeds of realistic growth forecasts.

3) We are proud donors to a New Hampshire land conservation organization and are concerned that the purpose of our donations would be violated if this project is allowed to secure easements over land that was legally committed to permanent protection from development.

4) We are concerned that the process of natural gas extraction via hydraulic fracturing has been proven to adversely affect local drinking water, public health, and the natural environment. Although natural gas is cleaner-burning than other fossil fuels like coal and oil, expanded reliance on any fossil fuel serves as a disincentive to widespread adoption of renewable energy sources, thereby contributing to climate change.

5) As citizens of a democracy, we are committed to the premise of equal political representation and deeply concerned that the more than \$3 million Kinder Morgan and its executives have spent on campaign contributions and federal and state lobbying expenditures, since 2014 alone, may unduly influence the decision-making process and subvert democratic representation.

20160115-5548

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Co., LLC

Docket No. CP16-21-000

**MOTION TO INTERVENE, INITIAL COMMENTS, AND REQUEST FOR
PROGRAMMATIC ENVIRONMENTAL IMPACT STATEMENT OF THE
NATURAL RESOURCES DEFENSE COUNCIL**

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“Tennessee Gas”), a subsidiary of the Kinder Morgan corporation, submitted an application to the Federal Energy Regulatory Commission (the “Commission”) under Sections 7(b) and 7(c) of the Natural Gas Act requesting, among other things, that the Commission issue a certificate of public convenience and necessity authorizing the construction and operation of the proposed Northeast Energy Direct Pipeline (the “Application”). The project is proposed to extend from Pennsylvania to Wright, New York and from there to Dracut, Massachusetts, at a total estimated cost of \$5.2 billion. As authorized by: 18 C.F.R. §§ 157.10, 385.211, 385.212, and 385.214; the Commission’s Notice of Application dated December 11, 2015; and the Commission’s Notice of Extension of Comment Date dated January 4, 2015, the Natural Resources Defense Council (“NRDC” or “Proposed Intervenor”) moves to intervene with full rights as a party in the above-captioned proceeding and protest the application. NRDC also provides the following initial comments on the Application.

All communications related to this proceeding should be addressed to:

Daniel Raichel
Natural Resources Defense Council
40 W. 20th St., 11th Fl.
New York, NY 10011
Phone: 212-727-4455
Fax: 212-727-1773
Email: draichel@nrdc.org

In support of its motion and as required by 18 C.F.R. § 385.214(b), Proposed Intervenor states its interests, positions, and the basis in fact and law for each position “to the extent known.” Proposed Intervenor may develop additional facts, arguments, and positions during the proceeding and reserves the right to bring those before the Commission when they are known and at the appropriate time.

I. STATEMENT OF INTEREST

NRDC is a non-profit environmental membership organization with more than 440,000 members throughout the United States. More than 35,000 of these members reside in the New York/New England Region. As required by 18 C.F.R. § 385.214(b)(2)(ii), NRDC has interests that will be directly affected by the outcome of this proceeding. Thousands of NRDC members live, work, and/or recreate in or near the communities and natural areas within the proposed pathway of the Northeast Energy Direct Pipeline, and may suffer injuries as a result of its construction or operation—such as impact on their property, interference with the quiet enjoyment and/or the conservation of natural areas, and the pollution of vital natural resources such as clean air and clean water. NRDC also has a longstanding and active interest regionally in the protection of wild and scenic areas and local communities as well as in the expansion and prioritization of clean energy resources. As such, NRDC has a direct interest in this proceeding both on behalf of its members and on its own organizational behalf.

Additionally, the interests that NRDC represents here are shared by the public at large. Therefore, the NRDC’s intervention is also warranted as in the public interest under 18 C.F.R. § 385.214(b)(2)(iii).

II. THE POSITION OF NRDC

A. Introduction

Under the Natural Gas Act, FERC must determine whether the proposed Northeast Energy Direct Pipeline “is or will be required by the present or future public convenience and necessity.” 15 U.S.C. § 717f(e). Initially, FERC determines, as a threshold matter, that “the project can proceed without subsidies from [the applicant’s] existing customers.” *Myersville Citizens for a Rural Community, Inc. v. FERC*, 783 F.3d 1301, 1309 (D.C. Cir. 2015) (quoting *Certification of New Interstate Natural Gas Pipeline Facilities*, 88 FERC, -r 61227,61745 (Sep. 15, 1999), clarified, 90 FERC, -r 61128 (Feb. 9, 2000), further clarified, 92 FERC, -r 61094 (Jul. 28, 2000) (internal alterations omitted)). In order to determine whether this standard is met, FERC performs a balancing test, “approv[ing] an application for a certificate only if the public benefits from the project outweigh any adverse effects.” 88 FERC, -r 61227,61750.

Assessing the need for a proposed pipeline is critical to avoid significant harms, such as “overbuilding, the ... unnecessary disruption of the environment, and the unneeded exercise of eminent domain.” 88 FERC, -r 61227,61737. Accordingly, the Commission has charged itself with considering “all relevant factors reflecting on the need for the project,” as well as all adverse impacts of the project, specified as those affecting “existing customers, the interests of competing existing pipelines and their captive customers, and the interests of landowners and surrounding communities.” 88 FERC, -r 61227,61747. In an early decision regarding Section 7(c) by the Commission’s predecessor, the Federal Power Commission, the agency acknowledged that “[i]n determining what is the ‘public’ whose convenience and necessity are the subjects of inquiry, we have conceived of that public as the public which exists in the area or territory proposed to be served, not merely the applicants nor those persons or towns who believe they would benefit from the proposed construction.” *Kansas Pipe Line and Gas Co.*, 2 F.P.C. 29, 56 (1939) (emphasis added). FERC must therefore focus its evaluation of need on those members of the public who would be directly affected by the new pipeline infrastructure, and not just on the certificate applicant who would economically benefit from the certificate approval.

While full evaluation of the environmental impacts of a project pursuant to the National Environmental Policy Act (“NEPA”) occurs after the Commission has made an initial “essentially ... economic” determination of need, *id.* at 61745, environmental review begins at the time of the filing of the application and plays an important role throughout the Commission’s decision making process. See *id.* at 61745-46; 90 FERC, -r 61128,61397-98. Ultimately, the Commission evaluates whether a project “can be constructed and operated in an environmentally acceptable manner,” and it has discretion to deny a certificate where it cannot. See *Millennium Pipeline Co., L.L. C.*, 141 FERC, -r 61198,61976 (Dec. 7, 2012).

Proposed Intervenor takes the following positions regarding the Northeast Energy Direct Pipeline:

1. New information, as well as shifts in regional energy policy and consumption trends, suggest that the Northeast Energy Direct Pipeline may not be needed and that the project's benefits do not outweigh its likely harms; and
2. The Commission must prepare a region-wide environmental impact statement that includes analysis of not only the Northeast Energy Direct Pipeline, but other pending or reasonably foreseeable pipelines in the New York/New England Region.

As required by 18 C.F.R. § 385.214(b)(1), the Proposed Intervenor provides the basis in fact and law for these positions below.

B. New Evidence Regarding Project Need and Shifts in Regional Energy Policy and Trends Suggest that the Project May Not Be Needed and that Its Benefits Do Not Outweigh Its Likely Harms

Tennessee Gas claims in the Application that the Northeast Energy Direct Pipeline reduces high costs for both electric and thermal uses of natural gas in the region and addresses reliability concerns, contending that these benefits outweigh the project's likely impacts. See Application at 58-90. Reliability and affordability are important energy issues. But new information regarding the costs and benefits that such a project would entail, including a recent study commissioned by the Massachusetts Attorney General suggest that there are lower-cost and lower-impact alternatives to meeting reliability and affordability in the New York/New England Region. The project's costs may thus outweigh its benefits to the detriment of the energy consumers who would bear the costs, risks, and impacts of potential overbuilding. The Commission's review of the Northeast Energy Direct Pipeline proposal must thoroughly review these issues.

1. The Massachusetts Attorney General's Report Provides Evidence that Additional Natural Gas Pipeline Capacity Is Not Needed to Meet New England Electric Reliability Needs and Is Not Cost Efficient

Protecting electricity reliability and preventing spikes in consumer electricity and natural gas bills during the coldest days of winter are vitally important energy policy goals. However, the results of a study commissioned by the Massachusetts Attorney General strongly suggest that there are other, lower-cost solutions to these issues than building the Northeast Energy Direct Pipeline. On November 18, 2015, the Massachusetts Attorney General's Office released the results of this study (the "Attorney General Report"), which evaluates options to address electricity reliability in the New England Region, including new natural gas pipeline capacity, through 2030.¹ Analysis Group, Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas (Nov. 2015).² In summary, the report concludes that, under existing and expected future market conditions through 2030, "power system reliability will be maintained with or without electric ratepayer investment in new natural gas pipeline capacity." *Id.* at vi. The report, however, also identifies that under an unlikely worst-case, "stressed" scenario an electric reliability deficiency of 1,675 MW would arise in 2024, and ultimately increase to 2,400 MW by 2030. *Id.* at iii.

To resolve this possible (if unlikely) deficiency, the Attorney General Report evaluated six "solution sets," one of which was the construction of additional natural gas pipeline capacity. When compared to the other alternatives, the analysis shows that new pipeline capacity represents neither the cheapest, nor the most cost-efficient solution to reliability issues under the "stressed" scenario. *Id.* at 31. For example, a solution comprised of energy efficiency and demand response resources was considerably more cost-effective than building new pipeline capacity. Moreover, the report concludes that new pipeline construction is associated with potential negative long-term economic and environmental consequences because it imposes "up-front costs and risk on ratepayers through significant long-term commitments to pay for the associated infrastructure" and will result in a net increase of greenhouse gas emissions. *Id.* at iv, 31-32. In other words, the Attorney General Report suggests that the project may not be needed and thus may harm energy consumers. The report also suggests that the purported benefits of the Northeast Energy Direct Pipeline are overstated, because other solutions could better address electric reliability issues than the construction of additional

pipeline capacity. This evidence stresses the importance in the environmental review process of thoroughly examining the project's need and the potential for overbuilding.

2. Current or Emerging Policies and Shifts in Regional Energy Trends Undercut the Need For the Northeast Energy Direct Pipeline, Especially in the Context of Other Regional Infrastructure Projects

We also note that the degree to which the Northeast Energy Direct Pipeline is needed depends, in great part, on current and emerging carbon reduction and clean energy policies and the current or foreseeable shifts in regional electricity and natural gas trends. Policies are already in place in the region aimed at reducing carbon pollution and moving to clean energy sources, including the nine-state Regional Greenhouse Gas Initiative and state energy efficiency and renewable energy policies—such as New York's newly announced Clean Energy Standard that will require that 50% of the state's electricity come from renewable sources by 2030 and the greenhouse gas emissions targets outlined in the 2008 Massachusetts Global Warming Solutions Act. In addition, as the states submit plans and adopt complimentary programs to cost-effectively comply with EPA's recently finalized Clean Power Plan additional energy efficiency and renewable energy initiatives are expected in the New York/New England Region.

Accordingly, the Commission must take a critical look at whether the construction of the Northeast Energy Direct Pipeline is needed and in the best interest of energy consumers. Importantly, this analysis must also include consideration of this project in the context of other recently approved or proposed infrastructure projects in the region, such as the Constitution Pipeline (which has substantial overlap with the proposed route of the Northeast Energy Direct Pipeline), the Access Northeast Project, and the Atlantic Bridge Project, Algonquin Incremental Market Project, and the Connecticut Expansion Project. The proliferation of these projects, combined with the ability of existing infrastructure and alternatives to satisfy what is likely to be diminishing fossil fuel demand in the region over the medium to long-term, suggest that approval of the Northeast Energy Direct Pipeline may not only fail to serve the public interest, but, in fact, is likely to become a long-term liability for energy consumers. These risks suggest that the benefits of building the Northeast Energy Direct Pipeline do not outweigh its likely harms. Again, the Commission's review should thoroughly examine these issues.

C. FERC Must Prepare a Region-Wide Programmatic Environmental Impact Statement that Includes the Northeast Energy Direct Pipeline and Other Pending or Reasonably Foreseeable Infrastructure in the New York/New England Region

The Commission must take advantage of its existing authority to evaluate the need for the Northeast Energy Direct Pipeline, identify and evaluate alternatives that would avoid or minimize harm to natural and cultural resources, and responsibly plan for pipeline development in the New York/New England Region. NEPA authorizes—and in our view, requires—a region-wide programmatic environmental impact statement (“EIS”) for proposed pipelines or expansion projects now pending before the agency, including the Northeast Energy Direct Pipeline, the Access Northeast Project, and the Atlantic Bridge Project. Given the Commission's recent action on several other projects in the region, any region-wide EIS should also include a detailed cumulative impacts analysis that evaluates the collective environmental impacts of pending projects in conjunction with those newly approved or pending final approval, including the Algonquin Incremental Market Project, the Connecticut Expansion Project, and the Constitution Pipeline.

NEPA requires that federal agencies prepare an EIS for all major actions significantly affecting the quality of the human environment. See 42 U.S.C. § 4332(2)(C). The Supreme Court has held that “[a] comprehensive impact statement may be necessary in some cases for an agency to meet this duty.” See *Kleppe v. Sierra Club*, 427 U.S. 390, 409-410 (1976). Thus, “when several proposals for ... actions that will have cumulative or synergistic environmental impact upon a region are pending concurrently before an agency, their environmental consequences must be considered together.” *Id.* at 410; see also *Churchill Cnty. v. Norton*, 276 F.3d 1060, 1077 (9th Cir. 2001) (“[A]n agency must prepare both a programmatic EIS and a site-specific EIS where there are large scale plans for regional development. At least when the projects in a

particular geographical region are foreseeable and similar, NEPA calls for an examination of their impact in a single EIS.”) (internal quotations and citations omitted); *Nat’l Wildlife Fed’n v. Appalachian Reg’l Comm’n*, 677 F.2d 883, 888 (D.C. Cir. 1981) (“the environmental consequences of proposed actions must all be considered together in a single, programmatic EIS when their impacts will have a compounded effect on a region.”). FERC itself has also recognized that “[p]roposed actions with potential cumulative impacts may mandate the preparation of a regional or comprehensive impact statement.” *Columbia Gas Transmission, LLC*, 148 FERC, r 61138, 61733 (Aug. 22, 2014) (emphasis, citations, and quotations omitted).

Support for region-wide consideration of multiple correlated proposals is found in NEPA’s implementing regulations, which define the scope of government actions requiring review to include both “[c]umulative actions” -defined as those with “cumulatively significant impacts” when considered with “other proposed actions”-as well as “[s]imilar actions, which when viewed with other reasonably foreseeable or proposed agency actions, have similarities that provide a basis for evaluating their environmental consequences together, such as common timing or geography.” 40 C.F.R. § 1508.25(a)(2), (3). Accordingly, the Council on Environmental Quality has determined that a regional or programmatic EIS is appropriate where there are “[s]everal similar actions or projects in a region or nationwide (e.g., a large scale utility corridor project),” or where “[a] suite of ongoing, proposed or reasonably foreseeable actions . . . share a common geography or timing.” Michael Boots, CEQ, Memorandum: Effective Use of Programmatic NEPA Reviews, 14,15 (Dec. 18,2014).³

A key purpose of NEPA’s requirement for a comprehensive, regional EIS is the identification and evaluation of alternatives that lessen cumulative impacts for an entire region. See *Kleppe*, 427 U.S. at 410. In order to fully comply with the Congressional intent of NEPA, FERC should evaluate all pending new natural gas infrastructure proposals within the New York/New England Region together in a single regional programmatic EIS in order to identify and evaluate alternatives that would lessen the cumulative environmental impacts of new infrastructure on the entire region. Among others, the Commission should consider “potentially lower-cost alternatives to building new [gas pipeline] infrastructure,” such as “increasing utilization of capacity that is not fully utilized in existing interstate natural gas pipelines, re-routing natural gas flows, and expanding existing pipeline capacity.” U.S. Dep’t of Energy, *Natural Gas Infrastructure Implications of Increased Demand from the Electric Power Sector*, 31 (Feb. 2015).⁴

Here, adequate assessment of the significant potential environmental harms of the Northeast Energy Direct Pipeline must account for the fact that Commission is considering several proposals in the New York/New England Region-including the Access Northeast Project and the Atlantic Bridge Project-all of which impact the same geographic area within roughly the same timeframe. See *Peshlakai v. Duncan*, 476 F. Supp. 1247, 1258 (D.D.C. 1979) (recognizing that “space and time” are important considerations in evaluating a request for a regional EIS). Standing alone, these projects, and those that are “reasonably foreseeable,” will have the “cumulative or synergistic environmental impact upon [the New York/New England] region” that warrants their review as either a cumulative or similar action. See *Kleppe*, 427 U.S. at 410. It is also critical, however, for the Commission to recognize that these projects come on the heels of several more projects within the same geographic area that have been recently approved by or are awaiting final approval of the agency, including the Algonquin Incremental Market Project, the Connecticut Expansion Project, and the Constitution Pipeline. Indeed, the Constitution Pipeline runs on a parallel and often nearly identical course with the Northeast Energy Direct Pipeline for more than a hundred miles. Under these circumstances, the required regional-wide EIS should also have a thorough cumulative impacts analysis that considers the combined impacts of these projects in the context of all recent or anticipated Commission-approved infrastructure in the region. See U.S. Env’tl. Protection Agency, EPA Comments in Response to FERC Notice of Intent for the Northeast Energy Direct Project, Docket No. FP14-22-000, at 19 (Oct. 16, 2015) (recommending FERC perform a “detailed account of cumulative impacts that will occur due to the construction and operation of both [the] Constitution Pipeline and the [Northeast Energy Direct Pipeline]”).⁵

Holistic consideration of the environmental impacts of proposed and approved infrastructure is also critical to adequate identification and evaluation of alternatives that minimize cumulative impacts for the entire re-

gion. Cf. Churchill Cnty, 276 F.3d at 1080 (stating that the purpose of the cumulative impacts analysis is “to assist the decisionmaker in deciding whether, or how, to alter the program to lessen cumulative impacts”) (quotations omitted). As the Supreme Court recognized in Sierra Club v. Kleppe, “[o]nly through comprehensive consideration of pending proposals can the agency evaluate different course of action.” Kleppe 427 U.S. at 410 (emphasis added). When multiple proposals are pending for the same region, separate environmental review for each project presents the serious risk that a federal agency will overlook important alternatives that could avoid or minimize impacts for the region as a whole. The Commission can only rationally evaluate any viable alternative in the context of a complete understanding of the demand for natural gas, the capacity of existing pipelines, and the proposed capacity of new pipelines—in other words, a region-wide programmatic EIS.

The existence of alternatives that could avoid or minimize the impacts to the New York/New England Region as a whole is also closely tied to the need for the project, which, as detailed above, is questionable given the existence of other recently approved infrastructure, existing and native capacity, and the availability of more cost-efficient means to meet peak regional electricity demand during the coldest winter months. Regional consideration of pending projects in light of recently approved infrastructure will enable the agency to identify alternatives that minimize environmental impacts through elimination of projects or project components that are simply unneeded. Accordingly, such consideration would not only assist in appropriate assessment of a “no-action” alternative for a particular project, but would also allow the agency to consider alternatives such as co-location of elements of proposed projects with existing infrastructure or other proposed projects. Proposed Intervenor urges the Commission to comprehensively examine these alternatives in a region-wide programmatic EIS that incorporates all recently approved, pending, and reasonably foreseeable pipelines in the New York/New England Region.

III. CONCLUSION

For the reasons stated above, the Commission should grant this motion to intervene and confer party status on NRDC. The Commission should also accept the foregoing statements as the protests of the Proposed Intervenor under 18 C.F.R. § 385.211(a).

Footnotes:

- 1 While the aim of the study was to assess the region’s electricity reliability needs and not its thermal gas capacity needs, it did assume a generous rate of growth in thermal demand in its deficiency analysis. See Analysis Group Study at 8, n.2S.

Re: NED Pipeline

I respectfully request to register as an intervenor in regard to the Northeast Direct Pipeline Proposed by Kinder Morgan’s Tennessee Gas Pipeline Company. I am against the NED pipeline on behalf of my neighborhood, grandchildren everywhere, and our planet.

Are we are serious about taking responsibility for preserving our planet ? We must STOP BURNING FOS-SIL FUELS. We must KEEP THEM IN THE GROUND. It would be a huge mistake to continue to invest in this obsolete technology that has already brought ecological mayhem. Rather, we must make it our urgent priority to CONSERVE ENERGY and to choose to find and create non-toxic ways to meet our needs. Fracking and pipeline transportation are unconscionable. Poison spews out, cannot be contained, cannot be undone. Many folks pay the price with our utility bills, our taxes, our health and our lives; a few get rich from it .

Money interests of individual humans cannot possibly outweigh the ecological price of this proposed disaster. We must stand up for a livable Earth. We must not allow shortsightedness and greed to ruin the land, poison the water and the air, to pollute the common good of ALL BEINGS ON THE PLANET.

INVEST IN ALTERNATIVES. NO TO THE PIPELINE!

Sincerely,

F Sheldon Ball

Basis for Intervening:

Dear FERC,

As a concerned future pharmacist, homeowner and resident of New Ipswich, NH (population approximately 5000), I would like to file a motion against the NED project. I believe that a pipeline of such magnitude is not needed and warranted and supported by our local communities. If approved, a NED project would result in the construction of a compressor station located only several miles from my home with numerous harmful effects on the quality of life for residents of NH and MA.

I am concerned about the negative health risks a natural gas pipeline would create. The added air pollution may increase my risk of heart and lung disease.

The construction of a pipeline in these small communities would cause permanent destruction to the lives of

many residents and valuable local wildlife. As a homeowner, I am also very concerned about the negative effects of the NED natural gas pipeline on my home's property value.

Please accept my motion to intervene against docket number cp16-21.

Sincerely,

Kevin Sinnott

20160115-5551

{Motion to Intervene of Kirsten A Spille-Scott}

ERC Docket number CP16-21

I am concerned the pipeline would be a soft terror target due to the pipeline's size, high pressure, volatility, and unpatrolled corridor

We all understand the ideas that this pipeline may be convenient and profitable; however, for the sake and health of innocent people, please consider what is right. Thank you for considering what is best to benefit and protect the people--men, women and children-- involved.

While some may claim the pipeline has numerous benefits, I would like to know if those people would be perfectly happy to have the pipeline in their backyard or near their property. Would those who promote the pipeline feel safe and sound for themselves and their family if they had a pipeline near their homes? While some would say, "Yes," I believe if those who say YES were completely honest, we all know deep down inside, no one in their right minds and hearts would be for this pipeline near their home? We, as those who inhabit this precious land and earth given to us, must be faithful stewards to care for that which we have been given.

Here are valid reasons to not allow the pipeline:

The pipeline will be a daily danger to those precious humans who live or work near it.

It would cause toxins to poison the air and water, contributing to the health of unknowing innocent people. Not only would human life be endangered, but also animals who are innocent would suffer as well. Furthermore, those who have worked hard to earn their land and property would potentially have their property values lowered living near a danger zone. No person should have Eminent Domain imposed upon him or her. Also, the towns in NH should not have the burden of taking care of the dangers that would result from having this pipeline.

Thank you very much for your time!

Basis for Intervening:

I strongly oppose the proposed pipeline project, for many reasons. First of all, climate change is the greatest threat that our world faces and fracked gas contributes heavily to climate change. The world's carbon budget cannot afford this pipeline. Secondly, I am concerned about health risks for those who live along the pipeline. Thirdly, as a ratepayer I am deeply offended that I would have to fund something as abhorrent as the pipeline.

20160115-5554

Margaret Miner, Litchfield, CT.

The proposal includes an additional, new pipeline, a portion of which will be constructed through 5.7 miles of land owned by the Metropolitan District Commission ("MDC") in West Hartford; Connecticut. Several drinking water reservoirs maintained and operated by the MDC are located on this property. These reservoirs provide the major source of public drinking water to over 400,000 people in the greater Hartford, Connecticut area and, as such, they are subject to special public health protections under state law. More than ten municipalities in this area rely on these reservoirs as the sole source for their public drinking water supply.

The MDC lands where the pipeline loop will be constructed are statutorily protected Class land Class II watershed lands. In accordance with Conn. Gen. Stat. § 25-32(b), no change in use of these protected lands can take place unless the Applicant can demonstrate that such change in use will not have a significant impact upon the present and future purity and adequacy of the public drinking water supply.

Pursuant to Conn. Gen. Stat. § 25-32(c), the Applicant has not demonstrated that its proposed activities will not have a significant impact on this critical drinking water supply. In fact, Applicant makes no reference to the fact that the MDC property is statutorily protected watershed land and is the location of a major public drinking water supply in its Environmental Report (ER) submitted with its Application for a Certificate of Public Convenience and Necessity.

Applicant's ER is deficient and does not provide any alternatives analysis for the location of the pipeline in this area.

Rivers Alliance also questions the adequacy of the Applicant's claim that there is a need for more natural gas in New England and therefore the need to construct additional infrastructure to increase capacity in order to provide it.

Applicant's proposed activities will have a major negative impact on the natural resources in this area and upon the recreational activities that take place on this land, one of the few open space areas for recreation in a primarily urban area.

Because the proposed location of the pipeline loop passes through the major source of public drinking water for the Hartford area and because this proposed project will cause environmental damage to the drinking water supply and the other natural resources in this area and the Applicant's inadequate showing of need for additional capacity, Rivers Alliance opposes this application.

Connecticut law provides the highest protections in the nation for drinking water.

First, no water body that has received a waste discharge can be used for public supply of potable water. Second, water utility land hydrologically linked to drinking-water reservoirs must be kept as natural open space and cannot be disturbed in any way other than certain limited permitted actions necessary to maintain operations. By statute the protected lands are termed Class I (closest to the source) and Class II (also impacts the source).

Protection of Class land II lands is the highest priority in our state water policy.

To violate this protection would set a precedent that would put at risk Connecticut's drinking water sources.

The state's standards for drinking water are uniquely high (only Rhode Island has similar standards). These high standards are increasingly justified as science reports document the myriad new pharmaceuticals, plastics, pesticides and other toxins in ordinary wastewater.

Existing treatment methods cannot adequately define or manage this array of toxins.

20160115-5557

Andrew P Davis, Stephentown, NY.

On January 15, 2016, Tennessee Gas/Kinder Morgan sent a letter to the Commission captioned "Update to Landowner Mailing List". In the last paragraph of page 1 of the letter Tennessee requested that the landowner list "be accorded privileged and confidential treatment".

Tennessee gave no reason for the list to be considered privileged. It gave no reason for the list to be given confidential treatment. Tennessee is obviously trying to burden the other parties and intervenors to these proceedings with expensive and duplicative work, without any substantive meaning to a mere compilation of names and addresses. It is an obvious attempt to prevent parties united in interest in opposing the NED pipeline from joining forces. Does the Commission support such a policy?

There are times, obviously, when privilege can be invoked and where confidential treatment of business information is justified. This is not one of them.

Having cited no reason that its list be deemed privileged or confidential, its request should be denied. The landowners list should promptly be posted to the Docket.

Respectfully submitted,

Andrew P Davis

Basis for Intervening:

I am a resident of Conway, MA, having made our permanent home here just over three years ago.

The proposed pipeline is an issue for the ages and one that I take very, very seriously. With all that I know – from what I’ve read and the public meetings that I have attended – this is a project that must be stopped. Not only is the Kinder Morgan record not to be trusted, as a citizen of the planet, as a citizen of Conway in Franklin County here in Massachusetts, the risks associated with this endeavor are simply not acceptable. The Blowdown Valve on Shelburne Falls Road frightens me no end. And I have zero interest in contributing to the exorbitant cost of the project in any way.

Existing infrastructure should be expanded. The multitude of documented leaks should be repaired. Sustainable energy sources should be exploited; that’s where science and engineering can have the greatest impact in the 21st century. There is no support for the pipeline here in Conway or in the adjacent Massachusetts communities and I am committed to doing everything possible to voice my sincere and well-informed objection to the project. It is not essential and it must be stopped.

20160115-5561

UNITED STATES OF AMERICA
BEFORE THE

FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Saengeeta Moorjani and Rajesh Tekchandani of 10 Ellsworth Road, Essex County, Andover, MA 01810, file this Motion to Intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000.

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Saengeeta Moorjani and Rajesh Tekchandani
10 Ellsworth Road, Andover, MA 01810
(978) 686-3232
tekchandanipipeline@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact us as follows.:

1) Our home is in the direct path of the proposed pipeline. Temporary construction zones directly impact our property where there are several alternative sites which are not being used. These temporary sites will have permanent impact to our home.

Between our home and the existing power line corridor there is a wide thickly wooded area, full of mature trees, This Forested area provide not only aesthetic natural beauty by blocking the view of the unsightly power lines, but also provides protection from the power lines, shelter from the emissions and other elements, shade and other protection for our property. as well as privacy for our family, This line of mature trees wraps around our entire neighborhood and acts as a natural sound barrier to the noise from local traffic and the nearby state highway.

Within this natural buffer, there are wetlands, rare and mature trees, valuable historic stone walls and ancient artifacts, vernal pools, AVIS Article 97 protected lands and a variety of rare and protected plants and animals. Our property is part of a contiguous wildlife corridor which abuts the conservation parcels and which runs from the Merrimack River to the Shawsheen River. Our wetlands also contribute to and serve to feed the drinking water supply for the Town of Andover.

This natural setting and all the benefits it provides was a material reason we invested in our single family home, paid a premium price for the property, have substantially invested in upgrading our home and property, and continue to upgrade and maintain our home at significant cost and expense.

If this Application is approved, we will be permanently and unnecessarily adversely impacted. The permanent clear cut easement will be 50 feet wide, while the temporary work easement will be as wide as 165 feet. The finished pipeline will be about 50feet from our home. This puts our family as well as our entire neighborhood, well inside the “Blast” or “incineration zone”. Our family will hear the high pressure gas being pumped through the line and the significant noise when cleaning occurs. We will lose our trees, our sound buffer, our privacy, our beautiful, natural views. All of the mature trees that give our neighborhood its character will be permanently eliminatedOur neighborhood will never be the same.

2) The removal of the trees will cause the wetlands to dry out. The wildlife habitat will be eliminated and

our family will be deprived of the enjoyment of watching the animals that inhabit and travel through the corridor and property daily. After construction, our view from our home will consist of nothing more than an expanse of land cleared of trees and replaced with invasive weeds and yellow posts clearly marked “Danger High Pressure Pipeline”. Because of the need for ongoing inspections and maintenance we will be permanently be subjected to random intrusions and violations of our privacy by total strangers, as well as to risks associated with toxic herbicides. The path of the pipeline will deprive us of privacy, disturb and dry out wetlands and ground water, and put our health at risk.

3) The current construction plans show that the pipeline which was represented throughout the public hearings and through public materials as “co-located”, defined then as within the existing corridor/ROWs with existing public utilities is not the true scenario of what will unfold here. Documented evidence in the form of the construction plans, shows that the pipeline will not be “co-located” but in fact will require the creation of new parallel corridors that extend 50ft – 100ft from the existing corridors/ ROWs. The construction and “temporary” construction sites will unnecessarily and permanently devastate hundreds of acres of acres of our most valued conservation lands and private properties. This includes the removal of hundreds of mature trees, whose value goes well beyond the physical tree, by, as mentioned above, helping protect the wetlands that feed the drinking water supplies and adding substantial value to our property values which we never recoup during our natural lives. Temporary construction zones create permanent destruction.

4) During construction, our family will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of privacy. In addition, we both run our offices out of our home. We need to be able to work during the days. We will be deprived of that ability and our livelihood will be adversely impacted. Our neighborhood is well known to consist of ledge (thus the need for septic and no gas lines to homes, only tanks) so substantial blasting would be inevitable. This blasting will endanger the structural integrity of our home, our septic system, of the other homes in our neighborhood, and adversely impact health and wellbeing of our family, as we use our property for solitude and relaxation and impede our ability to work productively. It will diminish the quality of our life. It will also unconscionably disrupt the wildlife. Saengeeta Moorjani is undergoing treatment for breast cancer. Her recovery is dependent on treatment rest and quiet at her home.

5) Furthermore, according to the Plans, Tennessee Gas intends to clear cut, then cross Bailey and River Roads,, main Roads between our home and the highway, and town 911 services. During construction, this will make coming and going to and from our home almost impossible and also more expensive. This also creates great risk for us and the other residents of our neighborhood should we need emergency responders. We will be greatly inconvenienced and endangered.

6) We are customers and rate payers.

7) This Infrastructure is not necessary. Massachusetts has all the infrastructure it needs. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Andover has been a strong participant in the Solarize Mass Program. It successfully executed a Solarize Andover program. In addition, Massachusetts has an LG facility in Everett that has been sitting unused, but which could be called upon to meet the needs of any days where there is high demand. The Attorney General’s independent study has clearly established that there is no need for this additional NED infrastructure. This pipeline clearly is not necessary at all to service New England. This Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience. By this time it has become quite clear that the true purpose of this oversized pipeline is to transport fossil fuels to Canadian and US coastal areas for sale and export to foreign markets, all at the expense of US rate payers. Massachusetts does not need this new pipeline infrastructure. It does not meet the criteria of serving the greater good and does not meet the definition of eminent domain and our rights under the constitution of the United States of America.

8) Our home is our only major asset. We depend on the equity here to survive and is the basis for our quality of life now and through our retirement. The value of our property will be diminished by the construction, operation and mere presence of the pipeline path. In fact, the resale value of my property has already been

diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive our family of retirement funds and directly impact the quality of life for ourselves and our two children.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, We, Saengeeta Moorjani and Rajesh Tekchandani respectfully request that the Commission to grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Respectfully submitted this 9th day of January, 2016.

Basis for Intervening:

Pristine land, private property, the price of oil and gas going down and will stay down . . . the pipeline is destructive and unnecessary. I am firmly opposed to this pipeline.

20160114-5167 Rensselaer County
20160115-5124 Deborah A. Leary

NOTE TO ALL, BOTH PUBLIC AND PRIVATE, AFFECTED BY THE CP16-21 N.E.D. PIPELINE:

FERC regulations require that copies of a Motion to Intervene be sent to the ‘Applicant’. The statement that a Motion to Intervene is ‘Submitted and Complete’ has been found to be misleading when the additional step of notification to ‘Applicants’ MUST be sent in order to adhere to FERC Intervention regulation requirements.

Please know that once one receives the acceptance email you must forward all to KM, the applicant: Jacquelyne_Rocan@kindermorgan.com; curt_moffatt@kindermorgan.com; shannon_miller@kindermorgan.com; ben_carranza@kindermorgan.com; mrp@vnf.com.

Furthermore, FERC requires that ANY subsequent document (comment, filing, etc) that is submitted in regards to the CP16-21 application MUST be sent to everyone on the Service List for that specific docket.

CONSIDER: FERC’s regulation requirement to contact all ‘Applicants’ or the ‘Service List’ would have been more easily and efficiently satisfied by including it within the ‘wizard’ process on the FERC Website.

CONCLUSION: I believe that this FERC process for Intervention gives the appearance of neglect as a ploy to inhibit the individuals who are the most publicly and privately affected by the NED Pipeline from satisfying the FERC regulation requirements to complete all steps necessary for a Motion to Intervene to be successful.

FURTHERMORE: I believe Public intervention must be encouraged and all once-in-a-lifetime FERC Website users ought to be assisted through this valuable process rather than denied their important legal standing.

I strongly oppose the proposed pipeline project, for many reasons. First of all, climate change is the greatest threat that our world faces and fracked gas contributes heavily to climate change. The world’s carbon budget cannot afford this pipeline. Secondly, I am concerned about health risks for those who live along the pipeline. Thirdly, as a taxpayer I am deeply offended that I would have to fund something as abhorrent as the pipeline.

I am concerned about the Kinder Morgan pipeline and compressor station which will be located less than a mile from my home in New Ipswich NH.

How will this will effect the air quality in our area

What health concerns will be a problem if there is to be a leak

What the effects from a gas explosion to our community

What effects does this have on our artisan wells and water sheds from the tracking process.

What light pollution will we experience from the compress station

What noise pollution will we experience

How will this effect wild life

How does this effect the open reservoir less than a mile from the proposed site

How will this effect the school which is less than a mile away

I am concerned about what effect this will have on my property value

Concerns about our rural area for fishing and hunting

Concerned about the endangered species including the bald eagles in our surrounding community

Concerns about our wet lands

Concerns about our existing conservation property
Concerned that this is not good for our great state of New Hampshire
These are just a few concerns I have as a long time resident of this area

CONCERNED HEALTH PROFESSIONALS OF NEW YORK fusho@earthlink.net

Basis for Intervening:

MOTION TO INTERVENE

CONCERNED HEALTH PROFESSIONALS OF NEW YORK

Docket No. CP16-21-000

I Introduction

We, the undersigned health professionals, submit our motion to intervene in the Tennessee Gas Pipeline Company Northeast Energy Direct (NED) project application under docket CP16-21-000.

According to the Code of Federal Regulations §385.214, a motion to intervene must demonstrate that a movant has a right to participate, including because “The movant’s participation is in the public interest.” Health professionals by definition work to ensure individual and public wellbeing through direct patient care, but also through related professional activities. As health care professionals and scientists who live and work in New York, a state through which the Northeast Direct pipeline is proposed to run, we are concerned particularly with the health of those who live in New York, but we also bear a responsibility to all those who may be adversely affected by this proposed project. We are filing because of our responsibility to the public interest, in that the proposed project puts individual and public health in jeopardy.

