Editor's note:

The comments sent to FERC by citizens, local governments and organizations are meant to provide important information to FERC for use in its review of a proposed project. In this role the information flows essentially in only one direction: to FERC.

A less well known function is to encourage the exchange of information between citizens, groups and local governments. In my view this exchange is as important as informing FERC, perhaps more important.

Unfortunately, while the comments sent to FERC are made part of the public record and are placed on-line, they can be rather hard to access through FERC's somewhat opaque eLibrary interface. In practice they essentially disappear from the public eye.

*As a consequence, much of the value of the comments is lost. While some comments are simple "I'm all for it" or "don't allow it" expressions of opinion, many others contain thoughtful discussions of costs and benefits, suggestions for studies which would be important, considerations of alternative solutions, and other valuable contributions to the public discussion. **It is a terrible waste of human effort and knowledge to allow these comments to disappear from the public discussion.***

The intent of this document was to collect and make easily accessible the comments sent to FERC by citizens, organizations and local governments along with FERC's replies. I wanted to make the comments available as a collection in a small number of PDF files of manageable size - this meant that the comments would have to be in text form rather than as large image scans.

Most of the documents were scanned at FERC and then converted into text via OCR (Optical Character Recognition). While modern OCR can do a decent job, there always will be errors. The errors were compounded by the tendency of some FERC clerks to stamp the documents near to, often on top of, the text - which greatly confused the OCR and made it time-consuming to select and copy the remaining legible parts.

Hand-written documents are not OCR compatible and could not be converted to text. They are listed in sequence below but without text; where possible a note is made as to author and support or opposition.

Maps and similar graphical material are also not included.

Also excluded are the very large document collections provided by Kinder Morgan in their application. Each update of their proposal includes almost 1,000 MB of files containing thousands of pages. These files are listed in sequence below and can be downloaded from FERC's eLibrary if you want them.

Much of the OCR'd text resulted in lines which did not match the page width of this collection; simply copying these short lines this would have at least tripled the length of this already very long document. Instead, after selecting the text I reformatted the paragraphs so that they would fill out the width. I did not attempt to also recreate indentations or tabular formats.

This project has been complicated by several factors:

I found it surprising that many documents which were fully OCR compatible were never converted, including a number which came from governmental bodies, tribes, or influential NGOs. These were either stored as (large) image scans in the PDF files or simply noted as not being convertible with no clue as to content. Some which had "SENT BY EMAIL" in their header, indicating they had been sent to FERC in digital text form were apparently converted into the much less useful scan image format. Processing at FERC seems somewhat inconsistent. Where possible I have applied my own OCR when only scans are provided.

Finally, there is pilot fatigue and error. Long and late hours provided ample occasion for errors and I'm sure I must have made some. I suspect the most likely would be deletions of parts of paragraphs (the Delete key being all too close to other keys I used). Please report any that you discover to Garth@Mason-NH.org and I will repair them.

In short, expect some errors. When in doubt you can consult images of the originals in FERC's eLibrary. The bolded numbers, such as "**20140917-4001(29789308).pdf**", are the FERC document file names in which the first numbers, e.g., **20140917-4001**, are the document's "Accession Number" while the numbers in () are the specific file number (there may be several files, for example a scan Image file and also a PDF version, possibly OCR'd, or not...).

You can search FERC's eLibrary at <http://www.ferc.gov/docs-filing/elibrary.asp> where you can use "advanced search" to find all files under a specific Accession Number.

G.Fletcher.

The files are listed in numerical order - which should correspond to date, beginning with the earliest.

A adaptation of a Christmas Classic ...
rewritten by Karen Miller

T'was the night before Christmas on the NED route,
Kinder Morgan was trying to make bribes with their loot!
New gas masks were hung by the back door this year,
we're hoping and pleading it doesn't land here!
The children were tangled, they tossed in their beds,
the nightmares of toxic waste filled up their heads!
While ma's crying "what ifs?" I stare at the map,
stressed out and exhausted we cant even nap!
When out on the lawn there arose such a clatter,
Maggie Hassan was screaming your lives don't matter!"
Away to the window I flew like a flash,
tore open the shutters and threw up the sash.
When what to my tiring eyes should appear,
a black SUV, Santa trapped in the rear!
Pedal to the metal, all reckless and quick,
I knew in that moment they'd kidnapped St. nick!
Much louder than blow downs Allen fore did proclaim,
"some ransom for Santas the name of my game!"
Run Dasher, run Dancer, run Prancer and Vixen,
run Comet. run Cupid, run Donner and Blitzen!
Compressor emissions pollute as they fall,
so run away, run away, run away all!
So up to the house front the SUV flew,
packed full of untruths and St. Nicholas, too!
And then in the twilight I thought it a spoof,
surveyors were tying some tape on my roof!
I slammed shut the window and quick spun around,
down the chimney came Santa duct taped and bound!
I undid the tape from his head to his foot.
Santa clothes were covered with ashes and soot!
"No bundles of joy in this holiday sack!"
and he looked like a beggar dragging a pack!
A tear in his eye and a twist of his head,
soon gave me the know we might all end up dead!
He muttered and sputtered and kept to his work,
and turned when said "Allen Fore is a jerk!"
then laying his fingers aside of his nose,

and giving a nod up the chimney he rose!
I heard Santa say disappearing from sight,
“No pipeline this Christmas, don’t give up the fight!”

Stop the NED/Tennessee Gas Pipeline project! Kinder Morgan greed, not New Hampshire need!

20160104-0011

December 30, 2015

Kimberly D. Bose, Secretary
Nathaniel J. Davis, Sr., Deputy Secretary
Federal Energy Regulatory Commission
888 First Street, N.E.
Washington, DC 20426

RE: Docket # CP16 -21-000

RE: Application for a Certificate of Public Convenience and Necessity (NED Project)

Dear Secretary Bose and Deputy Secretary Nathaniel Davis,

This letter is to inform you that I am hereby filing a motion to intervene in behalf of myself, Beverly Edwards, and my sister, Gayle Richards, in the Federal Energy Regulatory Commission’s application proceedings with the Kinder Morgan/Tennessee Gas Pipeline Company’s Northeast Energy Direct (NED) pipeline proposal.

I live at 41 Twillingate Rd., Temple, NH 03084. My sister, Gayle Richards, lives at 9 MI. View Drive, Temple, NH 03084. We are both opposed to the proposed Northeast Energy Direct pipeline.

My reasons for establishing intervenor status are based on the following issues:

1. Health concerns - Compressor stations along the natural gas pipelines coming from the Marcellus Shale in Pennsylvania, as those proposed for the Northeast Energy Direct pipeline will be, have been determined to emit numerous hazardous toxic emissions by studies conducted by the Southwest Pennsylvania Environmental Health Project (SWPA-EHP), Dr. Wilma Subra, and others.
 - Temple, NH abuts the location of the proposed Mid-station 4 Compressor Station planned for siting in New Ipswich, NH -- planned to run at 41,000 HP.
 - Gayle Richards lives within 1/2 mile of the proposed site for the compressor station or within its “buffer zone”. And I live within 2 miles of it.
2. Financial concerns
 - Due to the potential need to sell our homes in order to escape the emissions from the compressor station at a time when plummeting home values are already impacting our local real estate market, as realtors are questioned by potential buyers not wanting to buy near or in towns along the planned pipeline route. We are facing the possibility of needing to “walk away” from our homes without any buyers.
 - Increased taxes as other home owners in our town decide to leave what has been a quiet, clean, historic rural town void of any industry, but could soon have a noisy, dusty, dirty industrialized area right on our border-leaving fewer tax payers to cover the towns’ expenses.
 - The \$5 billion construction cost for NED will fall on the shoulders of ratepayers either through a tariff, “reservation fees” or simply added to one way or another
 - Higher prices for natural gas due to the consequences of exportation of natural gas (see below) through the NED pipeline.
3. Air quality, water quality (aquifers/wells), and soil quality concerns - for safe drinking water, clean air to breathe, and our ability to grow our own vegetables in uncontaminated soil

4. Concerns for the loss of amenities we depend on In our small town, such as our only restaurant and inn, which is facing diminished business from the harms the pipeline will inflict on the travel industry in our region, already beginning to occur due to the mere possibility of a pipeline nearby.
5. Climate change-the impact of methane from natural gas on climate change (since it is an even more provocative a greenhouse gas than CO2), and the repercussions of climate change on the lives of my adult children and grandchildren.

Some Details:

1. The McArthur Award recipient and nationally respected chemical researcher, Wilma Subra, has documented a list of health impacts affecting people who live or work within a 3 mile radius of a 12.000 HP compressor station. During a phone consultation with her this past October, Dr. Subra stated firmly that we would need to multiply the radius of potential health impacts considerably for a 41.000 HP compressor station - over three times the size and Impact radius of the 12.000 HP facility.

The pipeline and the compressor station are planned for a very close proximity to Temple's largest aquifer. and their construction will contaminate our well water. as well as our air and eventually our soil.

2. Ms. Richards is vulnerable to asthma attacks, which is one of the more common health problems associated with compressor emissions. It could become life threatening if she continued to live in her home within the "buffer zone". The dust and particulates caused by construction plus all the pollution from the diesel-fueled trucks are an additional concern for her health.

She will be a 70 year old (in 3 months) single woman who will probably not even be able to sell her home if the compressor station is sited so close to it. But she will need to leave it for the sake of her health. Not only will she suffer serious health problems. but...! housing and financial disaster as well.

3. At age 75. I will also be subject to potential respiratory health impacts from the particulates and toxic emissions emitted from the compressor station.
4. As ratepayers in NH we are concerned about Kinder Morgan's intentions to export its gas through the Northeast Energy Direct pipeline and the resulting effect on our domestic prices. The most recent study conducted by the Energy Information

Administration (EIA) confirmed their previous determination that prices will rise at the natural gas well-heads if natural gas exportations take place. thereby raising its price domestically.

5. I am concerned about stranded costs we ratepayers will have to cover, plus an abandoned and deteriorating pipeline underground and an abandoned compressor station in our neighborhood when the Marcellus shale play runs dry, or after mandates to stop using fossil fuels take place in the not too distant future. Troubling statements were made at the NH Public Utilities Commission hearings by the spokesperson for Liberty Utilities, the only NH customer for the Tennessee Gas Pipeline NED project. They referred to a 20 year payoff period for the burden of the \$5 billion construction cost for NED. Likely before then, there will probably be federal mandates for states to stop using fossil fuels

6. It concerns me as a ratepayer that such a heavy investment in infrastructure with all the destruction of its construction process would be foisted on the public for a limited time of usage. Clearly. it is neither cost-effective for New England nor fair to its ratepayers. That is especially true, considering that sufficient LNG has been made available to cover all NE's winter reliability needs without construction costs or the destruction to our environment and communities of building a pipeline.

20160104-0016

**COMMONWEALTH OF MASSACHUSETTS
THE GENERAL COURT
STATE HOUSE, BOSTON 02133-1053**

December 18, 2015

Secretary Kimberly D. Bose
Federal Energy Regulatory Commission
888 First Street NE, Room 1A
Washington, DC 20426

Dear Secretary Bose,

We write to express deep concern and opposition regarding the Federal Energy Regulatory Commission's recommendation of alternative compressor station sites located in the Methuen, Dracut area for the proposed Northeast Energy Direct (NED) Pipeline. The alternative sites proposed on page 7 of FERC's data requests to Mr. J. Curtis Moffat of Tennessee Gas Pipeline Company, LLC and in particular MTC Site Alternative 1, are likely to have a significant adverse impact on the quality of life, safety, and environment of the surrounding community.

The Regency at Methuen is an age 55 and older community situated in close proximity to the Brox property off of Wheeler Street in Methuen. The population residing at The Regency and the area's residential neighborhoods would be negatively impacted by the development of a compressor station in a number of significant ways.

The first concern is the potential for a number of harmful health impacts due to the chemical discharge during the "blow down" process. The former vice-chair of the Environmental Protection Agency's National Advisory Council for Environmental Policy and Technology, Dr. Wilma Subra and others, have extensively detailed a number of acute health impacts for individuals living in close proximity to compressor stations and other production wells. According to her research, some of these significant health impacts include but are not limited to, irritation of skin, eyes, nose, throat and lungs, nausea and weakness. These health impacts are likely to be worse for more vulnerable populations, including the elderly.

The second concern is the noise from the "blow-downs," which can often be heard as far as a mile away. In addition, a compressor station exposes residents to risks from gas leaks and accidents at compressor stations. Hedgeye Risk Management and the Wall Street Journal have reported Kinder Morgan's "high-level business strategy is to starve its pipelines and related infrastructure of routine maintenance spending in order to maximize distributable cash flow." Kinder Morgan's lack of focus on key maintenance tactics has resulted in a number of well documented incidents, including an explosion at a Kinder Morgan compressor plant in Wharton County, Texas in June 2014.

Finally, with thousands of residents impacted by the new proposed locations for the compressor station, FERC must provide public notification and an opportunity for public comment.

We strongly believe these new alternative locations suggested for a compressor station for the NED Pipeline are unacceptable for the same reasons locating such a station in Dracut is unacceptable public health, safety and natural resource protection must come before financial profits exclusive to an energy company seeking to compromise residents' quality of life and well-being.

Sincerely,

Kathleen O'Connor Ives

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C

Docket No. CP16-21-000

NOTICE OF EXTENSION OF COMMENT DATE

(January 4, 2015)

Due to an inadvertent error, during December 24-27, 2015 and December 31, 2015-January 3, 2016, those seeking to use eFiling and eComment on www.ferc.gov were unable to do so. To provide additional time for those who may have been inconvenienced, the comment date for Tennessee Gas Pipeline Company, L.L.C. Northeast Energy Direct (NED) Project will be extended to January 15, 2016.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below file with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit 7 copies of filings made in the proceeding with the Commission and must mail a copy to the applicant and to every other party. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commentators will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commentators will not be required to serve copies of filed documents on all other parties. However, the non-party commentators will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 5 copies of the protest or

intervention to the Federal Energy regulatory Commission, 888 First Street, NE, Washington, DC 20426.

Comment Date: January 15, 2016

Nathaniel J. Davis, Sr.,
Deputy Secretary.

20160104-5000

Esther L. Reynolds, Otego, NY.

Of the 150 acres that I own 120 are located in the half mile buffer zone (or as a neighbor calls it “the kill zone”) of the proposed NED Compressor station in the town of Franklin in the county of Delaware.

A huge concern I have is the detrimental effect that this project will have on the value of my lands and structures. I can only see them being devalued. My husband and I worked for years clearing our lands, building several structures mostly by ourselves. I am sick to think that all this work with the proposed project will be devalued.

When the project begins my quiet rural life will be no longer as trucks and equipment will be going by my lands and the noise of construction will penetrate my once quiet life.

As construction begins I am very concerned about the blasting and drilling and the impact it will have on my already tenuous water supply. My well is 350 Feet deep. It yields a half a gallon a minute and has only a 250 gallon reserve.

Upon completion I am very worried about the noise of the equipment, the harmful emissions and the potential of a hazardous event. Will not make for easy sleeping at night or peaceful days.

The pros in the area say that this project will benefit the area. I think they are right for the first 2 or 3 years when it is under construction. Local people will be hired for menial jobs.

After construction those jobs will be gone and only high paid gas engineers will be hired.

The area will be left scarred with the swath that is cut, industrialized, lose its idyllic rural atmosphere, and be injected with noise and chemical pollution.

What an awful legacy to leave to our children. From what I have read this project is not needed. There are many other ways to get any future need for more energy (solar, hydro).

Hopefully somebody in the government will really take a good look and come to their senses and stop the NED Pipeline and Compressor project.

20160104-5001

Sullivan Family, New Ipswich, NH.

The system is rigged against the general public. We do not have the deep pockets that the Energy Companies have. This article says it all! Daniel Weeks of Nashua is executive director of Open Democracy, a nonpartisan organization working for transparent and accountable governance in New Hampshire. FERC, please let the “little peoples” voices be heard and DENY this pipeline/compressor station project.

Democracy is missing from pipeline debate

The vast majority of Granite Staters can't afford to hire lobbyists or candidates of their own

By Daniel Weeks

Published: December 23, 2015

Growing up in Temple, there were few things we valued more than our land, our voice and our independence from outside interests. When it came time to repave a road or buy a new fire engine, our duly-elected selectmen would gather proposals and make their case to the town. Come town meeting in the spring, we all got to have our say.

That's the New Hampshire way.

Now, Temple and neighboring towns are facing the biggest threat to land and self-determination I have ever seen.

In 2014, Texas-based energy giant Kinder Morgan announced plans to build a natural gas pipeline through 17 New Hampshire towns, complete with a 41,000-horsepower compressor station in New Ipswich.

The Northeast Energy Direct pipeline would originate in western Pennsylvania and deliver 1.3 billion cubic feet per day of fracked natural gas to New England – more than twice the projected need for the region.

In order to install the 77 miles of pipeline through southern New Hampshire, Kinder Morgan would cut a 125-foot path and maintain a permanent 50-foot easement through private lands, as well as the existing right-of-way.

Regardless of whether you support or oppose the project, every Granite Stater can agree that it is fundamentally a local concern. The decision must be based on a careful weighing of the costs and benefits to the affected towns and the region, not Kinder Morgan's bottom line.

Yet most of us in New Hampshire do not have the means to buy a seat at the debate table in a political process increasingly dependent on money.

Over the last two years, Kinder Morgan the company has spent more than \$100,000 lobbying in New Hampshire. The \$50,000 they spent on lobbying in 2014 was more than any public interest, nonprofit or labor organization spent that year, and it is expected to rise even higher in 2015. (The New Hampshire Secretary of State has thus far failed to publish the mandatory lobbying disclosures for the second half of the year).

Grassroots groups opposing the pipeline did not make any lobbying expenditures of their own, according to the Secretary of State.

That means that long before state leaders heard a word from their constituents about the proposed pipeline, they had already been contacted by well-paid lobbyists arguing in support of the project. Official disclosures reveal that those same lobbyists have given thousands of dollars to help fund state lawmakers' campaigns.

Over the same period, Kinder Morgan has spent nearly \$450,000 lobbying in Massachusetts and another \$260,000 lobbying the federal government, for a combined \$1,000 per day. Over \$100,000 of their federal lobbying expenditures were specifically targeted at influencing the FERC process to ratify the NED pipeline.

And while Kinder Morgan touts its policy of political neutrality by saying the company does not make any campaign contributions, many of its top executives do precisely that.

Since 2012, Kinder Morgan employees and their families have invested millions of dollars in state and federal races, including current presidential candidates Jeb Bush and Ted Cruz. In 2015 alone, Chairman Richard Kinder and his wife have already spent \$2.2 million to influence the presidential election.

In a political system where elected officials set energy policy – directly and via appointments to the FERC – while simultaneously raising millions of dollars from special interests to get elected, Kinder Morgan's investments make perfect business sense. But what about the vast majority of Granite Staters who cannot afford to hire lobbyists or candidates of our own?

As Kinder Morgan holds its obligatory public hearings across southern New Hampshire, complete with slideshows and dozens of company representatives, I can't help wondering if it isn't just a charade. Why would a company spend millions of dollars to influence the political process if the voices of affected citizens are the central concern? And how can a democratic republic allow unlimited spending by special interests in the first place?

For the sake of my old town and the values we hold dear, I hope citizens across New Hampshire will make their voices heard in the current pipeline debate and put an end to endless spending in elections.

Daniel Weeks of Nashua is executive director of Open Democracy, a nonpartisan organization working for transparent and accountable governance in New Hampshire.

20160104-5021

Motion to Intervene

Before the Federal Energy Regulatory Commission (of U.S.A.)

Docket No. CP16-21-000

(Tennessee Gas Pipeline Company, LLC – The Northeast Energy Direct Project)

on behalf of

Timothy R. Wessels and Susan L. Wessels

We seek to intervene in the above-captioned proceeding, in opposition to the Northeast Energy Direct Project (NED) proposed by Tennessee Gas Pipeline Company, LLC, a subsidiary of Kinder Morgan, Inc.

Please communicate about this proceeding to:

Timothy and Susan Wessels

182 Sunridge Road

Rindge, NH 03461

tim@timwessels.com

Our interests in these proceedings include the following:

We own one parcel of land on Sunridge Road in Rindge, NH. The route shown in the March and July filings indicated that most of our 3 acre parcel would be included in the “study zone” of the NED construction project and the pipeline would be built in and through the area of our lot that includes the water well, screened porch, patio and, vegetable garden beds, and formal gardens. The path of the pipeline would then take a right turn (south/southeast), running parallel to Sunridge Road, creating another easement on the East side of our property, traversing wetlands in which we currently enjoy a wide variety of migrating wildlife. This path would create a permanent easement for the NED project that traversed both the North and East sides of our property, threatening our water supply and make living in our dwelling almost impossible, given the proximity to the construction and the actual pipeline. The market value of our home would be reduced to virtually nothing and our most valuable asset would be wiped out.

We decided to build our home on this particular parcel of land because of the proximity to wildlife, the peace and quiet this location affords us and because of the beautiful views we have from the porch on the east side of the house. We have invested countless money and time in building formal gardens all around our home. I am a professional photographer and I photograph flowers and plants that grow in our gardens. All this would be in jeopardy given either March or July filing of the proposed NED route.

The November 2015 filing indicated the route had been slightly shifted to the other side of the National Grid easement but still within 400’-500’ of our parcel and well within the “blast zone” should there ever be a gas explosion along the pipeline on the East or North of our home. We are concerned that with this route, too, our water supply would be compromised and our home would still lose substantial market value.

This same November 2015 filing indicates that the private road on which our parcel is located is designated as a “construction access road.” This road is a private road, maintained by all residents of the neighborhood. It was not built to withstand heavy industrial construction traffic and would be severely damaged in its use as a “construction access road.” Its narrow cartway would present a safety hazard to us and other residents if it were to be utilized by heavy industrial traffic as an access road during the months of construction estimated by Tennessee Gas Pipeline.

Our concerns are for both the construction phases during which the quality of our lives and property would be severely impacted and the operation phase in which our property will be at risk, our water supply jeopardized and our entire investment devalued due to its location vis-a-vis the pipeline. Susan Wessels is 72

years old and has health problems and impairments. The noise and disruption of daily life could have a severe impact on her physical and mental wellbeing.

Our interests include the impact the NED project will have on our lives, health, land, water quality, property value, residential viability as well as costs associated with the road we are obligated to maintain. Our interests also include concerns that the excessive costs, including potential stranded costs, of this project will be passed on to us as electric ratepayers should Kinder Morgan/Tennessee Gas Pipeline secure our electric utility as a Project shipper which in turn would seek to recover associated costs from its ratepayers.

Sincerely,

Susan L. Wessels

Timothy R. Wessels

Maria Szmauz, New Ipsawich, NH.

The Ferc should grant an extension for time line for intervention in this docket. Time was short to begin with, was around the holidays, AND the website was down from Dec. 28th until now losing many of the few days possible for people to file motions to intervene. (over 20% and growing) The note stated inclement weather as the reason which I take issue with. As far north as Boston no such weather interfered with business, including air travel in a significant way, and DC is much further south. Also there is no acceptable reason for weather to shut down a federal website. (If that would be the case we might as well hand America to the terrorists.)

As of this am, Jan. 4, 2016, the website is open for log-in, but still not functioning properly. It will not allow me to file my motion to intervene and keeps saying try again in 10 minutes. My time is as valuable as say Norman Bays, and I do not have unlimited "ten minutes" to keep trying this.

The Ferc's bad management of this website (whether intentional or not????) is TAKING AWAY MY RIGHTS AS A CITIZEN. EXTEND THE TIME FRAME TO INTERVENE.

Basis for Intervening:

I am a landowner directly impacted by the KM/NED pipeline route that is opposed to this project. As the route passes through my property, I could have my property seized by eminent domain. I believe my drinking water could be compromised due to construction and/or operation of the pipeline. As an Eversource customer, I could expect an increase in my bill due to cost recovery. My husband gardens on our property; the pipeline will take away our ability to provide our own organic, self sustaining produce as well as his retirement relaxation hobby. As a side note, I am also opposed to fracking, the source of this gas.

Basis for Intervening:

I live within half mile of the proposed Mid station 4, New Ipswich compressor station and my home property directly abuts the proposed site.

My Address:

Sebastian E Barthelmess
424 Temple Road,
New Ipswich, NH 03071

I will see, hear, smell, feel, and potentially taste the effects of the compressor station.

We have the following immediate concerns:

- The health of our three young children who are statistically more susceptible and at risk to the effects of operating a gas compressor turbine within a half-mile distance.
- The air quality impacts due to 41,000 HP turbines generating exhaust.
- The effect on our business breeding Bernese mountain dogs (Monadnock Mountain Breeders). These dogs live outside and are susceptible to environmental changes.
- The effects of the continuous, daily noise of compressor station.
- Any effects the pollution and noise would have on our vulnerable honey bees (2 large hives), and their resultant honey.
- We are concerned of the lack of information regarding potential and determined health effects we have received from TGP/Kinder Morgan to date.
- We have concerns that the resultant air and ground pollution from the compressor station and activities will have an averse effect on Maple Sap production and refining done on-site at our sugar shack. Also concerned about the quality of the syrup with high volumes of Volatile Organic Compounds reportedly released into the air by the compressor station.
- Any potential disturbances to our dug well as it taps into stratified drift aquifer that the compressor station resides on.
- The potential property value decrease of our home being extremely close to a compressor station.
- We are concerned with noise and pollution from blowdowns.
- Any effects the pollution from the compressor station would have on our organic gardens
- We are concerned with the effect any blasting would have on our wells.
- We are concerned with the disruption of the brown-field site to groundwater or other environmental effects.
- The effects of subsonic vibrations from the compressor station operations that can affect health.
- We are concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.
- We are concerned that eminent domain is potentially being used to take private property for private corporate gain.
- The effects of traffic, noise, air pollution and numerous disturbances during construction.
- We are concerned with light pollution to the current dark skies.
- Any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.

-We are concerned with the industrialization of the neighborhood and the socioeconomic impacts this would have on our town and surrounding area.

Basis for Intervening:

Motion to Intervene of FERC Docket number CP16-21

Basis for Intervening

We are impacted as the property owners of parcel 38-0-97 on the Dracut Assessor's Map. The NED (Docket CP16-21) project will impact our property and our physical and financial well being. We have lived in this community since 1981 and our primary asset, our home, is located within 2 miles of the proposed NED compressor site and is even closer to the proposed pipeline. We wish to file as interveners on FERC Docket CP16-21 for the following reasons:

- As Dracut residents; the NED project, due to number of proposed facilities and amount of construction and road closures proposed in town, would have a enormous effect on us.
- Our home is located within 200 feet of one of the prior routes planned for the Lynnfield Lateral line and we remain concerned that this route is still under consideration as an alternate by FERC.
- We live less than 1/2 mile from one of the sites that was under consideration for the proposed compressor and again remain concerned that this earlier site is still under consideration as an alternative.
- We are taxpayers in Dracut and concerned with the loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services.
- We are consumers of produce from Dracut farms and are concerned the pipeline may cause industrialization and contamination of the water supply and crops that are part of our food supply.
- We are ratepayers for National Grid gas service and electric service and are concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals.
- We are concerned with the continuous noise of a 24 x 7 compressor station as well as the noise and pollution resulting from blow downs.
- We are concerned with light damage to night skies and the impact to the environment and local wildlife. We are also concerned about the impact of subsonic vibrations that can subconsciously affect health.
- We are concerned about any chemicals or toxins released into the ground and the impact on drinking water.
- We are concerned with traffic, noise, air pollution and numerous disturbances during construction.
- We are concerned with the property value of our house as it would be close to both the compressor station and Lynnfield Lateral line, regardless of which location is ultimately selected for Dracut.
- We are concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and the potential destruction / damage of property and lives. We are also concerned that local emergency services would be incapable of responding to any such incident.

For these reasons, we are interested in and would be affected by the Applicant's filing. Our interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant us permission to intervene in proceedings for Northeast Energy Direct.

Paul and Patricia Zapert
64 Heather Rd

Basis for Intervening:

I strongly oppose the building of the NED pipeline by Kinder Morgan. I live in Montague Center not far from the proposed NED pipeline. The construction and existence of the pipeline would certainly affect the value of my home.

The state attorney general's report has shown that the gas this pipeline would carry is not needed in the state. We taxpayers will be paying for this unneeded project and it will impact us negatively.

I am a former board member and longtime member of Mt Grace Land Conservation Trust. I have help both Mt. Grace and Franklin Land Trust to protect vulnerable forests and farms throughout the region. My donations have been given with the understanding that this land will protected permanently. However, the pipeline would negatively impact much of this land.

Please do not approve the Kinder Morgan FERC application.

Basis for Intervening:

I am an identified ALO on this project. My land involved, on which my home is situated, as those of my neighbors for about one half mile of the route of NED, is conservation land. It has and has had strict conservation restrictions on it for over 30 years. It is heavily wooded and borders large forest areas. I have grave concerns about the effect of the project on many things, including my land, town and economy of it, my real estate value, and so on. I have grave concerns for my families safety, especially in the event of an accident, as our local volunteer FD could never handle a forest fire of magnitude that could be involved. I have grave concerns about my water supply, in an area with all granite bedrock and existing arsenic. I have grave concerns about the use of eminent domain in this circumstance where I and my entire town, and most of my state will get no direct benefit from this gas. I would like the right to intervene.

Re: Docket #PF14-22

To Whom it May Concern:

I am writing on behalf of the Dracut Land Trust which owns property through which the proposed Kinder Morgan pipeline will run should their application before you be approved. The Land Trust also owns an additional parcel less than a quarter mile away. Each parcel is about 35 acres. They are known as the Smith Farm and Ogonowski Memorial Field. The Smith Farm can trace its agricultural history back almost 300 years and the Ogonowski Memorial Field is named in honor of Captain John Ogonowski American Airlines pilot on 911 and founding member of the Dracut Land Trust. It is the mission of the Land Trust to preserve and provide stewardship over the agricultural use of these lands.

It is in that light that the Land Trust expresses through this correspondence its opposition to your granting this application especially due to the proposed location of the compressor station. The proposed sighting of the compressor is less than one half mile from either parcel where active agricultural activities (including vegetable and hay farming) are on going. It is my understanding that the proposed compressor station especially during a "blow off" will give off numerous volatile chemicals, particulates, as well as lead and arsenic which will settle on the agricultural fields and build up in the soil. This will inevitably make the land unsuitable for its intended agricultural uses. This is something The Land Trust can not condone.

Both sites are actively engaged in vegetable farming through a program known as the New Entry Sustainable Farming Project run under the auspices of Tufts University. This program strives to teach new farmers of all cultural backgrounds to grow its produce organically. Certainly the introduction of a toxic industrial infrastructure (ie the compressor station) would inevitably make organic farming impossible. Both parcels are irrigated by well water drawn on site and there is grave concern that high levels of the toxic materials spewed by the compressor station will contaminate the wells.

Agricultural land is disappearing at too fast a rate in this country and we all should be doing whatever it is we can to preserve more of it. It is sincerely hoped that these concerns are weighed heavily in your deliberation.

Very truly yours

John C Sandelli

President of the Dracut Land Trust

legislature which we understand isn't going to happen. Will you require this or just run roughshod over the Commonwealth?

Our Commonwealth's constitutional officer, Attorney General Maura Healey, released a study in November that concludes building additional pipeline is not needed. Should FERC disregard the overwhelming evidence (from her study and elsewhere) that this pipeline is not needed, we will join with our fellow citizens to encourage the AG to meet you in Federal court. We will ask her to stop this pipeline and at the same time shine a bright light on what will then be proof-positive of FERC's unwillingness to follow its own rules and mission. Hopefully as a result, this will change not only how FERC deals with this proposal, but force you to act properly with all projects under your review.

KM has proven to be very disingenuous and untrustworthy. There are numerous (voluminous) examples in FERC filings for this project of deliberate misinformation, disinformation and no information. FERC should not allow any project of this importance to be run by KM.

Their materials about our property also demonstrate significant wrong and missing information currently available to them through public records.

I ask that you not allow this project to be segmented and that you look at all the projects already approved and in process – filing and pre-filing - when considering this project.

I further ask that you look at the gross violations of public safety in neglected, leaking pipelines all over the Commonwealth, which has resulted in ratepayers being bilked for gas they pay for and never receive. These leaks help gin up a case for an export pipeline.

In addition to the above, I ask you to specifically consider the following, in deciding to deny the certificate for NED CP16-21.

- The impact of the pipe, compressors, valve stations and general leaks and blow-offs on the air that our families breathe, the greenhouse gas problems of the globe, and the specific goals for greenhouse gasses of the Commonwealth.
- Water quality.
- Overbuilding.
- The danger of co-location on safety. Pipelines erode more quickly when co-located. And you know what happens when gas meet electricity, right? I live in what they refer to as the “incineration zone.” How would that affect your sleep and quality of life?
- Impact on open space and wildlife.
- Leaks causing harm to us, our children and future generations.
- Lack of resources and training for local fire departments – our town is all volunteer. The overwhelming destruction to our town economy, water, and public safety.

Health risks of pathogens extruded.

- That eminent domain should be used for the common good – not an obvious export play by an out-of-state corporation and a rigged system of cartels, deliberately terrorizing a small state.
- The real threat of terrorism: foreign or domestic. A deadly combination along the very route flown by terrorists on 9/11.

I should be allowed to intervene in the FERC process. Sincerely, Jennifer Markens

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	lmreed53@yahoo.com	

Basis for Intervening:

I live in Windsor, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. My interests that may be directly affected by the outcome of the proceeding include:

My home is on Peru Road in Windsor and approximately three-quarters of a mile from the proposed pipeline as well as a planned 41,000-horsepower compressor station. Methane gas emitted from compressor stations, along with the emission of benzene, formaldehyde and other VOCs are dangerous health hazards. The proximity of the planned compressor station to my home is alarming.

Our home drinking water is sourced from a well on our property. I am concerned that the bedrock blasting that will be required for laying the pipeline can affect the performance of our well, as well as our water quality from contaminants.

Plans call for using thinner gauge steel for the pipeline through rural areas, such as ours. Windsor is at high elevation – 1,944 feet – and is subject to temperature extremes in the winter. I am concerned that this combination increases the potential for pipeline failure and leaks and further risks for our water and environment.

As a resident on Peru Road, I know first-hand the effect of heavy truck traffic on our dirt road. Our local electric utility brought in 200 truckloads of gravel over the last two weeks to prepare to replace some steel lattice structures in the coming months. Parts of the road were deeply rutted and impassable by smaller cars. There was constant noise and the truck traffic made it difficult to come and go to work and for errands. The road is narrow with hills and blind spots, making it dangerous for this type of traffic. The NED Project would have prolonged impact to Peru Road residents during the construction phase.

As an electric ratepayer, I am concerned about the potential increase on my bill relating to NED should Kinder-Morgan secure my electric utility as a Project customer. Windsor is not served by natural gas. I do not see that I would benefit from lowered energy costs, but would be exposed to the burden and significant risk of this Project.

I am a member of The Trustees of Reservations and a frequent visitor to neighboring Notchview Reservation. The pipeline is planned to cross through the southernmost leg of Notchview and impact this conservation land that The Trustees have made their mission to protect.

My husband and I purchased 10 acres in Windsor 26 years ago with the dream of building our home here. We were taken by the beauty, tranquility and wildlife of the area. We realized that dream nine years ago and brought our daughter, horses and dog here to live, thankful to “know” that we were surrounded by protected land and that the natural beauty around us would remain undeveloped. The proposed Project threatens our ability to enjoy our home, our community, our safety and health.

The value of our home, which we built at a cost of \$425,000, would also be significantly affected – if we were able to sell it at all – should this Project move forward.

Kinder-Morgan and the proposed NED Pipeline Project are motivated only by profit and show a disregard and disrespect for the people and natural resources of our region. The need for and benefits from this gas pipeline Project are overblown and not worth the risks and impacts to our communities. Far less harmful and disruptive means of meeting energy needs – including hydropower and solar – should be pursued.

20160104-5044

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
North East Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Jeff and Susan Landon, of Tewksbury, Massachusetts file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Jeff & Susan Landon
56 Dunvegan Road, Tewksbury MA 01876
(978) 640-6227
sjlandon@verizon.net

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the NED would directly and adversely impact us. The Lynnfield Lateral portion of the NED is shown passing through our property which is identified as Lot MA LL 85.00 on maps filed for the NED. Maps include Segment N, Lynnfield Lateral Construction Drawing LA-SEG_N_RES-013

Our concerns about this project and its impacts include but are not limited to:

1. **Safety.** The Lynnfield Lateral is shown as a 24-inch diameter pipe carrying natural gas at a 1420 pounds per square inch (psi) pressure. A pipeline of this magnitude in capacity and pressure presents significant safety concern from potential leaks and explosions. We have major concerns about having this pipeline located so close to our home and in our neighborhood.
2. **Property Devaluation.** The presence of this high pressure gas pipeline will significantly impact the market value of our home and neighboring properties as well as impact the ability to sell our home. Future potential buyers are highly likely to have the same safety concerns regarding a high pressure, high

capacity gas pipeline on their property. Future buyers will also find out there is a loss of property utilization due to the restrictions from a permanent utility easement and likely will have concerns about non-authorized people using the gas pipeline easements and trespassing on the property. These factors will make our property less desirable compared to similar homes, thereby reducing both the ability to sell and the value of our home. This is evident with the house currently for sale at 70 Dunvegan Road.

3. **Negative Impacts to Enjoyment of Property.** The pipeline construction and permanent easements shown for our property will require the clear cutting of a wide swath of mature pine forest on our and our neighbors' properties, resulting in permanent loss to the current aesthetic benefits and enjoyment of our property. One of the reasons we purchased our home 23 years ago was the presence of forest behind our and our neighbors' homes which we knew was protected from development. We are both retired and spend many hours outside enjoying our backyard and the woods. The impacts from the construction and operation of the pipeline include but are not limited to:
 - a. Privacy and noise buffer - These woods provide privacy and a noise buffer from nearby properties and streets, as well as nearby Highway 93. This buffer has become increasingly important in recent years as new residential developments have been constructed in the area with subsequent increases in traffic and associated noise. Once the land is cleared for pipeline construction no trees or shrubs will be allowed to grow. Even if tree planting took place it will be many years before the trees grew to any significant size or mitigation benefit.
 - b. Nature Observation - We also have become avid nature watchers and enjoy observing the wide variety of wildlife including fox, coyote, deer, weasels and numerous birds, including hawks and owls, that utilize these woods and our property. Our birdfeeders have also increased the number of songbirds that inhabit these woods. The actual construction of the pipeline and loss of forest will impact many of these animals with the potential to permanently displace them.
 - c. Presence of Trespassers – the pipeline easement will provide a corridor for people to trespass. We have observed that even when people post no trespassing signs violations will occur. Of particular concern are ATVs and snowmobiles which damage the terrain, produce emissions and unpleasant noise, and often leave litter behind. We have witnessed numerous ATVers and snowmobilers on state land and utility easements located within 1/2 mile of our home. These people likely have no regard for private property and will see the pipeline corridor as another extension of areas they can traverse. The pipeline corridor will be accessible from two ends – at Pinnacle Street and at the pipeline access easement at the end of Dunvegan Street. The potential for trespassing is another factor that will impact the value and ability to sell our home in the future.
4. **Outdoor Recreation Impacts.** We enjoy outdoor recreation activities throughout the year, including wildlife observation, hiking and snowshoeing, throughout the Commonwealth of Massachusetts. We take advantage of the many public and private properties available for recreation and wildlife protection, including state wildlife management areas, state forests, The Trustees of Reservations and Massachusetts Audubon Society properties. From the numerous filings with FERC on this project we have learned that many of the lands we enjoy visiting or plan to visit will be impacted by the NED. We are dismayed that so many of these areas would be negatively impacted for recreation and aesthetic enjoyment, as well as wildlife habitat, by the NED.
5. **Overall Need for Project.** In addition to the objections and direct impacts that not only we but hundreds of others have identified for the NED project, the Massachusetts Attorney General's filed a report stating there is no need for additional natural gas pipeline capacity given considering increased energy efficiency, solar generation installations and other alternatives. Therefore, we urge the Commission to consider whether the NED project is truly for the benefit of the people or rather is to benefit TGP, Kinder Morgan and other private interests.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, Jeff Landon and Susan Landon, respectfully request that the Commission grant our Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 3rd day of January 2016.

Jeff & Susan Landon
56 Dunvegan Road
Tewksbury, MA 01876
(978) 640-6227
sjlandon@verizon.net

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	child_of_winter53@yahoo.com	

Basis for Intervening:

My name is Elizabeth Lareau Whitcomb. I am a resident of Northfield, Massachusetts I am filing for intervention status on this project because I have grave concerns for its impact on Northfield and the surrounding communities that will be affected by the construction of the proposed pipeline. My concerns are as follows.

1. The pipeline is unnecessary. According to an extensive study performed by Maura Healey, the Attorney General of Massachusetts, this pipeline is not needed to meet the region's energy needs. There are many other, less invasive, means available.
2. The construction of the pipeline may threaten our water supply. As a homeowner whose water is provided by an artesian well, I have huge concerns to the damage that can be caused to the local aquifer.
3. The compressor station that is proposed for my town will release several pollutants into our air, many of which threaten the health of our population and of our environment.
4. The construction of the compressor station in my town will compromise the natural beauty and serenity of the area. We are a rural community. People here are used to peace and quiet. The noise generated by the compressor station will jeopardize this.
5. I refuse to have my legacy to future generations be that I sold out the beauty and the environmental well being of this area for a handful of dollars saved on my electric bill. No amount of saving is worth the ultimate cost (in terms of environmental damage) of this pipeline

spaulding.stephen.j@gmail.com

I have been a property owner and resident for more than 35 years of Hollis, New Hampshire, which at the time of Kinder Morgan’s initial requests for surveying permission pursuant to obtaining a certificate of public necessity for the Project was the only New Hampshire town that the pipeline was proposed to traverse. In April 2014, I received a letter from Kinder Morgan requesting permission to survey my property. The best available information at that time indicated that the pipe would run alongside my driveway and pass within 25 feet of my garage.

Since then, multiple route changes have occurred. First, much of the “preferred route” was moved northward, no longer passing through Hollis but instead traversing 17 other New Hampshire towns. A subsequent adjustment to the route resulted in Hollis again “hosting” a section of the pipe. (As far as I am aware, this is the current plan for the Project.) Now, maps for alternative routes submitted by the Company show a “South Merrimack Lateral” that may impact a larger segment of Hollis.

Clearly, with the Company determined to establish a Project route that FERC will approve, no resident of the region can be confident that surveyors will not soon come knocking at the door. With my personal history of actual exposure to this threat and with the apparent willingness of the Company to draw lines on the map wherever and whenever it may suit their purposes to do so, I am unquestionably qualified to claim intervenor status with respect to the Project. Moreover, I assert the following claims:

- As an electric ratepayer in the state of New Hampshire, I have a direct financial interest in these proceedings.
- As a mammal obliged to breathe the air, drink the water, and live in the environment of this region, I am a stakeholder in matters of health and aesthetics affecting my surroundings.
- As a father and grandfather, I have an incalculable emotional stake in fighting to protect this planet and ensure that it is livable for future generations.

I therefore request that FERC grant me intervenor status in proceedings involving the proposed Northeast Energy Direct project.

Signed:

Stephen J. Spaulding

Basis for Intervening:

I have an interest as an electric ratepayer, since Kinder Morgan (KM) seeks to secure my electric utility as a project shipper, which will seek to recover project costs from me and other ratepayers.

The project is vastly oversized relative to regional needs. It locks the region and its ratepayers into higher

energy costs, since the excess capacity would either go unused, or would be sold into markets overseas, driving up costs here. It exposes the region's ratepayers to excessive risks of stranded assets, particularly since energy conservation, efficiency, energy storage, market reforms and renewable energy have been all been shown to make the proposed pipeline increasingly uncompetitive.

I have an interest as a landowner and resident of Montague, MA, with property less than 1 mile from the proposed location, downstream from where the company proposes to cross Connecticut River with its pipeline.

I am concerned about the impact that the construction and operation of the pipeline could have on ecological and human health, my drinking water/aquifer, as well as health and safety risks to my small town's volunteer fire department, and other first responders in the event of an incident. I am concerned about the pipeline's impact on my property's resale value.

I have an interest as a taxpayer, neighbor and frequent visitor to protected public land in Massachusetts. My land abuts a Massachusetts Wildlife Management Area, and I am concerned this project poses a serious threat not only to hundreds of acres of public land the pipeline will devastate by direct impact, but also the legal threat to ALL land in Massachusetts protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution, if this protection is destroyed by FERC.

I have an interest as a health care professional, who is on record with FERC, the MA Energy Facility Siting Board, and MA DPU as to the serious public health and climate impacts of both the pipeline infrastructure and the burning of natural gas.

I have an interest as a donor, supporter, visitor and neighbor to both Mount Grace Land Trust and Franklin Land Trust's properties that would be impacted by the proposed pipeline. Maps filed with the KM's application provide no readily available information as to how the devastation to frail ecosystems would be prevented.

The public record indicates that KM's standard operating procedures are to get pipelines approved with few meaningful responses to address local knowledge and concern, install them as quickly as possible by cutting corners on construction and maintenance, and to treat fines resulting from violations as a cost of doing business.

Kinder Morgan continues to show disregard and disrespect for the people, priorities and natural resources of our region, and the worldwide health and economic threats of climate destabilization. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and impacts. Far less harmful and disruptive means of meeting our energy needs should be pursued.

Basis for Intervening:

I am a landowner in Rindge, NH and I am opposed to the NED pipeline project, which will run within one mile of my home. My wife and I have retired here and we plan to remain. We have done so because of the rural character of the area and the many scenic pastoral areas within the town and our access to quiet enjoy-

ment of them. We depend on our own water supply from a well on our property and border a pristine water body.

We are also electric ratepayers, who, if Kinder Morgan secures my electric utility as a project customer, expect to see an increase on our bill related to pipeline cost recovery.

Construction of the proposed pipeline would:

Expose my town to large costs in road rebuilding and emergency services in the event of pipeline problems in the future. Those costs would be passed along to us as local property taxpayers.

Endanger local water supplies in the area, including ours, through the blasting process necessary to cut through our granite base.

Deface Converse Meadows, a conservation area which has been maintained by the town at considerable effort and expense. Among hundreds of others in this and surrounding towns, we treasure our time in this beautiful area.

Endanger several streams which serve as spawning ground for wild trout. Our trout fishing in the area is a major tourist attraction and one of my major outdoor activities. The local fish population also supports a thriving raptor population which includes eagles, a relative rarity for the area.

Therefore construction and operation of the NED pipeline would significantly affect our economic well-being and quality of life in Rindge. Therefore I am interested in and would be affected by the Applicant's filing and request that the Commission grant me intervenor status in the proceedings for Northeast Energy Direct.

Basis for Intervening:

I am an affected landowner in the NED project. I have many concerns about the impact the project will have on my own land, my water, my neighbors land and water, my real estate value, my town, and my state. I have paid a mortgage for 30 years on a home on conservation land, and request the right to intervene in this process as I feel necessary. I have grave concerns about the use of eminent domain in what amounts to corporate gain since it is very debatable and not proven that my town, or state will receive any benefit from this project. I am nearing retirement and do not wish to be unable to sell my home if I chose, as is currently happening to neighbors due to this project.

Basis for Intervening:

Ned pipeline CP 16-21-000

My name is Virginia Hastings and I am a resident of Northfield, MA.

Is this project about Need? about Greed? about Public Convenience? about Necessity?

I am a land owner impacted by the pipeline route and the compressor station because this is our land, our water, our air, our health, our town, our history, our future, and most important our kids and grand kids future. Our water supply is directly impacted, it is at risk with the operation of the compressor plant and relief valves, leaks and the potential toxins spewed.

We are donors to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be forever protected...remember...article 97.

We are no less valuable than anyone else in this state. The wall thickness of the pipe varies because of population density. They are choosing our more rural areas because they can put in cheaper thinner pipe, because they think we can be bullied, because they think they can confiscate our conservation land easily, and because they are going to sell gas about 75% overseas, not for our common good and necessity

How would you feel living in the incineration zone of one of these operations?

You wouldn't be able to get a mortgage, homeowners insurance or even a student college loan.

Years ago when Boston wanted to expand their water supply... They thought they could rely on the water from the Connecticut River, diverted to the Quabbin Reservoir. That was not very popular...low and behold; they didn't need the extra water. The Quabbin reservoir goes up and down, but there has always been plenty of water for Boston, for decades now. Lesson learned?

At the very least...FERC should require any potential gas pipeline to provide funding for a dedicated independent baseline study of our air, our water, and noise levels prior to any construction. It is a NO BRAIN-ER.

Does gas burn cleaner? It does, but think about the volumes of methane, that has 84% greater impact than CO2, benzene, formaldehyde, and 500+ other toxins being emitted through release valves, blow offs, leaks and accidents. More gas=more toxins. We live here because we want preserved, protected land, water and air.

CONSERVATION! Advocate for less fossil fuel not more! Fossil fuel is OLD. It is not a sacrifice to conserve, it is a change in lifestyle, you must help create a goal of a sustainable future. FERC, DO YOUR JOB! The future is in your hands!

NO pipeline, it is not necessary. Our attorney general, Maura Healy, has already stated the facts about this proposed pipeline. We are working very hard in MA to reduce our energy consumption, and increase our energy efficiency methods. We are on a roll. Let's keep it that way.

Rural vs. industrial route...If you allow this behemoth to come into our state, at least require they follow a more industrial route... Pittsfield, Springfield, Worcester, Boston, to provide for greater need. The laterals would be so much easier to install as it is already a route and they are closer to the populated areas and industrial areas for laterals. This rural route is only to line the pockets of Kinder Morgan and others. We receive no benefits at all.

...if this pipeline is permittedplease require:

Complete independent baseline testing prior to any work

No exported gas, preserve our natural gas for us as we transition to energy independence

Safer, thicker walled pipes

Industrial route not a rural route...

Annual royalties to each and every landowner and community

Make sure they have to have insurance or provide a bond against loss resulting from malfunction or failure at the pipeline and/or compressor plant.

We are electric rate payers and will not tolerate additional fees to line their pockets.

Continuous dedicated ongoing testing to be sure there are no negative health effects

Remember, health issues are extraordinarily costly for all of us!

Do you really fund FERC through costs recovered by fees and annual charges from the industries it regulates? Can your decisions be fair and unbiased decisions? Is the fox watching the chicken coop?

I live in Dracut, MA and want to intervene in this proceeding to oppose the NED pipeline.

- I have an interest which will be directly affected by the outcome of this proceeding because
- I am a landowner directly impacted by the Compressor Station (Broadway Road - Dracut, MA). My home resides within a half mile radius of the proposed Compressor Station.
- I am within the 'blast radius' at my home and during my daily commute. I live within the a half mile of the proposed station and drive my son by the proposed location daily to attend the Campbell School. This school is roughly 2 miles from the Compressor Station.
- I am a member of an impacted community who has concerns about various impacts to our health living within a half mile radius of the proposed Compressor Station. Please note, my neighborhood currently contains roughly 20 school aged children.
- I enjoy the outdoors and our small rural farming community. I do not want to see our farmers or outdoor space impacted by any activities of this commercial project.
- I was never contacted by Kinder Morgan in regards to this project.

Individual	branchnotes@gmail.com	

Basis for Intervening:

I, Rachel I. Branch, as a citizen of the United States of American and a resident of the Commonwealth of Massachusetts, hereby demand the right as an individual to become an Intervener to oppose the application filed on November 20, 2015, by the Kinder Morgan/Tennessee Gas Pipeline Company for the Northeast Energy Direct (NED) pipeline.

I am the creator and producer of two Community TV programs called Solutions Rising. My second program is devoted entirely to stopping this proposed pipeline.

On November 10, 2015, I testified in Boston against Kinder Morgan's attempts to undermine Article 97 of the Massachusetts Constitution through pending bill H. 3690. Article 97 states that, "The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historic, and esthetic qualities of their environment."

I believe:

1. Every resident of the Commonwealth of Massachusetts will be adversely impacted by permitting this proposed pipeline.
2. The catastrophic effect on public health, public safety, quality of life, right to clean air and pure, uncontaminated water cannot even begin to be adequately addressed or understood without further independent studies.
3. A moratorium on any new pipeline in Massachusetts must be imposed to expire only after each and every one of the thousands of gas leaks in the Commonwealth are sealed and all aged pipes replaced to contain and stop any further leakage.
4. Approval of a permit by the Federal Energy Regulatory Commission does not in any way, shape or form constitute the requirements of public convenience and necessity.
5. FERC must stand with The People to protect their lives and communities in opposition to NED's attempt to gain eminent domain for private profit which is in direct violation of the intent of the eminent domain laws.

For the aforementioned reasons I believe my standing is not similarly situated as other intervenor parties; and, thus, my interests could not be sufficiently or properly represented and/or protected by any other party/intervenor.

Therefore, I respectfully request that The Federal Regulatory Commission (FERC) grant me intervenor standing.

Basis for Intervening:

I am writing as a concerned citizen of Windsor, MA to express my concerns and interest to intervene in opposition to the Kinder Morgan Northeast Energy Direct pipeline project due to the location of the pipeline and compressor station which will directly impact my community.

My concerns include:

the impact and pollution of the water quality in the area as we are all on private wells obtaining our water from the aquifer which would be impacted by drilling, blasting and pipeline leaks;

the airborne toxic chemicals which will impact the public health of residents in our town; the impact of methane leaks on climate change and the future of our planet; as well as the potential huge leaks (e.g. California) causing a public health catastrophe;

the noise and light pollution during the construction and afterwards followed by the continuous operation of the compressor station; and blowdown emissions polluting air and the natural environment;

the impact on our natural environment – destroying both private property and protected lands.;

As a taxpayer, neighbor and visitor to protected lands this project jeopardizes all lands previously entrusted to the State of Massachusetts for protection in perpetuity under the Massachusetts Constitution Article 97

No state, town or non-profit public parks or forests, which have been set aside for people and wildlife, should be impacted by any activities of this commercial project.

And as a donor to a land conservation organization the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

the value of my property which would be greatly impacted;

and my interest as an electric ratepayer who would expect to see an increase on my bill relating to NED cost recovery.

Individual		shannon_miller@kindermorgan.com
Individual		ben_carranza@kindermorgan.com

Basis for Intervening:

I am a 30-year resident of Windsor, Massachusetts. I am adamantly opposed to every aspect of the NED Compressor station, Pipeline or any other part of this project. I chose to build my home in Windsor because of the rural setting, the clean air, the clean water from my well, the dark night sky that allows me to see the beautiful stars, and the quietness of my surroundings due to no industrial businesses nearby (only mom & pop type stores and small farms are nearby). This pipeline project will negatively impact the quality of the air and my water, will create unwanted noise, and will brighten the night sky which will ruin the star-gazing activities of Notchview Reservation, as well as the activities from my back yard.

My home abuts the Wildlife Management land. The noise pollution, light pollution, air pollution and water pollution will have an adverse effect on the wildlife.

This project will increase property taxes and will negatively impact resale value of my home. I already know of a case where a home-buying offer was rescinded once the potential buyers learned of this project. I am concerned about tariffs proposed to force regional ratepayers to cover the costs of the pipeline, and possible increases in energy costs that could result from export natural gas, forcing local markets to compete on a global scale.

I do not have the financial wealth that would allow me to abandon my property and move somewhere else. For all of these reasons, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

20160104-5061

Karen St. Arnaud, Dracut, MA.

As of December 21, 2015, the Tennessee Gas Pipeline Company file a document informing FERC that they neglected to notify forty six affected landowners that are within a 1/2 mile radius of the proposed Dracut, MA compressor station site. The Tennessee Gas Pipeline Company requested that FERC waive the landowner notification provisions of Section 157.6(d) for these forty six landowners and agreed to send belated letters out no later than January 15, 2016.

The request made by Tennessee Gas Pipeline to waive the landowner notification provisions is unconstitutional. The affected landowners should be given the same rights as those who were correctly notified regarding this project. The current deadline to intervene on this docket (CP16-21) is January 6, 2016. If the forty six landowners are notified after the January 6th deadline they are not given the same rights as those contacted prior to the deadline. These landowners would not have the ability to file a motion to intervene. These landowners would also lose their ability to ask questions and reach out to Town

officials and State Representatives. Please deny Tennessee's request to waive the landowner notification provisions of Section 157.6(d), and please extend the January 6, 2016 intervention deadline by a few months so that those impacted by this project will have time to digest the information, ask questions, and reach out to local and state representatives.

Sincerely,

Karen St. Arnaud
81 Dadak Drive
Dracut, MA 01826

20160104-5063

Richard a Carpenter, amherst, NH.

I am the owner of property at 15 Patricia Lane Amherst NH 03031. The proposed Kinder Morgan gas pipeline is on a route that comes through the rear of my property. I have been told that recently the route has changed somewhat to be away from the rear of my property but still within the incinerator zone. We understand that this route could be changed back to the original route. Therefore for that reason I am applying for intervener status on this project if it is continued.

I am also President of the Sunridge Homeowners Association which owns property that this pipeline is proposed to abut or in one case follow through the property. Therefore for the same reasons as above I am applying for intervener status as president of this association.

Thanks

Richard A. Carpenter
15 Patricia Lane

Basis for Intervening:

January 4, 216

I am opposed to the proposed pipeline that would be laid in parts of Massachusetts. I am opposed to not only the fracked gas that would pass through the pipeline, but also of the degradation of the environment along the path and possible threats to my ability to live where I do now. Because Kinder Morgan has a poor record for constructing a solid system and about maintenance of its systems, I am also fearful of leaks and further

environmental degradation.

The reasons are the following:

1. I am not an abutter to the proposed pipeline site. However, my property, a house and 2.75 acres of land in the center of the town of Ashfield, MA, is less than a mile from one crossing of the proposed site and less than two miles from another crossing of the proposed site. I will suffer loss of value for my property.
2. Since the pipeline is proposed to run along the established high-tension wires path through Ashfield, I am threatened at the less-than-one-mile site should a major or minor accident happen. An electrical substation sits at this site; I and many other residents could lose our electrical power. As well, should there be a gas leak, I am close enough to be effected.
3. At the less-than-two-mile intersection, the proposed pipeline will run over or under the source of water for me and the other residents of the central town – the Ashfield Water District. As well, the most up-to-date source of our water, a well that is placed below the pipeline site, could be contaminated by any gas leaks. Possibly the construction process of dynamiting solid rock (New England is noted for its rock!) could destroy the water pipe and well systems. Is Kinder Morgan willing to bring in emergency water and rebuild our system immediately? I don't trust the record of Kinder Morgan.

In summary, the construction of this unnecessary pipeline threatens loss of value for my property due to the closeness of the proposed site in two place, threatens the loss of electricity, and threatens the loss of water. As I stated earlier, I do not believe in the environmentally deadly process of fracked gas. I do believe there are other opportunities for we, the people, who will most suffer from the construction of another pipeline to demonstrate that we can reduce our usr lovely environment.

Sincerely,

Beverly K Duncan

sachusetts from west to east without crossing the Appalachian Trail, a national corridor secured and maintained for public use.

The public record shows that Kinder Morgan does whatever it takes to get pipelines approved and installed as quickly as possible, cuts corners on construction, and pays fines for accidents caused by shoddy construction, lax maintenance, corroded pipe, and operator errors. The purported benefits of this pipeline are not worth the risks to our communities.

Instead of increasing our dependence on fossil fuels, the Commonwealth of Massachusetts has made a commitment to promoting sustainable energy sources, and I support that effort.

WHEREFORE, for all the reasons here cited, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Glendyne R. Wergland

Individual marciaday@comcast.net

Basis for Intervening:

As a resident of and visitor to the Deerfield River Watershed, I am concerned about the impact the construction and operation of the pipeline could have on the ecology of the watershed, which currently thrives on one of the cleanest rivers in southern Vermont and northwestern Massachusetts.

My family swims and boats on a tributary of the Deerfield and I am concerned for their health.

As a ratepayer I am concerned that the costs of constructing and maintaining a pipeline will ultimately be passed to the consumers.

20160104-5070

Karen St. Arnaud, Dracut, MA.

I am requesting that FERD extend the January 6th deadline for this docket due to the FERD login and registration engine being down for 4 days prior to the deadline. I contacted FERC customer support via email and phone. I also reached out to the webmaster to learn that if the site goes down outside of normal business hours it will not be restored until normal business hours resume. It is unacceptable to have the site down for 4 days prior to a docket deadline. Many residents of Dracut, MA are looking to file a motion to intervene and would like the deadline extended 4 days to make up for this downtime. Please extend the deadline due to FERC's website issues.

Sincerely,

Karen St Arnaud

20160104-5073

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Motion to Intervene

Ms. Cindy True and Mr. Steven True of 329 Upper Road in Deerfield Massachusetts, by and through counsel, move to intervene in the above-captioned proceeding. In this motion they will be referred to as the “True Interveners.”

Background .

On November 20,2015, Tennessee Gas Pipeline, L.L.C, (“TGP”) filed its Application for a Certificate of Public Convenience and Necessity to construct Install, Modify, Operate and Maintain Certain Pipeline and Compression Facilities and to Abandon Other Facilities. On Dec. 7,2015 the Federal Energy Regulatory Commission (“FERC”) gave Notice to stakeholders of TGP’s application.

The True Interveners home is located adjacent to a designated construction zone for the proposed pipeline. On information and belief, the adjacent construction zone will be used as a staging ground for horizontal drilling under interstate 91. Based on the documentation submitted by the Tennessee Gas Pipeline (“TGP”) in conjunction with its application, it appears that TGP will be drilling in the property adjacent to the intervener’s home and artesian well. The interveners are understandably anxious about the impact of the proposed drilling on their water supply and submit that their rights cannot be adequately protected unless they are allowed to intervene in the captioned proceeding.

Motion To Intervene

The True Interveners are directly impacted by the proposed pipeline. Their residence is within close proximity of the proposed pipeline and it appears that designated construction sites are immediately adjacent to their home. The True Interveners submit, on information and belief, that their property is vulnerable to structural damage during construction, as well as ongoing safety hazards if the project is approved and completed. The True Interveners also submit that portions of their property may be subject to condemnation proceedings if the pipeline is approved and constructed. Further, the True Interveners question the need for the pipeline and rely on the findings of the Massachusetts Attorney General’s independent study concerning the need for additional gas pipeline capacity in New England. The True Interveners incorporate by reference the arguments and conclusions reached by the Attorney General’s study. In addition, the True Interveners have grave concerns that the proposed horizontal drilling near their property will degrade their pristine water supply adversely impacting the quality of the family’s life. Because the True Interveners are directly impacted by the proposed pipeline, they request that leave be granted for them to intervene in the proceedings before the FERC. Like the vast majority of the citizens of Franklin County, Massachusetts, the True Interveners oppose the proposed pipeline and urge the FERC to deny the TGP application.

Contact Information

All pleadings, filings and correspondence in this proceeding should be directed to undersigned counsel.

Conclusion

Wherefore, for the reasons discussed above, the True Interveners request that the FERC grant the instant motion.

Respectfully submitted by,
Ms. Cindy True
Mr. Steven True

I opposed the construction of the Tennessee Gas Pipeline Project, also known as the Northeast Energy Direct Project, for many reasons.

I am very concerned about the property value of my home and land as the proposed pipeline will run through my property in Northfield Massachusetts. I own and have been paying taxes for 32 years on a lot that abuts my home, a lot that my children plan on building on. It will be of no value and they will not be able to build on it if the pipeline is approved. This will impact my property and the financial well being of my family.

My home and business will be in the potential impact radius if there is an accident.

I am a donor to the Mount Grace Land Trust and I am concerned about the public trust violation.

I am also concerned about the environmental impact of the proposed pipeline and compressor station. I moved to this rural spot 32 years ago because of its quiet, serene beauty. I have a passion for star gazing and the light pollution that will come with the proposed compressor station will impact my lifestyle. The continuous noise of the proposed compressor station will also impact my appreciation and enjoyment of my home and neighborhood.

I am concerned about how this proposed pipeline and compressor will affect my community. Northfield is a small community and the impact to its infrastructure, roads, police etc will be a burden. The prospect of traffic, noise, air pollution and the disturbances to my town and neighbors is of great concern to me. In addition, the potential health hazards from compressor blowdowns, the possibility of chemicals or toxins being released into the ground ending up in aquifers and the potential of natural gas infrastructure incidents, requiring evacuation and causing destruction/damage of property and lives are possible realities.

Lastly, I object to the expansion of the delivery of non-renewable fossil fuels in the form of fracked natural gas that contributes to greenhouse gas, resulting in the warming of the our planet, destroying our world.

20160104-5080

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.

Docket No. CPI6-21-000

Motion to Intervene

Mr. Patrick F. O'Bryan of 385 Upper Road in Deerfield, Massachusetts hereby moves, by and through counsel, to intervene in the above-captioned proceeding. Mr. O'Bryan's home and property is in close proximity to the proposed pipeline and he will be directly impacted by the proposed pipeline.

Background

On November 20, 2015, Tennessee Gas Pipeline, L.L.C. ("TGP") filed its Application for a Certificate of Public Convenience and Necessity to construct, Install, Modify, Operate and Maintain Certain Pipeline and Compression Facilities and to Abandon Other Facilities. On Dec. 7, 2015 the Federal Energy Regulatory Commission ("FERC") gave Notice to stakeholders of TGP's application.

The O'Bryan property is located approximately 1500 feet from the proposed pipeline and approximately 2500 feet from one of the staging areas identified by TGP as a site where horizontal drilling will commence to go under Interstate 91. In addition to Mr. O'Bryan's general concerns about the need for the proposed pipeline and its adverse impacts on the environment, his primary concern is with the impact on his water supply. In 1988 Mr. O'Bryan had a well drilled to secure a safe water supply. The 1988 well hit bedrock at approximately 130 feet and the well itself was approximately 540 feet deep. In June of 2000, Mr. O'Bryan had to deepen the well to a depth of 805 feet in order to maintain a flow of 2.5 gpm. During the deepening of the well the driller stated to Mr. O'Bryan that they had no way of knowing where the water was coming from and that it could be traveling a great distance through fissures in the rock to his well.

Given his close proximity to the staging area for the horizontal drilling contemplated by TGP, Mr. O'Bryan's concerns are that the proposed drilling will interfere with his water supply and/or contaminate it with chemicals used to lubricate the drilling apparatus.

Mr. O'Bryan submits that his concerns about the interruption or possible contamination of his water supply are concerns that are unique to him and that his rights and interests cannot be adequately protected by any other organization or individual. Accordingly, because of the direct impact on Mr. O'Bryan's property he asks that he be permitted to intervene.

Contact Information

All pleadings, filings and correspondence in this proceeding should be directed to undersigned counsel.

Conclusion

Wherefore, for the reasons discussed above, Mr. O’Bryan requests that the FERC grant the instant motion.

Respectfully submitted by,
Patrick F. O’Bryan

Basis for Intervening:

MOTION TO INTERVENE OF THE TOWN OF WENDELL

IN REFERENCE TO THE NORTHEAST ENERGY DIRECT (NED) PIPELINE

Pursuant to Rule 214 of the Federal Energy Regulatory Commission’s (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, The Town of Wendell (hereinafter referred to as “the Town”) files this Motion to Intervene in the above-captioned proceeding. The Town opposes the project because its construction would represent the industrialization of a rural area which contains valuable farm and forest land. Also, townspeople have raised concerns regarding the environmental, safety, and socioeconomic impacts of the NED pipeline project. Therefore, the Town seeks party status to protest the proposed pipeline, and fully protect Wendell’s interest.

I. STATEMENT OF INTEREST

A. Description of the Town of Wendell

The Town of Wendell is a rural community in Franklin County, Massachusetts consisting of 848 residents. The town encompasses 32 square miles of land, including several conservation areas, a Massachusetts Audubon sanctuary, the 7566 acre Wendell State Forest, and is bisected by the New England Trail. The Town contains 180 acres of open water, according to MassGIS 2005 land use data. Seven miles of the Millers River flows through Wendell along its northern border, providing opportunities for fishing, wildlife and

scenic viewing, whitewater boating and hiking. The Town is part of three river basins: the Millers River watershed to the north, the Chicopee River (Quabbin) watershed to the southeast, and the Connecticut River watershed to the southwest. The Town contains 38 major tributaries/sub-watersheds.

B. Description of Impacts

1. Threats to Natural Resources and Livelihood

Although the currently preferred route of the proposed pipeline does not enter Wendell, it does however come within one mile of the town. In addition, several “alternate” routes are currently being considered which do cross the town, and would cross farmland and forest with sensitive habitat areas and other natural resources. Wendell’s natural landscape is a vital economic asset, supporting tourism, outdoor recreation, and farm and forestry-related businesses. Both construction of the pipeline and its presence after construction, even if only in neighboring towns, will create a blight upon the region which will threaten these resources and thus the livelihood of the town.

The “alternate” routes cross conservation lands, state forest lands protected by the Massachusetts State Constitution (Article 97), sensitive water protection areas, permanently protected open space, farmland, forestland, rare, threatened and endangered species habitats, wetlands, vernal pools, cold-water fisheries, public infrastructure, private homes and business, and historic resources. The Town seeks clarification on how any of these alternates, in particular the Massachusetts Powerline Alternative, might impact aquifers within Wendell, including but not limited to Osgood Brook, and the Osgood Brook Wetland, a kame-aquifer system which may be an important aquifer recharge area for Wendell. A full inventory of impacted public and private wells and aquifers within Wendell is requested.

2. Threats to Mormon Hollow Landfill

The currently preferred route of the proposed pipeline comes within one mile of the Mormon Hollow Landfill, a construction demolition landfill on the banks of the Millers River that accepted more than 325,000 yards of demolition debris during the 1990’s. In 1999 the north face of the landfill collapsed, threatening the Boston and Maine railroad tracks and the Millers River below it. In 2008 the Massachusetts Department of Environmental Protection released a study showing that the landfill was “barely stable” and that “heavy rainfall or an earthquake event could destabilize the landfill again.” The pipeline proposal includes horizontal drilling beneath the Millers River, and blasting on the River banks, both of which have the potential of destabilizing the landfill, and perhaps allowing it to slide onto the railroad tracks and into the river.

C. Standard for Intervention

The Town of Wendell’s Motion to Intervene must be granted to the Town of Wendell as it satisfies the standard for intervention under FERC’s regulations. As discussed above, Wendell is directly impacted by the proposed project, and no other individual or organization can adequately represent Wendell’s unique interest in this proceeding. Further, Wendell’s intervention is in the public interest because the Town is responsible for the protection of the health and safety of all of its residents. Accordingly, the Town of Wendell respectfully requests that FERC grant this Motion to Intervene.

II. CONTACT INFORMATION

The following should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Daniel Keller, Selectboard Member

Town of Wendell, 9 Morse Village Road, Wendell MA 01379

III. CONCLUSION

Wherefore, in light of the foregoing, the Town of Wendell respectfully requests that the Commission GRANT this Motion to Intervene and allow the INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Submitted by request of the Wendell Selectboard,

Daniel Keller

Daniel Keller, Selectboard member

Town of Wendell, Massachusetts

CERTIFICATE OF SERVICE

Wherefore on this January 2, 2016, I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission's electronic service list in this proceeding, in accordance with Commission regulations.

Daniel Keller

20160104-5082

Submission Description: (doc-less) Motion to Intervene of Ipswich River Watershed Association, Inc. under CP16-21-000.

Submission Date: 1/4/2016 10:11:43 AM

Filed Date: 1/4/2016 10:11:43 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

---------------------	--------------------------------	----------------------------------

Ipswich River Watershed Association, Inc.	wcastonguay@ipswichriver.org	
---	------------------------------	--

Basis for Intervening:

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy regulatory Commission ("Commission") promulgated at 18 C.F.R. 382.212 and 385.214, the Ipswich River Watershed Association respectfully moves to intervene in the Tennessee Gas Pipeline Company, LLC Docket #: CP16-21-000.

Identity of Movant

The Ipswich River Watershed Association is a non-profit organization founded in 1977 whose mission is to protect the Ipswich River and Its watershed for People and Nature. We represent 21 communities and 350,000 people and businesses who obtain their drinking water from the river every day and our more than 1000 members who we represent to protect their interests in the river which include drinking water protection, fish/wildlife resources, river related resource-based livelihoods and recreational uses.

Interests of Petitioner

The proposed Lynnfield and Peabody laterals sections of the Northeast Energy Direct Pipeline will be constructed within the Ipswich River Watershed. It will traverse the watershed for more than 11 miles, cross the river and dozens of named and unnamed tributaries, traverse more than 2 miles of wetlands, alter dozens of vernal pools, be built directly on the riverbank for more than 2 miles, be built in the immediate proximity of 7 public permanently-protected water supply intakes and traverse hundreds of acres of permanently protected conservation areas including several parcels protected by Article 97 of the Massachusetts State Constitution. The proposed project will temporarily clear 131.5 acres of land during construction and permanently alter 65.8 acres in the required pipeline easement. The pipeline will significantly disrupt the underground hydrology of the watershed which is critical to its function as well as the hundreds of public and private water supply intakes in the immediate vicinity of its route. We feel there is simply no way to mitigate this level of impact and accordingly, our Board of Directors voted unanimously to intervene in this project.

Intervention

Because we feel that the Movant's interests cannot be adequately represented by any other party and in accordance with the Commission's Rules of Practice and Procedure, we feel the Movant satisfactorily meets the conditions for intervention because our participation is in the public interest and that we have a direct

and substantial interest in the outcome of this proceeding. WHEREFORE, the Ipswich River Watershed Association requests that the Commission accept this filing and grant this motion to intervene.

Respectfully submitted on this fourth day of January, 2016 by:

Wayne Castonguay, Executive Director of The Ipswich River Watershed Association, Inc.
Wcastonguay@ipswichriver.org

January 4, 2016

Re: NED #PF14-22

To the FERC

I am writing as an intervenor regarding the proposed NED pipeline (Docket #PF14-22). I am a resident of Northfield, MA and I am concerned that our town, along with every other farm, town and open lands along the proposed route of the NED pipeline will be affected negatively for the following reasons:

As a resident in Northfield, MA where one of the compressor stations will be built, I am deeply concerned about the negative impacts of a pipeline and compressor station in our town. I serve on our Energy Committee, and we have worked hard to apply for, and were awarded, a Green Communities grant of almost \$150,000 to help reduce energy use in our town buildings. To date we have insulated windows, walls and ceilings, installed window inserts, LED lighting, and soon a pellet boiler in Town Hall. Our energy footprint in Northfield is shrinking and we are saving tons of carbon emissions from entering our atmosphere. In New England, we do not need this gas pipeline. We have resources in conservation, and efforts to produce energy with less polluting and sustainable methods such as solar, wind and hydro-power.

As a resident of Earth, I am concerned about climate change. Extraction of carbon-based resources has proved to be seriously damaging to our planet. Methane is especially damaging to our atmosphere and a major source of climate-changing gas. The waste from pipeline gas leaks in the Northeast is already excessive, and companies do not appear to be responsible in maintaining, fixing and preventing leaks. We do NOT need another gas leak, oil spill, toxic waste dump or polluted waterway. We DO need to find a better way to use resources wisely, conservatively, and with less damage to air, water and soil, humans and all creatures. This SHOULD be the mission of FERC for the benefit of citizens and the environment now and into the future.

As a ratepayer, I have an interest in the cleanest, most efficient sources of energy. Kinder Morgan is planning to overbuild the pipeline infrastructure with the intention of increasing the amount of gas it ships to the East coast for transport to a foreign market. Ratepayers will pay in more than dollars for this monstrosity. This all spells profit for a corporation that has no interest in the healthy environment of this special area, or the people affected by the impact of the project.

FERC has a mission statement that says it will find the safest, most efficient forms of energy production for the American citizens. But the gas from the proposed pipeline will most likely ship overseas. Why, then, should we pay the price in every sense, if we will not benefit?

As a nearby resident to the proposed pipeline and compressor, I am concerned about the health of our water supply, the integrity of our forests and conservation land, and the health effects of the off-gassing of methane. The pipeline will have to traverse wetlands, conservation lands and farms, dive under rivers and streams, and bore through ledge. Every inch of land where it is built will be impacted in a negative way. Why should we encourage more of the same?? And it is not a rare occurrence for a pipeline to explode or leak. Kinder Morgan has a history of leaks and accidents that I will not detail here, since you must already be aware. Why does FERC approve such projects when the track record is abysmal?

The Massachusetts Attorney General spent considerable time and energy to research the need for the pipeline, and found that it is not needed. Kinder Morgan simply rejected this finding. But it seems clear that

conservation and the development of solar and wind could easily provide enough energy for the region if we plan carefully and consider appropriate use of energy and resource.

FERC needs to get out of the pockets of big gas and oil, and be more responsible on behalf of citizens now and in the future.

Respectfully submitted,

Annie Chappell

20160104-5085

Submission Description: (doc-less) Motion to Intervene of Elaine Mroz under CP16-21-000.

Submission Date: 1/4/2016 10:12:24 AM Filed Date: 1/4/2016 10:12:24 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	epmroz@gmail.com	

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in opposition to the Northeast Energy Direct Project proposed by Tennessee Gas Pipeline Company, LLC, a subsidiary of Kinder Morgan, Inc., Docket No. CP16-21-000.

I am trustee of the Buron-Mroz Family Trust, which holds property on what Tennessee Gas/Kinder Morgan designates as the “Massachusetts Alternative” to the Market Path component of the Project in Resource Report 10. Because possible selection of this alternative route would dramatically alter the value, character and security of this property, my fiduciary responsibility requires that I file for intervention.

Additionally, I personally own and reside in a home within a mile of the proposed Fitchburg lateral in Lunenburg, Massachusetts. This lateral is of dubious value given that Tennessee’s existing lateral serving Fitchburg is significantly under-subscribed, and that the environmental and community costs will be significant. As a Lunenburg taxpayer I object strongly to exposing my community to potential risk and costs for an unspecified and unquantified public benefit.

Additional interests of mine “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

-My interest as an electric ratepayer, who will pay both for cost recovery, and for higher supply costs. Despite Tennessee’s strong suggestion that the NED project will lower electric costs, it is clear that Tennessee’s project is part of a larger effort across pipeline interests to open the Marcellus fields to the worldwide market for natural gas. Over the long term, this will expose the domestic market to worldwide demand and will increase, not decrease costs.

-My interest as a member of the public, who will suffer both environmental and national security consequences. Continued reliance on fossil fuels will thwart public efforts to conserve energy and further delay development of renewable energy sources, contributing to dramatically increasing global warming impacts. Our national security interest is best served by conserving our domestic natural gas supplies for our nation’s potential needs over time, rather than exporting this valuable resource for the private short term corporate benefit.

-My interest as a long time supporter of environmental causes, including land preservation interests. I am very concerned that Tennessee Gas’ proposed taking of Article 97 land in Massachusetts will have a devastating effect not just on lands already protected, but on the willingness of the public to preserve their properties in the future. Ironically, this proposal is made just as breakthroughs in technology are poised to reduce the need for additional large scale energy infrastructure.

-My interest as a private landowner whose faith in our system has been weakened by the ease with which a corporate interest is allowed to take land by eminent domain for its own gain, with virtually no public discussion or disclosure of a purported public benefit.

For those, and other reasons, I respectfully request that my motion to intervene be granted.

20160104-5086

Submission Description: (doc-less) Motion to Intervene of Christine Erb under CP16-21-000.

Submission Date: 1/4/2016 10:12:29 AM

Filed Date: 1/4/2016 10:12:29 AM

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	chris.erb.ma@gmail.com	

Basis for Intervening:

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

- As an electric ratepayer, since the Company seeks to use my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is proposing a massive over-build which is very likely to lead to higher energy costs for New England’s ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.
- As a resident of Lanesborough MA whose daily commute crosses over the proposed pipeline route, I would be at physical risk. I am concerned about the impact that the construction and operation of the pipeline, and the compressor station proposed for Windsor (through downwind venting and air pollution), could have on ecological and human health in Lanesborough.
- As a taxpayer, neighbor and visitor to protected public land in Massachusetts. I live near public lands in Lanesborough, and I am very concerned about the threat this Project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution. I treasure our beautiful lands.
- As a land trust supporter, visitor and volunteer at the Massachusetts Audubon Society, and its West Mountain Wildlife Sanctuary in Plainfield, MA and The Trustees of Reservations’ Notchview Reservation in Windsor, MA. I have taken my son skiing there many times.
- As a member of an impacted community (Lanesborough MA) who has concerns about real estate values and the tax revenues of our town. The proposed route passes through the watershed of many residents, and the rest of us have wells which could be destroyed either by construction or pollution. Our town can barely make ends meet now. How would we pay for any of Kinder-Morgan’s accidents to our land and water, or hire a lawyer to hold them responsible?

There is no readily available information as to how devastation to any of the publicly protected ecosystems would be prevented. The public record indicates that Kinder Morgan too often does whatever it takes to get pipelines approved and installed as quickly as possible, cuts corners on construction and maintenance, and simply pays the fines later.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The theoretical benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued.

I respectfully request that my motion to intervene be granted.

20160104-5089

Submission Description: (doc-less) Motion to Intervene of Terri Landeck under CP16-21-000.

Submission Date: 1/4/2016 10:14:56 AM

Filed Date: 1/4/2016 10:14:56 AM

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
---------------------	--------------------------------	----------------------------------

Individual	tlandeck17@gmail.com	
------------	----------------------	--

Basis for Intervening:

I am applying for Intervenor Status, because as a stakeholder, being a citizen of the Commonwealth of Massachusetts, I do not want my tax dollars or utility charges to be used to build infrastructure to expand the extraction and distribution of fossil fuels. I am opposed to the construction of the proposed Kinder Morgan pipeline. With the addition of renewables, there is not a need for this pipeline. Our power sources should be more diverse and sustainable for environmental, security and economic reasons. The methane leaks that are known to occur with this type of transport compound the environmental impacts of extraction and burning of fossil fuels and the intrusive nature of a pipeline running through communities and open space. I also believe this proposed pipeline is in conflict with the Paris Agreement to limit acceleration of climate change caused by human activity. I believe all government agencies, including those at the federal, state and local levels, should be putting the goals of this agreement at the forefront of their decision making processes.

While I oppose the project, minimally, Kinder Morgan should be required by FERC to site a pipeline to minimize impact on open space and farmland and will not impact Article 97 Land, as the impacts of this extend to all citizens of the Commonwealth and beyond. No property should be acquired by eminent domain for the use and profit of a private corporation, so that should not be an option in locating this pipeline.

Thank you for your consideration of this request.

Sincerely,

Terri Landeck

20160104-5090

Laurel Greenberg
238 Trouble Street
Cummington, MA 01026

January 4, 2016

I live in Cummington, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am within several miles of the planned pipeline and compressor station in Windsor, MA. I am concerned about the impact that the construction and operation of the pipeline and the compressor station could have on ecological and human health in our environment. Prevailing winds come my way via the direction of the Windsor compressor station, and I would personally be concerned about drifting pollutants from that station, their effects on air, land and water, and any subsequent devaluation of my property.

I am opposed to the NED pipeline and am in favor of far less harmful and disruptive means of meeting our energy needs in New England.

I don't use natural gas at my home in Cummington. I bought the land in 2006 and built a home in 2013. It is a super-insulated house that is both passive and active solar. All the systems and appliances are electric and their energy is supplied by solar panels on the roof. I am an example of the future. I am an example of what others in the community, state and country are doing now and what more and more people can and will do in coming years.

Massachusetts doesn't need more natural gas. The people of this state are committed to choosing and supporting renewable energy – we have said it through our government and in the solar boom that the state has been experiencing in recent years. In January 2015, the Department of the Interior and the Bureau of Ocean Land Management opened 742,000 acres offshore of Massachusetts for commercial wind development. Boston is one of the cities that joined the Compact of Mayors at the recent UN Conference on Climate Change in Paris, committing to participating in a global climate solution. Our state attorney general's office studied the pipeline proposal and concluded that Massachusetts doesn't need it.

In Paris this December, 195 countries agreed to reduce greenhouse gas emissions and try to prevent catastrophic environmental problems on earth. Installing a high pressure gas pipeline for gas extracted using a resource-wasting, resource-polluting, greenhouse gas emitting process, through the middle of some of the purest and most beautiful land in New England, is not a proposal that any future-minded, concerned citizen of earth should approve! Now is the perfect time to make an intelligent decision that says NO to something that is NOT a long-term, sustainable, resource-saving and planet-protecting endeavor. We can do better.

BEFORE THE UNITED STATES OF AMERICA FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct Project

MOTION TO INTERVENE OF ROBERT T. DILLBERGER

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan"). Communications concerning this proceeding should be served upon me as follows:

Robert T. Dillberger

1030 Townsend Rd., Mason, NH 03048

603-878-4722

bob.dillberger@gmail.com

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

- I'm an electric ratepayer in New Hampshire. It seems likely that this project will ultimately result in higher electric rates in the Northeast due to increased price of natural gas caused by competition on the world market.

- The pipeline route crosses my town of Mason both with the proposed main line and the Fitchburg lateral, forever damaging our human environment and changing the character of my town in perpetuity.

- The time to take action to combat global climate change is now. While this project in itself might not be the tipping point, the same can be said of any individual project. To maintain the habitability of our planet, we must take action by reducing investment in and use of fossil fuel now. This means opposing all such

projects that cannot clearly demonstrate a true need and a tangible benefit. This project exhibits neither characteristic.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Robert T. Dillberger

Basis for Intervening:

I am opposed to the proposed Kinder Morgan Northeast Energy Direct pipeline docket number CP16-21-000 due to many concerns I have. I live in New Ipswich, NH and would like to intervene in this proceeding as I have interests which may be directly affected by the outcome.

I am a NH resident who may be charged with paying for the pipeline with a tariff charge added to my electric rates.

The aquifer which provides my well water could be degraded by construction and operation of the pipeline. The quality of air that I breathe could be degraded by toxic emissions from planned and unplanned compressor station blow downs and/or valve leaks.

The soils on nearby farms and my garden which grow produce I eat could be compromised by toxic emissions from planned and unplanned compressor station blown downs and/or valve leaks.

The financial ramifications of known and unanticipated consequences of the construction and operation of this pipeline could increase my local and state tax obligations.

Basis for Intervening:

We are farmers in Wendell on the west side of Mormon Hollow Road, neighbors of the Diemand Egg Farm, and producers of 100% pure Massachusetts maple syrup, hay baleage for our animals and others, and 100% grass-fed beef. We are also close to the Wendell demolition debris landfill which was allowed to be over-filled years ago by the MA EPA, and which is at risk of sliding into the Millers River and across a rail line if blasting for a pipeline from Montague to Erving were to take place.

In addition to these reasons, I want to intervene in this proceeding to oppose the NED pipeline because of the impact it would have on my daily commute. I travel west on S. Prospect Street under which the proposed gas pipeline is slated to be located, and I know there is the risk of leakage, not to mention possible explo-

sion. There is also the immense inconvenience of rerouting travel for hundreds of residents east of Millers Falls while it would be under construction.

I oppose the expansion of gas pipelines for the very real damage methane, which has been leaking for years, does to the environment and which has caused explosions causing further harm to life and the environment. Fracking for gas, transporting that gas, and using that gas laced with carcinogenic substances are all raising the risk of human disease and suffering.

I am also a National Grid ratepayer for electricity and may have a tariff imposed on my bill for the expenses of this private pipeline company's expansion plans, the benefits of which are purely private and the risks of which are great harm to the public and the air, land and water on which we rely for life itself. Our health, dependent on the health of the planet, would be compromised greatly by the expansion of this fossil fuel industry's project.

I am a member of the Agricultural Commission in Wendell, the Mount Grace Conservation Land Trust, and many other organizations dedicated to the betterment of life in western Massachusetts. The NED pipeline project has no place in our future.

Basis for Intervening:

Susan G. Hume seeks to intervene because the Hume residence is located in a neighborhood affected by the KM/TGP pipeline. The original proposal had the pipeline entering the beginning of my street and my residence within 300 yards of the pipeline therefore vulnerable to structural damage during construction, as well as ongoing safety hazards after the project is completed. A recent proposed rerouting by KM/TGP now has the pipeline construction moving further south of my residence by approximately another 300 yards. This pipeline has very little or no benefit to NH residents. The gas is passing through NH to Dracut, MA, and then most likely for export. Southern NH and its residents will be forced to absorb the adverse environmental and economic impacts, not to mention the intrusion on individual landowners' property and the reduction of individual property values. Intervention is necessary to enable Susan G. Hume to protect her property values and natural resources.

Basis for Intervening:

I live in Plainfield, MA and want to intervene in this proceeding to oppose the NED pipeline.

As a homeowner 1/2 mile from the proposed pipeline route which I believe is within the "blast radius" I

will be directly affected by the outcome of the proceeding.

As someone who supports protecting the environment I am also concerned about the proximity of the pipeline to protected lands - the Deer Hill Reservation in Cummington, West Mountain Audubon property in Plainfield, & the Trustees of Reservations Notchview property in Windsor. There are also wetlands in the immediate vicinity that would be impacted.

I am also an electric ratepayer who would expect to see an increase in my bill relating to the NED cost recovery.

Basis for Intervening:

I live in Townsend, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because the pipeline will be going right through my backyard possibly impacting \$17,000 septic system.

My drinking water could be impacted by the proposed route and we live right in the blast radius.

I am also an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

I am also confused as to why the pipeline cannot be moved back just a small distance and then it would be cutting through state forest and not personal property.

We also have not been fully informed on the risks associated with the blasting and the long-term existence of a pipeline in our backyard. This will impact our homeowner's insurance rates and sale ability of the property. Again, we are not sure why it cannot be pushed back just a bit and not impact private property of long-time residents.

Individual	ruppelkevin@yahoo.com	

Basis for Intervening:

My husband and I are landowners in Londonderry, New Hampshire. We invested our savings into moving to this community and this home in 2001 for many reasons, including access to green space, greater privacy and security allowed by the common land behind our property and a quiet, safe neighborhood to raise our children and enjoy family life. It has been our intent to live the remainder of our lives in this very family

oriented community.

Construction of the NED pipeline would impact our family, property and community in the following ways:

— I have been told that the pipeline as proposed would cross behind and through the common land behind the yard that our children play in and where we as a family spend the majority of our family time. Although representatives from Kinder Morgan (KM) have not provided us specific information about the distance of the proposed pipeline from our property line after our request, we can see stakes from our yard marking the proposed route, including one that appears to be within a delineated wetland. My concerns are multiple, including the possibility that my children will be playing in and sleeping within the so-called ‘incineration zone’ and blast zone. I have read about the health effects associated with living near pipeline infrastructure. I fear for the health and well being of my children and the quality of the air we breath and the water we drink, along with the possibility of a pipeline accident like others seen that would present a real danger to our safety.

— I have read articles in the Wall Street Journal and other sources describing Kinder Morgan’s safety record. My understanding is that according to the U.S. Department of Transportation’s Pipeline and Hazardous Materials Safety Administration, Kinder Morgan and its subsidiaries’ pipelines have been responsible for at least 180 spills, evacuations, explosions and fires, along with injuries, in 24 states from 2003 to 2014. With the level of debt KM is carrying and suggestions of junk bond status looming, I am very concerned about their ability to invest appropriately in necessary safeguards during construction and ongoing maintenance, further exacerbating my existing safety concerns.

- I fear for the regional health consequences of pollutants associated with the operation of the pipeline, fees proposed to force regional ratepayers to cover the costs of the pipeline and possible increases in energy costs that could result from exporting natural gas.

- I have concerns about the ecological and environmental impact of this project. In the area behind our property fox, bats, hawks, deer and a variety of other wildlife including geese, ducks and other migratory birds are seen.

— I am also very concerned about the impact on our property value and therefore our long term financial position as a family. A representative has told us that the corporation will if necessary have the ability to take a portion of our land by eminent domain if the project is approved.

— In a position where we would find our property more difficult to sell if we find living conditions here intolerable after the pipeline is built we, like many in the region, do not have the financial ability to abandon our property or sell at a greatly reduced rate to move elsewhere to a comparable property away from industrial development. I believe construction and operation of the NED pipeline in the proposed location would greatly impact my family’s quality of life, and economic wellbeing.

For these reasons, I am interested in and would be affected by the Applicant’s filing. My interests cannot be adequately represented and protected by any other party. Therefore, I request that the Commission grant me permission to intervene in proceedings for Northeast Energy Direct. Thank you.

BEFORE THE UNITED STATES FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC)
A division of Kinder Morgan)
Northeast Energy Direct Pipeline)

Docket No. CP16-21-000

**AMENDED MOTION TO INTERVENE OF THE ASHFIELD PLANNING BOARD IN
REFERENCE TO THE PROPOSED NORTHEAST ENERGY DIRECT (NED)
PIPELINE PROJECT**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure, 18 C.F.R. §385.214, the Ashfield Planning Board (hereinafter referred to as "The Board") files this Motion to Intervene in the above-captioned proceeding. The Board has significant concerns regarding the environmental, safety, and socioeconomic impacts of the proposed NED pipeline project. The short- and long-term impacts that the proposed project could have in our community are profound. The Board seeks to intervene in the proposed NED pipeline project to monitor the progress of the proceedings and expects to take a position against the proposed project.

While recognizing that MGL40A excludes The Board from regulating utility corridors, The Board also recognizes that the NED pipeline project, as currently proposed, is incompatible with the protective purpose of the Town of Ashfield Zoning Bylaws, as follows.

ASHFIELD ZONING BYLAWS, SECTION I: PURPOSE

The primary purposes of these by-laws are to promote and enhance the Town's rural atmosphere and character and to protect the health, safety, and general welfare of the inhabitants of the Town of Ashfield. Additional purposes are: to encourage agricultural activity; to reduce the hazard from fire, flood, and other hazards by regulating the location and use of buildings and the area around them; to encourage the appropriate use of land; to minimize congestion in the streets; to conserve the physical characteristics of neighborhoods; to promote the conservation of natural resources and to prevent pollution of the environment.

The Board's current reading of the NED pipeline proposal is that it will degrade the Town's rural atmosphere and character, as well as threaten the health and safety of inhabitants. The Board is gravely concerned that the proposed NED pipeline project would: impede agricultural activity; misappropriate land use; increase street congestion and degradation; adversely impact the physical characteristics of neighborhoods; increase fire hazards; contribute to the loss of natural resources; and promote rather than prevent pollution of the environment.

The voters of Ashfield overwhelmingly approved the above quoted section of Town Bylaws. As their elected representatives charged with upholding these protective ordinances, The Board must question both the wisdom and the necessity of the proposed NED pipeline project.

Respectfully,

Ashfield Planning Board
Michael Fitzgerald, Chair
Alan Rice, Clerk
Jim Cutler
Ken Miller
Lauren Preston-Wells

CP-16-21-000

Dear Sirs,

I am a resident of Northfield, MA

I am writing to strongly object to FERC's granting a permit to Kinder Morgan for a pipeline that does not serve the needs of Massachusetts residents. It is unfair for a "for profit" company to receive permission to risk our water quality, take private land by eminent domain, build on protected public land, add light to our night sky, add noise to our quiet community, pollute our air, destroy our roads, tax our local police and fire staff, just for profit.

Our Attorney General, through an independent study, has determined that we as a state, can meet our energy requirements without this pipeline, and building it would be unnecessary for our needs. It is not fair for FERC to take these risks with our local resources. Many of these resources are priceless, and cannot be restored, once destroyed.

Basis for Intervening:

We own land in Northfield which is in the path of the proposed Northeast Energy Direct pipeline. Our land is bordered in two places by the power line on the same side that the proposed pipeline is to be co-located. The New England Trail (NET), one of 11 National Scenic Trails designated by Congress to be "preserved and protected" crosses our land. The Richardson-Zlogar Hikers Cabin, funded by the National Park Service (NPS) and the Appalachian Mountain Club (AMC), and built by volunteers from the Berkshire Chapter of the AMC is located on our land, on the NET, approximately 400 yards from the site of the proposed pipeline. There is a spectacular view from the Richardson-Zlogar Cabin to the east which includes Mt. Wachusett, Mt. Watatic, New Ipswich Mountain, Mt. Grace, Little Monadnock, Gap Mountain, Monadnock and Mt. Ascutney. Bordering the powerline and proposed pipeline route is a vista to the west and northwest, on the NET that includes Mt. Greylock, Glastonbury Mountain, Stratton Mountain, Haystack Mountain, and Mt. Snow. Our parcel of 38 acres was placed in a Conservation Restriction through the Mount Grace Conservation Land Trust and the Conservation Commission of the Town of Northfield. It was our intent - and our understanding - that our land would be accessible to the public for quiet recreation - forever - and further, the land would be "preserved and protected" from development of any kind - forever. This is our personal legacy, and we believe that Article 97 of Massachusetts General Laws should guarantee that our contract with present and future generations should be honored.

The hikers cabin is used in three ways: 1) for "thru-hikers" who are hiking the entire length of the 215-mile national trail, as well as by a considerable number of hikers from nearby urban areas (Worcester, Springfield, Hartford and Boston) who hike the trail a few days at a time. 2) for workshops "in the field" in conservation, map and compass, wilderness first aid, and search and rescue. 3) for spiritual retreats. The area surrounding the cabin sees considerable use from local residents who like to "get away" for an hour's respite - and to enjoy the views. Activities associated with the building and maintenance of the proposed pipeline are incompatible with the wilderness experience that people seek at the Richardson-Zlogar Cabin.

The conservation and preservation of special scenic wilderness areas is a recognized part of our national

and local heritage. Yet, conserved land is seen by Kinder-Morgan as “the path of least resistance.” This is a direct contradiction of our historical character and culture. If there really is a need for this pipeline - and we believe that many have made a contrary case - then the proposed route should be changed so that it does not impact the significant special areas which remain available to a large nearby population.

Our land - and the state forest all around us - is a part of the large Quabbin to Cardigan wildlife corridor. “The Quabbin to Cardigan (Q2C) Initiative, launched in 2003, is a collaborative, landscape-scale effort to conserve the Monadnock Highlands of north-central Massachusetts and western New Hampshire... It is one of the largest remaining areas of intact, interconnected, ecologically significant forest in central New England. Importantly, it is also a key headwater of the Merrimack and Connecticut rivers. The region’s forests collect and naturally filter drinking water for almost 200 cities and towns including the city of Boston. This is not a place for a pipeline!

Accordingly, we, Samuel and Barbara Richardson, respectfully request that the Commission grant this Motion to Intervene.

20160104-5114

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
THE CITY OF METHUEN**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (the “Commission”) Rules of Practice and Procedure, 18 CFR §§ 385.212 and 385.214, the City of Methuen (“Methuen”) hereby moves to intervene in the above-captioned proceeding.

I. Background

On or about November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee Gas”) filed its Application for a Certificate of Public Convenience and Necessity to Construct Install, Modify, Operate and Maintain Certain Pipeline and Compression Facilities and to Abandon Other Facilities. The Notice of Application was issued by FERC on December 7, 2015

II. Motion to Intervene

The City of Methuen is a municipal corporation, duly organized under the laws of the Commonwealth of Massachusetts, with offices located at 41 Pleasant Street, Methuen, Massachusetts.

The City of Methuen has concerns about the route, safety, and size of this project, which in its current plan will directly impact numerous properties in Methuen. Specifically, the pipeline project alignment consists of two segments totaling 22,680 linear feet or 4.265 miles. The project impacts 97 properties in the city, 84 developed and 13 undeveloped. The alignment crosses municipal roads 15 times and a state road in Methuen once. Much of the alignment is described with an existing 30 foot wide easement and a proposed 30 foot wide easement. Assuming all of the existing and proposed easements are disturbed, the total disturbed area will be 1,360,800 square feet or 31.24 acres. Wetlands are impacted along approximately 4,508 linear feet of the alignment. The project will exceed the 5,000 square foot threshold for wetland disturbance and may require a variance from DEP. The total roadway right of way disturbed is 59,280 square feet or 1.36 acres. Methuen is concerned about the possibility of eminent domain takings and environmental impacts related to the construction of the pipeline and the operation of a compressor station. Methuen additionally is concerned about pollution and noise from the project, as well as public safety.

Accordingly, Methuen has a direct and substantial interest in the above docket and will be directly impacted

by the outcome of this proceeding. Methuen cannot be adequately represented by any other party and may be adversely affected or bound without opportunity to present its position unless it is permitted to participate in this matter. Moreover, Methuen's participation in this proceeding is in the public interest. Accordingly, good cause exists to grant the City's Motion to Intervene.

III. Communications

All correspondence and communications related to this proceeding should be directed to the following individuals whose names and addresses should be placed on the official service list maintained by the Secretary for this proceeding:

Stephen J. Gagnon
Chief Engineer
City of Methuen
41 Pleasant Street
Methuen, MA 01844
(978) 983-8550

Conservation Officer
City of Methuen
41 Pleasant Street
Methuen, MA 01844
(978) 983-8650
JGiarrusso@ci.methuen.ma.us

IV. Conclusion

Wherefore, for the reasons discussed above, the City of Methuen respectfully requests that the Commission grant Methuen's Motion to Intervene as a party in the above-captioned proceeding with all the rights attendant thereto.

Respectfully submitted this 4th day of January, 2016.

CITY OF METHUEN

**BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION**

Tennessee Gas Company, LLC
Northeast Energy Direct

Docket No. CP16-21-000

MOTION TO INTERVENE OF THE TOWN OF DALTON, MASSACHUSETTS

The Town of Dalton is a municipality incorporated under the laws of Massachusetts. 3.4 miles of the Northeast Energy Direct Pipeline will cross properties located within the municipal limits of the Town of Dalton, including a town-owned property and the watershed of drinking water supplies.

Pursuant to Commission Rules 212 and 214, 18 C.F.R. § 385.212 and 385.214, the Town of Dalton moves to intervene in the above captioned proceeding. This intervention is timely filed.

I. CONTACT INFORMATION FOR COMMUNICATIONS AND SERVICE

Please enter the Town of Dalton on the official service list for Docket No. CPI6-21-000. All pleadings, filings and correspondence in this proceeding should be served on the following:

Kenneth Walto
Town Manager
Town of Dalton
462 Main Street
Dalton, MA 01226
(413) 684-6111
Daltonth@bcn.net

John 1. Goldrosen, Esq.
Kopelman and Paige, P.C. Town Counsel
101 Arch Street, 12th Floor
Boston, MA 02110
(617) 556-0007
jgoldrosen@k-plaw.com

II. INTEREST OF PETITIONER

The Town of Dalton and its residents will be directly impacted by the construction and operation of the proposed pipeline. The pipeline will cross 3.4 miles of property within the Town, affecting many residential homeowners and numerous business owners. The pipeline will result in a devaluation of residential property and will limit the businesses' ability to expand, thus diminishing the Town's tax base. Further, the pipeline, as currently proposed, will cut through a portion of Town-owned property including water supply watershed, which will necessitate removal of many acres of trees and a taking of Town property.

The Town of Dalton opposes, and requires additional information with respect to, the proposed pipeline. If constructed, the Northeast Energy Direct Pipeline will have serious and significant environmental and economic impacts on the Town as a whole, as well as impacts to individual landowners' property.

Intervention is necessary to enable the Town of Dalton to protect its Watershed and natural resources and to

defend its taxpaying residents and businesses and their property from encroachment by the Northeast Energy Direct Pipeline. The Town of Dalton seeks to intervene to monitor this proceeding and address potential effects to land, wetlands, riverfront and waterfront, rare and endangered species, drinking water, transportation, and homes in close proximity to the proposed pipeline.

Accordingly, the Town of Dalton has a direct and substantial interest in the above proceeding, as the Town will be directly impacted by the proposed project. The Town may be adversely affected or bound by a decision in this proceeding, and no other party can adequately represent the Town's unique interests. Further, the Town of Dalton's intervention is in the public interest, because the Town is responsible for the protection of the health and safety of all of its residents.

WHEREFORE, for the foregoing reasons, the Town of Dalton requests that the Commission GRANT this Motion to Intervene.

Respectfully submitted

John W. Bartels, Jr., Select Board Chair
Town of Dalton

Basis for Intervening:

My interest as an electric rate-payer, given that the company seeks to secure my electric utility as a project shipper, and would in turn seek to recover costs associated from the project from rate-payers. Kinder-Morgan seeks to line its own pockets while providing no value to the rate-payers of New Hampshire where there is little if any need for this pipeline and the gas it will carry.

I am concerned also about the impact on our pristine environment. We moved to NH three years ago from NJ and specifically selected southern NH because of its beauty, clean air and water, environmental consciousness and protection of wildlife and ecosystems. This pipeline is inappropriate, unnecessary, and has serious impacts on all of the living creatures here in southern NH. We could understand such a need in NJ with 8 million more people living there, but given the limited population in this part of the country, installing this pipeline is not only not necessary but truly a travesty.

I am concerned also about the effect of a compressor station positioned within a short distance of an elementary school. The noise and air pollution on our children, along with the possibility of an accident, should be reason enough to reexamine this application. Placing innocent children in danger with no real benefit makes no sense.

I am also concerned that instead of investing in alternative energy sources at a time when the world is headed this way, we are considering more investment in resources that are limited and removed from the earth with devastating consequences. It is time to leave gas in the earth, install solar and wind generators, and move away from oil-based energy.

I am also concerned about Kinder-Morgan's financial position and the fact that although their principals are among the top 158 wealthiest families in the country, their stock price has dropped as their debt load has

reached unstable proportions. How will KM maintain this pipeline given the way they have stretched their resources? Will we allow this greed to continue unabated no matter the cost?

While I understand the compelling reason FERC was established initially at a time when it was important to build infrastructure for an oil-based economy, that time has passed. I respectfully ask that FERC exercise its power to say NO in this case.

Basis for Intervening:

I am a homeowner on Peru Road, in Windsor, Massachusetts, and want to intervene in this proceeding to oppose the NED pipeline.

My family and I have lived in the home we built for nine years.

I have invested twenty-six years into the clearing and developing our beautiful land, and designing and building our home, to accommodate my family, our two horses and other pets.

We chose this property in Windsor, to build our home, to raise our daughter and provide a wonderful home for our animals; on the basis of its natural, bucolic beauty, the protected wetlands and state forest across the street and the natural habitats, provided by the hayfields, woods and wetlands, adjacent to our property.

We feel we live on sacred land – which, on a daily and seasonal basis, provides a wonder of natural beauty – flora, fauna, sunrises and sunsets.

We, as have others in our town and surrounding hill towns, have chosen our lifestyle, to live in our communities, to respect and enjoy this natural beauty - not to desecrate it.

Construction of the proposed NED pipeline would mean that we would be living approximately 3/4 mile, directly down Peru Road from the proposed 41,000 horsepower compressor station.

Among the many reasons I am opposed to the proposed Kinder Morgan pipeline and compressor station being located in Windsor, MA are:

- The land in Windsor is comprised of bedrock. The blasting (which KM representatives promised would not occur) will undoubtedly affect our wells.

With the severity of our winters, the ground frost would potentially wreak havoc with the pipeline - no matter how it's built.

- Due to the topography of the surrounding land, sound really carries. The constant drone of the proposed compressor station would be totally disruptive to life – both human and wild, in Windsor and surrounding areas.

- This compressor station, with its periodic “blow downs” would release a list of toxic, carcinogenic gases, including benzene and methane, which, released into the atmosphere would have both short term and long term devastating effects on the environment, ecosystem, air quality, our wells, our health and our property values.

- These adverse, irreversible consequences would be the death knell of our small towns. Who is going to want to invest in, move to, and raise a family in an area that is dominated by a constantly noisy, spewer of

carcinogens?

- We have invested (financial and spiritual) our life in our Windsor home. As we near retirement age, and someday find it necessary to downsize and move on, it is our hope to do so; providing our wonderful home, in our wonderful town, to a new family, who has chosen to live in Windsor for all the same reasons that we did.

I can not believe, that in a “democratic” society, that we can be bullied, lied to and force fed such a ruinous agenda, which would merely serve corporate gain and profits, while creating such irreversible environmental, ecological, financial, social and health damages.

20160104-5119

Dennis Bergeron, Dracut, MA.

I may be a direct abutter to the route in the future as the route through Dracut keeps changing (or) I am a direct abutter to one of the prior routes to this pipeline that are still considered by FERC to be alternate routes. I am also a consumer of the produce from Dracut farms and I am concerned the pipeline may cause industrialization and contamination of the water supply and crops that are part of my food supply.

respectfully,

Mr. & Mrs. Bergeron

Basis for Intervening:

MOTION TO INTERVENE OF JOSEPH W. AND CYNTHIA L McGUIRE

JOSEPH W. AND CYNTHIA L McGUIRE are residents of the town of Mason, Hillsborough County, New Hampshire. The proposed right-of-way of the Tennessee Pipeline Company’s Northeast Energy Direct project runs across the McGuire property. As a result a significant portion of the McGuire property is subject to condemnation if the certificate is granted.

Pursuant to Commission Rules 385.214(b) and 157.10, Joseph W. McGuire and Cynthia L McGuire move to intervene in the above captioned proceeding. This intervention is timely filed.

The McGuires are directly impacted by the proposed pipeline. Their land lies within the right-of-way for the NED pipeline, thus exposing the property to condemnation if the certificate is granted. The pipeline would traverse their property causing loss of use of a portion of their land, and would cause irreparable damage to the property and cause irreparable damage to existing agricultural operations.

Further their residence will be well within the “incineration zone” in the event of an explosion. Further the residence relies on a drilled well as it’s sole water source that will in all likelihood be jeopardized by construction activities. Additionally there will be ongoing safety hazards and loss of privacy concerns after the project is completed.

Basis for Intervening:

Pursuant to FERC §385.214 (3) (R.214), I hereby move to be granted Intervener status, in compliance with the following:

The Northeast Energy Direct (NED) Project pipeline would run across the street from my house, approximately 600-750 feet from my front doo. It runs through the property of 87-year-old widowed neighbor. She had counted on the sale of her home—a magnificently restored 19th Century farmhouse and 30+ acres of land—to provide her with the means to support her for the balance of her life. One buyer came prepared with a contract; when he discovered the NED incursion on her land. He backed out. And even though my neighbor has lowered the price of her home/land three times, there have been no other potential buyers. Kinder Morgan’s claim that the pipeline would have no effect on property values is demonstrably specious and harmful.

My position is, as a matter of both fact and law, that Kinder Morgan and its subsidiaries have committed and intend to continue to commit consumer fraud by misrepresenting the need and demand for natural gas in the Northeast, and rather are motivated by the opportunity to reap huge profit at the expense of landowners such as myself and utility users throughout Massachusetts. My position is that approval of the proposal would result in profound damage to the environment, economy, sense of community, agriculture, aesthetics, flora, and fauna of this region. My position is that promoting continued reliance on fossil fuels as an energy source represents the greatest single threat to humans and every other species, and indeed to our planet, and that if the same zeal and investment Kinder Morgan proposes for this project was applied to developing improved methods of generating and storing renewable sources of energy, we would be making significant progress in the history of humankind and our planet. My position is that by permitting this dreadful proposal FERC would be violating both the letter and the spirit of the Agreement recently entered into by the United States in the 2015 Paris Climate Conference (COP21.)

Basis for Intervening:

My husband and I are land owners with water front property on Burden Lake and within the half mile from the proposed compressor station. We are concerned about the pipeline route and the compressor station that will effect the health of our air, our land, and our water plus the effect of the light and sound pollution. We are a electric ratepayer who, if KM secures our electric utility as a project customer, expects to see an increase on our bill relating to NED cost recovery. We enjoy the out-of-doors and do not want any state or

town public parks or forests, or water, which have been set aside for people and wildlife, to be impacted by any activities of this commercial project. Burden Lake was formed back in the early 1800 for Mr Burden's iron works on the Hudson River to give water power for making horse shoes and their nails for the area and later for the Union Army during the war between the states. so this area is and should still be considered an historical place and not one to be polluted by our generation. With this in mind the water from Burden Lake flows down to the Hudson River so all the area that it flows thru and even the Hudson River itself will be polluted for people and wild life which will include farms, drinking water and air.

This project should be a "NO-Go" for our state.

20160104-5125

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, L.L.C.

)

Docket No. CP16-21-000

**MOTION OF IROQUOIS GAS TRANSMISSION SYSTEM, L.P.
FOR LEAVE TO INTERVENE**

Pursuant to Rule 214 of the Federal Energy Regulation Commission's ("FERC") Rules of Practice and Procedure, 18 C.F.R. § 385.214 (2015), Iroquois Gas Transmission System, L.P. ("Iroquois") hereby moves for leave to intervene, and become a party to, the captioned proceeding. In support of this motion, Iroquois respectfully states the following:

I. Motion for Leave to Intervene

A. Iroquois Gas Transmission System, L.P.

Iroquois is a Delaware limited partnership with its principal office located at One Corporate Drive, Suite 600, Shelton, Connecticut 06484. Iroquois is engaged in the business of transporting natural gas in interstate commerce under authorizations granted by, and subject to the jurisdiction of, FERC. The Iroquois system currently extends from the U.S.-Canadian border at Iroquois, Ontario and Waddington, New York through New York State, western Connecticut and under the Long Island Sound to South Commack, New York, and then extends back under the Sound to a terminus at Hunts Point in the Bronx.

In addition to providing transportation service to shippers in New York and New England, Iroquois provides transportation service for shippers that receive corresponding transportation service from TransCanada Pipeline Ltd. ("TransCanada"), Tennessee Gas Pipeline, L.L.C. ("Tennessee"), Dominion Transmission Inc. ("DTI"), and Algonquin Gas Transmission, LLC ("Algonquin"). Iroquois has the following U.S. interstate gas pipeline interconnections: (1) with Tennessee at Wright, New York and Shelton, Connecticut, (2) with DTI at Iroquois' Canajoharie meter station located near Fort Plain, New York, and (3) with Algonquin in the Town of Brookfield, Connecticut.

B. Correspondence and Communications

All communications and service related to this motion should be directed to the following:

Helen M. Gallagher
Director of Legal Services and Secretary
Iroquois Pipeline Operating Company
One Corporate Drive, Suite 600
Shelton, CT 06484

Daniel.archuleta@troutmansanders.com

C. Background

On November 20, 2015, Tennessee filed with FERC an application pursuant to sections 7(b) and 7(c) of the Natural Gas Act seeking authority to (i) construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, and (ii) to abandon certain facilities, as part of the Northeast Energy Direct Project (“NED Project”). The proposed NED Project would provide up to 1.3 billion cubic feet per day (Bcf/d) of firm capacity at a cost of approximately \$5.2 billion dollars in order to transport domestic natural gas supplies from northern Pennsylvania to New York and New England markets.

D. Motion

As filed, the proposed NED Project includes an interconnect with Iroquois at Wright, New York. As such, Iroquois is interested in and will be directly affected by the outcome of these proceedings. Furthermore, Iroquois’s interests cannot be adequately represented or protected by any other party. Accordingly, Iroquois respectfully requests leave to intervene in this proceeding, with full rights to participate as a party.

II. Conclusion

WHEREFORE, for the foregoing reasons, Iroquois respectfully requests that the Commission grant it intervenor status in this proceeding.

Respectfully submitted,
Daniel P. Archuleta
TROUTMAN SANDERS LLP

Basis for Intervening:

I am a resident in Northfield, MA whose home is located within a short proximity to the proposed gas compression station and I fear for the safety and security of my families health and well-being. We moved

to Northfield over 6 years ago and purchased our home knowing that we would raise our children in a clean well water and clean air environment. If we were aware the potential for a gas compression station to be so close to our home we would have not choose to live here and raise our family. My wife and I have had two beautiful children ages 5 and 3, a boy and girl who mean the world to the both of us. When the word was spread that a gas pipeline and compression station was coming to our area I immediately became concerned and attended the public presentation from TGP and Kinder Morgan at the Elementary school gymnasium. I had many questions including how this will affect our environment and their methods of safety protocols. However none of my safety concerns were addressed and I was transferred with my questions from one representative to the next; each time I was introduced to the next representative I was told the equipment and specifications which went into the design and operation of the compression station, yet no efforts or information were put towards addressing the safety and health concerns of neighboring residents. Health and safety are not a concern of this pipeline endeavor much more work needs to be done to address this to avoid potential disasters to our crippling environment. Let's face it accidents can happen (BP oil spill in the gulf, gas leak in southern California, and etc.) and good plans will entail all possibilities for disaster, unfortunately the NED pipeline does not take into account the irreversible affects this development can entail and I will not sit idle while this occurs and I truly hope you folks will reject their application by sending them a clear message that the health and safety of the people come first and foremost.

20160104-5128

Comment of the City of Methuen Regarding Proposed Compressor Station

According to the November 20, 2015 FERC application, the Market Path Tail Compressor Station is proposed with one 8,000 hp and one 15,000 hp electric powered units for a total of 23,000 hp. The site plan for the original compressor station location, across from 955 Broadway Road, Dracut, indicates a total of 17.9 acres would be permanently disturbed. The site plan identifies 6 proposed buildings and 10 other noteworthy features including a 61' x68' cooler pad, main line blowoff valves, waste water tank, blowdown silencers and stormwater retention pond. In response to Kinder Morgan's application filing for the NED pipeline, FERC on December 8, 2015 directed Kinder Morgan to study three alternatives to the site they have proposed for a compression station in Dracut, MA. One of those alternatives is located at the Brox Industries quarry, which abuts the City of Methuen and is less than 1,000 yards from a newly built and dense community.