II Health concerns

Health related concerns for the project include, but are not limited to, the following (in no particular order):

- 1 Health surveys have identified a high proportion of residents living near compressor stations as experiencing symptoms consistent with known toxic effects of air pollutants such as headaches, nosebleeds, and rashes.
- 2 Hazardous air pollutants have been measured near compressor stations that exceed CDC and EPA toxicity and carcinogen limits.
- 3 Compressor stations and metering and regulating stations are known to release toxic and cancer-causing emissions, as documented in the application prepared by the Tennessee Gas Pipeline Company.
- 4 The air quality impact analyses in the application demonstrate that local concentrations of EPA criterion pollutants such as nitrogen dioxide will increase by amounts that will directly result in excess cases of cardiopulmonary disease, outpatient visits, emergency department visits, hospitalizations, and fatalities.
- 5 Increased disease and early death due to pipeline-related construction, emissions, noise, leaks, planned releases, and emergency releases, as well as potential explosions, place an undue burden on families that goes

beyond increased spending on health care to include increased stress and lost time from school and work.

6 Other impacts, such as blasting bedrock, diesel truck traffic, and increased noise levels all have the potential to affect human health and have been cited as health-related concerns by both local residents and local physicians.

7 Increased emission of EPA criterion pollutants are associated with increased health care utilization and spending, which will provide additional stress upon health care financing and budgets in states affected by the NED project.

8 Pipelines have a well-documented history of leaking, and some transported gases contain chemicals that are water-soluble, posing significant risk of contaminating water supplies with toxins, including carcinogens, radiation decay products, and endocrine disruptors. Bedrock fractures from blasting the pipeline pathway and motion of the buried pipeline itself (due to porosity of the pipeline backfill) could create new conduits between leaked toxic materials from the pipeline and existing private drinking water wells and aquifers.

9 There are suggestions in reports and regulatory documents that radon released during fracking production and transport does not pose a significant threat to human health due to the relatively short half-life of radon and its dilution in homes. However, these discussions do not reference radon decay products such as lead, polonium, and bismuth that could harm human health in the home or through precipitation in pipelines.

10 Multiple routes of exposure from air pollutants adsorbed into soil and vegetation could result in toxicity exceeding that predicted from air emissions alone, especially considering the high proportion of residents along the pipeline route who garden, farm, or raise livestock.

11 Local topographic and meteorological conditions, such as thermal inversion events, could concentrate pollutants locally and increase toxic and/or carcinogenic exposures.

III Correspondence

The name and address of the person upon whom all communications concerning this proceeding should be served are as follows

Kathleen Nolan, MD, MSL
kathynolan@earthlink.net
7194 Route 28
Shandaken NY 12480

IV Conclusion

At this time, there is limited consideration of health effects through the federal regulatory process. As health professionals we have a unique expertise and direct understanding of human health in relation to the proposal, including direct experience working with the populations that would be affected by the project. We therefore represent the public interest as defined in the Code of Federal Regulations §385.214.

WHEREFORE, for the aforementioned reasons, the undersigned health professionals respectfully request that this motion to intervene in the above-captioned proceeding be granted, and that they be granted the right to participate in all hearings in this proceeding as full intervenors with all attendant rights accorded that status.

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC.)
Northeast Energy Direct Project)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
PHYLLIS WHITCOMB SANFORD**

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Phyllis W. Sanford
59 Maple Street
Shelburne Falls, MA 01370
(413) 489-3160
wtminer@crocker.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

My interest as a stockholder in Kinder Morgan, Inc. and securing my family’s investment in this nation’s energy infrastructure and future as they relate to climate change and the moral and economic imperative of weaning our country off fossil fuels and having corporations like Kinder Morgan shift to renewable energy resources as soon as possible. The Supreme Court has deemed corporations to be people, therefore companies like Kinder Morgan no longer can simply look at the short-term, bottom line, but must invest in the nation’s future by behaving in a moral and ethical manner. Instead of securing my long-term investment, Kinder Morgan is being short-sighted by proposing the NED Pipeline, which is unnecessary, inordinately expensive, and a massive overbuild. In fact, it will significantly impair the rural economies of the Catskills, Berkshires and southern New Hampshire with no long-term benefit for New England electric ratepayers.

My interest as an electric and natural gas ratepayer, inasmuch as Kinder Morgan continues to ignore the imperative of dealing with climate change, its action will affect the health and ecological integrity of the earth, while likely driving electric rates higher in New England. We, as a nation of individuals and corporations, must rethink the economic model for energy production and distribution, where it is mired in the past and the bottom-line is sacrosanct, and invest and innovate in technology and renewable resources to reverse the detrimental effects of fossil fuels on our earth – its ecosystems and humanity.

My interest in rural conservation and development as a regional planner and a Board Member of the Greater Shelburne Falls Area Business Association. By crossing hundreds of miles of the rural Northeast, scarring pristine wild lands, eating up acres of farm and forest land, the NED Pipeline will impair and destroy the farming, forestry and recreational economies of the Berkshires, Catskills and southern New Hampshire by damaging the scenic value of our mountain landscapes, our significant open space heritage, and our rural character and culture. Once imposed on the landscape and our communities, the pipeline can never be taken back even as it brings little-to-no benefit to rural areas specifically, but to all of the Northeast in general.

My interest in not seeing the industrialization of our rural landscape. A number of other routes for expansion of a pipeline exist. Yet, Kinder Morgan will not pursue them, because it is easier to run rough-shod over rural areas and people as our voice is smaller than urban and suburban populations where routes already exist. It is time for energy companies to improve their existing infrastructure

before they propose new industrial uses in rural places.

Kinder Morgan is ignoring the imposition of its proposal on the people and economy of our rural regions. The purported benefits of this 400-mile pipeline are not worth the risks and impacts to our communities and earth. Far less harmful and disruptive means of meeting our energy needs should be pursued, in particular the existing alternate routes in Southern New England. As a Kinder Morgan investor and local economic development leader, I can bring valuable information and perspective to this proceeding.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Phyllis Whitcomb Sanford

**RE: Comments of Delaware County, New York, on FERC Docket No. CP16-21-000,
Application for a Certificate of Public Convenience and Necessity (Northeast Energy
Direct Project) of Tennessee Gas Pipeline Company, L.L.C.**

Secretary Bose,

On behalf of our client, the County of Delaware, New York, we respectfully submit the following comments on the proposed Northeast Energy Direct Project of Tennessee Gas Pipeline Company LLC ("Tennessee Pipeline" or "Applicant"), which is the subject of FERC Docket No. CP16-21-000.

Delaware County Background and Interests in this Proceeding

Delaware County is a poor, rural county in the Southern Tier region of New York. Some 47,500 residents call the County's 939,520 acres (1,468 square miles) home. The County Seat, in the Town of Delhi, is approximately 114 miles northwest of the City of New York. Delaware County consists of 19 Towns and 10 incorporated Villages. The Supervisors of the 19 Towns comprise the nineteen-member Delaware County Board of Supervisors ("DCBS" or "Board"). The Tennessee Gas Pipeline proposal would traverse 46.5 miles in Delaware County, spanning five Towns there-Davenport, Franklin, Harpersfield, Masonville and Sidney-and directly impacting hundreds of local landowners.

Delaware County is rich in natural resources, from agricultural lands, plentiful forests, and scenic landscapes, to abundant clean, fresh water. This wealth of sought-after natural resources and pristine open spaces has historically made Delaware County a prime target for outside groups, who have taken advantage of these assets for their own benefit, too often leaving local communities with little to compensate them for

their troubles. As much as half of the fresh drinking water supplied to the City of New York comes from the Delaware Watershed, and the City, in turn, regulates about half of the lands in Delaware County, which are subject to ever more stringent restrictions on land use and development. Major electric transmission corridors, one of New York State's largest electric substations, and at least three major natural gas/propane pipelines—including the Constitution natural gas pipeline approved by FERC in December 2014, and a propane pipeline—already crisscross the County, bringing power and fuel to major cities like New York and Boston. Meanwhile, County residents struggle with poverty, high heating and energy costs, a shrinking population, disappearing jobs, and unfunded mandates from governmental and quasi-governmental entities with jurisdiction over the area's watersheds and lands.

There is a profound disconnect between the burdens Delaware County has been asked to shoulder in order to provide gas, water, and electricity to major metropolitan areas, and the negligible benefits these communities have received in return. The federal government's commitment to environmental justice, as articulated in President Clinton's 1994 Executive Order 12898, demands that FERC carefully consider whether projects like the Tennessee proposal, and the cumulative piling-on of major energy transmission corridors in the same heavily burdened areas, simply asks too much of a small, low-income population, for the benefit of developers and end users.

Delaware's Economic Health and Host Community Needs

If the Tennessee proposal is approved, it will be the third major natural gas or propane pipeline to run through Delaware County, and the second to run along this precise proposed route. Yet the residents of communities like Franklin, Davenport and Sidney, who will host these massive pipelines cutting through their back yards, do not have access to natural gas to heat their homes.

In a recent study of the country's 3,000-plus counties, Delaware County ranked as the 10th worst place to own a home. ¹ This low ranking was due in part to the high costs of heating a residence in the County, as well as the risks for major weather damage, such as from flooding (discussed in fmiher detail below). The 2009 per capita income of Delaware County residents was \$22,909, which is approximately 34% lower than that of New York State residents in general (\$30,634). The income level of the full-time population has been falling further and further behind the remainder of the State population. The wages to full time residents have not kept pace with the cost of housing. During the period 2000 to 2005, real estate values in the County increased at a rate of 11% per year, making the cost of new housing beyond the reach of the typical household in Delaware County.

Historically, Delaware County had a flourishing natural resource-based economy that included milk and maple syrup products, logging and wood products, and blue stone mining. In an earlier century, Delaware County was listed as the largest milk producer in the country.

However, during the period 1997 to 2006, the County lost 22% of its operating dairy farms due to the increasingly impossible economics of farming. Logging, one of the oldest economic activities in the County, has recently seen a 17% loss in jobs.

The manufacturing industry is the largest employer in Delaware County. Much of the manufacturing sector is located outside the New York City Watershed in and around the Town of Sidney. The manufacturing sector contributes 32% of the regional jobs and 40% of the regional earnings. In recent years these jobs have been threatened by the disruption from the frequent flooding that has occurred. The service and visitor economic sectors representing regional service jobs account for 22% of County jobs but only 16% of County earnings. While Delaware County has seen growth in tourism, the jobs associated with this sector are usually low-paying and do not provide the needed employee benefits required to sustain a family.

Certain basic services, such as health care, education, delivery of electricity and gas for heating, availability of broadband, telephone and cell phone services, and fire protection are required to sustain a community. These are necessities, not luxuries. The communities of Delaware County struggle not only to find available doctors and teachers to provide health care and education, but also to pay the doctor's bills and teachers' salaries in the current economy. The priorities of the County government include, among other things:

expanding local access to the energy sources which pass through the area in great abundance, but which fail to provide local communities with the same services being shipped through the area to bigger cities; to spur economic growth by supporting manufacturing and expanding access to jobs that pay a living wage; and to monitor and protect existing natural resources, the agriculture industry, and tourism opportunities. To that end, the DCBS requests that FERC impose conditions on the Applicant's Certificate of Public Necessity and Convenience to provide impacted communities with benefits, including financial support and other compensation, in exchange for hosting the pipeline.

Residential Natural Gas Service

First, it is imperative that the developers deriving so much benefit from these pipelines be required to provide the same services to the communities whose property will be used to send those services elsewhere. If the Tennessee Pipeline is approved for Delaware County, DCBS requests that FERC require the Applicant to construct a natural gas distribution system to provide service to residents in Franklin, Davenport, Sidney, and other Delaware County communities where such service is not currently available. In addition to reducing the costs of homeownership, the availability of natural gas will make Delaware County more attractive to manufacturers, helping to bring good-paying jobs to this area.

Local infrastructure Impacts, Protection and Support

The County has a duty to ensure that the local infrastructure is protected and maintained for the benefit of residents and businesses. Taxpayers bear the financial burden of maintaining local roads, bridges and buried infrastructure. At this time, County-owned roads, culverts and bridges are in good condition. They are maintained at a level that provides good service to the taxpayers of the County. They are, however, not designed or constructed to accommodate heavy construction traffic. They are essentially roads that have developed over time from their origins as farm to market roads.

The nature of heavy vehicular traffic during construction of this Project may cause distress to local roads, culverts, bridges and other associated infrastructure. The Applicant will necessarily need to traverse County highways, roads, bridges and related fee-owned land, right-of-way or easements owned or maintained by the County, with heavy machinery, including but not limited to, trucks, construction machinery, drilling equipment, and other related vehicles and project components. Further, portions of the Applicant's proposed project may be buried beneath local roads-or at the very least, will cross them-resulting in the disturbance and potential degradation of those surfaces. Tennessee Pipeline must be required to work closely with the Delaware County Department of Public Works, as well as Town and Village Highway Departments, to assess potential damage or traffic disruptions, develop plans to minimize or avoid negative impacts to local communities, take steps to avoid undue harm to local infrastructure, and compensate communities for any damage done to that infrastructure. Further, the Applicant must be required to comply with local specifications on road surface restoration in the event sections of roadway need to be removed and replaced.

Further, each spring between the general periods of March 1st to April 15th the county posts certain roads due to loss of bearing capacity when the frost goes out. During this period, roads are posted for 4-ton axle limits in accordance with Article 4 Section 1650 of the New York State Vehicle and Traffic Law. Therefore, during that period, no construction traffic exceeding those limits will be allowed. Applicant must be required to consult with local communities to coordinate around and abide by these seasonal closures.

Prior to the commencement of any construction or clearing for an approved project, the Applicant must be required to pay for road surveys to assess the condition of local roadways before the project begins. Restoration of roadways will be required to bring these roads at least back to the condition they were in at the time construction started.

Finally, neither the County, nor its Towns or Villages allow New York State-issued Divisible Load Permits for any vehicles hauling over County, Town or Village roadways. Applicant cannot be permitted to use such permits to haul heavy loads on the local roads.

It is the County's preference that these matters be memorialized in a road use agreement with the Applicant.

Therefore, the County requests that FERC require, as a Certificate condition, that the Applicant negotiate and enter into such agreements with the County prior to commencing any work which utilizes local roadways.

Community Benefit Projects

The County has already proposed a number of projects which it believes should be funded by Applicant, including the rehabilitation and upgrading of the County's Emergency Radio Communications System-which would be essential to the area's ability to respond to any emergency related to the pipeline-as well as funds for stormwater protection projects, flood mitigation, septic management, community planning efforts, and economic development grants and programs. These community benefits will aid in compensating residents for the inconvenience and risk associated with hosting a major gas pipeline, as well as the further reduction in the County's ability to freely utilize its lands.

Other potential community benefits could be included in the proposed pipeline plan to offset or mitigate negative impacts, such as the installation of broadband along the proposed utility corridors, or the upgrade or improvement of existing infrastructure.

Flooding and Steep Slopes

In recent years, Delaware County has experienced historic and devastating flooding. Construction of the proposed pipeline will take place in several areas of steep slopes, and the project will cross multiple waterbodies. Therefore, it is imperative that the Applicant avoid, to the greatest extent possible, locating the project in areas particularly vulnerable to flooding or significant erosion. Where that is impossible, the Applicant must be required to employ protective mitigation measures for steep slopes and karst hazard areas. Stream crossings must be designed to withstand a 100-year storm event to minimize the risk of scouring. As Applicant continues to investigate potential impacts of its project, and available alternatives, these issues must be given significant weight and attention.

Agricultural Lands

Agriculture represents a significant part of Delaware County's economy, and organic farming makes up an important part of that sector. Local organic farmers rely on the pristine setting, clean water, and healthy soils to aid them in cultivating produce, milk and other products, and their customers place a high value on the integrity of these crops and products. To the extent that the pipeline would be sited on or in the vicinity of an organic farm, measures must be taken to prevent the pipeline from jeopardizing farm operations. For example, organic straw or hay should be used as mulch or cover on disturbed agricultural lands which are part of a certified organic farm, and the use of pesticides or herbicides to maintain the pipeline easement cannot be permitted.

Further, a robust agricultural mitigation and restoration program should be required, and it should be developed in consultation with local community groups, such as the Cornell Cooperative Extension and the Delaware County Soil and Water District. The Applicant's agricultural monitoring programs must involve local communities, the information gathered should be offered to local agricultural agencies, and all local groups should be able to engage with the Applicant in the event mitigation and restoration has not adequately addressed agricultural impacts. In addition, whenever pipeline segments will be located in an agricultural field, the Applicant must be required to provide adequate depth to cover and corrosion protection to avoid negative impacts to these sensitive properties.

Natural Gas Pipelines in the County: The Constitution Pipeline Experience

Delaware County is already home to three major natural gas and propane pipelines, one of which follows essentially the same path as the proposed Tennessee Pipeline. The County's recent experience with the Constitution Pipeline has made officials especially wary of additional projects like the Tennessee proposal. The County urges FERC to require Tennessee Pipeline, and all other applicants, to engage with local communities in a cooperative and transparent manner, providing regular updates, coordinating with local highway

departments and emergency responders, and ensuring this cooperation will continue once the Certificate is issued. Communities must be provided with mechanisms for addressing post-Certificate problems and noncompliance with Certificate conditions, and financial support for such compliance monitoring should be required of the Applicant. If a community cannot afford the fight required to enforce Certificate conditions or agreements made by the Applicant in order to obtain the Certificate from FERC, it renders those conditions meaningless.

Cumulative Impacts of Energy Infrastructure

The County remains very concerned about the cumulative impacts of having so many major natural gas and electric transmission corridors passing the community. Despite bearing the many burdens of hosting so much public infrastructure, the County fears it will see very little benefit at all.

Considerable interstate and intrastate utility infrastructure already exists here-from the existing major natural gas and propane pipelines and electric transmission lines, to a major electric substation and natural gas compressor stations, to the New York City water reservoir and aqueduct system-even without Tennessee's proposed pipeline and compressor station improvements. Given the ubiquitous utility infrastructure currently burdening the community, analysis of the Tennessee Pipeline's potential community and environmental impacts should include cumulative impacts of additional energy development in a concentrated area. Further, analysis of impacts to land use and the local economy should include a discussion of the effects of infrastructure-encumbered lands in Delaware County.

Further, if the Tennessee Pipeline commenced construction after the Constitution Pipeline was completed, the community would be faced with a never-ending construction project targeting the same areas for disturbance. One potential method for reducing the cumulative impacts of these two specific projects is to require that the Tennessee and Constitution Pipelines, if both are fully permitted and move forward, are constructed simultaneously within a consolidated or shared gas pipeline corridor. New York State Governor Andrew Cuomo has urged that this State's policy for infrastructure development should emphasize collocation within existing, already-disturbed corridors. To the extent that such collocation is possible here, it should be required, rather than permitting the Tennessee Pipeline to disrupt additional previously-undisturbed lands in the County.

The County also urges FERC to perform a more general analysis of the overall cumulative impacts of continuing to concentrate energy infrastructure in communities that happen to be located at a strategic point in the nation's energy network, including impacts to agriculture, local economies and housing, property values, tourism, recreation, cultural resources, encumbrance of local lands and impacts to land use and community planning, socioeconomic effects and quality of life. Ultimately, energy siting and planning should include a comprehensive view of the existing infrastructure already present in a given community or region, and the extent to which communities cannot-or should not be expected to-cede more of their lands to infrastructure projects which provide negligible local benefits and bring no additional energy or services to those communities.

Land Use Impacts

Numerous landowners in Delaware County have placed significant acreage into 480 and 480a Forest Management Plans, or have adopted Conservation Easements or other agreements restricting development on their property. To the extent that these landowners' Management Plans or agreements would be impacted by the proposed pipeline, the Applicant should be required to work with landowners to facilitate the amendment of management plans, the provision of detailed maps for so doing, and, where necessary, to engage professional foresters or other professionals to make these changes. The costs of these changes should be borne by the Applicant.

Further, where the pipeline would be located near populated areas or commercial development, consideration must be given to the impacts to land use that the presence and safe operation of the facility will have. For example, what kinds of land uses will be prohibited within certain distances of the pipeline? Are there

commercial or industrial uses offland which are incompatible with having a pipeline nearby, such that the placement of the pipeline would restrict a community's ability to allow such development in nearby areas? Local communities must be consulted regarding the extent to which future planning efforts or development proposals may be inhibited or foreclosed by the presence of the pipeline.

Lastly, to the extent that the placement of the pipeline on a small or irregularly shaped tax parcel, and the setbacks required therefor, eliminates a landowner's ability to use that parcel because of lot size or dimensions, FERC should direct that landowners be paid compensation for the full value of their property. Neither the local tax base, nor individual landowners, should be on the hook for entire tax parcels which are rendered unusable by the pipeline.

Municipal Cooperation and Transparency

The Applicant will need work closely and cooperatively with impacted communities to address emergency services issues, and to coordinate with municipal governments on such issues as local road use and traffic mitigation, and the potential need to use or cross municipal property or rights-of-way for siting, construction staging areas or other purposes. Further, as part of its environmental review, the Applicant will need to perform studies, the data and results of which could be helpful to the County. The County requests that it be provided access to the information collected in these studies-not merely their ultimate conclusions. Such studies and investigations, already proposed by the Applicant in its scoping documents, would include: the project's potential impact on property values, mortgages and homeowners insurance; detailed construction and implementation plans; agricultural mitigation and restoration plans, and the progress thereof; information on proposed water withdrawals; mapping and GIS information; notification of the Applicant's intention to utilize eminent domain. An Applicant's stated assurances of cooperation and transparency are a positive step, however, given the County's recent experiences on other projects, a direction by FERC requiring the Applicant to meaningfully engage and cooperate with the community may be more availing.

The County appreciates the opportunity to submit these preliminary comments on the proposed project, and reserves its rights to provide additional comments as this project proceeds through review.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)

Docket No. CP16-21-000

Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214, WE, ANDREW J. ZAROULIS and KARIN THEODOROS , both of Tewksbury, Middlesex County, Massachusetts, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7

of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Karin Theodoros
87 Catamount Road
Tewksbury, MA 01876
978-364-6176
attyktheo@gmail.com

II. INTEREST OF PETITIONERS

We have a direct interest in the outcome of the proceedings. Construction, operation and maintenance of the Pipeline would adversely impact us as follows:

1) It will impact our home. Our home is less than 1 mile from the direct path of the pipeline as currently proposed. Our home is not shown on the maps the Applicant has filed, but it sits across the pond shown on the Map entitled Segment N, Lynnfield Lateral, Alignment Sheet TE-SEG_N-005. We sit at an elevation of approximately 300 ft, on a forested hillside, so we have a view of the wooded area on the other side of the pond and through which the path is presently proposed. Our home is also within less than one mile of the path called "Line 200 to Turnpike Alternative Tewksbury Modification 2", as proposed by FERC in their December 8, 2015 letter to Tennessee Gas. Our property is part of a heavily travelled major wildlife corridor and upland habitat connecting the Shawsheen and Merrimack Rivers and passing through the Town owned Article 97 Conservation land mentioned below. We have seen many species of wildlife on our property which probably originated in the Article 9 habitat, including a fisher cat. We regularly see herds of deer, flocks of wild turkeys, all kinds of colorful birds, foxes, especially in the spring with their kits, at least one wolf and one ground hog, among many other species that live in the wooded corridor.

2) It will impact other real estate we own. Andrew owns an interest in another residential parcel consisting of 9 acres located on Longmeadow Road, Tewksbury, MA. It is not shown on the maps filed with this Application at this time, but it is shown on the maps for the path called "Line 200 to Turnpike Alternative Tewksbury Modification 1", proposed by FERC to go through Tewksbury in their December 8, 2015 letter to Tennessee Gas. In fact the Longmeadow Road Property is less than 500 feet of this proposed alternate route. This property abuts Trull Brook and the Great Swamp, important wetlands areas and habitats. It sits in a flood plain.

3) It will impact our impact and alter our neighborhood. This entire section of Town is known as North Tewksbury and is primarily a residential zone consisting of subdivisions of single family homes in a densely wooded suburban setting. Tewksbury sits in the watersheds of four rivers and as such tends to be very wet and plays a vital role in replenishing clean drinking water supplies. There are many glacial aquifers here. A large portion of this neighborhood through which the current path is proposed is in the Tewksbury Ground Water Protection Zone and the Massachusetts DEP Zone II Well Head Aquifer protection Area. The neighborhood here is thickly wooded with hundreds of mature trees. It is in its natural forested state and is part of a contiguous wildlife corridor providing valuable wetlands and supporting uplands habitats. There are many named streams and valuable wetland areas throughout the area of the path, in various yards, which ultimately feed the drinking water supplies and which require the mature trees for protection. The maps to date have failed to show these streams and/or properly identify them. This neighborhood will be destroyed by this proposal and the quality of our lives will be diminished. The ground water protection areas and the wellhead aquifer protection areas will be irreversibly damaged.

4) It will deprive us of historical, cultural, archaeological, and geological resources. There are many historically significant New England Fieldstone walls, dating back to the 1600's. These are recognized by the

Commonwealth of Massachusetts as being unique to New England and the history of the immediate area, and therefore have great historical, cultural, archaeological and geological significance.

5) It will create a new Utility Right of way clear cut up to 200 feet in width. There are no Utility Corridors or Power Rights of Way near this proposed path through our neighborhood. The setting of the homes throughout this section of Tewksbury is private, quiet and natural, one of natural beauty and balance. These things have great value as is proven by the fact that the homes in this section of town have the highest resale values.

According to the plans, the Tennessee Gas Pipeline Company intends to create a new right of way through back yards of the single family homes along just about the entire path. According to the plans, they will take these back yards by eminent domain and, along the majority of the path through town, create temporary and permanent clear cut easements of up to 200 feet in width for the purpose of installing a 24" 1460 psi high pressure pipeline. In some cases, the work areas are so close to the homes, they actually touch the homes. The neighborhood will be splintered, the character of the neighborhood will be destroyed, many of the homes will lose their privacy and be forced to suffer the sounds of the high pressure gas wooshing through the pipeline, as well as pigging operations. All of the homes and the health, safety and welfare of the families in them will be endangered and at risk because they all are inside the blast / incineration zone.

6) It will deprive us of the benefit of Article 97 of our State Constitution, as well as the natural Town owned beauty that we enjoy. The path as proposed will destroy valuable Town owned Article 97 conservation land shown as Lot MA LL 77.00 on Segment N , Lynnfield Lateral, Alignment Sheet TEG-SEG_N-006, and will deprive us of the benefit and enjoyment. This parcel consists of 18 acres, is an NHESP Certified Rare Species Habitat and Biomap 2 Core habitat. It has at least 2 certified vernal pools in it.

7) It will diminish our quality of life. During construction, we will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of privacy. This section of Tewksbury is well known to consist of ledge so substantial blasting would be inevitable. This will endanger the structural integrity of our home, of the other homes in our neighborhood, and adversely impact our health and sanity, as well as our use and enjoyment of our property. It will unconscionably disrupt the wildlife.

8) It will hinder our ability to move about Town and cause our commutes to be inconvenient, aggravating and expensive. According to the plans, TGP intends to clear cut and cross Route 133, the only main road between our home and the highways. (See MP 3.0 on the alignment sheet TE-SEG_N-004). It also plans to clear cut across Bellevue Road at Kendall (See MP4.0 on sheet TEG-SEG_N-006) This makes commuting to and from our home to certain other locations almost impossible. There are no reasonable alternate routes for us to travel in those directions. This creates a great risk for us and other homeowners should we need emergency responders. We will be greatly inconvenienced and endangered.

9) In addition to being property owners we are customers and rate payers. We support a move away from fossil fuels and toward renewable energy sources. We have already opted to pay slightly more to purchase electricity that is generated only from completely renewable fuel sources under the New England Green Start Program. Massachusetts is a recognized leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Massachusetts is not suffering from an infrastructure crisis. It has an LNG facility in Everett that has been sitting unused. The Attorney General's independent study has established that there is no need for this additional NED infrastructure. This pipeline is not necessary at all to service New England. This Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience. It is clear at this point in time, the true goal of the NED is to move fracked gas to the coastal areas for sale and export to foreign countries.

10) It is detrimental to our retirement. We are nearing retirement and our Tewksbury investments have a major asset. Our equity here was to be our retirement. We were depending on our equity to survive. We are both seasoned attorneys and licensed Massachusetts Real Estate Brokers. We know from experience, the detrimental impact this pipeline will have on our investment here. The value of our property will be dimin-

ished by this pipeline path. In fact, the resale value of properties nearby has already been diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive us of our retirement funds.

11) If this application is allowed, the outcome will subject to us to bad legal precedent. The use of eminent domain to benefit the profits of a private, publicly traded company is wrong. Taking land to build an infrastructure for Private profit was not the original intent of the Natural Gas Act. There is no public necessity here. We are also fully aware that, as a publicly traded company, there is nothing to protect us, from the risk that someday, a foreign entity who is not friendly toward us, may own the controlling interest. We are also aware that Kinder Morgan is in the business of leasing the use of pipelines to transport whatever substances generate the greatest profits for them. Although they may now be applying for a permit under the Gas Act, there is nothing to guarantee they will ultimately use it for the purpose of transporting fracked gas to Massachusetts.

12) If the path of the pipeline changes, we may be impacted in other ways.

13) We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, ANDREW J. ZAROULIS and KARIN THEODOROS, respectfully request that the Commission grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Respectfully submitted, this 14th day of January, 2016.

Andrew J. Zaroulis and Karin Theodoros

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of) Docket No. CP16-21-000
Tennessee Gas Pipeline Company, L.L.C.)
Northeast Energy Direct Project)

MOTION TO INTERVENE OF JIM OGWONOWSKI

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("FERC") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, Jim Ogonowski files this motion to intervene in this proceeding with respect to the property at 713 Broadway Road, Dracut, Massachusetts (the "Property" or "Farm").

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for construction and operation of the proposed Northeast Energy Direct Pipeline Project (the "Project" or "NED"), FERC Docket No. CP 16-21-000. The Project will be located on or near the Property.

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Richard A. Kanoff

Jim Ogonowski

Burns & Levinson LLP
125 Summer Street
Boston, MA 02110
Phone: (617) 345-3210
Fax: (617) 345-3299
Email: rkanoff@burnslev.com

713 Broadway Road
Dracut, MA 01826
Phone: (978) 846-0169
Email: jimogo@comcast.net

II. INTEREST OF PETITIONER

In TGP's original filing, the Farm, comprised of over 125 acres, was significantly impacted by the Project's multiple pipelines: 2,500 feet of 30 inch mainline pipeline and over 5,000 feet of pipelines for two laterals--one from Dracut to Lynnfield and one from Dracut to Haverhill would be sited on the Property. The Farm was proposed to have 7,500 feet of pipelines crossing fields, waterways, and clear cutting irreplaceable 100-year old forest land.

The specific impacts of this proposal were detailed in written Scoping Comments submitted on October 16, 2015 by Mr. Ogonowski in the related docket PF14-22-000 and these comments are incorporated by reference herein. In the Project's present configuration, the Farm is in close proximity to and will be adversely impacted by toxic emissions from the nearby proposed compressor station and also by construction and operation of the Project. Construction and operation of the Project will have an adverse impact on, among other things, water and wetland resources, animal life, crops, health and safety, and property values of the Farm. In addition, there remains uncertainty with respect to any future changes in the route.

Specifically, with respect to impacts from the compressor station, emissions from the compressor station include discharges of such harmful carcinogens and heavy metals as benzene, lead and formaldehyde. There is no safe exposure to any of these emissions. Benzene is known to contribute to bone marrow suppression and can lead to leukemia. Lead is harmful to people with compromised kidney function, and can be the difference between Stage 3-4 CKD and hemodialysis. Methane through exposure to sunlight makes formaldehyde. These emissions will pollute the soil, crops and water resources at the Farm.

In addition, the Property will be adversely impacted by construction and operation of the Project. The Project will be constructed nearby and the impacts of trucks, blasting, and other construction activities will have an impact on the Property's waterways, wetlands, groundwater, operation, air quality and property value.

Accordingly, Mr. Ogonowski submits that the Property will be adversely impacted by the Project and he has important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

For the reasons stated above, Mr. Ogonowski has an interest which may be directly affected by the outcome of this proceeding and his participation is in the public interest.

Wherefore, for the foregoing reasons he respectfully requests that FERC grant his motion to intervene.

JIM OGONOWSKI
By his attorneys,
BURNS & LEVINSON LLP

Individual	lynette.shanahan@gmail.com	

Basis for Intervening:

I live in Nassau, New York, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a landowner directly impacted by the pipeline and the compressor station. My residence is located directly across from the compressor station. I live within the incineration zone and I and my children would be at physical risk. I am a resident whose source of drinking water supply is at risk because of the construction and operation of the compressor station, pipeline, and other facilities. I am a member of an impacted community who has grave concerns about the various impacts to the local economy, environment, aesthetics, health, and quality of life. I enjoy the out of doors and do not want any state, or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by an activities of this commercial project. I choose to live in a rural area is because of the serene quality of life including less light and sound pollution which will be negatively impacted by the construction and operation of the pipeline and compressor station.

Basis for Intervening:

I am an abutter to the project and I may lose my land to eminent domain. We do not even own an acre and to lose the amount of land that we may, will be very disrupting to our lives. We are very bothered by the potential noise pollution and air pollution as well as the dramatic increase in traffic on our small cul de sac. We

have children that will not be able to play in their yard due to the work. There are major concerns related to the safety of the area now that all this activity as well as the pipeline filled with gas is being implemented. We know that we will not benefit from this project. The gas line is only being put in to benefit Kinder Morgan. My family as well as the town of Lunenburg as no interest in this gasline being put in. We are begging you to prevent this project from happening. It will disrupt and destroy our quaint little quiet town and in particular, our neighborhood and property.

20160115-5580

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Re: Tennessee Gas Pipeline/Kinder Morgan
Northeast Energy Direct
Docket No. CP16-21-000

David Coe is an Albany County resident who fears the route of the Northeast Energy Direct could be changed once again to go near his home in Glenmont, NY. David Coe is also a member of the First Reformed Church of Bethlehem. As a member of the Church, he has a stake in the future viability of the Church's Stephen Van Rensselaer Forest and Wildlife Preserve. Lastly, as a citizen David Coe has a stake in the future of the planet and the health and safety of its citizens which would be adversely affected by the pipeline's capacity to assist and augment additional releases of carbon dioxide gas into the atmosphere.

Pursuant to Commission Rules 385.214(b) and 157.10, David Coe moves to intervene in the above captioned proceeding. This intervention is timely filed.

I. CONTACT INFORMATION

Please enter David Coe below on the official service list for Docket No. CP16-21-000. All pleadings, filings and correspondence in this proceeding should be served on the following:

David Coe
291 Wemple Rd
Glenmont, NY 12207
FERC ID #F317609
davidbrookscoe@gmail.com
518-439-2057

II. MOTION TO INTERVENE

David Coe seeks to intervene. Personally he lives near the original route of the pipeline through Albany County and knows that the route of the pipeline can change and fears there is a chance it could be re-routed again to go through property adjacent to his house in Albany County. His home abuts large parcels of undeveloped land towards the east and north which could be suitable for pipeline route relocation(s). His home is serviced by an on-site well for domestic water. That well is drilled through a methane-bearing rock formation which could be adversely affected by pipeline construction activities such as excavation or blasting. Any changes to the quality of his well water will have a direct bearing on the current and future value of his property. In addition, his home could be vulnerable to structural damage from pipeline construction activities.

David Coe is also a member of the First Reformed Church of Bethlehem. As a member of the Church, he enjoys the natural and spiritual resources of the Stephen Van Rensselaer Forest and Wildlife Preserve. The currently proposed pipeline route will cut directly through the Forest and Wildlife Preserve, adversely affecting the topography, trails, archaeological resources, wildlife and watershed of the forest. He has been active educating other Church Members about the FERC process and how they can influence the progress and/or location of the pipeline.

David Coe opposes the proposed project. Continued extraction of fossil fuel is causing climate warming and is endangering life on our planet. Fracking as an extraction process is endangering the health and safety of people living near the fracking fields and workers in the industry. According to Massachusetts Attorney General Maura Healy's Nov. 18, 2015 study, the additional capacity that this pipeline would provide is not needed to meet the region's future electricity demand.

Continuing to rely on fossil fuel is slowing our transition to renewable energy. If we put our energy and money into creating renewable energy sources we could meet our energy needs with these sources. The destruction of habitat created by the building of the pipeline is significant. Leaks along the pipeline and venting at compression stations release methane and other toxic chemicals into our air, soil and water, making me fearful about the effect this has on the health and safety of residents along the pipeline. I object to the fact that in the FERC regulations people who live in rural areas are less protected (allowing thinner pipes, shutoff valves farther away and less inspection).

None of this gas will be used by New Yorkers, but New Yorkers will be forced to absorb the adverse environmental and economic impacts, not to mention the intrusion on individual landowners' property. Kinder Morgan has made clear to its stockholders that it expects to export much of this gas, making big profits in so doing. Kinder Morgan has been lobbying to have electric users pay a tariff to help pay for this pipeline. Since this project is clearly not for the common good, I object to Eminent Domain being used for private profit.

WHEREFORE, for the foregoing reasons, David Coe requests that the Commission GRANT this motion to intervene.

Respectfully submitted,

David Coe

291 Wemple Rd

Glenmont, NY 12207

FERC ID #F317609

davidbrookscoe@gmail.com

518-439-2057

January 15, 2016

20160115-5582

Submission Description: (doc-less) Motion to Intervene of James Moody under CP16-21-000.

Submission Date: 1/15/2016 4:27:57 PM

Filed Date: 1/15/2016 4:27:57 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
---------------------	--------------------------------	----------------------------------

Individual	jimbmoody@gmail.com	
------------	---------------------	--

Basis for Intervening:

CP16-21-000Basis for Intervening:

I am a homeowner in the town of Richmond, New Hampshire, and I want to intervene in this proceeding to oppose the NED pipeline. We will be directly affected by the outcome of the proceeding because our home is within feet of the proposed pipeline path, and the pipeline stretches across our property and through our watershed. We are in the blast zone and we are at physical risk because much of the land has no road access and our town has no ambulances or full time rescue squad. The pipeline construction would dramatically and negatively affect our well water quality and the quality of the lake we share with the town. A summer camp filled with children (who will also be at physical risk) would also be dramatically affected by any negative to our lake's water. As homeowners, we are gas and electric rate payers.

Dwarf wedge mussel (*Alasmidonta heterodon*) - Critically imperiled (global - critically imperiled)

Eastern red-spotted salamanders (*Notophthalmus viridescens*)

Jefferson Salamander (*Ambystoma jeffersonianum*) - Vulnerable to extirpation or extinction

American toads (*Bufo americanus*), and many others.

Several of these and other species with habitats on the northeastern shore of Sandy Pond are on the Endangered list maintained by the NH Fish & Game Department. These species are in danger of destruction as a result of run off from construction and post-construction activities.

Blasting during construction could destroy the spring that feeds our home with fresh drinking water and could alter the flow of water to Sandy Pond. If Kinder Morgan, or whatever company is charged with maintaining the right of way is allowed to use defoliation agents, it is a certainty that the toxins would flow downhill to Sandy Pond, and it is likely that most or all marine life in Sandy Pond would be destroyed.

The unwanted invasion of the pipeline on our property brings with it the danger of a catastrophic event that could destroy our property entirely. Just the worry of such an event occurring will have a detrimental affect on our family members - now and for generations to come. It would be a horrendous thing for FREC to allow Kinder Morgan bring that kind of danger, destruction and anxiety to a historic family home in the pristine hills of southern New Hampshire in the name of PUBLIC GOOD.

What I have heard is that "FERC NEVER MET A PIPELINE PROJECT IT DIDN'T LIKE." I hope that is not the case. I hope that the reader of this intervention will look critically at the public good of this project and the damage and destruction that it will cause, and deny approval of this project.

Thank you.

Tom Moody

Basis for Intervening:

To Federal Energy Regulatory Commission

RE Docket number CP16-21

From

Rev. Sarah Pirtle

I am filing for intervention in the Northeast Energy Direct Project proposed by the Tennessee Gas Pipeline. I am a homeowner in Shelburne Falls, MA, for 22 years and a resident of Franklin County MA for 40 years. The proposed pipeline would pass through my town -- touching farms and homes -- and our whole county would be directly affected by the pipeline. Our town government did a study of the proposed pipeline and we agreed that the pipeline

would destroy our community economically, geologically, socially, and impact our health

negatively, making our towns unliveable. I do not say this lightly. I speak as a chaplain aware of what a community needs to be viable. The compressor stations slated for Plainfield, Deerfield, and Northfield in Franklin County studies have shown would be

destroying land and health for those nearby in a broad radius.

Since we are a valuable close-knit county, each citizen -- even if the proposed pipeline did not directly get placed on their land -- would know others whose lives and land have been ruined by such an ill-conceived endeavor.

I ask FERC to protect our Western Massachusetts region by not allowing an interloper, bent on self-centered economic gain to enter our farmlands and homes for the purpose of selling fracked gas in European markets. We are clear from our research that this project has no benefit for us here and any benefit would accrue only to stockholders. Save our American democratic life. Take democratic action and prevent this deadly project.

Sincerely,

Rev. Sarah Pirtle
Shelburne Falls, MA 01370

Basis for Intervening:

I live in the Town of Bethlehem in New York and would like to intervene in this proceeding to oppose the NED pipeline. I have several interests which may be affected directly by the outcome of the proceeding. The proposed pipeline could negatively impact the quality of my town's drinking water as the pipeline crosses my town's water supply, putting it at risk. In addition, I am a CSA member (Community Supported Agriculture) and the proposed pipeline would directly impact the local farm from which I buy all of my food from May to November. It would cut through the farm's property damaging the natural landscape there and could potentially harm the farm's pond and well water - used by the farm to produce its organic harvest, which is of great value to me and many other people locally. Beyond this I am concerned about the justice of confiscating the properties of farms and landowners so that a private company may pursue profit. I believe the Kinder Morgan NED pipeline is unnecessary and that it will do more harm than good for the citizens in my community and across the Northeast.

20160115-5586

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Project)

MOTION TO INTERVENE, AND COMMENT

NOW COMES Ernest A. Kirslis and pursuant to Rules 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission ("FERC" or the "Commission"), 18 C.F.R. § 385.212 and 385.214, and regulations under the Natural Gas Act ("NGA"), 18 C.F.R. § 157.10, respectfully moves to

intervene in the above captioned proceeding initiated by Tennessee Gas Pipeline Company, L.L.C. (“TGP”), a subsidiary of Kinder Morgan Energy Partners, L.P. (“KMEP”).

STANDING

Movant, Ernest A. Kirslis, a person as defined by 15 USC 717a, is the owner of the Calhoun Pasture (the “Property” or “NH WD 168.00”), a property of historic significance so named in its deed to this day, located in the Town of Rindge, New Hampshire. The Property will be affected by the Alternative Route as proposed in the TGP December 8, 2014, Supplemental Filing-Adoption of Alternative Route as Part of Proposed Route Wright, New York to Dracut, Massachusetts Pipeline Segment of the Northeast Energy Direct Project (“NEDP” or the “Project”) and, as a result, the Property will be directly, substantially and adversely impacted by the construction, installation, modification, operation, maintenance, and possible or ultimate abandonment of the Project. The movant’s interests will be directly affected by the outcome of this proceeding, and cannot be adequately represented or protected by another party. If the movant is not permitted to intervene in the proceeding, it is highly likely the Property will be adversely affected and bound by action taken in this proceeding without having had an opportunity to be heard.

BACKGROUND

On September 15, 2014, TGP filed a request to use the Commission’s pre-filing procedures for the proposed NEDP, an interstate gas pipeline and its facilities. NEDP would be comprised of two components, a Supply Path Component from Troy, Pennsylvania to Wright, New York, and a Market Path Component (“MPC”) from Wright, New York to Dracut, Massachusetts. By notice issued October 2, 2014, the Commission approved TGP’s request to use the pre-filing procedures for the NEDP.

On November 5, 2014, Tennessee filed various draft reports including Draft Resource Report 10 (“DRR10”) with the Commission.¹ In DRR10, TGP presented evaluations of several major route alternatives for the MPC segment of the NEDP. Among the route alternatives discussed in DRR10 for the MPC were the New York Powerline Alternative, and the New Hampshire Powerline Alternative (“NHPA”). The NHPA route deviated from the proposed route in Massachusetts near milepost (“MP”) 108. Instead of remaining in Massachusetts and continuing through the state to its end destination in Dracut, Massachusetts, the NHPA route involved a major shift of the NEDP route completely out of the State of Massachusetts and into the State of New Hampshire.

The NHPA route only enters into southern New Hampshire and continues across it to return back into the State of Massachusetts and rejoin the proposed route of the Wright, New York to Dracut, Massachusetts Pipeline Segment near MP 175. The NHPA as named diverts the pipeline route over a much longer distance through the State of New Hampshire. While the original Market Path route involved 177 miles of pipeline, this new alternative route was stated in TGP’s Dec. 8, 2014 NED supplemental filing as increasing the length of the route eleven (11) miles to 188 miles in length. It also requires an additional compressor station. The NHPA route diversion involves more than seventy-one (71) miles, or approximately 375,000 feet, of pipeline in southern New Hampshire, in part co-located next to or within an existing 345kV (the highest voltage of any line in the state belonging to Eversource) electric energy transmission line corridor.

On November 20, 2015, TGP filed its Application for a Certificate of Public Convenience and Necessity pursuant to sections 7(b) and 7(c) of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of the Commission’s regulations, 18 C.F.R. 157.1 et seq., thereunder seeking authority to Construct, Install, Modify, Operate and Maintain Certain Pipeline and Compression Facilities, and to Abandon Other Facilities, all as part of the proposed Project. On December 7, 2015 the Commission gave Notice to stakeholders of TGP’s application.

ADVERSE IMPACT AND COMMENT

I. PREVIOUS ATTEMPTS IN WORKING WITH TGP

Prior to January 23, 2014 the Movant was notified by TGP as an affected land owner by the Project. The movant contacted TGP and was directed to Mr. Donald Oliver identified as a “land agent” for Kinder Morgan/TGP and the appropriate point of contact to present questions about the Project or to discuss concerns. On January 23, 2014 the movant contacted Mr. Oliver by telephone resulting in conversations and the exchanging text messages. Although Mr. Oliver related that TGP required a four hundred (400) foot wide right-of-way (“ROW”) which TGP centered on the existing 345kV electric utility corridor, construction of the pipeline would only require a fifty (50) foot wide permanent ROW outside of and adjacent to the existing utility corridor, and another fifty (50) foot temporary ROW work area adjacent to the permanent one. He also stated the Project was planned to be constructed on the south side of the corridor in relation to it and affecting the Property, though could provide no basis as to why. I noted that such a route would so adversely impact the Property as to require, according to the ROW mandates, removal of over eight hundred fifty (850) feet of historic stone walls, elimination of the driveway entrance from Goddard Road, interfere with the driveway on the property, and in addition to noting that the property was of special historic significance, that even in the existing utility corridor ROW that its stone walls were prohibited from disruption by the electric utility company, and vital to its security. In furtherance of that discussion Mr. Oliver was provided two images of the utility corridor showing the stone walled easement area within it, to which he replied “Got it, thanks”, copies of the existing property’s utility corridor ROW diagram and easement including the specific language regarding the property’s stone walls, to which he replied “Big help. Thanks again.” As was presented to Mr. Oliver, two other TGP employees since then, and stated her again formally in comment to the Commission now, the pipeline and its route threatens the security and aesthetic quality of the properties it would cross. It creates a pathway that does not currently exist that opens private property up with an avenue of travel in the cleared and maintained area above the pipeline.² This is made worse by changing the land topography across landowner’s property after such proposed construction that is not to what predated its presence but to only what is “practicable” in the best interest of TGP and its pipeline.³

Over the next months no further information was available from TGP, and after learning Mr. Oliver was no longer a contact regarding the Project for myself, and no other individual was made available, for specific reasons stated to TGP and filed in comments with the FERC in April, 2015 a decision was made by the movant deny survey permission to TGP. The risk of irreparable damage to the property with TGP’s access without clear and satisfactory limits to impact are simply too great. Comments filed then are respectfully requested to be included again here for the record in full. They may be referenced through the FERC online system here using the FERC file ID# 13839745:

<http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=13839745>.

The movant received no further response from TGP on the information he provided, regarding his letter to TGP, or his filed comments which included the letter and his concerns.

On or about July 20, 2015 TGP filed Alignment Sheet “TE-SEG_I-027” with the FERC for the Project’s proposed 30” pipeline Segment I adversely affecting the Property. With still no further cooperation from or dialogue with TGP, the movant again filed timely comments on October 16, 2015 for consideration regarding the Commission’s forthcoming Draft EIS. Within that filing was a formal request to be granted consulting party status under Section 106 of the National Historic Preservation Act. Those comments also filed on October 16, 2015 are again respectfully requested to be included here for the record in full. They may be referenced through the FERC online system here using the FERC file ID# 14017245:

<http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=14017245>.

The movant has received no further response from the FERC regarding his Section 106 request.

On or about October 30, 2015 the movant received a call from Ms. Martha Hudzinski with TGP. She stated she had recently become the contact for affected land owners in the communities of southern New Hamp-

shire including Rindge. She acknowledged that the movant had recently filed comments, although she was unaware of the movant's April letter which created concerns. She reiterating she only recently became involved with the Project and those affected properties involved in southern New Hampshire. Rather surprisingly, during the movant's expressing concerns about a significant riparian buffer zone than begins on the Eversource owned parcel to the north of the Property, and extending onto the Property, she stated she did not know what a riparian buffer zone was. She also was dismissive about the movant's concerns regarding the Property's stone walls, solitary in her position TGP would be removing and replacing whatever stone walls existed, though had no comment on how the stones would be inventoried, handled, and impact to the existing aesthetic quality inherent in stone walls of up to and more than two hundred years in age. She also had no comment regarding the movant's previous multiple requests related to working with TGP cultural resource associates or willingness to consider the movant's multiple requests the pipeline route be shifted eliminating some and potentially reducing other impacts to the Property.

On November 20, 2015, TGP filed an updated Alignment Sheet labeled "TE-SEG_I-023" with the FERC for the Project's 30" pipeline Segment I that even more substantially and adversely affects the Property than TGP's previously filed map. This increased impact to the Property in the wake of the movant's comments and attempts to discuss and work with TGP regarding a great number of concerns, to avoid, minimize or mitigate adverse impacts is testament to the actions of TGP being in complete opposition to its claims that TGP "will work with the... landowners to avoid, minimize, or mitigate any potential impacts" on affected properties.

As the movant's request for consideration to be granted consulting party status regarding Section 106 review has not been answered by the Commission. The movant's request remains and is respectfully reiterated herein. Further comment regarding a feature related to the Property's historic significance requires specific comment here. Specifically, within the Property's easement area is a rectangular depression consistent with the previous foundation of a building with potential to yield important information through archaeological or other investigation about the property's past which would be completely destroyed as in the pipeline path. It may date to pre-colonial times before the Property's sub-division to the deeded "twenty-six acres and eight square rods" before John Varnum Platts' ownership of it or from when the parcel's northern boundary abutter was referenced as the "widow Platts' thirds" as afforded by the provision of dower or according to law.

II. TGP AND COMMISSION RELEGATION OF STATE CONSTITUTION ARTICLES

TGP's reasoning for the proposed route change adopting the NHPA included that it would enable Tennessee to avoid, minimize or mitigate crossing Article 97 properties and Areas of Critical Environmental Concern ("ACEC") in Massachusetts.⁴ However, this shift to the NHPA by said reasoning did not make any type of comparison between the New Hampshire and Massachusetts routes and demonstrate a lesser environmental impact or greater public convenience or necessity advantage with the NHPA. This includes but is not limited to upon conservation, agricultural and other types of lands including ACEC in New Hampshire showing less adverse environmental impact by using the in fact longer NHPA route. Furthermore, despite TGP's claim of avoidance and minimization of crossing of certain types of sensitive, or special use or special status properties including ACEC by co-locating the NHPA route alongside or within an existing utility corridor in New Hampshire, TGP adopted the route prior to determining to what extent ACEC existed alongside or within it regarding the NHPA.

Furthermore there is an enormous question that TGP, a private company, and specifically the Commission should consider, on TGP's behalf requesting such certificates and on the Commission's in exercising its authority regarding the issuance of certificates of public convenience and necessity and the ability it bestows upon private companies the right of eminent domain, when the people of an entire state jurisdiction have, as a matter of constitutional law, protections from such actions by private companies rather than public agencies as specifically afforded by their State constitutions. In cases where despite the Commission's decision such a certificate for a project is appropriate, despite filings by an entity requesting such a certificate claim-

ing reasonableness to avoid or mitigate adverse impacts on the property and lives of this country's citizens, the result is the ability for a private company to so freely be entitled to right of eminent domain against the people contrary to the intent of Congress that a claimed need for public convenience and necessity has become so distorted as to no longer be valid. Enormous power is bestowed upon the Commission with its ability to preempt an entire State Constitution. So much so that attention has been drawn previously to that power possibly being misused and a system of checks and balances put in to place to safeguard the rights of the American people. Executive Order 13406 "Protecting the Property Rights of the American People" came into existence because of this potential for misuse and the movant is compelled to bring to the Attorney General's, the Commission's, and each affected landowner's attention to this Presidential Order that "it is the policy of the United States to protect the rights of Americans to their private property, including by limiting the taking of private property by the Federal Government to situations in which the taking is for public use, with just compensation, and for the purpose of benefiting the general public and not merely for the purpose of advancing the economic interest of private parties to be given ownership or use of the property taken"⁵ Specifically it also states: "The Attorney General shall issue instructions to the heads of departments and agencies to implement the policy set forth in section 1 of this order; and monitor takings by departments and agencies to implement the policy set forth in section one of this order."⁶ In addition it states "Heads of departments and agencies shall, to the extent permitted by law: comply with instructions issued under subsection (a)(i); and provide to the Attorney General such information as the Attorney General determines necessary to carry out subsection (a)(ii)."⁷ 15 U.S.C. § 717f(h) affords holders of a certificate of public convenience and necessity the ability to acquire the "*necessary right-of-way to construct, operate, and maintain a pipe line or pipe lines for the transportation of natural gas, and the necessary land or other property... it may acquire the same by the exercise of the right of eminent domain in the district court of the United States for the district in which such property may be located, or in the State courts. The practice and procedure in any action or proceeding for that purpose in the district court of the United States shall conform as nearly as may be with the practice and procedure in similar action or proceeding in the courts of the State where the property is situated*"⁸ While TGP seems to recognize Article 97 of the Commonwealth of Massachusetts' Constitution requires approval by a two-thirds vote from both houses of the Legislature for the required change in land use and is purporting the NHPA a better alternative, this is an outstanding question whether TGP recognition of Article 97 requirements and preference for the NHPA requirements is because the Commission is unlikely to relegate the Massachusetts Constitution TGP is relegating, utterly, Article 12 and 12-a of the Constitution of the State of New Hampshire in adopting the NHPA. It is depending upon the FERC's preemption of it while ignoring 15 U.S.C. § 717f(h).⁹ 10 In all cases where TGP may hold a certificate of public convenience and necessity though cannot acquire by contract, or the landowner refuses to allow the acquisition of their property voluntarily, and amount claimed by the owner of the property to be condemned is \$3,000 or less the appropriate jurisdiction is the State court as a result. Rather than simply relegate State constitutions or expect the Commission or other authority to condemn property, TGP should do their homework, foster better relationships with the communities and landowners potentially affected and selects routes that avoid condemnation proceedings and adverse impacts that are so objectionable as to waste the Commission's and landowner's time.

III. ADVERSE IMPACT TO THE PROPERTY

The NHPA route transverses many stratified-drift aquifers, conservation areas, and crosses or passes near certain unique and special properties. In the Town of Rindge Converse Meadow with a conservation easement on 240 acres held by the Monadnock Conservancy, and The Property, Rindge's historic Calhoun Pasture being developed as an organic farm and are among properties that will be adversely affected. Converse Meadow possesses walking trails well in excess of a mile and is a frequented throughout the year for hiking, snowshoeing, and cross country skiing. The Property only has overlap into a portion of the existing electric utility corridor and the opportunity to avoid some and mitigate other adverse impact of the pipeline route through the most minor of route changes shifting the pipeline route off the Property would result in the following benefits:

- 1) A reduction in the total number of properties affected.11
- 2) Mitigation of adverse impact upon the Property, in development as an organic farm, from the presence of a hazardous material pipeline upon it and contradictory to it, its history, its preservation, and its use.
- 3) Avoidance of the unnecessary permanent restriction upon land regarded by USDA soil type as “farmland of local importance”, specifically zoned for agricultural, not industrial, use.
- 4) The prevention in the prohibition of its agricultural use for the growing of fruit, nut and other trees not prohibited within the utility corridor which would be under TGP’s easement land use restrictions.

The proposed pipeline route given the geology, hydrology (specifically including but not limited to environmental watershed sustainability), hydrogeology, topography, aquifers presence and distribution and other factors will cause direct, indirect, serious, and irreparable damage to the Property. Return of the landscape grade to any deviation from its present topographical contour will divert runoff and contamination processed by a riparian buffer zone that is part of an important ecosystem that directly feeds Lake Monomonac. Should the pipeline be approved, constructed, and eventually abandoned without removal and complete repair of the area where it is being considered for construction, or it allowed to decay the adverse environmental impact from its eventual compromise and contamination to the environment including affected water resources and the surrounding habitats will be catastrophic. Should the pipeline be approved, construction begin and fail to complete and the Project be abandoned untold impact will result with incalculable environmental damage.

As the property continues its development as an organic farm, it is dependent upon drilled and dug wells for its water supply as its sole water source. Construction activities would jeopardize the integrity of that water purity. Additionally, there will be ongoing safety hazards after the project is completed. As the Property would be within the incineration zone, risk of product and future product to include liquefied natural gas and other products will adversely affect the movant, his heirs, successors, or assigns to obtain homeowner’s and other insurance or result in significantly higher premiums due to the Project. Such detrimental impact may restrict or negatively affect the Property’ owner to obtain a mortgage, rendering the property unsellable, essentially eroding its value completely.

The pipeline, if approved, requires a large swath of land to be cleared and kept permanently clear of vegetation. This visual blight will permanently scar the landscape directly adjacent to the property, creates a highly objectionable aesthetic result, and will negatively impact enjoyment of the Property and it’s value.

As the property continues its careful development as an organic farm, and active transition to organic certification, TGP in certain filings states it only recognizes certified organic operations which is beyond its authority to justify not adhering to the use of an acceptable methods free of toxic pesticides and genetically modified plants or seeds which would pose grave adverse impact and risk to the Property. The Property contains truly organic soil which is absent any contamination. As an organic farm that is not required to obtain certification when less than \$5000.00 in income is realized in a year TGP threatens to contaminate the Property without regard for it.. Fruit and nut trees take time to mature and produce. Similarly the increase in a substantially larger buffer zone along the Property’s boundary from products that can adversely affect it to include pesticides and genetically modified plants and seeds used by TGP contrary or its contractors has serious adverse impact. Although TGP provides a policy for damages following the loss of organic certification to a property, food is a fundamental human need and with other energy resources available, the Property as an organic farm is of a higher public necessity than a pipeline and its route which can be easily moved to eliminate some and mitigate other adverse effects it creates.

The adverse impacts to the Property would be to a historically significant one that is a completely stone wall enclosed, agriculturally zoned and representative of agricultural properties and farms that are becoming rarer with ever increasing sprawl. Land held in Current Use in the State of New Hampshire, which is in a conservation status, would be permanently and irrevocably converted to an industrial use prohibiting many specific agricultural uses of that land. This is a unique dilemma for the Property as the entirety of the parcel is within an agricultural zone. Farmland regarded by soil type by USDA specifically within an agricultur-

ally zoned area in an especially limited and finite resource and its maintenance as such is in a greater public interest than the taking of such land for conversion to private industrial use in the name of public interest and public necessity. The pipeline route path would necessitate the management of foliage above it with the primary method of choice by TGP by pesticides of a hazardous and toxic nature to the environment, to farming, to food, and to water and all the stratified-drift aquifers it will pass. Buffer zones around organic and other farms lands cannot prevent the spreading of these chemicals from the vast area of the pipeline route to other areas beyond it including adjacent land and specifically pipeline route lengths where alternative methods of foliage management are promised. The provision of sections of documents by TGP such as policies to address their claimed resolution to events such as the loss of organic eligibility qualification or organic certification to farms, land and soil used for the growing of food while offering a possible legal solution for them to circumvent the real risk of permanent contamination to the environment, it is socially, morally and ethically reprehensible and not a legally acceptable solution at all. It is not in the public interest to allow the inevitable contamination without recourse of our environment for humanities future generations. The long term future of an endless network of underground pipelines which will eventually decay, leach chemicals from their own composition, leak, become compromised and collapse, and contribute contaminants is irreparably damaging to the environment. Adequate safeguards do not exist for the future of the seventy miles of New Hampshire soil and aquifers at risk from the Project. The eventual unacknowledged or unknown transport of materials through sections of those pipelines, pipelines that will eventually deteriorate and, when abandoned, further spread contaminated material to include through simple groundwater penetrating them to aquifers and water bodies will result in irrevocable contamination of one of the public's most precious resources, the water and water supply that humans require as a matter of the greatest public interest of all.

IV. LAUDATO SI'

Jorge Mario Bergoglio, the current Pope, Francis, recognized for his diplomatic and cultural wisdom in his May 24th, 2015 "Encyclical Letter, LAUDATO SI', of the Holy Father Francis on Care For Our Common Home" relates remarks of Ecumenical Patriarch Bartholomew as well as his own regarding mankind's disregard of our environment and our planet. Future generations will judge you and your decisions based on your wisdom in the legacy you leave them. In the Commission's decision making regarding the Project, kindly consider these wise men's comments.

"For human beings... to destroy the biological diversity of God's creation; for human beings to degrade the integrity of the earth by causing changes in its climate, by stripping the earth of its natural forests or destroying its wetlands; for human beings to contaminate the earth's waters, its land, its air, and its life – these are... to commit a crime against the natural world..."¹²

"Account must also be taken of the pollution produced by residue, including dangerous waste present in different areas. Each year hundreds of millions of tons of waste are generated, much of it non-biodegradable, highly toxic... from construction and demolition sites, from clinical, electronic and industrial sources. The earth, our home, is beginning to look more and more like an immense pile of filth. In many parts of the planet, the elderly lament that once beautiful landscapes are now covered with rubbish. Industrial waste and chemical products utilized in cities and agricultural areas can lead to bioaccumulation in the organisms of the local population, even when levels of toxins in those places are low. Frequently no measures are taken until after people's health has been irreversibly affected."¹³

"The earth's resources are also being plundered because of short-sighted approaches to the economy, commerce and production. The loss of forests and woodlands entails the loss of species which may constitute extremely important resources in the future, not only for food but... could be key resources in years ahead for meeting human needs and regulating environmental problems."¹⁴

V. HISTORIC SIGNIFICANCE

The unnecessary adverse impact from the Project would be to land that has been preserved by my family for more than fifty (50) years, remained an un-subdivided parcel of land for more than two hundred (200) years, and owned by notable individuals indelible in Rindge's history. One is the namesake owner of the Property, Andrew Calhoun (b. 1764, d. 1842) notable in his own right, who came to reside in Rindge in 1814 with his wife, and children who included John (b. 1806, d. 1859) who taught President Abraham Lincoln the art and science of surveying.^{15 16} Another is the American Revolutionary War era soldier, Hezekiah Hubbard, as well as his family to include Otis Hubbard who bequeathed the money to the Town of Rindge, for the clock that to this day graces each side of its Second Meeting House which is on the National Register of Historic Places.

VI. BASIS FOR ROUTE CHANGE

Land that abuts the Property on its north boundary is owned by an energy infrastructure company. TGP already has consent for construction upon that parcel that it is approaching the Property from, and could be continued upon for the pipeline route with a most minor of alterations. This would avoid some of the adverse impacts, and not only reduce the cost of the pipeline with the needless disassembly, inventory, and highly questionable reconstruction of its walls, but honor the Property's historic significance, it's continued conservation, and continuing development as and use as organic farm.. This land use within a community includes the greatest necessity of the public, namely food with which mankind cannot live without. While energy is a necessity in itself, the type of energy that suits the public interest long term, and its cost to benefit access and use for consideration is dependent upon a number of factors. In considering environmental impact, the prevention of the permanent elimination of agricultural activities upon the finite and limited amount of agricultural and agriculturally zoned land must be a priority. Otherwise the farms of this country diminish at the expense of industrial development which is not in the public interest. If the pipeline route gets moved onto the property, or if soil, air or water contaminants result in the building or operation of the pipeline, years, decades, generations of work and financial investment will be destroyed.

COMMUNICATIONS

All correspondence and communications related to this proceeding should be directed to movant whose name and address has been placed on the official service list maintained by the Secretary for this proceeding:

Ernest A. Kirslis
P.O. Box 6
Central Village, CT

- 2 This creates a smoother pathway for transit, and in turn trespass. Stonewalls suffer from damage of off-road vehicles committed to their trespass, as well as from snowmobiles which although to a lesser degree impact walls until adequate snow cover adds some barrier against physical damage. Snowmobiles still have access despite a landowner posting property as private. Limited snowmobile traffic occurs in open space use areas when land owners are not adversely affected by excessive disturbance and noise. Once corridors become co-location monstrosities off road and other vehicles become an unwanted result. Putting the burden of this change to the aesthetic and physical landscape on land owners arguing they are legally able to post their land is dismissive of the impact that results from a pipeline path. Even with such posting, affected landowners in close proximity who may have previously have not objected to occasional open space use are adversely

impacted. This by virtue of route design and presence facilitates trespass by ATV, snowmobile, and by other means resulting in adverse impact to the properties around the pipeline route, subject to the noise of such vehicles, with a higher risk of vandalism to property, and contributes to lower property values for affected parcels possessing a pipeline easement.

Davenport Intervention <Tennessee Gas Pipeline 1-11-2015

TOWN OF DAVENPORT, DELAWARE COUNTY, NEW YORK

1790 State Highway 23

Post Office Box 88

Davenport Center, NY 13751-0088

Dennis J. Valente, Supervisor

The Town of Davenport NY is intervening on behalf of its citizens to block the permitting of the Tennessee Gas Pipeline. As no other party can represent the Town of Davenports interests in this matter, the Town of Davenport is filing this motion to intervene.

The Davenport NY Town Board prepared a survey to understand its residents’ opinion regarding a proposed gas transmission pipeline that is to run through a portion of the Town. The Town has heard the concerns of some of the residents that might be impacted by the pipeline. While the Board recognizes its limits in the

decision process, we want to express the majority opinion of the Town residents, to the best of our ability.

The survey was completed in June of 2013, and certified by the Town Board on July 16, 2013.

On July 16, 2013, The Davenport NY Town Board, by a unanimous vote, announced, certified & adopted the results of a town wide Pipeline survey, which was conducted by the town.

The survey had a 24% response with 77% against permitting the Pipeline. Of those directly on the Pipeline route, the survey had a 48% response with 87% against permitting the Pipeline.

Reasons cited for opposition to the pipeline were:

1. Safety -- (leaks, explosions, water contamination)
2. Property Value ~ (insurance, resale, equity, taxes)
3. Environment -- (quality of life, forest fragmentation, wetlands, pollution)
4. Eminent Domain
5. Fracking

Town of Davenport, NY)

Dennis Valente, Supervisor

Motion to Intervene: CP16-21

I live in Buckland Massachusetts, about 5 miles from the path of Tennessee Gas and Pipeline Company's (TGP) proposed Northeast Energy Direct (NED) natural gas pipeline. Buckland borders on three towns through which the pipeline is slated to pass: Ashfield, Conway, and Shelburne, and it is the passage through Conway where it crosses Shelburne Falls Road which is closest to my home.

I believe that it would be folly to assume that areas not adjacent to the pipeline, staging areas, valves, and compressor stations would be unaffected: the environmental impacts of construction, drilling, blasting, and any possible leaks or explosions would be far reaching. In the case of an explosion (and possibly in cases of scheduled "blow downs") toxins from the fracking process in the transported gas, particulates, and methane would most likely be dispersed widely — through and well beyond my property.

I feel fortunate to live in a state which invests in — and has strong laws to maintain plus promote — land conservation and wildlife protection. I currently enjoy visiting conservation areas that would be along the proposed NED path, and my tax dollars directly pay for the creation and maintenance of these beautiful areas. The environmental upheaval resulting from construction and operation of the proposed pipeline has been well documented in submissions to FERC during local scoping hearings in 2015: I am very concerned about the environmental destruction that would result if FERC allows the NED pipeline to be built.

Electricity to my home is supplied by EverSource. I am concerned that costs associated with constructing and maintaining this pipeline would ultimately be passed along to consumers via increases in the rates we are charged for electricity. I am also concerned about the possibility of the utility entering into longterm contracts for NED pipeline capacity. The fees we are charged — along with the charges for the electricity itself — are already among the highest in the nation. In addition, the study commissioned by the Massachu-

setts Attorney General (Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas) documents lower-cost alternatives for increasing wintertime electric reliability. I believe that I should not be asked to pay for something which is not necessary, provides no benefit to Massachusetts utility rate payers, and prolongs our dependence on fossil fuels.

I am against the proposed construction of the Northeast Energy Direct natural gas pipeline, and respectfully request that FERC deny Tennessee Gas Pipeline Company's application for a Certificate of Public Convenience and Necessity — CP16-21.

For the above reasons, I respectfully ask that FERC grant my motion to intervene.

Basis for Intervening:

-I live in Schodack, NY and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding including but not limited to noise impacts, health impacts, air pollution, loss of the natural rural character of the community, loss of farming community.

- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.

- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health.

- I enjoy the out-of-doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

Basis for Intervening:

My name is William Huston. I live in Broome County NY and live about 20 miles from the proposed NED. I am a researcher, blogger, and videographer on pipeline safety issues. I am very concerned about several issues.

1: The environmental impacts of this project should have been scoped with the Constitution Pipeline.

2: There has been no justification of need, as my research leads me to believe this pipeline is primarily to export into Canada.

3: I have several friends who are directly impacted landowners.

- 4: I am concerned about the climate impacts of the loss of 500,000 trees, methane emissions as a Greenhouse Gas, and toxic emissions of compressor stations which are proposed and/or likely along the route.
- 5: I am concerned that this pipeline will greatly increase the rate of gas drilling in NE Pennsylvania, especially in Bradford and Susquehanna Counties, where I have many friends and family.
- 6: I am concerned about FERC which has a history of grossly violating the Natural Gas Act and the National Environmental Policy Act in dozens of cases I have found, as well as orders of the federal courts.
- 7: I am concerned about the abuse of Eminent Domain to steal private property for private gain and corporate profits.
- 8: I love the natural beauty of this area, and am concerned about the loss of this beauty, the destruction of many trees, and countless other living things which depend on these trees.
- 9: I am concerned about air quality and water quality, which this pipeline threatens.
- Since no other part can represent my interests, I therefor make this motion to intervene.

20160115-5591

Motion to Intervene of Mary T. Finneran

I wish to be considered an intervenor regarding the Kinder Morgan/Tennessee Gas/ Northeast direct Pipeline project. While I don't live in the path of the pipeline, I visit and drive through the area of the path on a regular basis. I also regularly see Bald Eagles and it is for them that I intervene. For too long these wonderful majestic birds were endangered. For our children and our children's children, I hope to see this land protected from the methane pipelines and all the infrastructure inherent to it. Thank you.

Basis for Intervening:

As a new resident of Shelburne Falls, with a farm in Conway, I have grave concerns about the destruction of the quality of life that we came here to experience. The proposed pipeline would pass through our farm in Conway, directly outside our kitchen window. There is no denying that the proposed pipeline threatens the people, the animals and the ecosystems that delicately balance these. It is clear that our communities do not want this pipeline and see no need for the claimed energy advantages, nor do we trust that we will be the recipients of such advantages. As a community that has a history and track record of seeking and implementing renewable energy sources, we deserve and expect to be kept informed of considerations and decisions related to our energy future. It is our expectation that FERC, as an agency charged with service to the people, will respond honorably and with respect to us as taxpayers and neighbors deserving of respect, consideration and good faith. Stop the pipeline now.

20160115-5593

Motion to Intervene of Mary C Link

Motion to Intervene

in FERC Docket #CP16-21-000

by Mary Link

Summary

I oppose Tennessee Gas Pipeline Company's (TGP) proposal to build its Northeast Energy Direct (NED) project. This proposed pipeline would profit the company's shareholders at our expense, by externalizing many costs (costs that would be paid by the general public rather than by the company). This pipeline is proposed to cross lands protected in perpetuity under APR and chapter 97, disregarding both preservation laws and the huge investment that many people have made in preserving our land and natural resources. The project would put at risk our water sources, scenic natural environment, wildlife, and human health and safety. Specifically we live within the blast zone and directly downhill and down wind of the proposed route. Ashfield Lake, the gem of our community, is also directly down hill and within the blast zone – it would devastate our community to have that water polluted and the resource destroyed for public use. In addition, I question the legality of taking land by eminent domain for the purpose of corporate greed and export – there is no demonstrated greater public need, and almost no desire for the pipeline here. This NED project is not needed and there are far better alternatives for our energy needs. I request that the Federal Energy Regulatory Commission (FERC) refuse permission for the project.

Life and Well Being are More Valuable than Corporate Income

TGP executives are required by law to maximize return to their shareholders, regardless of what evil they must commit and regardless of what lies they have to tell. Their legal responsibility is at odds with common sense and with their moral and ethical responsibility. You FERC commissioners, on the other hand, are entrusted with the power and duty to uphold the well being of the people of the United States -- not the profits of TGP's shareholders. The regulations and the TGP proposal include using thinner gage pipes because this is a rural area, fewer people. This means that our lives are being valued by how many of us are here. But EVERY life has value, and our lives and health are important. This proposal is unacceptable. No one's profits are more important than a person's life -- no matter how large the profits, no matter how small the life, or how few lives might be impacted.

In addition, we must be the voice of the natural world. This pipeline will have a negative impact on our area's pastoral beauty and the multitude of wildlife that live here. People come here to live or as tourists drawn by the beauty and quiet. At night you can see the Milky Way sparkling across the sky (light pollution from compressor stations would destroy this). People come for our rivers, for fall foliage, for swimming, and fishing. The natural beauty and resources draw tourist here benefitting our local economy. The proposed pipeline has already negatively effected the ability of an elderly neighbor and others to sell their homes. Construction, venting, and leaks will destroy this landcape, the environment, water resources, and our lives. Please, do not approve it.