It may have appeared to FERC that the Brox site was a desirable location for the compressor station due to the apparent lack of density in the area, however, the quarry site itself is a problematic location for such a powerful compressor station which is likely to require a large standby power plant for operation and, due to the Regency development in Methuen abutting the site, there are in fact a number of citizens who would be affected by noise and hazards from the proposed compressor station. Among other concerns, we highlight the following hazards endemic to such compressor stations:

- Explosion / Fire – This hazard is self-explanatory but is often due to mechanical failure. The equipment at a compressor station is subject to high pressures/stress, vibration and corrosion that contribute equipment failure. According to Mina Hamilton, environmental writer-researcher, there have been 11 explosion /fires in the US since 2011. The vibrations of the Brox quarry could only exacerbate this problem.
- Emissions – Emissions can occur intentionally or accidentally, under controlled or uncontrolled releases. The largest single emission at a compressor station is a compressor blowdown. A blowdown releases natural gas in a plume extending upward 30 to 60 meters. A blowdown can last from 20 minutes to 3 hours and releases 15,000 cubic feet of gas to the atmosphere on average.
- Toxicity of Emissions – The emissions described above contain volatile organic compounds (VOC's) and nitrogen oxides (NOx) that commonly include formaldehyde, benzene, toluene, ethyl benzene, xylene, hydrogen disulfide, carbon monoxide, carbon dioxide, sulfur dioxide, methane and other

compounds that are known to adversely impact humans and the environment.

- Condensate Spills - Compression and cooling of the gas vapor can cause water and hydrocarbon liquids to condense out of the gas stream. These liquids are collected on site for disposal, creating the potential for a spill.
- Audible Noise – FERC regulates the normal day-night average noise level of the compressor station to 55 dbA at the nearest noise sensitive area (NSA). Blowdowns produce a noise comparable to a commercial jet taking off (120db). And happen 12 to 40 times per year, often at night. These levels, when coupled with the existing noise from the active quarry, are likely to violate Methuen’s noise ordinance.
- Low Frequency Vibration – Low frequency vibrations between 25 to 500 cycles per second have been associated to gas compressor stations and are suspected to contribute to Vibro-Acoustic Disease (VAD).

The Brox Industries site proposed by FERC is an operational hard rock quarry and bituminous concrete plant occupying approximately 1/3 of a site that appears to be in excess of 250 acres. An existing powerline corridor abuts the site on the west, presumably this is where the compressor station would be located, however the Alternative map from FERC indicates the facility would be located on the quarry floor. Logic would tell us that a quarry with regular blasting and a natural gas facility are not compatible uses. In fact, on page 2 of the “Compressor Station Alternative Analysis” enclosed with Eric Tomasi’s December 8, 2015 letter; Item 12 reads “Mines, quarries and other geological hazards within 1/4 mile”. This would imply quarries are a geological hazard to the proposed facility.

Unique to this site would be a blast hazard. The quarry has been developed with a 90’ high rock face on the south-southwest side of the site. Consequently a blast occurring on the quarry floor would be directed to the north-northeast, increasing the risk to Methuen. The rock face in the quarry would also serve to reflect noise in the general direction of Methuen.

The Brox site is as close as 1,670’ from then Merrimack River, Methuen’s source of drinking water, consequently condensate spills containing hydrocarbon liquid would be a concern. The likely discharge point into the river is approximately 17,915’ upstream from the City’s raw water intake. This would give the City approximately 8 to 12 hours, after the discharge reaches the river, to act before contamination enters the municipal water system.

Emissions would be another area of concern. The proposed site directly abuts Methuen; consequently the prevailing wind from the west would protect Dracut and carry the emissions straight into Methuen and specifically the Regency development.

Methuen also has concerns about the two alternate sites proposed on the December 8th letter. Alternative Site 2 appears to be a sand and gravel mining facility operated by Agretech. Like the Brox site, the current use, a mining facility, seems incompatible with a natural gas facility. Additionally, Site 2 is as close as 430’ from the Merrimack River and 20,025’ upstream from the City’s raw water intake so hydrocarbon liquid discharge would be a concern. Finally, as is true for the Brox site, this site is directly west of Methuen, therefore the prevailing winds would carry any emissions into Methuen. Alternative Site 3 is directly west of Site 2 and generally shares the same concerns. However Site 3 is as close as 220’ from the Merrimack River so hydrocarbon liquid discharge would be a serious concern.

In short, Methuen has concerns related to all three of the sites proposed by FERC for the compressor station. But the City’s deepest concerns involve the potential siting at the Brox quarry. The City respectfully requests that the Applicant and FERC reconsider the use of this site for the station. The site presents serious potential hazards to public safety, quality of life for Methuen residents, and the environment.

I am a Dracut resident. The NED project, due to number of proposed facilities and amount of construction and road closures proposed in town, would have a enormous effect on me. I am a taxpayer in Dracut and I am concerned with loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services. I am a ratepayer for National Grid gas service or electric service and am concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals.

Basis for Intervening:

I live in Williamstown, Massachusetts, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because...

I am a parent, a grandparent, and, most importantly, a citizen of the United States. Because of my status as a citizen and human being I am a trustee of the resources--air, water, and soil--that support the survival of our children and of the whole community of life of which the human species is a integral part.

As affirmed by COP21 (the gathering of all nations in Paris in Nov & Dec in Paris), I am a responsible stakeholder in the world-wide work of ending Humankind's dependency in fossil fuels as urgently as possible.

I founded a farm--Caretaker Farm--that is now protected in perpetuity by state and federal donations (and additional donations from my family) intended to preserve working farms and agricultural lands in Massachusetts & the United States. However, the farm's land protection could potentially be violated if this project sets a precedent by being allowed to take easements over land that is meant to be protected forever.

20160104-5132

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of)	Docket No. CP16-21-000
Tennessee Gas Pipeline Company, L.L.C.)	
Northeast Energy Direct Project)	

MOTION TO INTERVENE AND PROTEST

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Town of Richmond New Hampshire ("Richmond" or the "Town") hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Town opposes the construction of a natural gas transmission pipeline and other facilities known as the Northeast Energy Direct project ("Project") due to the adverse impacts that will be sustained by the Town, and therefore seeks party status to protest the proposed pipeline, and fully protect the Town's interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. The Town is committed to enhancing and protecting the quality of life of all its residents, workers, and businesses, and is gravely concerned for those who live, work, and recreate near the proposed pipeline route. There are substantial and real environmental, economic, and health threats to the Town arising from the construction and operation of the pipeline within the municipality. It is unacceptable that we may be coerced into the industrialization of our landscape and the degradation of our scenic, historic, and cultural resources-for a Project not even intended to benefit us.
2. The proposed pipeline will run through approximately 6 2/3 miles within the Town and within the right of way of public streets and near other property owned by the Town. It will cross conservation lands, sensitive water protection areas, permanently protected open space, public trail systems, forestland, endangered species habitats, wetlands, vernal pools, private homes and business, and historic resources. The proposed location of the pipeline is intrusive, and threatens to disrupt the rural tranquility our residents enjoy. It will have a deleterious impact on our park system, specifically Rhododendron State Park, and on walking trails in Richmond that cross on and near the pipeline at multiple spots. It will interrupt many wildlife crossing areas, as Richmond is heavily wooded and rural in nature - home to many species of wildlife. It will transverse the aquifer that is such an important water source to so many wells in our town and in near-by towns. It will cross streams that feed a beautiful local lake, Cass Pond, home to a summer camp and a recreational resource enjoyed by many Richmond residents. Additionally, construction will impede Town roadways and cause traffic and transportation disruptions along with related interruptions of public services, especially the crossings on Route 32 and Route 119, routes which are essential transportation and evacuation routes to the larger towns that have facilities essential to Richmond, such as public schools, hospitals and doctor's offices, grocery stores and other shopping, gas stations. There are no such facilities in Richmond itself and road access to them is essential to the Town. Additionally, in the event of a pipeline accident along the pipeline route through Richmond and the nearby towns, Richmond would likely be cut off from all emergency facilities within many miles, as access to the closest hospitals (approximately 30 - 50 minutes away, depending on where one is in Richmond) in Keene and Brattleboro could be near impossible for many parts of Richmond if Routes 32 and 119 were closed. State police access to Richmond, from State Police headquarters in Keene, could similarly be interrupted.
3. There are also approximately 71 homes within 1/2 mile of the proposed pipeline, and these residents are deeply worried about the reduction in value of their homes, and the difficulties they may encounter in refinancing and in obtaining homeowner's insurance for their properties. Faced also with the looming threat of the forcible taking of their property to facilitate the construction of the Project, these citizens are uniquely harmed by the Project and the Town is obligated to defend them from encroachment by the pipeline. Moreover, the Project threatens public safety by placing fire and explosion hazards in close proximity to residential areas, and subjects the Town and its residents to an ongoing fear of such catastrophic incidents. The Town's emergency response systems will also be burdened by these pipeline failures. Our fire department and emergency rescue unit is all volunteer and there are no full-time police officers. Our state police are located about 30 minutes away from Richmond's center (further from other parts of Richmond) and must respond to all our local towns in

this area.

4. Richmond is responsible for the protection of both its natural environment and the health and welfare of its residents, and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project. Accordingly, Richmond has a substantial interest in the outcome of this proceeding. Moreover, given the Town's expertise and familiarity with the locale of the proposed pipeline, and the proposed alternative site locations, its participation in the abovecaptioned proceeding will significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual(s) should be included on the service list for this docket, and all communications should be sent to:

Carol Jameson
Chairman, Richmond Board of Selectmen
105 Old Homestead Hwy, Richmond, NH 03470
(603) 239-4232
richmondselectmen@gmail.com

III. CONCLUSION

WHEREFORE, the Town of Richmond respectfully requests that it be permitted to intervene in this proceeding with full rights to participate in all further proceedings. Respectfully submitted,

Respectfully submitted
Town of Richmond, NH
Carol Jameson
Chairman, Richmond Board of Selectmen
105 Old Homestead Hwy.
Richmond, NH 03470

January 4, 2016

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Docket No. CP16-21-000

Application for a Certification of Public Convenience and Necessity Northeast Energy Direct Project.

**MOTION TO INTERVENE OF THE CONSERVATION COMMISSION FOR THE TOWN OF
MERRIMACK NEW HAMPSHIRE**

Kinder Morgan through Tennessee Gas Pipeline Company, LLC (TGP) filed a formal application for the Northeast Energy Direct (NED) project on November 20, 2015. Docket Number CP16-21-000, Certification of Public Convenience and Necessity was subsequently issued by FERC.

The Conservation Commission for the Town of Merrimack New Hampshire (MCC); a properly established Conservation Commission in accordance with New Hampshire State Law RSA 36-4, moves to intervene at this time for the purpose of becoming a party to this proceeding (CP16-21-000) in accordance to Title 18, CFR 385.212 (Rule 212) and CFR 385.214 (Rule 214), specifically Rule 214(b)(2)(ii) and (iii).

The proposed NED pipeline project as submitted by TGP on November 20, 2015 traverses over a conservation property owned by the MCC as depicted in Resource Report 8, Figure 8.3-i, Mapsheet 17 of 33, near MP22. This parcel is known in the Town of Merrimack New Hampshire as Tax Map 28-358-1. This parcel was donated to the Conservation Commission for conservation purposes in accordance to NH RSA 477:45-47; to preserve this property in its natural state and not for development of any kind except for the purposes of conservation, forestry, wildlife habitat management, or outdoor education. The NED pipeline is contrary to the donation and is not permitted on this property per its deed properly filed in the New Hampshire Hillsborough County Registry of Deeds.

The July 2015 NED proposed preferred route crossed two large parcels of land that are managed by the MCC. This management responsibility was directed by deed or action of the Merrimack Town Council. These parcels are known in the Town of Merrimack as Tax Map 3C-73 and 38-164. This crossing is now part of alternative routes presented in the November 2015 submittal in Resource Report 10, Section 10.3.2.5. The NED pipeline is contrary to the purchase and management plan for Tax Map parcel 38-164 and is contrary to the donation of Tax Map parcel 3C-73, as it is not permitted per its deed properly filed in the New Hampshire Hillsborough County Registry of Deeds.

In accordance to RSA 36-A:2, the MCC was established “*for the proper utilization and protection of the natural resources and for the protection of watershed resources in said city or town*” ...the natural and watershed resources for the Town of Merrimack, New Hampshire. The proposed pipeline project will traverse two major watershed resources within the Town of Merrimack. These resources provide potable drinking water to more than 90% of the residents and businesses of the Town of Merrimack. Proper protection of our drinking water is of utmost concern to the MCC and is certainly in the public interest for the people in our town.

The Merrimack Conservation Commission opposes the NED pipeline traversing ours and any other conservation and open space properties, impacting the drinking water resources for the residents and businesses of the Town of Merrimack, and for the detrimental effect its construction and operation will have on the natural resources and residents within our community, our neighboring communities, and our State.

We ask that the Merrimack Conservation Commission be granted this motion to intervene.

Please add the following members of the MCC to the Service List for this docket:

Cynthia Glenn
Merrimack Conservation Commission
6 Baboosic Lake Road
Merrimack, NH 03054
c glenn@merrimacknh. gov

Michael Boisvert
Merrimack Conservation Commission
6 Baboosic Lake Road

My strong interests that will be affected by the outcome of this proceeding are as follows:

I live in the town of Warwick Mass. which is on the proposed route of the project.

I reside downwind from the proposed compressor station in the neighboring town of Northfield Mass.

I am a taxpayer and believer in the conservation of Article 97 properties.

I Hold that devoting any funds toward new infrastructure for non-renewable energy goes against the Global Warming Solutions Act. Completion of this project would be in the public harm. I hope that you will grant this motion to intervene.

Basis for Intervening:

I live in Dracut, MA and want to intervene in this proceeding to oppose the NED pipeline.

- I have an interest which will be directly affected by the outcome of this proceeding because
- I am a landowner directly impacted by the Compressor Station (Broadway Road - Dracut, MA). My home resides within a half mile radius of the proposed Compressor Station.
- I am within the 'blast radius' at my home and during my daily commute. I live within the a half mile of the proposed station and drive my son by the proposed location daily to attend the Campbell School. This school is roughly 2 miles from the Compressor Station.
- I am a member of an impacted community who has concerns about various impacts to our health living within a half mile radius of the proposed Compressor Station. Please note, my neighborhood currently contains roughly 20 school aged children.
- I enjoy the outdoors and our small rural farming community. I do not want to see our farmers or outdoor space impacted by any activities of this commercial project.
- I was never contacted by Kinder Morgan in regards to this project.

Individual	jgarcia376@verizon.net	
------------	------------------------	--

Basis for Intervening:

I live in Windsor Ma where Kinder Morgan wants to build a compressor station for their proposed 30 inch pipeline. We are very concerned with the toxic emissions that will be released into and onto our town. We moved here 45 years ago for the rural quiet, clean air and pristine land. We are not in favor of giving this up to a Texas co that wants nothing but money and no concern for people and their enviroment.

We would be in the 2mile radius of the compressor and are very concerned for our garden food, underground water to our well ,air, noise level, percolates in our drinking water from blasting,losing our water supply from underground vein collapse, apples on our trees, blueberries, our very dark night sky,Cleveland reservoir (1mile downwind of compressor). The toxic emissions from the station would cause health and safety problems and the methane would contribute to more global warming.

We have live here 44 years and have made a huge investment in our home and property over the years.Our property values would plummet if this pipeline deal goes through. Our attorney general has just completed an independent report concluding the pipeline is not needed in our state.FERC should protect us from this project. A Spanish Co has bought this whole thing and will export all the gas to Europe.Residents of Massachusetts will get no benefit from this. They are even going to make Mass residents pay for the project.What a slap in the face.

If FERC accepts this unnecessary pipeline project through our state and town it will destroy our life as we know it forever.Residents of a rural town are more important than an uncaring Texas Co with a terrible track record.This will not lower our gas prices. Make them take a route that already has an existing pipeline and fix existing leaks. Don't let them destroy what we value. We need to be investing in green energy projects.

As a resident of Windsor our lives should not be sacrificed so a Texas(Spanish) Co can get richer off of us.Please protect us by voting against this unneeded project.

Sincerely, John Garcia

Basis for Intervening:

I live along the proposed pipeline route.

20160104-5146

Stephen P St Arnaud, Dracut, MA.

As a long time resident of the Town of Dracut, MA, I was very concerned to learn that the Northeast Energy Direct project would lead to the development and installation of a compressor station in my rural, farming community. The consequences of allowing this project into our town will likely lead to deteriorated health, environmental impacts, and decreases in property values.

Based on the research that I have done and the presentations that I have seen from other parts of the U.S. where similar projects were completed, the compressor station's scheduled "blow down" maintenance will potentially introduce many health related issues to the nearby residents of our town and the natural wetlands and wildlife in the very close proximity. As a father to a six year old child and the husband of a woman that may still become pregnant in the coming years, I am deeply afraid of the potential health risks that my family could be exposed to as we live half a mile from proposed compressor site. Additionally, my in-laws whom are both senior citizens and kidney transplant recipients, live within 2 miles of the compressor station site. Given their health conditions, they are also very susceptible to the byproducts that are emitted from the compressor station "blow downs". The Board of Health in our town unanimously voted against allowing the pipe line project and the building of a compressor station due to health concerns for the residents.

A further concern I have is that the proposed location for this compressor station is within 2 miles of the Campbell Elementary school (grades K-5). This school is attended by over 400 children under the age of 10. As a parent, I don't feel safe for the well-being of these children as the school is down wind from the discharges from the compressor station site.

The Massachusetts Attorney General's office conducted their own study and came to the conclusion that the Northeast Energy Direct project would not benefit the residents of Massachusetts as stated by the Tennessee Gas Pipeline Company. The energy needs of the state are currently met at satisfactory level and there is no need to bring this into our state.

I hope that FERC will take the time to hear the voices of the residents of our town and consider the potentially hazardous risks with no benefit that will come from this project.

Individual	dbennett823@gmail.com	

Basis for Intervening:

I am writing to express my extreme concern regarding the proposed Northeast Energy Direct (NED) Pipeline Project currently being reviewed for approval by the Federal Energy Regulatory Commission (FERC). The pipeline being proposed will potentially cut through my property. I am deeply concerned regarding the adverse effects that this pipeline could have on my property and the greater surrounding community as a whole. My property is terraced and on a steep hillside, and is already prone to erosion. From my understanding the Tennessee Gas is seeking to put the NED through a portion of my land that is densely wooded. This wooded area of my property is crucial in protecting my property from erosion from water and wind. If the pipeline were to cut through my property we would be forced to maintain the area with low growing grasses that would do little to keep the property from further eroding.

Across the street from my property is a wetland which is bordered by preserved farmland. This wetland, which the pipeline would cut through, protects my property and the property of others from flooding from the Deerfield River. As recently as August 2011 hurricane Irene resulted in extreme flooding in my area and much of the Northeast. My property on the hillside became an island, as water rose above the road in front of my home, trapping us there. However, we sustained no damage to our property, which is owed to the fact that the wetland in front absorbed a large portion of the flood waters. I am very concerned about the potential destruction of this wetland by the proposed pipeline.

As I explained above, the Deerfield River is nearby and the pipeline is proposed to cut across it. In addition, the eastern portion of my town, Deerfield, MA, is bordered by the Connecticut River and is also slated to be crossed by the pipeline. These rivers are valuable resources to my community and the state for recreation and commerce. There are numerous hydroelectric dams along the Deerfield River operating to produce valuable, renewable hydroelectric power. This goes for the Connecticut River as well. The Connecticut River has only recently been cleaned up from years of environmental degradation and now could face a new onslaught of pollution if this pipeline were to fail underneath it. There seems to be no legislation that protects my rights as a landowner. The pipeline running through my property would devalue it and there is nothing that mandates that this company provide me compensation for the devaluation. The magnificent views that are afforded from my property would be ruined in part by the destruction of the forested area bordering that this pipeline would destroy. The easement from this pipeline would lower the value of my home as a portion of the property would become unusable. And despite the devaluation to the property we would still be responsible for the taxes on the property. This pipeline cutting through my land would put my family in danger of any accidents to the pipeline that could occur. And these accidents do happen... January 2015, Brandon, MS a pipeline explosion burned six acres of land and created a large crater; April 2015 Borger, TX a Kinder Morgan gas pipeline exploded leading to the evacuation of nearby homes; August 2015 Falfurrias, TX another Kinder Morgan pipeline ruptured; March, 2014 Plymouth, WA a pipeline operated by Williams Companies exploded leading to the evacuation of 1,000 residents; February 2013 Knifly, KY a Columbia Gulf Transmission pipeline exploded detaching two homes.... this list could go on and on. Not only is my town not prepared to respond to the type of disaster that a pipeline explosion could cause, but the presence of a pipeline on my property could render it uninsurable.

20160104-5151

Randy Boisse, Dract, MA.

Pertaining to the proposed Dracut, MA Kinder Morgan compressor station; I must insist that if it is determined that the NED pipeline project is to move ahead, that the compressor station will be relocated at minimum of two miles away from any residences, schools, community gathering areas, etc. The current Dracut proposed site is within a 1/2 mile radius of many residences (including my neighborhood), churches, community gathering areas, and is just barely 1-mile away from the Joseph Campbell Elementary school which will be downwind of the proposed site.

Kinder Morgan keeps stating that the proposed Dracut compressor station will not release emissions because it is electric powered; however, Kinder Morgan does not seem to consider the routine “blowdowns” as emissions. It should be noted that Kinder Morgan consistently downplays the effects of the “blowdowns” by referring to them as infrequent; but yet is applying for permits that allow for 75-blowdowns per compressor unit (see http://www.kindermorgan.com/content/docs/NED_Compressor_faq.pdf paragraph 10). This does not seem infrequent to me. Furthermore, the “blowdowns” are not regulated by the EPA, and therefore generally fall within the 90 – 120 decibel range (the sound of a jet aircraft engine at take-off).

Kinder Morgan should not be allowed to refer to their compressor stations as “emission free” at their outreach meetings, nor within any of their proposal materials. The blowdown cycles can last up to several hours in which the gas contained within several miles of pipe is released into the atmosphere. These blowdowns release vast amounts of methane which is approximately 30 times more harmful to the environment than CO2 emissions; furthermore, when the methane interacts with sunlight, it quickly turns to formaldehyde which is considered a carcinogen, and is a heavy gas which will stay close to ground level. The blowdowns will also release many of the fracking agents that are used to extract the gas from the bedrock/shale. Some of these agents are benzene and toluene which are known carcinogens. Even Kinder Morgan’s documentation states that they cannot assure that no benzene will be released into the atmosphere. According to some doctors that I have spoken to, benzene exposure at any level will likely cause leukemia.

There are vast amounts of online reports/studies about a variety of cancers, neurological diseases, and other health problems that are associated with many of the residences within a 2-mile radius of compressor stations – small children are even more vulnerable to the effects of blowdown emissions. One such impacted town is Minisink New York which contains a compressor station that has sickened many of its residence.

Please do not allow a compressor station to be built within 2-miles of any populated areas.

And finally, please do not approve the NED project at a time when there are other energy projects underway in New England, such as that with Spectra Energy’s Access Northeast project. Furthermore, there are green alternatives that are currently growing in utilization within the New England area, such as wind, solar, and hydropower from Canada; if we keep pushing the use of fossil fuels, the current momentum that is currently underway with the use of alternative (green) energy sources will be undermined.

Sincerely,

Randy Boisse

Basis for Intervening:

I live in Northfield, MA and I want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceedings. Firstly, I am a landowner whose life will be impacted on a daily basis, for I walk the trails around the blasting site, as well as where the compressor is proposed to be. I am concerned that the natural beauty as well as the wildlife I enjoy will be decimated! I am concerned of the chemicals they use to push the gas through the pipeline, and the leaks that

have been on record, and that the surrounding area, and the air I breathe will be filled with such chemicals, as Methane, Benzene, as well as those we cannot see will have a direct impact on my health, these chemicals are known to cause cancer, nausea, nosebleed, migraines, to just name a few. I am a member of a community that is concerned about the negative impact to the economy, environment, aesthetics, and the treasured Native American archaeological sites there. I do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever. I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery. I am a person who enjoys and eats from the fertile ground and the farms here, and I am concerned that the NED project will impact in a destructive way the water and land the farmers use to bring forth the food that I and many in my community get our sustenance from. I am concerned that we will lose the agricultural community that is our way of life here.

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	juliacdmoore@gmail.com	

Basis for Intervening:

I am filing a motion for intervention status on FERC docket CP16-21 based on my residence at 359 Turners Falls Rd Montague, MA 01351. This property abuts MA Wildlife and Fisheries property and sits directly on top of our freshwater drinking aquifer. I am a resident expected to be in the "blast radius"/my daily commute crosses over the proposed pipeline route, so I will be at physical risk. The property is also within 1/2 mile of the Connecticut River as well as certified organic farmland that produces the bulk of my communities nutritional needs. I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health. My interest will be directly affected by the outcome of the proceeding and I am participating in the public interest as a consumer. I strongly object to the construction of the proposed pipeline because of the catastrophic environmental implications this project will perpetuate as well as the reduction of property values, the negative effect on our watershed, concern for toxic emissions, and the extreme reduction of the communities quality of life.

20160104-5156

I am a resident within a 1/2 mile of the proposed Market Path compressor station and am concerned for the health of my family due to the noise and air pollution from the compressor station. I am also concerned about the potential for blow downs and/or catastrophic ruptures in the pipeline which would only be approximately 1500 feet from my home.

I am also a parent of a child that attends the Joseph A. Campbell Elementary school at 1021 Methuen Street in Dracut, MA. Several proposed routes for the NED Pipeline would put my child's school within the potential "impact zone". I would be affected by traffic from construction and the properties in my side of Dracut would likely lose value due to the presence of a compressor station and two meter stations. The tax base of Dracut and its ability to fund our schools and services would be endangered.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	sbillias@comcast.net	

Basis for Intervening:

My wife, Bela Breslau, and I, live at 595B River Road, in Deerfield, MA 01342. We have lived here for 10 years, on a small farm that is partly rented to a certified organic farmer.

The NED pipeline is proposed to be located about one mile from our farm, crossing River Road north of us. We strongly object to the construction of the proposed pipeline. We are applying to be Intervenor for the following reasons:

It is an expensive, needless project that would be paid for by us, the electric ratepayers.

Most of the gas in this proposed pipeline would be exported. It provides no value to the people most affected by pipeline construction.

The proposed pipeline will cross conserved land in 25 MA towns. Article 97 of our state Constitution, states, in part, "The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historical, and aesthetic qualities of their environment...Lands and easements taken or acquired for such purposes shall not be used for other purposes." Why should land protected for long-term public health and conservation purposes be sacrificed for short-term private financial gain?

Why do we even need this proposed pipeline? The Massachusetts Attorney General's independent study concerning the need for additional gas pipeline capacity in New England reached the conclusion that it was not necessary.

River Road is a beautiful rural road. The condition of our road would be negatively impacted by the huge equipment brought in to build the proposed pipeline. Our rural quality of life would be terribly reduced, because of increased traffic, noise, and toxic emissions from the pipeline.

Kinder Morgan has a terrible safety record. Emergency workers could be subject to serious dangers, along with my neighbors who live close to the proposed pipeline routes. This is our town, we've lived here for decades, and we pay taxes here.

This proposed pipeline would expand the delivery of non-renewable fossil fuels that will add more greenhouse gases and result in more global warming. This is destructive to both the Earth and us, all her inhabitants. Building the proposed NED pipeline would neither be convenient nor necessary.

FERC has a deplorable record of approving ALL pipeline projects. If you are truly a regulatory commission, please stand up, do your job, and reject this needless pipeline. The tide of history is turning. Almost two hundred countries, including our own, have signed an agreement to combat global warming. Which side of history do you want to be on, that of the destroyers or preservers? You will be judged by your actions. Please make the right choice in this case and reject this pipeline!

Thank you!

I have lived at my home in Conway, Massachusetts for 40 years.

I own many acres of undeveloped land.

I understand that the proposed pipeline will traverse Conway.

I am concerned that the pipeline will propose safety and environmental risks in Conway, as well as in the surrounding area.

I am also concerned about how the proposed pipeline will impact me as an electric rate-payer.

As I understand, there is no particular gas supply emergency in Massachusetts. To the extent that Massachusetts suppliers face periodic gas supply issues, those issues are relatively minor and can be remedied by relatively modest alternative measures.

LANESBOROUGH VILLAGE FIRE AND WATER DISTRICT
20 Bridge Street PO Box 1504
LANESBOROUGH MA 01237
(413) 442-5916 lfwd@verizon.net

January 4, 2016

**BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION**

Tennessee Gas Company, LLC

Docket No. CP 16-21-000

Northeast Energy Direct

**MOTION TO INTERVENE OF THE
LANESBOROUGH VILLAGE FIRE AND WATER DISTRICT**

The Lanesborough Village Fire and Water District is a District incorporated under the laws of Massachusetts. The District supplies water to over 80% of the residents of Lanesborough Massachusetts. The Northeast Energy Direct Pipeline will cross properties located within the limits of the District and the proposed route endangers both the water source and the District infrastructure.

Pursuant to Commission Rules 385.214(b) and 157.10, the Lanesborough Village Fire and Water District moves to intervene in the above captioned proceeding. This intervention is timely filed.

I. CONTACT INFORMATION

Please enter the Lanesborough Village Fire and Water District below on the official service list for Docket No. CP 16-21-000. All pleadings, filings and correspondence in this proceeding should be served on the following:

Lanesborough Village Fire and Water District
20 Bridge St PO Box 1504
Lanesborough MA 01237

II. MOTION TO INTERVENE

The Lanesborough Village Fire and Water District and its residents are directly impacted by the proposed pipeline. The pipeline as currently proposed will cross the zone II aquifer recharge area for both of the District's only 2 municipal wells, and is in close proximity to the two wells and much of the distribution system infrastructure including the only water tank, and several miles of watermains.

The Water District has 850 connections to the system including 810 single family dwellings, 15 businesses which use high water volume, and several apartment buildings and condo units. This user group comprises 950 Equivalent Dwelling units (EDUs) which is the metric used by the Mass DEP as a measure of water supply needs. The population of the Water District is approximately 2,400 which is 80% of the population of the Town of Lanesborough. The District is blessed with an ample supply of very high quality water. The District has been investing in the system infrastructure to ensure a reliable supply. There is grave concern that operations of the pipeline operator during construction/installation and during operation may compromise the quality of the water and the reliability of the distribution. There are no suitable options for an alternate supply if the aquifer is contaminated. Damage to the infrastructure from blasting or other operations will cause extreme inconvenience to the District members, and will cause financial hardship as the District customers are already paying high water rates.

The Lanesborough Village Fire and Water District filed scoping comments with FERC on October 13, 2015 (accession no. 201510135197; docket no. PF14-22-000) which comments are incorporated herein by reference.

Further, the Berkshire Regional Planning Commission has also been acting on behalf of the Water District as well as various municipalities and districts in Berkshire County, Massachusetts and Rensselaer County, New York through which the Northeast Energy Direct Pipeline is proposed to or could pass through or impact to protect their common public interests. The Berkshire Regional Planning Commission filed scoping comments with FERC on October 15, 2015 (accession no. 201510155279; docket no. PF14-22-000) which comments are incorporated herein by reference. The Berkshire Regional Planning Commission continues to coordinate the dissemination of information to these entities. This motion should be regarded as also made in support of the intervention motion made by the Berkshire Regional Planning Commission.

Lanesborough Village Fire and Water District requires additional information with respect to the proposed pipeline. If constructed, the Northeast Energy Direct Pipeline will have environmental and economic impacts on the District.

Intervention is necessary to enable the Lanesborough Village Fire and Water District to protect its water source and infrastructure from damage by Northeast Energy Direct Pipeline. The District seeks to intervene to monitor this proceeding and address potential effects on water source and infrastructure.

WHEREFORE, for the foregoing reasons, The Lanesborough Village Fire and Water District requests that the Commission GRANT this motion to intervene and allow the DISTRICT to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,

Lee Hauge, Chairman
Board of Water Commissioners
Lanesborough Village Fire & Water District
20 Bridge St. PO Box 1504
Lanesborough, MA 01237

Averill Park NY 12018

I'm against this project based on, I live about one mile away from the proposed project. My concerns are what the Value of our homes would be if this project where to be built and if ever there where an explosion the effect this would have on the people living so close to what I would call a time bomb waiting to happen. What would we do if our home owners insurance where to be canceled, who do we go to? The protection of all the farm animals, the residents who have horses, all of the wild life animals throughout this area, all of the lakes in the area that could be contaminated along with our well water. the most important would be the health and safety of all the people living in the surrounding area. I would ask if FERC would do and environment impact study. I live in a recreational community and also concerned with the business that have been here for so many years such as the Golf course, that took many years of hard work and money to get it

to where it is today, Camp Schodack, that employs a big staff to accommodate children from all over every year, the camping sites throughout the area, and the lakes that are used for all sorts of activity. I'm not going to take all of your time with this but I think you understand what my point is.

I thank you

Peter J Cossack

Basis for Intervening:

I am filing a motion for intervention status on FERC docket CP16-21 based on my residence at 359 Turners Falls Rd Montague, MA 01351. This property abuts MA Wildlife and Fisheries property and sits directly on top of our freshwater drinking aquifer. The property is also within 1/2 mile of the Connecticut River as well as certified organic farmland that produces the bulk of our nutritional needs. I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health. I am a resident expected to be in the "blast radius"/my daily commute crosses over the proposed pipeline route, so I will be at physical risk. My interest will be directly affected by the outcome of the proceeding and I am participating in the public interest as a consumer. I was born, raised and continue to live on this property and intend to raise my children here. This project threatens the quality of our air as well as our public drinking water and therefore threatens the quality of my life and in the event of a accident/ blast my life itself.

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company,
a subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline Project

Docket No. CP 16-21-000

**MOTION TO INTERVENE OF TOWN OF WARWICK MA
IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §38S.214, TOWN OF WARWICK MA (hereinafter referred to as "the Town") files this Motion to Intervene in the above-captioned proceeding. The Town opposes the project because of the expected environmental, safety, and socioeconomic impacts of the NED pipeline project. Resources directly impacted by the proposed pipeline include drinking water supplies, protected open space, farmland, rare and endangered species habitats, wetlands, steep slopes, vernal pools, private homes and businesses and historic resources. Impacts will be profound. The proposed pipeline will run through a half-mile of the northeastern section of the Town through steep and rocky sloped land. The Town seeks party status to protest the proposed pipeline, and fully protect its resident's interests.

1. STATEMENT OF INTEREST

A. Description of INTERVENOR

TOWN OF WARWICK MA, 37.6 square miles, 780 residents, pipeline to be located within Town boundaries, Town owned land is not directly impacted, 3 of Town residents directly impacted by project as pipeline goes through their property and most residents will be impacted by compressor noise.

B. Description of Impacts

The Town will be directly impacted and harmed by the proposed project as follows: 1. The pipeline will pass through land in the Town of Warwick and have a significant impact; 2. Improper construction techniques could damage rare cold water fish habitat; 3. The pipeline, as proposed, may cross vernal pools and other rare or endangered species habitats that the town is trying to protect; 4. Many critical details have been passed over or lightly treated, such as protection of the New England National Scenic Trail, downwind impact of emissions from the compressor station blowdown; 5. Possible adverse impacts on permanently protected Article 97 lands both public and private; 6. Although the application CP16-21 has been accepted, much additional information, which could significantly impact the town, has not been submitted; 7. Unacceptable noise levels will be emitted from the compressor station; 8. Warwick has significant concerns about the area of high uranium and arsenic that the pipeline will cross.

C. The Town's Motion to Intervene Must Be Granted

The Town satisfies the standard for intervention under the Commission's regulations. As discussed above, The Town is directly impacted by the proposed project, and no other individual or organization can adequately represent The Town's unique interest in this proceeding. Further, The Town's intervention is in the public interest because the Town is responsible for the protection of the health and safety of all of its residents. Accordingly, the TOWN OF WARWICK MA respectfully requests that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The following individuals should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: J. David Young, Administrative Coordinator TOWN OF WARWICK MA

Address: 12 Athol Rd
Phone: 978-544-6315
Email: coordinator@town.warwick.ma.us

III. PROTEST/COMMENTS

IV. CONCLUSION

Wherefore, in light of the foregoing, the TOWN OF WARWICK MA . respectfully requests that the Commission (1) GRANT this motion to intervene and allow INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,
J. David Young, Administrative Coordinator
TOWN OF WARWICK MA

CERTIFICATE OF SERVICE

Wherefore on this January 4, 2016 I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission's electronic service list in this proceeding, in accordance with Commission regulations.

Warwick MA 01378

kathleenpadden@aol.com

The primary reason for this intervention filing is my objection to a for-profit company taking private property, conservation land, and state parks for their personal gain. They intend to tear through miles and miles of old growth forest, farm lands, under our rivers and through our water sources, blasting through our scenic, impregnable, central New England landscape (there's a reason the railroads bypassed many of the areas Kinder Morgan plans to plunder in Franklin County), leaving us with their mess when their glut dries up in a few short years.

We do not want, or deserve, to be their sacrificial lamb, especially when our region depends so much on tourism and farming, two things their pipelines and compressor stations would place in extreme jeopardy.

On a personal note, I live in Warwick, and KM intends to pass its pipeline through my town. During construction we'd lose use of use of the main roads in and out of town, a major inconvenience and safety hazard. Our roads and bridges are not constructed to handle the kind of weight - and abuse - that TNG would be heaping on them. We are a small community of 800 souls. This is not something we are equipped to deal with.

Nor are we set up to handle any pipeline-related emergency as our Emergency Services are completely volunteer. Any leak or fire in a town as heavily-wooded as ours with so few ways out is a disaster waiting to happen. It's insane that KM would even consider subjecting human beings to this sort of danger. Just because there's relatively few of us doesn't mean our lives don't matter.

We are also the next town over and directly downwind from the proposed compressor station in Northfield, MA, slated to be one of the biggest in the country, another nightmare in the making. There are many public safety issues to consider with this horrific proposal, including the impossibility of evacuating all of us in case of an accident, but also the proven threat to our health and well-being.

I moved here from Boston ten years ago so my asthma and COPD would improve, and it has, immeasurably. I don't see why my pulmonary status should suffer and cancer risk rise so Kinder Morgan can squeeze the last little bit of change from the shale boom.

In any case, the pipeline is not needed. Our Attorney General conducted a study proving that our state's energy needs are, and will be, adequately met without burdening the people or the planet with additional fossil fuel infrastructure. Our time and money is better spent adding renewables to the grid, not trying to cling to a form of energy that only benefits a few businessmen in Texas.

Thank you.

Kathleen Padden

January 4, 2016

20160104-5188

Motion to Intervene

in FERC Docket # CP1621000

by William Spademan

Summary

Tennessee Gas Pipeline Co. (TGP) proposes, in its Northeast Energy Direct project, to build a pipeline that would profit the company's shareholders at our expense, by externalizing many costs (costs that would be paid by the general public rather than by the company). If TGP took these costs upon itself instead of externalizing them (for example, if it built compressor stations beside its executives' homes, so they would occasionally die from explosions or poisoning, rather than members of the public), they would see clearly that the costs of the project outweigh any potential benefit, and the pipeline would never be built. The project is not needed and there are far better alternatives for our energy needs. The Federal Energy Regulatory Commission (FERC) should refuse permission for the project.

Money Over Life and Well Being

TGP executives are required by law to maximize return to their shareholders, regardless of what evil they must commit and regardless of what lies they have to tell. Their legal responsibility is at odds with common sense and with their moral and ethical responsibility. You FERC commissioners, on the other hand, are entrusted with the power and duty to uphold the well being of the people of the United States not the profits of TGP's shareholders. No one's profits are more important than a person's life not matter how large the profits, no matter how small the life.

Killing for a Price

In Friedrich Dürrenmatt's play *Der Besuch der alten Dame*, a woman offers townspeople a large sum of money to kill her former lover. Similarly, TGP's proposal promises to benefit some people financially, while killing and poisoning others. Since this pipeline serves no useful purpose (there are far better alternatives for our energy needs see "Alternatives" below), TGP's shareholders' financial profit is the only reason to approve this project. In your role as FERC commissioners, your task, like that of the townspeople in Dürrenmatt's play, is to decide whether the financial benefit outweighs your distaste for killing and poisoning people.

No Need

TGP claims the pipeline is needed to satisfy New England's increasing need for electricity generation. But it is an open secret (1) that TGP plans to use the pipeline to get fracked gas from Pennsylvania to the coast, for sale abroad at a much higher profit, which would of course result in increased domestic prices. This might serve the convenience and needs of the big business, but not the convenience and needs of the public. According to ISO New England, which oversees the operation of New England's bulk electric power system and transmission lines, in the past decade New England's electric power consumption has never again reached 2005's record level and New England's need for electric power generation is not expected to grow at all over the next decade (2). There is no real or planned benefit of the proposed pipeline, to the people of our region.

Poisoning and Blowing Us Up

By applying to FERC for permission to build this pipeline, the company is explicitly requesting permission to run explosive toxic chemicals through our forests, across our fields and rivers, over our hills, alongside our lakes, houses, and public ways. Gas pipelines often leak and explode. Compression stations routinely release large quantities of methane and other deadly toxins, including (3):

- methyl tertiary-butyl ether (MTBE)
- carbon monoxide
- isobutane
- methyl mercaptan
- n-butane
- n-hexane
- n-octane
- nitrogen dioxide
- nitrous-acid styrene
- 2-methyl butane
- 2-methyl pentane
- 3-methyl pentane
- ethyl benzene
- benzene
- ethane
- propane
- methanol
- naphthalene
- isobutene
- cyclohexane
- toluene
- m+p-xylene
- isopentane
- n-pentane
- isoprene
- dimethyl disulfide
- methyl ethyl disulfide
- ethyl-methylethyl disulfide
- trimethylbenzene
- diethylbenzene
- methyl methyl ethyl benzene
- tetramethylbenzene
- naphthalene,
- 1,2,4-trimethylbenzene
- m&p xylenes
- carbonyl sulfide
- carbon disulfide
- methylpyridine
- dimethylpyridine
- 1,1,2-trichloro1,2,2-trifluoroethane,
- 1,2-dichlorobenzene

- 2-butanone
- carbon tetrachloride
- chloromethane
- dichlorodifluoromethane
- ethylbenzene
- methylene chloride
- tetrachloroethylene
- trichloroethylene
- trichlorofluoromethane

as well as radioactive material. These releases, from scheduled and unscheduled blowdowns, fugitive emissions, and accidents, along with noise pollution and occasional explosions, have severe adverse effects on quality of life, including loss of property value, sickness, injuries, and deaths.

Spills and Accidents

According to the Wall Street Journal, there were 1,400 pipeline spills and accidents in the U.S. in the four years from 2010 to 2013 about one a day (4). According to the Pipeline and Hazardous Materials Safety Administration (PHMSA), many such spills and accidents result in hospitalization (1,365 in the twenty years from 1995 to 2014) or death (360 between 1995 and 2014) (5). These figures include only direct deaths and injuries and do not include the much larger number of deaths and illnesses resulting from poisoning of our air, soil, and water, such as nosebleeds, rashes, headaches, nausea, diabetes, birthdefects, neurologic disorders, cancer, heart attack, and inability to breathe.

As a former firefighter, I know that even a single small explosion here could be disastrous. Here in rural Western Massachusetts, we live in a forest. Even without gas explosions, it is not unusual for a forest fire in Western Massachusetts to burn several hundred acres before it can be extinguished. According to the state's Hazard Mitigation Plan (6), climate change is expected to increase the number of acres destroyed in each fire.

Deceitful Distortion of Impact Projections

According to the Northeast Energy Direct website, for new compressor stations FERC requires the noise level to be no greater than 55 decibels on a day/night average sound level (dBA Ldn) at the closest noise sensitive area (NSA). The site assures us this is like the hum of a refrigerator. The site does not mention that most refrigerators don't make any sound at all most of the time and living with your ears right next to a running refrigerator motor is unpleasant and unhealthy.

The site also does not mention that the compressor noise is quite a bit louder during blowdowns a sound that has been described as "comparable to a commercial jet taking off" (12). TGP's Resource Report 9 on "Air and Noise Quality" gives rosy estimates of minimal disturbance, based on projections rather than on measured noise at existing compressor stations during blowdowns.

Similarly, air quality impact projections are distorted. The EPA limits PM2.5 particulate emissions to 15 ug/m³. Projected emissions at compressor stations are on the order of 10 tons per year about 2,500 grams per day (2.5 billion ug). But that load of pollution is not distributed evenly throughout the day, nor evenly throughout the region. It is concentrated in a burst at the compressor station during a blowdown. Those 2.5 billion micrograms won't disperse immediately. So we can expect people living (or passing) near the compressor to experience sometimes a much higher concentration than the mere 15 micrograms per cubic meter limit. That shortterm concentrated pollution can be deadly. In practice, residents near existing compressor stations report a variety of severe adverse health effects (14)(15).

The normal background incidence rate of coronary heart disease (CHD) is about 28.8 per 1,000 person-years for men, around 23.3 per 1,000 personyears for women (8). For women, this rate increases by 42% for every 10 ug/m³ of PM2.5 particle pollution in the air women are much more affected than men by PM2.5 pollution (10). Women who live near a compressor station are more likely to die of a heart attack than women who don't. The compressor stations cause those deaths as surely as a bullet though no one will be able to

prove the causal connection.

Climate Change

Climate change is another externalized cost of the proposed pipeline. The large quantities of methane released by compression stations is a significant contributor to climate change.

Additionally, even one explosion could result in a fire that destroys hundreds of acres of forest. Like a person's life, or the value of clean water, clean air, and clean soil, the value of our forests cannot be realistically monetized. Without trees, we cannot breathe. With too few trees, carbon in the air warms the planet, causing mass migrations and death tolls potentially in the millions (7).

Our laws do not require TGP to consider such costs. It is the responsibility of FERC commissioners to weigh these costs against the potential benefits.

Alternatives

It is wellknown by now that conservation and energyefficiency improvements are more costeffective and easier on the environment than building new energy infrastructure (9)(4). With a combination of conservation, energyefficiency improvements, and renewable energy sources (wind, solar, lowimpact hydro, geothermal, anaerobic digestion, and other renewables), we can satisfy our energy needs without killing and poisoning people or destroying the planet.

Throughout New England there are many smallscale local initiatives for conservation, energyefficiency, and renewable energy production, that together will provide a more secure energy future than this ungodly pipeline. As even TGP admits, in its Energy Alternatives Conclusion (section 10.1.2.11 of Resource Report 10): "...the states in the Project area have all adopted policies, programs, and projects to reduce their state's dependence on fossilfuel electric generation."

Taking just one county (Franklin County, Massachusetts) as an example of such initiatives:

- The Northeast Biodiesel plant is expected to begin operating in Greenfield, MA in January 2016;
- The towns of Plainfield, Ashfield and Buckland are participating this year in the Massachusetts Clean Energy Center's Solarize Mass program, which provides financial incentives for private solar panels;
- Coop Power's CommunityShared Solar initiative gives residents an option to erect solar arrays jointly with other residents;
- Several dozen local businesses and over 1,200 residents have already taken up Greening Greenfield's "10% Challenge" to reduce energy consumption by 10%;
- The town of Greenfield (Franklin County's largest municipality) is actively working toward reducing energy consumption in all town buildings by 20%.
- Many individuals and families are taking advantage of free energy audits by Mass Save and Community Action, to reduce their household energy use.
- Our upcoming generation is painfully aware of the mess we have made of their world.

Many colleges now offer majors in sustainability and permaculture. The Tiny House Movement (13) is growing throughout the country, as people especially young people redesign their lives to have a smaller negative impact on the environment.

TGP's proposed pipeline would sabotage all those initiatives and others like them throughout the Northeast. In fact, the pipeline proposal is already undermining these initiatives, by taking people's time and energy away from productive endeavors, as they prepare to combat this unnecessary, evil pipeline proposal using civil disobedience and legal action, along with more direct approaches. Many community leaders and activists who were focused on building a sustainable energy future for our region, have shifted their focus to opposing this pipeline proposal, to keep it from undercutting all their good work.

TGP's analysis of Alternatives (Resource Report 10) is flawed in several ways:

- The report begins with a fallacious assumption, summarized with deceitful redundancy in its Energy Alternatives Conclusion (section 10.1.2.11): “As increasing demand for electricity continues to rise...”. As shown above, in the “No Need” paragraph, New England’s need and demand for commercial electricity generation is expected to grow not at all , over the next decade.
- The report addresses each “no action” alternative individually and argues that that alternative is insufficient. However, a combination of these alternatives would be sufficient and Report 10 does not mention that possibility.
- The report considers only largescale commercial solutions as alternatives. It does not, for example, consider tens of thousands of rooftop solar arrays, with battery storage, as a possible alternative. My family and I installed a 5kW solar array two years ago. It’s easy to do, has no impact on air quality, make no sound at all, and, combined with conservation, satisfies all the electrical energy needs of two families. We also installed a rooftop solar hotwater system seven years ago, that reduced our electrical consumption dramatically. No large corporation has the benefit of ongoing profits from these alternatives, so it was not considered in TGP’s analysis.
- The report addresses only production demand, not consumption demand, as exemplified in its Energy Alternatives Conclusion (section 10.1.2.11): “While these [alternative] measures will impact the overall demand for electricity from fossil fuel generation, [those alternatives] do not meet the purpose and need of the Project, which will provide additional natural gas pipeline transportation capacity to its customers...” In other words, the Northeast does not need the pipeline, but TGP could profit by building it.

Long-Term Plan

A gas pipeline has a typical lifespan of about 50 years. That’s 50 years of poisoning, explosions, sickness, noise pollution, and death.

What then? Presumably, build another pipeline for another 50 years of poisoning, explosions, sickness, noise pollution, and death. And with all that gas used up, we would have to do more hydraulic fracturing and dump even more toxic chemicals in the earth, to find more gas. We could then continue that cycle until there is no more natural gas to be found or until we have poisoned the earth so badly that no human life can survive (whichever comes first).

Or, when the pipeline reaches the end of its life, we could do what we should have done to begin with: use a combination of conservation, energy efficiency, and renewable energy sources to secure our energy supply indefinitely, without destroying ourselves and the planet in the process.

An Act of War

So, in effect, despite far better solutions to our energy needs, TGP is requesting permission to destroy property, poison our environment (making many people sick), and kill a few people outright. This can only be seen as an act of war on the people of New York, Massachusetts, and New Hampshire (in addition to Pennsylvania, where the process of mining the gas, through hydraulic fracturing, continues to cause additional deaths, sickness, injuries, and loss of property value).

Opposition

The people of Western Massachusetts will not allow this pipeline to be built, without a fight.

Western Massachusetts has a long history of fighting against oppressive rule by a faraway elite, dating back to before the American Revolution. Here is where we will make our stand against soulless corporations that lie, kill, poison the Earth, corrupt our government, and trample common citizens in relentless pursuit of profit.

This is a cause worth dying for. Our lives are at stake. Our children’s lives are at stake. The future of humanity is at stake. We will protect our planet. We will protect our forests, our rivers, our fields, our homes. We will protect our people and the children who will follow us down through the generations.

People here are angry. People are fed up with big business misbehaving. I even hear that some people plan to destroy TGP property and equipment, if this plan goes forward.

A war between the corporation and the people of Western Massachusetts will serve no one's best interests. But I believe war is what will come, if you approve this proposed pipeline. And if war comes, it could be very, very expensive for the corporation and for the people of our region.

This pipeline must not be built.

Basis for Intervening:

motion to interven of john and jane singleton

John and Jane Singleton are residences if the /town Of Pelham, N.H Hillsborough County, New Hampshire we live on Hobbbs Road which is between both pipeline routes We oppose this pipeline

We move to intervene, pursuant to commission Rules 385.214(b) and 157.10.

we are concerned of the safety of this pipeline, if something should happen we woud be trapped in both sides of the pipeline, we have no way off escaping., we have a swamp behind our home that is full of wild-life, and there is concern on there lives also. the Air and at the water we have an artisan well, which will definatelly be effected from the blating, it would ruin our underground water line,

The air quality would also affect , our health, with the emission from the Dracut compressor station.

This intervention is timely filed.

Basis for Intervening:

Michael and Nina Halley, Dracut, MA 01826

I am writing this letter on behalf of myself, my husband, two children and the Dadak Drive community as we are very concerned to learn that the Northeast Energy Direct project would lead to the development and installation of a compressor station in our neighborhood. We will be directly impacted by the Pipeline that is coming into our backyards. We are pleading for this to not to take place as I have a young family that I brought to Dracut to raise. My daughter is 7 and my son is 3 and we are concerned for their safety and what the harm this would bring to them. I am also concerned about my homes value and well as my neighborhood. Please take this into consideration

20160104-5196

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Project)

**MOTION TO INTERVENE OF
Patricia A Martin**

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Patricia A. Martin
17 Farrar Road
Rindge, NH 03461
(603) 899-2894
Pmartin2894@yahoo.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a blow torch to light a candle. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England’s ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

My interest as a taxpayer, neighbor and visitor to protected public land in Rindge, New Hampshire. I am particularly concerned that the pipeline will cross land within Converse Meadow, a property donated to the Monadnock Conservancy as a 240 acre easement which provides wildlife habitats and recreational activities. I am a frequent visitor to this beautiful site with hiking trails and lovely vistas. I personally donated to the fund to purchase this land for conservation purposes as well as pay property taxes for its funding and maintenance.

I am especially concerned with the financial premises for this project. Kinder Morgan and our public utilities have repeatedly asserted that pipeline constraints cause the high electricity rates paid in New England. However, when I examine my electric bill and compare the Service Delivery charges and Energy charges to

the national average from the eia.gov website, I see that for every 2.3 cents per KWh that I pay for energy charges above the national average, I also pay 2.5 cents per KWh above the national average for transmission and distribution charges. None of the studies commissioned by Kinder Morgan or the utilities discussed this issue.

Moreover, I have learned from a NESCOE presentation that ISO-NE is the last to come under the rules of FERC Order 1000 concerning competitive transmission markets. A white paper on the impact of Order 1000 on ISO-NE is expected in the first quarter of 2016. I am concerned that our utilities are “loading up” on projects in advance of the new rules in order to avoid competition. And, while the utilities are prohibited from extracting profit directly from transportation contracts, many of them have set up separate entities with investment in the pipeline projects in partnership with Kinder Morgan.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued. As a retired electrical engineer, Chair of my town energy commission, and frequent participant in legislative and Public Utility Commission hearings on energy policy, I feel that I can bring valuable information and perspective to this proceeding.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Patricia A. Martin

January 1, 2016

Why Pipelines won't solve high electric rates in New England in two charts

By Pat Martin

Feel free to play along. Grab your electric utility bill. We're going to be looking at the “detail” section of your bill. I was billed for 328 KWH (33 days) in my 2000 square foot house last month. Here's the detail:

{chart omitted}

Notice that there are two parts to these charges. The Generation Detail (I buy from a competitive supplier, Fairpoint's 100% renewable offer) is what I actually paid for the electricity I used. The Delivery Services Detail, is what the utility charges me for the use of all their wires, poles, transformers, meters, etc to get that electricity to my house. Specifically, the Transmission Charge is how much it costs to get electricity from the power generator to the beginning of the Eversource Distribution network. The KWH Distribution Charge is what Eversource charges to get it from their network to my house.

The distribution charge is \$0.041610 per KWH and the transmission charge is \$0.019570 per KWH. Now look at the chart below from the eia.gov website. It shows that the US average for distribution was \$0.026 per KWH and the transmission charge was \$0.009 per KWH in 2013. (Most recent eia data I could get for this.)

{chart omitted}

Although comparing 2013 data with current rates is not ideal, the eia projections show rates that are only slightly higher for 2020, so this is probably “close enough” and I was consistent in also using the 2013 average generation rates.

So, we pay $((.041610 - .026)/.026) * 100 = 60.04 \%$ or 1.5 cents more per KWh for Distribution Charges in New England

And $((.019570-.009)/.009) * 100 = 117.44\%$ or 1 cent more per KWh for Transmission Charges in New England.

These two higher charges contribute an extra 2.5 cents per KWh on the utility side of the bill.

And what about Generation? The US average was \$0.066 per KWH in 2013, while I paid \$0.0897 per KWH So, $((.0897-.066)/.066) * 100 = 35.9\%$ or 2.3 cents more per KWh for my actual energy than the US average.

As you can see our high transmission and distribution charges from the utilities have more to do with our high electricity rates in New England than does natural gas supply. The New England Power Generators Association members, who actually produce our electricity, oppose these projects being built at ratepayer expense. They are the ones who are supposed to use all this natural gas and they don't think we need it! They feel they have better solutions already working (Winter 2014-2015 wholesale rates fell 60%). In comparison with the utilities, they are a lot closer to the US average generation rates than the utilities are for transmission and distribution rates. Who has more credibility?

Were the high rates for transmission or distribution ever mentioned in all the commercials or research reports commissioned by Kinder Morgan and their front group, Coalition to Lower Energy Costs? Did the utilities step up and volunteer that it would be impossible for the NED or any other pipeline to cut our energy bills by 65% when almost 50% of our bill is for utility charges?

Betting that natural gas prices will stay low is a gamble; getting our utilities to operate more efficiently and cost-effectively is something that should be within our control. And while the utilities are not supposed to make any money from the tariff; Eversource and National Grid are investors in the Spectra Access Northeast pipeline, and Algonquin, parent of Liberty Utilities, is an investor in the NED pipeline. They will get their pound of flesh from us through those 20 years of reservation fees for which ratepayers will take all the risk....again...

Did we learn nothing from the scrubber on the Merrimack Coal Plant fiasco? The original estimate in 2005 was \$250 Million and that it would extend the life of the coal plant for 20 years. How did that work out? The final cost was over \$400 Million and we barely run the coal plant because of the high cost to operate it and the pollution it produces. It was a bad idea for which Eversource will receive 100% compensation at ratepayer expense.

Take our power as consumers back! Go to shopenergyplans.com and sign up with a competitive supplier offering at least some renewable energy.

20160104-5197

Town of Stephentown

26 Grange Hall Road, Stephentown, NY 12168

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Company, LLC

Docket No. CP16-21-000

Northeast Energy Direct

MOTION TO INTERVENE OF THE TOWN OF STEPHENTOWN, NEW YORK

The Town of Stephentown is a municipality incorporated under the laws of New York, 7.6 miles of the Northeast Energy Direct Pipeline will cross properties located within the municipal limits of the Town of Stephentown. The construction of the pipeline has the potential to disrupt private water supplies, contami-

nate protected water resources, harm public infrastructure (roads and bridges) and stress local emergency services.