No Need

TGP claims the pipeline is needed to satisfy New England's increasing need for electricity generation. But it is an open secret (1) that TGP plans to use the pipeline to get fracked gas from Pennsylvania to the coast, for sale abroad -- at a much higher profit, which would of course result in increased domestic prices. This might serve the convenience and needs of the corporation, but not the convenience and needs of the public. According to ISO New England, which oversees the operation of New England's bulk electric power system and transmission lines, in the past decade New England's electric power consumption reached a record high level in 2005, and has been LESS ever since. New England's need for electric power generation is not expected to grow at all over the next decade (2). The Massachusetts Attorney General's Office has published a study showing there is no need for this pipeline. This proposed pipeline is in direct conflict to our state's goal of increasing dependence on renewable energy sources and reducing our carbon footprint. In addition, we personally have installed solar panels on our roof and generate our own electricity. Many others in our area are taking advantage of opportunities to expand the development of solar energy here, further reducing the need for natural gas. There is no real or planned benefit of the proposed pipeline, to the people of our region.

Poisoning and Blowing Us Up

By applying to FERC for permission to build this pipeline, the company is explicitly requesting permission to run explosive toxic chemicals through our forests, across our fields and rivers, over our hills, near our drinking water sources, alongside our lakes, houses, and public ways. Gas pipelines often leak and explode. Compression stations routinely release large quantities of methane and other deadly toxins, including (3):

- methyl tertiary-butyl ether (MTBE)
- carbon monoxide
- iso-butane
- methyl mercaptan
- n-butane
- n-hexane
- n-octane
- nitrogen dioxide
- nitrous-acid styrene
- 2-methyl butane
- 2 methyl pentane
- 3 methyl pentane
- ethyl benzene
- benzene
- ethane
- propane
- methanol
- naphthalene
- isobutene
- cyclohexane
- toluene
- m+p-xylene
- isopentane
- n-pentane
- isoprene
- dimethyl disulfide
- methyl ethyl disulfide
- ethyl-methylethyl disulfide
- trimethylbenzene
- diethylbenzene
- methyl-methylethyl benzene
- tetramethylbenzene
- naphthalene,
- 1,2,4-trimethylbenzene
- m&p xylenes
- carbonyl sulfide
- carbon disulfide
- methylpyridine
- dimethylpyridine
- 1,1,2-trichloro-1,2,2-trifluoroethane,
- 1,2-dichlorobenzene
- 2-butanone
- carbon tetrachloride
- chloromethane
- dichlorodifluoromethane
- ethylbenzene
- methylene chloride
- tetrachloroethylene
- trichloroethylene
- trichlorofluoromethane

as well as radioactive material. These releases, from scheduled and unscheduled blow-downs, fugitive emissions, and accidents, along with noise pollution, light pollution and occasional explosions, have severe adverse effects on quality of life, including loss of property value, sickness, injuries, and deaths.

Spills and Accidents

According to the Wall Street Journal, there were 1,400 pipeline spills and accidents in the U.S. in the four years from 2010 to 2013 -- about one a day (4). According to the Pipeline and Hazardous Materials Safety Administration (PHMSA), many such spills and accidents result in hospitalization (1,365 in the twenty years from 1995 to 2014) or death (360 between 1995 and 2014) (5). These figures include only direct deaths and injuries and do not include the much larger number of deaths and illnesses resulting from poisoning of our air, soil, and water, such as nosebleeds, rashes, headaches, nausea, diabetes, birth-defects, neurologic disorders, cancer, heart attack, and inability to breathe.

My husband is a former firefighter here, and our small towns primarily have volunteer on-call fire departments – in no way equipped to handle emergencies that will likely result if the pipeline is approved. Even a single small explosion here could be disastrous. Here in rural Western Massachusetts, we live in a forest. Even without gas explosions, it is not unusual for a forest fire in Western Massachusetts to burn several hundred acres before it can be extinguished. According to the state's Hazard Mitigation Plan (6), climate change is expected to increase the number of acres destroyed in each fire. In addition, construction would place an undue burden on our local roads and bridges. And in winter conditions, evacuation if necessary, could be impossible from several parts of town – as was the case after tropical storm Irene.

Deceitful Distortion of Impact Projections

According to the Northeast Energy Direct website, for new compressor stations FERC requires the noise level to be no greater than 55 decibels on a day/night average sound level (dBA Ldn) at the closest noise sensitive area (NSA). The site assures us this is like the hum of a refrigerator. The site does not mention that most refrigerators don't make any sound at all most of the time, which would not be the case with a compressor station, and living with your ears right next to a running refrigerator motor is unpleasant and unhealthy.

The site also does not mention that the compressor noise is much louder during blow-downs -- a sound that has been described as “comparable to a commercial jet taking off” (12). TGP's Resource Report 9 on “Air and Noise Quality” gives rosy estimates of minimal disturbance, based on projections rather than on measured noise at existing compressor stations during blow-downs. We value the quiet here. It brings people to this area. These compressor stations would have a huge negative impact on our communities.

Similarly, air-quality impact projections are distorted. The EPA limits PM2.5 particulate emissions to 15 ug/m³. Projected emissions at compressor stations are on the order of 10 tons per year -- about 2,500 grams per day (2.5 billion ug). But that load of pollution is not distributed evenly throughout the day, nor evenly throughout the region. It is concentrated in a burst at the compressor station during a blow-down. Those 2.5 billion micrograms won't disperse immediately. So we can expect people living (or passing) near the compressor to experience sometimes a much higher concentration than the mere 15 micrograms per cubic meter limit. That short-term concentrated pollution can be deadly. In practice, residents near existing compressor stations report a variety of severe adverse health effects (14)(15).

The normal background incidence rate of coronary heart disease (CHD) is about 28.8 per 1,000 person-years for men, around 23.3 per 1,000 person-years for women (8). For women, this rate increases by 42% for every 10 ug/m³ of PM2.5 particle pollution in the air -- women are much more affected than men by PM2.5 pollution (10). Women who live near a compressor station are more likely to die of a heart attack than women who don't. The compressor stations cause those deaths as surely as a bullet. The negative health impacts on our children and others with more fragile health conditions, would be even bigger. We who live here have chosen to live here in part because the environment is cleaner and healthier. Please do not approve this pipeline.

Climate Change

Climate change is another externalized cost of the proposed pipeline. The large quantities of methane released by compression stations is a significant contributor to climate change.

Additionally, even one explosion could result in a fire that destroys hundreds of acres of forest. Like a person's life, or the value of clean water, clean air, and clean soil, the value of our forests cannot be realistically monetized. Without trees, we cannot breathe. With too few trees, carbon in the air warms the planet, causing mass migrations and death tolls potentially in the millions (7).

Our laws do not require TGP to consider such costs. It is the responsibility of FERC commissioners to weigh these costs against the potential benefits.

Alternatives

It is well-known by now that conservation and energy-efficiency improvements are more cost-effective and easier on the environment than building new energy infrastructure (9)(4). With a combination of conservation, energy-efficiency improvements, and renewable energy sources (wind, solar, low-impact hydro, geothermal, anaerobic digestion, and other renewables), we can satisfy our energy needs without killing and poisoning people or destroying the planet. The Massachusetts Attorney General's study and report released in Oct 2015 shows that the pipeline is not needed, and Massachusetts has committed to creating a sustainable, renewable energy future.

Throughout New England there are many small-scale local initiatives for conservation, energy-efficiency, and renewable energy production, that together will provide a more secure energy future than this ungodly pipeline. As even TGP admits, in its Energy Alternatives Conclusion (section 10.1.2.11 of Resource Report 10): "...the states in the Project area have all adopted policies, programs, and projects to reduce their state's dependence on fossil-fuel electric generation."

Taking just one county (Franklin County, Massachusetts) as an example of such initiatives:

- The Northeast Biodiesel plant is expected to begin operating in Greenfield, MA in January 2016;
- The towns of Plainfield, Ashfield and Buckland are participating this year in the Massachusetts Clean Energy Center's Solarize Mass program, which provides financial incentives for private solar panels;
- Co-op Power's Community-Shared Solar initiative gives residents an option to erect solar arrays jointly with other residents;
- Several dozen local businesses and over 1,200 residents have already taken up Greening Greenfield's "10% Challenge" to reduce energy consumption by 10%;
- The town of Greenfield (Franklin County's largest municipality) is actively working toward reducing energy consumption in all town buildings by 20%.
- Many individuals and families are taking advantage of free energy audits by Mass Save and Community Action, to reduce their household energy use.
- Our upcoming generation is painfully aware of the mess we have made of their world. Many colleges now offer majors in sustainability and permaculture. The Tiny House Movement (13) is growing throughout the country, as people -- especially young people -- redesign their lives to have a smaller negative impact on the environment.

Personally, my family has embraced and supported these initiatives. We have reduced our energy needs through energy audits, conservation, and weatherization. We are member owners of Co-op Power. We have installed solar hot water and electric panels that generate enough electricity for two households.

TGP's proposed pipeline would sabotage all those initiatives and others like them throughout the Northeast. In fact, the pipeline proposal is already undermining these initiatives, by taking people's time and energy away from productive endeavors, as they prepare to combat this unnecessary, greedy, evil pipeline proposal using civil disobedience and legal action, along with more direct approaches. Many community leaders and activists who were focused on building a sustainable energy future for our region, have shifted their focus to opposing this pipeline proposal, to keep it from undercutting all their good work.

TGP's analysis of Alternatives (Resource Report 10) is flawed in several ways:

- The report begins with a fallacious assumption, summarized with deceitful redundancy in its En-

ergy Alternatives Conclusion (section 10.1.2.11): “As increasing demand for electricity continues to rise...”. As shown above, in the “No Need” paragraph, New England’s need and demand for commercial electricity generation is expected to grow not at all, over the next decade.

- The report addresses each “no action” alternative individually and argues that that alternative is insufficient. However, a combination of these alternatives would be sufficient and Report 10 does not mention that possibility.
- The report considers only large-scale commercial solutions as alternatives. It does not, for example, consider tens of thousands of rooftop solar arrays, with battery storage, as a possible alternative. My family and I installed a 5-kW solar array two years ago. It’s easy to do, has no impact on air quality, makes no sound at all, and, combined with conservation, satisfies all the electrical energy needs of two families. We also installed a rooftop solar hot-water system seven years ago, that reduced our electrical consumption dramatically. No large corporation has the benefit of ongoing profits from these alternatives, so it was not considered in TGP’s analysis. These grass roots level alternatives must also be taken into consideration.
- The report addresses only production demand, not consumption demand, as exemplified in its Energy Alternatives Conclusion (section 10.1.2.11): “While these [alternative] measures will impact the overall demand for electricity from fossil fuel generation, [those alternatives] do not meet the purpose and need of the Project, which will provide additional natural gas pipeline transportation capacity to its customers...” In other words, the Northeast does not need the pipeline, but TGP could profit by building it.

Long-Term Plan

A gas pipeline has a typical lifespan of about 50 years. That’s 50 years of poisoning, explosions, sickness, noise-pollution, and death.

What then? Presumably, build another pipeline for another 50 years of poisoning, explosions, sickness, noise-pollution, and death. And with all that gas used up, we would have to do more hydraulic fracturing and dump even more toxic chemicals in the earth, to find more gas. We could then continue that cycle until there is no more natural gas to be found or until we have poisoned the earth so badly that no human life can survive (whichever comes first).

Or, when the pipeline reaches the end of its life, we could do what we should have done to begin with: use a combination of conservation, energy efficiency, and renewable energy sources to secure our energy supply indefinitely, without destroying ourselves and the planet in the process.

Our Opposition to this Proposed Act of Violence and War by TGP

In effect, despite far better solutions to our energy needs, TGP is requesting permission to destroy property, poison our environment (making many people sick), and kill a few people outright. This can only be seen as an act of war on the people of New York, Massachusetts, and New Hampshire (in addition to Pennsylvania, where the process of mining the gas, through hydraulic fracturing, continues to cause additional deaths, sickness, injuries, and loss of property value). We don’t roll over easily here in New England. In Massachusetts we have a long history of fighting against oppressive rule by a far-away elite, dating back to before the American Revolution. We will continue to stand against soulless corporations that lie, kill, poison the Earth, corrupt our government, and trample common citizens in relentless pursuit of profit. We are prepared to fight this pipeline until it is stopped. As the federal representative charged to represent “We the people” we expect FERC to represent US!

This pipeline must not be built. Please deny TGP’s application for the NED pipeline.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual brettlaible@gmail.com

Basis for Intervening:

The proposed NED Pipeline is located approximately 150 feet up a steep slope from our home. We are concerned about damage to our well and the quality of our drinking water. In the event of a leak or rupture our lives would be in jeopardy. This will drastically alter and disfigure the landscape causing problems with runoff and erosion. The Constitution Pipeline is proposed to run north and parallel of the NED. We feel this will diminish the value of our property. As no one else can represent our interests in this matter, we are filing this motion to intervene.

Basis for Intervening:

Greetings to all who read this!

Here is the music video I created when I learned of Kinder Morgan's proposal that would (more than likely) necessitate that our home be seized by eminent domain in order to put a new gas pipeline through Richmond, Mass.

Perhaps someone out there will enjoy and share it.

WAKE UP AND SMELL THE GAS https://youtu.be/dLY_4zQLxpo i

Given that the Marcellus and Utica Shale are not producing what was expected, at least not for the length of time projected, this project seems like a "make money" then leave the folks of Ohio, Pennsylvania, New

York, Massachusetts, and Maine to pick up the pieces while KM bails themselves out of their sorry current financial predicament.

I am not sure what exact role Richard Kinder played in the Enron scandal since he got out before the excrement flew, but KM's business practices are so suspect that the Board of Health of more than one Massachusetts town has forbidden KM from doing business in those towns based of KM's criminal record.

As the video points out, we are all responsible for our current level of energy consumption.

I ask FERC to serve as leader in terms of the way we generate, consume, and transport energy.

- 1) Repair EXISTING infrastructure before building NEW time-limited infrastructure
- 2) Discourage fracking and its reprehensible environmental and human health impacts
- 3) Encourage development of wind, hydro, geothermal, geo-electrical, solar, and micro-energy projects on a community by community basis.
- 4) Above all, encourage CONSERVATION of energy on nationwide basis.

With gratitude and concern I recognize your oversight in every sense of the word.

Sincerely,

Mark Kelso

Richmond, Massachusetts

20160115-5596

Submission Description: (doc-less) Motion to Intervene of Gregory G Smith under CP16-21-000.

Filing as a member of the NH State Legislature representing the voters of Pelham and Huson NH.

Basis for Intervening:

3 Mountain View Road

Pelham NH 03076

Dear FERC:

As an elected official in the NH House of Representatives I wish to file to intervene in the Northeast Direct Project as proposed by Kinder Morgan.

My district, representing the towns of Pelham and Hudson NH is one of the impacted in the state by this proposed project. Over 70 families are immediately affected by the route that could require their property to be seized by eminent domain.

Many more homes are exposed to the possibility of damage if there is an accident or pipeline explosion. Most of the townspeople in Pelham rely upon well water which could be impacted during the drilling and construction process of a pipeline. Running a large, high pressure NG pipeline through the center of a populated region is neither safe - nor necessary.

This project which will require extensive greenfield construction through populated areas is not required at this time. Other projects can supply incremental NG supply to New England and instead FERC should focus on approving those which have been proposed by Spectra Energy, including Access Northeast, AIM, and Atlantic Bridge.

I urge FERC to reject the proposed Northeast Direct project and allow the other Spectra Energy projects to

move forward. NED should only be approved if there are no other possible alternatives to NG supplies in the Northeast.

Regards,

Rep. Greg Smith
Hillsborough District 37
Pelham + Hudson NH

Basis for Intervening:

I live in Easthampton, Massachusetts, and want to intervene in this proceeding to oppose the Northeast Energy Direct pipeline. I have at least 4 interests which may be directly affected by the outcome of the proceeding because:

- I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to Northeast Energy Direct cost recovery.
- I am ratepayer of Columbia Gas of Massachusetts who has contracted for Northeast Energy Direct capacity, which is expected to result in an increase on my bill relating to Northeast Energy Direct and the recovery of unnecessary infrastructure expenditures.
- I enjoy the outdoors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.
- I am a donor to The Trustees of Reservations and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

Basis for Intervening:

I am just barely outside of the incineration zone in the event of a rupture, my family and I would be negatively impacted.

Since the pipeline keeps moving, I am not sure where it will eventually be. Originally it was not that close to me, but now I am barely outside the blast zone. I may be a direct abutter to the route in the future as the route through Dracut keeps changing

I am a taxpayer in Dracut and I am concerned with loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police

and fire and other services.

I am a chicken farmer and am concerned about the effects of the pipeline pollutants on my flock, their health as well as how the pollutants will effect their eggs and their egg production. Noise and light are big issues for hens as well as people.

I am a consumer of produce from Dracut farms and I am concerned the pipeline may cause industrialization and contamination of the water supply and crops that are part of my food supply.

My home as a well as its sole water supply. This water is delicious - I know that most folks don't think about their water that way, but we do. It is sweet and tasty, very satisfying to drink. It is also clean and healthy. I am concerned that leakage from the pipeline will take my water supply away by polluting it. There is no public water to this side of town, and even if there were, it is not nearly as good as our well.

I am a ratepayer for National Grid gas service or electric service and am concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals

As a Dracut resident, I am greatly concerned about the health effects of this pipeline and the compressor station. These negative health effects have been documented in the work of Dr. Bushkin-Bedient, a 17-year member of the New York State Medical Society, and a specialist in chronic diseases, aging and environmental health. She is a member of the New York Alliance Against Chronic Diseases. Please take our health into consideration - once it is lost, it is gone forever.

Once fields, forest, wildlife and various species are lost, they are also gone forever. We rely on the wildlife to sustain us, to help us find cures to current and future issues. The potential is for the pipeline and compressor station to bring light and noise which will negatively impact the reproduction of numerous species which live here in Dracut. I cannot list the all - Cathy Richardson did that. Listen to her details about this.

Did you know that the leading cause of deafness is Noise Induced Hearing Loss? This is caused by sounds we experience in our environment every day. Most often these sounds are ok, but they can become harmful in a flash when they are too loud for even a brief moment, or when they are both loud and long-lasting. Then they damage the sensitive structures in the inner ear, causing Noise Induced Hearing Loss. It can happen immediately or over the course of time. It can be temporary or permanent. However, it is preventable. I personally wear ear protectors when I use power tools, but I know that most folks don't. I see construction workers and lawn care folks without them all the time, but I won't mow my lawn, or use my leaf blower without them.

I am concerned about my and my families hearing and our general health because of the compression station. The compression station will have blow-outs. Some of these blow-outs will often be at 50 decibels, but that others will be at an undetermined higher level of decibels for an undetermined amount of time. Noise Induced Hearing Loss can be caused by onetime exposures to an intense impulse sound, like an explosion, such as some of the blow outs might cause, or the continual loud sound for an extended period of time, which the other blow outs will cause.

In this article from the Johns Hopkins Medical Library called Noises that cause Hearing Loss, common engines we use all the time also put us at risk:

Hearing loss can occur after a one-time exposure to a loud noise or after repeated exposure to varying loud noises. Exposure to loud noises can occur at work, at home, or at play.

In 2011, WHO released a paper on the health effects of sound in our environment called the Burden of Disease from Environmental Noise. "There is sufficient evidence from large-scale epidemiological studies linking the population's exposure to environmental noise with adverse health effects. Therefore, environmental noise should be considered not only as a cause of nuisance but also a concern for public health and environmental health. For example, well-designed, powerful epidemiological studies have found cardiovascular diseases to be consistently associated with exposure to environmental noise. "

Are Dracut residents, my family and I included, going to suffer long term health issues because of the noise/

sound pollution as well as the air and possible land and water pollution?

For the last 45 years I have supported my family by running a cross country ski area in New Ipswich NH. The pipe line cuts through the middle of our land and would force us to close have of our ski trails. My son would like to take over the business but has reservations about living next to the compressor station that would be sending out toxins into the surrounding area. It is clear that there is no need for this export pipe-line. It must be stopped before it destroys our community and the environment. This year we installed solar panels that offset all of our electric needs, it was very easy and cost effective. Anybody in their right mind would be against this pipeline, I hope you care about the future of the human race.

I am a resident of Merrimack, NH specifically Whittier Road. My family is applying as interveners in Docket CP16-21-000 because we will be directly impacted by this project in a number of ways including but not limited to:

1. Land/homeowner in potential route
2. If built, the quality of life in our neighborhood will be decreased significantly during construction and in future with possible restrictions to our common land and concerns for safety
3. The proposed route crosses our town's watershed and this could pose a great risk to our town's water supply
4. I am currently a Liberty Utilities ratepayer and am concerned that I could be forced to pay for this pipe-line through my utility rates
5. Our town (Merrimack, NH) is identified as the location of a meter station, which I am concerned may negatively impact the quality of life for the residents of Merrimack NH.

I am a property/land owner in Dracut, MA and have lived here for the last 13+ years. My wife and I chose to move here and build a house to raise our family in so that we could live somewhere with a generous amount of land areas for our family to enjoy outside with nature. I have two children, ages 3 and 7, and we are constantly playing in our yard and at the local Dracut parks. I am concerned about emissions and noise from the pipeline station as well as potential contamination of soil and water. In addition to a concern about being outdoors, I am also concerned about my children's school areas and church and the affect it may have on them in those areas while they are at school and church and when I drive and pick them up at school or church, passing directly by the proposed station each time. They go to the Campbell School and Creative Minds, both on Methuen Street in Dracut, and St. Francis Church on Wheeler Road. In addition, as a homeowner, I am also very concerned about my property value decreasing as a result of this proposed pipeline. I also worry that new, young families will not move to Dracut anymore as a result of this pipeline. I coach baseball, football, basketball, and soccer and want to see many new children outside on our teams so the Dracut flourishes in every way. I'd appreciate you not putting this pipeline and station in Dracut. Thank you.

Basis for Intervening:

I, Kathleen O'Connor, live at 407 River Road, in Deerfield, MA 01342. I have lived here for 18 years in a peaceful rural setting.

The NED pipeline is proposed to be located about four miles from my home, as the crow flies, crossing River Road north of us. I strongly object to the construction of the proposed pipeline. I am applying to be Intervenor for the following reasons:

As electric ratepayers, we would have to pay the tariffs proposed to force us to cover the costs of the pipeline.

In addition, we would have to pay the increase in energy costs that would result from exporting natural gas. There is no doubt that most of the gas in this proposed pipeline would be exported. Overseas, gas costs a lot more, and then local markets would have to compete on a global scale.

The land and woods around us are protected conservation lands, so we are very aware of the purpose of that process. The proposed pipeline aims to take 27,400 acres of conserved land in 25 MA towns. The Commonwealth of Massachusetts bought conservation rights, under Article 97 of our state Constitution, which states, in part, "The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historical, and esthetic qualities of their environment...Lands and easements taken or acquired for such purposes shall not be used for other purposes." As MA taxpayers, we paid for all conserved land in MA. Why should land protected for long-term public health and conservation purposes be sacrificed for short-term private financial gain?

And the sacrifice would be for naught. Why do we even need this proposed pipeline? The Massachusetts Attorney General's independent study concerning the need for additional gas pipeline capacity in New England reached the conclusion that it was not necessary.

Here on River Road in Deerfield, I and other neighbors have worked for decades to get a toxic dump railroad yard cleaned up. Now the pipeline is proposed to go under the rail yard undoing decades of state and federal work!

The pipeline is also proposed to go under the Connecticut River at the rail yards, negatively impacting our watershed.

River Road is a rural, tertiary road. The condition of our road would be negatively impacted by the huge equipment brought in to build the proposed pipeline. Our rural quality of life would be terribly reduced, because of increased traffic, noise, and toxic emissions from the pipeline.

Deerfield's fire and other emergency workers are not trained or knowledgeable in case of pipeline accidents, which, in the case of Kinder Morgan, has a terrible record. Emergency workers could be subject to serious dangers, along with my neighbors who live close to the proposed pipeline routes. This is our town, we've lived here for decades, and we pay taxes here.

And lastly, and most importantly, we are applying to be intervenors because we are citizens of Planet Earth. This proposed pipeline would expand the delivery of non-renewable fossil fuels that will add more greenhouse gases and result in more global warming. This is destructive to both the Earth and us, all her inhabitants. Building the proposed NED pipeline would neither be convenient nor necessary.

My drinking water is at risk from construction and operation

Negative health impact from emissions from compressor station

Environmental impact

Economical impact to future sale of my house and to business in the area - one which I work in

Hike in electric bill

I enjoy outdoor activities and peace and quiet of living in the country

I would never have bought my house if compressor station was here or was planned to be built

Having a school less than half a mile away from proposed compressor station

I ride my bike to work most days in good weather worry about breathing in emissions from compressor station

I worry about Kinder Morgan not adhering to safety standards

Kinder Morgan misrepresentation of the fact about this project eg. Maps out graft timelines impact and what the will pump through when fracking is complete

Fact that most gas is being shipped out of country

Fact that there are existing pipelines to Dracut Mass. All ready that they won't use

Should be looking at alternatives to fossil fuels

Stress this project has caused me personally never did I think in granite state NH would I be living in such proximity to a massive health impact

All of kinder Morgan's tbd that are not addresses

I am filing as a gas and electricity rate payer who is very concerned that installation of the NED will burden consumers and business owners. So little of its intended capacity is now spoken for by american companies. Foreign competition for this gas may well increase prices.

I am filing as a global citizen with a stake in the well being of family and my next generations. Global warming clearly accompanies increased use of natural gas. Leaks from existing gas line already contribute mightily to global warming. I recognize that any shortfalls in gas delivery using existing lines could be taken care of using liquid natural gas supplied to existing lines in places already designed to accept more

supply tanks.

And I am filing as an accident reconstructionist with 40+ years of experience who recognizes the major environmental risks that would accompany this pipeline, including noise and methane/ethane pollution.

Basis for Intervening:

Though I currently live north in Peterborough, New Hampshire, my ancestral home lies at 10 Pearl Brook Lane in Townsend, Massachusetts. This is still the primary residence of my parents, the place at which my children play on a weekly basis, and the land in which my heart resides. While it is my deep desire that my parents should live for another 100 years, the fact remains that at the time of their passing, I will inherit this property. Accordingly, I have both a financial and an ancestral/cultural interest in this property.

Currently, the proposed route for this pipeline would destroy this lot of land. In fact, it would destroy the entire neighborhood, polluting it with leaks and contamination, and potentially destroying - in an immediate way - the wells and septic systems upon which we depend.

I therefore implore you to not allow avarice and Mammon to dictate the future for the good inhabitants of this pristine neighborhood and those of us who call it a long-term home. Lastly, I would just add that the potential use of eminent domain, supposedly reserved for instances that are clearly and unequivocally in the PUBLIC interest - not the interest of energy companies ultimately doomed to annihilation in the face of Saudi economic warfare.

Basis for Intervening:

I am filing as a gas and electricity rate payer who is concerned about the higher rates thatd on the NED pipeline will cause in Massachusetts. I am also filing as a citizen of the hilltowns of Western Massachusetts who is concerned about the well-being of my family and next generations as well as the environment where we have lived for more than twenty years. I have also been past president of the area's League of Women Voters, a member of Mass Audubon and the Trustees of Reservations, and a longtime defender of our state's conservation lands. I believe the pipeline construction will harm many of these protected locations on its route, and I am concerned that the citizens of Western Massachusetts will be forced to pay for this without receiving any benefit from it.

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact us as follows:

1) Our home abuts an electrical power corridor, and is in the direct path of the proposed pipeline. Specifically, we abut the lot shown as Lot MA LA 45.00 on Segment N , Lynnfield Lateral, Alignment Sheet TE-SEG_N-003. A portion of our street is shown on Construction Drawing LA-SEG_N-RES-005. Although our Street has a name, the name is not disclosed on either the Alignment nor the construction drawings. In addition, we note that, although the construction drawings appears to have assigned lot numbers to some, but not all homes on our street, those lot numbers are glaringly absent from the Alignment sheet. This is wrong.

Between our home and the existing power line corridor there is a wide thickly wooded area, full of mature trees, This Forested area provide not only aesthetic natural beauty by blocking the view of the unsightly powerlines, but also provides protection from the power lines, shelter from the emissions and other elements, shade and other protection for our property. as well as privacy for our family, This line of mature trees wraps around our entire neighborhood and acts as a natural sound barrier to the noise from local traffic and the nearby state highway.

Within this natural buffer, there are wetlands, rare and mature trees, valuable historic stone walls and ancient artifacts, vernal pools, AVIS Article 97 protected lands and a variety of rare and protected plants and animals. There is one perennial stream, identified on the Alignment sheet as Stream SPI-673. We believe there are more streams. Our property is part of a contiguous wildlife corridor which abuts the conservation parcels and which runs from the Merrimack River to the Shawsheen River. Our wetlands also contribute to and serve to feed the drinking water supply for the Town of Andover.

This natural setting and all the benefits it provides was a material reason we invested in our single family home, paid a premium price for the property, have substantially invested in upgrading our home and property, and continue to upgrade and maintain our home at significant cost and expense.

If this Application is approved, we will be permanently and unnecessarily adversely impacted. The permanent clear cut easement will be 50 feet wide, while the temporary work easement will be as wide as 165 feet. The finished pipeline will be about 150feet from our home. This puts our family as well as our entire neighborhood, well inside the “Blast” or “incineration zone”. Our family will hear the high pressure gas being pumped through the line and the significant noise when cleaning occurs. We will lose our trees, our sound buffer, our privacy, our beautiful, natural views. All of the mature trees that give our neighborhood its character will be permanently eliminatedOur neighborhood will never be the same.2) The removal of the trees will cause the wetlands to dry out. The wildlife habitat will be eliminated and our family will be deprived of the enjoyment of watching the animals that inhabit and travel through the corridor and property daily. After construction, our view from our home will consist of nothing more than an expanse of land cleared of tress and replaced with invasive weeds and yellow posts clearly marked “Danger High Pressure Pipeline”. Because of the need for ongoing inspections and maintenance we will be permanently be subjected to random intrusions and violations of our privacy by total strangers, as well as to risks associated with toxic herbicides. The path of the pipeline will deprive us of privacy, disturb and dry out wetlands and ground water, and put our health at risk.

3) The current construction plans show that the pipeline which was represented throughout the public hearings and through public materials as “co-located” , defined then as within the existing corridor/ROWs with exiting public utilities is not the true scenario of what will unfold here. Documented evidence in the form of the construction plans, shows that the pipeline will not be “co-located” but in fact will require the creation of new parallel corridors that extend 50ft – 100ft from the exiting corridors/ ROWs. The construction and “temporary” construction sites will unnecessarily and permanently devastate hundreds of acres of acres of our most valued conservations lands and private properties. This includes the removal of hundreds of mature trees, who’s value goes well beyond the physical tree, by, as mentioned above, help ing protect the wetlands that feed the drinking water supplies and adding substantial value to our property values which we

never recoup during out natural lives. Temporary construction zones create permanent destruction.

4) During construction, our family will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of privacy. In addition, we both run our offices out of our home. We need to be able to work during the days. We will be deprived of that ability and our livelihood will be adversely impacted. Our neighborhood is well known to consist of ledge (thus the need for septic and no gas lines to homes, only tanks) so substantial blasting would be inevitable. This blasting will endanger the structural integrity of our home, our septic system, of the other homes in our neighborhood, and adversely impact health and wellbeing of our family, as we use our property for solitude and relaxation and impede our ability to work productively. It will diminish the quality of our life. It will also unconscionably disrupt the wildlife. As we work from home, the construction noise will impact our livelihood, and will require other accommodations to be made at an additional cost.

5) Furthermore, according to the Plans, Tennessee Gas intends to clear cut, then cross Bailey and River Roads,, main Roads between our home and the highway, and town 911 services. During construction, this will make coming and going to and from our home almost impossible and also more expensive. This also creates great risk for us and the other residents of our neighborhood should we need emergency responders. We will be greatly inconvenienced and endangered.

6) We are customers and rate payers.

7) This Infrastructure is not necessary. Massachusetts has all the infrastructure it needs. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Andover has been a strong participant in the Solarize Mass Program. It successfully executed a Solarize Andover program. In addition, Massachusetts has an LG facility in Everett that has been sitting unused, but which could be called upon to meet the needs of any days where there is high demand. The Attorney General's independent study has clearly established that there is no need for this additional NED infrastructure. This pipeline clearly is not necessary at all to service New England. This Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience. By this time it has become quite clear that the true purpose of this oversized pipeline is to transport fossil fuels to Canadian and US coastal areas for sale and export to foreign markets, all at the expense of US rate payers. Massachusetts does not need this new pipeline infrastructure. It does not meet the criteria of serving the greater good and does not meet the definition of eminent domain and our rights under the constitution of the United States of America.

8) Our home is our only major asset. We depend on the equity here to survive and is the basis for our quality of life now and through our retirement. The value of our property will be diminished by the construction, operation and mere presence of the pipeline path. In fact, the resale value of my property has already been diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive our family of retirement funds and directly impact the quality of life for ourselves and our two children.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Julie DeMarco respectfully request that the Commission to grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Respectfully submitted this 9th day of January, 2016.

Julie DeMarco

Basis for Intervening:

My house is about three hundred feet from the proposed pipeline route. My mom and I have animals and grow vegetables on our farm to sell and as a place for people local and from out of town to come learn about how a small farm works and visit the animals. The sound of the construction and machinery used to build the pipeline will effect our quiet life style and the animals natural environment. The construction will also destroy some of the forest behind out house that we take nature walks on and where wildlife lives. The pipe-line and construction could endanger our well and prevent us from having clean water to drink and water our animals and vegetables.

Basis for Intervening:

I am a Dracut resident, residing at 17 Brentwood Drive in Dracut Ma. Me and my family have lived in Dracut for the past 16 years. We moved here because of the Towns desire and commitment to retaining its rural character. Due to the proposed facilities of the NED project, and the amount of construction proposed in Dracut, this will have an enormous effect on me and my family.

We live within close proximity (about 1 mile) from the proposed compressor station to be located on Broadway Road. My wife Kathy and I are raising 4 school age children and we are very concerned about the toxic impact this will have on our environment. Two of our younger children attend Campbell School which is a few miles downwind of the Compressor Station and we are deeply concerned about the health effects of blowdown emissions on them and their school. Additionally, we are well aware of the noise that emanates from these plants, and fear the long term effects on our lives. We are not convinced that Kinder Morgan will used superior advanced technology to make these stations whisper quiet, as they intimated during their open house. We understand they only have to follow govt regs and the tree buffer zone of the proposed site is small and will not absorb the noise from the station.

Nearing retirement age we fear significant, unrecoverable, financial loss due to lower home equity values, as a result of the detrimental impact on property valuations that will come with this project. A prospective

home buyer's perception of the associated risks of a Compressor Station, will impact on that buyer's decision to purchase a home in Dracut and would increase the difficulty of any of us selling our property. Property listings in Dadek Estates have already started to slide due to the announced location of the Compressor Station. This will undoubtedly have a long term impact on the Town's tax revenue and future growth. Our fear is this project will kill the Town.

The station and pipeline location abut countless multiple bedroom homes, occupied primarily by families with kids. Nice homes located in neighborhoods called Meadow Creek, Parker Village, Dadek Estates and Cartwheel Path, to name a few. These are some of the most desirous family neighborhoods in Town. This project risks the health and well being of all of us and through exposure to emissions and noise from the Compressor Station and the risks that come from pipeline accidents.

Lastly, the proposed plan to locate and construct two 23,000 hp compressor units with unprecedented capacity, along the main road into Town (Broadway Road) will wreak havoc on all of us. Commutes in and out of Town will suffer tremendously for no discernable local benefit and I oppose this project.

I am specifically requesting to intervene because my property was directly affected by one of the route iterations put forth by KM/TGP. According to the official filing, my property is no longer in the direct path of the proposed pipeline but the many months of learning about the pipeline plans, KM/TGP, the affected towns and people have made me realize that this is a terrible thing for NH whether your property is directly affected or not. The NED pipeline is not needed in NH and will have so many negative side effects on the numerous towns it crosses and people who live in them.

I am a member of an impacted community who has concerns about various impacts to the local environment and health.

The environmental impact of the pipeline is potentially huge. The risk of oil spills and groundwater contamination is really high, no matter how safe the project seems to be. One spill can change our lives forever. I have read about the toxic contaminants that may infect clean water supplies in towns nearby the project. This type of contamination is associated with cancer deaths, renal failure, lupus, and hyperthyroidism. Huge pipeline spills near Marshall, Mi. and Mayflower, Ar. have led to respiratory ailments and other health ills. Pollutants from this type of projects are linked to heart and lung disease, asthma, and cancer and means a more dangerous future for our children. This dirty energy project is all risk and no reward for our community. Moreover, the biggest risk of all is exacerbating climate change.

I live 5 miles from both the proposed Constitution and NED pipelines in Delaware County, NY. I was an organic farmer for many years, and I continue to be an organic gardener on a large scale. My view of a healthy, safe environment cannot coexist with the alarming build-out of fracked gas infrastructure. Not only will my county be facing the harms from high-pressure pipelines and all the methane leakage these entail, but we will also be living near highly polluting compressor stations and, much worse, gas power plants. The cumulative health impacts of this certain build-out has not been addressed in any of the environment impact studies by FERC. Segmentation of these projects can no longer rule the day. We can no longer afford to turn a blind eye to our decisions.

Basis for Intervening:

I am deeply disturbed about FERC's premature issuance of the "Certificate of Public Convenience and Necessity" to Constitution Pipeline Company(CP13-499). I read PACE litigation's "request for rehearing" to FERC and in it, they make very clear that FERC violated the Natural Gas Act and the Clean Water Act by issuing this Certificate prior to the DEC and Army Corp issuing permits. (1) After reviewing other FERC projects, it is evident that this is a common practice by the Commission. (2) My concern is two-fold. First, it appears this puts added pressure on the NY DEC and ACE to issue permits. Second, this has allowed Constitution to gain eminent domain (prematurely) on landowners who had refused to sign easement agreements. There were approximately 300 landowners who fell into the "refusal" group-about half of all landowners along the route. After FERC's issuance of the FEIS, Constitution lawyers sent a threatening letter to landowners, many of whom felt pressured into signing agreements. (3) Of the remaining landowners, Constitution gained eminent domain on approximately 120 (4)—all made possible by FERC's premature issuance of the FEIS, prior to NYS permits. This illegal action by FERC must not continue.

I know several of the affected landowners this has been devastating for them. I have witnessed people breaking down over the probability that they will have permanent easements on their property titles even

if the COntitution project is denied. I want to have faith in the regulatory process but it has become quite clear that this FERC process is not judicious and that public participation (going on nearly four years now) has little, if any bearing on the results.

And with a one two punch, Kinder Morgan has filed for its Northeast Energy Direct Pipeline (NED), which would run 50 feet along-side Constitution Pipeline if permitted. I recently went to the Delaware County Board of Supervisors meeting where Kinder Morgan gave their presentation. The supervisors were very upset by this proposal and the majority are opposed to the project(5). They are worried about industrialization, their roads and most significantly--more flooding. They should have been equally concerned with Constitution for the same reasons but with all of the “generous” donations being made by Williams and the idea of “cheap local gas” (however unrealistic)(6), there was little impetus to look at the repercussions....until now.

The last three and a half years have been a learning curve for everyone involved and unfortunately most people(including myself) could not fully understand all of the intricacies and complicated moving parts, until after the public process was over. It certainly didn't help that pertinent information regarding the Constitution project, requested by DEC and others, was not included in the DEIS until after the public comment period was closed and that 24% of the survey information for the entire route was still missing when FERC issued the FEIS. The inadequacy and generic nature of the DEIS and FEIS was clearly documented in the many comments submitted to FERC by the NY DEC, the Army Corp of Engineers, the NY Attorney General, the US Department of Interior Fish and Wildlife Services, the NY Public Service commission, the EPA, Public officials, Stop The Pipeline, Environmental groups, landowners and the public. (7)

If Constitution pipeline is built, it will create an existing right of way and a corridor that will continue to expand. Kinder Morgan's NED project, now filed with FERC, is proof of that. And there's no reason to believe it will end there. Indeed, an article published last year about Kinder Morgan states (8):

“Kinder Morgan's VP stresses future projects will be incremental and adding pipeline where there's already pipeline, and folks around northeastern Pennsylvania will learn more in the coming months.” And this from the same article, according to a landowner: “They have a strange way of doing things. I understand they want to come back through when they were already just here. If you have it already tore up, do the job and be done with it.”

The reason they do things incrementally is so that agencies aren't able to look at cumulative impacts. The DC Circuit Court of Appeals recently ruled against FERC stating that the Tennessee Gas Pipeline project in PA was illegally segmented(9):

“After oral argument, where the agency's legal argument was characterized as “gobbledygook” by Judge Edwards, the D.C. Circuit court ruled in favor of the Delaware Riverkeeper in a 3-0 decision on June 6, 2014. The panel of judges found that the Federal Energy Regulatory Commission violated NEPA by: “ segmenting its environmental review of the Northeast Upgrade Project – i.e., failing to consider the Northeast Upgrade Project in conjunction with three other connected, contemporaneous, closely related, and interdependent Tennessee Gas pipeline projects – and failing to provide a meaningful analysis of the cumulative impacts of these projects to show that the impacts would be insignificant.”

As you just read, Kinder Morgan intends to continue this behavior and indeed this is what Constitution has been permitted to do by excluding the NED and Iroquois SONO reversal...all with FERC's blessing. (10) In making a decision on NED, FERC should evaluate cumulative environmental impacts from all three of these projects.

Finally, this process is deeply flawed. Based on FERC's actions, the process is rigged in favor of pipeline companies at the expense of the public, landowners, the environment and most importantly: the law. However, I am filing this motion to intervene with the intention of ensuring that FERC will change this unacceptable, illegal behavior and conduct due diligence on this project for the public good.

Rachel Soper

20160115-5653

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

DOCKET No. CPI6-21-000

MOTION TO INTERVENE OF ANITA E. TRUDEL
17 Autumn Street Windham New Hampshire

Pursuant to Sections 212 and 214 of Rules of Practice and Procedure of the Federal Energy Regulatory Commission (FERC) promulgate at 18 C.F.R. 385.212 And 385.214 respectively,

Anita E. Trudel hereby respectfully moves to intervene in the above referenced Docket.

I protest the Commission's acceptance of an incomplete application. The Commission issued an information request to the Applicant the day after accepting the NED application noting, among other things, that the Company 'did not fully provide adequate data for alternate comparisons' in its Application, as required by the Minimum Filing Requirements.

The proposed project will drastically diminish and depreciate the property value located at 17 Autumn Street Windham, NH

The proposed project will create a "nonconforming" lot on the property located at 17 Autumn Street Windham, NH

Inequitable Easement Contracts- No one has directly contacted me and proposed any terms of settlement for an easement.

loss of valuable existing mature trees buffering the Existing Eversource Utility Corridor.

Imposed tariffs to cover cost of building the NED pipeline. I am a liberty Utility customer and am anticipating an imposed tariff on my utility bill to cover the cost of building this pipeline.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

RE: Docket CP16-21-000 Northeast Energy Direct Project-Wetland Mitigation

Dear Chairman Bay:

Attached please find a series of email exchanges between Lucas Meyer, Public Affairs Consultant for Kinder Morgan/Tennessee Gas and David Drouin, Chairman of the Rindge Conservation Commission (the "Commission"). I summarize these exchanges as follows:

In September, 2015, Mr. Drouin received a request from Kinder Morgan for a meeting with the Commission to discuss “local wetland mitigation opportunities” that Tennessee Gas might be able to include in its compensatory mitigation plan to be developed for the proposed Northeast Energy Direct Project (Attachment I). Mr. Drouin promptly responded and provided Kinder Morgan with five possible meeting dates between September 24, 2015 and January 22, 2016. Mr. Drouin was then contacted by Mr. Meyer who requested that the Commission hold a special meeting. This request was denied by Mr. Drouin (Attachment 2).

On December 17, 2015, after weeks of silence, Mr. Meyer wrote to inform Mr. Drouin that Tennessee Gas wanted the Commission’s proposed mitigation measures by January 15, 2016. Mr. Meyer went on to explain that if Tennessee Gas did not receive input from the Town by that date, it might opt to pursue mitigation through the New Hampshire Aquatic Resource Mitigation Fund which would mean that compensation for impacts occurring in the Town of Rindge would not be directly available to the Town (Attachment 3). Mr. Drouin’s response to this letter speaks for itself (Attachment 3).

If there is supposed to be a meaningful public process in connection with the NED Project, it is not evident here and, in fact, it is, and has been, non-existent since Kinder Morgan/Tennessee Gas made its original filings with FERC in December of 2014. Those of us who are public officials in the communities that are in the path of this pipeline have received misinformation, out-of-date information or simply no information at all. This is evident in the plight of the Rindge Conservation Commission. This Commission, comprised of citizen volunteers, is responsible for the stewardship of the Town’s significant natural resources. To be bullied to respond to complex wetland mitigation issues in less than a month during the holiday season and to be asked to do this without the benefit of accurate or current maps of the Project is outrageous.

Kinder Morgan/Tennessee Gas seems intent upon completing all of its FERC requirements in the most superficial way possible at the expense of the residents of New Hampshire, particularly, those in the path of the proposed pipeline. If this is an acceptable manner for pipeline projects to muster FERC approval, then we question FERC’s ability to be fair, transparent and objective.

Very truly yours,

Rindge Board of Selectmen
Robert Hamilton, Chairman

RE: Northeast Energy Direct Project Compensatory Mitigation Plan Town of Rindge

Dear Mr. Drouin:

In response to the increased demand for transportation capacity of natural gas in the Northeast United States (“U.S.”), Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) is proposing the Northeast Energy Direct Project (“Project”) which will modify its existing pipeline system in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut. As you are likely aware, the Project includes proposed new Project facilities in the Town of Rindge. The proposed route of the 30” Wright to Dracut Pipeline segment traverses the Town of Rindge for approximately 9.04 miles (reference attached map).

While minimized to the extent practicable, impacts to wetlands and streams may be unavoidable. Such impacts will require compensatory mitigation to comply with the applicable state and federal rules and regulations. In accordance with New Hampshire Department of Environmental Services (“NHDES”) rules for compensatory mitigation (NH Env-Wt 800), Tennessee’s final compensatory mitigation plan may include various measures such as land preservation, relevant environmental projects, payment to the State’s Aquatic Resource Mitigation fund (“ARM fund”) and other acceptable mitigation options.

Tennessee’s strong preference is to maximize the compensatory mitigation benefits to the Town of Rindge, and Tennessee would like to meet with you to discuss in person the possible projects that are a high priority to you for potential inclusion in Tennessee’s Project compensatory mitigation plan. In accordance with NH Env-Wt 800, these local projects could include:

- Preservation of upland buffer- preservation of areas of land contiguous to an aquatic resource that contribute to the resource functions and values. These lands could be preserved by either purchase of a conservation easement or transfer of fee simple ownership to a government entity or nonprofit organization acceptable to NHDES.
- Wetland restoration by reestablishment of a filled, dredged, or drained wetland to restore lost functions.
- Wetland creation by transformation of upland to wetland in appropriate locations.
- Stream restoration or improvement, for example, by replacement of an undersized culvert to provide better hydraulic capacity for high flows and/or aquatic habitat or passage under roads.

We would be very interested to meet with Town representatives at a time which would be convenient to discuss potential local mitigation opportunities, and with your assistance, include projects with direct benefit to the Town of Rindge. In order to conduct an evaluation of potential opportunities that may be included with the Project application, we kindly request that you respond by September 24, 2015 with a date that would work for the Town of Rindge. In the interim, if you should have any additional questions, please do not hesitate to contact me.

Sincerely,

Allen Fore
Vice President, Public Affairs
630-725-3044

Subject: KM Wetland Mitigation Meeting

Mr. Drouin,

I wanted to touch base about scheduling the wetland mitigation meeting between the KM project team and the Rindge Conservation Commission. Since you were one of the first to reply, i wanted to try to schedule a meeting with the Rindge Conservation Commission during the first week of meetings that the project team is scheduling.

We are aiming for the first round of meetings to be over the first week of November. I know that you have a regularly scheduled meeting on November 9th, but would the Conservation Commission be open to meeting a week earlier on the evening of November 3rd at 7:00 pm?

Thanks!

Lucas

Lucas S. Meyer Consultant,
Public Affairs Kinder Morgan Inc.

To: Lucas Meyer
Fr: David Drouin
Sent: Wed, Oct 14,2015, 3:43 pm

Lucas,

You requested a special meeting in your last email and I indicated that we would not be open to a special meeting for the initial meet. I gave you our dates through January and the Commission members have arranged their schedules around those dates. I cannot be assured that we would have quorum for a special meeting that is arranged via email. If secondary meetings are required, they would be scheduled while all Commission members are in the room at the initial meeting and we can schedule around those conflicts. This system has worked since the inception of the Commission in the 1970s and more recently for the giant retailers Walmart and Home Depot. Surely Kinder Morgan has a number of teams that one of them can meet with the Commission at a regularly scheduled meeting. I also want to remind you that we need enough notice of your attendance so that we can lighten our regular workload to accommodate you and we need time to properly public notice the meeting per the State RSAs. If not properly noticed we will be unable to meet with you even if you are in attendance at the meeting.

Regards,

David G. Drouin Chair, RCC

Subject: Wetland Mitigation Guidance

Mr. Drouin,

On September 1, 2015, Tennessee Gas Pipeline Company, L.L.C. ("Tennessee") submitted a letter to the Town of Rindge, regarding the opportunity to discuss local mitigation opportunities that Tennessee may be able to include in the compensatory mitigation plan that will be developed for the proposed Northeast Energy Direct Project ("Project"). The intent of this correspondence is to follow-up to provide additional guidance to the Town of Rindge in effort to streamline the process to identify potentially suitable mitigation projects. In the event that schedule conflicts may further delay the opportunity to meet with the town, Tennessee representatives may be available via phone or email to discuss potential projects. We request that potential project(s) are identified by the town and presented to Tennessee for evaluation by January 15, 2015, as further outlined below.

The New Hampshire Department of Environmental Services ("DES") rules for compensatory mitigation indicate a preference for "permittee responsible" mitigation such as local restoration and creation of wetlands or preservation of wetlands and their surrounding upland buffer, however in-lieu-fee compensation is frequently used for projects that impact small areas of multiple wetlands and streams. If the in-lieu-fee route is taken, money is placed in the Aquatic Resource Mitigation (ARM) fund, and is available through a grant process within the watershed in which the impact occurred. Therefore, compensation for impacts that occur in the town would not be directly available to the town.

Tennessee prefers to maximize the compensatory mitigation benefits directly to the town in which the impacts occur. Tennessee is seeking input from the town so that local mitigation projects may be evaluated for potential inclusion in the Project mitigation plan. If we do not receive such input from the town, Tennessee may pursue mitigation through the in-lieu-fee program.

We have provided an example ARM fund calculation as an attachment to this correspondence. This calculation is based 0111.0 acre of forested wetland impact. This is provided as a guideline in effort to demonstrate the potential funding amount that may be available for your town; however, funding will be dependent upon actual impacts that occur within the town. The current estimated permanent wetland impacts for New Hampshire were calculated and reported in the Environmental Report, Resource Report 2 - Water Use and Quality on November 20, 2015 to the Federal Energy Regulatory Commission ("FERC"). For the Town of Rindge, the current total estimated permanent wetland impacts are 4.66 acres.

The local mitigation projects included as part of the mitigation plan will ultimately be evaluated by DES and approved if deemed appropriate mitigation for the wetland functions and values impacted by the Project. As such, it is in the best interest of municipalities to present a well-planned, compelling and adequately funded mitigation project for DES to consider. The guidance below is provided to assist you with evaluating a potential project that may be suitable for Tennessee to include in the Project mitigation plan. More detailed information can also be found at this

website: <http://des.nh.gov/organization/divisions/water/wetlands/wmpl>

STEP 1: Initially a brief summary paragraph and a figure (aerial photo, tax map or USGS map) showing the project location will be sufficient to get vetted by DES for inclusion as a potential mitigation project in the Project's permit application. The summary paragraph should include:

- a brief description of the project, including benefits and objectives;
- identification of additional funding sources to support the entire project;
- a schedule for full implementation of the project; and
- identification of adjoining conservation land, if applicable.

If the town has identified a potentially suitable project, Tennessee requests the town submit the summary paragraph and figure by January 15, 2015 in order to include the information in a compensatory mitigation proposal to the DES for their preliminary review.

STEP 2: If DES initially concurs that the proposed mitigation project has potential to mitigate for the Project impacts, providing a more in-depth project description will be required. This information will primarily consist of expanding Step 1 to further justify and add more detail to the mitigation project. This should include: a more in-depth description of the project and project objectives; steps to accomplish preservation or restoration, amount of funds needed, and how the town would raise additional funds if needed; benefits to natural communities and human values such as recreation; a long-term monitoring plan, if appropriate; and representative photographs.

The New Hampshire Fish & Game Department Wildlife Action Plan (<http://Uextension.unh.edu/fwtltafw/index.htm>) includes maps of critical habitats that are ideal in obtaining information to better define mitigation project benefits.

Tennessee is available to answer any further questions you may have. If you have potentially suitable mitigation in your town, please let us know and we would be happy to meet with you or review any correspondence, while keeping the appropriate timeline in place. If the January 11th meeting is still an option, the KM wetland mitigation team would be happy to attend to discuss the wetland mitigation process. We look forward to hearing from you soon.

Best,
Lucas Meyer

Mr. Meyer.

I'm glad to hear from you. Let me disburse to the rest of the Commission and Town government for consideration.

I will say that since the initial inquiry from you over three months ago and my prompt reply to you with seven dates over five months, your lack of communication and/or ability to schedule a meeting in the intervening three months has been most disappointing. I think the Commission has acted in good faith to meet with you to discuss these important matters and now you come forward with a request for proposals due in one month. We have been waiting to meet with KM in order to be able to bring forth projects for mitigation. If we had known that we would be put off for three months with no communication, we would have requested that this RFP be presented to us back in September, so that we could put the time and effort that any possible mitigation deserves. You now come to us with a request for proposal due in one month during the holiday season when our meeting schedule has been reduced by 50%.

There seems to be a sense of urgency on the part of KM when you desire action favoring the project, but a lack of cooperation and disregard for timely communication when the Town requests information or a meeting. It seems that the reputation that KM has for this pattern of behavior is well earned.

In September I requested of you and received the latest pipeline maps relative to Rindge. At the early December KM open house there were new maps that showed a temporary access road and work site for the extraction and/or discharge of water for hydro-static testing on a piece of Town owned conservation land. When I questioned the addition of this facility, I was assured the the Town was aware of it. The Conservation Commission had no knowledge of it nor did the Board of Selectmen. At that meeting I requested new maps, which I have yet to receive. I now request another set of the most up to date and complete maps you have for this project as it crosses Rindge. I request this information be handled with an expedited delivery.

I don't know if we can produce what you have requested by the Jan 15, 2016 deadline as we only have one

more meeting before then, as you are well aware of from the schedule I sent you in September. A more suspecting person than myself might think it was even planned that way.

Regards,

David Drouin Chair, RCC

Subject: Re: Wetland Mitigation Guidance

Mr. Drouin,

Please see attached for Rindge mapping that is reflected in the FERC filing. You may also reference that FERC filing for more detailed Rindge alignment sheets.

Additionally, we do not need a fully developed mitigation plan by the 15th, but wanted to make sure we had started the process with you and the Rindge Conversation Commission before that date and that we have some demonstrable forward progress on a wetland mitigation plan by that date.

With that in mind, the wetland mitigation team would like to be added to the agenda for the Jan. 11th meeting. To reiterate, the purpose of this meeting would be to discuss the DES wetland mitigation process, what DES looks for in successful wetland mitigation projects, and to begin a dialogue about potential wetland mitigation projects. We do not expect to conclude the meeting on the 11th with a fully hashed out mitigation plan, but to have started a dialogue and to have established points of contact moving forward.

On Mon, Dec 28, 2015 at 7:43 AM,

<dgdrouin wrote:

Mr. Meyers,

I have briefly reviewed the maps attached and I do not see the temporary access road and withdrawal/discharge site on pg 3 that were on the maps at the open house December 4, 2015. Why is that? I thought you were supplying the latest maps, these are dated 11.24.2015. The engineer at the open house insisted that the Town of Rindge knew of the road and water access site. Was this added between the 24th of November and the 4th of December?

How are we supposed to be well informed of the pipeline plan to discuss mitigation when we either do not have all the information or what we have is not complete or obsolete? What else is missing that needs to be taken into consideration when discussing mitigation? Why should we have to wade through the FERC filing to extract the information we need to prepare for our meeting on the 11th of January? We are all volunteers spending our own time to deal with this project that has been thrust upon us, the least KM could do is provide the most up to date info we need to do our volunteer jobs, not just be pointed to where we have to search for it.

I expect more of an organization with the resources of KM/TG.

David Drouin RCC Chair

Fr: David Drouin

Sent: Tue, Dec 29, 2015 11:12 am

Mr. Meyers,

Apparently the last sentence of my second paragraph regarding “not just be pointed to where we have to search for it” didn’t register with you. Where do I enter these two document numbers on the FERC website? When I enter them in the advanced search section, I get no hits. Do I need to search down the list manually? Is there a subsearch under the docket that is not clear? we need large scale copies that can be used in our meetings and presented to the public January 11, 2016. Projects for review by our Planning Board or Board of Adjustment require D size drawings as a minimum, 8.5 x 11 or 11 x 17 prints from the FERC file are not going to cut it. The FERC site is not the most user friendly and I do not care to view any other documents other than those requested of you.

This has not been helpful. Any other project information for consideration in the Town of Rindge for review by the Conservation Commission in my ten years on the Commission has been provided by the project owner or the contractor. Quite frankly, I resent having to take either my personal time or my employer’s time to search for documents that I requested in September, that have subsequently been superseded by KM/TG, that you cannot be bothered to supply to the Town. Why should the Town have to assume the burden in time and materials to get the information we need to do our jobs? Jobs we are not paid to do and that the Town will not be compensated for.

KM/TG has the resources to provide the information needed, I think they should use them.

David Drouin Chair, RCC

20160119-0014

This is a Request for a **Motion to Intervene** regarding Docket #CP16-21 (Kinder-Morgan pipeline, aka NED).

As a resident of Franklin county, living in the town of Erving Massachusetts, I am against the proposed pipeline construction disruption and unknown irreversible damage that will be done to the land, water and air that I use.

There is a large portion of conserved land that will be “unconserved” if this project is given the go ahead. I am sure that my fellow Massachusetts citizens, who put this land in a conservation state, would not allow the proposed pipeline to go through. This land was conserved for perpetuity, against any and all development.

I will also be affected economically, due to the fact that I am a user of the electric utilities in this area, and I am very concerned about rate hikes and the continued use of fossil fuels.

For the reasons stated above, I respectfully request that the commission (FERC)) grant this motion to inter-

vene and to provide me party status in this proceeding.

Additionally, I request that the applicant send me “hard copies” of all correspondence and documents of this motion to intervene, regarding docket 1 CP16-21, by first class mail.

Respectfully,

Robert E. Steele

Docket 1 CP16-21-00

Dear Administrative Staff,

I am the property owner of 205 Wheeler Road. Parcel ID 38//41 Dracut Massachusetts . I oppose this project as I will be in close proximity to a newly constructed 30 “ pipeline along with being close to a Meter Station and less than a half mile from a 23000 hp Compressor Station .This project will affect my property value and could adversely affect myself and families health due to noise and odor pollution. I feel that this project had not been looked over enough and thoroughly thought out with regards to the many damaging effects a project like this could pose to the town of Dracut and its citizens . Kinder Morgan changes its mind constantly as to where to put this or that with no regards to anything but their own interests. Please take careful thought before approving a project that has not been well thought out and seems to be rushed by Kinder

Morgan . I do not think this project is even needed at this time .Let's take our time and look into other sources of energy that are safer and less damaging to our environment that are out there.

Sincerely,

Robert J. Berube

Washington, DC 20426

Dear Sir/Madam:

I would like to file for intervenor status regarding the NED gas pipeline proposed to be built by Kinder Morgan through Franklin County, Ma. where I live. I am strongly opposed to this project for many reasons:

- 1.Convincing evidence has been presented by our attorney general as well as unbiased research at Umass Amherst that this pipeline is not needed (except by our gas company — owned by a Spanish corporation with obvious desires to get the gas supply exported to Europe where they can make a bigger profit). Our need for natural gas at peak times during the winter can be met with a reserve supply of liquified natural gas using present resources.
2. This pipeline would be contributing to future decades of fossil fuel burning at a critical time when we still have a chance to preserve a liveable planet if we STOP BURNING FOSSIL FUELS IN THE NEXT DECADE. All the climate science is very clear on this, yet the fossil fuel industry seems willing to commit our planet to certain death in order to continue reaping its mighty profits. The citizens of Massachusetts are leaders in this country to leave fossil fuels in the past and invest aggressively in renewable energy. This pipeline defies that intention.
3. The pipeline would compromise the soil, water, air and health of the citizens and the wildlife of our state, compromising preserved agricultural land, the beauty that attracts tourism, and the property values of many of our citizens whose rights to preserve their value would be violated by this project.
4. This pipeline would introduce the possibility of accidents that would overtax our tax-based emergency responders, swamping our resources and possibly even requiring evacuation from our homes, disrupting our lives and livelihoods.

We are standing firm and stmnng-as a community, as a bioregion, and as global citizens protecting life for future generations-against this project. Please grant me intervenor status so my voice will be heard in this most urgent matter for the quality of life for people of Massachusetts today and in the future.

Sincerely

Sandra Boston

STOP THE NED PIPELINE!!

Protect NH land from Eminent Domain!

I oppose the Kinder Morgan Northeast Energy Direct (NED) EXPORT pipeline. The pipelines, and compressor station will scar the NH landscape and put our water, wildlife, forests, agricultural lands and rural character at risk. These include health and safety risks from emissions, industrialization, pollution and the devastating effects of fire and explosions. Greed, not need is fueling this project. Say NO to this private company that will

TAKE OUR LANDS with NO BENEFIT TO US.

20160119-5001

Raymond Reuter, Coeymans, NY.

I strongly oppose the NED pipeline under consideration specifically as it applies to the town of Bethlehem NY and the surrounding areas.

20160119-5002

Donald Clendaniel, Averill Park, NY.

A review of the updated maps provided to the town of Nassau indicates that the proposed pipeline and work space is significantly different than maps released earlier. The more recent maps move the pipeline from the north side of the National Grid right of way at the Nassau substation to the south side of the right of way. This change places the pipeline on my property line and extends it onto the property of several residents. Additionally, the map indicates that the south side of the proposed pipeline will be used as temporary workspace; this would require the razing of hundreds of privately owned trees and moving the current tree line approximately 25 feet inside residents' property. This would also encompass established water flows and wetlands, which are unlikely to be restored after project completion. This is unacceptable and unnecessary. The proposed pipeline crosses the National Grid right of way after passing Taborton Road in order to avoid a water body. Moving the pipeline to the north earlier in the line would require no significant additional materials or construction. Furthermore, the property in equal distance from the power lines on the north side is owned by National Grid and would allow for all workspace to be contained on property being leased for

the pipeline construction.

20160119-5017

Evelyn Taylor, New Ipswich, NH.

I do not see that Tennessee Gas has addressed the condition of asphyxiation as part of their response to health impact concerns.

Natural gas can asphyxiate a person within minutes.

Even if death is not a consequence, what studies can the FERC, Tennessee Gas, Kinder Morgan, the EPA, or any other entity responsible for creating, imposing, abiding by, or enforcing safety standards for a pipeline such as NED reference to accurately respond to the health consequences of short or long term exposure to leaks or pipeline operations, including compressor station and metering station activities, as it relates to the asphyxiation capabilities of methane?

Where is the evidence in this respect that allows Tennessee Gas/Kinder Morgan to convey the gas is safe when asphyxiation by natural gas is a known phenomenon?

20160119-5020

Leslie J Carey, Averill Park, NY.

The application of the TGP/KM NED is seriously flawed. It is a shoddy piece of work, riddled with inaccuracies and leaves many areas unaddressed. For example:

Failure to meet the mandates of Waters of the United States Rule, including the failure of TGP to disclose the Rule and its potential impact, including the fact that landowners could be potential liable for fines of nearly US\$40 000 per day for pipeline breaches attributable to TGP.

Accurate lists of the names and addresses of all affected landowners, waterbody crossings that may have contaminated waters or sentiments, and watershed and designated surface water protection areas.

Plot or site plans of compressor stations showing the location of the nearest noise-sensitive areas.

Complete description of terrestrial and wetland wildlife and habits, as well as major vegetative cover types, that would be affected by the proposed pipeline.

Thoughtful evaluation of the potential for short and long-term impact on the wildlife resources and state-listed endangered or threatened species causes by construction and operation of the proposed project.

Accurate description quantifying the impact on employment, housing, local government services, tax revenues, transportation, and other relevant factors with the project area for major aboveground facilities.

Full list of any geologic hazards to the proposed facilities.

This application must be rejected immediately.

20160119-5024

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we, name here, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Policarpio A Soberanis and Ivy E Soberanis
49 Cart Path Road, Dracut MA 01826
515-897-2059
psoberanis@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Kinder Morgan's Northeast Energy Direct (NED) is a high-pressure pipeline carrying excessive amounts of natural gas through Massachusetts without a primary benefit to the state. It is a bad deal for Dracut, MA that would take lands by eminent domain, likely raise energy rates, decrease home values, and threaten water

quality across the region.

This pipeline would be literally in our backyard. We have 2 children 2 and 5, and would love for them to grow up without worrying about being affected by health issues from a pipeline and compression station. We both have PhD's in engineering and after getting news that this pipeline will be in our back yard, we decided to do some research. From our research we have only encountered cons of this proposed pipeline. Not only will this devalue our property, we will be exposed to the danger of serious accidents, health issues, environmental issues and possible relocation as a result of health issues.

Danger of Serious Accidents

Transmission pipelines are large steel pipes (usually 2" to 42" in diameter; most often more than 10" diameter) that are federally regulated by the U.S. Department of Transportation. This type of pipeline carries un-odorized gas at a pressure of approximately 200 to 1,500 psi. The pipe itself is constructed with 40'-60' sections or "joints" that are welded together at the seams.

Transmission pipelines can fail due to: seam failures, corrosion, materials failure, or defective welding. Given that the natural gas transmission pipelines transport is un-odorized gas leaks can go undetected until an explosion occurs. [<http://nhpipelineawareness.org/safety-issues/>]

There have been several natural gas pipeline explosions in the pass few years. I am very worried that if there is an explosion many families including ours can and will be affected. When I saw an image of fireballs shooting hundreds of feet in the air from a natural gas pipeline explosion in Brooke County, West Virginia last year January 26, 2015 (Figure 1), I wonder, why would our officials allow oil companies to run pipelines through residential neighborhoods? As a parent, our job is to protect our children and provide a safe environment for them. Is living next to a gas pipeline safe? No it is not! There are many eminent dangers from a pipeline explosion.

Figure 1: Pipeline Explodes in West Virginia, January 26, 2015, 1,

{ photo omitted }

Health Issues

From an Article, Gas Compressors and Nose Bleeds by Jessica Cohen, TheUtne Reader, Fall 2015 reported a study in Minisink, NY that connects health issues with rural gas compressor pollution. In the Minisink study conducted in New York, they found that spikes in air toxins around the compressor coincided with residents' adverse health symptoms. Asthma, nosebleeds, headaches, and rashes were common among the 35 participants in eight families living within one mile of the compressor. The study found six of the 12 children studied had nosebleeds, which environmental health consultant David Brown attributed to elevated blood pressure or irritation of mucous membranes by formaldehyde, a carcinogen found in excess around compressors in a recent SUNY Albany study. This is a big concern for us, as we live within a mile of the proposed compression station.

Furthermore, VOCs, present at compressor station construction and operation, are a varied group of compounds, which can range from having no known health effects to being highly toxic. Short-term exposure can cause eye and respiratory tract irritation, headaches, dizziness, visual disorders, fatigue, loss of coordination, allergic skin reaction, nausea, and memory impairment. Long-term effects include loss of coordination and damage to the liver, kidney, and central nervous system². Some VOCs, such as benzene, formaldehyde, and styrene, are known or suspected carcinogens³. There is also the possibility of elevated risk of cancer from UNGD VOC exposure.

Figure 2: Minisink Health Study Photo, Gas compressors and nose bleeds 4

{ photo omitted }

Other Factors

Natural gas is also primarily methane, a greenhouse gas over 86 times more powerful than CO₂.

Natural gas is also primarily methane, a greenhouse gas over 86 times more powerful than CO₂. When a full

accounting of methane's impact is taken into consideration, studies show that it has no benefit over coal or oil in reducing greenhouse gas effects.⁵ What is rather upsetting is that the pipeline is not to serve our needs. It is solely for the purpose of export of gas, which could result in a 3X increase in Natural Gas prices. This is rather disheartening to say the least.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, Policarpio Soberanis and Ivy Soberanis, respectfully requests that the Commission to grant our Motion to Intervene as a party with full rights to participate in all further proceedings. Respectfully submitted this 15th day of January 2015.

We live in Nassau, NY and want to intervene in this proceeding to oppose the NED pipeline. We have an interest which may be directly affected by the outcome of the proceeding because our family including our 4 and a 1/2 year old daughter live a half mile from where the pipeline will pass and within five miles of the proposed compressor station site on Clark's Chapel Road. We are worried first and foremost about our safety and health, especially that of our daughter's. We are concerned about the effects the station and close proximity of the pipeline will have on the quality of air in this region and on our water supply. We enjoy our land and the recreational lands in this area which are at risk for being destroyed by this proposed project. The possible impacts to our economy, environment, health and safety of this beautiful area we call home and hope to call home for many many years are too many to list here. We wholeheartedly oppose the NED

expansion. We are asking that the NED project by Kinder Morgan / Tennessee Gas not be approved.

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we , name here , file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16-21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Christina Melillo
452 Methuen Street Dracut, Ma 01826

978-455-5960
cmelillo78@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Provide paragraphs on how construction of the pipeline will adversely impact you: (You may put your reasons here in the body, or on a separate sheet called "Exhibit A", with wording here stating : "See Exhibit A, attached and made a part hereof by reference")

The Pipeline Project by Kinder Morgan will directly effect my family. I am worried of the effects the pipelines will do to my family which include 2 children (8 and 6). I am also very worried about the compressor station that is also being proposed to be built not that far from where I live. We are downwind from the proposed location and the Methane and other toxic elements that will spewed from the compressor station will directly impact my children's health and well being. I ask that you please consider stopping the proposed Pipeline and Compressor station from entering an area of Dracut, Ma that not only is home of hundreds of children under the age of 10 and within 1 mile of an elementary school.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 16th day of January, 2016.

Basis for Intervening:

I live in Pelham, MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

20160119-5034

Motion to Intervene of Shanti O Gaia

I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever. I also enjoy the outdoors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. Lastly I feel that global climate

disruption caused by carbon pollution is the number one concern for humanity and feel that we need immediately stop building any new fossil fuel infrastructure and focus all of our energy investments on clean, renewable energy.

Basis for Intervening:

I live in the town of Nassau, NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because the existing pipeline runs through land directly adjoining ours. This is one of the proposed routes along which the new pipeline may be run if it is approved. My Children attend an elementary school within the area affected by toxic emissions by the proposed compressor station. My father's land also directly borders the currently proposed compressor station site. This places both him and my brother in the blast zone and at risk of severe injury if there were to be an incident there.

Basis for Intervening:

My home is only a few hundred yards from the proposed route of both the Constitution Pipeline and the NED pipe. I am greatly concerned that the pipe construction will alter the subsurface water flows significantly, possibly resulting in degradation of my well and ponds on my property. My home and property is all that remains of my family’s wealth and I fear great property value losses.

I am also a committed environmental defender. I’ve installed solar panels on my property and use care in

using resources - in short, I'm trying to do my part and do not appreciate a for profit corporation threatening my homeplace for their benefit.

I have chosen to intervene because I do not believe there is any other entity which might represent my interests adequately.

Natural gas is mostly methane, a powerful greenhouse gas. Natural gas has climate change impacts both as methane, when it leaks from pipelines and drilling sites, and when it is burned and turns to CO2. Pound for pound, methane has more than 20 times the greenhouse gas impact of CO2 over a 100-year period. Let's step into the 21st century with clean energy (wind and solar). Now, not later.

This pipeline is a case of harming the public common wealth in the service of private profit. It is short-sighted environmentally, and it is also not necessary for our country's energy needs and security. I will not silently suffer it as a landowner and community member in Ashfield.

20160119-5046 Motion to Intervene of Keith Kowalski

I would like to file as an intervenor in opposition of application CP16-21 by Kinder Morgan (KM) with its principal executive offices located in Houston, TX. They are engaging in substantial business activities, which include but are not limited, to the ownership, management, operations and maintenance of approximately 84,000 miles of pipelines. I am concerned about the hazards to health, safety, and the environment in the construction and operation of the proposed pipeline.

Public documents allege that that ruptures of KM pipelines has released hazardous material into the environment causing environmental damage as well as death and injury to KM employees and other people. Such occurrences include but are not limited to the following.

1. In 2011 the PHMSA cited KM corporate defendants for various safety violations, including: failing to update maps to show pipeline locations, failing to test pipeline safety devices, failing to maintain proper firefighting equipment, failing to inspect its pipelines as required, and failing to adequately monitor pipes' corrosion levels (PHMSA letter of February 28, 2011)
2. History of neglect further documented by The Wall Street Journal, in "Is Kinder Morgan Scrimping on its Pipelines?," after an investment analyst determined that the company was starving its pipelines of routine maintenance by diverting excessive funds to investors, September 27, 2013.
3. Excessive history of leak data and ruptures of Kinder Morgan's onshore gas transmission pipelines documented by PHMSA, 1994-2013, including determinations of faulty infrastructure, failure of the pipe, cracked welds, faulty pipeline equipment, corrosion of the pipe, and other problems.
4. California Occupational Safety and Health Administration cites KM for failure to accurately mark or map pipeline location; contributing toward an event which caused a gasoline spill and fire and explosion that incinerated five workers and severely injured others; also fine levied by the California Fire Marshall for KM's role in the "completely preventable" tragedy; KM agreed to upgrade pipeline inspection methods and improve corrosion control.
5. Early December, 2014, in Anderson County, South Carolina gasoline discharged from a 26 inch pipeline. Reports of gasoline leaked vary (from 8,800 gallons to 359,600 gallons). After 10 months of remediation efforts, less than 53% of the release has been recovered leaving substantial gasoline remaining in the soil, groundwater and surface waters, and throughout the aquifer and substratum. Following the 2004 pipeline rupture and spill in California, Kinder Morgan pled guilty to criminal charges with several million dollars in fines. The Chief of California's pipeline safety division determined that KM had committed criminal offenses by ignoring data that the pipeline had corroded and required maintenance. In addition to the criminal pleas noted above, the PHMSA in 2005 ordered KM to address its rise in pipeline incidents resulting from KM's "inadequacies" in interpreting data to evaluate and repair its pipelines. The United States Department of Transportation also determined to "form a task force to look into Kinder Morgan Inc.'s maintenance and inspection practices on several petroleum pipelines, ... the first such task force the agency has ever formed." Public documents against Kinder Morgan claim negligent and deficient maintenance and repair of corporate pipelines, including inadequate allocation of funds for needed maintenance, repair, and other operational function; as well as inadequate budgeting, staffing, training, supervision, development, and implementation of policies and procedures which have resulted in ruptures of pipelines and catastrophic releases of hazardous product into the environment.