Pursuant to Commission Rules 385.214(b) and 157.10, the Town of Stephentown moves to intervene in the above captioned proceeding. This intervention is timely filed.

I. CONTACT INFORMATION

Please enter the Town of Stephentown, New York below on the official service list for Docket No. CP16-21-000. All pleadings, filings and correspondence in this proceeding should be served on the following:

Town of Stephentown
26 Grange Hall Road
Stephentown, NY 12168

II. MOTION TO INTERVENE

The Town of Stephentown and its residents are directly and perhaps negatively, impacted by the proposed pipeline. The Town of Stephentown requires additional information with respect to the proposed pipeline. If constructed, the Northeast Energy Direct Pipeline will have environmental and economic impacts, not to mention impacts to individual landowners' property,

Intervention is necessary to enable the Town of Stephentown to protect its public infrastructure and natural resources and to defend its taxpaying residents and businesses and their property from encroachment by Northeast Energy Direct Pipeline.

The Town of Stephentown seeks to intervene to monitor this proceeding and address potential effects to land, wetlands, rivers and streams, rare and endangered species, transportation, and homes in close proximity to the proposed pipeline.

Further, the Berkshire Regional Planning Commission has also been acting on behalf of the Town of Stephentown, New York, and the various municipalities and districts in Rensselaer County, New York and Berkshire County, Massachusetts through which the Northeast Energy Direct Pipeline is proposed to or could pass through or impact to protect their common public interests.

The Berkshire Regional Planning Commission filed scoping comments with FERC on October 15, 2015 (accession no. 201510155279; docket no. PFI4-22-000) which comments are incorporated herein by reference. The Berkshire Regional Planning Commission continues to coordinate the dissemination of information to the County of Rensselaer, New York and the various municipalities in Rensselaer County, New York and Berkshire County, Massachusetts. This motion should be regarded as also made in support of the intervention motion made by the Berkshire Regional Planning Commission.

WHEREFORE, for the foregoing reasons, the Town of Stephentown requests that the Commission GRANT this motion to intervene.

Respectfully submitted,

Larry Eckhardt, Town Supervisor
Town of Stephentown
26 Grange Hall Road
Stephentown, NY 12168
518-733-9195 office
518-733-6492 fax
kcfaac@taconic.net e-mail
sclerk.wagar@aol.com e-mail

This 28th day of December, 2015

and cause traffic and transportation disruptions along with related interruptions of public services. There are also approximately 417 homes within 1000 feet of the proposed pipeline, and these residents are deeply worried about the reduction in value of their homes, and the difficulties they may encounter in refinancing and in obtaining homeowner's insurance for their properties. Faced also with the looming threat of the forcible taking of their property to facilitate the construction of the Project, these citizens are uniquely harmed by the Project and the Town is obligated to defend them from encroachment by the pipeline. Moreover, the Project threatens public safety by placing fire and explosion hazards in close proximity to residential areas, and subjects the Town and its residents to an ongoing fear of such catastrophic incidents. The Town's emergency response systems will also be burdened by these pipeline failures with limited resources and personnel to respond to and combat a pipeline failure should one occur in our community.

3. The Project specifically contemplates building a compressor station in Dracut, Massachusetts which is located within one mile of the Town of Pelham. This compressor station would negatively affect the quality of life for all nearby Pelham residents. In addition to producing harmful toxic emissions and atmospheric pollution, the compressor station will burden our residents with constant noise pollution that will be unbearable and damaging during blowdowns. Communities should not have to endure the inherent risks associated with compressor stations.
4. The Town of Pelham is responsible for the protection of both its natural environment and the health and welfare of its residents, and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project. Accordingly, The Town of Pelham has a substantial interest in the outcome of this proceeding. Moreover, given the Town's expertise and familiarity with the locale of the proposed pipeline and compressor station and the proposed alternative site locations, its participation in the above-captioned proceeding will significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual(s) should be included on the service list for this docket, and all communications should be sent to:

Brian McCarthy/Town Administrator
6 Village Green
Pelham, NH 03076
1-603-508-3074
bmccarthy@pelhamweb.com

III. CONCLUSION

WHEREFORE, the Town of Pelham, NH respectfully requests that it be permitted to intervene in this proceeding with full rights to participate in all further proceedings.

Respectfully submitted,
Brian McCarthy
Town Administrator
6 Village Green
Pelham, NH 03076
1-603-508-3074
bmccarthy@pelhamweb.com

Dated: December 29, 2015

20160104-5201

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

**MOTION TO INTERVENE OF NINA ANDERSON COLER
IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, I file this Motion to Intervene in the above-captioned proceeding. I oppose the project because of natural resource, infrastructure and economic impacts and seek party status to protest the proposed pipeline, and fully protect my personal interests and those of my grandchildren.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

I am a resident of Ashfield, Massachusetts. My home is 1 mile north of the proposed pipeline route. My husband and I have placed the majority of our 90 acres under a conservation easement. I am a mother and a grandmother of children that live in town. I have dedicated much of my life's efforts to supporting the preservation of our open, rural land for the purpose of growing food on numerous small farms and for the protection of wildlife habitat and recreational spaces for the community. I have been on the Board of Directors of the Franklin Land Trust for a dozen years and I have been on the Ashfield Park Commission for 10 years. I also work to maintain the historical integrity of our community by serving on the board of the Ashfield Community Hall (an historic structure) and past years on the Ashfield Historical Commission. Personally I have lived off-grid for 20 years, doing all that I can to lower my carbon foot-print. Philosophically, the notion of fracking is morally reprehensible to me. Suffice it to say that I am a very active member of my community and have grave concerns about the future health of our collective small towns if the pipeline is allowed to be built. I will do all that I can to see that it is not built.

Description of Impacts

I will be impacted and harmed by the proposed project in the following ways:

Water resources and water shed: Our well is drilled into the same geologic formation that the proposed pipeline route intends to cross, there will be blasting due to all the ledge that is prevalent in our area. I am concerned that all this destruction will have impact on my well in terms of water quality and quantity. In the bigger picture, the proposed route follows the Bear River water shed which is home to native trout. The Bear River feeds into the Deerfield, then into the Connecticut. Years of effort and great resources have been spent cleaning and protecting these very important water sheds. They are not only important to the creatures that rely on them (humans included) but are a source for beauty for tourism, a very important business in this area.

Financial Impact: This is one of the last rural, pristine areas left on the Eastern seaboard. It is not an industrial region. Many of us make our living based on the non-industrial nature of our region. Farming is very important to us, and we support our local farmers in order to know where our food comes from. We enjoy the vistas that this farming creates. These vistas in turn make for a tourism industry. On a personal level as an artist, I rely on tourism to sell my paintings of local scenes. Our small towns have a difficult time keeping the tax rate down whilst still keeping the schools running and all the other services that are necessary. The impact on our roads from the construction, the loss of bucolic vistas needed for tourism and farming, the inability of our fire and ambulance services to protect us from major explosions all work to degrade the financial health of our towns. How can an organic farmer's crops be protected from the down draft of poisonous fumes from a vent pipe or compressor station? What happens to his/her livelihood? I would like to know how Kinder Morgan proposes to compensate for these far reaching economic issues. I also have concerns about the value of our homes at that point, especially those of my friends and neighbors that own homes on the proposed route.

Carbon and Water Footprint:

We quantify our carbon and water footprint on a regular basis and have demonstrated a sustained reduction of both by nearly 75% of the average American household. To have the Northeast Energy Direct Pipeline Project deliver a fossil fuel product that was extracted in such secretly destructive and poisonous manner is a vulgar show of complete disregard for the Earth and its inhabitants. As a member of the human species who chooses to make a difference today in how we treat the Earth, I am utterly and completely offended by FERC's nonchalant and continued approval of fossil fuel exploitation. The proposed NED development will cost rate payers billions of dollars and projects decades of continued extraction, transport, and use of fossil fuel. Like the tar sands of northern Alberta, its development flies in the face of agreements made at the 2015 Paris Climate Conference (COP21.) and this country's efforts to curb its destructive fossil fuel energy portfolio.

Article 97 of the Articles of Amendment to the Massachusetts Constitution: As a taxpayer in the State of Massachusetts, I trust (and demand) that all private and public land (APR or otherwise designated) that falls beneath the protection of said Article, be dealt with in accordance with the protocols established by said Constitution. Any change of use whether temporary or permanent must be voted upon by "Lands and easements taken or acquired for such purposes shall not be used for other purposes or otherwise disposed of except by laws enacted by a two thirds vote, taken by yeas and nays, of each branch of the general court." Per the Massachusetts Constitution, I have a constitutional right to a clean environment and therefore any attempt to thwart such would be considered a breach of public trust.

Liability Concerns: With their poor fiscal status I am concerned about the company's LLC status and its ability to cover potential damages. The Commission must consider this issue and explore solutions which may include requiring the parent company to take responsibility for liability or post substantial bond to ensure its ability to pay for damages.

B. No Need for the Pipeline

The impacts described are problematic generally, but entirely unacceptable given that TGP has failed to demonstrate a need for the pipeline. In the three years TGP has offered open contract seasons to local gas distribution companies, their interest is only .55 bcf/day. Even after downsizing NED from 2.2 bcf/day capacity to 1.3 bcf/day, these contracts cover less than 40 percent of capacity. A recently-released assessment of New England's electrical needs by the Massachusetts Attorney General's office demonstrated that the electric sector does not need NED or other major new gas pipelines: [http://www.mass.gov/ago/doing-business-in-massachusetts/energy-and-utilities/regional-](http://www.mass.gov/ago/doing-business-in-massachusetts/energy-and-utilities/regional-electric-reliability-options-study.html)

[electric-reliability-options-study.html](http://www.mass.gov/ago/doing-business-in-massachusetts/energy-and-utilities/regional-electric-reliability-options-study.html). I request that FERC adopt this study's findings and recommendations in evaluating the question of domestic need for the NED pipeline.

II. CONTACT INFORMATION

The following should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Nina Anderson Coler
Address: 168 Bailey Rd., Shelburne Falls, MA 01370
Phone: 413 834 2465 Email: ninacoler@hotmail.com

20160104-5203

I live in Andover, Massachusetts, and want to have the ability to intervene in this proceeding to oppose the NED pipeline. I have interests that may be directly affected by the outcome of the proceedings. For example, the proposed route for the NED pipeline goes through my neighborhood. My home is expected to be in the blast radius and I fear for the well being of my family and fellow community members if this pipeline is built.

-Zachary Zimmerman

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Northeast Direct Project of
Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

**MOTION TO INTERVENE AND COMMENTS OF PRIVATE CITIZENS
FROM HOLLY HIGINBOTHAM AND ROBERT R. WOOD, WINDSOR MA. RESIDENTS**

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”) promulgated at 18 C.F.R. § 382.212 and § 385.214, we, Holly Higinbotham and Robert R. Wood, of 300 High Street Hill in Windsor, MA, respectfully move to intervene and provide comments in the above-captioned proceeding.

Basis and Grounds for Intervention

We are residents of Windsor MA living within 1.42 miles of the proposed compressor station, and closer still to the proposed pipeline. We have an organic garden in which we grow food for year-round consumption. We have neighbors across the street who keep chickens and whose eggs we eat. We have a well that supplies our drinking water. We have a swimming pool which we use on a daily basis in the summer, and which our grandchildren come to use.

Therefore, we request intervenor status because we would be directly impacted by this project. Because of the level of emission pollutants in the air and water, our garden would no longer be considered organic and we would not feel safe eating the produce we grew. We would be concerned about the safety of our drinking water, and we would no longer feel that our swimming pool was safe to swim in especially for the grandchildren who are less than five years old. As a result of this project, our lifestyle would be inalterably destroyed, our well water put in risk of contamination, our health would be endangered, and our property value would be seriously diminished.

Pursuant to Commission Rules 385.214(b) and 157.10, we move to intervene and file comments in the above proceeding. This intervention is timely filed. We file this motion jointly, as a couple.

Contact Information

Please enter us on the official service list for Docket No. CP16-21-000. All pleadings, filings and correspondence in this proceeding should be served on the following:

Holly Higinbotham 300 High Street Hill 413-684-3724. higinbo@hotmail.com

Robert R. Wood 300 High Street Hill 413-684-3724. rrwood50@hotmail.com

Motion to Intervene

We seek to intervene because we are directly impacted by the proposed 41,000 hp compressor station (which could double in size at the option of the developer). We would be impacted by compressor station emissions, ground water (well water) contamination during construction and from subsequent pollution, structural damage from blasting during construction, loss of ability to grow our food, endangerment of our swimming pool due to airborne contaminants, and devaluation of property value. As residents of the Town of Windsor, we would also be impacted by damage to our roads (and the cost of repairing them), increased truck traffic on roads that were not built to accommodate such traffic, impoverishment of our town’s financial resources (due to decline in property values and therefore tax revenues), impoverishment of our town’s environmental resources (we are located in a pristine, boreal forest that would be negatively impacted by the construction of and operation of a large compressor station and pipeline), and undue stress on the limited infrastructure of a town served primarily by volunteer officials, a volunteer fire department, and mostly part-time paid personnel. Any significant emergency caused by accidental explosions, contaminations, truck

accidents, or other pipeline and compressor station related events would quickly overwhelm the resources of the town and endanger our well-being.

We oppose this proposed project for the foregoing reasons. We request that the Commission GRANT this motion to intervene and comment.

Respectfully submitted,

Holly Higinbotham and Robert R. Wood

20160104-5206

Basis for Intervening:

I am a directly impacted landowner that will hear, smell, feel, see and breathe the effects of the compressor station during construction and into operation. I commute through the impacted area on a daily basis and am part of a local running group that routinely jogs in the immediate area. I own a home within one mile of the Mid station 4, New Ipswich compressor station.

340 Hadley Hwy
Temple, NH 03084

I am concerned about the air quality impact associated to discharges for routine operation, maintenance and emergency responses.

I am concerned with disturbances to our well as it taps into a stratified drift aquifer that the compressor station is on top of and of the potential impact to the recharge rate as a result of construction of the compressor site.

I am concerned with the continuous noise associated with operation of the compressor station.

I am concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.

I am concerned with traffic, noise, air pollution and numerous disturbances during construction.

I am concerned with the impact to my property value of my house as a major investment towards my retirement as a result of its proximity to a compressor station and high pressure gas line.

I am concerned with the potential health and safety risks to young children attending the Temple Elementary School and associated with impact to air and water quality and safety as a result of operations of the compressor station.

I am concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and to lives.

I am concerned with the industrialization of the neighborhood. The only things that are comfortable living next to 41,000 HP compressor stations is other heavy industry.

I am concerned with potential long term risks associated with the in place abandonment of the compressor station, pipe lines and associated support equipment as its usefulness is depleted.

I am concerned with the impact to open space, wildlife and conservation areas through the installation of the compressor station and pipeline.

I live in the close proximity to the proposed compressor station and will feel its effects.

Basis for Intervening:

I am a resident of Deerfield, MA, an impacted community with concerns about the various impacts of a liquid natural gas pipeline on our town.

I am worried about the effects of probable leaking from a pipeline of any quality, let alone the substandard grade they are planning,

Environmentally I am concerned about the impact of the construction and presence of the LNG pipeline on our local ground water, the effect on local wells and farmland that rely on irrigation from the Deerfield River.

I am concerned with the impact of the pipeline on historic sites from Deerfield's unique past.

The proposed route threatens to impact a unique religious retreat center where I have volunteered.

With an active Amtrack route crossing the pipeline I am worried about increasing service and the impact on a LNG pipeline. I live a few miles south of the proposed intersection and the fear of something catastrophic happening is very real and unsettling. I am concerned about the ability of our small town local fire department to be able to handle a disaster of this magnitude.

Lastly I support our Constitution, in which Article 97 states, in part, "The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historical, and esthetic qualities of their environment...Lands and easements taken or acquired for such purposes shall not be used for other purposes."

As MA taxpayers, we paid for all conserved land in MA. As 30 year residents of Deerfield we have supported the protection of woodlands and farms in an effort to preserve the rural way of life in an area with the top 2% farmland in the world.

I also feel that an LNG pipeline sourcing the gas through fracking is the wrong direction our country should take to add to our energy needs. I favor conservation and alternative options.

Basis for Intervening:

I am a retired home owner who lives in

Dracut, MA in close proximity of the proposed gas lines as well as the proposed meter stations near both St. Francis Church and Cart Path Rd. I am very concerned about the potential devaluation of my home. My only water source is an artesian well and I am very concerned about the fact that blasting from construction of a compressor station on a contaminated former EXXON site may cause contamination of underlying aquifers. As a senior citizen, I am also very concerned about potential air pollution caused by emissions from these stations impacting my health. Another serious safety concern is the addition of pipelines in very close proximity to an expanding quarry (Brox) whose blasting frequently shakes homes more than 3/4 mile away.

Basis for Intervening:

1. I am a Dracut, Massachusetts resident and live on Cart Path Road, close to a proposed compressor station and a proposed metering station which will impact me and my family.
2. I live less than a quarter of a mile away from Brox Industries which is an active blasting quarry. This is also less than a quarter of a mile from the proposed metering station off of Cart Path Road in Dracut.
3. I have children who attend Campbell School which is about a mile away from the proposed metering station and compressor station.
4. I am a taxpayer in Dracut and am concerned with loss of property value.
5. I am a consumer of products from Dracut farms and am concerned about contamination of soil and water in the proposed area of the new pipeline and compressor stations.
6. I am a ratepayer for National Grid gas service and electrical service and am concerned about overpaying for unnecessary pipeline infrastructure which is primarily intended to move large amounts of gas for export.

Basis for Intervening:

BEFORE THE UNITED STATES FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

A subsidiary of Kinder Morgan

(Northeast Energy Direct Pipeline)

Docket No. CP16-21-000

MOTION TO INTERVENE OF EDWARD HOLUB IN OPPOSITION TO

NORTHEAST ENERGY DIRECT PIPELINE

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Edward Holub

49 Barton Hill Road

Dalton, MA 01226,

edwardholub@aol.com

My interests would be directly affected by the outcome of the proceeding pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

The quality of the air that I breathe—I choose to move to Dalton, Massachusetts five years ago because I had trouble breathing the poor quality of air in Charlotte, NC. Two weeks after I moved to Dalton, I no longer needed to take medication to breathe. The proposed pipeline would negatively impact the quality of the air I breathe and thus my health. There is potential venting of hazardous gas from the mainline valve located in Dalton. There will also be hazardous gas flowing into Dalton from the nearby compressor station.

During construction and after, water runoff will be effected. Besides affecting the Dalton drinking water, the runoff water would likely contribute to pollution of the east branch of the Housatonic River. Soil in the town of Dalton contains many hazardous chemicals left over from 200 years of manufacturing. Many of the sites have been abandoned for decades and there is no reliable data regarding which hazardous chemicals are present and exactly where they are located. Construction of the pipeline will cause these hazardous substances to migrate and when these toxic substances enter into the East Branch of the Housatonic River, some will be incorporated into the fish making them further dangerous to eat. Toxic substances will also migrate down the river into Long Island Sound. They can make various shellfish inedible. This would adversely affect me because I like New England Clam Chowder.

There are other ways that the proposed pipeline would adversely affect me. The quality of the town drinking

water would be compromised by the pipeline's construction near the reservoir that is used as the source for Dalton drinking water.

I am a consumer of electricity and as a ratepayer would be affected by this project because it would affect the rate I will pay for electricity.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted, Edward P. Holub January 4, 2016

20160104-5222

MOTION TO INTERVENE OF MARGARET SCARSDALE

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan").

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

My interest as an electric ratepayer, inasmuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a blow torch to light a candle.

This claim is evidenced by the opinion of the United States Energy Information Administration, the federal agency that "collects, analyzes, and disseminates independent and impartial energy information to promote sound policymaking, efficient markets, and public understanding of energy [policy]." According to the agency's data, the six New England states consumed a total of 889 billion cubic feet (bcf) of natural gas in 2013. The data also show that New England's natural gas inflow capacity is currently 1,709 bcf/yr, exclusive of the region's three liquefied natural gas (LNG) import facilities, which in the past have contributed additional capacity of up to 150 bcf/yr. The data does not show that the pipeline is needed to meet our energy needs.

I also am aggrieved because Black & Veatch in their report to NESCOE said that in a Low-Demand Scenario, NO NEW PIPELINE would be needed. The citizens of Massachusetts deserve a full evaluation of the Low Demand Scenario, the consideration of LNG imports to serve as the natural gas bridge option until renewable source capacity matures, and above all, a commitment to repair the pipeline leaks that account for as much as 56 million cubic feet/day of gas in Massachusetts, or more than 10% of the peak-shaving capacity shortfall estimated by NESCOE's own consultant, Black and Veatch.

As for the cost to the ratepayers, Kinder Morgan's estimated costs for this project have ballooned exponentially, from the original \$1.2 billion to \$2.1 billion to latest estimates of \$7 billion – apparently where our pocketbooks are concerned, the sky is the limit. Additionally, the massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England's ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

My interest as a resident of Pepperell, MA, listed on the Company's original pipeline route and still listed as an alternate, inasmuch as Pepperell is home to hundreds of acres of conservation lands (bought and paid for with the money of Pepperell citizens) and rivers that would be affected if the alternate route becomes, again, the main route for the proposed pipeline. One of the most widely known tracts of land in Pepperell is Pepperell Springs, which, as its name suggests, is a natural spring that provides some of the cleanest drinking water in the area. In 2004, the town of Pepperell voted unanimously to purchase the 265-acre parcel for permanent conservation protection. Multiple local, state, and federal organizations worked for years to acquire this land that was deemed a protection priority. Heald Orchard, located on Heald St. is another area that would be in the direct cross-hairs on the Company's alternate route. This is an 80-acre town-owned

property, which leads into a lovely, secluded pond where my family and I have spent many peaceful afternoons relaxing in the water and leisurely kayaking around its many nooks and crannies. Heald Orchard also has a 1,000,000 gallon water tank located where the proposed line would run. Massachusetts is also forward-thinking enough to have Article 97 in our Constitution, and we are urging our representatives to use this legal tool to protect our land. The proposed (alternate) main line, not including laterals, will cut through 30.9 miles of core waters (206 wetlands, 15 outstanding resource waters, 13 public water supplies, 2 scenic rivers, and 4 wellhead protection areas) (data compiled from the Massachusetts GIS website by Samuel King of Sustainable Community Development at UMass).

My interest as a human being dependent on clean air is that “natural” gas (obtained through “fracking”) is often touted as a clean alternative to other fossil fuels, yet the significantly greater increase in methane that is produced in the production of “natural” gas is alarming. The Environmental Protection Agency has already weighed in on this issue: “Pound for pound, the comparative impact of CH₄ on climate change is over 20 times greater than CO₂ over a 100-year period.” Henry Tepper, President of MassAudubon has stated that: “The proposed Kinder Morgan project... is also contrary to the state’s commitment to meet the greenhouse gas (GHG) emission reduction targets of the Global Warming Solutions Act.”

My interest (concern) in fracking is based on scientific data and environmental studies. According to the United States House of Representatives Committee on Energy and Commerce’s report, “Between 2005 and 2009, the 14 oil and gas service companies used more than 2,500 hydraulic fracturing products containing 750 chemicals and other components.” More critically,

Between 2005 and 2009, the oil and gas service companies used hydraulic fracturing products containing 29 chemicals that are (1) known or possible human carcinogens, (2) regulated under the Safe Drinking Water Act for their risks to human health, or (3) listed as hazardous air pollutants under the Clean Air Act. These 29 chemicals were components of more than 650 different products used in hydraulic fracturing. (<http://democrats.energycommerce.house.gov/sites/default/files/documents/Hydraulic-Fracturing-Chemicals-2011-4-18.pdf>)

My interest in the general environmental health of the Commonwealth and my very close neighbors in New Hampshire, in that conservation lands, private lands, and state forests are in the crosshairs of this pipeline – and therefore subject to a 100- to 125-ft destruction zone while the pipeline is being laid, and a 50-ft permanent vegetation-free zone thereafter. This permanent zone is maintained with chemicals, some of which are carcinogenic. The “alternate” pathway through Pepperell for the proposed gas pipeline will be constructed through numerous environmentally sensitive areas, including state-designated Areas of Critical Concern, town-owned conservation land, and critically important watershed areas. The permanent 50-foot-wide right of way would be kept clear with chemicals that have not been fully evaluated as to their effect. Indeed, according to the Office of Energy and Environmental Affairs, one of these chemicals, Metsulfuron-methyl, “is a relatively new herbicide,” and the OEEA states that the studies provided on its website as to this herbicide’s safety “have been provided by the registrant, EI DuPont.”

These studies differ from that of the U.S. Department of Agriculture (USDA), which states that with use of metsulfuron-methyl “damage to sensitive nontarget species could be expected in ground broadcast applications at distances of about 500 feet from the application site in areas in which off-site drift is not reduced by foliar interception”. [1] With regard to effects on humans, “[t]he lack of experimental data regarding dermal absorption of metsulfuron methyl adds substantial uncertainties to this risk assessment”. [2]

My interest in the safety of my friends and neighbors is another factor that leads me to intervene in this project. According to the Department of Transportation’s Pipeline and Hazardous Materials’ Safety Administration (PHMSA), there have been over 5,500 “significant incidents,” resulting in over 360 fatalities and 1,360 injuries. These significant incidents have resulted in a total cost of over \$7 billion dollars. These are not even the sum total of all accidents, fatalities, and injuries, only the ones that meet certain criteria, for instance, requiring hospitalization or resulting in more than \$50,000 in cost for that incident.

All of this proposed destruction and increased health and safety risks for maybe 75-100 years of energy

from the Marcellus Shale in Pennsylvania? Maybe 75-100 years. According to the U.S. Energy Information Administration (EIA), “There remains considerable uncertainty regarding the size and economics of this resource.” Surely we could not be more short-sighted than to engage in all this effort for barely more than the one generation’s worth of energy supply we will receive. All of this destruction so that we can contribute to escalating the dangers of global climate change? And all funded by taxpayers? Kinder Morgan’s claim that “in most of our businesses we operate like a giant toll road” seems to be quite accurate. I believe the “toll” for the Northeast Energy Direct (NED) pipeline is unacceptable.

Sincerely,

Margaret Scarsdale

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	hometown@crocker.com	

Basis for Intervening:

I am a resident of Franklin County, Massachusetts, having live here since 1983, now residing in the Town of Montague, one of the eight Franklin County towns through which the NED seeks a Certificate of Public Convenience and Necessity.

I am also an award-winning internationally-recognized documentary filmmaker who has dedicated my life’s work to protecting and enhancing local economies, culture, and environment in mine as well as other regions (homeplanetpix.com).

As a member of the Connecticut River Watershed Council (and residing within the Connecticut River Watershed); The Franklin Land Trust; and the Mount Grace Land Trust, I support their opposition to this project. As a resident of the Town of Montague with the knowledge of it’s unique geology of igneous basalt and sedimentary formations, I am aware of unpredictable consequences that will result from blasting and lateral drilling, with the potential to degrade the water quality that I drink. As citizen, resident, and steward of this land, I understand the vast destruction that will result from trench digging through hundreds of brooks, streams, and other waterways, as well through farmlands and wildlife habitats.

For these reasons, I would be affected by the Applicant’s filing. My interests cannot be fully represented and protected by any other party. Hence, I seek permission to intervene in proceedings for Northeast Energy Direct.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	brock296@yahoo.com	

Basis for Intervening:

I am a 20 year resident of Northfield, MA, a small, quintessentially New England town of 2,000. I love living here because it provides a lifestyle that absolutely suits me. A big front porch on my old house, a large yard, and immediate access to beautiful woods and walks.

Enter Kinder Morgan and their hell bent pursuit for more (\$). I'm hard put to imagine anything worse. In their initial "informative meetings" to the townspeople they brushed aside every and all presented concerns as non-issues. Further they gave very misleading information which we only later learned. Early on about 1 in 6 townspeople voted for their proposal. Since then our learning curve has brought this to maybe 1 in 30. (Dare I say, there's always that one voter that Trump is looking for.)

My interests which may be directly affected by the outcome of this proceeding include:

- 1) my interest as an electric ratepayer, inasmuch as the Company seeks to secure my electric utility as a Project Shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. The massive overbuild in Kinder Morgan's proposal is very likely to lead to higher energy costs for New England's ratepayers - either because the excess capacity contracted for our utilities would go unused, or because the capacity would be used for markets overseas, driving up domestic energy prices.
- 2) my interest as a Northfield resident of a pristine area that must be protected from the disruption and destruction required in both the building of the pipeline and compressor station but in its functioning. There is a very bad track record as to what Kinder Morgan has left in its wake. Ignored leads of toxic chemicals, as well as light and noise pollution from the proposed compressors. Kinder Morgan has evidenced a serious lack of corporate responsibility to date. I would think that they would not be allowed to continue laying pipelines and all that that involves without first having cleaned up behind themselves. So far, nothing short of a court order to do so has gotten their attention. Though to date they have only been recently court ordered to clean up two of the worst sites, as far as I know, but not the lesser ones - which is a sorry state of affairs. How could this be allowed to continue to happen???
- 3) my interest as both a beekeeper and a birder.

For many years I have done all I could to support and further the Eastern Bluebird population in my area, and through my efforts as well as the efforts of others in town I believe that Northfield is distinctive in having an unusually high bluebird population per square mile. Most people have never seen one. Some years ago they were close to extinction. They come to my back porch feeder all year long many times a day. Over the past two years or so their population growth has expanded their territory exponentially, and only because they have a suitable environment in which to do so. Birds fly. Exposure to any gases and toxins produced through leaks, emissions, etc. in the area, air or ground, will certainly have a direct and catastrophic impact on them. No territory in town is outside their reach.

My honeybees also fly, foraging and drinking from streams and water sites up to several miles away from their hives. Most certainly exposure to toxic air or ground leaks/spills would be either deadly or produce unwanted aberrations that would render them as good as dead. I would also have serious concerns about the honey that they would produce in that environment.

Since the demise of the honeybees has become a newsworthy matter of considerable importance, I would hope that they would count in this picture. There are quite a few beekeepers in this area, and those of us who haven't given up soldier on, but it is touch and go as conditions now stand, never mind adding the above described exposures.

- 4) my interest in our small family business making custom bamboo fishing flyrods. In and around this is supporting and advocating for healthy, unpolluted, undisturbed streams and rivers. Fish (and, of course, all wildlife) require this. The fish populations are unarguably already in serious decline. Having a pipeline cross over our streams and rivers many times is an absolutely outrageous prospect in a situation where it has already been established that both accidents and degradation of equipment happens. Further, as mentioned above, these situations frequently remain unaddressed.

Even without the likes of Kinder Morgan and their pipeline, our fragile ecosystem is already on a very troubling trajectory. The primary solution is clean, sustainable energy. Now, not tomorrow.

Kinder Morgan doesn't give a damn about our natural resources or our very documented wish to not have their pipeline and compressor station in our town. The reality of a diminished quality of life for the people who have to live with what they create and leave in their wake is of no concern to them. It's only about corporate profit.

FERC has a clear history of siding with business, not people or the environment. Even if it meant saving a few dollars on our electric or gas bills (which remains questionable) it's the wrong direction to go. This I say as a 71 year old woman on a modest fixed income. It would be an extraordinary affirmation of all things good to see FERC side with the overwhelming majority of Northfield residents that I join in opposing the pipeline/compressor wherein quality of life is chosen over corporate profit and the promise (which is not the same as the reality) of our saving a few dollars.

20160104-5226

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we, Peter O. Dion, Trustee of the Peter O. Dion Revocable Trust of 2005, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Peter O. Dion, Trustee
Peter O. Dion Revocable Trust of 2005
430 River Road
Andover, MA 01810
Tel: 978-258-5781
Email: Pdionpipeline@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

- My home is directly inside a Construction Zone and is to be fenced off including cutting off of access to our common driveway, my RV that is parked on my personal driveway and tethered to an existing structure, and my neighbors.

- I specifically purchased my home 10 years ago because it provided a beautiful bucolic setting with lots of wildlife including deer, turkeys and foxes plus significant tree screening of the abutting power lines but this pipeline will eliminate all of the trees and natural habitat along with the abutting forest areas that will be razed to make way for construction access and a permanent maintenance easement thus leaving no place for the wildlife to habituate as well as ruining my view not to mention the value of my property.

- The proposed pumping station will be less than one mile from my house.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Peter O. Dion Trustee, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 4th day of January, 2016.

Peter O. Dion
430 River Road
Andover, MA 01810

Basis for Intervening:

I am a resident who lives in the "blast radius" next to a wildlife management area that is proposed as part of the route. I believe the people and wildlife in the commonwealth would be put unnecessarily at physical risk. My drinking water would be at risk, my community would be significantly impacted, and the development of new fossil fuel infrastructure is irresponsible in the face of the scientific understanding of climate change. Please do not allow the development of this pipeline. I have four sons whose lives will be impacted more than ours. Like Obama did with the Keystone XL pipeline, please, make the responsible and obvious decisions necessary.

Individual	judi.l@verizon.net	

Basis for Intervening:

I live in Northfield, MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a member of this community who has grave concerns about the various impacts this pipeline will cause to our local economy, environment, aesthetics, and health. I am also an electric ratepayer who if KM secures my utility as a project customer, expects to see an increase in my bill relating to NED cost recovery. I also enjoy the out of doors and live in Northfield in order to enjoy the local beauty. I do not want any state or town public parks or

forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

Individual mdmercier@hotmail.com

Basis for Intervening:

I live in Nassau, NY, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because...

- I am a landowner directly impacted by the pipeline route / compressor station.
- I am a resident who lives in the "blast radius" so I would be at physical risk.
- I am a resident whose source of drinking water is within one half mile of the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.
- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health.
- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.
- I enjoy the outdoors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.
- I live in a recreational community and am concerned about health and environmental impacts as well as property values.

Basis for Intervening:

I am a land and house owner within the 1/2 mile impact zone of the compressor station planned for New Ipswich, NH. My family's lives, health, and land are affected by this proposed project.

20160104-5234

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)

Docket No. CP16-21-000

**MOTION TO INTERVENE
OF RUTILIOUS B. PERKINS III**

Pursuant to Rule 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”), 18 C.F.R. §385.214, and pursuant to the Regulations under the Natural Gas Act at 18 C.F.R. 157.10, I, Rutilious B. Perkins III, as Movant, respectfully move to intervene in the above-captioned proceeding.

Pursuant to 18 C.F.R. 157.10(a)(1), the Movant also hereby states specifically that I seek a formal hearing on the application by Tennessee Gas Pipeline Company, L.L.C. (“TGP”, “Applicant”) with respect to the above-captioned proceeding.

The name and address of the person upon whom all communications concerning this proceeding should be served are as follows:

Rutilious B. Perkins III, Esq.
42 Cherry Lane
Amherst, MA 01002
413-549-5707
rudyperkins@yahoo.com

The above-captioned proceeding concerns the proposed Northeast Energy Direct Project (“NED”, “NED Project”) of TGP. The NED Project would include, inter alia, a “Market Path Component” involving 188 miles of new mainline pipeline facilities in New York, Massachusetts, and New Hampshire, 58 miles of lateral and pipeline looping, including laterals in Massachusetts and New Hampshire, and six new gas compressor stations, with the entire NED providing up to 1.3 billion cubic feet per day (Bcf/d) of firm gas transportation capacity, and costing approximately \$5.2 billion dollars. I

TGP has filed an Abbreviated Application (“Application”) for a Certificate of Public Convenience and Necessity (“Certification”) pursuant to Sections 7(b) and 7(c) of the Natural Gas Act (“NGA”), 15 U.S.C. §717 et seq., for the construction, operation and maintenance of its proposed NED Project, the subject of the above-captioned proceeding. This matter was docketed by the Commission in the pre-filing period as Docket No. PFI4-22-000, and to the extent applicable, this motion is also intended as a Motion to Intervene with respect to matters addressed under that earlier docket number.

Basis for Intervention

The Movant (i) has an interest which may be directly affected by the outcome of the proceeding as a consumer and customer, and (ii) the Movant’s participation is in the public interest. 2

(i) Movant’s interest as a consumer and customer

The Movant is a residential homeowner in Amherst, MA, and a consumer and residential gas customer of The Berkshire Gas Company (“Berkshire”), one of the local gas distribution companies (“LDC’s”) that has entered into a Precedent Agreement with TGP involving gas transportation services for a twenty year extendable term on TGP’s proposed NED Project facilities.³ The results of the proceeding are likely to have an impact on the availability and pricing of gas resources and other forms of energy available to service my home, and therefore potentially on energy costs, availability and reliability for my home, potentially impacting the property value of my residence.

Upon information and belief, the Movant concludes that granting of Certification for the NED Project pursuant to the above-captioned proceeding would likely slow, diminish or block the development and availability of residential energy sources for my community and my property that will likely be, over the planning horizon of the NED Project, lower cost, lower impact, and more reliable than the energy resources proposed in the NED Project.

Moreover, as a consumer and residential gas customer of Berkshire in Amherst, MA, my home is subject to

the moratorium on gas service expansion (“Berkshire Moratorium”) imposed by Berkshire until and unless the NED is permitted and built.” Because the NED-related Berkshire Moratorium blocks any additional capacity for gas service to my property, it has a direct impact on my property and potentially the value of my property. Moreover, the Berkshire Moratorium is reportedly delaying some business and real estate development in my community, potentially slowing municipal efforts to widen the Town’s tax base and offer tax relief / stabilization to residential property owners such as my household.’ Because of these Berkshire Moratorium impacts related to the NED project, affecting the Movant, the Movant has an interest in the outcome of the proceedings different from most other gas customers in the state, and different even from Berkshire customers in its non-moratorium service areas. Therefore, the Movant’s interests are unlikely to be adequately represented and protected by other potential intervenors in this proceeding.

Any granting of a Certificate of Public Convenience and Necessity for the NED project by the Commission is likely to cause Berkshire to maintain the Berkshire Moratorium for a minimum of about three years, until at least November 2018, the currently projected completion date for the NED. Given the strong likelihood of numerous legal challenges to the NED, including a likely case of first impression as to whether the federal NGA preempts land protections provided pursuant to an article of a state constitution (Massachusetts Article 97), November 2018 seems like an overly optimistic date for any completion of the NED pipeline. During an extended moratorium period facilitated by any grant by the Commission of Certification, Berkshire is unlikely to explore more expeditious full or partial alternatives to the Berkshire Moratorium, including alternatives which may have fewer environmental, legal and economic impacts, such as some combination of:

- (i) the full build-out of its Whately, MA LNG peaking facility, where only two of Berkshire’s five planned 70,000 gallon LNG storage tanks to address projected increases in customer gas demand were installed.?
- (ii) revisions to its demand management agreements with the University of Massachusetts, a large multi-fueled Berkshire gas customer, which has planned to build its own permanent 108,000 gallon LNG storage facility on the University campus, with the construction bid already awarded for up to the 54,000 gallon LNG Phase 1 of such storage;’ this new LNG storage facility may increase the ability of the University to contract to intermittently discontinue draws from Berkshire’s system during winter peak demand days, effectively increasing Berkshire’s ability to supply other customers without the NED,
- (iii) revisions or additions to demand management agreements with other large or dual fuel users, 8
- (iv) accelerated leak repair,
- (v) accelerated gas efficiency programs,
- (vi) off-peak LNG liquefaction facilities like the one developed in nearby Ludlow, MA by Columbia Gas,” which could enable Berkshire to store gas as LNG during periods of existing interstate pipeline transportation capacity surplus and low gas prices, and re-gasify and release that gas during periods of peak winter demand and constrained interstate transportation capacity, without the NED,

and/or other alternatives. The Commission’s decisions in the above-captioned proceeding are therefore likely to have a direct effect on the duration of the Berkshire Moratorium and the implementation of potentially lower cost, lower impact energy and/or more reliable alternatives by Berkshire Gas and, with that, a likely impact on my community, its tax base, and on my property, and on the environment more generally.

In addition, as an Eversource residential electric customer and consumer, the Movant is a Massachusetts electric ratepayer. Given the Massachusetts Department of Public Utilities (“D.P.U.”) and the Massachusetts Department of Energy Resources discussion of possible new mechanisms to charge electric ratepayers for gas pipeline construction presented in D.P.U. Docket No. 15_37,¹⁰ construction costs for new gas pipeline projects such as the NED may eventually be added onto my electric bill, further having a direct negative impact on my household.

Whether or not a new electricity tariff mechanism is established to charge Massachusetts electricity rate-payers for gas pipeline construction, NED construction costs may indirectly add to our electric bills, as gas-fired generators buy gas from LDCs, or from direct suppliers, that is shipped through any such costly new pipeline. Thus, a decision in this proceeding may affect my future electric bills. The estimated \$5.2 billion NED construction cost could be locked into our energy system costs for decades, even as the cost of renewable energy, like wind and solar, continues to plummet. A decision in the above-captioned proceeding could also affect the reliability of electric service to my property and to others, as Certification could further exacerbate our electric system's over-reliance on natural gas and a small number of natural gas pipelines, making it more vulnerable to natural and human-caused disruptions. II

(ii) Movant's participation is in the public interest

The Movant is a Massachusetts attorney with a longstanding interest in energy issues, publishing a detailed analysis as a law student in the 1990s of certain Massachusetts energy policies and their potential impact with respect to climate change. 12

The Movant has repeatedly submitted heavily researched comments to public officials and regulatory bodies in connection with the proposed NED pipeline project and related energy issues, including to the Massachusetts Department of Public Utilities,¹³ the Department of Energy!¹⁴ and the Federal Energy Regulatory Commission. IS

The Movant is an occasional columnist on energy and other issues published in the widely read, Northampton-based regional newspaper, The Daily Hampshire Gazette. 16

The Movant was a co-author and principal proponent of a municipal resolution in opposition to the NED pipeline project that was adopted in the spring 2015 Amherst, Massachusetts representative Town Meeting by a vote of 133 to 7. 17

The Movant was a former Conservation Commissioner in the Millers River watershed community of Winchendon, MA, and was the former chairman of the Millers River Watershed Council, investing considerable volunteer effort for years to protect the environmental health of the Millers River and its environs. The Millers River is one of the rivers that could potentially be impacted by horizontal direct drilling beneath it, and work or operations around it, for the proposed NED pipeline project. 18

The Movant is employed as a Project Manager and Staff Attorney for an affordable housing developer, overseeing the development of highly energy efficient multifamily rental apartments in the region that have radically reduced gas use and other residential energy use.

For the foregoing reasons, the Movant brings considerable knowledge and experience regarding the environment and energy options in our region, assembling critical information on the issues which has been cited by others. It is in the public interest to have a variety of critical and knowledgeable voices as participants in the above-referenced proceeding.

Position of the Movant and the basis for that position

To the extent now known, the Movant's position is for the denial by the Commission of the Certificate of Public Convenience and Necessity for the proposed NED project. The Commission's policy statement regarding its criteria for Certification includes a balancing test, in which the Commission balances the "public benefits against the potential adverse consequences" of a project. 19 The Movant is opposed to the proposed NED project because I have concluded that the public benefits of the project would be slight to non-existent, and the potential adverse environmental, legal and economic consequences from the project would be numerous and significant.

In the environmental arena, the NGA has among its subsidiary purposes, the respecting of conservation and environmental limitations.ⁱ In contradiction to those purposes, the NED Project will have numerous localized unavoidable and potential environmental impacts, including but not limited to deforestation and excavation in the pipeline route, wetlands and river crossings, including horizontal direct drilling under riv-

ers and other resource areas, the violation of conservation limitations, disruption of protected conservation lands, including conservation lands protected by Article 97 of the Massachusetts Constitution, noise and light pollution near compressor stations, potential fires and explosions, construction traffic impacts, wildlife habitat impacts, impacts to farmlands, residences, sensitive receptors and recreation lands, and potential air quality impacts from planned and unplanned leakage and venting of the pipeline. The NED would also encourage expanded hydro-fracturing (“fracking”) for natural gas, with the localized environmental and health risks associated with such expansion in the areas where the fracking takes place.

At a global level, because the NED will encourage the expanded production, transportation and combustion of natural gas, and likely expanded export of natural gas, it will lead to increased emissions of methane from pipeline system leaks and intentional venting, and carbon dioxide emissions from transportation and combustion of the gas, further aggravating climate change, and conflicting with the goals of the Massachusetts Global Warming Solutions Act.

Currently, TGP has Precedent Agreements for domestic use of only about half of the proposed 1.3 Bcf/d firm transportation capacity of the NED Project. Moreover, it is likely that contracted domestic users of the NED Project would sell or re-assign portions of their contracted firm capacity during periods of the year when their own firm capacity needs are low. The NED Project’s proposed pipeline from the Marcellus fields to the interconnection point with the Maritimes & Northeast Pipeline in Dracut, MA, positions the NED Project to use available surplus pipeline capacity to transport Marcellus and other gas to proposed LNG export facilities in Maine and Atlantic Canada for overseas export.

TGP has stated that “[t]he proposed interconnection with the Joint Facilities [in Dracut, MA], together with the anticipated reversal of the primary flow direction of the Joint Facilities and Maritimes & Northeast Pipeline, will potentially enable the [NED] Project to access more markets in the region, including ... the Atlantic Canada region”,²¹ TGP told the Commission: “Potential Atlantic Canada customers [for the NED project] include ... liquefied natural gas (‘LNG’) export projects...”,²² A number of Atlantic Canada LNG export projects have been proposed, including that of Saint John LNG.

Saint John LNG told Canadian regulators: “In the case of feed gas supply from the United States, gas would be procured from producers in the Appalachia [read: Marcellus shale region] and transported to Dracut or Beverly, Massachusetts via expansions or extensions of the Tennessee Gas Pipeline and/or Algonquin Gas Transmission systems. From Dracut, the gas would be transported on [the] Maritimes & Northeast Pipeline” to the Canadian border and then on to Saint John’s proposed LNG project in New Brunswick for export.²³ (Emphasis added.) Proponents of other Atlantic Canadian LNG export projects have made similar statements.

LNG export will likely increase the drilling for, and combustion of, natural gas. The Department of Energy commissioned a study by the U.S. Energy Information Administration (“EIA”) that modeled a variety of U.S. LNG export scenarios. The Department reported that the “EIA projected that, across all cases, an average of 63 percent of increased export volumes would be accounted for by increased domestic [natural gas] production.”^r In other words, LNG export will likely increase new natural gas drilling and production in the U.S., with the consequent burning of that gas produced, with the greenhouse gas emissions that would result.

Moreover, a key U.S. Department of Energy study suggests that LNG shipped from the United States could have a higher “expected value” for greenhouse gas impact, than LNG shipped to Europe and Asia from closer regional suppliers of LNG (Algeria to Europe, and Australia to Asia, respectively), although the DOE cautioned that these “expected value [s]” “should not be interpreted as the most likely values due to the wide range of scenario variability and uncertainty in the underlying modeled data” and “should be interpreted as general guidance to provide perspective on trends only”.²⁵ This DOE study definitely does not support any clear conclusion that US export of LNG will mitigate climate change better than available alternatives (such as regionally supplied LNG from Algeria and Australia, or renewable energy in Europe and Asia). LNG export involves additional energy use and climate impacts resulting from the liquefaction and

later regasification of the LNG and from the fuel used for shipment by marine tankers, with greater shipping distances generally producing greater greenhouse gas emissions from the latter. So, LNG export, facilitated by the NED project would likely further contribute to dangerous climate change.

In the legal arena, the NED Project will likely require significant use of eminent domain to obtain the NED right of way. In its policy statement on how the Commission evaluates proposals for certificating new construction, the Commission identified a goal of appropriately considering “the unneeded exercise of eminent domain.”²⁶

In contrast to the NED, alternatives such as energy efficiency, demand shifting, energy storage and renewable energy, and even expanded interim use of LNG infrastructure, particularly existing LNG infrastructure, are likely to require little or no exercise of eminent domain. The proposed NED Project would therefore likely involve the unneeded exercise of eminent domain.

In the economic arena, the NED Project could exert upward pressure on Massachusetts gas and electricity prices over the long-term, as it further exacerbates our over-reliance on natural gas transported by a handful of transporters through a handful of interstate pipelines, and as it is used to export gas abroad.²⁷ With only about 0.55 Bcf/d of contracted use reflected in current Precedent Agreements, TGP’s planned capacity of 1.3 Bcf/d of the NED Project would likely involve significant over-building of capacity, a recurring concern of the Commission.” Overbuilding pipeline capacity could lead to wasteful stranded asset costs and/or overcharging of gas customers.

The NED Project would likely also have a depressing effect on other energy options with more long-term cost-saving potential, such as energy efficiency, demand-shifting, energy storage and renewable energy. The Movant previously outlined to the Commission numerous possible energy alternatives possible to such a long-term, high volume gas infrastructure project, in my August 26, 2015 letter of comment to the Commission re Docket No. PFI4-22-000. The recent Analysis Group / Massachusetts Attorney General’s report on New England power reliability similarly concluded that under the base case analyzed, electric power system reliability will be maintained without additional new interstate natural gas pipelines.”ⁱ

In addition, and in the alternative, if facts and analysis developed within or during the course of these proceedings determine that the proposed NED Project would be a lower cost, more reliable energy option over the 23-year construction and initial precedent agreement horizon, with fewer negative environmental, legal and economic consequences than the alternatives that would be available in that time horizon, the Movant will likely seek the Commission’s imposition of conditions on any such Certificate granted that will result in the development and operation of the NED Project in a way that has the fewest negative consequences practicable, and secures the safest and least accident-prone, most reasonably priced, best engineered and most reliable NED Project, with the fewest practicable environmental impacts. The NGA authorizes the Commission to attach conditions to Certificates of Public Convenience and Necessity/”

Wherefore, the Movant requests that the Commission accept this filing and grant this motion to intervene, granting the Movant all rights of participation as a party in the above- captioned proceeding.

Respectfully submitted,

Rutilious B. Perkins III, Esq. BBO # 644714

James P. Cutler
 421 Beldingville Rd.
 Ashfield, MA 01330
 jim.cp1621@gmail.com

BEFORE THE UNITED STATES FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC)
A division of Kinder Morgan) Docket No. CP16-21-000
Northeast Energy Direct Pipeline)

**AMENDED MOTION TO INTERVENE OF JAMES P. CUTLER IN REFERENCE TO THE
NORTHEAST ENERGY DIRECT (NED) PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure, 18 C.F.R. §385.214, I (JAMES P. CUTLER) files this Motion to Intervene in the above-captioned proceeding. I have significant concerns regarding the environmental, safety, and socioeconomic impacts of the NED pipeline project. The short and long-term impacts that the proposed project could have on my property and in my community are profound. I seek to intervene on the NED Project to monitor the progress of the proceedings and expects to take a position against the Project.

To the Commissioners of the Federal Energy Regulatory Commission,

As an impacted homeowner applying for intervenor status in the permitting process for CP16-21-000 I would like to bring to your attention a number of facts and issues concerning my property that has been included in the proposed route for the Northeast Energy Direct pipeline project.

My parcels as well as parcels to the West of me (also on the proposed route) sit on top of a unique alluvial sand deposit that acts as a large aquifer (this geological data has been confirmed by Umass Amherst geology department and a professional cartographer). This aquifer serves my well among others and would be directly impacted by this pipeline project should you decide to approve it.

This sand deposit is also VERY unstable! I refer you to the attached image titled "Blowout within 200' of proposed pipeline route". This blowout, according to Mass DEP and Eversource is due to the clear cutting of trees for the existing power line ROW. The proposed pipeline construction path of 100' clearcut will cause further destabilization of the geology resulting in potential pipe failure. You, FERC, are on notice that you have been informed of this situation.

This part of my property has also been placed into permanent conservation easement (Article 97) under Massachusetts General Laws. Article 97 cannot be undone without a 2/3 majority vote. Without that 2/3 majority vote to remove Article 97 from my property TGP CANNOT construct the pipeline.

Kinder Morgan through its subsidiary Tennessee Gas Pipeline Company, LLC have not adequately prepared their permit application for this project resulting in 1000's of entries with the acronym "TBD" which means to be decided. This lack of required data renders their submission incomplete and should never have been accepted by FERC..

The property at 421 Beldingville Road is also the location of a 1700's burial site that is in process of being cataloged. Any disturbance could damage this site and the potential historical significance it might play.

I have not given permission to TGP or Kinder Morgan to survey my property. For this reason they do not have access to the necessary information to determine feasibility for this pipeline project.

I also refer you to the image titled "Old Growth Pine & Burial Site within proposed pipeline route". At the base of this old growth tree lies the burial site of my mother Priscilla P. Whipple. This tree and my mother burial site will be desecrated by the pipeline construction process as it lies within the 100' construction zone.

In summary, you, the commissioners at FERC, have accepted an application from TGP to construct a pipeline that is devoid of relevant data, in a proposed area that is inhospitable to this type of construction and that will destroy existing cultural artifacts, a unique and very important aquifer and human burial site.

Respectfully Submitted,

Jim Cutler

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Project)

Docket No. CP16-21-000

MOTION TO INTERVENE OF

Tim Winship

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Tim Winship
PO Box 143
Temple, NH 03084
603-878-2063
tim@newfieldfarm.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

- being the owner of our farm located about one mile from the compressor station proposed for New Ipswich, NH. Because the farm is dependent on clean air, clean water, and healthy soils for its success in both growing and marketing, and because it is well documented that compressor stations release harmful toxins that can degrade the quality of the air, water, and soil within an extensive radius of their operation, we will be directly and negatively affected by the pipeline.
- being a resident of Temple, NH where our elementary school is located within a half mile of the proposed compressor station I’m concerned about the effect this proximity will have on the health of the children and staff at the school, as well as the effect on the continuing viability of the school. Many parents may decide not to send their children to the school because of the risk to health and safety and this could lead to Temple becoming an undesirable place for families to live. Besides the health threat posed to the residents of Temple generally by the compressor station, the loss of families with young children would reduce the quality of life in Temple.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Tim Winship

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual _____ rmellor619@gmail.com

Basis for Intervening:

My property at 258 Abel Road, Rindge, NH 03461 has been identified as part of the Pipeline Corridor and I am ENTIRELY OPPOSED to its construction. The proposed route will impact a 6+ Acre pond on my 27 acre property that overlays a stratified drift aquifer and wildlife habitat that has been intact for at least 80 years since the Electric Transmission line was first installed. I have had no informational exchange with the applicant and I do not wish for them to do any surveying of my property. This project is clearly not needed and the negative impacts are truly incalculably huge. Rindge has no Municipal water supply and relies entirely on private wells that in turn are fed from the limited aquifer resources. This pipeline route crosses many more wetland resources than have been identified by the NED Proposal. My well will be about 100 feet from the pipe and much ledge will need blasting to place it underground. The entire hydrology of Rindge will be imperiled and wildlife habitat disrupted with devastating consequence to nature and personal economic value.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	syrehag@aol.com	

Basis for Intervening:

I, Stephanie Syre-Hager, seek to intervene because my residence is on the proposed Fitchburg lateral pipeline route. It is therefore vulnerable to structural damage during construction, as well as ongoing safety hazards after the project is completed. I oppose the proposed project. If constructed, it will disturb and destroy a swath of land across Mason and it will bisect the town. Neither of these pipelines is beneficial to local residents because there will be no access to the gas to residents of this rural town. This project is an intrusion on individual landowners and will result in decreasing property values. I am intervening because I feel the need to protect my property values, the natural resources in the area, and the quality of life in my rural town.

Basis for Intervening:

I live in the town of Nassau, NY, Rennselaer County and I am listing as an intervener in the proposed proceeding. We are in opposition of the NED pipeline.

I am an abutting landowner and also fall within the incineration zone for the proposed 41,000 HP compressor station proposed for Clarks Chapel Road, Nassau NY.

We run a family farm and raise beef cattle. We rely on our farm raised beef and vegetables.

We enjoy the outdoors and all outdoors activities; including hiking and horseback riding which we currently enjoy on our property with our animals. I have grave concerns for the quality of land, air and environment

in our immediate surroundings.

We also rely on well water as our sole source of drinking water.

Sincerely,

The Cross Family

20160104-5243

Motion for Intervention to the FERC for Kinder Morgan NED

As a resident of Massachusetts, a citizen of the United States and an inhabitant of our one and only precious planet I oppose the proposed pipeline.

The following are my main objections:

- 1) I object to the pipeline as a person deeply concerned about climate change and the large-scale extraction, combustion and release of natural gas into the atmosphere, which directly affects all beings on this planet.
- 2) I object to it as an electric ratepayer, a taxpayer, a neighbor and visitor to protected public land in Massachusetts. It would imperil our food, water, and air.
- 3) I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.
- 4) I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.
- 5) I understand that land that has been put under conservation is going to be seized through eminent domain if the pipeline is completed. I don't believe that this should be allowed for a commercial project that will be profited by only for a few. This use would also be in violation of easements over land that is meant to be protected forever. This use of land could dissuade future gifts of land to be put into conservation.

I appreciate your consideration of my reasons, and hope that the pipeline will be stopped.

Best regards,

Jeff

Basis for Intervening:

I am filing a motion for intervention status on FERC docket CP16-21 based on my property ownership in Turners Falls Ma. My interest will be directly affected by the outcome of the proceeding and I am participating in the public interest as a consumer. I am a resident who lives in the "blast radius" and whose daily commute crosses over the proposed pipeline route so I would be at physical risk. I am strongly opposed to this pipeline as it perpetuates the use of non-renewable energy sources, which is detrimental to our society

and planet. The proposed project has detrimental effects to the surrounding living environment, the impact on local roads, the impact on conservation lands, the negative effects on the quality of our water, air, soil, and life.

20160104-5247

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company,
a subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline Project Docket No. CP 16-21-000

**MOTION TO INTERVENE OF TOWN OF ASHFIELD
IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, THE TOWN OF ASHFIELD (ASHFIELD) files this Motion to Intervene in the above-captioned proceeding. ASHFIELD opposes the project because of natural resource, infrastructure and economic impacts and seeks party status to protest the proposed pipeline, and fully protect Ashfield's interests.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

Ashfield is a community of 1,800 people in the western portion of Franklin County, Massachusetts. The proposed NED pipeline's approximately 10-mile reach through Ashfield will bisect the 40A-square-mile Town. The pipeline would pass through environmentally sensitive areas, areas protected by Conservation Restriction, and land that is within the watershed of town public water-supply resources, and recreational areas.