I am concerned because it seems KM repeatedly is putting profits before people and the environment.

Basis for Intervening:

My name is Lydia Davis. I live in East Nassau, New York, a few miles south of where the proposed pipeline would run, and a few miles southeast from one of the proposed compressor stations (in North Nassau). I strongly object to the building of this proposed pipeline. The area through which it would run near my home is a peaceful, quiet and EXTREMELY RURAL area with much historic interest and a wonderful mix of woods, wild fields, agricultural land, very small villages, and isolated homes, many of them quite old. The open pastures and woods are much appreciated by all who live in the area both for walking and hunting, horseback riding and skiing. We residents have no desire to see the local ecology disrupted in this major way by a pipeline and the cleared land around it and the attendant dangers and noise from the compressor station. There is also risk to our drinking water supply from the construction and operation of the pipeline, compressor station and other facilities. I am also more generally strongly opposed to any further development of the fracked gas industry, which has a devastating impact on any environment it directly affects. The gas transported by this proposed pipeline would not benefit my community at all, and there would not be any guarantee that this gas would not be sold out of the U.S., therefore benefitting only the producers and transporters and adversely affecting all the communities through which the pipeline would pass.

20160119-5052 Motion to Intervene of Michele Sprengnether

Michele Sprengnether
31 Chilton St.
Cambridge, MA 02138

Jan 15, 2016

I am a resident of Massachusetts who wants to **intervene** in the proceeding to oppose the NED pipeline. My understanding is that ratepayers currently pay \$90 million per year for gas leaks in the greater Boston area. I would rather be paying to stop these leaks than adding more fossil fuel infrastructure. In addition, under the Global Warming Solutions Act, our energy needs to shift away from fossil fuels. We have no need for new fossil fuel infrastructure. I don't think that ratepayers should be paying for new infrastructure.

We need the existing infrastructure to be repaired, and we need a smart grid and clean sources of energy.

20160119-5055

UNITED STATES FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.,) Docket No. CPI6-21-000
Applicant, Northeast Energy Direct Project.)

**MOTION TO INTERVENE BY
COALITION OF LANDOWNERS ON THE NED**

Pursuant to Section 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (the "Commission"), 18 C.F.R. § 385.214, the Coalition of Landowners on the NED ("Landowner Coalition") respectfully moves to intervene in the above-captioned proceeding.

The Landowner Coalition is an informal association of more than fifty landowners, including individuals, nonprofit organizations, and others who own land in more than eighteen Massachusetts municipalities, who are directly impacted by the proposed Northeast Energy Direct project, and who expressly intend to refuse to sell easements across their properties to the Applicant for a project that is unnecessary and unwise and not in the public interest, particularly when reasonable alternatives are available to meet the energy needs of the region with far lower costs to landowners, communities, and the environment. Mount Grace Land Conservation Trust, Inc., a non-profit corporation organized and existing under the laws of the Commonwealth

of Massachusetts, has played a leadership role in the formation of the Landowner Coalition. The participation of the Landowner Coalition in this proceeding is in the public interest.

Service Address of the Landowner Coalition

All documents required to be served upon the Landowner Coalition in this proceeding should be addressed as follows:

Coalition of Landowners on the NED
c/o Leigh Youngblood, Executive Director
Mount Grace Land Conservation Trust, Inc.
1461 Old Keene Road
Athol, MA 01331
978 248-2055 x20
Email address: youngblood@mountgrace.org

and

Coalition of Landowners on the NED
c/o Polly Ryan
11 Windsor Avenue
Cummington, MA 01026
413 634-5732
pollyryanlane@gmail.com

Position of the Landowners Coalition

It is the position of the Landowners Coalition in this proceeding that no certificate of public convenience and necessity should be issued in response to the NED application of November 20, 2015. Based on the studies of the Massachusetts Attorney General and others, in the balancing analysis required of the Commission any need for additional gas pipeline capacity is far offset by the extensive adverse effects to the interests of landowners, surrounding communities, and the environment identified below and by other parties to this proceeding.

Interests of the Members of the Landowners Coalition

As land owners, homeowners, parents, grandparents, and citizens, members of the Landowners Coalition, individually and collectively, have direct interests that will be affected by the outcome of this proceeding. These include health, safety, welfare, and property rights arising from direct ownership of homes, multi-generation family land, home businesses, and protected conservation land on which the pipeline is proposed to be built. These interests are directly threatened by unnecessary and unwarranted claims of federal preemption and use of federal eminent domain.

In the above areas of interest, a wide variety of impacts to the land is at issue. Property will be affected by the clearing of trees and other vegetation from land and the widening of existing rights of way, by construction and maintenance of access roads, by blasting, by drilling under rivers and streams, by erosion resulting from the construction process and permanent changes to soil structures, by gas leakage and blow-offs, by degradation and/or pollution of aquifers, by noise and light pollution caused by compressor stations, and by damage to the natural landscape and scenery of the entire area. Personal and public safety will be affected by gas leakage and blow-offs, by degradation and/or pollution of aquifers, by noise and light pollution caused by compressor stations, and by increased stress and fear of accidents. The personal value and the commercial value of these properties will be reduced by the proposed project.

The Commission's decision in this matter is governed in part by the extent to which the proposed project would require excessive use of eminent domain proceedings by the Applicant to obtain necessary rights of way for the NED pipeline on both public and private land. The alleged federal right of eminent domain will have to be imposed in scores of instances across Massachusetts, Connecticut, New Hampshire, Pennsyl-

vania, and New York. At least fifty affected landowners have indicated in writing that they oppose selling easements to the Applicant, and accordingly acquisition of rights of way across many properties, and the outright purchase of many properties will require exercise of eminent domain powers and procedures.

The Public Interest

At every level, therefore, from the most specific to the most encompassing, the Landowner Coalition has interests that may be directly and adversely affected by the subject project and the outcome of the above-captioned proceeding and that can be adequately expressed, represented, and protected only by its intervention as a party in this proceeding. Because many of these interests affect the public welfare, the participation of the Landowner Coalition in this proceeding is in the public interest.

WHEREFORE, the Coalition of Landowners On the NED hereby moves, pursuant to Rule 214 of the Commission's rules, to intervene in and thereby be made a party to the above captioned proceeding.

Respectfully submitted,
Coalition of Landowners On the NED
Leigh Youngblood
Executive Director
Mount Grace Land Conservation Trust, Inc.

MOTION TO INTERVENE IN OPPOSITION TO THE NOTRHEAST ENERGY DIRECT PIPELINE.

Docket No. CP16-21-00

I, Carol Hoehne, live in Cummington, Massachusetts and want to intervene in this proceeding to oppose the Northeast Energy Direct Pipeline. I have an interest which may directly affect me by the outcome of the proceeding.

I live near the proposed Windsor Compressor station and pipeline. The potential for adverse impact on the environment, the air quality, the water quality, and light pollution greatly concerns me. I have an organic garden and orchard and live in this beautiful rural area of Massachusetts. This pipeline is not appropriate for this region and poses a grave threat to the environment.

As a taxpayer, I am concerned for the negative impact on my community as tourism is a vital part of the economy which depends on the pristine woods and streams that this pipeline would jeopardize.

As a Land Trust supporter, we have valuable land in preservation for our residents, visitors and for future generations. This pipeline would permanently alter the land that has been set aside for the public

I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see increase on my bill relating to NED cost recovery

For these reasons, I am an affected applicant. I respectfully request that my motion to intervene be granted.

Sincerely,

Carol Hoehne

Filing Party/Contacts:

Wildlife, including fish, are abundant in these hilltowns. Bisecting their habitat in the woods or disturbing their rivers and streams could do untold damage. Moreover, Kinder-Morgan's safety record is not reassuring--nor is the segment of their budget which is set aside for maintenance. An accident could wreak havoc upon our environment--and upon the tourism industry which supports many businesses in this area.

Finally, Massachusetts is a leader in turning away from dirty energy to green energy. Our Attorney General's study has shown that Massachusetts does not need the gas this pipeline would provide, but that we could meet our needs in far less damaging ways. This pipeline would force us off the path we have chosen.

Basis for Intervening:

I live in Pelham NH and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because;

I am a landowner who will be directly impacted by the pipeline.

I live in the blast radius.

And I am also a ratepayer who if KM secured my electric utility as a project customer expects to see an increase in my bill relating to NED cost recovery.

Patricia Payson

Basis for Intervening:

I live within 1/4 mi of the proposed pipeline. I am concerned for my health--due to water or air contamination--& for that of my animal family. And as a regular donor to several local land trusts, I am appalled that the protection placed on these lands could be so cavalierly over-ridden. In short, if we kill the land & drain it's every resource, we are killing ourselves as well.

Basis for Intervening:

- I am a resident who lives in the "blast radius" [or whose daily commute crosses over the proposed pipeline route] so I would be at physical risk.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.
- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health [any specifics you want, or not].
- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.
- I am gas ratepayer [of National Grid, Columbia, Berkshire, Liberty, Westfield] who has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts).
- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

Basis for Intervening:

As a resident of a quiet rural area, I feel that I have many reasons to intervene in this process including but not limited to:

- I am a landowner directly impacted by the pipeline route / compressor station. While I may be just outside

the “incineration zone” I do not believe that would save me from the effects of a catastrophic failure of this compressor station.

- I am a resident who lives near the “blast radius” so I would be at physical risk, in addition to significant stress from the constant threat of explosion.
- I am a resident whose source of drinking water is near the proposed route so my drinking water supply is at risk due to the construction and/or operation of the pipeline, compressor station, or other facilities.
- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health. My wife and I moved to this location to get the rural character, and to be closer to nature. We both grew up in more rural, natural environments and want to have the same for our hopeful future children. In addition, this project would destroy the rural, natural beauty of the area. With 24 hour noise, light pollution, and the imminent threat of explosion at any time. Another significant negative impact would be the possible negative health impacts of this project. Much research has been centered around the tendency of gas pipelines to be leaky, and the significant health problems that can arise from such leaks.
- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.
- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.
- I live in a recreational community and am concerned about health and environmental impacts as well as property values.

Additionally, New York state would see few, if any benefits from this project as currently planned.

Finally, the federal government should be looking forward and investing in cleaner energy solutions, instead of furthering the use fossil fuels, and other dirty methods of energy generation.

Basis for Intervening:

I am a homeowner near the compressor station / pipeline that is being proposed and would potentially be in / just outside the incineration zone as well as affected by health and safety impacts of such infrastructure. There are concerns with water quality as well as safety and health due to recent research on byproducts of compressor stations as well as leaks from pipelines. The history of the company itself in terms of safety and accidents is not exemplary and is highly questionable. I am concerned about the safety of my family and the children I intended to raise when we moved here on the 4th of July. We moved here to start a family in a nice country environment surrounded by nature. This infrastructure would also impact property values and the local economy in the long run as well as unknown impacts on the environment.

Submission Description: (doc-less) Motion to Intervene of Alan Futterman under CP16-21-000.

Submission Date: 1/16/2016 12:38:01 PM

Filed Date: 1/19/2016 8:30:00 AM

supporters. It has two offices in the Catskills – Youngsville and Woodstock – and employs a full-time professional staff working on environmental and sustainable economic development issues.

Over the last several years, CMK has played a key role in the regional and statewide policy debates surrounding proposed natural gas drilling and transmission, including the potential adverse environmental, health and infrastructure impacts on localities in New York State. Among other activities, CMK has organized public meetings, educated public officials, published detailed newsletters on the natural gas drilling controversy in towns across the Catskills region and, in cooperation with other non-profit organizations and has prepared and submitted detailed comments on multiple gas infrastructure projects through out the State. CMK also works on other issues directly affecting towns and municipalities in the Catskills, including protection of drinking water, lakes and streams; traffic congestion; farmland preservation; air quality; and the safeguarding of the overall natural beauty and rural character of the region.

The proposed North East Direct Pipeline which is the subject of this docket will be located within the Catskill Region and close to the worldfamous Catskill Park. It will be crossing multiple important premier trout streams. CMK has long been concerned with land use, land preservation and development in the area, because it constitutes part of the special ecological buffers around the Catskill Park

The Commission based its approval of the Constitution pipeline on the purported need for additional supplies of natural gas to New England. See FEIS at 1-2; Order ¶ 25. As stated in the Mass. AG Report, that need may no longer exist, or at least be greatly reduced, due to declining demand and the increasing availability of non-gas resources, including renewables.¹ Furthermore, there are numerous proposed pipeline projects that all claim to address this same questionable need, and municipal officials from the New England area have called on the Commission to conduct a collective review of the many proposed pipeline projects that “constitute alternative solutions to [this] same potential need.”²

The proposed NED Pipeline represents a significant threat to the environmental resources of the Catskill region, which CMK is dedicated to protecting. It will also directly affect supporters of CMK, who live in the area, including several who reside in close proximity to the proposed Pipeline. Thus, CMK has a particular and special interest in participating in this proceeding, both as a part of its mission and on behalf of its supporters who live in or regularly pass through the affected area. CMK will oppose the licensing of the and/or seek modifications to reduce its negative impacts. Should the Pipeline be approved, CMK and its members will be directly and adversely affected.

In addition, the proposed NED Pipeline is only part of a large number of gas transmission facilities that are or will be proposed in, or will pass through, the Catskill region. These facilities, taken together, have the potential to severely damage the natural and rural beauty of the Catskills through the industrialization of the landscape. They could also do severe damage to the critical water resources that the rivers and streams of the Catskill region provide. For this reason, CMK believes that a comprehensive analysis of the proposed facilities, looking at cumulative impacts, among other things, is essential before any further such facilities should be licensed or permitted. That process could and should begin with this docket.

CMK’s participation in this proceeding would also be in the public interest, because it will represent conservation and sustainable development interests in the Catskill region, bring its expertise to bear on issues of safety, health and environmental impact, represent a broad constituency of individuals who cannot themselves participate in the proceedings, and help develop a record on which the Commission can make an informed decision in this matter.

For all of these reasons, CMK’s motion to intervene should be granted.

WHEREFORE, the Catskill Mountainkeeper respectfully requests that it be permitted to intervene in this proceeding.

Respectfully submitted,

Wes Gillingham
Program Director

Catskill Mountainkeeper
Po box 1000
Livingston Manor, NY 12758

Basis for Intervening:

I live in Davenport Center, NY. I within the blast area of the proposed NED pipeline. I live close enough to be affected by a compressor station, and at this point no knows for sure where these stations will be. It might be a half mile from me, and I might be downwind from it. I live along Pumpkin Hollow Creek, downstream from where the pipeline may cross it. I live on a road that would be used by pipeline vehicles during the construction period. The value of my home and land would be diminished by the construction and operation of this pipeline.

This pipeline might be build alongside the Constitution pipeline, if the latter is actually built (which I hope it won't be). Having two large transmission pipelines for methane gas running through my local community, close to my home, would turn this area into an industrial zone and create all kinds of problems from the toxic pollutants, damage to land and water, noise, and financial and health risks.

There is a long record of methane pipeline explosions in the U.S. An explosion would devastate our local community, especially because we rely on small volunteer fire departments that are not trained or equipped to deal with them.

The construction and operation of the pipeline would harm our waterways, forests, and wildlife.

For these reasons, I request intervenor status.

Basis for Intervening:

I live in Plainfield, MA and I want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding. My interests include:

- My interest as a property owner. I live near and commuting daily across the blast radius of the proposed pipeline and would be at physical risk.
- My interest as a taxpayer and community member living in Plainfield who supports and utilizes protected public lands, including the Trustees of Reservation Notchview Reservation, as well as local state parks. I am gravely concerned about the impact the proposed pipeline could have on local ecosystems and the environmental health of our treasured lands. I am very concerned about the threat this project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution.
- My interest as a ratepayer. I am an electric ratepayer whose rates are likely to go up as a result of this massive overbuild. Attorney General Maura Healy's research has clearly demonstrated that that the massive overbuild embodied in this proposal exceeds New England energy needs. The pipeline is very likely to lead to higher energy costs for New England's ratepayers — either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.
- My interest as a strong supporter and utilizer of alternative energy sources. The devastating impact of fossil fuel utilization to our environment has been documented worldwide. I constructed my home to be as energy efficient as possible to minimize my use of fossil fuels, heat with wood, and do not directly utilize any fossil fuels in my home. I will have solar panels installed on my roof this Spring which will supply more than one hundred percent of my home's energy needs. The proposed pipeline threatens to increase reliance on fossil fuels over investment in alternative energy sources.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued.

20160119-5075 Motion to Intervene of Steven Count

FERC Docket number CP16-21

Basis for Intervening:

For these reasons I am strongly opposed to the NED pipeline proposal:

I am concerned that the pipeline would be a daily hazard to those who live and work around it.

I am concerned the pipeline would cause excessive toxic emissions from compressor stations to poison the water and air, putting innocent people's health and lives at risk.

I am concerned the pipeline would cause excessive light and noise pollution from compressor stations.

I am concerned the pipeline would cause long-term damage to the beauty and health of nature preserves and wildlife in our area.

I am concerned the pipeline would be a soft terror target due to the pipeline's size, high pressure, volatility, and unpatrolled corridor.

I am concerned the pipeline would lower property values because no one wants to live in a potential danger zone.

I am concerned the pipeline would unjustly impose Eminent Domain on average citizens who have worked hard for their land.

I am concerned the pipeline would cause a proposed tariff to be forced on energy ratepayers.

I am concerned that the rural towns along the pipeline route are not equipped for the burden of the potential dangers associated with this volatile pipeline.

I am concerned the pipeline would negatively impact tourism in the area and result

I live in the town and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which will be directly affected by the outcome of this proceeding because I am a landowner and will be directly impacted by the compressor station and the route of the NED pipeline, I have concerns over the various health impacts imposed on myself, family and the community as a direct result of proximity to the compressor station, I have concerns over the location of the compressor station and the complete disregard for the inability to have a safe evacuation route or plan for the community and the residents.

20160119-5085

Docket No.CP16-21-000

Tennessee Gas Pipeline Co.,L.L.C. – Northeast Energy Direct Project [NED]

Alignment Sheet TE-SEG_F-024 Albany County, New York

{map omitted, full document can be downloaded (.doc, 1,062 KB) at: }

<http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=14121187>

The above picture is from Alignment Sheet TE-SEG_F-024. It shows the proposed NED pipeline running next to the 400 feet National Grid Power corridor [2 Black straight lines running from left to right across picture] We own property on both sides of the National Grid Power corridor.

Why can't the NED pipeline run in the 400 foot National Grid Power corridor?

Why can't the NED pipeline run on edge of the National Grid Power corridor?

That way only 25 feet of land is leveled for an easement . The above picture of the proposed NED pipeline looks like it about 10 feet from the National Grid Power corridor. That means we lose a 35 foot strip of property.

Why ?

The Temporary and Additional Workspaces on the bottom side of the proposed NED pipeline on our prop-

erty contain hardwood trees that we harvest to help pay our taxes. The picture shows 10 and 25 foot areas that will be stripped of trees that won't grow back in our life time and a lose of revenue.

Why can't all temporary work be done in the National Grid Power Corridor?

Thank you,

Mike Waldenmaier
108 Becon Road
Glenmont, NY 12077

20160119-5086 Motion to Intervene of David and MJ Galat

My wife and I live in Winchendon Mass and wish to **intervene** in the proceedings to oppose the NED Pipeline.

We are potentially impacted landowners on the original route of the pipeline through Winchendon. We have been involved in farming our land since 1982. We have spent massive amounts of time working our land, trying to improve our forest and fields for the benefit of the forest itself and the wildlife that inhabits it. The NED pipeline would destroy much of what we have spent the majority of our lives working towards. Many others are in the same situation as us, they have owned their properties in some cases for many generations. These landowners are not transients like many of those people who live in urban areas and are moving to a new location every few years. We have set our roots down and intend to spend our lives here.

I believe too many lies have been put forth by the proponents of this pipeline, and the necessity is a farce. I keep hearing that the line is needed to supply the gas needed for power generation, however no generators have contracted for any capacity. It appears that putting some pressure on the ISO to better manage the grid has miraculously averted any new power shortages since those experienced in the winter of 2014.

We have made great strides in here in Massachusetts to improve our energy efficiency and promote renewable energy resources. The impact has been especially evident during our summer peak loading periods on the electric system. Summer peak loads have been 10 – 15% lower than the peak load we experienced in 2006, and all the ISO continues to promote is their 1.3% load growth estimates which doesn't make any sense. The population of the New England area is not growing fast enough to create that kind of growth nor will we ever see the industrial growth here.

Provisions to supply the peak gas loads for those few days it occurs each year had been addressed by installing the tanker ports off the Coast of Massachusetts some years back. For some convenient reason it appears someone neglected to contract a supply for the winter of 2014 which would have averted the whole apparent gas shortage that existed that year. It seems like mismanagement is more of the problem with our gas supply, not a lack of pipelines. Of course, building out a system that exceeds our needs would make life very easy for those managing the gas and electric system, no more thinking would ever be involved, but is not an especially good use of resources. It would however, allow for Kinder Morgan the ability to transport their product to foreign markets.

This Pipeline needs to be stopped, it is hurting many people and it is not needed. There is something wrong in this country if eminent domain can be used for a corporation like Kinder Morgan to generate their corporate profits at the expense of those of us in their path. We love our property and we want it to remain ours.

Sincerely,

David and MJ Galat

I am a resident of Pelham, NH 03076. I am very concerned about the proposed pipeline.

I am concerned about the environment, the air we breathe, the water that I get from my artesian well, and possible security and safety incidents. In addition, I am concerned about the Dracut Compressor Station which will be approximately one mile or so from my home and what will happen during blow-downs if chemicals should be carried by air currents to my town. I am also concerned that our electric bills would have to fund this line which would increase our bills that are already too high.

Individual altonwasson@comcast.net

Basis for Intervening:

I am a resident of this part of Western Mass and feel invaded by the possibility of this pipeline cutting through this beautiful country and making a pathway and possible pollution through our pretty lands and towns. I am opposed to it and feel that it is not needed and that from what I have heard, mainly to serve eastern Mass and possibly to be carried to the coast and shipped elsewhere.

I do not like the Blowdown Valve in Shelburne Falls or the Yard in Conway. Please stop this mess. We also do not want to support fracking West of us and certainly do not want to have that gas piped through our countryside. We are all searching for alternative energies so this is going in the wrong direction as far as I am concerned.

Sincerely,

Alton Wasson

20160119-5089 Motion to Intervene of Timothy M. Camann

Approximately one-half mile of the route of the proposed pipeline is on land that my wife and I own. The pipeline would place my home in the blast zone, endanger Carr's Creek and several of its tributaries as it crosses them on my land, destroy portions of my woods, disrupt my network of trails, reduce the value of my land, and scar the landscape. It would increase the emission of greenhouse gases—both carbon dioxide from combustion and methane from leakage in drilling and distribution—by promoting further development and use of natural gas. This would exacerbate the problems from climate change.

I request a full, cumulative environmental analysis of this proposed pipeline project.

My interest cannot be adequately represented by any other party to this proceeding.

Timothy M. Camann

Basis for Intervening:

I have lived in Northfield, MA for 28 years and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding because I am a homeowner in an area that will be directly impacted by the pollution that will be created by the proposed compressor station. I understand that the health effects of compressor stations are many and will be increased at times of inversion.

Our drinking water will be compromised as a result of the construction and operation of a compressor station.

I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to

see an increase in my bill related to NED cost recovery.

I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

One of the advantages of living in Northfield is the natural beauty and the vast number of protected lands on which to hike and explore. The pipeline installation and operation threatens these lands.

Basis for Intervening:

I am intervening because this project like the constitution pipeline is continuing with the antiquated non-sustainable harmful practice of fossil fuels. This project is using our land and will be yet another 'eminent domain' situation which is THEFT. We are held hostage to companies coming into pristine, rural and organic areas, forcing themselves into our towns with their bribes under the guise of 'grants'. These companies have no regard for our health and welfare or regard for future generations. These companies run on greed. They want money and their goal is not local gas for local people. It's big bucks selling to companies overseas. They won't generate jobs - they generate destruction starting with the removal of over 700,000 trees. The profit is not ours - the damage left behind is ours. Do not approve this pipeline.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	balemoine1@comcast.net	

Basis for Intervening:

I have lived and been a landowner in Northfield, MA since 1989 and want to intervene in this proceeding to oppose the NED pipeline. I oppose the taking of private property, land under conservation restriction, and land owned by the Commonwealth by a private corporation without proof of definite need. The Attorney General has determined this energy source is not needed. I oppose the introduction of particulate into the air and ground of unknown materials which have the potential to harm residents, wildlife, and penetrate ground water. I rely on well water for my drinking supply, and many residents of Northfield do. I do not want to ingest introduced materials that could be ingested by me and other residents both in drinking water and by vegetables grown by me and by local farmers. Unless we know all the chemicals that would be introduced to the area by NED, how can we determine if it is possible to test for the presence of these materials in water and vegetation. I oppose the disruption of woodlands and hiking trails, and the adverse effects on both local outdoor users and visitors drawn to the special qualities in the Northfield area. I oppose taking land that was intended to be protected forever. I oppose this project as I would be adversely affected by both the construction process and subsequent noise and light pollution, in addition to air pollution. I am on the Board of Directors of the Northfield Historical Society, who have notified the Northfield Board of Selectmen that we

are opposed to NED due to the disruption and possible destruction of historically important sites, including both native and non-native peoples. Thank you for considering the private citizens' concerns of our area.

888 First Street NE; Room IA
Washington, D.C. 20426

RE: Northeast Energy Direct Project FERC Docket CP16-21-000

Dear Secretary Bose:

The Town of Nassau has previously filed information with the Commission regarding numerous technical concerns related to the above-referenced project. To date, many of these issues have not been addressed. In particular, I ask you to please note that it is imperative that this proposed project not be allowed to impact

aquifers and surface waters of the Town and Rensselaer County in general. These areas contain numerous sensitive areas that are the primary source of drinking water for majority of our residents.

The Northeast Energy Direct draft filing with FERC proposes to discharge untreated and potentially contaminated waters into uncontaminated Town of Nassau waterways and aquifer recharge areas. Such a move is unwarranted and is a direct attack on the safety of potable drinking water for the residents of our community.

At the very least, we call on FERC to require that all pipeline water discharges from hydrostatic testing of the proposed pipeline go back into the waterway from which it was drawn and that all discharges be required to be filtered and treated to prevent contamination.

Our residents rely on diverse and fragile aquifers for their drinking water. It is imperative that these water resources are protected and all necessary steps are taken to guarantee clean drinking water for our residents. Additionally, the quality of our lakes and streams are vital to community recreation and economic development and all necessary steps must be taken to protect these waters and the people that live around them from invasive species and contaminants.

As FERC staff is aware, the fabrication of the pipeline itself may produce additional contaminants which could then be flushed into the local environment. These potential pathways of contamination must be eliminated. Mitigation by filtration and treatment is a necessary requirement to protect public health. Thank you for your prompt consideration and action on these concerns and your anticipated efforts to address this matter in your review of this project.

Please feel free to have your staff contact me should they require any additional information.

Very truly yours,

David F. Fleming, Jr.

20160119-5157 Motion to Intervene of Suzanne Kelley

To Whom it may concern,

I do not want this pipeline coming through my town of Litchfield NH for several reasons. First and foremost, the pipeline will have to cross the Merrimack River and will negatively impact wildlife and the local farming community while simultaneously posing a threat to the ecological stability of the river's ecosystem. Second, my home is within range of the blast radius, should any accident ever occur, and this will have a negative impact on the being able to sell my home in the future. Lastly, I consider this pipeline project to be eco-terrorism as it has the potential to instill fear into daily life with no gain for those most deeply affected.

Providence, RI 02904

RE: Information Request, Tennessee Gas Pipeline Company, LLC, Northeast Energy Direct Project, FERC Docket No. PF14-22 – UPDATED ROUTE

Dear Ms. Ferry:

The Town of Merrimack (“Town”) received and reviewed the Tennessee Gas Pipeline Company, LLC (“TGP”) November 11, 2015 request that the Town identify whether sensitive environmental areas within 0.25 or 0.50 miles (dependent on the nature of the sensitive area) of the updated route for the proposed Northeast Energy Direct Project (“NED Project”) - a natural gas pipeline which will traverse the Town.

Given that the NED Project as currently proposed impacts several protected conservation areas and wetland resource areas, is located within close proximity to one of the Town’s elementary schools, is proposed within proximity the Town’s wellhead protection areas, crosses several municipal water and sewer lines, the Merrimack Rivers and may have impacts to recreational areas and the residences and private water supplies of many of the Town’s citizens, it is vital to the Town that all such areas be accurately assessed and identified so as to ensure that all impacts to such sensitive receptors are avoided and/or mitigated. To this end the Town is highly motivated and willing to assist in accurate identification of these areas. As such, we have enclosed a preliminary list of such areas.

Unfortunately, the Town’s resources are limited and the TGP request imposes a significant burden with regard to both staff and financial resources. The Town, as we asked in our original response letter in March 2015, therefore, requests additional time and assistance from TGP to supplement these materials. The Town will continue to participate in the review of the project as it progresses through the various Federal and State permitting processes.

The Town also asks that TGP provide the Town with an opportunity to review and comment upon any additional materials that may be prepared for submission to the Federal Energy Regulatory Commission in the above captioned matter in advance of such filing.

Sincerely,

Timothy J. Thompson, AICP
Community Development Director

Filing Party	Signer (Representative)	Other Contact (Principal)
Individual	clarkjs10@gmail.com	

Basis for Intervening:

I live in the Town of Schodack, New York State, and want to intervene in the proceeding to oppose the NED pipeline. I have an interest in the outcome of the proceeding because I am a homeowner whose southern property line parallels the proposed pipeline route about 500 feet away and my eastern property line is a little bit over 1/2 a mile away from the proposed compressor station site. I am very worried about waste wa-

ter from the compressor station seeping into the ground and poisoning my well (which is my only source of water). I am very concerned about the loss of the value of my home and acreage. The pond on the compressor station site and the pond adjacent to my home are both resting and breeding sites for migrating herons, ducks and geese, and hunting sites for hawks, owls, bald eagles and northern harriers.

Basis for Intervening:

I am opposed to the pipeline project and pumphouse station locations for the project. As i am both a local resident and local small business owner I am very concerned for the future and safety of our area. Careful consideration must be taken, the voices, opinions and concerns of the people who live and work here must must be accounted for.

20160119-5216

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)	

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Mary an Antonio Garcia, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its , application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 ofFERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Mary and Antonio Garcia
11 Valewood Circle
Tewksbury, MA 01876
978-851-0455
Amg1996@hotmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact us.

First the pipeline will run directly in our backyard. Current diagrams that have been issued show that Tennessee Gas Pipeline Company would be taking over approximately half an acre of our one acre lot. Their plan is to install a security/privacy fence which would be feet away from our back deck.

Also, out home is heated by propane. We have a 50b gallon propane tank that is underground in our back-

yard. This tank would be very close to this fence that they plan on installing. We think: a 500 gallon propane tank in our backyard and a pipeline being installed in the same backyard is a recipe for disaster! We have children at home and all our safety would be at risk.

On the land they plan on taking has our shed. If the pipeline goes in we will not have a backyard! In our backyard we do have a lot of rock and ledge. We can't imagine Tennessee Gas Pipeline being able to install the pipeline without blasting some of our property. This could possibly lead to damage of our foundation and inside our home.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 19th day of January, 2016.

Docket #CP16-21-000

STOP THE NED PIPELINE AND COMPRESSOR STATION!! Protect MA land from Eminent Domain!

I oppose the Kinder Morgan Northeast Energy Direct (NED) EXPORT pipeline. The pipelines, and compressor station will scar the MASS landscape and put our water, wildlife, forests, agricultural lands and rural character at risk. These include health and safety risks from emissions, industrialization, pollution and the devastating effects of fire and explosions. Greed, not need is fueling this project. Say NO to this private company that will

TAKE OUR LANDS with NO BENEFIT TO US.

From: Concerned Citizens of Dracut, MA

RE: The Morgan (NED) Pipeline

Docket # CP 16-21-000

We are 45 Residents who were not informed of the potential site of the Dracut Compressor station within 1/2 mile of our homes. We are concerned citizens, concerned about our health, safety and disruption to our town that the Kinder Morgan Pipeline and compressor station would cause.

We are not happy that Kinder Morgan failed to notify us and concerned that Kinder Morgan has failed to educate the resident about the project and it's components. We were unaware of previous meetings and because FERC closed the scoping sessions we were denied the ability to ask questions and voice our concerns.

We are upset that Kinder Morgan changed the location of the compressor station and failed to alert the new abutters until after the application was filed.

We understand that Kinder Morgan made a mistake in not alerting us regarding the new site location of the compressor station in Dracut and that they are requesting a waiver. However, we unequivocally feel that no waiver should be granted. We are afraid they will make another mistake at our expense.

We feel our rights have been violated by not properly alerting us and keeping us informed. It is our feeling that more time should be allowed for us to gather information and respond accordingly before the scoping sessions are formally closed.

Respectfully,

Concerned Citizens of Dracut

My Husband Greg Panagiotopoulos
same address
617-794-7899
gpanag@verizon.net

My husband and I own a home at 600 Kendall Road in Tewksbury, Massachusetts. Depending on the route chosen for the pipeline, our property could be directly affected by the construction or the pipeline itself.

We will be affected by the pipeline in many ways but a few reasons are most significant to me:

-My family consists of my husband, my two young boys, my dog, and myself. Should there be construction next to or on our property, it would affect the quality of our outdoor time in our private backyard. We spend as much quality time in our yard as possible, and the noise and construction would not allow us to enjoy the peace, fun, and beauty of our yard, never mind in our own home.

-Dangers: As a mother, the safety of my children are first and foremost my biggest concern. I worry about the dangers of construction materials being put through or around my property disallowing my children to

play safely and freely in their backyard. I worry about the dangers of chemicals being exposed to the air they breathe, the water they drink, and the food we grow to eat. My biggest fear is the danger of the pipeline leaking or worse yet, exploding, and the potential of losing one of my boys from something unnecessary and avoidable.

-The effect the addition of the pipeline would have on my real estate and the quality and desire of my town. My husband and I chose Tewksbury to raise a family because of its beauty and quality of living. Should a pipeline be put in so close to my home, we would consider moving and in turn would take a loss on our newly built home as well as losing out on a great family-oriented community.

TGP's errors and omissions and outright misstatements of facts in its Massachusetts ENF give me no confidence in the assurances it makes in this filing to protect the environment and safety of our town and my immediate surroundings. My hope is to raise and create wonderful memories for my 3 year old and 8 month old sons in our beautiful home in Tewksbury, MA. This environment is their future and they deserve better than a gas pipeline being out in their backyard.

Thank you.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000

OBJECTION OF
NORTHEAST ENERGY SOLUTIONS, INC.
TO
IRVING OIL TERMINALS OPERATIONS, INC.
MOTION TO INTERVENE
AND FURTHER PROTEST

Northeast Energy Solutions, Inc. ("NEES") hereby objects to Irving Oil Terminals Operations Inc. ("Irving Oil") motion to intervene in the above-captioned proceeding concerning Tennessee Gas Pipeline Company L.L.C.'s ("Tennessee") Northeast Energy Direct Project ("NED Project") certificate application ("Application") and further Protest the Federal Energy Regulatory Commission's ("Commission") acceptance of Tennessee's Application; and, also, herewith, requests a formal hearing on this Objection.

1. In support of this Objection and further Protest, NEES states, as follows: The exact legal name of the Objector is as set forth in the above, unnumbered paragraph. NEES is a multi-jurisdictional nonprofit corporation comprised of energy, land, environmental, end-user, and related economic interests. Uniquely, NEES, through its founding members, represents over 101,850 individuals in Massachusetts and New York who collectively own or hold conservation restrictions on over 46,211 acres of land in the Massachusetts. NEES also includes municipalities and a state legislator among its members. NEES is an educational resource and advocacy group (before state and federal government officials) that works to ensure that economically viable and environmentally responsible energy projects account for its member's collective and respective interests. NEES was founded to represent its members in providing energy infrastructure analysis and advocacy regarding the economics of energy projects and transactions in the Northeastern United States.

2. The name and mailing address of the person upon whom all communications concerning the proceeding should be served is, as follows:

Vincent DeVito, Partner

Bowditch & Dewey, LLP
300 New Jersey Avenue, NW, Suite 900
Washington, DC 20001
Telephone: 617-757-6518
Fax: 508-929-3019
vdevito@bowditch.com

3. On or about November 20, 2015, TGP filed the Application pursuant to sections 7(b) and 7(c) of the Natural Gas Act, and the Commission regulations thereunder, seeking authority to: (i) construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut; and (ii) to abandon certain facilities, all as part of a proposed Northeast Energy Direct Project (“NED”). The proposed NED is comprised of two components:
 - a. Supply Path Component: Comprised of the proposed facilities from Troy, Pennsylvania to Wright, New York, including approximately 174 miles of pipeline facilities in Pennsylvania and New York, the proposed construction of three new compressor stations and modifications to one existing compressor station, further construction of two new meter stations, and purported appurtenant facilities.
 - b. Market Path Component: Comprised of proposed facilities from Wright, New York to Dracut, Massachusetts. These proposed facilities include approximately 188 miles of mainline pipeline facilities in New York, Massachusetts, and New Hampshire, laterals located in Massachusetts and New Hampshire, and Connecticut), proposed construction of six new compressor stations, 13 new meter stations and modification of 14 existing meter stations, and purported appurtenant facilities.
4. The Commission issued a Notice of Application for the Application on December 7, 2015 and NEES timely moved to intervene in this proceeding. No opposition was not filed against NEES’ motion to intervene within 15 days after it was filed. As such, NEES is a party in this proceeding.
5. Irving Oil timely filed its Motion to Intervene (“Motion”) on January 6, 2016.
6. NEES respectfully and timely objects to the Motion based upon the following:
 - a. The Application and the Motion are inconsistent with particular, affirmed assertions respectively contained therein, as follows:
 - i. The Application states in its Exhibit I, a summary of end gas uses, that the gas that is proposed to be delivered to Irving Oil is for “industrial” uses by an “Industrial End-User.”
 - ii. Conversely, the Motion states, on page 2, that “[t]he NED Project will allow Irving Oil to transport natural gas from production areas in Pennsylvania and New York through the Northeast United States and into Canada.”
 - b. The Application and the Motion offer contradicting uses of the proposed gas by Irving Oil. As term of industry, an “Industrial End-User” is a typically a facility that uses energy supply on site. However, Irving Oil asserts that they intend to transport gas beyond a facility accepting gas for on-site operations. Therefore, either the Application or the Motion is inaccurate and the Motion cannot be relied upon by the Commission for lack of correctness.
 - c. In the attached hereto “Frequently Asked Questions” document developed by Kinder Morgan and available on their website, the following question is posed by Kinder Morgan:

“Will New Englanders benefit from NED or will the natural gas be sent to Canada for export?” 1

The answer smarmily offered by Kinder Morgan, is as follows:

“New Englanders will be the beneficiaries of NED. NED is being developed specifically to provide much needed additional natural gas for regional electric generation and local distribution companies that need to serve increasing customer demand in their New England service territories. NED’s shippers have already committed to over 560,000 Dthld of natural gas supplies to meet New England’s growing consumer and industrial gas needs, as well as to help bolster electric

generation reliability. Our anchor shippers include seven New England Local Distribution Companies, and TGP continues to negotiate with various customers to provide capacity to industry sectors such as gas-fired power generation facilities.”

d. Unfortunately, this is another clear indicator that Tennessee is not being accurate and forthright with regulators, elected officials, stakeholders, and the public. It is unjustifiable for Tennessee to state that “NED is being developed specifically to provide much needed additional natural gas for regional electric generation and local distribution companies that need to serve increasing customer demand in their New England service territories”² (emphasis added) and then submit an Application that contradicts such a public assertion.

7. As such, the Application also is defective as intentionally inaccurate and cannot, in good faith, be relied upon by the Commission’s staff for further review. More so, the Application cannot be cured by amendments as it is so likely riddled with defects that the required amendments would be too voluminous for practicality.

8. Therefore, NEES also respectfully requests that a formal hearing on the this Objection and Protests the Application be scheduled in accordance with 18 C.F.R. § 157.10(a)(I). The issue of material facts raised in this Objection and further Protest cannot be resolved on the basis of a written record. The enormity of the written record in this case does not allow for the efficient and targeted deciphering of material facts that would be allowed in a trial- type evidentiary hearing. In fact, the comprehensive stitching together of material facts is nearly impossible without direct party interaction. A trial-type evidentiary hearing would put NEES on equal footing with TGP. A paper record cannot supplant an oral narrative in this proceeding. The numerous aspects of material facts that are of jurisdictional import to the Commission cannot be judiciously and artfully presented by mere pleadings. Naturally, FERC could narrow or tailor any such hearings in accordance with the Commission’s substantial discretion. Alternatively, the Commission should set the issues raised by NEES for a technical conference, with staff participation, to determine whether evidentiary hearings are required.

WHEREFORE, for all of the aforementioned reasons, NEES respectfully requests the relief sought herein be granted, including but not limited to (i) Denying Irving Oil’s Motion and (ii) terminating this proceeding dismissing and the Application as materially incomplete and grossly and negligently inaccurate.

Tennessee Gas Pipeline Company, L.L.C.
a Kinder Morgan company
Northeast Energy Direct Project (NED)
Frequently Asked Questions (FAQs)

Q: Why is NED needed?

A: NED is needed to fill a growing gap between natural gas supply and demand in New England and to reduce both energy costs and greenhouse gas emissions.

• New England’s families and businesses currently pay the highest prices for natural gas in the continental United States. yet an abundant supply of low cost natural gas is only 300 miles away.

NED will connect New England - currently the highest price demand region in the continental U.S., to the lowest cost, most reliable natural gas supply region in the country some 300 miles away. Natural gas in the Marcellus-Utica area has consistently been the lowest priced in the U.S. for the past two years. Meanwhile, the gas distribution hub at Dracut, Massachusetts has consistently had the highest natural gas prices over the same period. During the winter of 2013/2014, natural gas prices at Dracut averaged over 700% higher than the natural gas prices in the Marcellus-Utica producing area.’ The higher cost of natural gas caused by the current lack of pipeline capacity is in effect a “tax” on New England’s families, businesses and public institutions.

• New England’s pipeline capacity has not kept pace with the rapid growth of natural gas-fired

electric power generation capacity.

In 2000, 15% of New England's electric energy production was fueled by natural gas. By 2014, that figure grew to 44%, as New England dramatically reduced its reliance on coal (minus 13%) and oil (minus 21%) for electric generation.² Natural gas demand for power generation alone in New England has grown by nearly double the rate of natural gas pipeline capacity additions to the region from 2000 to 2014.³ This gap will grow as older nuclear, coal and oil-fired plants continue to be retired and replaced by new, cleaner gas-fired plants. Scheduled retirements of these power plants between 2014 and 2018 represent more than 10% of the region's generating capacity." At the same time, nearly 60% of the 9,500 megawatts of proposed new electric generation in ISO New England's region will be fueled by natural gas.⁵

• Therefore, New England's families and businesses also pay the highest electricity costs in the lower 48 states, and the last two winters alone cost New Englanders nearly \$7.0 billion.

According to the independent U.S. Energy Information Administration, New England's electricity prices were nearly 50% above the U.S. average in 2014 and were over 70% above the U.S. average in January and February of 2015.⁶ Over the past two winters, ISO New England electric plants have had to rely on high-priced natural gas, expensive imported LNG and costly fuel oil purchased on the spot market to meet demand due to insufficient natural gas pipeline capacity serving the region. This resulted in New Englanders paying over \$4.8 billion more for electricity during the winter of 2013-2014 and approximately \$2.1 billion more for electricity during the winter of 2014-2015 than what was spent for electricity during the winter of 2011-2012.⁷ Also, ISO New England has noted that, although total use of electricity in New England dropped 2% in 2014 compared to 2013, the average price for wholesale electricity rose 13% in 2014, with the increase largely due to the increase in the cost of power plant fuel, particularly natural gas.⁸ Further, estimates for future winters suggest new pipeline infrastructure could save New England's residential, commercial and industrial customers approximately \$3 billion annually based on reasonable future weather and electric load conditions." NED alone would have saved New Englanders some \$3.7 billion during the polar vortex of 2013-14 and is estimated to save consumers between \$2.1-2.8 billion during normal winters." If shared among New England's 6.4 million households, those savings would be a "tax cut" of \$437 per household per year.

Q: Will NED increase our reliance on fossil fuels or prevent the development of energy-efficiency measures and renewable technologies?

A: On the contrary, NED will facilitate greater use of renewables and will further reduce greenhouse gas emissions by enabling a faster transition from coal and oil use. NED will be built with the latest technologies to promote energy efficiencies. Natural gas is the cleanest fossil fuel available, and represents a much more environmentally friendly energy source than coal or fuel oil. Natural gas-fired power generation emits about half the carbon dioxide emitted by coal and over 30% less than fuel oil.¹¹

• Increasing the supply of cleaner, domestic natural gas is a critical part of the solution to New England's existing energy crisis, along with growth in renewable energy and efficiency improvements.

In April 2015, six New England governors noted that the region is already facing an energy crisis, punctuated by higher costs for consumers, and that sound energy solutions, including increased use of natural gas, renewable energy, and increased efficiency are needed for the region. While an "all of the above" solution is important and absolutely should include renewable energy sources and increased efficiency, natural gas must play a role given its reliability, affordability and, more importantly, the inability of renewable energy sources to sufficiently supply existing and future energy needs. A recent International Energy Agency study projects that under current policies, fossil fuels will still be required to meet approximately 80% of the world's energy needs as far out as 2040.¹²

Natural gas and renewable energy have a symbiotic relationship. Solar and wind resources are only available when the sun is shining or the wind is blowing. To ensure that electricity is available for homes, businesses, and industry on a reliable basis, operators of the electric grid need readily-available sources of power

to compensate for the variability associated with renewable energy. Because of its flexibility and reliability, natural gas-fired generation is the ideal source of electricity to support renewable energy. Without natural gas to provide fuel on demand for electric generation when needed in any weather, solar and wind power are simply incapable of satisfying New England's existing and projected electricity requirements.

Kinder Morgan supports renewable energy resources and is one of the largest handlers of ethanol and biofuels in the nation. As such, Kinder Morgan is on the forefront of advancing technology to transport biofuels to meet our nation's energy needs. We also use wind and solar power in our operations - e.g., powering measurement and communications equipment in remote areas.

NED will result in a further shifting away from high-carbon-emissions-generating fossil fuels such as coal and oil, causing a corresponding reduction in the region's carbon and other emissions. A report led by current United States Energy Secretary Ernest Moniz stated, "Natural gas possesses remarkable qualities. Among the fossil fuels, it has the lowest carbon intensity, emitting less carbon dioxide per unit of energy generated than other fossil fuels. It burns cleanly and efficiently, with very few non-carbon emissions."

Natural gas has been essential to national and regional efforts to reduce carbon emissions. The White House noted that "Natural gas is already playing a central role in the transition to a clean energy future." Since 2007, energy-related CO2 emissions in the U.S. have fallen 10% and a significant factor contributing to this reduction was fuel switching from coal to natural gas.¹⁴ ISO New England has stated that as a result of New England's transition from coal and oil to natural gas from 2001 to 2013, regional emissions of CO2 fell by 23%, regional emissions of NOx fell by 66%, and regional emissions of SO2 fell by 91%.¹⁵ Natural gas also produces far less solid waste as a by-product of its use than other fuels used in power plants throughout New England.

Q: Will NED's construction harm the environment?

A: No. Construction will adhere to the strictest environmental standards for clean air, water and habitat and will undergo a comprehensive environmental review as part of the FERC permitting process. More than 80% of the total NED mainline will follow existing utility corridors to further minimize potential impacts. For all rights-of-way utilized by NED, TGP will work with all appropriate federal, state, and local governments to develop a comprehensive plan to restore and maintain the land.

- **Each and every foot of NED's right-of-way is governed by significant and comprehensive federal, state and local regulations addressing initial right-of-way permitting, construction, post-construction restoration and ongoing maintenance.**

Regulatory oversight of NED's construction will be significant and all-encompassing. While FERC is the lead agency for right-of-way permitting, restoration and ongoing maintenance, several other federal agencies (U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, U.S. Department of Transportation, etc.) as well as state agencies (Departments of Environmental Protection, Departments of Conservation and Recreation, etc.) and local agencies (county conservation districts, etc.) also have significant construction and right-of-way oversight responsibilities to ensure that NED is constructed properly and in an environmentally sensitive manner. TGP's culture is to leave the land in as good or better shape than when the project began. Below are images of TGP right-of-way before and after previous construction projects:

{ photos omitted }

Q: Will NED promote hydraulic fracturing techniques used to produce hydrocarbons?

A: No. NED will simply allow New Englanders to benefit from natural gas that will be produced regardless of the NED project. While NED will provide an additional 1.3 Bcfd of natural gas to meet energy requirements in the New England region, NED will transport only a small fraction of the total natural gas produced from the Marcellus-Utica region. Without NED, other regions will benefit from the natural gas produced, but it will be produced regardless.

It's also important to note that hydraulic fracturing is a tried-and-true production technique with a history of more than 60 years in the United States. EPA estimates that between 25,000 and 30,000 new wells were

drilled annually between 2011 and 2014. It is a proven method to safely and efficiently produce natural gas. On-going technological improvements, commitments by producers, along with state and federal regulations continue to drive environmentally protective production of this vital resource. Regulations cover well design, location and spacing, drilling operations, water management and disposal, air emissions, wildlife impacts, surface disturbance, and worker health and safety, as well as on-going inspection and enforcement requirements.

Q: If developed, will NED put our personal safety at risk?

A: No. Pipelines are proven to be the safest method of transporting energy and TGP has been safely supplying natural gas to New England for more than 60 years.

- **NED will be designed, installed, operated and maintained in accordance with best industry practices and federal safety and operational regulations for interstate natural gas pipelines. These standards and practices have been developed with the benefit of nearly one hundred years of operating experience by Kinder Morgan and predecessor companies and operating and safety benefits derived from increased regulatory requirements.**

TGP's parent, Kinder Morgan, has an incident rate 30% lower than the interstate natural gas pipeline industry's average. Overall in 2014, our operational performance was better than our industry peers in 35 out of 36 environmental, health and safety comparisons.

TGP and Kinder Morgan are committed to the safety of the public, our employees and contractors, protection of the environment, and the safe operation of our pipelines in compliance with applicable rules and regulations. We invest hundreds of millions of dollars each year on integrity management and maintenance programs with the objective of seeking to ensure safe, reliable operations - including more than \$400 million in 2014 alone. Please review our operational performance updated monthly and published on our web site, www.kindermorgan.com.

Q: Will New Englanders benefit from NED or will the natural gas be sent to Canada for export?

A: New Englanders will be the beneficiaries of NED. NED is being developed specifically to provide much needed additional natural gas for regional electric generation and local distribution companies that need to serve increasing customer demand in their New England service territories. NED's shippers have already committed to over 560,000 Dthld of natural gas supplies to meet New England's growing consumer and industrial gas needs, as well as to help bolster electric generation reliability. Our anchor shippers include seven New England Local Distribution Companies, and TGP continues to negotiate with various customers to provide capacity to industry sectors such as gas-fired power generation facilities.

Q: Will NED place an unnecessary burden on electricity ratepayers to fund the cost of its construction? Eventually, will consumers have to bear the burden of building NED?

A: Far from it. The NED project is not relying on any subsidies to be built; rather, NED is a standalone project that will be paid for by TGP and supported by our customers who enter into firm transportation capacity commitments on the pipeline. NED has received commitments of more than 560,000 Dthlday to date, and we anticipate having sufficient customer support to move forward with the project. As noted above, consumers will actually save hundreds of dollars a year per household if NED is built.

Recent initiatives by the New England Governors and the New England States Committee on Electricity (NESCOE), a not-for-profit organization representing the collective interests of the six New England states on regional electricity matters, suggest that adding significant natural gas firm transportation capacity to the region's markets would lower the price of gas in New England and enhance the reliability of both natural gas and electricity service.

Q: Is the FERC process just a "rubber stamp"? Will local citizens be able to make their voices heard? Is my property subject to be impacted by eminent domain?

A: The FERC permitting process is rigorous and allows for robust stakeholder participation and dialogue throughout. TGP participated in the NEPA pre-filing process through the FERC, which allows companies,

agencies and stakeholders to identify potential environmental and other impacts from proposed energy projects and mitigate the impacts during permitting. FERC has already held a dozen public scoping meetings on the project and has begun gathering verbal and written comments to which TGP will respond. Overall, the pre-filing and certificate application processes may encompass more than two years of hearings, written and verbal comments, filings, and responses.

In addition to the FERC process, we have been conducting outreach efforts for NED since 2014, including meetings with governmental officials and regulatory agencies to gather information that will be used in the preparation of federal and state permit applications. We have held some 70 open houses and presentations for towns and counties, providing more than 4,400 residents multiple opportunities to ask questions about NED and to voice their concerns.

Prior to construction, TGP is required to apply to and receive from the FERC a certificate under the federal Natural Gas Act. As part of the certificate application process, TGP is required to prove that building NED is in the public need, which is referred to by the FERC as being in the “public convenience and necessity.” The process includes substantial filing requirements to inform FERC’s decision. The certificate application will include several thousand pages of information. The first draft of the Environmental Report submitted in the pre-filing process included over six full binders of information. The final Environmental Report includes resource reports covering: water use; fish, wildlife, and vegetation; archaeological and cultural resources; socioeconomics; geological resources; soils; land use, recreation, and aesthetics; air and noise quality; project alternatives; reliability; and safety. TGP filed its FERC application on November 13, 2015.

If the FERC concludes that NED will serve public convenience and necessity, eminent domain proceedings will be available, but not before such a finding. However, we always view eminent domain as a last resort only to be used if extensive consultation and negotiations with an individual landowner is unsuccessful. Our goal, our practice and our overwhelming experience is to arrive at mutually beneficial terms and conditions with landowners. On our recent pipeline construction projects, 98.8% of the right-of-way has been secured under voluntary agreements with landowners. In fact, many of our recent projects have 100% of the right-of-way under voluntary agreements. In the infrequent cases when eminent domain is used, the landowner is fully compensated for the limited rights obtained following a prescribed hearing before a neutral tribunal.

TGP has maintained safe, respectful, mutually beneficial relationships with landowners along its existing pipeline rights of way throughout New England for over 60 years, and is committed to continuing to do so in the future.

Communications and Correspondence

The following people should be included the service list for this docket, and all communications should be addressed to them as follows:

Gregory Panagiotopoulos

600 Kendall Rd.

Tewksbury, MA 01876

617-794-7899

gpanag@verizon.net

My Wife Crystal Panagiotopoulos

same address

617-416-9759

crystal.pang@gmail.com

My wife and I own a home at 600 Kendall Road in Tewksbury, Massachusetts. Depending on the route chosen for the pipeline, our property could abut or be directly affected by the construction or the pipeline itself.

We will be affected by the pipeline in many ways but a few reasons are most significant to me:

-My family consists of my wife, my two young boys, my dog, and myself. Should there be construction next to or on our property, it would affect the quality of our outdoor time in our private backyard. We spend as much quality time in our yard as possible, and the noise and construction would not allow us to enjoy the peace, fun, and beauty of our yard, never mind in our own home.

-Dangers: As a father, the safety of my children are first and foremost my biggest concern. I worry about the dangers of construction materials being put through or around my property disallowing my children to play safely and freely in their backyard. I worry about the dangers of chemicals being exposed to the air they breathe, the water they drink, and the food we grow to eat. My biggest fear is the danger of the pipeline leaking or worse yet, exploding, and the potential of losing one of my boys from something unnecessary and avoidable.

-The effect the addition of the pipeline would have on my real estate and the quality and desire of my town. My wife and I chose Tewksbury to raise a family because of its beauty and quality of living. Should a pipeline be put in so close to my home, we would consider moving and in turn would take a loss on our newly built home as well as losing out on a great family-oriented community.

TGP's errors and omissions and outright misstatements of facts in its Massachusetts ENF give me no confidence in the assurances it makes in this filing to protect the environment and safety of our town and my immediate surroundings. My hope is to raise and create wonderful memories for my 3 year old and 8 month old sons in our beautiful home in Tewksbury, MA. This environment is their future and they deserve better than a gas pipeline being out in their backyard.

Thank you.

20160121-5045

Retailers Association of Massachusetts

January 21, 2016

Norman C. Bay, Chairman
Federal Energy Regulatory Commission
888 First Street, NE
Washington DC 20426

RE: eFiling Docket CP16-21-000

Dear Chairman Bay,

The Retailers Association of Massachusetts (RAM), established in 1918, is a statewide trade association of approximately 4,000 member companies. Our membership ranges from independent, “mom and pop” owned stores to larger, national chains operating in the general retail, restaurant and service sectors of the retail industry. The retail industry in the Commonwealth is the backbone of our local Main Streets, supporting over 928,000 jobs and operating in more than 73,000 brick-and-mortar establishments.

RAM respectfully requests the Federal Energy Regulatory Commission to approve the proposed Northeast Energy Direct Project submitted for approval on November 20, 2015.

Massachusetts continuously ranks among the nation’s top five states in cost of electricity—nearly doubling the rate of other states in some cases. This cost disparity hinders our ability to be competitive in many industries including retail and impedes economic growth, hampering any efforts made to promote new job growth and profitability for small businesses.

RAM recognizes that there is no one solution to this problem and therefore supports the Commonwealth pursuing a long term, comprehensive energy strategy designed to establish a diverse, sustainable, and yet affordable energy market for the future. However, an integral part of such a transition is ensuring reliable and affordable energy for today’s ratepayers by taking advantage of all available resources. This requires a bridge fuel that is environmentally friendly, reliable and cost effective. RAM supports expansion of the region’s natural gas supply to serve as such a bridge fuel.

Natural gas is a safer and environmentally sound alternative to our current oil and coal energy production and, with sufficient infrastructure improvements, is a more reliable alternative than both traditional resources and new renewable options available at this time. In emergency situations, the ability of natural gas plants to come online in a relatively short period of time makes them more reliable and cost effective than both traditional plants which require a ramping up of production and renewables which may be unable to produce under certain circumstances (e.g. solar cannot produce at night or when weather conditions interfere with panels). As any delay or inability to produce energy during an emergency increases potential risks to public safety, sound public policy would call for the adoption of the most efficient and reliable source of production source available—natural gas.

RAM wants nothing more than to assist retail industry growth in Massachusetts leading to job creation, investment and increased economic activity. On behalf of RAM and its 4000 members, I respectfully request the Commission to support the proposed pipeline projects which will lower energy costs and improve emissions in our region as we transition towards a more sustainable marketplace.

Thank you for your consideration of these comments. Please feel free to contact RAM directly with any questions or concerns.

Respectfully,

Jon B. Hurst
President

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Project)

Docket No. CP16-21-000

**MOTION TO INTERVENE OUT OF TIME
BY THE AUDUBON SOCIETY OF NEW HAMPSHIRE**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §385.212 and §385.214, the Audubon Society of New Hampshire (“ASNH”), a New Hampshire non-profit corporation with a mailing address of 84 Silk Farm Road, Concord, New Hampshire 03301, hereby submits this Motion to Intervene Out of Time.

1. The ASNH Senior Advisor for Science and Policy was out of the office for the month of December as a result of family health care responsibilities and the President was out of the country for the first two weeks of January. These circumstances, the first of which was unanticipated, have made it impossible to timely submit this motion. We respectfully request the Commission’s understanding in considering and granting this Motion to Intervene Out of Time.
2. ASNH is a state-wide, non-governmental, 501(c)(3) conservation organization, established in 1914, with headquarters at 84 Silk Farm Road in Concord, New Hampshire. The organization’s mission is to protect New Hampshire’s environment for wildlife and for people. ASNH conducts active programs in environmental education, conservation science, land protection (fee and easement), and environmental policy. In fulfillment of its mission, ASNH strives to participate fully in state and federal permitting proceedings for major projects with substantial impacts on the natural resources and environment of New Hampshire.
3. The July 2015 Resource Reports indicated that the New Hampshire portion of the previously proposed project route included 92 wetland crossings totaling more than 22,000 ft., 55 perennial and 27 intermittent stream crossings totaling more than 5,000 ft., and flood zones of six brooks and rivers. The route also affected 37 tracts of protected conservation lands, including our Ponemah Bog Wildlife Sanctuary, as well as state, municipal, Monadnock Conservancy, and Society for the Protection of New Hampshire Forests lands. We recognize that more recent route changes have eliminated some of these impacts, including the crossing of our Ponemah Bog Wildlife Sanctuary. Nonetheless, the revised project will involve considerable impacts to wetlands, water bodies, wildlife habitat, and protected conservation lands, as well as substantial effects on air quality in relatively pristine, rural areas.
4. ASNH has not taken a position regarding the Northeast Energy Direct project at this time and its intervention should not be interpreted as indicating that ASNH will ultimately take a position on the project, though ASNH reserves its right to do so. Regardless of whether ASNH ultimately takes a position on the project, ASNH reserves its right to continue to bring issues pertinent to its mission to the attention of the Commission through public comments.
5. ASNH participation in this proceeding is in the public interest. If constructed, the proposed project will have direct and lasting impacts on New Hampshire wetlands, waterbodies, wildlife and habitat, and air quality, all of which are within ASNH interests. The interests of ASNH will not be comprehensively represented by any other party and therefore will not be adequately protected unless ASNH is permitted to intervene and to participate as a formal party to this proceeding. Further, ASNH participation in this proceeding will contribute to better informed decision-making and more reliable protection of affected natural resources.
6. Service of all pleadings and other filings in this proceeding should be addressed to the following individual, whose name should be placed on the official service list prepared by the Secretary in this

docket:

Carol R. Foss
Senior Advisor for Science and Policy
Audubon Society of New Hampshire
84 Silk Farm Road
Concord, NH 03301
(603) 224-9909 x331
cfoss@nhaudbon.org

WHEREFORE, ASNH respectfully requests that the Commission grant this Motion to Intervene Out of Time and grant ASNH full party status in this proceeding.

Dated this 21st day of January, 2016

Respectfully submitted,

Audubon Society of New Hampshire
Michael J. Bartlett President

20160125-5002

Rosanne Beaudoin, Candia, NH.

My community of Candia, NH is not, as of today, directly affected by Kinder Morgan's plans for the Northeast Energy Direct natural gas pipeline. However, as a life-long citizen of New Hampshire, I want to raise my voice in support of my New Hampshire and New England neighbors who have been fighting against the pipeline for the past few years. After reading about the pros and cons of this project in newspapers and magazine articles, I feel that the sacrifices that would be required in putting in this pipeline outweigh the benefits for New Hampshire residents. I also take issue with the amount of town, private, and conservation land that would be taken by eminent domain. In my town of Candia, it is always a hard-won battle to get land into conservation and it seems just plain wrong to allow a Texas-based company to come in to our state and reverse what others have worked so hard to preserve. In summary, I hope that the FERC listens to and respects the wishes of the stakeholders of New Hampshire versus the plans of Kinder Morgan and does not approve the Northeast Energy Direct project.

20160125-5018

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline (TGP),
a wholly owned subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF THE BEMENT SCHOOL, INC
IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §38S.214, The Bement School, Inc. files this Motion to Intervene in the above-captioned proceeding.

The Bement School, Inc. opposes the project because of safety concerns associated with the location of school-owned property and buildings in close proximity to the pipeline project. The school further cites concerns with the project's impact on natural resources and significant archaeological sites in the path of the proposed pipeline. The Bement School, Inc. seeks party status to protest the proposed pipeline, and fully protect The Bement School, Inc., interests.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

The Bement School, Inc., a 210 student day and boarding school located in Deerfield, MA and incorporated in Massachusetts has dormitory residences, administrative housing, and athletic fields located within the potential impact radius for the pipeline project. The school's 210 students include 37 boarding students. There are 68 faculty and staff employed at the school. The main campus is located at 94 to 100 Old Main Street. The school also has a residential campus with two dormitories and a residence for our dean of boarding located at 138 - 144 Old Main Street. The residence for our head of school and the school's athletic fields are located on Old Ferry Road.

B. Description of Impacts

The proposed pipeline installation will harm and endanger The Bement School, Inc. as follows. The proposed route pipeline will run a half-mile north of the main campus. It will also pass within one-quarter-mile of two dormitory buildings housing 40 students and eight faculty apartments and two residences housing senior administrative staff and their families. The land to be used for construction and installation is even closer to the school's athletic fields. These buildings and fields are within the potential impact radius of the project. The project will cross protected agricultural land, which also has significant archaeological importance. The construction and existence of the pipeline elevates risk to students, adults, property, and viability of the school and threatens the environmental quality that is vital to the school's identity in the present and into the future.

The Bement School, Inc.'s Motion to Intervene Must Be Granted

The Bement School, Inc. satisfies the standard for intervention under the Commission's regulations. As discussed above, The Bement School, Inc. is directly impacted by the proposed project, and no other individual or organization can adequately represent The Bement School, Inc.'s unique interest in this proceeding.

II. CONTACT INFORMATION

The Bement School, Inc. should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Kenneth Cuddeback, Business Mgr.

Address: The Bement School, Inc.

94 Old Main Street

Deerfield, MA 01373

Phone: 413-774-7061

Email: kcuddeback@bement.org

II. PROTEST/COMMENTS (OPTIONAL)

IV. CONCLUSION

Wherefore, in light of the foregoing, the Bement School, Inc. respectfully requests the Commission GRANT this motion to intervene and allow The Bement School, Inc. to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,

Kenneth Cuddeback, Business Mgr.

The Bement School, Inc.

CERTIFICATE OF SERVICE

Wherefore on this January 22, 2016, I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission's electronic service list in this proceeding, in accordance with Commission regulations.

Washington, DC 21426
RE: Docket CP 16-21-000

December 31, 2015

Dear Mr. Tomasi,

On April 8, 2015, you visited our farm and looked at where the Constitution Pipeline is slated to run and where the NED Pipeline would be located if it were to co-locate with Constitution. During this visit we stood at the edge of Keyser Road in the town of Middleburgh. You expressed your concern as to the lack of space for the pipelines to make two turns as they crossed Keyser Road. You stated that you were concerned about the angle of the turns and the crowding as they crossed the road. You also stressed that it was too close to the house that sits on Keyser Road. You asked us to show you possible alternate routes that would eliminate this concern as well as other concerns we had regarding our CAFO compliance during construction of two pipelines.

We have had several meetings with NED representatives that included our CAFO planner and Ag and Markets. We relayed your concerns to NED land agents and engineers. We discussed the alternate routes with these people as well.

On Tuesday, December 15, 2015, we attended a second open house hosted by Kinder Morgan/Tennessee Gas. We obtained the latest project maps. According to these maps, the NED pipeline will be co-located to the south of the Constitution Pipeline. This southern co-location plays right into your concerns. The NED Pipeline will then be within 100 feet of the house on Keyser Road and will traverse through the center of our fields diminishing the amount of land we can continue to work during construction.

Can you please take a look at this section of the NED Pipeline?

Respectfully submitted,

Mr. Norman C. Bay, Chairman
Federal Energy Regulatory Commission
888 First Street, NE
Washington, DC 20426
RE: Docket # CP16-21-000

Dear Chairman Bay:

On behalf of the **North Central Massachusetts Chamber of Commerce** I humbly request your support of the proposed natural gas pipeline projects proposed in Docket # CP16-21-000. The North Central Massachusetts Chamber of Commerce is a non-profit business organization with a focus on advocating business advancement, economic growth and job creation for the benefit of North Central Massachusetts. We serve nearly 1,000 member businesses of all sizes from virtually all industries in 16 communities in the Commonwealth of Massachusetts.

The North Central Massachusetts Chamber of Commerce supports measures and initiatives that support and encourage a reliable, diverse and more affordable energy supply that keeps pace with the region's growing population and economy, while protecting our environment. Given the strained natural gas capacity in New England and the region's increasing reliance on natural gas for our electricity, the Chamber supports the development of this pipeline project to transport natural gas into the region and state. The Chamber believes that the project will increase the availability of natural gas in New England, reduce price volatility and increase capacity to help support the future needs of the region and the Commonwealth.

Throughout our many discussions with our members, energy costs are consistently a major concern. While electricity costs for all of Massachusetts are among the highest in the nation, parts of North Central are the highest in the state. North Central Massachusetts also has the largest concentration of manufacturers in Massachusetts, including many in the plastics, fabricated metals and machinery industries that are very energy intensive. One in every four jobs in our region is related to manufacturing. Despite outsourcing and off-shoring, manufacturing continues to play a vibrant and vital role in our economy. In an increasingly competitive and globalized economy, these high energy costs place businesses and industry in North Central Massachusetts at a competitive disadvantage. Since 1996, Massachusetts has lost 160,000 manufacturing jobs. Our workforce and our economy cannot weather the loss of any more of these good quality jobs that have proven to be the pathway to the middle class. In an often polarizing economy, these jobs and these employers are more important than ever.

To the extent possible, many of our members have made serious investments to reduce energy consumption and improve costs. Efforts have included installing cogeneration systems and solar panels. While these businesses have done their part to use less energy and be more sustainable, there is not sufficient natural gas capacity to support these innovative projects and measures. In peak winter times, the capacity of natural gas is so low that there is a reliance on coal and oil – sources that are not as sustainable and efficient for both the environment and the balance sheet.

We also know that all employers and small businesses across every industry in North Central Massachusetts feel the impact of high energy costs. When we hear from entrepreneurs or individuals looking to get their businesses up and running, we have to remind them of the impact of energy costs will have in their business plan. In no way do we wish to squelch aspiring business owners, but alerting them of high energy costs can be a sobering experience.

The North Central Massachusetts Chamber of Commerce remains a strong and active supporter of this project. We encourage the Commission to support the proposed pipeline expansion project.

Thank you for your consideration on this important economic development issue. Please do not hesitate to contact us if we can be of assistance.

Respectfully Submitted,

Roy M. Nascimento, IOM
President and CEO

20160127-5039

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)

Docket No. CP16-21-000

**IRVING OIL TERMINALS OPERATIONS INC.
ANSWER TO OBJECTION OF NORTHEAST ENERGY SOLUTIONS, INC.**

Pursuant to Rule 213 of the Federal Energy Regulatory Commission’s (“FERC” or “Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.213 (2015), Irving Oil Terminals Operations Inc. (“Irving Oil”) hereby submits this limited response to the Objection of Northeast Energy Solutions, Inc. (“Objection”) filed on January 20, 2016 in this proceeding.¹ When considering whether to grant a motion to intervene, the Commission considers, among other factors, whether the movant represents an interest which may be directly affected by the outcome of the proceeding.² As stated in Irving Oil’s timely-filed Motion to Intervene, Irving Oil has entered into a precedent agreement with Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) along the Market Path of the proposed Northeast Energy Direct Project (“NED Project”). Irving Oil is a potential customer of Tennessee on the NED Project that is the subject of this proceeding and has an interest that will be directly affected by the outcome of the proceeding. Irving Oil’s Motion to Intervene is

proper, and NEES's Objection provides no basis upon which to deny Irving Oil's Motion to Intervene. Irving Oil also wishes to correct NEES's claim that Irving Oil's Motion to Intervene suffers from a "lack of correctness,"³ the basis of which is an apparent inconsistency between certain statements in Tennessee's application and Irving Oil's Motion to Intervene. Irving Oil submits that the statements that NEES references speak for themselves, and the Commission is fully capable of analyzing these statements. Irving Oil nevertheless objects to any suggestion that it has made an inaccurate or misleading statement in this proceeding. WHEREFORE, for the reasons above, Irving Oil requests the Commission grant its Motion to Intervene and reject NEES's Objection with respect to Irving Oil's Motion to Intervene.

Footnotes:

- 1 "Objection of Northeast Energy Solutions, Inc. to Irving Oil Terminals Operations, Inc. Motion to Intervene and Further Protest," Docket No. CP16-21-000 (filed Jan. 20, 2016) ("Objection"). Irving Oil will defer to Tennessee to respond to all other issues raised in the Objection.
- 2 18 C.F.R. § 385.214(b)(2)(ii); see e.g., Central Vermont Pub. Serv. Corp., 53 FERC ¶ 61,204, 61,817 (1990); see also PSI Energy, Inc., 55 FERC ¶ 61,254, 61,810 (1991) (accepting timely motion to intervene over an objection because intervenor "expressed an interest in the outcome of the proceeding that is not represented by another party and . . . their participation may be in the public interest").

20160127-5123

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
Northeast Energy Direct Pipeline Project

Docket No. CP16-21-000

Motion to Intervene
"Out of Time"

The Alps Family Campground, LLC and Ronald VanFleet hereby move to intervene in opposition to the above-captioned proceeding. I am requesting to be allowed to be an out of time intervenor, since it is still early in the proceedings, and it will not disrupt the proceedings, nor will it have an influence on any party. I was not aware of the intervening process until after the time to intervene had passed and therefore missed the deadline for filing.

I am a property owner along the proposed route of the NED pipeline delivering gas from Pennsylvania to Massachusetts. I own a campground that abuts the current National Grid Power lines. As I understand the proposed route of the pipeline it will encroach further into the campground in order to maintain a safe distance from the power lines, which I assume must be considerable since a gas explosion combined with the high tension power lines serving down state NY would not only be a local catastrophe, but would likely shut down power in at least parts if not all of the NYC metropolitan area. At this point I have no knowledge of where the proposed pipe will actually be placed. But, wherever it is, it will have a significant impact on my business, the watershed, habitat, and the ecological balance in the area.

I have to wonder what the impact on my business will be if I no longer have a “Nature Trail” to offer my campers. Also will people want to camp next to a potentially dangerous situation? And lastly what will the impact be on the ability to sell the campground in the future?

Beyond that, I have other concerns about the delicate eco system that surrounds our property and feeds the wetlands and the nature ponds in and around our property. Our ponds are home for herons, fish, frogs, turtles, geese and ducks that return every year to nest. We also have deer that frequent the pond, as well as many other woodland creatures. If this small stream of water from the mountain above if it is changed in any way much of the wetlands wildlife could be destroyed forever. While, we are guaranteed by Kinder Morgan, that the property will be restored to its original state “as much as possible”, I doubt that they can rebuild a swamp and our wetlands. Again, I must also wonder, as I mentioned above, what impact this will have on my business without the wildlife that my guests come to enjoy.

While my description of my concerns is brief, the proposed pipeline plans are also brief and not specific enough to make me feel comfortable that a true analysis of the impact on the area in question has been viewed. Just recently a representative of Tennessee Gas and Pipeline came and asked permission to go through my property to go to the National Grid Power Lines saying that they thought there was only one set of poles and lines on the line when in fact after they reviewed aerial photos of the line they discovered there are in fact two sets of poles and lines. This concerns me because it does not seem that they have really put a solid plan together for anything other than accomplishing their goal without regard to the impact on business, environment or quality of life for the property owners near the proposed route of the pipeline.