B. Description of Impacts

ASHFIELD will be directly impacted and harmed by the proposed project as in the following ways:

Water Resource Impacts: The proposed pipeline route runs through an area upslope of a Town drinking supply reservoir. It also runs through the aquifer that feeds Town drinking water supply wells. These public water resources supply all of the households and businesses in the Ashfield Water Supply District. Secondly the proposed pipeline has multiple crossings of three major rivers in Ashfield: the head waters of the Swift and South Rivers and the Bear River. Ford Pond is also within the direct path of the proposed pipeline. The Town is concerned about the possible of contamination of public water supplies and waterbodies from the pipeline and from planned horizontal directional drilling.

Economic Impacts: There are approximately 25 homes within 500 feet of the proposed pipeline. The Town is concerned about reduction of home values, difficulties in refinancing, and difficulties in obtaining homeowner's insurance for these properties. There is also a concern about resident rights to pass over the pipeline right-of-way to access privately and publicly owned back lots. Lack of access to some affected lots could have an impact on forestry, recreation, and agriculture in Ashfield.

Open Space and Recreation Impacts: Ashfield Lake is a center piece of summer time recreational opportunity in Ashfield. The proposed route cuts directly through the watershed feeding this waterbody. Additionally, the forested areas surrounding the route are used extensively by hunters, hikers, bird watchers and snowshoers. The proposed route also transects areas identified by Mass Dept of Fish and Wildlife as Core Habitat, and Critical Natural Landscapes. These designations identify areas that are most critical for ensuring the long-term persistence of rare and other native species and their habitats, exemplary natural communities, and a diversity of ecosystems. Thus the Town is concerned about the long term negative impact the

proposed project will have on protected lands, as well as the impact on hunting, recreational trail use, and habitat.

Public Safety Impacts: Ashfield's all volunteer Fire Department does not have the manpower or equipment to address pipeline accidents. The topography in Ashfield severely limits access to the pipeline route, and much of the route is inaccessible to firefighting equipment and other emergency personnel. In certain areas it would be unlikely that the Town would be able to respond to public safety and emergency incidents.

Construction Impacts: The Town is concerned that heavy equipment during construction will damage town roads. We are also concerned about proximity to high voltage transmission lines and the geological impacts of directional drilling.

Liability Concerns: The Town is concerned about the company's LLC status and thus its ability to cover potential damages. The Commission must consider this issue and explore solutions which may include requiring the parent company to take responsibility for liability or post substantial bond to ensure ability to pay.

C. No Need for the Pipeline

The impacts described are problematic generally, but entirely unacceptable given that TGP has failed to demonstrate a need for the pipeline. In the three years TGP has offered open contract seasons to local gas distribution companies, their interest is only .55 bcf/day. Even after downsizing NED from 2.2 bcf/day capacity to 1.3 bcf/day, these contracts cover less than 40 percent of capacity. A recently-released assessment of New England's electrical needs by the Massachusetts Attorney General's office demonstrated that the electric sector does not need NED or other major new gas pipelines: <http://www.mass.gov/ago/doingbusiness-in-massachusetts/energy-and-utilities/regional-electric-reliability-optionsstudy.htm>]. Ashfield requests that FERC adopt this study's findings and recommendations in evaluating the question of domestic need for the NED pipeline.

D. Ashfield's Motion to Intervene Must Be Granted

ASHFIELD satisfies the standard for intervention under the Commission's regulations. As discussed above, ASHFIELD is directly impacted by the proposed project, and no other individual or organization can adequately represent ASHFIELD's unique interest in this proceeding. Further, ASHFIELD's intervention is in the public interest because the Town is responsible for the protection of the health and safety of all of its residents. Accordingly, ASHFIELD respectfully requests that the Commission grant this Motion to Intervene.

II. PROTEST/COMMENTS

A. Ashfield does not view the NED Application as complete.

ASHFIELD disagrees with the Commission's acceptance of the Application and the opening of Docket #CPI6-21-000. FERC issued an Environmental Information Request on December 8, the day after the Notice of Application. The request demands TGP supply data in response to lengthy list of comments and inquiries from 28 state, regional, and municipal governing bodies and environmental organizations. FERC staff stated that "at a minimum" TGP must answer these comments-vindicating that staff view other information as missing or incomplete as well. It is Ashfield's position that PERC should have deferred the Notice of Application until staff had received complete responses to the FERC staffs December 8 and October 10 information requests of the Company.

B. TGP/KINDER MORGAN is not financially solid enough to entrust with the NED project.

TGP owner Kinder Morgan's stock price is tumbling; the company just slashed its dividend by 75 percent; its debt is reported by the business press at \$41 billion for a company worth \$37 billion. The company's bond ratings are narrowly skirting junk-bond status. In addition to the proposed NED pipeline, Kindel' Morgan has many other projects in development that it proposes to build during overlapping time frames with the NED project, all with 2018 inservice dates. These other projects include a \$5.4-billion expansion of

the Trans-Mountain oil pipeline in Canada. Given the Company's balance sheet, it is hard to comprehend the vast investment in so many projects that would not produce income until late 2018 at the earliest. The proposed NED pipeline would be one of the most technically challenging pipelines ever built by TGP, because the geological, hydrologic, and environmental conditions change almost by the yard over the entire route. Even if we had no other objections, Ashfield cannot have confidence that a company in such difficult financial straits can be trusted to build this complex and demanding pipeline to appropriate standards of safety.

C. The natural-gas market and especially the supply of shale gas is notably unstable.

Frequent press reports cover fracking sites that run dry more quickly than expected; a reduction in drilling due to falling gas prices; regulatory uncertainty as the Federal Clean Power Plan may limit climate-disrupting methane emissions from the industry; and earthquakes caused by fracking that could put an end to the practice if they become severe and widespread. With state and Federal regulatory agencies routinely allowing energy companies to recover "stranded costs" from ratepayers for investments in infrastructure that do not turn out to be profitable, Ashfield faces a real risk of having an unused pipeline decaying underground, threatening our water supplies, while being paid off by the Town, and possibly Eversource ratepayers as well.

III. CONTACT INFORMATION

The following should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Todd Olanyk, Select Board
Address: P. O. Box 560, Ashfield, MA
01330 Phone: 413 628 4441 x7
Email: pipeline@ashfield.org

IV. CONCLUSION

Wherefore, in light of the foregoing, ASHFIELD respectfully requests that (the Commission (1) GRANT this motion to intervene and allow INTERVENOR to participate in this proceeding with full rights of party status, including the rights to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted by the Ashfield Board of Selectmen,

Thomas Carter, Chairman
Ronald Coler
Todd Olanyk

CERTIFICATE OF SERVICE

Wherefore on this 12/28/14, I caused to be served the foregoing Motion to Intervene electronic on II parties on the Commission's electronic service list in this proceeding, in accordance with Commission regulations.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	Lyndon213@verizon.net	

Basis for Intervening:

I am filing a motion for intervention status on FERC Docket #CP16-21-000. I live at 14 South Main Street in Lanesborough, parcel #105 4, just half a mile from where the proposed pipeline is to cross Route 7. I am also the owner of parcel #105 5, an abutting undeveloped lot. My interest will be directly affected by the outcome of the proceeding and I am participating in the public interest as a consumer.

This proposed project affects my property, my lifestyle, and my community in many ways.

- My home is situated on the county's major north-south route, just a half mile from the proposed pipeline crossing. A construction project of this magnitude will disrupt the peacefulness and cleanliness of our neighborhood. Heavy construction vehicles and materials will be a nuisance for the duration of the construction process.

- The insurability, value, and resale potential of my properties will be threatened after the completion of this project.

- Lanesborough's rural, pre-Colonial character will be marred by the bisection of this pipeline across Constitution Hill, underneath our aquifer, and across our farmlands, wetlands, and forests. The State Champion Elm sits outside my front door. Our town flag depicts the Constitution Oak, named for the legendary spot from which the signing of our Constitution was announced to Lanesborough residents in 1787. We value our recreational and agricultural lands, and this pipeline would diminish that value.

Individual	simmms@msn.com	

Basis for Intervening:

Motion to Intervene of David B. Simpkin

David B. Simpkin is a resident of the Town of Pelham, Hillsborough County, New Hampshire. The proposed right-of-way of the Tennessee Pipeline Company's NED project runs through the middle of my town. As a result the pipeline affects many of my fellow residents. Also the pipeline runs across a aquifer that will affect the water quality of my well water and also that of many of my neighbors. As a rate payer of Liberty Utilities am very concerned about rate increases to pay for the unneeded pipeline. I Greatly question the needs of this pipeline. It seems like the purpose of the pipeline is to export gas. I believe to reduce global warming the continued use of fossil fuels must stop. The proposed pipeline will greatly increase the amount of CO2 and even worse CH4.

The proposed Dracut compressor station is less than a mile from Pelham. The station will emit harmful and unhealthy pollutants several miles away. The release of methane (a greenhouse gas 83 times more potent than CO2) from the station will significantly effect global warming.

I hereby oppose the building of this pipeline.

MOTION TO INTERVENE OF Town of Windsor Select Board IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE

{ PDF of scanned image too faint for useful OCR, original, 15 pages, 771 KB can be downloaded at: }

<http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=14088709>

20160104-5255

Motion to Intervene

in FERC Docket # CP16-21-000

by Society to Benefit Everyone (dba Common Good Finance)

William Spademan, Executive Director

Common Good Finance’s mission is to promote community based democratic economics for the common good. We envision a society in which communities everywhere gather to decide for themselves what their funding priorities should be, for sustainability and for providing for the well being of all citizens.

We partner with organizations like Coop Power, to give communities control over their energy future, in a way that benefits the community, rather than the big corporations that want to profit at our expense.

Tennessee Gas Pipeline Company’s Northeast Energy Direct project is very much at odds with our mission. Their proposed pipeline is unnecessary and would have a devastating effect on our region, very much against the wishes of the majority of our citizens.

We ask FERC to reject the proposal.

Basis for Intervening:

Dear Sir

I built my dream green, environmentally friendly home, in Windsor Massachusetts in 2005, having moved from South Florida to have a better quality of life! I’m located less than two miles downwind from the proposed 41,000 horsepower compressor stationmaster meaning I’ll be downwind of toxix pollutions and particulates. This is one of the last places where a person can still see the stars in the sky! There is no lighting pollution, yet! The route of the proposed pipeline runs through pristine environmental areas that people come from all over the world to spend time. Notchview (a Trustees of Reservation Property) abbutts the compressor site station, cross country skiing, hiking star gazing, is one of this country’s natural treasures! We don’t need the stigma or the pollution , or the possible danger of pipeline explosions! Don’t destroy what this country is supposed to stand for. Freedom to pursue happiness and a good, healthy, safe place to live as well as one of our country’s best places to visit Nature!

Kinder Morgan, a fracked gas pipeline company is trying to ruin the most beautiful part of Massachusetts, the historic Berkshires!

Not only do we have some of the most beautiful landscapes in America, but it’s one of our country’ great “Playgrounds” for cultural events, Tanglewood, as well!

I’m really upset that the website where I could file a Motion to Intervene at the automated online filing system was shutdown! This will likely mean Motions to Intervene cannot be filed until Monday. This shutdown was unannounced and makes it more difficult for the affected residents to make their wishes known.

“My interest as a resident of Windsor,living just near where the Company proposes to cross the federally designated Wild & Scenic Westfield River with its pipeline. In addition to living in the watershed, my family swims and plays in the river near the Windsor town line. I am concerned about the impact that the construc-

tion and operation of the pipeline, and the compressor station proposed for Windsor, could have on ecological and human health in our watershed.

What about the Paris Accord, as the promise to clean up our planet??

Barbara West

With regard to my submission 634053 dated 30 December 2015, I wish to make it clear that this submission is in OPPOSITION to the proposed Tennessee Gas Pipeline filing in southern New Hampshire.

20160104-5260

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC,)
a subsidiary of Kinder Morgan) Docket No. CP16-21-000
Northeast Energy Direct Pipeline)

MOTION TO INTERVENE OF:

Hidden River Farm
Phyllis Kirkpatrick, Beth Manning, Gillian Rosner and Wesley Rosner.
553 Bellus Rd (Ashfield)
Shelburne Falls, MA 01370

IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 c.P.R. §385.214, We, Phyllis Kirkpatrick, Beth Manning, Gillian Rosner and Wesley Rosner, file this Motion to Intervene in the above-captioned proceeding.

We, oppose the project because we have concerns about the risks inherent in this pipeline. We seek party status to protest the proposed pipeline, and to protect our clean water, woodlands and healthy, organic soil.

I. STATEMENT OF INTEREST

A. Background

Phyllis Kirkpatrick and her family have owned this historic, 43 acre farm since 1977. The farm. is comprised of a 1797 house and two antique barns, There are approximately 25 acres of organic hay land with the balance in woodland, streams and a certified vernal pool. Our farm has been home to various farming endeavors, livestock and crop production. Most recently, the farm became the host to what was then a fledgling yogurt plant, Side Hill Farm, Side Hill Farm thrived on this farm, pasturing and milking their cows and making yogurt here for 12 years until they acquired their own additional land.

B. Description of Impacts

We, Phyllis Kirkpatrick, Beth Manning, Gillian Rosner and Wesley Rosner, will be impacted by the NED pipeline for the following reasons:

Organic Status: The proposed pipeline would bisect the fann, running approximately 1500 feet right

through the middle of the pasture and woodlands. We are very concerned about soil disruption, the introduction of invasive plants and possible loss of the organic status of the land. We have never used pesticides, herbicides or chemical fertilizers on the fields or woods. Kinder Morgan uses herbicides to keep vegetation in check.

Livestock Health and Safety: Currently the open land is used for hay and pasture for cattle and horses. Pipeline construction: would tear up the fields and create real hazards for these animals before, during and after construction. Soil that has seen disruption of this magnitude will not be navigable by large animals or tractors for many months or longer. We question the condition the land will be left in, how long it will take to be safe to use and the care Kinder Morgan would take to remedy any problems that will arise.

Electric Ratepayers: As an electric ratepayers, we feel that the Company seeks to secure our electric utility as a Project shipper, which, in turn, would sock to recover costs associated with the Project from ratepayers through possible tariffs. Although purported to be necessary to lower electricity costs, this grossly oversized pipeline is very likely to lead to higher energy costs for New England's ratepayers because excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

Lower Property Value: This property represents the majority of Phyllis' retirement. We have reason to believe that the NED pipeline will lower property values and make it difficult to sell real estate in proximity to it. This belief is based in part on the fact that a bona fide offer on the property was rescinded upon official news of the NED pipeline plan. People who live in this area are here for the clean water, deep history, beautiful terrain, woodlands, rivers and streams. and largely undisturbed wildlife habitats. This pipeline will leave a giant scar on our landscape and threaten the health of the people, wildlife, water and farms,

C. Motion to Intervene Must Be Granted

We satisfy the standard for intervention under the Commission's regulations. We are directly impacted by the proposed project, and no other individual or organization can adequately represent our unique interest in this proceeding. Accordingly, we respectfully request that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The following individual should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Phyllis Kirkpatrick
553 Bellus Rd
Shelburne Falls, MA 01370
413 625-9328

Beth Manning
69 Taylor Rd
Shelburne, MA 01370
413 625-9967
manning@crocker.com

Gillian Rosner
9 Franklin Rd
Gill, MA
413 348-5904
grosner@rcn.com

Wesley Rosner
18 Severence St
Shelburne Falls, MA 01370
413 575-4848
wrosner@blue-fox.com

III. We oppose the construction of the Northeast Direct Pipeline because it does not appear that it is for the

greater good in any way. Instead it would allow a forprofit company to take private land using eminent domain while putting our property values, farmland, wildlife, personal safety and way of life in peril.

IV. CONCLUSION

Wherefore, in light of the foregoing, we, respectfully request that the Commission GRANT this motion to intervene and allow us, as an intervener, to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,

CERTIFICATE OF SERVICE

Wherefore on this 5th day of January, 2016, we caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission's electronic service list in this proceeding, in accordance with Commission regulations.

20160104-5267

UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of) **Docket No. CP16-21-000**
Tennessee Gas Pipeline Company, L.L.C.)
Northeast Energy Direct Project)

MOTION TO INTERVENE AND PROTEST

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Town of Litchfield, New Hampshire hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Town opposes the construction of a natural gas transmission pipeline and other facilities known as the Northeast Energy Direct project ("Project") due to the adverse impacts that will be sustained by the Town, and therefore seeks party status to protest the proposed pipeline, and fully protect the Town's interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. The Town is committed to enhancing and protecting the quality of life of all its residents, workers, and businesses, and is gravely concerned for those who live, work, and recreate near the proposed pipeline route. There are substantial and real environmental, economic, and health threats to the Town arising from the construction and operation of the pipeline within the municipality. It is unacceptable that we may be coerced into the industrialization of our landscape and the degradation of our scenic, historic, and cultural resources for a Project not even intended to benefit us.
2. The proposed pipeline will run through 2.68 miles within the Town and within the right of way of public streets and on other property owned by the Town. It will cross conservation lands, sensitive water protection areas, permanently protected open space, farmland, forestland, endangered species habitats, wetlands, vernal pools, public infrastructure, private homes and business, and historic resources. The proposed location of the pipeline is intrusive, and threatens to disrupt the rural tranquility our residents enjoy. Additionally, construction will impede Town roadways and cause traffic and transportation disruptions along with related interruptions of public services.
3. There are also approximately 100 homes within 500 feet of the proposed pipeline, and these residents are deeply worried about the reduction in value of their homes, and the difficulties they may encounter in refinancing and in obtaining homeowner's insurance for their properties. Faced also with the looming threat of the forcible taking of their property to facilitate the construction of the Project, these citizens are uniquely harmed by the Project and the Town is obligated to defend them from encroachment by the pipeline. Moreover, the Project threatens public safety by placing fire and

explosion hazards in close proximity to residential areas, and subjects the Town and its residents to an ongoing fear of such catastrophic incidents. The Town's emergency response systems will also be burdened by these pipeline failures.

4. The Town of Litchfield is responsible for the protection of both its natural environment and the health and welfare of its residents, and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project. Accordingly, the Town of Litchfield has a substantial interest in the outcome of this proceeding. Moreover, given the Town's expertise and familiarity with the locale of the proposed pipeline, and the proposed alternative site locations, its participation in the above-captioned proceeding will significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual(s) should be included on the service list for this docket, and all communications should be sent to:

Troy Brown
Town Administrator
4 Liberty Way
Litchfield, NH 03052
603-424-4046 ext 1250
tbrown@litchfieldnh.gov

III. CONCLUSION

WHEREFORE, the Town of Litchfield, NH respectfully requests that it be permitted to intervene in this proceeding with full rights to participate in all further proceedings.

Respectfully submitted,
Troy Brown
Town Administrator
4 Liberty Way
Litchfield, NH 03052
603-424-4046 ext 1250

Dated: January 4, 2016

20160104-5269

UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP1S-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, GERALD KUTCHER, of Tewksbury, Middlesex County, Massachusetts, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Gerald Kutcher
210 Cardigan Road

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me as follows:

1) My home is in the direct path of the proposed pipeline, as are the other homes on my street. My home is shown as Lot MA LL 64.00 on sheet TEG_N-005 on the map named Segment N, Lynnfield Lateral, and on construction drawing LA-SEG_RES-08. As I explained in the pre-filing comments I submitted under PF14-22 on June 4, 2015, which, by reference, are hereby fully incorporated herein, this strip of land which runs behind my home in the direct path is a steep, forested slope with large shady trees, a thing not revealed on the maps. It is in a Residential subdivision of single family homes on 1-2 acre forested lots. It has numerous perennial streams running through it in multiple locations. It also has several wetlands and swampy areas. It is midway between two major rivers and forms a wildlife corridor which runs between several Article 97 parcels which are NHESP rare species habitats and at least one Biomap 2 core habitats. This area is a natural home, and breeding ground for a variety of wild life, including many birds, reptiles, amphibians, foxes, coyotes, rabbits and deer. It serves as a wildlife corridor as the animals and birds migrate between the Merrimack and Shawsheen Rivers, between our numerous certified wild life habitats, and as they otherwise travel north to south and back again throughout the state. This area has been preserved in its natural state because it is wetlands and supporting uplands, both of which are recognized by Federal, State and Town law as important wildlife habitats and a source of contribution to plentiful, clean water. It also has historic, cultural and archeological significance, dating back to the 1600's. It is part of an area which was originally inhabited by the Pennacook and Wamesit Indians/ Native Americans.

As many residents have already written, this pipeline project will destroy this habitat, consequently destroying forever wildlife in the area, as well as cultural, geological, and archeological artifacts. The alterations will be detrimental to the replenishment of the clean water that so many people down river depend on. Because of the close proximity of the homes to each other and high population along this path, installing the pipeline in this location creates an unnecessary risk to the health, safety and welfare of many families. It will also destroy significant historical, cultural, archeological and geological resources located here. To see the portion of the proposed path I am referring to herein, please see the segment of the Map TGP filed in March, attached as Exhibit A in my comments filed under PF14-22, on which I have noted my property as 210 Cardigan in yellow highlight.

The setting of my home is private, quiet and natural. My neighborhood is one of natural beauty and balance. This will all be permanently destroyed.

2) According to the plans, Tennessee Gas (TGP) intends to install a 24", 1460 psi pipeline in and across the entire width of my private back yard by clear cutting a swath behind my home in order to create temporary and permanent work easements. The swath will result in the elimination of hundreds of the mature trees which now give my neighbors and me privacy and shade, and which provides a wildlife habitat that I deeply care about. According to the maps, although the clear cut swath behind my home will be approximately 90 feet wide, the swath on abutting properties along this corridor will be as wide as 195 feet wide.

3) The path as proposed will disrupt numerous streams through my back yard and the other yards along the path. In my yard specifically, there is a natural stream that flows down the slope behind my home. It starts up behind 5 Deca Circle, Andover (shown as 64.01 on the map) and flows down toward my home. This stream, plus any surface run off storm water by the nature of the topography, next continues on past my home to an even lower elevation to recharge the Certified Zone II Well Head protection area that my home borders, and Tewksbury Ground Water Protection Zone that my home sits in. The proposed path of the pipeline will traverse the stream on the perpendicular, and cut off/disrupt the flow of that natural stream. It will also traverse on the perpendicular the swale which allows "downhill water" run off from Andover's Brown St /Deca Circle to flow into a 12 pipe in a drain culvert that I had installed on my property at the bottom of the swale. Engineers recommended and installed this pipe and drain culvert to divert surface water flood wa-

ters away from my house. Prior to installing this pipe (at the end of the swale) water from the higher Andover land on Brown Street would come flowing down the hill and flood my basement. Allowing the pipeline to cut the swale would bring a return to the flooding problem for me.

4) The path, as proposed, will disrupt the slope behind my home and jeopardize the homes at the top. This is a very steep slope, but the maps TGP has provided to date fail to reveal this fact. The Elevation of my home at 210 Cardigan Road, Tewksbury, is elevation 110 while the homes behind me on Brown Street and Deca Circle, Andover are at elevations 210-220. This is a steep slope but, as stated above, the maps that TGP has filed to date do not show this. They are outdated and/or deceiving. The homes are much closer together than as shown on the Maps. To cut into that slope as proposed on the maps and explained in the Resource Reports will for sure result in damage to every single home here. Such work endangers the long term stability of the slope. It will be impossible to re-compact the soils to support the weight of those homes at the higher elevation, causing long term risk to homes at both elevations, not only during construction, but also as they settle over time. Please note that the roots of the mature trees here, through which, according to their maps, TGP proposes to clear cut a 90-170 foot wide swath and keep a 50 foot easement, play a big part in keeping the slope stable and preventing erosion. The removal of the trees along this corridor will have a devastating long term consequence. Once the trees on the slope are removed, the roots holding the slope intact will die and the land under the homes at the top of the slope will collapse while the homes at the bottom of the slope will be buried under a mudslide. The existence of this slope does not seem to be recognized in any of their resource reports.

5) CULTURAL, ARCHAEOLOGICAL AND ENVIRONMENTAL RESOURCE AREA:

There are numerous historical New England fieldstone walls running down the stretch of land between Cardigan Road, Tewksbury and Brown Street, Andover. These fieldstone walls are at least 200-400 years old. There is a major one, substantially still intact, which I believe to have been erected in colonial times, perhaps as an original border between Andover and what was then Billerica but which is now Tewksbury. This wall runs along the length of the width of my Property. That wall runs through all the back yards here, exactly where this Lynnfield Lateral is proposed to go. Because my land extends over both sides of the Tewksbury/ Andover Town line, a major section of this stone wall exists, intact, at the edge of my yard, precisely where the maps show KM wants to dig to install the pipeline and maintain their permanent easement. These walls are recognized in Massachusetts as cultural, historical, archaeological, and geologically significant Landscape structures. These stone walls are unique to New England and without argument, have significant cultural, historical, geological and archaeological value. The proposed Lynnfield lateral will traverse them, run over them, and otherwise permanently destroy these significant historical and archaeological monuments, which are unique to New England. See also booklet published by MA DCR entitled, "Terra Firma, Putting Historic Landscape on Solid Ground" and "Stones that Speak".

6) Risk to Health and Safety -The permanent clear cut easement will be 50 feet wide. The finished pipeline will be about 100-150 feet from my home. This puts me (and my neighbors) well inside the "Blast" or "incineration zone". My family and I will hear the high pressure gas being pumped through the line and the pigging when cleaning occurs. My neighbors and I will lose our trees, our sound buffer, our privacy, our beautiful, natural views. All of the mature trees that give our neighborhood its character will be permanently eliminated. The wetlands will dry out. The wildlife habitat will be eliminated and my family and I will be deprived of the enjoyment of watching the animals that inhabit and travel through the corridor daily. After construction my view will consist of nothing more than an expanse of grass or invasive weeds upon which my trees would have been replaced by yellow posts clearly marked "Danger High Pressure Pipeline". That is all that will separate me from my neighbors on Regis Road. Because of the need for ongoing inspections and maintenance, I will be permanently subjected to random intrusions and violations of my privacy by total strangers, as well as to risks associated with toxic herbicides. The path of the pipeline will deprive us of privacy, disturb and dry out wetlands and ground water, threaten our aquifers and well heads, and jeopardize our water supply.

7) During construction, I will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of

privacy. My neighborhood is well known to consist of ledge so substantial blasting would be inevitable. This blasting will endanger the structural integrity of my home, of the other homes in my neighborhood, and adversely impact my health and sanity, as well as my use and enjoyment of my property. It will diminish the quality of my life and will unconscionably disrupt the wildlife.

8) Furthermore, according to the plans, TGP intends to clear cut and cross Kendall Road at Bellevue, the only main road between my home and route 133, as well between my home and the highways. This makes commuting to and from my home almost impossible. There are no reasonable alternate routes for me to travel to destinations in that direction. This creates a great expense and inconvenience for me and other homeowners as well as puts us at great risk should we need first responders in the event of an emergency. We will be greatly inconvenienced and endangered.

6) I am a customer and a rate payer. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Massachusetts has an LG facility in Everett that has been sitting unused. The Attorney General's independent study has established that there is no need for this additional NED infrastructure. This pipeline is not necessary at all to service New England. This Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience. By this time it has become quite clear that the true purpose of this oversized pipeline is to transport fossil fuels to Canadian and US coastal areas for liquefaction and ultimate sale and export to foreign markets, all at the expense of US rate payers and private property owners. Massachusetts does not need this new pipeline infrastructure. It should not be expected to pay for it.

7) I am a senior citizen and this home is my only major asset. I depend on the equity here to survive. The value of my property will be diminished by this pipeline path. In fact, the resale value of my property has already been diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive me of my retirement funds.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 2nd day of January, 2016.

Gerald Kutcher
210 Cardigan Road
Tewksbury, MA 01876

Submission Description: (doc-less) Motion to Intervene of Joan L Devoe under CP16-21-000.

Submission Date: 1/4/2016 1:03:37 PM

Filed Date: 1/4/2016 1:03:37 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual jld1251@verizon.net

Basis for Intervening:

I am a retired schoolteacher and a cancer survivor who owns a home on parcel 105.4 at 14 South Main Street and a plot of land on parcel 105.5 at 6 South Main Street in Lanesborough, MA, which is one-half mile from the proposed NED pipeline and near the Incineration Zone or Blast Area. My husband and I

choose to live in Lanesborough, MA because it is a safe, quiet community that has clean water, healthy air, a wide variety of wildlife, and beautiful bucolic conservation land. We have invested everything we have to live here because we want to remain in this beautiful community. However, now, we are deeply troubled and heartbroken to learn that this natural gas pipeline is slated to pass through our aquifer, conservation land, and under the local Cheshire Reservoir, thus threatening our town's health, safety, property values, and recreational economy.

Therefore, I am filing this Motion to Intervene in this proceeding because I am concerned that the construction, operation, and maintenance of this pipeline will affect me in the following ways:

My first concern is that there are well-documented examples which show that Kinder Morgan and the Tennessee Gas Pipeline Company lack the moral integrity and financial resources to provide adequate compensation to landowners when explosions and leaks have occurred in the past. Therefore, prior to construction, a scientific No Action Alternative Assessment needs to be established by an independent third-party determine the impacts of not building this pipeline. This study would assess the current property values, public health, wildlife habitat, watersheds, vernal pools, aquifers, private wells, and the quality of the air, water, and soil all along the pipeline from Hancock to Dracut including the areas where the compressor and meter stations would be built. This No Action Alternative Assessment will establish not only a baseline of the current status of our environment, public health, and economy, but it will also provide individual property owners, businesses, and towns with the necessary information they will need in order to receive adequate and fair compensation for any accidents, pollution, health consequences, or any damages that may occur if this pipeline is built.

Once the construction of this pipeline begins, it will result in heavy machinery traveling directly the front of our house on Route 7, as well as nearby blasting which will cause noise, road congestion, and damage to our main road and the structure and integrity of our house which was built in 1855. Also, this construction will disrupt and possibly damaged the local wildlife, wetlands, and bucolic beauty of our conservation land.

Another concern is the quality of the pipeline itself. For it to be safe, this pipeline will need to be buried well below the frost line with shutoff valves every 2 miles not the proposed every 10 - 20 miles, and the pipe must have a thicker lining then the one currently being proposed.

Once this pipeline is operating, toxic methane leaks are a very real possibility especially since these ongoing leaks continue to be well-documented throughout the state and country. As a cancer survivor, it is imperative to me to live in an environment that is healthy and safe from toxic substances. At this point, my immune system cannot afford to live in a toxic environment that threatens the quality of the water I drink and the air I breathe.

The threat of a natural gas explosion is also a possibility. These explosions have been and continue to be well-documented throughout our country. Our local medical and emergency personnel do not have the adequate resources or detailed training in how to respond to a pipeline explosion or any other pipeline-related health hazards. Our small town also lacks the financial resources to provide residents with emergency food, water, shelter, medical care, and other basic necessities for as long as a crisis may exists.

As a retiree on a fixed income, I feel it is unfair to require me to pay additional fees on my electric bill to cover the cost of the installation of this pipeline which will have no direct benefit to me or the the other residents in Lanesborough and which could actually devalue our properties and damage our health, safety, as well as our wetlands, aquifer, and our reservoir.

This pipeline does not address the need for our state and our country to establish clean, renewable and sustainable energy. It is a step backwards which further damages the climate rather than providing the innovative solutions we need for the future. This pipeline is not the answer to our energy needs, and therefore it is not needed.

Therefore, the above concerns indicate that as a landowner and taxpayer, I have important information and perspectives to bring to this process, consideration of which will serve the public.

Wherefore, I, Joan L. Devoe, respectfully request that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 4th day of January, 2016.

Joan L. Devoe

Basis for Intervening:

I strongly object to the construction of the proposed pipeline for a number of reasons. The primary reason for this intervention filing is my objection to expanding the delivery of non-renewable fossil fuels in the form of fracked natural gas that contributes to greenhouse gas and the resulting warming of the planet, a course that is inherently self destructive to our world. Secondary objections are equally strong, namely the reduction of property values, the negative effect on the watershed, concern for toxic emissions, the impact on conservation easements, the impact on the condition of local roads, and the reduction in the rural quality of life in Cummington and Windsor.

Basis for Intervening:

The public need for this project has not been sufficiently demonstrated to justify the taking of private property by eminent domain. More reasonable alternatives to this plan have been proposed and deserve serious consideration. In addition the energy supplied by this project would far exceed the need. This amounts to

using eminent domain mainly for private profit.

Basis for Intervening:

I live in Rindge NH and want to intervene in this proceeding to oppose the NED pipeline.

I moved here because of the rural character of Rindge, it's parks, lakes, ponds and forest where my family enjoys this land.

I am concerned about the environmental impact to the lands, our wells, foundation by blasting.

I am concerned about our first responders who don't have the equipment, training or expertise to deal with possible problems leaks or fires.

I am concerned about the damage to our rural roads in the spring where and because of frost, load limits are imposed and most of the pipeline machines grossly outweigh those limits.

I am concerned about the financial viability of KM/TGP

I worry what this project will do to our community, it's economy, it's aesthetics, and health issues

I believe this project is an overbuild and other means should be addressed to facilitate any energy needs.

And lastly...what will it cost me as a ratepayer

Basis for Intervening:

Dear Ms. Bose,

I am a resident, property owner, and tax payer of the town of Wendell. I am concerned because the Massachusetts Powerline Alternative and Massachusetts Article 97 Collocation Alternative both bisect portions of Wendell. I am particularly concerned with the Article 97 Collocation Alternative because I cannot discern the ROWs used.

I am concerned whether the Massachusetts Article 97 Collocation Alternate may run in close proximity to my property, to MacAvoy Pond which my property abuts, and to Lake Wyola. I would like more clarity as to the ROWs proposed for this alternate.

I would also like an inventory of parcels and water/wetland resources that would be impacted by this alternate.

I am concerned about the impacts of this alternate and the Massachusetts Powerline Alternative on my property value (Parcel ID 319/409.0-0000-0031.0), ability of my town's first responders to mount an adequate response in case of emergency (and impact of a response on our tax rate and safety of residents), water quality, wetland impact, and impact to conservation land, permanently and temporarily protected open space, wildlife, agriculture, forest products, and the scenic beauty of our town.

I am also concerned with the proximity of the current proposed pipeline to the Millers River and its potential impact on the Mormon Hollow landfill, since sliding of that landfill into the Millers River would impact a fishing, recreation, and tourism resource for the area. Seven miles of the Millers River run along the border of Wendell.

Sincerely,

Raymond DiDonato
Wendell, MA

20160104-5281

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of)
Tennessee Gas Pipeline Company, L.L.C.)
Northeast Energy Direct Project)

Docket No. CP16-21-000

MOTION TO INTERVENE AND PROTEST

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Town of Greenville, New Hampshire ("The Town of Greenville" or the "Town") hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Town opposes the construction of a natural gas transmission pipeline and other facilities known as the Northeast Energy Direct project ("Project") due to the adverse impacts that will be sustained by the Town, and therefore seeks party status to protest the proposed pipeline, and fully protect the Town's interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. The Town is committed to enhancing and protecting the quality of life of all its residents, workers, and businesses, and is gravely concerned for those who live, work, and recreate near the proposed pipeline route and compressor station. There are substantial and real environmental, economic, and health threats to the Town arising from the construction and operation of the pipeline within the municipality. It is unacceptable that we may be coerced into the industrialization of our landscape and the degradation of our scenic, historic, and cultural resources-for a Project not even intended to benefit us.
2. The proposed pipeline will run through 1.6 miles within the Town and within the right of way of public streets and on other property owned by the Town. It will cross sensitive water protection areas, farmland, forestland, endangered species habitats, wetlands (including the Souhegan River), and private homes. The proposed location of the pipeline and compressor station is intrusive, and threatens to disrupt the rural tranquility our residents enjoy. The pipeline will cross the Souhegan River and the Compressor Station (currently slated for New Ipswich) lies wholly within a protected watershed for Greenville's drinking water, which comes from the reservoir in Temple. Additionally, construction will impede Town roadways and cause traffic and transportation disruptions along with related interruptions of public services. The current path of the pipeline crosses Route 31 in Greenville which is a major route of traffic in and out of our Town ..
3. There are also approximately four homes within 500 feet of the proposed pipeline, and these resi-

dents are deeply worried about the reduction in value of their homes, and the difficulties they may encounter in refinancing and in obtaining homeowner's insurance for their properties. Faced also with the looming threat of the forcible taking of their property to facilitate the construction of the Project, these citizens are uniquely harmed by the Project and the Town is obligated to defend them from encroachment by the pipeline. Moreover, the Project threatens public safety by placing fire and explosion hazards in close proximity to residential areas, and subjects the Town and its residents to an ongoing fear of such catastrophic incidents. The Town's emergency response systems will also be burdened by these pipeline failures. The Town of Greenville's Fire Department is 100% volunteer.

4. The Project specifically contemplates building a compressor station within the Town of New Ipswich on land which would negatively affect the quality of life for all nearby residents. In addition to producing harmful toxic emissions and atmospheric pollution, the compressor station will jeopardize the Greenville Water Department's Drinking Water Source Protection Area. The reservoir in Temple that this Water Source feeds into provides drinking water for approximately 25% of our residential homes and 75% of our businesses.
5. Greenville] is responsible for the protection of both its natural environment and the health and welfare of its residents, and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project. Accordingly, Greenville has a substantial interest in the outcome of this proceeding. Moreover, given the Town's expertise and familiarity with the locale of the proposed pipeline and compressor station, and the proposed alternative site locations, its participation in the above-captioned proceeding will significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual(s) should be included on the service list for this docket, and all communications should be sent to:

Kelley A. Collins/Town Administrator
Town of Greenville
PO Box 343,
Greenville, NH 03048
603-878-2084
NEDPipeline@greenvillenh.org

III. CONCLUSION

WHEREFORE, the Town of Greenville respectfully requests that it be permitted to intervene in this proceeding with full rights to participate in all further proceedings.

Respectfully submitted,
Kelley A. Collins
PO Box 343,
Greenville NH 03048
603-878-2084

Basis for Intervening:

Basis for Intervening:

I live in the town of Temple, on Cutter Road, about 2 miles from the proposed compressor station. This proposed industrial development will cause dramatic, irrevocable damage to my community, as well as my own property value and tax liability.

I am a past member of the Temple Planning Board (2007-2014), including 3 years as Chair. I have been very active in other Temple Committees. I know my town well, and it is a caring, thoughtful community that has carefully considered it's direction, and made regulations that support the values of the residents.

The proposed pipeline and compressor station are just over the border in neighboring New Ipswich, but town lines and other borders have no bearing on the impacts of this development.

This massive development is not just completely unwelcome, it is completely out of place, and is in dramatic contrast to every value supported by the citizens of our town: Rural, quiet, quintessential New England, historic, natural, bucolic. The people here support high education ideals and excellent town services. These notions are all reflected in our zoning, our town surveys, and the articles passed at town meeting.

If this development is allowed, we lose EVERYTHING we have built our towns to be. Polluting, noisy, bright, dangerous massive industrial development can not co-exist with the natural quiet lifestyle of our region! Educated, thoughtful people will leave. Some homes will be abandoned. Our home values will plummet. Our tax base will be decimated as our most productive citizens leave for safer, less polluted locations. This will raise the taxes of the citizens who have not left, which will result in even more homes abandoned, and reduction in services as the tax base diminishes.

Some of my neighbors will lose their livelihood, some will lose their life savings via loss in property value. I will personally lose as my home value plummets and taxes go up. This beautiful area will never be the same. The potential risks are catastrophic. We will lose our character, our people and our money.

As these reasons demonstrate, my quality of life will be directly impacted by the Applicant's filing. I wish to be able to represent the full breadth of my concerns, and therefore request permission to intervene in the proceedings regarding Northeast Energy Direct.

Basis for Intervening:

I am a resident of Mason, NH. I am filing to intervene on the proposed NED project. I want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the out-

come of the proceeding because I am a property owner and abut land designated for the 30" main pipeline and I also abut land designated for the 12" Fitchburg Lateral Line. I have a direct interest in his project as I have a well that is less than 1000 feet from this project. Blasting from this project may impact my home and my well and water quality and content. Also, the project route my change and I can potentially be a stakeholder with direct impacts to my property.

I am also an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED.

– I am a resident expected to be in the "blast radius"/my daily commute crosses over the proposed pipeline route, so I will be at physical risk.

– I am a resident whose watershed is crossed by the proposed route and could have my drinking water supply impacted by construction and/or operation.

– I am a member of an impacted community concerns about various impacts to local economy/environment/aesthetics/health.

Motion To Intervene

Docket No. CP16-21

Amy Abbott Breen

12 Savoy Ct.

Dracut, MA 0182

I live in Dracut, MA, and I want to intervene in this proceeding, docket no. CP16-21, to oppose the NED pipeline. I strongly object to the construction of the proposed pipeline for a number of reasons. The greatest impact my family and I will feel will be the impact on our church and the land surrounding St. Francis. This includes our Mary prayer garden as well as other facets of the property that parishioners' hard work and financial contributions made possible as a way to expand our faith, strengthen our prayer community, and deepen our relationship with God. I will also be impacted as a patron of a local organic farm that will be forced to shut down due to the close proximity of environmental toxins and loss of land due to the construction of the pipeline. My son will lose outdoor play space where he and his friend are able to explore and learn from nature as well as develop physical and mental health through a rich outdoor environment. I am also greatly concerned about the reduction of my property values, the negative effect on our watershed, concern for toxic emissions, the impact on conservation easements, the impact on the condition of our local roads, and the reduction in our rural quality of life.

In addition to this motion to intervene, I want to personally express my disappointment at the difficulty I have encountered in this intervention process. When I tried to register with FERC on January 2, 2016, the website stated that it was shut down due to weather in the Washington DC area and to check back later. The statement was dated December 18.

Sincerely,

Amy Abbott Breen

Basis for Intervening:

I am landowner directly affected by the pipeline route, live in Rindge, NH and wish to intervene to oppose the NED pipeline. I am seriously concerned about this pipeline proposal because I continue to believe that this pipeline is not in the best interest of the citizens of New Hampshire. The proposal is most unreasonable and quite incomplete to make any valuable and intelligent decision about allowing it to go forward.

Individual	patriciafarrow@mac.com	

Basis for Intervening:

My domestic partner and I purchased a property in New Ipswich, NH and moved here in April 2014. We moved across the country from California and invested all of our savings to purchase this home and its 9.5 acres as our retirement employment. We intend to update the property and create a B&B for the many tourists who come to the Southern NH region for Fall Foliage and Winter Cross-Country Skiing. Additionally, we intend to do organic farming and permaculture and use the property as a teaching facility for others interested in learning these forms of agriculture.

Our property is within 1/2 mile of the proposed site for Kinder Morgan/Tennessee Gas Pipeline's 41,000 horsepower compressor station. We have private wells that provide our clean drinking and domestic water and are concerned for the welfare of these water sources. Additionally, because of the nature of compressor stations and the light, noise, and toxic emissions from such facilities, if this project is approved, we will no longer be able to open a B&B as a new business to bring much-needed tourist revenue to our town.

If this project is approved, we will have no choice but to leave our home and start life again in another place. The light, smell, noise, periodic blowdowns, toxic emissions, and industrial nature of pipeline compressor stations will render our property unappealing to tourists seeking B&B accommodations while visiting the Southern NH region. We are in our 50's and invested all the money we had saved to purchase our New Ipswich property and begin the necessary work to make it a community-friendly tourist business.

We are affected landowners (ALOs) who will be deeply impacted if FERC approves this project. On these grounds, I apply for Intervenor status with FERC on the NED pipeline project proposal.

Basis for Intervening:

My family lives directly across the street from the proposed Mid station 4, New Ipswich compressor station.

Rebecca C Barthelmess

424 Temple Road,

New Ipswich, NH 03071

I would hear, see and smell the effects of the compressor station.

I am absolutely concerned about the health of our kids living so close (just feet) from the proposed compressor station. I am concerned about the air and water pollution from the compressor station. I am concerned the compressor station will be responsible for heavy truck traffic, noxious odors, persistent low-level vibrations, and air contamination. I am concerned about our gardens and the quiet, peaceful area we live in. I am concerned about light pollution in our clear dark skies. I have read the documentation and responses from Kinder Morgan, and I am concerned with their lack of transparency and their avoidance of answering our questions directly and thoroughly. I am concerned with potential accidents and explosions from the rural gas-line and compressor station. I am concerned with the financial viability of the company building the pipeline as Kinder Morgan's earnings are down over 75% compared to year-earlier quarter as reported by

TheStreet on 12/31/2015. I am concerned that blasting may adversely effect the radon levels in our home. Lastly, I am concerned about our property value decreasing 50% [or more] as reported by NYS Assesors in Hancock, NY due to proximity of the Millennium Pipeline's much smaller (15,000hp) compressor station.

Save Burden Lake

saveburdenlake1@gmail.com

Basis for Intervening:

Save Burden Lake is a grassroots group of citizens from Nassau, Sand Lake, and the greater Capital District. It was organized to opposed the construction of the NED compressor station in the Town of Nassau approximately 2500 feet from the southern shore of Burden Lake. The concerned citizens from this organization include residents of Glass Lake, Crooked Lake, and Crystal Lake, all to the north of Burden Lake. This is a recreational, residential community. Though the original concern was largely for the location of the pipeline, members of this organization now are opposed to the entire NED project within Rensselaer County. This organization is applying to intervene in the interest of the public good.

This area does not have a municipal water supply. Construction of this pipeline will require extensive blasting which could significantly damage our aquifers and wells. It would also require blasting near the location of a Superfund Site in the Town of Nassau. Any changes to the bedrock in that area could alter the flow of residual contaminates that could potentially enter our aquifer, wells, and ground water feeding into Burden Lake.

This area is not zoned for commercial use. Blasting and the operation of a large compressor station would alter the rural nature of this residential, recreational area and disrupt wildlife and natural habitat. The need for 24/7 lighting would also disrupt wildlife and obliterate our "night sky", and potentially disturb sleep rhythms in residents.

Due to the recreational aspects of this area, property values are currently fairly high. This area represents a significant tax base for both Nassau and Sand Lake. Placing an industrial complex in the community with risks to health and the environment has the potential to significantly lower property values. This would have impacts for residents who have invested life savings in holding onto and maintaining these properties. It would also have tax consequences for the towns should residents ask for reassessments or abandon properties due to potential health consequences.

People choose to live in this setting for the natural beauty and clean air.

Save Burden Lake members have attended health forums where the current research on the health impacts of living near compressor stations was presented. We have serious concerns about emissions from compressor stations that contain particulate matter and other toxins. This area is used year round for recreation which means people are out doors exposed to contaminants in the air. Our prevailing winds come from the southwest and would carry emissions over homes and our lake. We are concerned that under certain weather conditions the toxins and particulates would drop to the surface of the lake causing contamination and health risks to those who swim, fish, and use the lake water for bathing and cooking.

This area is home to two summer camps for children who spend much of their time outdoors and on the water. Children are particularly vulnerable to toxins used in fracking and found near the sites of other compressor stations. We would like the health and environmental impacts of pipeline infrastructure studied by

an independent source to ensure the safety of all residents.

Roads in our community are narrow and not paved to support heavy construction machinery. Construction of the pipeline and compressor station in this area would pose a hardship on those traveling to and from their homes.

There are several organic farms in our community. Particulate matter and toxins falling to the ground or making their way to irrigation systems or animal water supplies would have health and economic consequences. The noise from construction and operation of a compressor station would have an impact on the animals on those farms.

There is also a golf course/restaurant in this area which draws people from the Capital District. This too is to the northeast of the proposed compressor station. It provides significant tax revenue and employment in the area. Golfers and diners would not seek out this area if it presented health risks and noise pollution.

Save Burden Lake does not feel that the need for this pipeline has been demonstrated. In fact, we believe that most of the gas is planned to be exported. This could result in increased prices in the areas the NED is supposed to serve. We also believe that given the data on methane leaks from pipelines, that this project is not in line with the goals to lower greenhouse gasses.

We are also concerned about pipeline accidents. Our community is protected by a volunteer fire department. There is no burn center in our area. Many firefighters are living in the incineration zone, so should there be an accident, they could not be mobilized.

We are not satisfied with the current standards that allow for lower grades of pipes in rural areas. There are hundreds of homes in this area that would be in danger in the event of an accident.

There are thousands of residents that would be exposed to the emissions from blowdowns and operation of a compressor station.

One only has to look at recent accidents in California to see that there has not been adequate oversight of these projects.

For the protection of our homes, families, environment and public good, Save Burden Lake formally requests to intervene in the NED project.

Basis for Intervening:

The proposed pipeline route requires a new right-of-way that would cut through many miles of environmentally sensitive areas and take permanently protected land out of that protection.

Some "fracking" compounds and chemicals negatively impact the skin, eyes, sensory organs, the respiratory system, the gastrointestinal system, the liver, the nervous system and are endocrine-disrupting chemicals. Endocrine-disrupting chemicals (EDC's) present unique hazards, particularly during fetal and early childhood growth and development. We do not want anyone to be exposed to any of these chemicals.

20160104-5308

Tennessee Gas Pipeline Co, LLC

Docket No. CP 16-21-000

**MOTION TO INTERVENE OF FIRST PARISH UNITARIAN
UNIVERSALIST-BEDFORD, MASSACHUSETTS**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure, 18 CFR §§ 385.212 and 385.214, Section 15(a) of the Natural Gas Act (18 CFR 157.10), The First Parish in Bedford Unitarian Universalist moves to intervene in the above captioned proceeding.

On November 20, 2015, Tennessee Gas Pipeline Co. LLC filed its Notice of Application for a certificate of Public Convenience and Necessity to (i) construct, install, modify and operate certain pipeline and compressor facilities to be located in Pennsylvania, New York, Connecticut, Massachusetts and New Hampshire and (ii) to abandon certain facilities as part of a Northeast Energy Direct Project (NED Project).

The First Parish in Bedford Unitarian Universalist is a duly organized religious community under the Laws of the Commonwealth of Massachusetts, founded in 1729. The First Parish in Bedford, Unitarian Universalist, located at 75 The Great Road, Bedford, Massachusetts is a community of nearly 400 members, individuals and families, adults and children, committed to independent spiritual paths and a shared religious journey. Together we face the challenges of existence within a context of belonging. Three practices help us to live our values: personal inquiry, common worship, and public responsibility. Our neighbor is ourself, and we accept our responsibility to one another and to our larger community. We affirm an active spirituality that does not withdraw us from the world but engages us more fully. Proud of our historic location on the Bedford Town Common, we pledge to be a good neighbor and an active participant in public life within and beyond Bedford. We join with others who are already engaged. Inspired by our vision of community, local and global, we aspire to shape our culture and enlarge common good. As such, the Congregation approved a Resolution Declaring Our Right to a Livable Climate on November 8, 2015.

Whereas, we are a community of faith that values the inherent worth and dignity of all people and communities, and seek to create and defend a world in which all people may lead full and productive lives;

Whereas, at least 80% of declared fossil fuel reserves in the ground must remain in the ground if we are to avoid catastrophic climate change, defined by the international community as warming over 2 degrees Celsius (3.6 degrees Fahrenheit);

Whereas, fossil fuel companies have stated publicly they intend to burn all their known reserves, thereby directly threatening the livability of Bedford and Massachusetts;

Whereas, fossil fuel companies continue to grow their businesses by building new infrastructure to extract and transport fossil fuels;

Whereas, fossil fuel companies are a keystone institution within an economic system that has resulted in rising inequality and which systematically ignores the needs of people of color, workers, and communities with the fewest resources;

Whereas, we know that a world without the burning of fossil fuels is technologically possible, and that a transition to this world is being blocked by the fossil fuel companies and the politicians influenced by them;

Whereas, we know that climate disruption caused by the burning of fossil fuels is causing forced migrations, food shortages, mass extinctions, and the disruption of indigenous peoples around the world:

Therefore, be it resolved, by the First Parish in Bedford, that the congregation:

- 1. Recognizes that we have an inherent right to a livable climate, and that right trumps laws legitimizing the continued extraction and consumption of fossil fuels.*
- 2. Recognizes the continuation of extraction and burning of fossil fuels as immoral; therefore the construction of new fossil fuel infrastructure is unconscionable.*
- 3. Supports those in our community who through organizing or nonviolent civil disobedience seek to reject or dismantle the laws legitimizing this industry.*
- 4. Opposes any tariffs that may be imposed on Massachusetts ratepayers to fund new fossil fuel infrastructure, including the proposed Kinder Morgan and Spectra pipelines.*
- 5. Stands in solidarity with frontline communities in their efforts to oppose fossil fuel infrastructure.*
- 6. Empowers our ministers and elected officials to act in accordance to this resolution in conducting*

public affairs and speaking on behalf of this congregation.

The First Parish in Bedford, Unitarian Universalist Congregation opposes the proposed pipeline for moral reasons as outlined above in our Resolution. The proposed NED project would go against our commitment to life and our commitment to climate justice for all communities.

The First Parish in Bedford Unitarian Universalist has a commitment to addressing our energy challenges by investing in energy conservation and clean renewable energy. The Congregation supports the Commonwealth's goals of meeting established targets under the Global Warming Solutions Act (GWSA) to reduce total greenhouse gas (GHG) emissions by 25 percent below 1990 levels by 2020 and 80 percent by 2050. We also support the Paris Climate accord recently agreed upon on December 12, 2015 by 195 countries worldwide, which commits to reducing the use of fossil fuels in order to keep global temperatures from rising more than 2 degrees Celsius. The NED Project is inconsistent with our Declaration to Our Right to a Livable Climate and with the goals set forth by the GWSA of the Commonwealth and The Paris Climate Accord.

The First Parish in Bedford Unitarian Universalist has a substantial interest in the above docket and will be significantly impacted by the outcome of the proceeding. The First Parish in Bedford Unitarian Universalist cannot be adequately represented by any other party and would like the opportunity to participate in these proceedings.

All correspondence and communications related to this proceeding should be directed to the following individual, whose name and address should be placed on the official service list maintained by the Secretary for this proceeding:

Christine Dudley-Marling
Chair, Social Responsibility Council
The First Parish in Bedford, Unitarian Universalist

January 4, 2016

Docket No. CP16-21
Federal Energy Regulatory Commission
Tennessee Gas Pipeline Company - NED Project

Motion of Norman S. Walker, James A.S. Walker, Bryce S. Walker, Owen S. Walker to Intervene

We, who are joint owners of woodland in Ashfield, MA located from and north of the existing high-tension transmission lines where they adjoin Bear Swamp Road and bounded on the west side by Bear Swamp Road, move to intervene in this proceeding. The proposed pipeline, as we understand it, would run through our land and would require a taking of part of that land.

If the pipeline were built, the blasting for it or subsequent leakings, seepage, or explosions in the pipeline itself could affect much of our land, which is downhill from the place on our land that the pipeline would be built on, including a spring that is sometimes used in connection with a house at the corner of Hawley Road and Bear Swamp Road, i.e., 534 Hawley Road, (owned by Bryce S. Walker, Owen S. Walker, and other relatives).

Under the Fifth Amendment to the Constitution of the United States, as you know, land may be taken only

for a public purpose; and usually eminent domain takings are made by political units, not private companies. The burden of proof on this key matter lies on the pipeline company, a non-public venture whose motivation is to make a profit, not to enhance the public interest. Given the already strong negative reaction to the pipeline by various people (including public figures) in the affected states, this burden of proof may be unsurmountable.

(This motion to intervene concerns different property from the property of Norman S. Walker, at 411 Hawley Road, Ashfield, about which the latter filed a motion to intervene dated December 30,2015.)

Motion to intervene of Claudette Bisson

Claudette Bisson is a resident of the town Pelham,N.H. In Hillsboro county. The proposed Kinder Morgan pipeline is proposed to run through my property.As a result a large amount of this property may be subject to condemnation if a certificate is granted.

Pursuant to commission Rules 385.214(b) and 157.10, I Claudette Bisson move to intervene in the above captioned proceeding.This intervention is timely filed.

I will be directly affected by the proposed pipeline.My land lies within the right of way for the NED pipeline, thus exposing the property to condemnation if the certificate is granted.This is my American right to ownership of this property. I do NOT want my or my neighbors health,safety ,and environment damaged. All of Pelham has private wells which we must protect.

I oppose the NED pipeline.

Basis for Intervening:

Four years ago I moved to the small town of Plainfield, MA and quickly felt the deepest love for this beautiful land and a strong connection with its people. Just the thought of a fracked gas pipeline coming through our town sickens me. It will sicken many of us in time though, and this is confirmed by studies of the Medical Society of New York State. Infrared photographs now show clearly the large amount of methane entering our atmosphere from such pipelines.

The Medical Society of New York State, a physicians' association, has found that compressor stations "chemical and radioactive emissions" which include "dangerous mixtures of carcinogens, mutagens, endocrine disruptors, neurotoxins, respiratory irritants, and hematological and cardiovascular toxins."

They recommend that all levels of government should take up health assessment of natural gas infrastructure. The possibility for health and safety or environmental harm resulting from natural gas compressor stations are many and serious. Some of these include explosions and fires, leaks and spills, fugitive emissions of volatile organic compounds (VOCs) and nitrogen oxide (NOx)."

Peer reviewed studies of The Endocrine Exchange find that such elements are "prone to causing major health effects to humans and animals." Some of the effects listed are "cancer, respiratory problems, early childhood mortality, childhood learning disabilities, male reproductive problems, mental illness."

Of course the fracked gas industry denies all of this, just as they did when the State Department of Health in New York declared fracked gas wells unsafe for New York State, leading the governor to ban such drilling. When you parrot the industry's untruths, you do not serve as a regulatory agency, but rather an advertising firm.

In addition to my local concern, I lived in New York State near the PA border and saw for myself what the industry's exploitation has done. As an American citizen, I am angry at the gag orders that quiet those who lost their drinking water, then their health and their right to enjoy their homes. I am angry for my rural New York friends who have lost their hearing due to a compressor station (everyone in their rural neighborhood). To use their suffering to make Kinder Morgan and other corporations wealthy while they plan to export LNG abroad is against our Constitution and is an act of Treason.

But if that were not enough, release of methane from drilling, fracking operations, flaring and transportation seriously exacerbates the problem of climate change. Since I am a citizen of this planet, as are you, I feel it is my duty to intervene. For the sake of my children, grandchildren, and great grandchildren, and those of my neighbors in this remarkable town, I request intervenor status.

VIA ELECTRONIC FILING

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
Room 1A East
888 First Street, N.E.
Washington, D.C. 20426

Re: Docket No. CPJ6-2J-000: Request/or Extension of Time to File Comments

Dear Secretary Bose:

On November 20,2015, Tennessee Gas Pipeline Company, L.L.C. (the “Company”) filed an application pursuant to sections 7(b) and 7(c) of the Natural Gas Act with the Federal Energy Regulatory Commission seeking authority to (1) construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, and (2) abandon certain facilities, as part of the Northeast Energy Direct Project (the “Project”), as more fully set forth in the FERC application. The Commission subsequently published a Notice of Application on December 7,2015, where, among other things, it requested that all parties file any comments on the FERC Application by January 6, 2016. As described in detail below, certain factors compel granting a limited extension of time of 30 days-for responding to the Commission.