Lastly, I must question, if the NED pipeline is pushed through, and the environment is destroyed, taking my business with it, will the Federal Government or Tennessee Pipe and Gas pay restitution for the loss of my business, my retirement, my future and my family’s future. I have spent 16 years of hard grueling work building this business so that I could provide for my family, and prepare for our future. And if this project is approved by your agency, this can all be taken from me by eminent domain, which would basically destroy my family. How do I prepare my wife and my 16 year old daughter that our future is not what we have been working, saving and planning for, but welfare instead? And how do I tell my daughter that her future plans for college will not happen, as well as many other plans that we have all worked hard for? Of course that does not matter to you, it matters to me and I vote.

I insist that as representatives of the people the United States of America, that the Environmental Protection Agency conduct a complete/comprehensive environmental study of the impact of this project before it is allowed to move forward.

Respectfully,

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street NE; Room 1A
Washington D.C., 20426

Re: Northeast Energy Direct Project; CPI6-21-000

Dear Secretary Bose:

As the Commission is aware, the Town of Nassau has filed for Intervener Status in the above referenced project. In addition to that request, we bring the following additional information to your attention for consideration and action as part of the review process.

Previously, FERC directed Kinder-Morgan (104) to look at alternative compressor station sites in Rensselaer County, New York beyond the initial site proposed along Clarks Chapel Road. In their December 8, 2015 submission to FERC, KM proposed two additional sites for evaluation. One of the two proposed alternative compressor sites was approximately 3 miles further east, located between NY Route 66 and NY Route 43 along the proposed pipeline route in the Town of Nassau. On behalf of the Town of Nassau, I am providing comments concerning this alternate siting location as well as providing an additional siting location information that KM should be required to consider.

It is incomprehensible how and why Kinder Morgan would propose a large industrial site at this location. Beyond the fact that this area is zoned as rural/residential and that siting this facility here would be completely inappropriate; the uneven and steep, rocky side-hill terrain at this proposed site would present significant problems for construction. This proposed site is entirely wooded and would require an enormous clear-cut of large hardwood and hemlock/spruce forest. Ingress and egress to this site for large trucks and earth moving equipment necessary to open up and re-shape the site during construction from either the NY Route 66 or Route 43 would present significant traffic disruptions and dangers to the traveling public. However, the most egregious aspect of Kinder Morgan proposing this site is that it lies completely within the Rensselaer Plateau; a federal, state, county and town recognized ecologically distinct area.

The Rensselaer Plateau was given priority project status in New York State's 1998 Open Space Conservation Plans and all subsequent plans. This area includes the fifth largest un-fragmented forest in New York. The boundaries of the Rensselaer Plateau can be viewed on the website rensselaerplateau.org. New York State has identified the Rensselaer Plateau as an important area for protection due to its diversity and bird breeding features and the Audubon Society has designated the Rensselaer Forest Tract as an important bird breeding area. The Audubon Society specifically cites the high diversity and abundance of forest breeders on the Plateau, including many at-risk species. The inevitable increase in noise and light pollution, both during construction as well as operation will have a significant negative impact on the at-risk bird species. Protection of the Rensselaer Plateau as an un-fragmented forested habitat is an important goal both for the State of New York as well as the Town of Nassau. The U.S. Department of Agriculture's (USDA) Forest Service has designated the Rensselaer Plateau as a Forest Legacy Area. The USDA has awarded a \$5.5 million grant to the NYSDEC to work with the Rensselaer Plateau Alliance to create a program designed to protect forest lands from conversion to non-forest uses. Both KM and the FERC have been made aware of the Rensselaer Plateau's ecological uniqueness in multiple information submissions from myself, the Town of Nassau's Natural Resource Committee and from private citizens. This is why it is so puzzling that KM would consider this an appropriate alternate site.

Some have characterized this alternate proposal as either the height of arrogance or disingenuous action on the part of KM for offering this as an acceptable alternative.

While Nassau fully recognizes that FERC and KM are not bound by all local zoning ordinances with regard to siting of the compressor station, we firmly believe that the nature of the development patterns within a community is something that FERC must and does take into account in its environmental review.

All three of the sites proposed to-date by KM for an industrial compressor station in Rensselaer County are in areas that are zoned as residential. The Nassau sites are completely unacceptable.

Why hasn't KM or FERC looked at sites that are more appropriately zoned as commercial or industrial?

Nassau has proposed alternative sites in previously filed documents in the FERC e-library and those sites should be genuinely considered as alternate compressor station locations.

Thank you in advance for your consideration of these comments.

Very truly yours,

David F. Fleming, Jr.

Town Supervisor

20160127-5324

COMPILATION OF COMMENTS IN FERC DOCKETS PF14-22 & CP16-21

I have created a "text only" compilation (less than 30 MB) of all submissions to FERC Dockets PF14-22 and CP16-21 (Tennessee Gas Pipeline NED Project). This makes it much easier to access the entire record.

My intent is to promote transparency and the sharing of information about this important project. I believe this compilation provides a powerful research tool for anyone interested in the NED project.

An "Editor's note" at the front of each volume explains the motivation, process and limitations in greater detail.

The compilation covers all comments received or sent by FERC since September of 2014 when the project started. As "text-only" files they are searchable, though the frequent OCR errors in scanned documents can interfere somewhat. The text has been "re-flowed" to full page width to reduce the number of pages required.

It does not include maps, photographs, or other graphic images (but their omission is noted in the text). Nor does it include the very large document collections provided by KM/TGP in their application - which often contain many dozens of files requiring 1,000 MB or more to download; these are available in FERC's eLibrary.

At present the compilation consists of 8 volumes in PDF text format, each being only a few MB in size. Periodically a new volume is spun off - usually around mid-month to allow time for FERC to have completed processing of the previous month's submissions. These "spun off" volumes are then unchanging and need only be downloaded once. The complete collection is less than 30 MB.

The current Volume, updated frequently, is always at:

http://www.Mason-NH.org/FERC_COMMENTS.pdf

As of today, Jan 25, 2016, this current volume is Vol 8, (pages 5,346...6,308) Jan 2016... (5.5 MB). It is up to date with the FERC Docket listings as of Jan 23, 2016.

Links to the earlier volumes are contained within each volume, or you can directly access them at:

Vol 7 (pages 4,736...5,345) Nov, Dec 2015 (2.3 MB)

http://www.Mason-NH.org/FERC_COMMENTS_vol_7.pdf

Vol 6 (pages 3,591...4,735) October 2015 (4.5 MB)

http://www.Mason-NH.org/FERC_COMMENTS_vol_6.pdf

Vol 5 (pages 3,281...3,590) September 2015 (1.3 MB)

http://www.Mason-NH.org/FERC_COMMENTS_vol_5.pdf

Vol 4 (pages 1,885...3,280) August 2015 (5.4 MB)

http://www.Mason-NH.org/FERC_COMMENTS_vol_4.pdf

Vol 3 (pages 1,140...1,884) June, July 2015 (2.7 MB)

http://www.Mason-NH.org/FERC_COMMENTS_vol_3.pdf

Vol 2 (pages 580...1,139) March...May 2015 (2.1 MB)

Skye Stephenson, PhD
14 Barrett Ave
Keene, NH 03431

January 5, 2016

Dear Kimberly D. Bose, Secretary:

I am writing to you as a concerned citizen of New Hampshire regarding the proposed Northeast Energy Direct (NED) pipeline, which Kinder Morgan and its allies would like to build partially through sections of New Hampshire, due to opposition in some communities in Massachusetts. AS A CITIZEN, LOCAL RESIDENT AND EDUCATOR, I AM OPPOSED TO THE PIPELINE for several reasons.

First of all, we should be shifting our focus away from gas and oil energy consumption towards renewable energy now due to climate change concerns. This pipeline would just contribute to our worsening global climate with all this entails.

Secondly, this proposed pipeline provides no real benefits to New Hampshire citizens while the costs of environmental destruction and other costs will be picked up by us. The primary winners will be the corporations and perhaps export consumers outside of the United States.

Thirdly, while I do not live in a community directly impacted by the pipeline, I believe we will all be impacted by it in one way or another. It is time for us to treat the earth with respect, and not misuse it through fracking and other practices destructive to our rocks and waters.

I urge you to please use your position in FERC to oppose this pipeline, and keep it from being built in New Hampshire.

Many thanks for your consideration,
Skye Stephenson, PhD

Washington, DC 20426-0002

Re: Docket1 CP16-21-000

Dear Ms. Bose,

Enclosed, please find a copy of Resolution 2015-04 adopted by the Town Council in Londonderry, New Hampshire, by a 5-0 vote, at its meeting on July 20, 2015.

Of particular importance, please note the Town Council's stated opposition to the location of the proposed NED Kinder Morgan pipeline in the Town of Londonderry.

If you have any further questions, please do not hesitate to contact me at 603 432-1100, ext. 111. Thank you for your attention to this matter.

Respectfully,

Kevin H. Smith
Town Manager

RESOLUTION 2015-04
A RESOLUTION REGARDING NORTHEAST DIRECT PROJECT

First Reading: 07/20/2015
Adopted: 07/20/2015

WHEREAS Tennessee Gas Pipeline Company, L.L.C., (“TGP”) a subsidiary of Kinder Morgan Energy Partners, L.P., has proposed to construct a new natural gas distribution pipeline in southern New Hampshire, known as the Northeast Energy Direct Project (“NED”);and

WHEREAS TGP has filed proceedings in the United States Federal Regulatory Commission (“FERC”), Docket No. PR14-22-000, requesting comments on environmental issues and other matters, and meetings for receipt of public comments are scheduled in New Hampshire in July; and

WHEREAS In addition, related proceedings have been or may be filed in the future with the New Hampshire Public Utilities Commission (“PUC”) and the New Hampshire Site Evaluation Committee (together, the “State Agencies”); and

WHEREAS A portion of the proposed NED pipeline is proposed to be constructed in Londonderry; and

WHEREAS The proposed pipeline will create no direct benefit to the residents of Londonderry, and the disruption to the residents of Londonderry caused by the construction of the new pipeline may outweigh the benefits to the Town and its residents.

NOW THEREFORE BE IT RESOLVED by the Londonderry Town Council that the Town of Londonderry does not support the location of the proposed pipeline in the Town of Londonderry, and

BE IT FURTHER RESOLVED that the Town Manager is authorized to file such statements at the proceedings and meetings held by FERC and the State Agencies as he determines appropriate to convey the foregoing resolution to TGP and to FERC and the State Agencies.

John Farrell, Chairman
Town Council

RE: Tennessee Gas Pipeline Company, L.L.C., a Kinder Morgan Company, Northeast Energy Direct Project, PA, MA, CT, NH. MHC 1RC.56771.FERC Docket 1 CP16-21-000.

Dear Secretary Bose:

The Massachusetts Historical Commission (MHC), office of the State Historic Preservation Officer (SHPO), received the “Application of Tennessee Gas Pipeline Company, L.L.C. for a Certificate of Public and Convenience and Necessity,” dated November 2015 (Application).

The MHC offers the following comments to assist the Federal Energy Regulatory Commission (FERC) in its compliance with 36 CFR 800, the regulations implementing Section 106 of the National Historic Preservation Act.

The MHC is uncertain if project information pertinent to the MHC’s role as the Office of the SHPO has been submitted to FERC but not provided to the MHC in a format required by the MHC’s record-keeping and filing systems to enable the MHC to comment. As the MHC has previously indicated, the MHC cannot accept electronic submittals, and the MHC is unable to view materials posted on websites.

The MHC reiterates its previous requests that information submitted for the MHC's review and comment be provided in paper format by mail or delivery. Project plans and drawings submitted to the MHC should be sized no larger than 11"x 17" to accommodate the MHC's filing systems.

The MHC will continue to advise and assist FERC in carrying out its responsibilities to take into consideration the effects of the project on historic and archaeological resources and to provide consulting parties the opportunity to comment on its findings and determinations (36 CFR 800.2(c)(1)).

The MHC will participate in continued consultation with FERC and its applicant for determination and documentation of the project's areas of potential effects for historical architectural and for archaeological resources (36 CFR 800.4(aX1)).

The MHC will continue to consult with FERC and its applicant in the development of adequate scopes for identification and evaluation efforts for historic and archaeological resources that may be affected by the project (36 CFR 800.4(b) to (c)), conducted in accordance with the Secretary of the Interior's Standards and Guidelines for Archeology and Historic Preservation (48 Fed. Reg. 190 (1983)) and the Massachusetts State Archaeologist's field investigation regulations (950CMR 70).

The MHC will continue to review and comment on the completed cultural resource identification and evaluation efforts to assist FERC to make informed required findings and determinations (36 CFR 800.2(a), 800.2(cd), 800.4 to 800.6).

The MHC cannot comment specifically on the general outlines of proposals in the Application for resolution of adverse effects, such as avoidance and protection plans, because the cultural resources surveys for identification, evaluation, and consideration of alternatives to avoid adverse effects have not yet been completed and submitted to the MHC.

The MHC recommends that FERC consider additional effective pre- and post-construction measures for cultural resource protection, such as those developed for the Maritimes &, Northeast Phase III Project (FERC Docket No. CP01-4-000), including environmental inspectors during project construction, and post-construction assessment and reporting. Methods of noting locations of avoided cultural resources on as-built alignment sheets should be developed to assist in future resource management decisions for facilities maintenance projects. Sensitive and confidential information about cultural resources should be protected.

These comments are offered to assist in compliance with Section 106 of the National Historic Preservation Act of 1966 as amended (36 CFR 800), the Secretary of the Interior's Standards and Guidelines for Archeology and Historic Preservation (48 Fed. Reg. 190 (1983)), and MGL c. 9, ss. 26- 27C (950 CMR 70-71). If you have any questions, please contact Edward L. Bell, Deputy State Historic Preservation Officer at the MHC.

Sincerely,

Brona Simon
State Historic Preservation Officer
Executive Director
State Archaeologist
Massachusetts Historical Commission

Attention: J. Curtis Moffatt, Deputy General Counsel and
Vice President Gas Group Legal

Reference: Data Request

Ladies and Gentlemen:

Please provide the information described in the enclosure to assist in our analysis of your proposal in the above application. File your response in accordance with the provisions of the Commission's Rules of Practice and Procedure. In particular, 18 C.F.R. § 385.2010 (Rule 2010) requires that you serve a copy of the response to each person whose name appears on the official service list for this proceeding.

All responses should be filed with the Secretary of the Commission by close of seven (7) business days from the date of the issuance of this request. The response should be filed electronically via the eFiling link on the Commission's web site at <http://www.ferc.gov>. The Commission accepts most standard word processing formats. Documents created electronically should be filed in native applications or print-to-PDF format and not in a scanned format. Please file all under oath (18 C.F.R. § 385.2005) by an authorized representative of Tennessee Gas Pipeline Company, L.L.C. and include the name, position, and telephone number of the respondent to each item. If you have any questions regarding this data request, please contact Kenneth Witte at 202-502-8057.

Sincerely,
Nils Nichols, Director
Division of Pipeline Regulation

Enclosure

Enclosure

1. On Page 34 of Tennessee's transmittal it states "Tennessee proposes to use separate incremental postage stamp recourse rates under Rate Schedules FT-A and IT for service on the Market Path Component and Supply Path Component facilities. Thus a shipper using only the Market Path Component facilities or only the Supply Path facilities will only pay for the costs associated with the facilities actually used." Please explain whether Tennessee proposes to charge its existing system zonal recourse rates as well as the postage stamp recourse rates for any recourse rate shipper contracting for capacity as part of the Project.
2. Pages 35-36 of Tennessee's transmittal states that "The incremental cost of service for the Mar-

ket Path Component and Supply Path Component facilities reflect...depreciation expense using a straight-line rate of 3.33 percent, based on an estimated useful life of the Market Path Component and Supply Path Component facilities of 30 years.” Please provide Tennessee’s last approved and stated depreciation rate for mainline facilities.

3. Please explain why Tennessee is proposing zonal fuel rates as shown on Page 4 of Exhibit Z-7 of its application when Tennessee proposes to charge initial rates for the Project that are postage stamp?
4. Please provide an updated fuel study that reflects Project volumes at 100% load factor utilization (i.e. design capacity).
5. In Exhibit N, Page 2, Tennessee estimates its 1st year O&M Expenses for the Supply Path Component of this project to total \$11,227,000 and the Market Path Component of this project to total \$15,566,000. Provide a breakdown of these expenses by (1) FERC account number and (2) labor and non-labor costs.

20160129-0007

POLAR BEVERAGES

January 8, 2016

Mr. Norman C. Bay, Chairman
Federal Energy Regulatory Commission
888 First Street, NE
Washington, DC 20426

Dear Mr. Bay: Re: eFiling PF Docket 14-22-000

Polar Beverages is a soft drink company based in Worcester, Massachusetts that manufactures and distributes sodas, seltzers, ginger ales, mixers, and spring water to consumers in the Northeastern United States. As the country’s largest independent soft drink bottler, we are a fourth generation family —owned business that traces its roots back to 1882.

Massachusetts has the highest cost of electricity on the Continental United States. At Polar, we have participated in many of the efficiency programs offered by the state and the utility at our Worcester facility, but we still feel that our options are not substantial enough in the increasingly competitive and shifting beverage industry.

New England has shut down most nuclear and coal power i*eneration, which has dramatically affected the cost of doing business in the State. Less than a decade ago, five percent of New England power was generated with natural gas. Now, fifty percent of the region’s electricity is natural gas-powered. I believe that we need a reliable blend of base load power from Hydro Quebec Natural Gas to allow manufacturing to survive.

Polar Beverages continues to support the environment by way of various sustainability activities, which include recycling and air-quality projects. For instance, we purchase electricity from an anaerobic digester generator from Jordan Farm to supply 26 percent our power. We support the Northeast Energy Direct (NED) project, not only for its supply of natural gas, but for its ability to reduce emissions in the region.

We believe that the Northeast Energy Direct natural gas pipeline project will decrease energy costs, improve the region s emissions, and provide renewable energy into the future. We ask that you join us in supporting this timely project ior the be&fit of the environment and the economy of the Commonwealth.

Thank you for your consideration and interest in this undertaking.

Sincerely,

Christopher J. Crowley
Vice President & Treasurer
Polar Beverages

20160129-0010

FEDERAL ENERGY REGULATORY COMMISSION
WASHINGTON, DC 20426

January 27, 2016

OFFICE OF THE CHAIRMAN

The Honorable Paul Tonko
U.S. House of Representatives
Washington, D.C. 20515

Dear Congressman Tonko:

Thank you for your January 4, 2016, letter regarding Tennessee Gas' proposed Northeast Energy Direct Project (Docket No. CP16-21-000).

On January 4, 2016, we issued a Notice of Extension of Comment Date for the Northeast Energy Direct Project. In our Notice we stated that to provide additional time for those who may have been inconvenienced by the closure of our eFiling and eComment systems, the comment date, as well as the deadline to file for intervenor status is extended to January 15, 2016. However, as a matter of policy, I assure you the Commission will fully consider any request for intervenor status that is received by FERC after January 15, 2016.

As in any Commission matter, please be assured that we strive to make our review of proposals both accessible and transparent to the public. If I can be of any further assistance in this or any other Commission matter, please let me know.

Sincerely,

Norman C. Bay
Chairman

20160129-0020

FEDERAL ENERGY REGULATORY COMMISSION
WASHINGTON, DC 20426

January 27, 2016

OFFICE OF THE CHAIRMAN

The Honorable Kirsten Gillibrand
United States Senate
780 Third Avenue, Suite 2601
New York, NY 10017

Dear Senator Gillibrand:

Thank you for your December 22, 2015, letter forwarding your constituent's concerns over both the Constitution Pipeline Project and Tennessee Gas Pipeline Company's proposed Northeast Energy Direct (NED) Project.

The Constitution Pipeline Project was granted a certificate by the Commission on December 2, 2014, under Docket Nos. CP13499-000 and CP13-502-000. We determined that the Constitution Pipeline would have some adverse environmental impacts; however, these impacts would be reduced to less than significant levels with the implementation of our environmental conditions attached to our Order and the additional measures that Constitution Pipeline committed to implement.

On November 20, 2015, Tennessee Gas filed its application for the NED Project in Docket No. CP16-21-000, and the Commission staff is currently preparing an environmental impact statement (EIS) for this proposed project. This document will analyze the project's environmental impacts, including those related to pipeline safety and socioeconomic impacts. The Commission will then consider the findings of this EIS,

as well as the public comments received on the need for the project, before making its decision on whether or not to authorize this project. Tennessee Gas has indicated that the NED Project will deliver gas to local distribution companies, an industrial end user, and an electric generator.

All projects filed with the Commission undergo a thorough analysis in the determination of need as well as to assess their compliance with existing laws, regulations and policy. Each project is also reviewed for potential environmental impacts. The results of these analyses are considered by the Commission prior to making any decisions about the project.

Like many other agencies, the Commission's funding is through appropriations from the general fund as approved by Congress. However, the full cost of these expenses are recovered by the federal government through annual charges and filing fees that FERC places on the industries it regulates. The Commission deposits this revenue into the Treasury as a direct offset to its appropriation, resulting in no net appropriation. There is no compensation to the Commission provided by energy companies.

Regarding your constituent's concerns over illegal acquisition of land, Congress has conferred the right of eminent domain to any holder of a Certificate issued by the FERC under the Natural Gas Act. Certificate holders must follow the applicable state laws regarding the access or acquisition of private property. The Commission does not have the authority to oversee the state process by which an applicant uses eminent domain.

As in any Commission matter, please be assured that we strive to make our review of proposals both accessible and transparent to the public. If I can be of any further assistance in this or any other Commission matter, please let me know.

Sincerely,

Norman C. Bay
Chairman

Steph Brown
10 September Lane
Burlington, MA 01803

20160129-5054 Mary Neville Wall to MA DPU

Mary Neville Wall, Northfield, MA.

Submitted to MA Dept. of Public Utilities by Mary Neville Wall of Warwick and Northfield, MA:

- Our energy future is in your hands, please do what's best for the people of the Commonwealth and our future generations.

- MA has a choice to invest (\$) in a clean energy future or a huge long-term commitment to fossil fuel. The impact of fossil fuel on climate change and public health is well documented, so the choice is clear. We are already being impacted, and our children's future is at stake. The pipeline is not a bridge; it is a road off a cliff.
- Thus far, considerations of the pipeline and its commitment to fossil fuel are not addressing the financial impact of serious climate change events and health-care impacts in our state. ..we 'just missed' hurricane Sandy and we were hit hard by tropical storm Irene. These costs are real and should not be ignored.

Follow the money. Who promoted CapEx (to buy and build assets) as more profitable to Utilities' than OpEx (to maintain and repair assets)? This policy has encouraged the ongoing myriad of prolific gas leaks in MA which customers must pay for in cash and health-care, all while utilities' lobby to promote fossil fuel pipelines and to restrict the advancement and benefits of solar's distributed generation.

- Tariff - Publicly subsidizing a gas pipeline is unprecedented, unnecessary and poor public policy. Rate-payers should not be expected to cover the costs of a multi-billion dollar, for-profit corporation, and certainly not without a voice in the process.
- MA Global Warming Solutions Act – MA passed comprehensive climate legislation in 2008, but has failed to fully implement the law and is not on track to meet our greenhouse gas emissions reductions targets. The NED pipeline project would increase our greenhouse gas emissions from current levels making compliance with the goals the people set impossible. We support full implementation of the GWSA. The US Military has reported climate change of immediate concern.
- Protected Lands, MA Constitution Article 97 – MA has made an environmental and financial choice/commitment to protect these lands. They shouldn't be given up for profit. The natural beauty of our state has economic value in our communities. A scar across any of them will have untold effects that can't be undone, as every tree provides oxygen and sequesters carbon.
- Energy Security – reliance on gas for heat and electricity makes us extremely vulnerable to any price fluctuations and supply issues with this single resource. Diversity makes us much more resilient. When (not if) the gas runs out (predicted as few as 20Y) we won't be in a position to meet our energy needs by other means. We will have put all our 'eggs' and our money, in one useless basket. Not to mention that during the "polar vortex" of 2013/14 pipeline valves froze, compressor stations went off-line, and at least one electric generating station that ran on gas failed to start. These failures resulted in price spikes from New England to California. Natural gas is not reliable in very cold weather.
- Green Jobs – growing our green economy will provide many more, and local, jobs than the same investment in fossil fuel infrastructure.
- Pipeline Capacity/Export – recent applications for export terminals in Maine and Nova Scotia clearly indicate the plan to use the NED to transport gas for export. Please don't allow this exploitation of the people and lands of MA
- Energy Efficiency – MA is a leader on efficiency through the GWSA, Green Communities Act and efficiency incentives. Efficiency is the most cost-effective way to reduce emissions and saves consumers on their energy bills. Although we excel, Massachusetts can do much more in this area. "Collaborating" with other states shouldn't mean the people of MA should be expected to 'carry' other states who are not working hard in this area. The people in MA believe in investing in energy efficiency, and have been.
- Pricing and opportunities for rate reform – current issues with electricity pricing could be addressed through pricing reform, time-of-day pricing, demand response, and real 'bridge' modalities such as storage of Liquid Natural Gas for peak usage. It's not about 'not enough pipeline capacity'.

20160129-5115

Karen St. Arnaud, Dracut, MA.
Docket Number: CP16-21-000

After reviewing several documents supplied by Kinder Morgan and Tennessee Gas Pipeline, I have several questions and requests I would like addressed before the project moves forward. I have a vested interest in the outcome of this project as my neighborhood is considered an abutter and the closest subdivision to the proposed Dracut Compressor Station property. According to documentation supplied by Tennessee Gas Pipeline Company/Kinder Morgan, our subdivision is roughly 1,000 – 1,500 feet from property proposed for the Dracut Compressor Station.

Source - Website: www.northeastenergyfuture.com/faqs

“What is ‘venting’? When does ‘venting’ occur at compressor stations?”

Venting is an infrequent event at compressor stations during which small amounts of natural gas are emitted in the following operational conditions:

Compressor Blowdowns: will occur when a compressor is stopped and gas between the suction/discharge valves of the compressor is vented to the atmosphere via a blowdown vent prior to the next startup. This will not occur every time the compressor is shutdown, but are only expected to occur if the compressor will not be run for an extended period of time, if the turbine/compressor makes an emergency stop, or for compressor maintenance purposes. 75 compressor blowdowns per unit are being represented in the air permit applications to estimate potential emissions. However, based on practical experience the number of unit blowdown may be lower.”

Source - Document Title: Northeast Energy Direct Project, Docket No. CP16-21-000, Environmental Report, Resource Report 9, Air and Noise Quality

FERC File Name: 20151120-5227(31035537)

Submitted By: Tennessee Gas Pipeline Company, L. L. C.

Date: November 2015

Page 17 – Section 9.1 Air Quality

“Since the proposed Station 319 modifications will not result in any incremental increase in air emissions and the new Market Path Tail station will use electric compression units, dispersion modeling is not required for these stations.”

Page 58 - Section 9.1.3.3 Massachusetts Operational Emissions and Air Quality Impacts

“Since the proposed new Market Path Tail compressor station will be electric-driven, operational emissions associated with this station will be minimal and only associated with an emergency generator, gas-fired heater and pipeline component leaks and venting (under normal circumstances all emergency generators are only operated about 30 minutes per week for maintenance purposes). While air permit applications are required for the Market Path Mid Station 2 and Market Path Mid Station 3 compressor stations, the electric driven Market Path Tail will not require an application, but will be registered under the Massachusetts ERP program given the small size of the heater and emergency generator.”

REQUEST:

Based on the ‘venting’ response on the Kinder Morgan website, it would be reasonable to assume blowdowns occur on a somewhat frequent basis due to maintenance and unexpected changes in pipe pressure. Based on the ‘Air and Noise Quality’ document, it states that emissions will be “minimal”, “only associated with an emergency generator, gas-fired heater and pipeline component leaks and venting (under normal circumstances all emergency generators are only operated about 30 minutes per week for maintenance purposes).”, and “new Market Path Tail station will use electric compression units, dispersion modeling is not required for these stations”. Could you please answer the following questions to help clarify why specific decisions were made in regards to our air quality.

1. Why is an air permit not required for the proposed electric station as ‘venting’ will occur up to 75 times per year and components may leak emissions during normal processing.
2. Why is dispersion modeling not being utilized for this station?

If a permit is still not required and dispersion modeling is not going to be used for this Compressor Station I'd like to request additional air quality testing be completed in my neighborhood. I'd request that this testing be completed by an independent party to ensure the 20+ children and 40+ adults will not be negatively impacted by emissions due to the Compressor Station.

- Air Quality test prior to construction (Spring, Summer, Fall, Winter): This will give us a base line for our area.

- Air Quality test during construction (start of construction, peak and normal operational times): This will help us understand impacts, if any, during the construction process.

- Air Quality test at the completion of construction: We can compare this measure to the 'prior to construction' season measure to evaluate change, if any.

- Air Quality test during start up, normal, peak, and 'venting'/blowdown: This will help us understand how our air quality is being impacted over time considering all variables associated with the operation of a Compressor Station - Air Quality test completed on a yearly basis over the next three years to monitor normal, peak, and 'venting'/blowdown processing.

I'd like to request I be directly notified, via email, mail or FERC website, of Kinder Morgan/Tennessee Gas Pipeline Company's response to my requests.

Thank you for taking the time to read my questions, comments and requests.

Sincerely,

Karen St. Arnaud

Karen St. Arnaud, Dracut, MA.
Docket Number: CP16-21-000

After reviewing several documents supplied by Kinder Morgan and Tennessee Gas Pipeline, I have several questions and requests I would like addressed before the project moves forward. I have a vested interest in the outcome of this project as my neighborhood is considered an abutter and the closest subdivision to the proposed Dracut Compressor Station property. According to documentation supplied by Tennessee Gas Pipeline Company/Kinder Morgan, our subdivision is roughly 1,000 – 1,500 feet from property proposed for the Dracut Compressor Station.

Source - Document Title: Northeast Energy Direct Project, Docket No. CP16-21-000, Environmental Report, Resource Report 9, Air and Noise Quality

Submitted By: Tennessee Gas Pipeline Company, L. L. C.

Date: November 2015

FERC File Name: 20151120-5227(31035537)

Page 104 – Section 9.2.2.9.1 Existing Noise Levels

“A sound level survey was conducted by SLR on August 19-20, 2015, in the area surrounding the Market Path Tail Station proposed site, located in Middlesex County, Massachusetts. Five NSAs were identified. The nearest structures in different directions from the site were selected as representative locations. Each NSA consisted of a group of residences. Area sound sources included vehicular traffic, wildlife (birds and insects), and wind-generated noise. Sound levels ranged from 45 to 66 dBA Ldn.”

“Attachment 9a, Figure 9.2-9, shows the distances and directions of the NSAs to the compressor station. Table 9.2-17 shows the measured daytime and nighttime sound levels (Leq, dBA) as well as the equivalent day-night sound levels (Ldn, dBA). The table also shows the distances and directions from the approximate center of the proposed compressor building location to the NSAs. Due to access limitations, sound level

monitoring locations were restricted to public rights-of-way.”

Page 105 - 9.2.2.9.2 Operation Noise Impacts and Mitigation

“The results indicate that with proposed noise control treatments, the station noise contributions attributable to the proposed equipment at all of the nearest NSAs will be below the Commission criterion of 55 dBA Ldn. The predicted station sound levels for continuous operations and emergency generator operations are below the MADEP limit at all NSAs. Sound levels due to short-term sound levels due to venting events are predicted to exceed the quietest ambient L90 values by less than 10 dBA. The predicted station contribution sound levels along the station property line range from 38 to 65 dB(A) Leq.”

“The predicted sound level is not likely to meet the limit at the station property line. Tennessee is in the process of evaluating sound mitigation measures and additional sound attenuation devices/procedures, and will continue to do so following submittal of the MADEP application to attempt to comply with the property line standard.”

REQUEST: The Five NSAs identified did not include my subdivision. Our subdivision is considered an abutter to the proposed Dracut Compressor Station property. I am requesting that our subdivision be added as a NSA site and included in the sound level survey. Area sound sources can fluctuate based on season. I would also request that the survey include spring, summer, fall and winter months independently. Simply reviewing August data does not provide enough evidence of yearly noise contributions. Lastly, I'd like to request I be directly notified, via email, mail or FERC website, of Kinder Morgan/Tennessee Gas Pipeline Company's response to my requests.

Thank you for taking the time to read my questions, comments and requests.

Sincerely,

Karen St. Arnaud

Re: Tennessee Gas Pipeline, LLC, Docket No. CP16-21-000

Dear Secretary Bose:

On December 18, 2015, the undersigned filed a motion to intervene and comments in support on behalf of

the New England Local Distribution Companies in the above-captioned proceeding. This letter is to request that the official service list in the captioned proceeding be amended to add the individuals listed below who were listed in the motion to intervene but were not added to the official service list.

The New England LDCs

Debra Ann Palmer, Esq.
Schiff Hardin LLP

---------------------	--------------------------------	----------------------------------

Individual	jcampbl@berkshire.rr.com	
------------	--------------------------	--

Basis for Intervening:

My property, Dalton parcel 236-43, was on the previous preferred route. Since my objections to the pipeline as currently proposed are the same as those of the majority of objectors, many of whom have expressed their rationale for opposition far more articulately than I could, I did not file to intervene in a timely manner. But it has since occurred to me that should Kinder Morgan revert to their original plan, I would again be in danger of destruction of my septic field, pollution of my well, devaluation of my property and a slew of other problems associated with pipelines. I very much want to be made aware of any proposed changes to the route so I can take appropriate action; therefore, I am filing this **motion to intervene** out of time and am confident that, because it is early in the proceeding, this intervention will not be disruptive or prejudicial to others in the proceeding.

RE: Northeast Energy Direct Pipeline/ CP16-21-000

Phase 1 Archaeological Surveys- Massachusetts, New York, Pennsylvania

Comments by Stockbridge-Munsee Mohican Tribe

Dear Ms. Bose:

I am submitting these comments on behalf of Stockbridge-Munsee Mohican Tribe as part of our ongoing consultation on the Northeast Energy Direct (NED) pipeline project.

I have reviewed the Interim Progress Report: Phase 1 Archaeological Surveys dated November 9th 2015 (received January 2016) submitted by Louis Berger per the tribe's cultural resource responsibilities for Section 106 of the National Historic Preservation Act. I am replying to you as the Federal contact for the project in keeping with our Government-to-Government consultation protocol.

On behalf of the Stockbridge-Munsee Mohican Tribe, I offer the following comments for the segments within our cultural areas of interest:

MASSACHUSETTS:

- We note that the report contains only preliminary information of surface walkovers occurring since August 2015. We will await the results of subsurface testing.
- We request to continue to be notified of the testing dates when fieldwork resumes so that we may have the opportunity to monitor.
- We note that the report names PAL in Pawtucket, RI as the destination for artifacts recovered during the surveys, and instead we request that consulting tribes be given the opportunity to curate the Native American materials.

NEW YORK:

- We concur with the recommendations for further Phase 2 testing of the Temporary Sites as listed in the Abstract, noting that 17 of the 20 identified sites contain Native American materials.
- Specifically, we note that the two adjacent parcels to Temporary Site 3102-01 have not been tested and may very well be part of this site; we ask that Phase II testing for Temporary Site 3102-01 wait until land access can be obtained for the adjacent sites and a comprehensive test can be done over the larger area.
- In addition, we find we do not concur with the report for the treatment of several sites for which no further testing was recommended. We recommend Phase 2 testing for 8 additional sites, with the following rationale:
 - o TS 2101-09: The site is in close proximity to another site and may be associated
 - o TS 2101-10: Same as above
 - o TS 2101-17: This site may be associated with a known NY State site 75 feet north, and deserves further analysis
 - o TS 2101-18: Same as above
 - o TS 2101-34: This site is in the vicinity of a known cultural site that includes burials, therefore we wish to have further analysis.
 - o TS 2102-01: The report identifies that 2102-02 is potentially NR eligible, and this site is part of the same site, therefore we request further testing.
 - o TS 3101-11: There are two sites near to this as well as stone features, and we wish to have further analysis.
 - o TS 3103-13: The narrative does not describe the precontact materials, but the mapping shows multiple surface finds were identified in a field. We would like to review further testing results.
 - We have already communicated to Louis Berger our great concern for the high cultural sensitivity of the NED pipeline at the Hudson River crossing in the towns of Bethlehem and for Papscaanee Island. We would like to reiterate that concern once more and request that no testing be conducted in these areas without a monitor present from our tribe.
 - For all remaining parcels, we request to continue to be notified of the testing dates when fieldwork resumes so that we may have the opportunity to monitor.

PENNSYLVANIA:

- We concur with the recommendation to avoid the two sites in Susquehanna County (TS 3203-01 and 3203-03) and also concur that a 50-foot buffer is satisfactory.
 - o Please note that the report appears to have a typo in the Management Summary and misidentifies 3203-03 as 3202-03.

As a general comment for all reports, for ease and effectiveness of review we ask that the consultant Louis Berger identify the page number of the site shown on the mapping when they list the site in the narrative. For example, the New York report has more than 300 pages of mapping, yet they are all identified as “See Figure 2” in the narrative. Instead, when a site is described in the narrative we ask that the corresponding page number for the map is listed.

Thank you for review of the comments of Stockbridge-Munsee Mohican Tribe.

Respectfully,

Bonney Hartley