On December 8, 2015, the Commission ordered the Company to respond to an environmental data request by December 28. See Letter from FERC to Tennessee Gas Pipeline Company, L.L.C., December 8, 2015 (Access Number CPI6-21-20151208- 3031). Specifically, the Commission sought additional information pertaining to Resource Report 10 and alternative routes for the proposed pipeline, including the Massachusetts Turnpike Alternative. The Commission had previously requested much of this information in its May 15, 201~ comments under Resource Report 10. See Letter from FERC to Tennessee Gas Pipeline Company, L.L.C., May 15,2015 (Access Number PF14-22-20150515-3033) However, for reasons unknown, the Company did not include this information when it filed its FERC Application.

On December 28, the Company responded to the Commission’s December 8, information request as follows:

Tennessee has not included responses to Question 2 through 9 from the Commission’s Environmental Information Request relating to Resource Report 10, Alternatives. Tennessee will submit responses [to] Question 2 through 9 no later than December 31,2015.

Letter from Tennessee Gas Pipeline Company, L.L.C. to FERC, December 28,2015 (Access Number CPI6-21-20151228-5266). The Company submitted its complete response on December 30, 2015 after 4 p.m. Responses to Commission’s December 8, 2015 Environmental Information Request No.1 of Tennessee Gas Pipeline Company, L.L.C., December 30, 2015 (CPI6-21-20151230-5351).

Due to the Company’s late filing, the public will afforded only four business days to review this new information before the deadline to submit comments. This is wholly insufficient. First, the Company’s responses contain new information regarding alternative pipeline routes. Three days is inadequate to analyze the new data critically and to submit meaningful comments.

Second, the information regarding the Massachusetts Turnpike Alternative is important and deserving of a full review by the public. Specifically, the Massachusetts Turnpike Alternative would relocate the pipeline from the northern to the southern boarder of Massachusetts and remove the need for the pipeline to cross into New Hampshire. See Recourse Report 10 at 49-50, Figure 10.3-9. For Stockbridge and other municipalities that fall along the Massachusetts Turnpike Alternative route, this information is essential in order to provide comments on the potential impacts of the Project within its jurisdiction. Four days does allow for such review to occur.

The Commission determined that the requested information on the Massachusetts Turnpike Alternative was

necessary for it to conduct its review of the Project as long ago as May of this year. Despite the Commission's clear request for this information, the Company failed to amend its FERC Application accordingly. The Commission demanded this information a second time on December 8 and, again without any explanation, the Company failed to provide the information within the time allotted. Therefore, any prejudice that would result from extending the time for public review and comment is attributable to the Company's failure to provide the information in a timely fashion.

Based on the foregoing, the Town of Stockbridge respectfully requests that the Commission grant all parties a 30-day extension to February 5, 2016, in order to file comments on the FERC Application.

Sincerely,
J. Raymond Miyares

Basis for Intervening:

I strongly object to the pipeline crossing over my land. Looking at the Map of the pipe line it looks like the pipe is intentionally jogging to hit the bottom of my land. There is ample room for the pipe to move and not intrude on my land. I have a well and I'm very concerned about fossil fuel being place next to my water supply. There will probably be a great intrusion to my woodlands not to mention any wild life that lives on and near my woods. The company putting in the pipe keeps telling us that they want to be a good neighbor but they seem to be going out of their way to intrude in my life. This will reduce the property value of my house. I moved to West Townsend to get away from this exact problem. I want this pipe to go somewhere else where wells are not required and where wild life will not be hurt. Find a paved road somewhere to run the damn pipe.

20160104-5337

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
FRANKLIN LAND TRUST, INC.**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, Franklin Land Trust, Inc. (“FL T”) hereby moves to intervene in the above-captioned proceeding.

1. In support of this motion, FLT states, as follows: The exact legal name of movant is as set forth in the above, unnumbered paragraph. FL T is a Massachusetts nonprofit land conservation corporation. FL T represents over 1,000 individuals in Massachusetts and holds 131 conservation restrictions on over 8,500 acres of land in Massachusetts. FLT works with landowners to conserve, in perpetuity, their farms, forests, and other natural resources significant to the environmental quality, economy and rural character of our region for the benefit of the present and future generations. FLT stewards land that it has conserved to ensure its health and long-term conservation value.
2. The name and mailing address of the person upon whom all communications concerning the proceeding should be served is, as follows:

Richard K. Hubbard, Executive Director
Franklin Land Trust, Inc.
P.O. Box 450, 5 Mechanic Street
Shelburne Falls, MA 01370
Telephone: 413-625-9151
Fax: 413-625-9153
rkhubbard@verizon.net

3. On or about November 20, 2015, Tennessee Gas Pipeline Company, LLC (“TGP”), filed an application pursuant to sections 7(b) and 7(c) of the Natural Gas Act (NGA), and the Federal Energy Regulatory Commission (Commission) regulations thereunder, seeking authority to (i) construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, and (ii) to abandon certain facilities, all as part of a proposed Northeast Energy Direct Project (“NED”). The proposed NED is comprised of two components:
 - a. Supply Path Component: Comprised of the proposed facilities from Troy, Pennsylvania to Wright, New York, including approximately 174 miles of pipeline facilities in Pennsylvania and New York, the proposed construction of three new compressor stations and modifications to one existing compressor station, further construction of two new meter stations, and purported appurtenant facilities.
 - b. Market Path Component: Comprised of proposed facilities from Wright, New York to Dracut, Massachusetts. These proposed facilities include approximately 188 miles of mainline pipeline facilities in New York, Massachusetts, and New Hampshire, laterals located in Massachusetts and New Hampshire, and Connecticut), proposed construction of six new compressor stations, 13 new meter stations and modification of 14 existing meter stations, and purported appurtenant facilities.

4. During this proceeding, FL T may seek to verify that TGP can locate the proposed NED within or adjacent to existing rights-of-way; and, further, FLT may investigate whether appropriate pre-filing and application protocols were followed.
5. FLT herewith reserves its right to submit comments and other information during this proceeding.
6. FLT has direct interests that will be affected by the outcome of this proceeding. The proposed NED is proposed to cross a number of properties on which FL T holds conservation restrictions as well as other properties that have been conserved with the assistance of FL T for their natural resource values.
7. FLT's interests cannot be adequately represented or protected by any other party.
8. If FLT is not permitted to intervene in this proceeding, it is highly likely to be adversely affected and bound by action taken in this proceeding without having had an opportunity to be heard.

WHEREFORE, FLT respectfully requests that it be permitted to intervene in this proceeding and that it be granted all the rights of a party thereto, including the right to notice of, and to participate in, all hearings and other proceedings.

Respectfully submitted,

On behalf of FLT:

Richard K. Hubbard, Executive Director
 Franklin Land Trust, Inc.
 P.O. Box 450, 5 Mechanic Street
 Shelburne Falls, MA 01370
 Telephone: 413-625-9151
 Fax: 413-625-9153
 rkhubbard@verizon.net

January 4, 2016

CERTIFICATE OF SERVICE

I hereby certify that I have this day served the foregoing document on all parties listed on the official service list compiled by the Secretary in this proceeding and attached hereto.

Dated at Shelburne Falls, Massachusetts this 4th day of January, 2016.

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

DOCKET NO. CP16-21

IN RE:) TOWN OF LUNENBURG
TENNESSEE GAS PIPELINE COMPANY, LLC) **MOTION TO INTERVENE**

The Town of Lunenburg, Massachusetts (“Lunenburg”) hereby moves that the Federal Energy Regulatory Commission (“Commission”) grant Lunenburg leave to intervene in the above referenced matter, pursuant to 18 CFR 385.214. As reasons therefor, Lunenburg states as follows:

1. The above matter concerns an application for the construction of a natural gas transmission pipeline and other facilities known as the Northeast Energy Direct Project (“Project”). Several miles of the pipeline will be located within Lunenburg.

2. Tennessee Gas Pipeline Company LLC (“Company”) filed an Application for Certificate of Public Convenience and Necessity to Construct, Install, Modify, Operate and Maintain Certain Pipeline and Compression Facilities and to Abandon Other Facilities (the “Application”) on November 20,2015. The Motion to Intervene is timely.

3. Lunenburg and its residents will be directly affected by the construction and operation of the pipeline within the municipality. The pipeline is proposed to be installed within public streets that pass through commercial and residential areas of Lunenburg. Lunenburg has concerns as to construction related impacts on the safety and convenience of residents and businesses, and as to the impacts of the completed pipeline on public health and safety.

4. For these reasons, Lunenburg seeks to be allowed to intervene as a party in the proceeding as a whole.

WHEREFORE, the Town of Lunenburg respectfully requests that this Motion to Intervene be granted.

TOWN OF LUNENBURG

Basis for Intervening:

I am a resident of CT and a parent of two students who attend Northfield Mount Hermon School, closely situated to the proposed pipeline and compressor station #37. I am writing to strongly oppose any expansion of the NED pipeline for many reasons.

We chose to send our children to NMH over all other high schools we considered with its location being a primary reason. The beauty and magnificent setting was - and is - one of the main reasons they chose to attend NMH. It is a magical place surrounded by a magical landscape, evoking a spiritual connection for students to live and learn among some of the most beautiful land in the country. Building a pipeline would threaten the landscape in ways we can only speculate on. Any environment impact study would never be able to capture the potential harm that may come as a result. From sound, noise, light, and sludge pollution the pipeline creates, the surrounding areas could be devastated.

I fear any detrimental impacts to this picturesque landscape will deter future students from attending NMH, jeopardizing its long-held legacy as one of the finest educational institutions in the country, situated in one of the most beautiful areas of the country. The future of this beloved educational institution, which has impacted and positively shaped thousands of students in its 137 year history, is in dire jeopardy if this pipeline gets built.

According to Mass Attorney General Healey, the cost/benefit of the temporary jobs the building of this pipeline will bring is ultimately not worth the potential damage it will bring to the landscape and wildlife in the area. For those that believe natural gas is a bridge from using oil to ultimately relying more on renewable energy sources: we don't need an energy bridge. We need to invest in renewable clean energy resources NOW, and this pipeline will only put off further what we should be doing today. Furthermore, the Attorney General commissioned a study that found the potential increased gas capacity will not even be needed to meet the state's electricity needs in a worst case scenario through 2030, and that other cleaner alternatives to this gas pipeline would be enough to meet our needs. Any jobs that would be created would only be temporary, so the economic benefits would also not outweigh the potential negative impacts. Our region needs to stop thinking of short term solutions to our long term problems. And this expansion is just another short term solution.

Connecticut recently passed legislation halting all fracking and acceptance of fracking-related materials for three years. We need to know more about its long-term effects. Our sacred lands in New England are priceless. Massachusetts should follow Connecticut's lead and halt any use of fracked energy materials, especially because we know that wind and solar provide safer alternatives that continue to be more cost efficient with each passing day.

As a concerned mother and citizen of New England, I implore you to please reject this pipeline expansion. It is too costly, unnecessary, and unproductive.

Basis for Intervening:

Basis for intervening:

I spearheaded the successful adoption of Brush Mt. Conservation Area as the first conservation property for the Town of Northfield. The proposed path of the pipeline directly impacts this historic property.

Once the homestead for Calvin Swan (1799 – 1875), a free black man who was a well-known carpenter and sawmill owner and who established anti-slavery societies in Northfield and Franklin County, this 46-acre property is now an important trailhead for the New England National Scenic Trail, a long distance path from Long Island to New Hampshire.

In addition to the New England Trail, Brush Mt Conservation Area also provides a trailhead, parking and a kiosk for two other trails all of which are active recreational areas for residents and visitors. Both the proposed pipeline and the compressor station will severely impact this experience.

I also oppose this pipeline route because Brush Mt. Conservation Area is permanently conserved land under Chapter 97 in Massachusetts State Law. The acquisition of Brush Mt. was funded by individuals and foundations which specified that the land be permanently conserved. Donations from the Recreational Trails Program, the Appalachian Mt. Club, and other foundations require that the land be permanently conserved. Taking easements from Brush Mt. Conservation Area and other permanently-conserved land will violate the purposes of the donations.

I oppose the pipeline route because it will damage and destroy historic property such as stonewalls which are the original boundary lines for the property. The original cellar holes and functioning well for the Swan family remain here among other historic artifacts. There is no way to mitigate or remediate any damage. Before the settlers, the Native Americans used this land extensively as part of their traditional communication from peak to peak. This area is historically important.

As a member of the Northfield Open Space Committee and the Conservation Stewardship Committee of the Northfield Conservation Committee, I am responsible for the care and protection of conservation properties in Northfield.

Accordingly, I, Joanne D. McGee, respectfully request that the Commission grant this Motion to Intervene

Basis for Intervening:

I live in Rindge, New Hampshire and want to intervene in this proceeding to oppose the NED pipeline. I am a landowner impacted directly by the proposed pipeline route.

My well water supply will be threatened by the this project route due to the necessity of blasting bedrock and drilling.

As a 37 year long citizen of Rindge, I have great concerns for the potential impact of this project on the health of myself, my children, grandchildren and my neighbors.

I own property that provides safety and stability for wildlife and believe the degradation of land, water and air quality will seriously impact that population.

I have land that has vernal pools which will be damages or destroyed again impacting our environment both in the short-term and long -term.

I am an electric ratepayer who, if KM secures my electric utility as a project customer, I expect to see an increase on my bill relating to NED cost recovery.

As a taxpayer in Rindge, my tax dollars are being impacted by damage to Converse Meadows, which my Dollars have gone to support.

My property, which was anticipated to be part of my retirement plan has been permanently degraded in value, with no anticipated way to recover losses.

My timber value in current use will be permanently damaged again without ability to recover losses.

I support the use and development of alternative energy sources and this project will force costs for alternative projects to be lost, as the community attempts to recover the damage to our community, its traditions and any potential for the future.

People do not come to NH to visit pipelines, they come for the reason I am here...the beauty, the healthy environment the integrity of our foundational institutions, which are all being potentially challenged by this unnecessary project.

20160104-5355

Submission Description: (doc-less) Motion to Intervene of Joshua B Knox under CP16-21-000.

Individual	jknox@ttor.org	

Basis for Intervening:

I am a landowner in Holyoke, Massachusetts. I invested everything I have into moving to this community in 2013 for many reasons, including accessibility to local organic food and quiet natural recreational opportunities-- away from industrial development. In doing so, it was and remains my intent to live the remainder of my life in this community.

Construction of the NED pipeline would mean that the cross country ski area I visit regularly (Notchview) will be within hearing and viewing range of the proposed 41,000 horsepower compressor station in Windsor. This compressor station would spew toxic chemical pollutants and light pollution in what is now "the darkest corner of New England". Notchview reservation (abutting the compressor station site property) holds astronomy and "stargazing" events among its many other nature-oriented programs which would be irrevocably harmed by the station. Recreating near the compressor would include risks to the health of me, my family and community from breathing pollutants and particulate matter.

The pipeline would cross the Westfield River, a designated federal “Wild and Scenic” river. Wet trenching during construction, pipeline coatings and other possible pollutant leaks affect the entire Hilltowns region, downstream from this crossing. This crossing is part of the headwaters that lead through Worthington, Huntington, Russell, Westfield and West Springfield among other communities on its way to the Connecticut River and is a host to already endangered coldwater fish communities and the predator and raptor species that rely on them as a food source.

Our region would feel the economic impacts of:

- regional health consequences of pollutants associated with the operation of the pipeline
- tariffs proposed to force regional ratepayers to cover the costs of the pipeline
- possible increases in energy costs that could result from export natural gas, forcing local markets to compete on a global scale

My ability to access fresh, local, organic produce will be compromised by the pipeline’s destruction of a number of valley farms including Clarkdale Orchards.

My livelihood depends on protecting open space lands for the public to use and enjoy. If this project is approved, these areas will be destroyed, thereby compromising the promise of perpetual protection of conservation areas and threatening my job stability.

For these reasons, I am interested in and would be affected by Applicant’s filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

Individual	lholly@comcast.net	

Basis for Intervening:

I am a resident of West Townsend, Massachusetts and want to intervene in this proceeding to oppose the Northeast Energy Direct (NED) pipeline. As a land and homeowner within the “blast radius” of the main pipeline alternative route/compressor station as well as the currently proposed “Fitchburg Lateral”, I have an interest which is directly affected by the outcome of the proceeding. In addition, the source of my drinking water will likely be affected by the construction and/or operation of the pipeline. The route of my daily walk through the state and public forests in West Townsend will be compromised by either/both the main pipeline/Fitchburg Lateral.

I am seeking intervenor status as there are no other intervenors that can appropriately represent my unique interests.

Thank you.

Regards,

Laura Holly

Basis for Intervening:

I live in Tewksbury, Mass and want to intervene in this proceeding to oppose the NED pipeline. I have concerns that may directly affect me and my family because:

1. The pipeline will run within 80 feet of my house and I am concerned that I would be well within a “blast radius” and me and my family would be at risk.
2. I am concerned that the excavation and tree removal will upset the in-ground water levels and contribute to the water leaks in my basement.
3. I question the need for this gas line and the actual benefits this area will receive. If the gas passing through this pipeline continues to the north, how is to my benefit, when all it will add is profits for the company. Why do I have to have my property over run and disturbed for private profits? A significant portion of my frontal property, which currently has trees, will be leveled for machine access. This access area will take many years to regrow.
4. I am very concerned of the impact of my property values when this project, running along the edge of my property, is a mere 80 feet from the structure.

Basis for Intervening:

These are only two reasons why I am against the installation of a pipeline in our vicinity.

The pipeline and compressor station would be located too close to a farm containing Newfoundland ponies, and endangered animal. There are only 250 left on earth.

The pipeline and compressor station would be located to Temple School whose heating system uses outside air to heat the facility. The high pressure, high-capacity would be significant human safety risks to teachers and children attending the school.

Basis for Intervening:

I live within 1/2 mile of the Mid station 4, New Ipswich compressor station, possibly close to 1/4 mile of the compressor station.

99 Glen Farm Rd

Temple, NH 03084

I will hear, smell, feel, see and potentially taste (dug well water quality) the effects of the compressor station.

We are concerned about air quality due to 41,000 HP turbines generating exhaust.

We are concerned disturbances to our dug well as it taps into stratified drift aquifer that the compressor station is on top of.

We are concerned with the continuous noise of compressor station, 24-7.

We are concerned with noise and pollution from blowdowns.

We are concerned with light damage to dark skies. We won't be able to see stars.

We are concerned with subsonic vibrations that can subconsciously affect health.

We are concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.

We are concerned with traffic, noise, air pollution and numerous disturbances during construction.

We are concerned with the property value of our house being extremely close to a compressor station.

We are concerned with the potential closing of the Temple Elementary School because families don't want

children to go an elementary school within half mile of the compressor station. Part of the property value and benefit of my residence is being close to an elementary school.

We are concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.

We are concerned with the industrialization of the neighborhood. The only things that are comfortable living next to 41,000 HP compressor stations is other heavy industry.

We live in the shadow of the proposed compressor station. We will feel its effects.

Individual rehigginssteele@gmail.com

Basis for Intervening:

- 1) Our home in Ashby Massachusetts is approximately 200 yards from the original proposed route for NED direct which gives us risk of decreased property value as evidenced in other areas in the state where pipeline
- 2) proposals have rendered properties “unsellable” by real estate professionals.
- 3) Kinder Morgan has not demonstrated a real need for a pipeline other than the fact that they have contracts for gas
- 4) Solar power and wind energy that is coming on line in the 2014-18 were not incorporated into. ISO-NE calculations for 2018-2019 (NESCOE Statement at the NEPOOL Participants Committee on ISO-New England’s Installed Capacity Requirement values for the 2018-19 Capability Period (FCA9) October 2014
- 5) The Massachusetts statute the global warming solutions act states was passed to lessen dependence on fossil fuels -even though the FERC ‘s power trumps (for now) -this is a state’s rights issue
- 6) The potential of crossing state lands is a violation of Article 97 of the commonwealth which is also a state’s rights issue
- 7) Building infrastructure such as the NED pipeline encourages natural gas use. 8
- 8) Infrastructure of this scale is rarely abandoned belieing industry’s implication that natural gas is a bridge fuel
- 9) The gas transmitted will be mainly gas produced by hydrofracking. Although hydrofracking has been around for years, in it’s current form it amounts to a large scale experiment conducted in large part without informed consent
- 10) There is no evidence that New England energy companies did not manipulate supply and pricing of natural gas and electricity in the winter of 2014-2015, (California energy prices and shortages were manipulated in 2001 and 2006). An in depth inquiry into pricing and supply during 2014-2015 should be a prerequisite for permitting any new gas projects NY TIMES , WSJ
- 11) Remediation of a large percentage of gas leaks (90% or more) should be completed before any new projects are considered
- 12) — additional emissions of methane and it’s associated chemical residues from the processes by which it was extracted; —
- 13) risk to long-term health impacts from those chemicals - known carcinogens, neurotoxins and endocrine disruptors; —

14) greatly increased risk of pipeline rupture, fire or explosion due to the high pressure at which the pipelines are planned to run once the expansion is complete

Basis for Intervening:

I live in Northfield, Massachusetts, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because my home, which my husband and I built 21 years ago, is two miles from where the proposed compressor station would be built. I am very concerned about toxic emissions from the compression station itself, as well as from the proposed piggy station and blowdown valve. Our health would very likely be compromised by deteriorated air quality as a direct result of the station.

In addition, it is very possible that the quality of our well water would be negatively affected by both the compressor station itself and, perhaps even more so, by blasting that Kinder Morgan would be doing as the pipeline is built and the compressor station is installed.

Also, I am a frequent user of lands that have been put into lifetime conservancy by the land owners, but which the NED Project proposes to cross with the pipeline! In addition, I am a donor to a land trust whose land would be effected.

Living in Northfield, and only two miles from the proposed compressor station, I fear what would happen if any kind of accident should occur. Northfield's emergency responders are primarily volunteer, small in number, and not trained or equipped to deal with an emergency of this type.

Finally, by installing solar panels, purchasing a new and efficient water heater and furnace, hanging out clothes rather than using a dryer, etc. we are doing everything we can to help the environment. Living in a town that has a new gas pipeline and giant compressor station would be a GIANT step backward for the

environment.

Basis for Intervening:

I, David Plaza, am filing as to “Motion to Intervene” with regards to the NED pipeline, Reference Docket number CP16-21, that will run from New York to Massachusetts, through New Hampshire.

I live in NH, 1 mile from the proposed pipeline route. My parents live about 2.5 miles from the proposed pipeline route in NH. My parents and I own land in Lanesborough, MA which is directly affected by the NED pipeline. I oppose the construction of the NED pipeline because I have an interest which may directly be affected by the outcome of the proceedings because of the following reasons:

1. My family are electric rate payers who if Kinder Morgan (KM) secures my electric utility as a project customer, we expect to see an increase on our bill relating to the NED pipeline due to the cost of the proposed pipeline.
2. My family is a directly impacted land owner.
3. My family has house lots for sale in Lanesborough, MA and cannot sell them due to the NED pipeline and the house lots will have a decrease in value due to the pipeline. KM said “Someday, you will find the right buyer and someone will buy them.” In the meantime, I have to pay taxes waiting for that day and KM is making a profit from using my land.
4. My family’s land is within the “Blast Radius” and directly in the path of the pipeline, which creates an unnerving situation for every visit. If there was an incident, would my family be able to escape or would one of us have to watch a family member die?
5. The access to my 170 acres of fields, woodlands and house will have to cross over the proposed pipeline and will be restricted due weight limits that will prevent me from having any access for heavy vehicles and equipment. There is only one way into the property due to the property being surrounded by steep ravines and water North East and North West of the proposed pipeline
6. The property has streams and ponds that contain wild brook trout that will have to be crossed. The clearing of land will affect the water temperature in these bodies of water. The run off from the cleared easement path and work areas will be tremendous because of the steep slopes in the area. I will also be losing about a dozen of old growth trees that are about 4-5 feet in diameter plus many other trees.
7. The property has historical sites on the property in the path of the pipeline along with stone walls that were constructed in the 1760’s to 1780’s.
8. KM will be using herbicides to control vegetation growth which will cause contamination in our streams and ponds.
9. My family residents, whose watershed is crossed by the proposed route, could have an impact on our well water and aquifers that feed neighboring lakes and streams. The construction and or operation of the pipeline will have an effect on the wells for my house lots as well as my residences.
10. The property in Lanesborough, MA contains caves that are habitats for endangered species of bats. To date, no investigation has been done to confirm.
11. The property contains habitat for deer, bear, rabbits, squirrels, fox, salamanders, black weasels and

hawks.

12. When KM filed for construction of the pipeline, it was filed with the intent for export. Why should KM be allowed to use my property for profit since it is a private company and the pipeline will have minimal effect on the cost of electricity for residents of New Hampshire and Massachusetts.

13. Eminent domain should not be used as a threat to use my property for profit by KM.

14. The referenced property in Lanesborough, MA was to be a place for retirement or a long term investment for retirement. My wife even stated that she would be willing to move there away from the high property taxes of NH. Since the proposed pipeline would go directly on my property, my plans for retirement are out the window.

15. The referenced property in Lanesborough, MA has magnificent views, and who with a lot of money would want to buy a piece of land with a large and potentially hazardous situation as a risk that comes with the purchase of the property.

16. Finally, the use of eminent domain cannot be used to benefit "Our allies of Germany and Japan" as stated to my father by a person who works at FERC. Germany and Japan are not residents of the United States.

Thank you.

Individual	mark.getty@baesystems.com	

Basis for Intervening:

The proposed NED pipeline abuts my property in Pelham New Hampshire. My concern is that blasting and other construction activity will damage my well and introduce mineral contaminants such as iron and radon into my water supply. I have experienced this before when foundations were built on adjacent lots for new home construction. My concern is that contaminants generated by the pipeline construction will damage my plumbing and fixtures, destroy household laundry and pose a health threat to my family.

Prior to construction I would like my water tested by an independent third party to establish a water quality baseline. I would then like the quality of my water monitored during and after the construction. The NED project should be held financially responsible to remediate any damage caused by the construction. This could include repair to plumbing and fixtures, installation of filtration or ion exchange equipment or installation of radon abatement equipment.

In the longer term I am concerned that contaminants generated during the operation of the pipeline will enter the aquifer at large over the life of the project. Water monitoring wells should be installed at regular intervals along the pipeline in the area of my home. Water quality should be measured frequently and perpetually in the aquifer over the life of the pipeline. The NED project should be held financially responsible for any environmental impact and compelled to remediate any such impact.

Basis for Intervening:

I am a resident of and landowner in New Ipswich, NH and oppose the proposed Kinder Morgan/Tennessee Gas, LLC/NED pipeline. Docket # CP16-21-000.

I have many concerns regarding this proposed pipeline, including the building of the industrial infrastructure that will run through my town, the proposed location of the compressor station, and the environmental impacts.

I am concerned my well water could be disturbed during blasting and construction of the pipeline, and am also concerned about possible chemical contamination into the ground water resulting from residual breakdown of the pipeline over time. I am concerned about possible air pollution from "blow downs" and also during normal daily operation of the compressor station. Another concern is for possible fire and explosions along the route of the pipeline, which we are less than a mile from, and which I will commute across to and from my work. Finally, I am also concerned about possible environmental threats to wildlife, farms, vegetable gardens, and local animals and crops that we eat which all rely upon local water, air, and manure for their production.

I hereby respectfully request my motion to intervene be granted.

Respectfully,

Mark Hutchings

Basis for Intervening:

I am a resident of New Ipswich who is very concerned about the Kinder Morgan NED pipeline and compressor station that is filing with FERC to proceed. This puts southern NH towns in an adversarial position with Kinder Morgan. New Ipswich is the proposed site for the compressor station, and as a result we will have health issues from environmental pollution in the air we breathe and the water we drink from our wells. Our questions to Kinder Morgan regarding responsibility have been countered with half-truths and provable lies.

My belief is that government in America is to PROTECT people from greed and from big business taking unfair advantage of the people in southern NH and across the country. I feel that this not happening. The financial gains that NED promises us as a result of building this pipeline are false. Any benefits, jobs, electric rate reductions, and lower taxes for example, will be short-lived and we will pay later. The jobs that they promise are not for our local contractors but rather for union workers. The residents will be paying for construction through tariff and will be subject to higher gas rates when the gas is exported. Our homes will be devalued being in such close proximity to the compressor station. Kinder Morgan has been irresponsible in being accountable in the past and has side-stepped responsibility for damage it caused.

For these reasons, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

20160104-5384

BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

TENNESSEE GAS PIPELINE, LLC)
A SUBSIDIARY OF KINDER MORGAN) DOCKET NO: CP16-21-000
NORTHEAST ENERGY DIRECT PIPELINE)

MOTION TO INTERVENE OF KAREN A. PICKETT AND STEPHEN C. COTE

Pursuant to Rule 214 of the Federal Energy Regulatory Commission, Karen A. Pickett and Stephen C. Cote respectfully move to intervene in the above-captioned matter. As grounds therefor, Ms. Pickett and Mr. Cote assert the following:

1. Ms. Pickett and Mr. Cote are a married couple with two small children who reside at 5 MacArthur Road in North Reading, Massachusetts. They have resided at this address since 2002.
2. Kinder Morgan has notified Ms. Pickett and Mr. Cote that it is seeking approval to run a natural gas pipeline through their backyard.
3. Ms. Pickett and Mr. Cote chose to live in their home because of its peaceful, country nature. The Cote family, their children and their pets have enjoyed their backyard through which Kinder Morgan proposes to run its pipeline.
4. Ms. Pickett and Mr. Cote also chose to live here to enjoy the natural landscape and topography and because of the birds and other wild animals that inhabit the woods of which their backyard is part.
5. Ms. Pickett and Mr. Cote have several concerns about the proposed project running through their backyard, including, but not limited to: the noise and distraction of the construction project; the adverse effect on the land, water and environment; and the destruction of the character of their backyard; and the potential dangers of explosions, emissions and other problems from the pipeline to themselves, their children and dog. Perhaps the biggest concern is that the pipeline will be constructed and running very close to a rock blasting site that only serve to increase the above-mentioned dangers.
6. Ms. Pickett and Mr. Cote understand that the town of North Reading has many concerns about the

project and opposes it as well. Ms. Pickett and Mr. Cote adopt the arguments set forth in North Reading's motion to intervene as if fully set forth herein.

7. Ms. Pickett and Mr. Cote also understand that other organizations in Massachusetts oppose the pipeline and that there has been no showing that there is the necessity of this pipeline being constructed. Ms. Pickett and Mr. Cote do not even utilize natural gas so there is literally no benefit to them if Kinder Morgan is allowed to violate their property.
8. Ms. Pickett and Mr. Cote and their family will receive no benefit from the running of the pipeline through their yard, but will be unusually harmed.
9. Ms. Pickett and Mr. Cote assert that there are no other individuals or organizations that can adequately represent the interests that they have in their own land, health, safety and welfare, as well as that of their children.

FOR THE FOREGOING REASONS, Karen A. Pickett and Stephen C. Cote respectfully request that the Federal Energy Regulatory Commission allow this Motion to Intervene. They further request to be added to the Official Service List: Karen A. Pickett and Stephen C. Cote, 5 MacArthur Rd., North Reading, MA 01864. Phone: 617 721 258. Email: kpickettlaw@gmail.com

Karen A. Pickett and Stephen C. Cote

Dated: January 4, 2016 3

CERTIFICATE OF SERVICE

I, Karen A. Pickett, do hereby certify that on January 4, 2016, I caused this motion to intervene to be served electronically on all members on the Commission's electronic service list in accord with the Commission's regulations.

/s/ Karen A. Pickett

I live in Ashfield, Mass., and wish to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a resident who lives in and travels over the "blast radius. Also, I am a member of the community who has concerns about various impacts to the local economy, the regional environment, and the health and safety of the people who live near to the proposed pipeline route. In addition, I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to Northeast Direct cost-recovery. Finally, I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

I live in the Town of New Scotland, and want to intervene in this proceeding to oppose the NED pipeline. I have an interests which may be directly affected by the outcome of the proceeding because...

I am a landowner directly impacted by the pipeline route which runs directly through my property.

I am a resident who lives in the "blast radius" so my family and I as well as my residence would be at physical risk. My home is within 90 m. of the proposed pipeline route.

I am a resident whose source of drinking water is within 100 m. of proposed route so my drinking water supply is at risk of the construction of the pipeline.

I am a landowner who may have my property seized by eminent domain.

I am concerned the potential pipeline easement and construction easement will destroy mature hardwood stand, as well as a richly diverse wildlife habitat on my property.

I object to the Tennessee Gasline Proposal. The pipeline which would abut our complex if it follows the proposed pipeline route under the power lines in our area, and its compressor station would be located too close to Our Lady of Hope, our religious retreat facility. This high-pressure, high-capacity station would bring significant human and health risks to our Sisters living here and to our guests because of the noise and pollution.

The pipeline and compressor station would also be in close proximity to Lukas Community which is a residential facility for disadvantaged adults and would adversely affect this community also.

Basis for Intervening:

For 60 years my family has operated a residential children’s summer camp in Nassau, NY. We house over 700 people on our 100 acre property for the entire summer and offer seasonal and full-time employment to many local residents. We are one of the largest taxpayers in the area and spend tens of thousands of dollars per year to local vendors and tradespeople.

The installation of a compression station so close to our property will have catastrophic repercussions to our business. Firstly, the bad press from such a project will limit our recruitment efforts among current and new families who do not want their children being exposed to the potential negative side effects the station will produce.

In addition, the air quality may be significantly affected and the noise from the station could make it impossible for us to continue running our program. However, perhaps the most extreme concern is the pollution that could be inflicted on our five private wells, which service our entire population at camp.

It is entirely irresponsible and unethical to allow a compressor station to be placed so close to a thriving community of children. This project could cripple our business and cause significant health risks to the children who attend our camp.

Basis for Intervening:

I am opposed to the Northeast Direct pipeline project as proposed by Tennessee Gas Pipeline / Kinder Morgan for many reasons. I have a small farm on my property, which will be approximately 800 feet from the pipeline route. I am responsible for the daily care of 37 animals, all who consume a great deal of water and appreciate breathing clean air. My concern is that the drilling and blasting required to bury the pipe will disrupt our aquifers and affect the quality of our water. I am also concerned about the noise pollution that will take place during the construction period, which adversely affects my farm animals and then effects their production. We started our farm in 2013 with the hope that in the future we would yield enough profit for one of us to quit our day job. Unfortunately, with the uncertainty of this pipeline project, we have put many of our development plans on hold before we invest more in a farm that may be worthless with no water and poor air quality. I am also concerned that this project is not for the betterment of our community, but for the sole purpose of lining Kinder Morgan’s pockets. We moved to rural southern New Hampshire in

1998 with the knowledge that we were giving up many comforts and conveniences for privacy, quiet, quality air, quality water and peace of mind! Please deny this application, as it does not provide any necessity or convenience to the property owners and rate payers in southern New Hampshire.

20160104-5397

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Project)

Docket No. CP16-21-000

MOTION TO INTERVENE OF
Beth R Manning

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Beth Manning
Shinglebrook Farm
69 Taylor Rd
Shelburne, MA 01370
(413) 625-9967
manning@crocker.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

- My interest as a resident of Shelburne, Mass, living approximately one mile from where the Company proposes to cross Taylor Road with the NED pipeline. In addition to living close to the pipeline, Taylor Road and Bardwell’s Ferry Road provide the only access to the pipeline route during construction. Both roads are designated scenic roads. This means that they are not to be changed in any way with regard to the cutting of trees, changes to road surface or width or the altering of any stone walls. I am concerned about the impact that heavy equipment and heavy traffic would have on these historic roads, which are narrow, windy and partially dirt.
- My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. Although purported to be essential to lower electricity costs, this grossly oversized pipeline is very likely to lead to higher energy costs for New England’s ratepayers because excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.
- My interest as a farmer who purchases hay harvested on the land at neighboring Hawks Farm, which would be directly and negatively impacted by the proposed pipeline if it is approved.
- My interest as a property owner who expects to see a reduction in my property value as a result of being so close to this pipeline should it be approved.
- My interest as a beekeeper, concerned about the use of herbicides by the Company to keep the pipeline route clear and the effects this might have on my currently healthy hives as well as the health of our natural pollinators.
- My interest as a citizen, questioning the wisdom of building this enormous pipeline, particularly when a compelling case has been made by the Massachusetts Attorney General, Maura Healy that it is not needed for New England. Furthermore, because fossil fuels are major contributors to cli-

mate change, this pipeline would do little more than speed up a process that many nations around the world are finally attempting to slow down. I believe that there are many alternatives that must be considered first, such as the use of renewable energy, repairs to EXISTING pipelines, possible alternate routes, energy efficiencies, and insulation/weatherization measures.

Kinder Morgan has demonstrated both disregard and disrespect for the people and natural resources of our region. Therefore, it is crucial that the people that would be most impacted by this huge and largely unwanted pipeline, are granted a role in the process.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Beth Manning

Basis for Intervening:

I am here to oppose the construction of the NED pipeline. I am a freshman at Northfield Mount Hermon (NMH) this year. My school resides very close to Northfield, where Kinder Morgan is planning on constructing a compressor station. Compressor stations pose a threat not just to the environment around them, but to my school's heritage and long time traditions. Every year, NMH has a tradition called Mountain Day. The 9-11th graders all hike a beautiful mountain right by where the compressor station will be built. This tradition has been going on at the school since 1881. This year, I participated in my first Mountain Day, and seeing such a wonderful tradition die for such a hurtful cause would impact our community detrimentally. If the compressor station is installed, our tradition will be permanently cancelled due to the mountain being so close to the noise and pollution of the station.

Compressor stations are unbelievably disruptive to their surroundings. Waste and sludge from transporting the gas is created, and usually brought in trucks to disposal sites, but the likeliness of gases and harmful substances leaking into the Connecticut River is unreasonably high. Not just waste and sludge are released from compressor stations. These stations release toxins into the air such as benzene, toluene, sulfuric oxid, and formaldehyde. Lastly, compressor stations are run 24 hours a day for every day of the year. The noise can reach up to 55 decibels, and as quiet as that seems, to neighbors the ongoing noise could potentially be very disruptive. In these ways, compressor stations can create noise pollution, air pollution, water pollution, and are large contributors to climate change. NMH is known for its beautiful landscape: some would say it's the reason teenagers apply to the school. By polluting the environment around it, and keeping lights on for 24 hours a day, a compressor station could impact the environment of my school. This wouldn't just affect the current students, but the possibility of people choosing to come to our school. If our environment isn't the same because of the station, my school and the careers of everyone working there could be on the line. The compressor station that is being proposed by Kinder Morgan could draw people away from NMH, kill a 134-year tradition, and pollute the environment in multiple ways. For these reasons, I am completely against building the NED pipeline.

Basis for Intervening:

I live within half a mile of the proposed pipeline.

I am opposed to the siting of the pipeline as well as any building of the pipeline.

I will be impacted negatively by the increase in my electric bills, the impact of the venting station and compressor stations on my friends and neighbors in Conway and Northfield

I am opposed to the noise that will be generated during the building of the pipeline that runs half a mile from my home and workspace and the sounds that carry up that hillside.

I am opposed to the devaluation of my property taxes with a pipeline so close

I am opposed to the potential health risks to myself my family and friends from the building of the pipeline and any leaks that may arise from it.

I am opposed to the disruption of the woods and streams in which I routinely walk with my dogs and where the pipeline will be built

We grow our own vegetables and meat on our farm, we have put all our savings and years of personal sweat into building our home, it is not an option for us to just move somewhere else, this pipeline is unnecessary, and the people who are pushing it are not looking at the costs to the environment and the people and animals that will live near it

Individual	stacywelsh9@gmail.com	

Basis for Intervening:

My name is Stacy Welsh and I am a homeowner at 295 Birnam Rd in Northfield, Mass 01360. I bought my home in 2013 because of the quiet and pristine environment. I garden organically and have free range chickens. The peepers greet me each spring. Eagles and hawks circle the river. I chose this place because it is sacred and clean. I want it to stay that way for myself and for the generations that follow. I am also a psychiatric nurse practitioner and know how important protected wilderness is to mental health as well as physical health.

I am a resident whose health will be impacted by compressor station toxic emissions. I have asthma and the air quality around the compressor station will deteriorate as has been reported in New York and Texas {nosebleeds, headaches, breathing problems}.

I am less than 5 miles away from the proposed compressor station site. I am in proximity to the blast zone. I am concerned about my family and my animals if there is a blast accident as has been reported in Texas.

I am concerned about leakage of toxic chemicals into the ground water which will poison wildlife, migratory birds, and eventually Northfield residents.

I am concerned about noise pollution especially when the compressor station off gasses and, as mentioned above, toxic emissions.

I am concerned about damage to our roads from the heavy machinery and trucks that will clog our country roads.

I am concerned that this pipeline is unnecessary as noted in the study commissioned by our LT Governor, Maura Healy, and that we need renewable resources, not the pipeline.

Finally, I am concerned that Kinder Morgan is tanking financially and is willing to sacrifice our land and the land of others for it's own viability.

NextEra Energy Resources, LLC	william.lavarco@nexteraenergy.com	
-------------------------------	-----------------------------------	--

Basis for Intervening:

NextEra Energy Resources, LLC ("NextEra Resources") is the competitive generating subsidiary of NextEra Energy, Inc. NextEra Resources develops, builds and operates electric-generating facilities throughout the United States that are fueled primarily by natural gas, by nuclear power, and by renewable resources such as wind, sun and water. NextEra Resources' subsidiary, NextEra Energy Power Marketing, LLC ("NEPM") sells natural gas and electric energy at wholesale and is a shipper on numerous interstate pipelines, including Tennessee Gas Pipeline Company, LLC ("Tennessee"). Given that NEPM is a shipper on Tennessee's interstate pipeline, NextEra Resources has a direct and substantial legal and economic interest in this proceeding which cannot be adequately protected by any other party to this proceeding. NextEra Resources' interests would not be adequately represented by any other party and NextEra Resources believes its intervention in this proceeding is in the public interest. Accordingly, the Commission should grant NextEra Resources' request to intervene in this proceeding.

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company,
a subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline Project

Docket No. CP 16-21-000

**MOTION TO INTERVENE OF
THE TOWN OF NASSAU, RENSSELAER COUNTY, NEW YORK**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, the Town of Nassau, Rensselaer County, State of New York, files this Motion to Intervene in the above-captioned proceeding.

The Town of Nassau, is a directly impacted town and potential location for an industrial compressor station. The Town's governing unit, the Nassau Town Board, has taken a formal vote opposing construction of the pipeline and compressor station in their jurisdiction and has formally voted in support of filing this motion.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

The Town of Nassau was created by an act of the New York State Legislature in 1806. Its jurisdiction is nearly fifty (50) square miles of Rensselaer County, New York situated between the Hudson River and Massachusetts border.

The Town requests separate intervenor status.

Rensselaer County contains 665 square miles and has a population of over 159,000 people (2010). The proposed NED pipeline cross three towns in Rensselaer County. The three towns directly impacted are Nassau, Schodack, and Stephentown and collectively have a total population of 20,486 (2010). Nassau's population relies on well water from the Tsatsawassa, Valatie Kill and Schodack and Aquifers which are directly impacted by the proposed pipeline. A municipal water system is also located in the Village of Nassau which relies on municipal wells in the aquifer system.

A compressor station is proposed in the Town of Nassau which is a rural residential community containing no industrial uses. The compressor station would be located directly adjacent to the residential and recreation area of the town known as Burden Lake.

Since the subject proposed pipeline was proposed in 2014, citizens and government officials from the Town of Nassau have been involved in monitoring and reviewing this project and have worked in coordination with the Berkshire Regional Planning Commission in reviewing materials and communicating information to residents. The Town of Nassau has individually and actively participated in the pre-filing for the NED Project under docket PF 14-22-0000, including filing detailed scoping comments dated June 18, 2015, August 13, 2015, August 14, 2015 and October 16, 2015. Additionally, the Town supported a filings during this period through the Berkshire Regional Planning Commission under docket PF 14-22-0000, including filing detailed scoping comments dated October 15, 2015.

The Town of Nassau expects to continue to serve our citizens during the formal filing process under CF 16-21-0000.

The pipeline, as proposed, crosses approximately 6.7 miles of Nassau and impacts the primary highways including New York Routes 43 and 66 in the town and impacts several local roads, as well as numerous waterbodies and wetlands. The pipeline crosses the Rensselaer Plateau which is a significant natural resource for not just the town and county but also designated area of importance at the state and federal level. The pipeline in Nassau will also directly impact existing businesses and recreation opportunities that rely on the rural residential nature of the community. It will also directly impact hundreds of homes, with associated

private wells.

The Town of Nassau is served by all-volunteer fire departments and EMS services and relies upon surrounding communities, typically all-volunteer as well, for incidents involving mutual aid.

It should be additionally noted that the Berkshire Regional Planning Commission filed scoping comments with FERC on October 15, 2015 (accession no. 201510155279; docket FF14-22-000) which comments are incorporated herein by reference. Also incorporated herein are the previously submitted comments by the Town of Nassau as mentioned above and filed under docket FF14-fl-QUO.

The Town of Nassau continues to coordinate the dissemination of information for our residents with the Berkshire Regional Planning Commission. This motion should be regarded as also made in support of the intervention motion made by the Berkshire Regional Planning Commission.

If the Town of Nassau is not permitted to intervene as a party to this proceeding, its interests and those of its citizens will not be adequately represented by other parties and it may be bound by actions, determinations and decisions in this proceeding without opportunity to participate and be heard.

The Town of Nassau's participation as a party in this proceeding is in the public interest.

B. Description of Impacts

The Town of Nassau, Rensselaer County, New York, will be directly impacted and harmed by the proposed project as follows.

- 1) The project impacts primary drinking water supplies for large sections of the Town's nearly 5,000 people. The Tsatsawassa, Valatie Kill and Schodack Aquifers in Rensselaer County are among the most important aquifers in the County and provide water to residents and businesses in the Town of Nassau.
- 2) Construction of the pipeline and transportation of significant amounts of heavy equipment and supplies for construction of the pipeline and related infrastructure will impact aging and fragile local infrastructure and the regional transportation network. Specific areas of concern are all roads, bridges, and culverts used for transport; maintenance of public access, including for public safety during construction; and impacts on water supplies.
- 3) The previously undisclosed use of town road rights-of-way and town property for construction and operation of the pipeline.
- 4) The project inappropriately proposes the location of an industrial compressor station in a rural residential zone. In addition to proposing a prohibited industrial facility in a residential area filled with children, the related noise, deterioration in air quality, lighting, and potential emergency response for such facilities are primary issues. It is well established that existing zoning in Nassau for the proposed compressor station locations prohibit industrial uses and natural gas compressor stations are industrial uses. The Comprehensive Plan for Nassau calls for this area to be low density rural residential and location of a compressor station as proposed is in conflict with the Town's adopted comprehensive plan.
- 5) Provision of public safety services involving construction and operations of the pipeline and related facilities.
- 6) The large number of streams, lakes and ponds, and wetlands impacted by the NED pipeline.
- 7) The NED pipeline impacts multiple key natural areas in the Town of Nassau. These include the ecologically significant Rensselaer Plateau.
- 8) Socio-economic impacts regarding loss of agricultural lands, heritage and recreational tourism, commercial forestry, community tax base, impacts on local businesses, municipal liability exposure, potential impact on a major interstate electric transmission line, impact on community quality of life, local property values, and local tax base due to the compressor station in Nassau, and impacts of property acquisition, construction, and operations on private property owners throughout the length

of the pipeline.

C. The Town of Nassau's Motion to Intervene Must Be Granted

The Town of Nassau satisfies the standard for intervention under the Commission's regulations. As discussed above, the jurisdiction served by Town of Nassau is directly impacted by the proposed project, and no other individual or organization can adequately represent the Town of Nassau's unique interest in this proceeding. Further, the Town of Nassau intervention is in the public interest because the Town is responsible for the protection of the interests of all of its citizens and its areas of responsibility include all impacts indicated previously, as well as others which may arise during the proceedings. The Town of Nassau increasingly relies on a natural resource and tourist based economy which will be threatened by the NED project. Accordingly, the Town of Nassau respectfully requests that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The following individual should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: David F. Fleming, Jr., Town Supervisor
Town of Nassau, New York
Address: Nassau Town Hall
29 Church Street, Post Office Box 587
Nassau, New York 12123
Phone: 518-766-3559 ext. 2
Email: supervisor@townofnassau.org

III. PROTEST/COMMENTS

In addition to seeking intervention, the Town of Nassau expresses its strong concern that the project as proposed will dramatically and negatively impact the quality of life for citizens of the community. Additionally, if adequate mitigation of impacts of this project are not appropriately addressed, individual property owners will be severely impacted and will not be adequately compensated for or protected from those impacts. The complete lack of any accommodation of these concerns through the absence of any community benefit agreements with TGP or in the FERC certificate would be devastating to the health, welfare and safety of our residents.

The Town of Nassau is opposed to this project and believes it will have severe negative impacts on our community and ability to provide vital public services, especially including adequate drinkable public water. We also have significant concerns over impacts on public safety and the ability of our first responders, ALL of whom are volunteers, to respond on a continual basis to potential public safety impacts. The impact of transport of significant amounts of heavy equipment and materials for construction on very fragile public roads is of considerable concern and the Town of Nassau does not have the financial resources to repair damage to the roadway infrastructure. The impact of the proposed compressor stations on our rural community will change the very quality of life that the residents of this town have cherished and made them a desirable places to live and raise a family.

IV. CONCLUSION

Therefore, in light of the foregoing, the Town of Nassau, New York, respectfully requests that the Commission GRANT this motion to intervene and allow the INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,

David F. Fleming, Jr.

Town Supervisor, Town of Nassau, New York

CERTIFICATE OF SERVICE

Wherefore on this day, January 4, 2016, I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission's electronic service list in this proceeding, in accordance with Commission regulations.

David F. Fleming, Jr.
Town Supervisor
Town of Nassau, Rensselaer County, New York
supervisor@townofnassau.org

Basis for Intervening:

I am a resident of Rindge, New Hampshire and wish to be an intervenor in opposition to the Kinder Morgan (NED) pipeline as I am being directly adversely affected. I am an electric user who, if Kinder Morgan secures my electric utility as a project customer, could be charged for NED recovery costs.

I may be selling my home in a couple of years and have been told by a local realtor that homes are harder to sell at this time.

I hike regularly at a state park, Rhododendron State Park, and Converse Meadows nature preserve that are currently projected to be cut through by the pipeline. I have a particular concern with the ponds and wetlands that will be impacted as I get my water from a well, as do all Rindge residents.

Basis for Intervening:

I live in Florence, MA, 18 miles from Ashfield MA, one of the towns on the Tennessee Gas Pipeline route (also called Northeast Direct or NED). I am filing this intervention because I am concerned that if this pipeline is constructed, (1) the price of natural gas will increase; (2) my electricity bills will increase; (3) there will be significant damage to the beautiful hiking, climbing, fishing, and swimming areas in and near Ashfield; (4) these will all cause significant negative impacts to our local socio-economic conditions. These concerns are based on my reading of materials made public by the Tennessee Gas company, and by what I learned attending two FERC hearings in our area.

Here is brief background for each of these points.

(1) The MA Attorney General sponsored a study released this fall, presenting strong evidence that there is NOT a strong need for this pipeline to meet MA demand for natural gas. Therefore, if the pipeline is built,

much of the gas will be exported, leading to increased in gas prices. (2) Our house is heated and cooled by electricity provided by National Grid. Its gas subsidiary has already contracted for gas on NED and National Grid has made it known that it would contract for capacity on NED if it were built to provide fuel for electric generation. Our governor has issued some statements indicating that the MA regulatory environment would not oppose utilities charging ratepayers for the cost of capacity contracted on NED. My wife and I are now semi-retired and will be fully retired soon. We cannot afford unwarranted increases to our utility bills. (3) We moved to Western MA because of its natural beauty. Many of our friends and neighbors did as well. From the presentations at the FERC hearings, I know that if this pipeline is built there will be at least some damage, and possibly significant and irreparable damage. The Tennessee Gas company and its parent company Kinder Morgan have done a very poor job in their environmental impact studies, leaving many questions unanswered or inadequately answered. (4) Increases in energy costs and damage to our beautiful local environment will no doubt have significant negative impacts on our local economy and way of life.

Basis for Intervening:

I am filing for intervenor status in FERC Docket CP16-21-000 as a homeowner, landowner, long-time resident, and concerned community citizen of Otsego County, NY and adjacent counties and communities that will be affected by Tennessee Gas Pipeline Co.'s Northeast Energy Direct proposed pipeline, compressor station, and any other related industrial operation in my area.

I am opposed to this project for several reasons, including disruption of peaceful living here by the construction and operation of this project. This is a thriving semi-rural area which industrialization will disrupt. Fossil fuel extraction and transmission are shown to have been, and continue to be, dangerous, prone to, breakages, leaks and explosions, and chemical toxification of water, air, soil, and the health and well-being of people, wildlife, farm and household animals, plants, and all living things. Fracked-gas contains radon as well as BTEX chemicals from the process. Compressor stations required to transmit the gas emit toxic chemicals along with excessive noise and overlighting 24/7/365, and especially during periodic necessary flare-offs. There are many other unwanted effects of this process. The construction alone will require clear-cutting 700,000 trees on mountainous hilly slopes, contributing to erosion in our already flood-prone areas here. Methane released by extraction, transmission, and burning of shale gas, as well as shale oil, is a worse atmospheric pollutant than carbon, whose serious deleterious environmental effects the promoted switch to gas was supposed to alleviate. Trees and other plant-life absorb carbon dioxide while supplying oxygen, but with forests disturbed, this natural-cycle recharging and remediation will suffer. We are all seeing the many increasing and interacting effects of persistent global warming, changing the climate with many known and some unanticipated or unknown results in the short term and the long term. Further, cumulative effects have not been taken into account sufficiently. This NED project may be involved in segmentation if constructed along the same route as the already FERC-approved Constitution Pipeline, but requiring additional infrastructure and additional taking of property by eminent domain.

Many in my community are already subject to this invasive project, and while my house and land are not currently on the direct route, I am close enough that I'll be affected. Further, some local companies have indicated plans to tap into these larger transmission lines, including running their own pipelines directly past my house enroute to other neighboring towns or businesses. The purported "convenience and necessity" has

been shown not to exist as advertised, as the gas will only pass through here, exposing many people to the risks and dangers but not benefitting us either economically or (more importantly) environmentally, while degrading the quality of our life. However, the presence of the pipeline and associated infrastructure, if built, is likely to open this area to further destruction by attempts at deep shale-fracking, despite our state's current tenuous and limited "ban" on high-volume hydrofracking.

The construction and operation of the NED project involves much environmental destruction, which cannot be sufficiently "mitigated" by any known methods, procedures, or technological "fix." All of this has been substantiated, and research continues. Prevention is far preferable to any amount of "mitigation" attempts. The Precautionary Principle should be the guideline, but it is known to be disregarded by the companies involved, according to the record of known violations past, present, and expected in the future.

These are only some of the many reasons I oppose this project, constituting my interest which may be directly affected by the outcome of the proceeding.

Basis for Intervening:

My economic and personal interests put at risk by this project include the following:

1. I am a Cummington, MA, homeowner serviced by the Eversource Electric Utility group, a proposed project shipper, and face the risk of increased rates from passed-along project costs and/or wholesale price jumps unrelated to increased or improved service.

2. I am a "Corporate Trustee" of and a donor to The Trustees of Reservations, a public charity whose environmentally sensitive Notchview Reservation in Windsor is at risk of being pipeline breached; and a member of and donor to the Massachusetts Audubon Society, a public charity whose protected West Mountain Wildlife Sanctuary in Plainfield is also at risk of a pipeline breach, in each case imperiling the value of my investments in those organizations.

3. For years I have been a user of and fisherman at the East Branch of the Westfield River in Cummington and Chesterfield whose water quality will be put at unnecessary risk by any upstream pipeline crossing.

4. I am an 80-year old individual who has invested a substantial part of his last 25 years in working to protect the wild and scenic qualities of the lands of the Westfield River Watershed as a director and officer of the Hilltown Land Trust, another public charity, which environmentally sensitive watershed and its existing wild and scenic character is now at risk of substantial degradation by the proposed pipeline.

For the above reasons I am opposed to the proposed pipeline.

Basis for Intervening:

I live in New Ipswich, NH, about one mile from the proposed compressor station. I am also a directly impacted landowner with the pipe to go through my yard. The pipeline would be going in my leach field which was just installed 3 years ago. The placement of my leach field is really the only place we can have it based on my well placement and wetlands. This pipeline should not be allowed to come through NH, and eminent domain of property should not be used. The gas coming from this pipeline will not be used for NH residents. New Ipswich residents should not be subjected to the chemicals and pollution of a compressor station, especially where the gas cannot be used in this town. New Ipswich has voluntary emergency departments and do not have the capability to respond to any dangers produced by this pipeline in a timely manner.

I am vehemently opposed to any form of NED Pipeline in my town of Conway or surrounding vicinity. I believe my health and the health of my family and friends would be at risk with the Blowdown Valve on Shelburne Falls Road. I also am opposed to the potentially harmful effects on the natural world, the polluting of air and water due to Pipeline problems. Even if I were to benefit financially, I still would be completely against the building or maintenance of any pipeline.

Respectfully yours,
Cynthia Mandile

Basis for Intervening:

I am opposed to the NED pipeline project and hope that you will deny permission for this project. The reasons are as follows:

I am a Dracut resident. The NED project, due to number of proposed facilities and amount of construction and road closures proposed in town, would have a enormous effect on me.

I am a direct abutter to the latest pipeline route, within 400 feet (or) i live very close the the pipeline (within about 1000 feet) and may be within the incineration zone in the event of a rupture.

I live close to the proposed meter station near Cart Path Road.

I am a taxpayer in Dracut and I am concerned with loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services

I am a consumer of produce from Dracut farms and I am concerned the pipeline may cause industrialization and contamination of the water supply and crops that are part of my food supply.

I am a ratepayer for National Grid gas service or electric service and am concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals.

Basis for Intervening:

I live in Townsend, MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because for the following reasons, all of which share equal weight:

1. I am a landowner who lives in the blast radius so that I would be at physical risk not to mention the impact of lost property value.
2. I am a resident whose source of drinking water will be at risk during the construction phase of the pipeline.
3. I am a member a community who has concerns about impacts to the local economy, environment/aesthetics/health by not only the construction phase of the pipeline but by the very existence and operation of compressor stations.
4. I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase of my bill relating to NED cost recovery.
5. I enjoy the out of doors and do not want any state or town public parks or forests which have been set aside for the people and wildlife to be impacted by any activities of this commercial project.
6. I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to secure easements over land which is meant to be protected forever.
7. I am an inhabitant of this planet who feels that continued reliance and pursuit of fossil fuels is detrimental to the longevity to our life here.
8. I am an individual who strongly opposes this pipeline which will decimate and significantly negatively impact the region should construction permission be granted.

Basis for Intervening:

I am a landowner in the town of Northfield, MA.

I wish to intervene in this proceeding to oppose the NED pipeline proposal.

I have an interest which may be directly affected by the outcome of this proceeding because the aquifer which is the source of our drinking water is crossed by the pipeline route, putting at risk the health of my family and neighbors as well.

I am a donor to the Mount Grace Land Trust, the purpose of which is to protect our environment and wild-life. Moreover, the taking of lands preserved by land trusts is in direct violation of Article 97 of the Massachusetts Constitution.

Clearly due to climate change, our planet is at grave risk if we continue to burn fossil fuels.

We need to change direction in our sources of energy away from fossil fuels toward more sustainable sources.

The proposed NED project constitutes a danger and hazard to our community and the planet as a whole.

Basis for Intervening:

I live in New Ipswich, NH, and am especially concerned about the proposed Tennessee Gas Pipeline and its compressor station. I believe the compressor will cause a constant and life-threatening explosion hazard, will have health threatening emissions, will be noisy, and will lower property values. I am seventy-six and will have to sell my house before long; I fear that I will be unable to do that because of this project. I have read many, many articles about this pipeline and have been presented with no reason to see its necessity or benefit.

for our community and beyond. Further, such an industrial behemoth in this part of town will forever mar the backdrop of this community.

Lastly, on a personal note, we moved to Dracut 30 years ago. Our children grew up here, and now bring our grandchildren here. This is where we wanted to settle, and worked very hard to do so, because it is an area rich in the qualities that we most desired and appreciate – a bucolic area lush with farmlands, fruit trees, backyard gardens, conservation land, wildlife, quiet nights, open space, and clean air and water. We suspect that, because the proposed route crosses through a rural area, the powers-that-be see the quantifying impact as negligible (less people impacted = the path to least resistance). However, be assured that this impact is in NO WAY negligible. These are very real lives and ways of life, not unlike your own, that are being disregarded and stomped upon crushed in the name of corporate greed. Sitting on those reserves in the PA Marcellus Shale field is costing someone money. Steamrolling a path through people's towns, properties, lives, dreams, hopes and futures is a pathetic and ill-conceived response to a problem that is being packaged as something it is not. We know it, and you know it. So we are now asking that you do the RIGHT thing!

Regards,

Paul & Michele Vercellin
329 Jones Avenue

Basis for Intervening:

I strongly oppose the proposed Kinder Morgan Pipeline because the towns have volunteer fire departments, limited budgets for police and first responders and emergency management. Who would adequately respond to explosions and leakage, and who would foot these bills in case of explosions and fires? Town taxes would have to increase and this add additional financial burdens to residents.

The gas that would be carried in the proposed pipeline is likely to be particularly high in toxins and radia-

tion, and the health impact upon our families, animals and plants must be avoided.

- a) I am an east Dracut resident. The NED project, due to number of proposed facilities and amount of construction and road closures proposed in town, would have an enormous effect on me.
- b) My home is close to the proposed compressor station and I live close to the proposed meter station near St. Francis church and finally I live close to the proposed meter station near Cart Path Road
- c) I am a taxpayer in Dracut and I am concerned with loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services.
- d) I am a consumer of produce from Dracut farms and I am concerned the pipeline may cause industrialization and contamination of the water supply and crops that are part of my food supply
- e) I am a ratepayer for National Grid gas service or electric service and am concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals
- f) I use well water in East Dracut and I am particularly concerned about the fact that the development plans by Kinder Morgan and the blasting from construction are likely to impact the migration of toxic chemicals from the contaminated former EXXON site at 970 Broadway Road. This contamination was detailed in a letter and proposal reviewed at the meeting of the Dracut Board of Health on April 1, 1982.
- g) Being educated as a Biologist, I am deeply concerned with the effects of the proposed infrastructure and proposed construction will have on the wildlife that visit my property and my neighborhood on a daily basis.

20160104-5444

{Motion to Intervene of Matthew Hill}

I am requesting intervenor status because the proposed Kinder Morgan pipeline is intended to cross my property in Conway, Massachusetts, and I have received letters from the Tennessee Gas Pipeline Company seeking permission to survey on three adjoining parcels of my land (LL# MA WD 248, 250. Map/Block/Lot: 407-52, 407-80 & 407-81). Thus far, I have declined to accede to TGP's request because I have both deep misgivings about the impact of the project on my family, my land and my community and strong doubts about the project's value to the Commonwealth of Massachusetts.

My most immediate concern is my family's safety. The power-line easement the pipeline is intended to follow passes within six hundred feet of our house, and although I know pipeline accidents are not common, a little research suggests they are not quite as vanishingly rare as one might hope (the Wikipedia page, "List of pipeline accidents in the United States in the 21st century," lists several hundred, never fewer than a dozen a year, with the names "Tennessee Gas" and "Kinder Morgan" coming up distressingly frequently).

My worry is increased when I consider that the landscape the proposed pipeline will be passing through as it crosses our property is extremely rugged and heavily wooded. If the worst should happen, and an accident resulting in fire were to occur during the driest part of the summer, fire could easily spread to the many hundreds of acres of roadless forest that border the power line easement. Conway has no town water system

and thus no hydrants, and there is no other nearby source of water, such as a pond or river, fire fighters could draw on either. While Conway has only a small, all-volunteer fire department, It is hard to imagine how even a large, professional one could handle a fire in such a difficult location and under such circumstances.

In addition to the threat the possibility of fire poses to our natural landscape, there is an equally troubling threat to our town's history. The particular piece of Conway the pipeline is slated to pass through holds some of Conway's oldest houses. Three nearby houses date from the 18th century, all built within a few decades of the town's settlement in 1762. One of them is in fact even closer to the power line easement than our 1840's Greek revival farmhouse. Even setting aside the possibility of fire, one can not help but be concerned about the wear and tear on such venerable structures - all built on unmortared fieldstone foundations - likely to result from nearby blasting and the constant passage of heavy equipment.

Apparently Tennessee Gas maintains their project would have no negative impact on property values. I find that hard to believe. Had my wife and I been informed twenty-three years ago when we first sets eyes on our current home that immediately behind the house there was a high pressure gas pipeline that could, in the event of an accident, without a moments warning, incinerate us and our children, we simply would not have bought the property. I am sure we are not the only parents who would react that way.

One of the things that makes the Hill Towns of Western Massachusetts, Conway included, attractive both to residents and visitors is the sense of respite they offer from more built-up and fasterpaced regions. Mornings are quiet out here. The stars at night are very bright. Would driving a natural gas pipeline, with its hissing blowdown valves and brightly illuminated, multi-acre compressor stations, through the Hill Towns entirely obliterate our region's tranquil character? Of course not. But, without question, it would diminish it, degrade it, render it a little less distinctive than it is now.

There is an additional cost too in making use of eminent domain in this particular case. Currently, many Americans have come to feel that their government is deaf to the voices of average citizens yet acutely attentive to the demands of large, well-monied interests. Overriding the will of land owners regarding the use of their property and of communities regarding the use of land within their jurisdiction at the urging of a private corporation whose legal obligation is not to the public interest but rather to its shareholders seems likely to further deepen this public mood of disillusionment. At the very least, a plan issuing from such a source requires the highest possible level of scrutiny. That Kinder Morgan, whose business it is to sell pipeline, tells us our region needs more pipeline is no more evidence that we really do than a mouthwash manufacturer's pitch is evidence that we need their product.

It is possible that imposing costs on some landowners and communities will lower energy prices somewhat in Massachusetts as a whole. On the other hand, if the pipeline actually ends up being used to export natural gas overseas where it can command a higher price, it may actually raise local costs. Even if the second possibility can somehow be ruled out - which seems unlikely, given how desirable such an outcome would be to the producers of natural gas - it remains reasonable to question the value of Kinder Morgan's proposal. Massachusetts' electricity costs are quite comparable to those paid in other Northeastern states and in California. At present, Massachusetts is at below five percent unemployment and is experiencing economic growth at a rate well above the national average. Undoubtedly, lower energy prices would be nice to have but are clearly not critical to our state's economic performance. And again, there is no guarantee the Kinder Morgan pipeline will deliver lower prices to us in any case.

Eminent domain is a tool of governance that, because it abrogates rights that individuals and communities in a democracy normally expect to enjoy, should be used sparingly. It is intended to aid the state in achieving only its most critical objectives. Certainly it should not be used when the same ends can be obtained more certainly and more cheaply by other means. The report from the Massachusetts attorney general's office suggests such other means are available. Invoking eminent domain and disrupting land set aside for conservation, long-established farms and sources of drinking water, and placing people, wood lands and historic buildings at risk from explosion and fire to allow the construction of a gas pipeline with a capacity so much in excess of that required for local needs that one has to suspect it is intended to allow gas export, would be

unconscionable. I strongly urge The FERC to reject Kinder Morgan's proposal.

Individual	ericlaforte@gmail.com	

Basis for Intervening:

- a) I am a Dracut resident; Due to the large number of proposed facilities and the sheer scale of proposed construction and road closures, this project would have a enormous effect on my town.
- b) I live very close the the pipeline (within about 1000 feet) and may be within the incineration zone in the event of a rupture.
- c) I may yet be a direct abutter to the route in the future as the route through Dracut keeps changing.
- d) I live close to the proposed meter station near Cart Path Road. I have many concerns about the environmental and health impacts of living so close to this facility.
- e) I have two children who attend the Campbell Elementary School in Dracut, which is very close to the current or route for the NED pipeline and the proposed metering station. I am extremely concerned for the health and safety of my two children
- f) I am a taxpayer in Dracut and I am concerned with loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services.
- g) I am a consumer of produce from Dracut farms and I am concerned the pipeline may cause industrialization and contamination of the water supply and crops that are part of my food supply.
- h) I am a ratepayer for National Grid gas service or electric service and am concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals.
- i) I am concerned that this project will have a negative impact on the value of my property due to its close proximity to both the pipeline and proposed metering station.

Basis for Intervening:

I am filing a motion for intervention status on FERC docket CP16-21 based on my residence 83 Morgan Circle, Amherst MA 01002. My interest will be directly affected by the outcome of the proceeding and I am participating in the public interest as a consumer. I am a resident who lives in the "blast radius" and whose daily commute crosses over the proposed pipeline route so I would be at physical risk. I am strongly op-

posed to this pipeline as it perpetuates the use of non-renewable energy sources, which is detrimental to our society and planet. The proposed project has detrimental effects to the surrounding living environment, the impact on local roads, the impact on conservation lands, the negative effects on the quality of our water, air, soil, and life.

Individual somclimateaction@live.com

Basis for Intervening:

We are residents of Orange, Wendell and Somerville, MA who are opposed to any and all new pipelines being built in New England. We are committed to moving to a renewable energy future and will not accept business as usual with carbon-based and other polluting energy sources.

We are stakeholders in this issue because carbon-based energy is hazardous to our health and survival through leaks and the burning of them which is changing the climate and causing drought, flooding and wildfires and negatively affecting plants and wildlife.

The fact that the NED pipeline is approved to be funded by taxpayers, without our knowledge or approval, makes this highly egregious on Tennessee Gas Pipeline's behalf. This is a decision made on financial and corporate motivation and not on our region's needs.

We request that we be granted this motion to intervene and allow Somerville Climate Action to participate in this proceeding with full rights of party status including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

20160104-5462

MOTION TO INTERVENE OF NICHOLAS SCARSDALE

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan").

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a blow torch to light a candle.

This claim is evidenced by the opinion of the United States Energy Information Administration, the federal agency that "collects, analyzes, and disseminates independent and impartial energy information to promote sound policymaking, efficient markets, and public understanding of energy [policy]." According to the agency's data, the six New England states consumed a total of 889 billion cubic feet (bcf) of natural gas in 2013. The data also show that New England's natural gas inflow capacity is currently 1,709 bcf/yr, exclusive of the region's three liquefied natural gas (LNG) import facilities, which in the past have contributed additional capacity of up to 150 bcf/yr. The data does not show that the pipeline is needed to meet our energy needs.

I also am aggrieved because Black & Veatch in their report to NESCOE said that in a Low-Demand Scenario, NO NEW PIPELINE would be needed. The citizens of Massachusetts deserve a full evaluation of the Low Demand Scenario, the consideration of LNG imports to serve as the natural gas bridge option until renewable source capacity matures, and above all, a commitment to repair the pipeline leaks that account for as much as 56 million cubic feet/day of gas in Massachusetts, or more than 10% of the peak-shaving capacity shortfall estimated by NESCOE's own consultant, Black and Veatch.

As for the cost to the ratepayers, Kinder Morgan's estimated costs for this project have ballooned exponentially, from the original \$1.2 billion to \$2.1 billion to latest estimates of \$7 billion – apparently where our pocketbooks are concerned, the sky is the limit. Additionally, the massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England's ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

My interest as a resident of Pepperell, MA, listed on the Company's original pipeline route and still listed as an alternate, insomuch as Pepperell is home to hundreds of acres of conservation lands (bought and paid for with the money of Pepperell citizens) and rivers that would be affected if the alternate route becomes, again, the main route for the proposed pipeline. One of the most widely known tracts of land in Pepperell is Pepperell Springs, which, as its name suggests, is a natural spring that provides some of the cleanest drinking water in the area. In 2004, the town of Pepperell voted unanimously to purchase the 265-acre parcel for permanent conservation protection. Multiple local, state, and federal organizations worked for years to acquire this land that was deemed a protection priority. Heald Orchard, located on Heald St. is another area that would be in the direct cross-hairs on the Company's alternate route. This is an 80-acre town-owned property, which leads into a lovely, secluded pond where my family and I have spent many peaceful afternoons relaxing in the water and leisurely kayaking around its many nooks and crannies. Heald Orchard also has a 1,000,000 gallon water tank located where the proposed line would run. Massachusetts is also forward-thinking enough to have Article 97 in our Constitution, and we are urging our representatives to use this legal tool to protect our land. The proposed (alternate) main line, not including laterals, will cut through 30.9 miles of core waters (206 wetlands, 15 outstanding resource waters, 13 public water supplies, 2 scenic rivers, and 4 wellhead protection areas) (data compiled from the Massachusetts GIS website by Samuel King of Sustainable Community Development at UMass).

My interest as a human being dependent on clean air is that “natural” gas (obtained through “fracking”) is often touted as a clean alternative to other fossil fuels, yet the significantly greater increase in methane that is produced in the production of “natural” gas is alarming. The Environmental Protection Agency has already weighed in on this issue: “Pound for pound, the comparative impact of CH₄ on climate change is over 20 times greater than CO₂ over a 100-year period.” Henry Tepper, President of MassAudubon has stated that: “The proposed Kinder Morgan project... is also contrary to the state's commitment to meet the greenhouse gas (GHG) emission reduction targets of the Global Warming Solutions Act.”

My interest (concern) in fracking is based on scientific data and environmental studies. According to the United States House of Representatives Committee on Energy and Commerce's report, “Between 2005 and 2009, the 14 oil and gas service companies used more than 2,500 hydraulic fracturing products containing 750 chemicals and other components.” More critically,

Between 2005 and 2009, the oil and gas service companies used hydraulic fracturing products containing 29 chemicals that are (1) known or possible human carcinogens, (2) regulated under the Safe Drinking Water Act for their risks to human health, or (3) listed as hazardous air pollutants under the Clean Air Act. These 29 chemicals were components of more than 650 different products used in hydraulic fracturing. (<http://democrats.energycommerce.house.gov/sites/default/files/documents/Hydraulic-Fracturing-Chemicals-2011-4-18.pdf>)

My interest in the general environmental health of the Commonwealth and my very close neighbors in New Hampshire, in that conservation lands, private lands, and state forests are in the crosshairs of this

pipeline – and therefore subject to a 100- to 125-ft destruction zone while the pipeline is being laid, and a 50-ft permanent vegetation-free zone thereafter. This permanent zone is maintained with chemicals, some of which are carcinogenic. The “alternate” pathway through Pepperell for the proposed gas pipeline will be constructed through numerous environmentally sensitive areas, including state-designated Areas of Critical Concern, town-owned conservation land, and critically important watershed areas. The permanent 50-foot-wide right of way would be kept clear with chemicals that have not been fully evaluated as to their effect. Indeed, according to the Office of Energy and Environmental Affairs, one of these chemicals, Metsulfuron-methyl, “is a relatively new herbicide,” and the OEEA states that the studies provided on its website as to this herbicide’s safety “have been provided by the registrant, EI DuPont.”

These studies differ from that of the U.S. Department of Agriculture (USDA), which states that with use of metsulfuron-methyl “damage to sensitive nontarget species could be expected in ground broadcast applications at distances of about 500 feet from the application site in areas in which off-site drift is not reduced by foliar interception”. [1] With regard to effects on humans, “[t]he lack of experimental data regarding dermal absorption of metsulfuron methyl adds substantial uncertainties to this risk assessment”. [2]

My interest in the safety of my friends and neighbors is another factor that leads me to intervene in this project. According to the Department of Transportation’s Pipeline and Hazardous Materials’ Safety Administration (PHMSA), there have been over 5,500 “significant incidents,” resulting in over 360 fatalities and 1,360 injuries. These significant incidents have resulted in a total cost of over \$7 billion dollars. These are not even the sum total of all accidents, fatalities, and injuries, only the ones that meet certain criteria, for instance, requiring hospitalization or resulting in more than \$50,000 in cost for that incident.

All of this proposed destruction and increased health and safety risks for maybe 75-100 years of energy from the Marcellus Shale in Pennsylvania? Maybe 75-100 years. According to the U.S. Energy Information Administration (EIA), “There remains considerable uncertainty regarding the size and economics of this resource.” Surely we could not be more short-sighted than to engage in all this effort for barely more than the one generation’s worth of energy supply we will receive. All of this destruction so that we can contribute to escalating the dangers of global climate change? And all funded by taxpayers? Kinder Morgan’s claim that “in most of our businesses we operate like a giant toll road” seems to be quite accurate. I believe the “toll” for the Northeast Energy Direct (NED) pipeline is unacceptable.

Sincerely,

Nicholas Scarsdale

Basis for Intervening:

I live in Northfield and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I own property within the 200 foot survey area of the proposed pipeline and will be directly impacted by the pipeline. I also live in the same town as a proposed compressor station and have serious concerns about the impacts of both. I am par-

particular concerned about impacts to the health of my children based on air and water quality impacts. I would like to submit the record of water tests on our private well over the past 8 years, taken every year, to ensure we are drinking clean and healthy water. we will be able to determine with scientific data that our well has impacted, should this occur.

20160104-5465

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
North East Energy Direct Pipeline Project)

MOTION TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Richard F. LaMonica and Carol LaMonica, both of Tewksbury, Middlesex County Massachusetts, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Richard F. LaMonica
Carol LaMonica
205 William G Drive
Tewksbury, MA 01876
978-851-9030
rflamonica@aol.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would directly and adversely impact us for the following reasons:

1) Our home, as well as all the other homes in our neighborhood, are in the direct path of Segment N, the Lynnfield Lateral. We own and reside at 205 William G Drive, Tewksbury, Massachusetts. Our home is in a single family residential zone. Our home is in Tewksbury and our natural wooded back yard is Andover. It is identified as Lots MA LL 77 .15 and MA LL 71.00 on the Map named Segment N, Lynnfield Lateral sheet TE-SEG_N-006 and on construction drawing LA-SEG_RES-10. Our back yard abuts the back yard of other homes shown on the same map as "Regis Road" and "Bellevue Road".

Our back yard is thickly wooded and in its natural, forested state, as are the back yards of all our neighbors. There is a large area of known wooded wetland area on our property, in actuality, conservation land protected from construction under state and local laws. Tennessee gas has represented this wetlands on the map as WPI 2780. It is shown in blue which means it is based on a photographic perception. Given the density of trees on my property, it is impossible for any such representation to be accurate. Therefore, the maps they have filed are misleading. The surveys required to produce accurate mapping to support the application have not been conducted so the maps they have filed here are incomplete and inaccurate. The maps are, in reality, "fabricated". Kinder Morgan and Tennessee Gas should not be allowed to file these unfinished maps as if they were factual. Their doing so constitutes an unfair and deceptive act and practice under Massachusetts Consumer Protection Law MGLc 93A.

Our property is located within .1 mile of Town owned Article 97 Conservation Land, which is also recognized as a NHESP Priority Habitat of Rare species and a Biomap 2 core habitat. This town conservation land abuts two other Article 97 conservation parcels on the Andover side of the line. Taken together those parcels form a parcel of over 100 acres of contiguous Article 97 wildlife and rare species habitat. Our property is part of a contiguous wildlife corridor which abuts those conservation parcels and which runs from the Merrimack River to the Shawsheen River. We greatly enjoy watching the wildlife that inhabits and traverses the corridor daily. Our property also sits in a ground water protection zone and on the edge of a well head protection area. Our property is serviced by private well water and a relatively new septic system which complies with Massachusetts Title V, both of which are located in the work and easement area. We also have an in ground pool which is located in the work and easement area. All of these will be eliminated by this project.

The setting of our home is private, quiet and natural, while our neighborhood is one of natural beauty and balance. These things have great value as is proven by the fact that the homes in this section of town have the highest resale values.

According to the plans, Tennessee Gas (TGP) intends to install 24", 1460 psi pipeline in and across our back yard. It intends to clear cut a swath through our back yard, a protected wetlands resource area. It will run between our home and the Bellevue Road homes next to us, then between our home and the Regis Road homes behind us. It will then continue on through the other neighborhood back yards and bisect the Article 97 Conservation lands that we described above. Although in their resource reports, they have represented that they will narrow the work areas through wetlands, the map shows that the Temporary work easements and clear cut swath behind our home (and our neighbors' homes) is actually widened and will vary between 140 and 165 feet wide. It will come within 45 feet of our home. The permanent easement will be 50 feet wide while the finished pipeline will be 75 feet from our home, which puts us (and our neighbors) well inside the "Blast" or "incineration zone". We will hear the high pressure gas being pumped through the line and the pigging when cleaning occurs. We will lose our trees, our sound buffer, our privacy, our beautiful view. All of the trees that give our neighborhood its character will be permanently eliminated. The wetlands will dry out. The wildlife habitat will be eliminated and we will be deprived of the enjoyment of watching the animals who inhabit and travel through the corridor daily. After construction our view will consist of nothing more than grass or invasive weeds. Our trees will be replaced by yellow posts clearly marked "Danger High Pressure Pipeline" separating us from our neighbors. The path of the pipeline will threaten our aquifers and well heads and jeopardize our water supply.

The value of our property will be diminished. The health and safety of our family and neighbors will be endangered. The construction of this pipeline will irreversibly destroy what we have. The value of the entire neighborhood will be adversely impacted. It will essentially convert a residential zone to an industrial use.

2) We are senior citizens and this home is our only major asset. Our equity here was to be our retirement. We were depending on our equity to survive. The value of our property will be diminished by this pipeline path. In fact, the resale value of our property has already been diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive us of our retirement funds.

3) During construction, we will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of privacy. Our neighborhood is well known to consist of ledge so substantial blasting would be inevitable. This will endanger the structural integrity of our home, of the other homes in our neighborhood, and adversely impact our health and sanity, as well as our use and enjoyment of our property. It will unconscionably disrupt the wildlife.

4) Furthermore, according to the plans, TGP intends to clear cut and cross Kendall Road at Bellevue, the only main road between our home and the highways. This makes coming to and going from our home almost impossible. There are no reasonable alternate routes for us to travel in that direction. This creates a great risk for us and other homeowners should we need emergency responders. We will be greatly inconvenienced and

endangered.

5) Furthermore, in addition to being property owners we are customers and rate payers. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Massachusetts has an LG facility in Everett that has been sitting unused. The Attorney General's independent study has established that there is no need for this additional NED infrastructure. This pipeline is not necessary at all to service New England. This Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience.

6) Although we previously gave KM and TGP permission to survey our property, we are hereby revoking any such permission. When we granted it, we asked them to give us advance notice and a copy of the completed survey. So far we have received neither. Given that they are using a photographic image to depict the wetlands in our back yard, it is clear they never bothered to survey in person. They are hereby prohibited from entering our property. Any such entry by them will be considered a criminal trespass. Again, the applicant should not to be allowed to file an application with fabricated mapping. They had a chance to conduct actual surveys to make real maps. They did not take it. They opted, instead, to file fake maps.

We have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, We, Richard F. LaMonica and Carol LaMonica, respectfully request that the Commission to grant our Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 22nd day of December, 2015,

Richard F. LaMonica
Carol LaMonica
205 William G Drive
Tewksbury, MA 01876
978-851-9030
rflamonica@aol.com

20160104-5467

BEFORE THE UNITED STATES FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company (TGP),
a wholly owned subsidiary of Kinder Morgan
Northeast Energy Direct (NED) Pipeline

Docket No. CP 16-21-000

MOTION TO INTERVENE OF THE FRANKLIN REGIONAL COUNCIL OF GOVERNMENTS

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, the Franklin Regional Council of Governments(FRCOG) files this Motion to Intervene in the abovecaptioned proceeding. The FRCOG has significant concerns about the environmental, safety and socioeconomic impacts of the NED pipeline project. The resources in Franklin County, Massachusetts that could be directly impacted by the proposed pipeline include: public and private drinking water supplies, permanently protected open space, farmland, forestland, rare and endangered species habitats, wetlands, vernal pools; coldwater fisheries, public infrastructure, private homes and businesses, and historic resources. The short and long-term impacts that the proposed project could have on our communities and region are profound. The FRCOG seeks to intervene on the NED Project to monitor the progress of the proceedings and expects to take a position on the Project once we complete our review of the KM- TGP Application filed with FERC.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

The Franklin Regional Council of Governments is the Regional Planning Commission for the 26 communities of Franklin County Massachusetts, of which eight are slated to be directly impacted by, and several others indirectly impacted by, approximately 34 miles of pipeline, a large scale compressor station and other above ground facilities.

The FRCOG provides technical assistance and analysis to our member communities. The FRCOG is also responsible for addressing regional issues and large scale development that cross town boundaries and impact multiple communities. We are assisting our towns to understand the potential impacts of the pipeline and represent their needs and issues during the scoping and EIS processes.

Franklin County is the most rural region in Massachusetts with a total population of approximately 71,408 and is located in the western portion of the State bordering Vermont and New Hampshire (see attached map). The eight towns directly impacted by the pipeline are largely rural communities. The largest is Montague with a population of 8,4221 and the smallest is Warwick with a population of 6421. The total population of the 8 towns is 24,2251. While the largest employment sectors in the 8- town region are education, health care services, manufacturing, and retail trade, there has been significant growth in agricultural, forestry and other natural-resource based employment that will be negatively impacted by the proposed pipeline. The pipeline is located in primarily rural areas zoned for residential, agriculture and forestry and is largely comprised of farmland and forest with sensitive habitat areas and other natural resources.

B. Description of Impacts

The resources in Franklin County, Massachusetts that could be directly impacted by the proposed pipeline include: public and private drinking water supplies, permanently protected open space, farmland, forestland, rare, threatened and endangered species habitats, wetlands, vernal pools, coldwater fisheries, public infrastructure, private homes and businesses, and historic resources described in more detail in the Table and text below.

Our rural communities are increasingly reliant on natural resources for their economic strength and diversity and have less income and resources to address the short and long term cumulative impacts from the proposed NED pipeline project. The economic and public health of rural residents is closely tied to the health and viability of the region's natural resource base. Further, the NED pipeline project is proposed to be sited in several Environmental Justice (EJ) Areas, according to a study recently completed by the FRCOG, which are areas of high poverty or minority populations in the region. These EJ Areas include the Northern portion of Deerfield, Western portion of Erving, Non-Urban Area of Montague, the Millers Falls Area of Montague and the Northern portion of Northfield." Consequently, the proposed NED project in Franklin County raises serious economic, public health and Environmental Justice issues.

Based on publicly available data, the FRCOG prepared GIS mapping and compiled statistics utilizing GIS information on the proposed pipeline route and above ground facilities locations provided by AECOM, a subcontractor to KM-TGP dated June 2015. The GIS information includes the pipeline route, a compressor station, access roads and workspace, contractor yards, pig launchers and receivers, main line valves, and metering stations. As shown in Table 1 below, there will be significant impacts to regional environmental resource areas including Permanently Protected Open Space, rare and endangered species habitat (e.g. MA Natural Heritage & Endangered Species Program (NHESP) Priority Habitat Areas), unfragmented forests, active farmland, coldwater fisheries, vernal pools, water supply areas, and water bodies. Because these figures are based on publicly available data, it is likely that this analysis underestimates the resources that could be impacted. Field surveys for a major portion of the proposed pipeline route are needed to accurately reflect the resource impacts. The above ground facilities further increase the resource areas impacted. Based on our mapping analysis, there will also be impacts to farming and forestry businesses and recreational and heritage tourism businesses.

Table 1 - Franklin County, MA Resource Areas3-4	Resource Areas Within 300 foot Buffer	Resource Areas Within 1/4 Mile Buffer
Permanently Protected Open Space	440 acres	1,749 acres
Outstanding Resource Waters	117 acres	493 acres
Public Water Supply Recharge Area	110 acres	528 acres
Public Water Supplies	2PWS	6PWS
Aquifers	344 acres	1,398 acres
Agricultural land Use, Prime Farmland Soils	780 acres	2,893 acres
NHESP Priority Habitat Rare Species	692 acres	2,731 acres
Wetlands	97 acres	459 acres
NHESP & Nature Conservancy BioMap2 Core Habitat	970 acres	4,114 acres
Cold Water Fisheries (# of Streams or Rivers Crossed or within the Buffer Area)	15	20
Total # of Streams or Rivers Crossed or within the Buffer Area (includes Cold Water Fisheries)	27	43
Federally Designated National Scenic Trails Crossed	1	1
Ponds, lakes or Reservoirs	10	35
Federally Designated American Heritage River Crossed	1	1
State or Federally Designated Scenic Byways Crossed	3	3

The pipeline is expected to impact air and water quality and will generate significant noise pollution. The pipeline also has the potential to impact private property including the private wells and septic systems of approximately 250+ homes or businesses within 1/4 mile of the proposed pipeline route based on a review of available mapping of water and sewer infrastructure. Overall there are approximately 1,319 structures located within 1/4 mile of the NED project including approximately 710 residential or business structures that could be impacted.

There are significant public safety and infrastructure concerns. In the eight towns directly impacted by the proposed pipeline, fire protection is provided primarily by local volunteer fire departments, with forest fire support from State agencies, and most areas do not have public water systems that provide fire protection. Much of the road network consists of rural two-lane roads and these local roads and rural bridges, in some cases one lane bridges, are not suitable for heavy construction equipment or vehicles. Construction will occur along a corridor of rural towns with significant areas of protected open space in state and non-profit ownership.

The NED project violates the local zoning of the communities in Franklin County, Massachusetts. Most of the land along the proposed NED pipeline route is zoned for residential and agricultural use and also includes permanently protected open space. These Residential- Agricultural zoning districts are not suitable for industrial uses. There are approximately 2,893 acres of prime farmland soils and/ or agricultural land use and many farms within a 1/4 mile of the proposed NED project that will be impacted.

Even without more specific parcel-level detail of the actual proposed path of the pipeline and related surveying, it is clear that there will be impacts to Franklin County's natural resources, infrastructure and ability to adequately protect public safety.

C. Standard for Intervention

The Franklin Regional Council of Governments satisfies the standard for intervention under the Commission's regulations. As discussed above, the Franklin Regional Council of Government's region is directly impacted by the proposed project, and no other individual or organization can adequately represent the Franklin Regional Council of Governments unique regional interest in this proceeding. The FRCOG's intervention is also in the public interest because it represents the interests of governmental bodies. Accordingly, the Franklin Regional Council of Governments respectfully requests that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The following individuals representing the Franklin Regional Council of Governments should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Linda Dunlavy, Franklin Regional Council of Governments
Address: 12 Olive Street, Suite 2
Phone: 413-774-3167 x103
Email: lindad@frcog.org

Name: Peggy Sloan, Franklin Regional Council of Governments
Address: 12 Olive Street, Suite 2
Phone: 413-774-3167 x133
Email: psloan@frcog.org

III. COMMENTS

Based on an initial review of the Application submitted by TGP on November 20, 2015, it is deficient in at least five key areas: 1) Demonstration of the need for the NED Project; 2) Comprehensive Analysis of Alternatives based on Environmental Resource Impacts; 3) Analysis of Environmental Justice Impacts; 4) Lack of Real Co-Location and 5) Inadequate Information on Insurance & Public Safety Threats.

1) Demonstration of the need for the NED Project

Under the Commission's Certificate Policy Statement, an applicant must demonstrate a need for the proposed project," Further, where a proposed project - such as Northeast Energy Direct - will have significant, adverse effects on the surrounding environment, and private and municipal property rights and state constitutionally-protected parklands, the amount of evidence necessary to establish project need for a proposed project is heightened."

The Applicant admits that the NED Project is not fully subscribed. According to the Application, the market path component of the NED Project has a total capacity of 1,332,500 Dth/ day, but only 552,261 Dth/ day -- or 41 percent -- is committed under what the Applicant claims are binding precedent agreements? For the supply path component, the Applicant has executed precedent agreements for 751,650 Dth/ day - or roughly 61 percent of the Supply Path Component's capacity of 1,230,000 Dth/ day. A cursory review of the project subscribers shows that at least one, UIL Holdings is an affiliate of the project - and precedent agreements with affiliated entities are not considered as probative of need as unaffiliated, arms-length contracts." In addition, there are no firm commitments from gas fired electric generators for the market path component even after the most recent "Power Serve" Open Season that closed on October 29/2015 (Pages 24-26 -Application), The shippers listed in the Application (Pg. 26) include LDCs (such as Berkshire Gas), one municipal light department, one industrial end user and one holding company. The speculative nature of the NED Project is particularly problematic given the large amount of private property expected to be taken by eminent domain to build the NED pipeline in light of the very low survey permission rate. Further, there are vast amounts of critical environmental resources that will be impacted, including public water supplies, endangered species habitat, and permanently protected open space.

Even so, where a pipeline is not fully subscribed, the Certificate Policy statement allows a showing of need through alternative evidence of market demand for the project. Here too, the NED Project falls short.” According to a 2015 Department of Energy Report, only 54 percent of current pipeline capacity is being used - and higher utilization of existing interstate natural gas pipelines will reduce the need for new pipelines. Moreover, while the DOE Report finds that at most, 8.4 bcf/ dare needed, the Commission is currently considering applications for 48 bcf/ d.!! Even the Commission’s own projections from its March 2015 State of the Market Report likewise show that by 2016, sufficient pipeline capacity will be in place to handle Marcellus production.

{ chart omitted }

Chart from FERC State of Markets Presentation (March 2015) at 8 online at <http://www.ferc.gov/CnlendnrFilesI20150319162231-A-3.pdj> (lines show growth in pipeline capacity)

The DOE and Commission studies are in line with the Massachusetts Attorney General’s recent report, which determined that increased gas supply is not needed to meet the state’s electricity needs.V

The Certificate Policy Statement also allows a project sponsor to attempt a showing of project need based on potential benefits, such as lowered gas or electric rates. But “vague assertions of public benefits” are not sufficient; any claimed benefits must be backed up by a market study that explains the basis for the projections. P Many of the project benefits listed in the application - notably avoidance of another costly Polar Vortex’< and savings of between \$1.7 billion and \$2.4 billion in electric costs - preliminarily, seem speculative.P For example, an ICF Report commissioned by Kinder Morgan found that the NED pipeline would have saved consumers \$3.7 million in costs associated with the Polar Vortexlv -- even though two reports by the Northeast Energy Reliability Council (NERC) conclude that the Polar Vortex resulted from lack of coordination, and that similar scenarios have and may be avoided through coordination and advance planning.”? Moreover, these improved coordination efforts are far less costly than the \$5.2 billion price tag to achieve added savings as a result of the NED Project.

- i) TGP has failed to demonstrate sufficient need for the NED Project to justify either the substantial adverse impacts to the environment and communities, or the taking of private and municipally-owned property and state constitutionally protected parklands. As such, the Commission should find that the project will not serve the “present or future convenience and necessity” and deny the Application. Alternatively, even if the Commission finds that TGP has offered some evidence to support project need for the project, the evidence is disputed, and as such, the Commission must hold a hearing to adjudicate the issue of whether there is a need for the project.!”
- ii.) The Applicant cites the need for this gas pipeline to serve the electric utility industry but does not have firm commitments from electric generating companies to purchase gas from the NED project. The pipeline, after a lengthy period of TGP conducting open seasons, still has only 41 % (552,262 Dth per day) of the market path pipeline capacity (1,332,500 Dth per day) committed. The recent study sponsored by the Massachusetts Attorney General’s Office found that the NED Project as proposed by TGP is not needed to meet electricity reliability needs in New England!”.

2) Comprehensive Analysis of Alternatives based on Environmental Resource Impacts

The Alternatives Analysis, Resource Report 10, is deficient and the information is incomplete making it impossible to adequately assess the environmental impacts and select the alternative with the least impacts. The analysis relies primarily on “desktop” data (RRI0; Pg. 10-23) for the Preferred Route obtained from aerial photographs and/or publicly available GIS datalayers, and resource impacts are significantly underestimated. Th~ tables do not present the information clearly and should list both miles or linear feet, as well as acreage of each resource area within 300 feet and % of a mile of the centerline of the pipeline. Further there is still information missing in the Alternative Tables including Vernal Pools, Minor Stream Crossings, Public Water Supply Recharge Areas, and Permanently Protected Open Space. For example, in Massachusetts alone (Resource Report 2 Page 2-57) there are 64 Certified Vernal Pools and 91 Potential Vernal Pools within 750 feet of the proposed NED pipeline which are not reflected in the Alternatives Analysis. The

information contained in the Alternatives Analysis should be consistent with the information presented in the other Resource Reports.

Although FRCOG is still evaluating the Alternatives Analysis more closely, one obvious alternative is omitted: closer gas-electric coordination between pipelines and generators, and through the New England ISO to avoid situations like the Polar Vortex and keep rates in check. At least two NERC studies have suggested that increased coordination would resolve many of the problems that gave rise to the Polar Vortex.^s The omission is surprising given that the ICF Report purporting to show a need for the NED Project touts the \$3.7 billion savings that would have resulted had the NED Project been online when the Polar Vortex occurred. Likewise, many of the options identified in the Massachusetts Attorney General's Report also warrant discussion as lower cost alternatives to the NED Project.

The Cumulative Impact Assessments presented in the Resource Reports are still deficient and provide limited quantitative assessment of water quality, critical wildlife habitat, fisheries or rare and endangered species impacts caused by construction and clearing of forested areas (e.g. erosion and sedimentation impacts on water quality of streams including cold water fisheries, increased stormwater runoff and nutrient loading to water bodies, estimated increase in water temperature in cold water fisheries streams as a result of forest land cleared, I reduction of rare or endangered species as a result of lost or fragmented habitat, etc.). Approximately 11,000 acres of land will be disturbed by the project yet on Page 2-157 of Resource Report 2, the proponent states that "the cumulative effect on groundwater, surface water, sensitive waters, and wetlands resources will be temporary and minor."

The data, assessments, and discussion of cumulative impacts presented in the Resource Reports are not adequate to provide a foundation for the Cumulative Effects analysis that is required under National Environmental Policy Act (NEPA). The Council on Environmental Quality's (CEQ) "Considering Cumulative Effects under the National Environmental Policy Act" provides a framework that project proponents can use to evaluate the cumulative effects of a project on specific resources, ecosystems and human populations of all related activities." The D.C. Circuit has since amplified the scope of cumulative impacts analysis, stating that a meaningful assessment of cumulative impacts must identify:

the area in which the effects of the proposed project will be felt; (2) the impacts that are expected in that area from the proposed project; (3) other actions - past, present, and proposed, and reasonably foreseeable - that have had or are expected to have impacts in the same area; (4) the impacts or expected impacts from these other actions; and (5) the overall impact that can be expected if the individual impacts are allowed to accumulate. II Grand Canyon Trust v. FAA, 290 F.3d 339, 345 (D.C. Cir. 2002).²²

The Resource Reports are both conclusory and deficient in terms of data and assessment and these deficiencies, if not corrected, will limit or preclude a useful analysis of the cumulative effects of the proposed project. The Resource Reports should contain adequate information to establish the environmental baseline and thresholds of environmental change. This is especially critical in Franklin County where the proposed pipeline route crosses large tracts of undeveloped, unfragmented landscape.

The CEQ regulations require the Commission to consider indirect impacts of the proposed actions. Indirect impacts are caused by the proposed action and occur later in time or are farther removed in distance than direct project impacts, but are still reasonably foreseeable. 40 C.F.R. §1508.8(b).

Increased Marcellus development is an indirect project impact that the Application does not discuss. Instead, TGP states that the Commission need not consider the environmental effects of production at Marcellus because shale extraction is regulated by the state and outside the Commission's jurisdiction. However, if an impact falls outside the scope of the Commission's regulatory jurisdiction, that is no basis for ignoring it,²³ In fact, the Commission itself has never asserted jurisdictional limits as a basis for ignoring indirect impacts of increased Marcellus production in a Certificate proceeding. Rather, the Commission previously declined to consider indirect impacts associated with Marcellus production because of a lack of causal connection between pipeline construction and Marcellus extraction.^s However, here, because the NED project is over-built and affords access to export markets, it is far more likely to induce Marcellus production - thus giving

rise to a causal connection between pipeline construction and increased shale extraction activity that was lacking in prior cases.²⁵

Given the inadequacy of the Alternatives and Cumulative Effects Analysis it is questionable whether TGP has chosen the alternative that minimizes impacts to environmental resources that are protected by NEP A.

3) Analysis of Environmental Justice Impacts

The NED pipeline project is proposed to be sited in several Environmental Justice (EJ) Areas, according to a study recently completed by the FRCOG, which are areas of high poverty or minority populations. These EJ Areas include the Northern portion of Deerfield, Western portion of Erving, Non-Urban Area of Montague, the Millers Falls Area of Montague and the Northern portion of Northfield.” Consequently, the proposed NED project in Franklin County raises a serious Environmental Justice issue if rural low income or minority populations are impacted by a project that is expected to have adverse air and water quality impacts and which may have a depressing effect on property values given health and public safety concerns. The Environmental Justice Analysis conducted by TGP is inadequate because it only examines this issue at the community scale not at the neighborhood level.

The Northeast Energy Direct Project’s Resource Report 5 (Socioeconomics) conducted an environmental justice analysis for the project region. Specifically, they examined the poverty and minority statistics at state, county, and municipal level. For their analysis, the criteria for determining low-income areas and minority populations is defined as “(1) the minority/poverty population of the affected area exceeds 50 percent, or (2) the minority/poverty percentage of the affected area is meaningful greater than the minority/poverty percentage in the general population or other appropriate unit of geographic analysis” .²⁷ In their analysis, the term “meaningful greater” is defined as 25 percent or greater than the applicable statewide average.

This criteria is slightly different than that which the Franklin Regional Council of Governments (FRCOG) traditionally uses to determine low-income areas and minority populations, since federal guidance on defining “meaningful greater” varies between federal agencies. The FRCOG follows the Federal Highway Administration’s guidance, in which “meaningful greater” is defined on a project-by-project basis. The FRCOG also uses as the unit of geographic analysis the Census-defined block group, rather than the town, since the impacts of a large project can have significant impacts at the neighborhood level and demographics can vary greatly at the sub-municipal level.

Using FRCOG’s criteria for defining Environmental Justice areas, there are five affected areas in the proposed project region that are classified as either low-income areas or have high minority populations. Applying the different criteria used by the TGP’s analysis, there are four affected areas that meet the CEQ and USEPA defined minority and low-income Environmental Justice populations. See Table below for comparison.

Location (blockgroup)	Percent Minority (population)	Percent Below Poverty Level (households)	Met FRCOG Criteria	Met NE Direct Criteria
Deerfield 28 (northern portion)	22%	4%	Yes	Yes
Erving 29 (western portion)	10%	8%	Yes	No
Montague 30 (Millers Falls area)	5%	16%	Yes	Yes
Montague 31 (non-urban portion)	12%	9%	Yes	Yes
Northfield 32 (northern portion)	4%	16%	Yes	Yes

To apply the definition of “meaningful greater” in the same way as TGP, the FRCOG used Franklin County

as the general population comparison unit. An area was defined as a minority population if it was 25% or greater than the county's average of 9% nonwhite residents (25% greater = 11.2%). An area was defined as a lowincome area if it was 25% or greater than the county average of 11 % households under the poverty level (25% greater = 13.7%). The data used for the FRCOG analysis was the 2013 American Community Survey, Five-Year Estimates. The Environmental Justice Analysis is deficient and should address neighborhood level impacts by using Block Group Information.

4) Lack of Real Co-Location

The Commission regulations encourage applicants to minimize project impacts through co-location. Applicants are directed to undertake siting, construction and maintenance of facilities to "avoid or minimize effects on scenic, historic and recreational values," (18 C.F.R. § 380.15(a)), to consider "use and widening of existing rights of way" and limit ROW clearing to a minimum width (18 C.F.R. §380.15(e)).

What is troubling about the proposed NED Wright to Dracut pipeline segment is that it is presented as "co-located" with the electric transmission lines when it really is not. Only 20 feet of the 50 foot permanent NED ROW easement is proposed to overlap with the existing electric transmission line easement with the centerline of the pipeline expected to be located 5 feet outside of the utility ROW (Page 54 of the Application). Additional construction work space will further impact environmental resources and TGP states on Page 55 of the Application that the centerline may move further out given ongoing discussions with the electric utility. This could result in a 100% Greenfield project that essentially parallels the utility ROW but is not co-located on even a portion of the electric utility ROW.

Instead of minimizing the size of the right of way - which is the purpose of colocation, the NED project expands the existing ROW well beyond what is necessary and contrary to the purpose of Section 380.15. As a result of doubling, instead of collocating the pipeline easement and electric transmission right-of-way additional damage - such as deforestation, erosion, loss of endangered species habitat and wetlands, and impairment of rivers and streams, including highly sensitive cold water fisheries will result.

5) Inadequate Information on Insurance & Public Safety Threats

The Commission has previously indicated a willingness to study the impact of a pipeline on insurance premium costs. 33 Tennessee Gas Pipeline - by its own admission (albeit in its SEC 10-K filing and not the Certificate Application) - does not carry sufficient insurance coverage against the various inherent risks associated with operation of gas pipeline infrastructure. From the TGP SEC Report:

Our operations are subject to the inherent risks normally associated with those operations, including pipeline ruptures, explosions, pollution, release of toxic substances, fires and adverse weather conditions, and other hazards, each of which could result in damage to or destruction of our facilities or damages to persons and property. In addition, our operations face possible risks associated with acts of aggression on our assets. If any of these events were to occur, we could suffer substantial losses. While we maintain insurance against many of these risks, to the extent and in amounts that we believe are reasonable, our financial condition and operations could be adversely affected if a significant event occurs that is not fully covered by insurance.v'

Because TGP lacks adequate insurance, municipalities must now explore whether they will need to procure additional and potentially costly liability coverage to protect its property and residents, while landowners are likely to face premium hikes. These impacts are not adequately discussed in the Application. In addition, the Applicant should address whether or not they carry adequate insurance to cover serious or catastrophic events and information identifying the limits of their current insurance coverage per incident should be provided.

The Applicant has not adequately addressed potential safety issues that could be caused by cyber terrorism or severe storm events (e.g. tornadoes, earthquakes, hurricanes) given that the pipeline is primarily operated remotely from the Tennessee Gas Control Center in Houston, Texas. A more comprehensive analysis of the public safety threats and security measures to be undertaken should be provided to FERC.

These comments are based on a preliminary review of the voluminous Application materials. The FRCOG

and its member communities continue review of the

Application which may require Consultants to assist with evaluating the more technical portions of the Application on noise, air quality, wetlands impacts, etc. Accordingly, the FRCOG reserves the right to file additional comments on the Application and/ or other supplemental materials filed by the Applicant.

IV. CONCLUSION

Wherefore, in light of the foregoing, the Franklin Regional Council of Governments respectfully requests that the Commission (1) GRANT this motion to intervene and (2) allow the INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,

Bill Perlman, Chair - FRCOG Executive Committee

Proposed TGP Route & Facilities

2 Regional Transportation Equity Analysis for Franklin County, MA; Franklin Regional Council of Governments; July 2015; Environmental Justice Areas are defined as areas where minorities comprise 9% or more of the block group’s total population or where at least 12% of the area’s population lives below the poverty level (see Tables 1 & 2 and Narrative; Pages 6-8); These definitions have been in use by FRCOG since 2012 for compliance with Title VI of the Civil Rights Act and while the minority percentage figure is lower than the Statewide average, it is the Franklin County average reflecting our rural region; www.frco~.or~

3 Data based on publicly available information. There are additional resources not included in the table which are located along the proposed pipeline route that require field work and/or prior permission from property owners, including but not limited to: private drinking water wells, private septic systems, historic structures, cemeteries, residential homes, parks and recreation areas including ball fields and trails, churches, private schools, pre-schools and daycare centers, vernal pools, delineated wetlands, endangered species habitat, and recently protected open space. Native American and other archeological resources may be present.

4 Data compiled is based on digital GIS shapefiles of the pipeline route and above ground facilities provided by AECOM, a subcontractor to KM-TGP dated June 2015 and includes above ground facilities such as the compressor station, access roads, contractor yards, and metering and venting stations. Additional route changes have occurred in Warwick based on correspondence received from AECOM dated October 27, 2015, but digital information has not been provided.

5 Certification of New Interstate Natural Gas Pipeline Facilities, 88 FERC ‘161 ,227 (1999), order on clarification, 90 FERC ‘16[‘ 128, order on clarifiicalion. 92 FERC, 61,094 (2000) (Certificate Policy Statement) at 25.

The Report also identifies six other pipelines either recently constructed or planned for the New England area which also diminish the need for the NED Project.

13 Certificate Policy Statement at 27.

14 A polar vortex is a large area of low pressure cold air that ordinarily surrounds the Earth’s poles, but which migrated south during the winter of 2014, accounting for record-breaking freezing temperatures and price spikes throughout the Northeast, and in particular in the New England area due to increased power use. See https://en.wikipedia.org/wiki/Early_

- 2014_North_American_cold_wave (describing polar vortex phenomenon); also We're Not Facing An Energy Crisis in New England, <http://commonwealthmagazine.org/environment/were-not-facing-an-energy-crisis-in-new-england/> (June 1, 2015) (describing impact of polar vortex on New England power markets)
- 15 The FRCOG is still in the process of a detailed review of the reports submitted by TGP to support the project and will supplement these comments further.
- 16 See ICF Report (September 2015), online at <http://ir.kindermorgan.com/press-release/all/ncw-study-outlines-new-eng-lands-need-additional-natural-gas-capacity-37-billion-co>.
- 17 See NERC Report Re: Polar Vortex, (September 2014), online at http://www.nerc.com/palr/rmf/January%202014%20Polar%20Vol.%20Review/Polar_Vortex_Review_29_Sent_20_14_Final.pdf (finding that lack of coordination gave rise to polar vortex events); NERC Report Re: Winter 2015, online at http://www.nerc.com/pai/RAP/NRAI/Reliability%20Assessments%20DLI2015-16%20WRA_Report_Final.pdf (describing measures that can be taken to avoid vortex events in the future).
- 18 See Environmental Action 11. FERC, 996 F.2d 401, 413 (D.C. Cir.1993 - requiring adjudicative hearing when the disputed issues may not be resolved through an examination of written submissions.”). As FRCOG will discuss in a separate motion, assertions of project require credibility assessments of the underlying analyses and therefore, are not susceptible to resolution on the papers.

CERTIFICATE OF SERVICE

Wherefore on this January 4th, 2016, I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission’s electronic service list in this proceeding, in accordance with Commission regulations.

Bill Perlman, Chair - FRCOG Executive Committee

20160104-5468

Submission Description: (doc-less) Motion to Intervene of Valerie W. Shanley under CP16-21-000.

Submission Date: 1/4/2016 4:08:40 PM

Filed Date: 1/4/2016 4:08:40 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual vshanley@nycap.rr.com

Basis for Intervening:

I live in the Town of Sand Lake, New York, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because:

- I am a landowner directly impacted by the pipeline route / compressor station. my lakefront property is just slightly over one mile from the proposed major gas compressor station to be located in the Town of Nassau, NY.
- Some of my neighbors would have their property seized by eminent domain.
- I am a resident who lives barely outside the “blast radius,” and so am concerned that my family, neighbors, pets and wildlife would be physical risk.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.
- I am a member of an impacted community who has concerns about various impacts to the local economy, environment, aesthetics and health.
- I enjoy the out of doors and do not want to be impacted by any activities of this commercial project.
- I live in a rural, residential, recreational community and am deeply concerned about the serious health and environmental impacts of this commercial project, as well as decreased property values.

20160104-5470

Submission Description: (doc-less) Motion to Intervene of Rod Watkins under CP16-21-000.

Submission Date: 1/4/2016 4:12:26 PM Filed Date: 1/4/2016 4:12:26 PM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual rpwatkins48@gmail.com

Basis for Intervening:

I am a resident of New Ipswich, NH through which the proposed NED pipeline is not only routed, but will also be the site for a compressor station. I am both a home owner in the jurisdiction of New Ipswich and have a child in the school system. As such myself and my family will be directly impacted by the pipeline in terms of potential health, water quality and additional tax assessments. I am also at risk of losing value in my home, having my property taxes increased, or both as a result of the proposed NED pipeline. I therefore have a direct interest in the disposition of this proposed project.

Individual naturegirl2112@comcast.net

Basis for Intervening:

I am a landowner in Merrimack NH, an employee of The Home Depot, and live within 1500 feet of Thornton’s Ferry Elementary School. My home, my job, and the school are all in the pathway of the proposed NED project through NH. My antique cape from 1787 is surrounded by wetlands, protected habitats, and the town’s watershed. The proposed pipeline cuts through Home Depot property, the town’s aquifer, the town’s watershed, and those protected habitats. It also comes precariously close to the above mentioned elementary school. This cannot happen. The town does not want this pipeline, nor does the state. It was never meant to come into NH, and it is only here because MA, the end-user, didn’t want it in their state. Your agency needs to be regulated, so that conflicts of interest such as this one don’t continue to happen. The fact that your agency answers to no one and is mostly funded by the companies you approve is unacceptable. Get this atrocity out of my backyard, out of my water supply, out of my nature, and OUT OF MY STATE!

20160104-5474

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of _____) Docket No. CP16-21-000
Tennessee Gas Pipeline Company, L.L.C.)
Northeast Energy Direct Project)

MOTION TO INTERVENE AND PROTEST

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Town of Pelham, New Hampshire hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Town opposes the construction of a natural gas transmission pipeline and other facilities known as the Northeast Energy Direct project (“Project”) due to the adverse impacts that will be sustained by the Town, and therefore seeks party status to protest the proposed pipeline, and fully protect the Town’s interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. The Town of Pelham, NH is committed to enhancing and protecting the quality of life of all its residents, workers, and businesses, and is gravely concerned for those who live, work, and recreate near the proposed pipeline route and proposed compressor station located in Dracut, Massachusetts. There are substantial and real environmental, economic, and health threats to the Town of Pelham arising from the construction and operation of the pipeline within the municipality. It is unacceptable that we may be coerced into the industrialization of our landscape and the degradation of our scenic, historic, and cultural resources-for a Project not even intended to benefit us.
2. The proposed pipeline will run through 6.1 miles within the Town of Pelham and within the right of way of public streets and on other property owned by the Town. It will cross conservation lands, sensitive water protection areas, permanently protected open space, farmland, forestland, endangered species habitats, wetlands, vernal pools, public infrastructure, private homes and business, and historic resources in Pelham. The proposed location of the pipeline is intrusive, and threatens to disrupt the rural tranquility our residents enjoy. Additionally, construction will impede Town roadways and cause traffic and transportation disruptions along with related interruptions of public services. There are also approximately 417 homes within 1000 feet of the proposed pipeline, and these residents are deeply worried about the reduction in value of their homes, and the difficulties they may encounter in refinancing and in obtaining homeowner’s insurance for their properties. Faced also with the looming threat of the forcible taking of their property to facilitate the construction of the

Project, these citizens are uniquely harmed by the Project and the Town is obligated to defend them from encroachment by the pipeline. Moreover, the Project threatens public safety by placing fire and explosion hazards in close proximity to residential areas, and subjects the Town and its residents to an ongoing fear of such catastrophic incidents. The Town's emergency response systems will also be burdened by these pipeline failures with limited resources and personnel to respond to and combat a pipeline failure should one occur in our community.

3. The Project specifically contemplates building a compressor station in Dracut, Massachusetts which is located within one mile of the Town of Pelham. This compressor station would negatively affect the quality of life for all nearby Pelham residents. In addition to producing harmful toxic emissions and atmospheric pollution, the compressor station will burden our residents with constant noise pollution that will be unbearable and damaging during blowdowns. Communities should not have to endure the inherent risks associated with compressor stations.
4. The Town of Pelham is responsible for the protection of both its natural environment and the health and welfare of its residents, and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project.

Accordingly, The Town of Pelham has a substantial interest in the outcome of this proceeding. Moreover, given the Town's expertise and familiarity with the locale of the proposed pipeline and compressor station and the proposed alternative site locations, its participation in the above-captioned proceeding will significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual(s) should be included on the service list for this docket, and all communications should be sent to:

Brian McCarthy/Town Administrator
6 Village Green
Pelham, NH 03076
1-603-508-3074
bmccarthy@pelhamweb.com

III. CONCLUSION

WHEREFORE, the Town of Pelham, NH respectfully requests that it be permitted to intervene in this proceeding with full rights to participate in all further proceedings.

Respectfully submitted,
Brian McCarthy
Town Administrator
6 Village Green
Pelham, NH 03076
1-603-508-3074

Basis for Intervening:

Tenaska Marketing Ventures (“TMV”) is a partnership organized and existing under the laws of the State of Nebraska with its principal place of business located at 14302 FNB Parkway, Omaha, NE 68154. TMV is engaged in the marketing of natural gas in the United States and holds transportation capacity on numerous interstate pipelines. As such, TMV has a substantial interest in the outcome of this proceeding. No other party can adequately represent TMV’s interest in this matter. Thus, granting this motion to intervene would be in the public interest.

TMV requests that its intervention be granted with all rights associated with that status.

Basis for Intervening:

As a citizen of the Commonwealth, I would like to intervene on this docket to say that we do not need more natural gas pipelines. Kinder Morgan’s Northeast Energy Direct pipeline that is being proposed will keep us on a path of using more fossil fuels to get our energy which we need to stop doing in order to decrease the catastrophic effects of climate change. We need to transition to clean energy moving forward and not build new gas pipelines that have been shown to leak and thereby polluting our air and water in addition to the emissions created from producing energy from natural gas.

Please do not approve this pipeline for the sake of our planet and future generations!!

Individual	dave5star@yahoo.com	

Basis for Intervening:

There are four reasons why I am filing this document:

1. I am a property owner in Pelham NH at 71 Dutton Road, Map/Parcel 30-11-100 which is in the path of the proposed pipeline as well as a proposed expansion of the existing power line easement (<http://www.transmission-nu.com/residential/projects/merrimack/default.asp>). Both projects are scheduled to be built at roughly the same time and both directly affect my property

2. The proposed path passes within feet of a Prime wetland on our property, defined in New Hampshire law in RSA 482-A 15 (<http://www.gencourt.state.nh.us/rsa/html/l/482-A/482-A-15.htm>) and the construction processes of two different, uncoordinated projects has the potential of inflicting immediate and long range damage to this vital wildlife resource.

3. The easement for the power lines to traverse our land was granted in the 1920’s for \$1. Despite a four fold

expansion in the size of the lines since it was first used, not a dime more has been paid since then for use of our land. Now the NED line proposes to use the same space for its gas pipeline and/or construction of that pipeline. I have seen nothing in any of the filings addressing the right of one utility to “co-locate” its construction within the easement of another utility. The granting of one easement over 70 years ago should not automatically give the right to another company to co-locate. The multiplier effects of such overlapping of projects on the land, the wildlife-such as Blanding’s turtle- and the flora-including endangered flora found on the site such as the birdsfoot violet need to be addressed. At the very least, the commission should require NED to coordinate construction with the power lines to mitigate the effects. A delay in these proceedings needs to be imposed to allow for this coordination.

4. Because of the peculiar footprint of our land and the power line easement on our land coupled with the proposed path of NED, we will suffer significant financial loss both immediately and permanently. We have 13 acres and there are at least two building lots available on the class 6 road now known as Briarwood Drive (formerly Old Lawrence Road). While Selectboard approval is needed, the closeness of that land to Dutton Road makes that approval likely. NED using the same path makes that approval far less likely and certainly delays any possible approval in the short term. The value of two unimproved building lots in Pelham is approximately \$75,000 each. The financial impact is significant.

Basis for Intervening:

We are seeking intervener status in order to access all relevant information as we decide to relocate from our current home in Sunderland, Massachusetts. My wife and I are now retired and looking to move to a more suitable home that meets our current and future needs. We selected a new development in Whately. Because of the easy access to Route 91, a 50 acre staging area is in the NED proposal within one mile of the Pine Plains subdivision. That presents problems with significant truck/equipment activity and immediate storage of piping, fencing and machinery that we must thoroughly evaluate.

20160104-5486

MOTION TO INTERVENE

In regard to Tennessee Gas Pipeline’s NH proposal
Docket No. CP16-21-000

Myra Emmons
8 Adams Hill Rd
Greenville, NH 03048
603-291-1251

I am filing this motion to intervene for a number of reasons, including:

- risk to long-term health impacts from chemicals - known carcinogens, neurotoxins and endocrine disruptors;
- greatly increased risk of pipeline rupture, fire or explosion due to the high pressure at which the pipelines are planned to run once the expansion is complete;
- risk to extensive damage from said fires or explosions due to the inability of Greenville’s communi-

ty's emergency response team to adequately address the situation

- risk of decreased property value as evidenced in other areas in the state where pipeline proposals have rendered properties “unsellable” by real estate professionals.
- proximity of my property to the proposed compressor station, with its attendant noise and health hazards
- lack of real need in our area, and the ‘overkill’ aspect of the project’s size
- the unnecessary taking of property against the will of the property owners

With the utmost sincerity and in hope that you will actually listen to those of us who will be ruined by this travesty of a project,

Myra Emmons
Greenville, NH

Gilmartinh@gmail.com

INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact us. We enjoy our right to a quiet neighborhood for our children free from the risk of a high volume gas pipeline that would not even directly improve our quality of life nor our community. The construction would destroy our neighborhood buffer from a highway and this path has been chosen purely for the ease in which to take land when there is a power line right of way up the street. This project is to benefit a private company that would be using our land, privacy and right to peace and safety for its own advantage. We also have a beautiful piece of land and waterbody that would be adversely affected as well as many wetlands that are protected.

Individual crw.subscriptions@gmail.com

Basis for Intervening:

My husband and I are impacted property owners (abutters), Parcel 005-052-34 in Londonderry NH to the proposed Kinder Morgan Pipeline. Kinder Morgan has been very careful to not answer our questions about exactly where the pipeline will be located. Yet, they have talked to us about the pipeline coming west to east and right angling southerly at our property. They suggest that they must traverse the existing EverSource ROW to the easterly side of the ROW. Because of installation of the EverSource 345 transmission line, close to the easterly edge of their ROW, KM indicated that there may not be room within the EverSource ROW to install the pipeline. This suggests to us that the pipeline may be on our property, especially since they have sent us a booklet describing what we can and cannot do or plant on top of the pipeline.

Construction of the Pipeline would bring additional hazards to our property and surrounding area, including but not limited to:

- risk of pipeline rupture, fire, explosion and personal harm/death due to being in the incineration zone
- risk to our well water supply from bedrock blasting and drilling during construction as well as post construction due to potential chemical leakage into the surrounding soil.
- health risks due to gas emissions

- significant decreased property value (KM has told us that the only time property values are impacted is when tree line is removed - this will be the case with us, with full view of power lines.)
- We are electric ratepayers who, if Kinder Morgan secures our electric utility as a customer, expect to see an increase in our electric utility bill relating to NED
- concern that the pipeline will pass alongside two soccer fields in Londonderry, putting children and families at heightened risk.

My husband and I are retired and on a fixed income and had planned to retire to a warmer climate at some point. If the pipeline is constructed, we will find it hard, if not impossible to sell our home and garner the pre-pipeline value of our home. Our financial well being will be significantly impacted if this project is allowed to move forward and make it financially difficult to relocate.

We respectfully request to intervene under CP16-21-000.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	speeddee@aol.com	

Basis for Intervening:

My name is Melissa Rickards and I am writing to intervene in the process of the pipeline proposed to come through my property. I live at 8 Tina Ave. in Pelham, NH and will be directly effected by the pipeline, as it is coming through my personal property of my home. I have lived in Pelham my entire life and was so excited to be able to raise my own children here as well. I have three children growing up in this home with my husband and I and the thought of this pipeline putting all of our health in danger is disturbing. Not only do I worry about leaks and explosions (knowing it would be instant death for my entire family!) but that I need to worry about air quality on a daily basis and water contamination to my well. We do not have town water and with the pipeline going through some of my 1 acre property, there is no way that our health will not be at risk. My husband owns his own HVAC company which is based out of our home. He is planning to build a garage to help expand his business...however this garage would go where the pipeline is proposed. With a pipeline in our yard, we have NO room to grow, expand, or renovate. Unacceptable for a growing

family to feel trapped in their own home, that we have worked hard to maintain and pay property taxes on. I would be losing a significant piece of land and would never feel safe again.

I thank you for your time and hope that you strongly consider the ramifications this pipeline has on our state and town, with absolutely no immediate benefit to us. We are just a cut-through. Sacrificing the safety of my family to be a cut-through property is not okay.

Sincerely,

Melissa L Rickards

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
---------------------	--------------------------------	----------------------------------

Individual	Jennc69@gmail.com	
------------	-------------------	--

Basis for Intervening:

My name is Jennifer Caron. I am a mother and a grandmother. I am a 25 year resident of Wendell Massachusetts. I want to intervene in this proceeding because I am opposed to the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding due to several factors, including, but not limited to, I choose many years ago to live in a region that contains many areas of protected land, as a supporter of several land trusts and conservation areas whose main goal is to protect these lands from industrial devastation and protect them for future generations, my investment of time and financial resources is threatened. I am deeply concerned about the threat the project poses to all public lands protected by Article 97 of the articles of Amendment to the Massachusetts constitution.

My interest as a neighbor and frequent visitor to the beautiful town of Northfield, slated to have a massive compressor station, that will release gas laced with carcinogenic substances and a very real threat for methane leaks and explosions.

My interest as a resident of the Millers River Watershed where blasting for the pipeline will take place. Travel through this area will also be greatly affected by construction.

I am also a National Grid ratepayer for electricity and may have a tariff imposed on my bill for the expenses of this private pipeline company's expansion plans, the benefits which are purely private and in no way are for the public good. The very real risks of which are great harm to the public and the air, land and water on which we rely for life itself. Our health, dependent on the health of the planet, would be compromised greatly by the expansion of this fossil fuel industry's project.

The NED pipeline has no place in our sustainable future.

Basis for Intervening:

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Shannon K Johnson

69 Lakeshore Drive

Averill Park, NY 12018

shannon.ferc@gmail.com

I currently reside with my wife as a full time resident of Burden Lake, NY at 69 Lakeshore Drive, Averill Park, NY.

I am stating my opposition to the NED pipeline and compressor station proposed for Clark’s Chapel Road in the Town of Nassau. The property at 69 Lakeshore Drive is within one mile of the proposed compressor station. The property is located on Burden Lake and is enjoyed by a large community of people. We rely on our well for drinking water.

I believe the emissions from this compressor station could endanger my health and the health of my family. Young children are particularly vulnerable to toxins released. My wife has limited lung capacity and would struggle with an increase in particulate matter and the toxins and odors emitted. I also have concerns regarding the blasting for this pipeline. It could impact the quality and output of our well. I am opposed to the potential noise and light pollution from the compressor station and fear the risk of explosion. I am also concerned about the economic consequences. This is a recreational residential area. Property on Burden Lake is now valuable. If a compressor station is placed within 2800 feet from the southern shore of this lake, property values would be drastically reduced. Residents forced to sell to safeguard their health would lose their life’s investment. Sadly, families who enjoyed this area would be forced to sell at a loss. The opportunity to own lake front property would then be out of reach.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Shannon K Johnson

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	britadempsey@yahoo.com	

Basis for Intervening:

I am a landowner in Holyoke, Massachusetts. I invested everything I have into moving to this community in 2013 for many reasons, including accessibility to local organic food and quiet natural recreational opportunities-- away from industrial development. In doing so, it was and remains my intent to live the remainder of my life in this community.

Construction of the NED pipeline would mean that the Nordic ski area I visit regularly (Notchview) will be within hearing and viewing range of the proposed 41,000 horsepower compressor station in Windsor. This compressor station would spew toxic chemical pollutants and light pollution in what is now "the darkest corner of New England". Notchview reservation (abutting the compressor station site property) holds astronomy and "stargazing" events among its many other nature-oriented programs which would be irrevocably harmed by the station. Recreating near the compressor would include risks to the health of me, my family and community from breathing pollutants and particulate matter.

The pipeline would cross the Westfield River, a designated federal "Wild and Scenic" river. Wet trenching during construction, pipeline coatings and other possible pollutant leaks affect the entire Hilltowns region, downstream from this crossing. This crossing is part of the headwaters that lead through Worthington, Huntington, Russell, Westfield and West Springfield among other communities on its way to the Connecticut River and is a host to already endangered coldwater fish communities and the predator and raptor species that rely on them as a food source.

Our region would feel the economic impacts of:

- regional health consequences of pollutants associated with the operation of the pipeline
- tariffs proposed to force regional ratepayers to cover the costs of the pipeline
- possible increases in energy costs that could result from export natural gas, forcing local markets to compete on a global scale

My ability to access fresh, local, organic produce will be compromised by the pipeline's destruction of a number of valley farms including Clarkdale Orchards.

For these reasons, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	kchase59@gmail.com	

Basis for Intervening:

I am a part-time resident in Northfield, MA and want to intervene in this proceeding to oppose the NED pipeline. I have a number of concerns regarding this project.

I live in close proximity (approximately one mile) to the proposed 41,000 HP turbine compressor station and am very concerned about the short and long-term health effects from the release of known carcinogens,

VOCs and other particulate matter into the surrounding environment.

My drinking water source is near the proposed compressor station and is at risk from construction and operation of said station. The proposed compressor station planned for Northfield is a "pigging station". Potential toxic chemical spills are very possible from this operation and ground water contamination likely. I am concerned about the potential health hazards that will be posed by vegetation management with undisclosed chemicals around the actual pipeline path.

I am an electric ratepayer who, if Kinder Morgan secures my electric company as a project customer, expects to see an increase on my bill relating to the NED cost recovery.

I am concerned with existing infrastructure destruction due to increased heavy equipment traffic, noise, air pollution and numerous disturbances during construction and subsequent operation of the compressor station.

I am concerned with the property value of my house and surrounding property being close to a compressor station.

20160104-5523

Submission Description: (doc-less) Motion to Intervene of Robert Dickerman under CP16-21-000.

Submission Date: 1/4/2016 4:48:15 PM Filed Date: 1/4/2016 4:48:15 PM

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	rld@dickermanelectronics.com	

Basis for Intervening:

I, Robert L. Dickerman, am a resident of Northfield, MA, where Kinder Morgan proposes to build a 41,000 HP compressor station. My home is about 1.5 miles from the proposed Northfield compressor site and about 1.0 mile from the proposed NED pipeline route.

Consequently, if the project were built, my family, my neighbors, and I would be guaranteed to be exposed to air pollution from the project due to the fact that 19,060,000 pounds of exhaust gases per day would be produced by the nearby compressor plant. These combustion gases would include 130 tons of carbon dioxide greenhouse gas per day, and 1180 pounds of formaldehyde per year, some of which we would be breathing.

We would also be breathing some part of the 144 tons of methane per year from blowdowns. Furthermore, much of the blowdown methane would be converted, in the presence of air and sunlight, into more formaldehyde.

The proposed compressor station is planned to be built uphill from my home, over what I believe is part of the watershed for my well. If the project were built, we might suffer degradation of flow rate, as well as pollution of our water, due to the severe disruption of the watershed during compressor station and pipeline construction activity. Our well's watershed would certainly be exposed to the settling of chemically and radioactively contaminated exhaust gas particulates during routine compressor plant operation. The watershed might also be exposed to accidental liquid spills of lubricants, solvents, and pigging waste from the compressor station.

The proposed compressor station would also produce a significant amount of heat pollution - a direct heating of the local environment. Essentially all of the chemical energy released from the gas would be ultimately be dissipated as heat energy - thermodynamically, the station would resemble an 85 MW space heater. At a gas turbine efficiency of 36%, the majority of the heat power, about 54 MW, would be released in Northfield in the 19,060,000 pounds of 940 o F exhaust gases per day mentioned above. Another 5 MW

Individual mikemadden464@gmail.com

Basis for Intervening:

I oppose the NED project as the owner of Templeshire Farm and consider myself a stakeholder in this matter for the following reasons:

1. Business Disruption: As a supplier of organic hay to the Temple Mountain Beef Company, a grass fed cattle company, my customer's business could be dramatically altered if not eliminated altogether. Temple Mountain Beef is an abutting property to the proposed New Ipswich, NH compressor station. Emissions from the regular blow downs that will occur at that station may result in soil contamination and pose a danger to the livestock.
2. Health and Safety: The proposed New Ipswich, NH compressor station location becomes a safety concern for the Temple, NH grade school since the school is sited within the incineration zone of the station. The school also serves as the town emergency shelter.
3. Electric Ratepayer: As an electric ratepayer I am concerned that Kinder Morgan may attempt to recover costs from the ratepayers via tariffs. Ratepayers should not be responsible for financing and export business which will ultimately lead to higher energy costs as the export demand increases.
4. Land Values & Rights: The reduction in property values begins a cascading negative effect in the regional towns which are dependent upon property taxes as a primary source of income. Additionally the rights of land owners are being abused if the eminent domain statutes are used to support a commercial export business.

Basis for Intervening:

I am opposed to the pipeline bringing gas to New England and Massachusetts. I am concerned about the water and air quality issues in other states and do not want to take any chances.

I do not want my taxes to go to this project or to any other pipeline infrastructure that adds carbon/ carbon dioxide into the atmosphere. I prefer solar energy, hydro energy and wind energy.

I am also opposed to spending billions of dollars for only one company's benefit.

I am also concerned that FERC is taking only 6 months to complete it's assessment instead of the 1 year they had originally planned for assessing the environmental impact of 100's of miles of pipe and work stations and 9 compressor stations. We all need more time to assess the impact of these structures. So I am opposed to the pipeline for these reasons.

Basis for Intervening:

As an Ashfield MA resident for over 30 years, I want to intervene in this proceeding to OPPOSE the NED Pipeline. I have an an interest which is directly affected by the outcome of the proceedings because I am a resident who lives near and travels through the blast radius, so I would be at physical risk.

I am a member of an impacted community that has serious concerns about various impacts to the local economy, the regional environment, and the health and safety of residents. In addition, I am an electric rate payer who, if Kinder-Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery. I don't see in any of the documents offered that any of the local communities will actually benefit in any way but I can see that all communities will be dramatically impacted in many negative ways--financial (our bills), environment (the land, wildlife, water supplies--including Boston's supply).

There is no evidence of any local benefit; further, our local energy consumption is actually going slightly down and not up--due to alternative fuel programs, conservation measures, and increased efficiency.

Finally, the current infrastructures (plants, equipment, pipelines, etc) seem to need greater attention and upgrading and repairs. Better to take care of current structures than simply building yet another pipeline which travels through, without local benefit, and puts the entire Commonwealth at risk without careful consideration of facts, local communities, and the opportunities offered through better management of current facilities and consumer education for conservation.

I expect more out of my well-educated and conservation-conscious government. The last thing we need is a multi-billion dollar construction pipeline. Let's put a fraction of that cost back into current systems and alternative systems...and consumer education. That's something I can get behind.

20160104-5530

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C

Docket No. CP16-21-000

MOTION TO INTERVENE AND OPPOSITION

OF BRIAN BRAGA of DRACUT, MASSACHUSETTS

Pursuant to 18 C.F.R 385.212 and 18 C.F.R 385.214, I Brian Braga, file a motion to intervene in this proceeding.

I'm seeking to intervene in opposition to the Northeast Energy Direct Project, proposed by Tennessee Gas Pipeline Company, LLC, a subsidiary of Kinder Morgan Inc.

I am further intervening because of Kinder Morgan has failed to notify me and others who are within the proximity of those who should have received notice of the proposal from Kinder Morgan.

Grounds to Intervene

I am seeking to intervene because I have two children ages 8 and 4. My wife and I reside at 63 Dadak Dr, Dracut, Massachusetts. I am directly impacted by the proposed compressor station and pipeline.

Reasons for Intervening

I am intervening because the proposed location of the compressor station and pipeline will have a direct impact on the health and safety of my family, my neighbors families and the community as a whole. It will also harm animal life, crop and soil, waterways, along with increased noise pollution and the quality of the air.

My family and I are personally impacted by the 24k hp compressor station that's being proposed to be built within 1400 feet of my home, and my childrens schools. Within my neighborhood there are more than 20 children under the age of 10. Not including other surrounding developments in similarly situated with minor children.

Living near the compressor station will bring risks to the health of me, my family and my surrounding neighbors from breathing pollutants and particulate matter. This would place my property within the "dift zone" of toxic polutants that are emitted from such compressor stations during the "blow-downs" cycles which can last for hours and cause as but not limited to: chronic dizziness, headaches, nosebleed, sore throats and an elevated risk of certain cancers. This could be the next "Civil Action", Residents of Woburn, Massachusetts sued Beatrice Foods, the operator of a tannery, and Cryovac, a subsidiary of W.R Grace and Company, and UniFirst, a laundry service, for causing a cancer cluster and other negative effects on health by contaminating groundwater.

My neighbors and I are being told that our neighborhood is called "Ground Zero" of the proposed compressor station and within the "incineration corridor" if there an explosion. The Town of Dracut isn't equipped for a gas pipeline emergency with the amount of staff serving on the fire and police departments.

I am further intervening do to the insufficient research and studies being conducted concerning the impacts of the pipeline and compressor stations on the well being of the enviroment and human health.

Massachusetts Attorney General Maura Healey, had a commissioned study showing that there is not a need to expand the gas pipeline.

For these reasons, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

Thank you,

Brian Braga

Basis for Intervening:

I live in Cummington, Massachusetts and am building on land up the road in Plainfield, Massachusetts. The property values of my present home and my future home will be diminished should the proposed pipeline be built. The quiet Hilltowns of Western Mass. are appealing, not for their bustling industry and retail outlets, but for their natural ecosystems, touched only lightly by human enterprise. The presence of a large conduit for petroleum changes the appeal of living in this area. I suspect this is already making my house difficult to sell.

The watershed of the Westfield River's East Branch, a federally-designated "Wild and Scenic River", provides for Plainfield, Cummington, Chesterfield, and all the communities downriver. Any breach in the containment of natural gas would poison the water supplies for these communities. Our current water systems are basic ones, given the availability of clean water. Should the proposed pipeline get built, any trouble would sabotage a well-functioning water system. There may be no "fix" for such a problem. We will have lost something precious.

Western Massachusetts is a gem: rolling hills, active farms, vibrant woodlands and towns imbued with stewardship of the land and neighborliness. We still have darkness when the sun goes down, and the night sky puts on a show. This is the darkest place in the state, and has an active group of amateur astronomers. If the compressor station goes in at Windsor, the night sky will be lost.

This pipeline is being proposed at a point where the options for power generation are proliferating. We want to get behind that enterprise, rather than being party to the highly questionable practice of hydraulic fracturing. Even if this requires sacrifice in the short-term, it is well worth doing to preserve our world.

It is very disturbing to me the existing state land protections may be abrogated. Do these mean nothing? As a society, we must stand by the promises we have made to one another and to the land.

Basis for Intervening:

MOTION TO INTERVENE_RStevens

Ruth Stevens

ruthstevens@charter.net

This is a motion to intervene in the proposed Kinder Morgan pipeline as I am opposed to it. Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The alleged benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued.

The construction of this pipeline would be hazardous to the environment and to our communities. Water contamination, methane leaks, explosions, and other hazards from pipeline ruptures are detrimental to our local natural resources, residential developments, and the overall health of our communities. There are mul-

multiple documented examples of the dangers of this system occurring all over the country. Even new pipelines are not immune to costly complications. The proposed path of this new line runs through or dangerously close to some of the east coast's best preserved natural treasures. Many protected areas that support endangered plants and animals will be put at risk.

This pipeline is said to provide needed energy for our area, but the continued use of environmentally UN-friendly fuels contributes to climate change and its related hazards of extreme and unpredictable weather. This in turn could lead to more leaks and contaminations. If instead we invested in clean energy solutions such as solar and wind farms we could provide cheap safe fuel to the same number of people. In fact, solar panels and wind mills are going up all over. We will have less need for natural gas in the very near future. Technology is changing rapidly and the environmental impacts of these unnecessary pollutants have to stop. We don't need another pipeline. We can instead invest in our country's distant future by ensuring a clean and safe environment for our grandchildren and their descendants to inhabit.

Basis for Intervening:

I live in Somerville, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED. I am also a gas ratepayer whose gas company has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts of the gas company). I am also a human being threatened by climate change which is caused by burning fossil fuels. The NED pipeline will increase fossil fuel consumption, exacerbate climate change, and threaten my personal well being as well as that of my children and all human beings.

20160105-0006

Kimberly Bose, Secretary
FERC

Washington, DC 20426

STOP THE NED PIPELINE!!

Protect NH land from Eminent Domain!

I oppose the Kinder Morgan Northeast Energy Direct (NED) EXPORT pipeline. The pipelines, and compressor station will scar the NH landscape and put our water, wildlife, forests, agricultural lands and rural character at risk. These include health and safety risks from emissions, industrialization, pollution and the devastating effects of fire and explosions. Greed, not need is fueling this project. Say NO to this private company that will TAKE OUR LANDS with NO BENEFIT TO US.

Attention: Federal Energy Regulatory Commission

Reference: Docket1CP16-21-000

Dear Federal Energy Regulatory Commission:

My name is Heather Donald and I am a resident of Dracut Massachusetts. For the past 6 years I'e lived in a development called Farm Gate Estates, with my husband and 2 daughters. There is an existing pipeline abutting our property. Living with the pipeline has not been an issue, but I'e learned about plans for a proposed pipeline expansion that may impact my property. I'm struggling to understand why I may lose property and/or trees to accommodate a pipeline when there is ongoing debate about the need for such an expansion. I've also learned about plans for a 23,000 HP compressor station about a mile away, along with at least one metering station on the edge of our development. Project information received from Kinder Morgan seems intended to placate while telling us the project is inevitable. The local KM information session was maddening at best, and misleading at worst.

Neighbors and concerned citizens from other parts of New England have helped fill in some of the information gaps, and I'm increasingly concerned. This compressor station will be located in the middle of a highly populated area, generating air and noise pollution. This is unacceptable, and I am absolutely shocked that FERC would consider approving this project in an area populated by families and farmland. Unfortunately, I'm also told that FERC 'always'pproves applications for such projects, and that you always put the profits of energy companies ahead of the concerns of citizens or the environment. I sincerely hope this isn't the case.

You should also know that we live near a quarry with constant blasting. I'm unaware of any studies measuring the power of these blasts, but can tell you that most of the homes in this development have cracked foundations, very likely from the blasting. I believe further study is needed to assess the safety of the pipelines and stations given the blasting from Brox Industries.

We built our home knowing we had a natural gas pipeline in our back yard (i.e.the incineration zone). There is also an elementary school less than a mile from our home. If you approve this project it will create a massive health and safety problem. Property values will be impacted, and working families will either have their health impacted by staying, or lose valuable income if they choose to move away. Additional study is required.

Please consider alternative plans, and please do not approve this pipeline project.

Sincerely,

Heather Donald

11Barn Road

20160105-0018

FEDERAL ENERGY REGULATORY COMMISSION
WASHINGTON, DC 20426

January 4, 2016

OFFICE OF THE CHAIRMAN

Governor Margaret Wood Hassan

107 North Main Street

Room 208

Concord, NH 03301

Dear Governor Hassan:

Thank you for your December 4, 2015, letter regarding Tennessee Gas Company's proposed Northeast Energy Direct Project (Docket No. CP16-21-000).

Commission staffs independent environmental analysis will identify and address the potential impacts resulting from construction and operation of the project. This will include an analysis of alternative pipeline route variations and a full consideration of environmental, public health, and safety issues raised by affected communities. The forthcoming environmental impact statement (EIS) will not be issued without the Commission having all of the information necessary to determine the potential impacts associated with constructing and operating the project.

The draft EIS will be issued for public review and will be sent to the Commission's environmental mailing list for this project. When the draft EIS is issued, comments may be submitted to the Commission either in writing or verbally at public comment meetings that will be held in the project area. After consideration of comments, a final EIS will be issued.

The Commission will consider the findings of the final EIS, together with the nonenvironmental issues, before making its decision on whether this proposal would be granted a Certificate of Public Convenience and Necessity under the Natural Gas Act.

As in any Commission matter, please be assured that we strive to make our review of proposals both accessible and transparent to the public. If I can be of any further assistance in this or any other Commission matter, please let me know.

Sincerely,
Norman C. Bay
Chairman

20160105-0020

Friday, December 18, 2015

Mr. Norman C. Bay, Chairman
Federal Energy Regulatory Commission
888 First Street, N.E.
Washington, D.C. 20426

Northeast Energy Direct Project.

Dear Chairman Bay:

Interprint, Inc. urges your support of the Kinder Morgan/Tennessee Gas Pipeline Company Northeast Energy Direct Project.

Massachusetts electricity rates are not competitive and increasingly volatile. This is a burden our competitors do not face in their regions; therefore it's one that we must overcome through other means if we are to compete.

We recently announced a \$2.5 million investment in solar energy that's expected provide 20% of our annual electricity supply. We are spending another \$150 thousand converting our factory and office lighting to LED. These measures however, while significant for a company our size, will provide little security if our region's electricity supply fails to meet demand.

Chairman Bay, the increased supply of natural gas the Northeast Energy Direct Project delivers will ensure electrical generation will meet demand, stabilize energy markets, and increase Interprint's competitiveness. Please support this project.

Best regards,

Peter Stasiowski
Director of Communications

Interprint, Inc
101 Central Berkshire Boulevard
Pittsfield, MA 01201

**Congress of the United States
House of Representatives
Washington, DC 20515-3220
January 4, 2016**

The Honorable Norman C. Bay
Chairman
Federal Energy Regulatory Commission
888 First Street, N.E.
Washington, D.C. 20426

Dear Chairman Bay:

I write to request that the Federal Energy Regulatory Commission (FERC) extend the deadline to file a Motion to Intervene on the proposed Northeast Energy Direct Pipeline, Docket Number CP16-21400, due to recent closure of FERC's E-filing system. It is my understanding that FERC's E-filing system was inaccessible for a number of days at the end of 2015 as a result of the recent federal holidays.

As you are aware, becoming an intervenor grants interested parties additional rights. Intervenor receive filings and PERC documents as well as have the ability to appeal the final ruling. I strongly believe that robust public participation in this project is critical. Intervention is an important part of enabling interested parties to monitor this proceeding more closely.

This project will impact a number of communities in New York's 20th Congressional District. I am aware of a number of my constituents that are interested in filing a Motion to Intervene and hope they will be given additional time to do so.

I appreciate that FERC has prioritized promoting greater public participation and transparency. In light of the reduced opportunity to access FERC's E-filing system to submit a Motion to Intervene, I urge you to extend the deadline to file for intervenor status beyond January 6, 2016. If the Commission is unwilling or unable to extend this deadline, I urge you to look favorably upon late filings received in the coming weeks.

Thank you for your consideration.

Sincerely,

Paul D. Tonko
Member of Congress

20160105-0022

**The Commonwealth of Massachusetts
MASSACHUSETTS SENATE
Office of the President**

Senator Stan Rosenberg
President

December 30, 2015

The Honorable Norman C. Bay
Chairman
Federal Energy Regulatory Commission

888 First Street, NE
Washington, DC 20426

Re: Tennessee Gas Pipeline Company, LLC, Docket NDL CP16-21-000, PF 14-22-000
Northeast Energy Direct Project

Dear Chairman Bay:

Thank you again for meeting with me in Washington, DC on September 30, 2015 regarding the application of Tennessee Gas Pipeline Company, LLC to construct and operate the proposed Inland Morgan Northeast Direct Project (NED) (Docket Nos. CP16-21-000, PF14-22-000). I very much appreciated the opportunity to speak with both you and Commissioner Cheryl A. LaFleur about the concerns of many of my constituents and communities regarding this project which, if approved, will have a substantial impact in Massachusetts and New England for decades to come.

As the Federal Energy Regulatory Commission (FERC) initiates the review process, I remain concerned about the disconnect between the regulatory process that will be employed by FERC in analyzing the NED application and the clean energy and climate goals and emission reduction targets established by the Massachusetts Global Warming Solutions Act (GWSA). I understand that the FERC review process is governed by the agency's statutory and regulatory requirements and that the current paradigm makes it difficult for FERC to consider a proposal within the context of what we need to do as a country to address climate change and to develop a green energy future.

In 2008, the Massachusetts Legislature established the most aggressive set of measures in the United States to address climate change. The GWSA established a statewide limit on greenhouse gas (GHG) emissions of between 10 percent and 25 percent below 1990 levels by 2020 and 80 percent below 1990 GHG emission levels by 2050. The Massachusetts Clean Energy and Climate Plan for 2020 initiated mitigation strategies across multiple sectors to achieve that limit.

The strategy for meeting most of the emission reduction targets in the energy generation and distribution sectors employs a combination of importing clean power from outside the region, the retirement of older coal fired plants and increasing renewable energy generation in New England. We are also a national leader in energy efficiency and demand-side management. While the Commonwealth has made considerable progress in meeting the GWSA goals, we remain mindful that more needs to be done.

As I mentioned in my prior letter to FERC, the Commonwealth of Massachusetts is in the process of shifting from a fossil fuel based energy framework to a new energy paradigm that is consistent with our established emission reduction targets and that reduces our dependence on fuels that have harmful emissions. As we transition to a cleaner energy future, we are actively considering legislation that will have a substantial impact on our ability to generate clean, renewable energy in Massachusetts and the New England region. The proposals currently under consideration focus on increasing the availability of solar, off-shore wind, hydro and new technology such as grid-scale battery storage to meet our future demand. And, although the New England region depends on natural gas to meet our current electric generation and heating needs, recent studies cast doubt on the assertion that New England must build more pipeline capacity to meet our current and future requirements.

I was encouraged by the comments of Commissioner LaFleur, who assured me that FERC does not ignore state policies and plans and is mindful of the need for the United States to transition to an energy future that increases the availability of clean and renewable energy. If approved as filed, the NED project flies in the face of the Commonwealth's emission reduction goals. The NED project could be in service for many decades at a significant long-term cost to ratepayers and could make it substantially more difficult and costly for Massachusetts to transition to a clean energy future. As FERC balances the public benefits against the potential adverse consequences of the any proposed project, the interests of the citizens of Massachusetts must be paramount. FERC's regulatory review process must be harmonized with the public interest in meeting our statutory clean energy goals.

Therefore, I strongly suggest that FERC consider the Commonwealth's legal framework as a threshold

determination for need prior to initiating any environmental review of the NED project. And, pursuant to the public interest standard, FERC should consider the interest of Massachusetts'itizens in establishing an energy sector based substantially on reduced emissions and clean and renewable energy as an initial test for determining whether any proposed project is in the public interest.

We are at a pivotal moment in time as we work to change the direction of our energy future and meeting those goals will require unprecedented cooperation and coordination. Again, thank you for meeting with me in September to discuss these important issues and I look forward to further dialogue and input as the pmcess moves forward.

Sincerely,

Stan Rosenberg
President of the Senate
Hampshire, Franklin and Worcester District

20160105-5000

James Reilly, Chicopee, MA.

I support the Kinder Morgan Pipeline. It is a benefit for the people and a need for New England.

20160105-5002

Zachary Livingston, BOSTON, MA.

I am a Massachusetts citizen with a small business in Shelburne Falls, a town immediately affected by the proposed Tennessee Pipeline, and I am against the proposition. At some point people have to look beyond saving a few bucks and look into their conscience. I could not sleep at night knowing I sat idling while another form of energy acquired from questionable methods was the source of my savings. It sounds hypo-critical because I have a car and depend on oil, gas, propane, etc. But opening another door to an energy that is the result of stripping resources rather than harnessing them, creates an even steeper decline on an already slippery slope.

20160105-5003

Basis for Intervening:

I am an electric ratepayer in Massachusetts. This project may impacts me personally (but not limited to) as follows:

- 1) Electric ratepayers being required to fund a privately-owned company's infrastructure project.
- 2) The project may reduce the value of my property including the my solar panels by reduction directly or indirectly the reimbursement for generation of electricity.

20160105-5004

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Northeast Direct Project of

**MOTION TO INTERVENE
OF MARK A. BURTON AND LISA K. P. BURTON**

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”) promulgated at 18 C.F.R. § 382.212 and § 385.214, Mark A. Burton and Lisa K. P. Burton (the Burtons) respectfully move to intervene in the above-captioned proceeding.

Basis and Grounds for Intervention

The Burtons own two parcels of land in Ashfield Massachusetts, described in the ‘Franklin County Registry of Deeds as Lot A PB91 P48 and Lot B PB91 P48, that will be directly impacted by the above captioned construction project. Lot A is the Burtons’ homestead, and both Lots contain maintained forest lands managed by the Burtons under a Massachusetts Chapter 61 forestry plan. Both parcels have frontage on Beldingville Road.

The southern portions of these parcels are separated by Bear River Road, an unmaintained Ashfield town road that is historic, dating back to 1754 (see excerpt from ASHFIELD HISTORIC PROPERTIES WITHIN THE PROPOSED NED PIPELINE ROUTE by Nancy Gray Garvin, Ashfield Historical Society, below). This road is shown on tax maps and surveys as a “cart path,” which likely refers to its original use, a transportation way for horse- or ox-drawn wagons. The road is formerly a dirt road, but is now hard packed soil with small weeds growing on it in sunny spots and bare soil in shady areas. It is barely a car width wide with mature forest on either side, although the exact survey dimensions of the road could be wider. This ancient road is used by fishermen, hunters, and other nature lovers as foot access to the Burtons’ acreage, which is open to the public.

Tennessee Gas Pipeline Company (TGP) proposes to both cross this road perpendicularly with its right of way (ROW), and also use the road for access to the ROW during and after construction, as it plans to locate a pigging station on or near where the ROW crosses Bear River Road. (The Project’s proposed route and siting of appurtenant facilities continue to shift; the impacts on our land and quality of life mentioned herein reflect our understanding of TGP’s current plans.) Significant tree cutting on either side of Bear River Road will be required, and considering how narrow it is, TGP will need to take additional land from the Burtons for the construction of the access road, as well as the ROW.

Additionally, Lot B is bordered on the northwest and to the north by approximately 2,860 feet of frontage on Bear River, a tributary to the Deerfield River and a prime coldwater headwater that serves as a significant spawning ground for the Eastern Brook Trout. A first order tributary joins the Bear River just a few dozen feet west of the western boundary of Lot B. In November, 2015, Mark Burton witnessed brook trout spawning in this tributary. On several occasions in the past year, he has observed brook trout under three inches in size in this tributary. Both this first order tributary and the Bear River will be crossed and severely disturbed by this project.

The Burtons will be impacted in several ways by this project, and therefore need a means to intervene. First, the gross alterations to Bear River Road, a mere 300 feet from their home and the close proximity of the ROW and pigging station to their home, will irrevocably damage the quality of life the Burtons now enjoy and the quality of life offuture Burton generations or future owners. Second, the economic damage to the value of the homestead will be material. Third, the estimated acreage of deforestation on the two parcels owned by the Burtons is a minimum of five and quite possibly as high as 25 acres, resulting in both economic damage but more importantly, damage and disruption to the goals of the forestry plan, which include a long range vision for the enjoyment of future generations. Fourth, it is unknown how the construction of the infrastructure, especially the pigging station, may impact groundwater quality on which the Burtons rely for clean, safe drinking water. Fifth, as a fly fisherman, member of Trout Unlimited, and board member of the Greater Boston Chapter of Trout Unlimited, Mark Burton is a conservationist dedicated to conserving, protecting, and restoring coldwater resources. The land owned by the Burtons and land across the region are

abundant as coldwater resources, but are in decline because of the cumulative impact of previous incremental development; therefore, the Burtons have a vested, recognizable interest in protecting their small corner of the available coldwater resources.

Excerpt from ASHFIELD HISTORIC PROPERTIES WITHIN THE PROPOSED NED PIPELINE ROUTE by Nancy Gray Garvin, Ashfield Historical Society:

Lot #56, First Division. - Mass. Historical Commission Inventory #B-96 and B-803. Richard Ellis of Easton, one of Huntstown 's first settlers, purchased this Lot in 1739 and built a log cabin, partly underground in the side of the hill. He later built a frame house nearer the corner of the lot. In 1760, after his wife, Jane, had died, Richard moved to Colrain. He sold this lot to Samuel Belding of Deerfield in 1761. Samuel was elected the first Town Clerk, when Huntstown was incorporated as the Town of Ashfield in June 1765. This property was owned by his son, John Belding, who built the house, of which the cellar hole is still there. John's son, Hiram Belding was next to own this property. Hiram Belding and his wife, Mary Wilson, moved to Otisco, Ionia County, Michigan ca. 1847 with five of their children. The area where they settled became the village of Belding, Michigan in 1871. Their sons had founded Belding Brothers and Co., with mills to manufacture silk thread and cloth located in Belding, as well as in Northampton, Massachusetts; Rockville, Connecticut; San Francisco, California; and Montreal, Canada. Their son, Milo M Belding, donated the Belding Memorial Library in 1914 to the Town of Ashfield in their memory. His son, Milo M Belding, Jr. donated the Reservoir Lot and the Pond Lot, what is now Ashfield Lake and the Belding Memorial Park, to the Town in 1928 in memory of his parents. The original Samuel Belding cellar hole can still be seen south of Beldingville Road. The original Ellis cemetery, where Richard Ellis, his wife, Jane, and some of his descendants were buried, is located on the east side of this property, which extends north to the Bear River. The original 1754 road passes through this property. It has never been discontinued, although the bridge across the Bear River washed out in the 1938 hurricane and was never rebuilt. The proposed pipeline route passes across this road. The part of this property through which the pipeline is proposed to go is now owned by Mark Burton of 365 Beldingville Road. Work on the pipeline could affect the historic Bear River, which marks the northern boundary of the Ellis/Belding property. Vibrations from drilling could damage the historic stones in the historic Ellis Cemetery.

Earliest Mill Sites - Mass. Historical Commission Inventory #B-92 and #B-93. Just north of the Bear River are the sites of the original Proprietors' saw mill and the second grist/corn mill. The stone foundations of both mills and the outline of the mill pond can still be seen. The property on which these sites are located, on North Bear River Road is now owned by Peter Corens of 607 Beldingville Road. The saw mill was begun in April 1753 and the "floom" to power the saw mill was built in 1754. The first owners of the saw mill were Chileab Smith, one of the first settlers, Eliphalet Cary of Bridgewater, and Daniel Alden, Jr. and Barnabas Alden, of Stafford, Conn. In 1762 Chileab Smith built the grist mill next to the saw mill and powered by the same mill pond west of these mills. The Ashfield Historical Commission placed signs there in the 1980s marking the location of these two mills. The original proposed route of the NED pipeline was shown to pass north of the Bear River, thus affecting and possibly destroying these historic mill sites.

As an impacted landowner, the Burtons have a direct and substantial interest in the outcome of this proceeding.

Wherefore, the Burtons request that the Commission accept this filing and grant their motion to intervene.

Service for the proceeding should be sent via first class mail to:

Mark and Lisa Burton
365 Beldingville Road
Shelburne Falls, MA 01370

As a courtesy electronic copies of all filings should be sent by Email to: maburtonl@aol.com

Respectfully submitted,

Mark A. and Lisa K. Burton

Dated: January 4, 2016

EXECUTED BY BOTH OF THE UNDERSIGNED ON JANUARY 4,2016, AND TRANSMITIED TO FERC AND TO THE APPLICANT VIA EMAIL ON THIS DATE.

BarryVille Homeowner’s Association belliveau.john@gmail.com

Basis for Intervening:

I’m filing for intervenor status on behalf of myself and my neighborhood’s Homeowner’s Association (Barryville HOA). Our interests include but aren’t limited to our property values, the health and safety of our resident families, the rural character of the area, our presently abundant supply of clean potable water and ability to grow our own food, accessibility of entrance, egress, and emergency services to our neighborhood, our utility rates, our rights to quiet enjoyment, local tourism and agriculture, and the preservation of our land which is threatened by eminent domain. The presence of a planned compressor station within 1/2 mile also threatens these interests. The public record shows that toxic emissions, noise and light pollution, air and water contamination from these compressor stations pose a material threat and safety concern of those living nearby. Additionally, it is readily apparent and documented that Kinder Morgan’s modus operandi is to say whatever is necessary to get their pipelines approved and installed as quickly as possible while cutting corners on construction and maintenance, choosing to pay the fines later IF they are caught. Kinder Morgan, born from Enron; continues to show disregard and disrespect for the people and natural resources of our region. The benefits they claim for this project do not serve the public and are not worth the risks and impacts to our communities. The massive overbuild embodied in this proposal seems likely to lead to higher energy costs for New Hampshire ratepayers due to excess capacity going unused, or due to the large amounts of this gas would be shipped overseas, not benefiting the public whatsoever. Since most of the capacity is being planned for overseas markets, we run the substantial risk of higher domestic energy prices.

20160105-5007

Submission Description: (doc-less) Motion to Intervene of Richard Dunn under CP16-21-000.

Submission Date: 1/4/2016 10:02:20 PM Filed Date: 1/5/2016 8:30:00 AM

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual MrDunn2016@gmail.com

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”).

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

As a Contingent Property Owner: I am an estate beneficiary of the owner of the property located at 529 Main Street, West Townsend, Massachusetts. The proposed pipeline will cut directly across this property and includes plans to use several acres of the property for construction, storage, and a staging area. This acreage produces three crops of hay per year. The proposed removal of all top-soil will not only render these fields unable to produce hay, but the Company plans to construct and operate a work-site and Valve Station in the field. The extremely close proximity to proposed construction would make the property unlivable during construction. One of the specific functions of these valve stations is to release gas into the air. This will negatively impact upon the health of any resident at the property and reduce the value of the land. The release of dangerous gases, the lights, sounds, and smells after construction will greatly diminish the usability and value of the property.

As a Consumer: My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from rate-payers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), the Company is proposing to build a pipeline to meet capacity requirements which do not exist and will never materialize and which will in all likelihood be used primarily to export liquid petroleum. This competing demand for our limited energy resources will likely drive the domestic cost of energy upward. This will be compounded by the likelihood that this massive proposed overbuild will result in unutilized capacity by New England utility companies which will pass the cost of this unused capacity to local rate payers.

As a Massachusetts property owner and taxpayer: I object to the proposed Pipeline because it will destroy land which has been set aside as a land trust and protected by Article 97 of the Articles of Amendment to the Massachusetts State Constitution. FERC does not have the authority to violate the Massachusetts Constitution nor does FERC have the power or authority to grant the Company the right to violate the Massachusetts Constitution. FERC should set aside the pipeline application by the Company until such time as the Massachusetts Legislature has voted to approve release of all impacted areas under land trust for use by Kinder Morgan.

As an ecologically conscientious citizen: The proposed pipeline will destroy protected wetlands, breeding grounds for endangered wildlife, and destroy vast acres of state parks. Many sections of the pipeline, including the valve station they want to build in my field, are in flood plain where there are deep floods of several feet and massive ice-dams which make any pipeline or valve station extremely susceptible to damage and ecological catastrophe.

WHEREFORE, for the foregoing reasons, I respectfully request that my Motion to Intervene be granted.

Respectfully submitted,

Richard Dunn

Individual jack.cavacco@gmail.com

Basis for Intervening:

My wife, Julia B. Cavacco, and I, John S. Cavacco III, have lived in our home at 123 North Hillside Rd., in South Deerfield, Massachusetts for over 30 years. We strongly object to the construction of the NED pipeline which is proposed to be located within two miles from our home. Over the past three years we have participated locally in numerous meetings, hearings, and demonstrations regarding this project and will continue to vigorously voice our opposition.

I am applying for intervenor status for the following reasons:

- As electric ratepayers, we would have to pay the tariffs proposed to force us to cover the costs of the pipeline. In addition, we would have to pay the increase in energy costs that would result from exporting natural gas. There is no doubt that most of the gas in this proposed pipeline would be exported. Overseas, gas costs a lot more, and then local markets would have to compete on a global scale.
- As a supporter of the Franklin Land Trust, I feel that the proposed route of the NED pipeline will threaten the good work that the FLT has done over the past 20-plus years to conserve and protect valuable wilderness land from commercial intrusion. The proposed pipeline aims to take 27,400 acres of conserved land in 25 Massachusetts towns. Article 97 of our state Constitution states, in part, "The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historical, and esthetic qualities of their environment...Lands and easements taken or acquired for such purposes shall not be used for other purposes." As Mass. taxpayers, we all paid for conserved land in Mass. If this pipeline should be built, it would undo years of effort and cost. I don't feel that land protected for long-term public health and conservation purposes should be sacrificed for short-term private financial gain.
- The Massachusetts Attorney General's independent study concerning the need for additional gas pipeline capacity in New England reached the conclusion that it was not necessary.
- The pipeline is proposed to go under the Connecticut River, negatively impacting our watershed. Also, our rural quality of life would be terribly reduced, because of increased traffic, noise, and toxic emissions from the pipeline's construction.
- I feel that investment in renewable, non-fossil forms of energy is time and money better spent for the greater public good.

Sincerely,

John S. Cavacco III

Basis for Intervening:

As farmers and homeowners in Hillsborough County NH, Eugene and Marilyn Jonas of Hungry Bear Farm, seek to intervene in opposition to the Northeast Energy Direct Project that has been proposed by Tennessee Gas Pipeline Company, LLC, a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan"). Communications concerning this proceeding should be served upon us as follows:

Eugene and Marilyn Jonas

Hungry Bear Farm

27 Fairfield Lane

Wilton, NH 03086

The construction of this pipeline threatens to affect our health and livelihoods and to destroy this beautiful community that we are a part of.

In 2009, we invested our money and our futures to move to NH to become producers of Certified Naturally Grown produce. Since that time, we have not only worked tirelessly to produce high quality produce on our properties in Mason and Wilton, but have also invested considerable energy developing relationships with other local producers. The proposed pipeline and its associated infrastructure is now threatening the survival of the blossoming producers network that we have become a part of. If this pipeline is built, it will not only threaten our ability to access contamination-free vegetables, herbs, berries, mushrooms and eggs from our own property; it will also threaten our ability to secure fresh sustainably produced meat, dairy, poultry and fiber products from our neighbors.

On a more personal note, since childhood, Marilyn has suffered from serious asthma symptoms whenever she has lived in regions where the air quality is contaminated by industrial/agricultural pollutants. Living in Wilton allows her to live medication free almost all of the time. She now fears that the air pollution from the compressor station will exacerbate of her asthma symptom and may even lead to the progression of her condition and permanent reduction of her lung functioning.

Basis for Intervening:

As a resident of Temple, NH who lives near the New Ipswich line where the compressor station would be built, which is also dangerously close to our local Elementary school, I have a vested interest in keeping the pipeline from being built through our towns, largely without the consent of the residents. What gives a private, for-profit organization the right to apply and/or claim eminent domain when there is clearly no benefit to the residents affected by the construction, no benefit to the locality in general, no country-wide benefit (as in, say, an interstate highway being built)? People being forced out of their homes by a corporation is unconscionable, and should in no way be endorsed by a federal ruling.

20160105-5024

Raffaellina Mahogany
Charles B. Mahogany
13 Brandy Lane
Pelham, NH 03076

Strongly object to the construction of the proposed pipeline for a number of reasons. The primary reason for this intervention filing is my objection to expanding the delivery of non-renewable fossil fuels in the form of fracked natural gas that contributes to greenhouse gas and the resulting warming of the planet, a course that is inherently self-destructive to our world.

Secondary objections are equally strong, namely the reduction of my property values, the negative effect on our watershed, concern for toxic emissions, the impact on conservation easements, the impact on the condition of our local roads, and the reduction in our rural quality of life.

Regional health consequences of pollutants associated with the operation of the pipeline

- tariffs proposed to force regional ratepayers to cover the costs of the pipeline
- depressed area economy that relies on the rural character of the region for tourist income
- possible increases in energy costs that could result from export natural gas, forcing local markets to compete on a global scale.

In a financial position where I would receive no compensation from the pipeline company, yet find my property more difficult to sell if I found living conditions here intolerable after the pipeline is built. I, like many in the region, do not have the financial ability to abandon my property or sell at a greatly reduced rate to move elsewhere away from industrial development again. Construction and operation of the NED pipeline would greatly impact my quality of life, and economic wellbeing, and leave me in a position where it would be difficult to re-establish myself somewhere else.

For these reasons, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

Basis for Intervening:

My family owns land in the proposed impact zone that will destroy the farm land, that supplies much needed feed for animals.

I also enjoy the outdoors and do not want any state or town public parks, forests and conversation land which has been set aside for the enjoyment of people and the wildlife, to be impacted by the proposed gas line.

I am also greatly concerned with the impact this proposed gas line will have on the community and the effects to the environment, the chemicals you will use has a destructive health effect. Many like my self have severe health concerns with certain chemicals.

My biggest concern is my health as I have extreme allergies and asthma which is effected by the chemicals in town water, or the vapors from pumping gas, perfume and many cleaning agents. It concerns me to the long term effects the chemicals used to stop the growth around the pipeline, not only to my self but to the wildlife and many water ways that fill many wells in these communities.

Basis for Intervening:

I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and operation of the pipeline. My shallow well is fed from an aquifer that is bisected by the proposed pipeline. There is a risk of contamination from the construction of the pipeline and reduced flow from redirection of groundwater from the pipeline trench. I am also concerned about contamination of the aquifer from any small leaks that may develop in the pipe and the gas by-products that might accumulate in the aquifer. I am also concerned about contamination of my aquifer from the hazardous byproducts of blasting chemicals used to create the trench.

I am an individual filing as an intervener against this project and pipeline – my home will be affected being 1/2 mile from the proposed compressor station along with the pipeline. Temple Elementary School is less than 1/2 mile from the proposed compressor station and pipeline of which both my children are attending

and I am in fear of their diminishing health. Our quiet rural town will no longer be the same with an industrial building next to livestock farm.

Basis for Intervening:

I am a resident of West Townsend, Massachusetts and want to intervene in this proceeding to oppose the Northeast Energy Direct (NED) pipeline. As a land and homeowner within the “blast radius” of the main pipeline alternative route/compressor station as well as the currently proposed “Fitchburg Lateral”, I have an interest which is directly affected by the outcome of the proceeding. In addition, the source of my drinking water will likely be affected by the construction and/or operation of the pipeline. The route of my daily walk through the state and public forests in West Townsend will be compromised by either/both the main pipeline/Fitchburg Lateral.

I am seeking intervenor status as there are no other intervenors that can appropriately represent my unique interests.

Thank you.

Regards,

Victoria Janicki

Basis for Intervening:

I am against the proposed pipeline with both my children attending Temple Elementary School and being less than 1/2 mile from the both the compressor station and pipeline. I have a child with both sensory and health issues and am very concerned with the noise and the air quality which will diminish their health and the behavior of my child with health issues already. The school is the town of Temple's emergency shelter in any type of disaster, by putting in a pipeline you are endangering the elderly who will have no place to go. Our children will be at risk and in danger if there is an explosion, the voluntary emergency crews will not be able to save all the children and teachers being so close to the pipeline and the compressor station. Wildlife homes will be destroyed, Greenville water supply will be affected along with local businesses in town of Greenville.

MOTION TO INTERVENE

Christine Budd

christine.budd@juno.com

I am filing this Motion to Intervene in the matter of the Kinder Morgan proposed pipeline.

I strongly feel that the construction of this pipeline would be hazardous to the environment. The construction of numerous compressor stations will also be a constant, noisy and disruptive menace, destroying the quality of life of anyone in the vicinity.

Researching the internet, one can see how many examples there have been of water contamination, methane leaks, and explosions, which are harmful to the environment and our communities. The proposed new pipeline will run through or dangerously close to conservation areas, which are supposed to be protected in perpetuity for present and future generations. The taking of protected conservation land is an insult to anyone who has donated land to conservation trusts in the belief that the land will be protected permanently.

This pipeline is said to provide needed energy for our area. Massachusetts has invested heavily in solar and wind farms and thus the need for natural gas is questionable. This pipeline is not worth the threat to our environment and quality of life.

Basis for Intervening:

My property is within 100 feet of the proposed pipeline and I have numerous concerns about and objections to it.

I have been trying to sell my house for a year. Potential buyers have been scared off by the project. Even if the pipeline doesn't go through, I have already lost money and undergone emotional distress on this account. Where is my compensation?

I have a shallow well with excellent water quality. The proposed pipeline goes through wetlands that make up the local aquifer. What happens if I am unable to use my well and the house becomes uninhabitable? There is no town water in the vicinity.

Massachusetts' energy needs don't require this pipeline, per AG Maura Healey. It is illegal to seize property by eminent domain unless there is domestic benefit. Where is our recourse for illegal taking if, as we expect, the gas is ultimately exported?

Just east of my property is the East Deerfield Railyard. What assurances do I and my neighbors have that the pipeline will safely cross it?

Just west of us is the Franklin County Sportsmen's Club, a shooting range. The pipeline is slated to go across their property. What assurances do we have that a stray bullet from a high powered rifle won't puncture the pipeline?

The proposed route crosses and re-crosses power lines beside my property, which can lead to corrosion.

My own house is heated by a ground-source heat pump. Digging and heavy equipment in the vicinity may dislodge the horizontal loop. Kinder Morgan plans a staging area within 50 feet of the loop.

There are so many reasons not to inflict this expensive, dangerous, irreversible scar on our land: limited life span of the fracking fields, earthquakes, tainted watertables. If we truly have a government for the people, it is unconscionable to allow this project, which will only profit corporations.

Basis for Intervening:

Basis for Intervening: We live on Gulf Rd, 5/8th to 3/4s of a mile from the proposed compressor station in Northfield, MA. I am concerned that the air, water, sound and natural environment around me will be significantly compromised if this goes through. We are against this project.

We built our house 30 years ago in this area, which is a clean and natural environment. I have also built an art studio here. We have an organic garden and a drilled well. I believe that the extensive blasting may very well impact our well water and possibly our foundations, and the toxics emitted into the air from the construction and eventual operation of the substation and compressor station will pollute our soil as well as the air we breathe and smell. Light and noise pollution will also be a issues for us which will compromise our quality of life.

We have attended various community education events, one by a DR. Curt Nordgaard who spoke about the effects of a compressor station on air quality. We are convinced that this situation will result in toxic air.

The taking of conserved lands for a large-scale commercial venture goes against the very reason for conserving land. We hike, watch birds, forage for mushrooms and ski on these lands, which will be destroyed. The natural environment of various animals and plants will be obliterated. It is not fair to take these preserved, pristine and protected lands for a large industrial complex.

We live here because of the peace and quiet and natural beauty. This will cease to exist and we will not be able to sell our property at fair market value. I have been advised of this reality by a realtor. A neighbor had arranged to sell his property and when the purchasers discover the threat of the NED and compressor station, they backed out of the deal. So even if we wanted to sell and flee, we would be severely impacted financially.

I have been distraught since I heard of this proposal over a year ago. I am also aware of the fact that FERC has never turned down a pipeline proposal, instead the agency “guides” the applicant through the stages of the permitting process. This is not a just unbiased process.

Linda Mahoney

20160105-5040

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company,
a subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline Project

Docket No. CP 16-21-000

**MOTION TO INTERVENE OF THE ASHFIELD WATER DISTRICT IN
OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission’s (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, THE ASHFIELD WATER DISTRICT files this Motion to Intervene in the above-captioned proceeding.

THE ASHFIELD WATER DISTRICT opposes the project because of environmental, infrastructural, public health and safety, and economic impacts, and seeks party status to protest the proposed pipeline, and fully protect ASHFIELD WATER DISTRICT’s interests.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

THE ASHFIELD WATER DISTRICT is the water supplier for the village center of Ashfield in Franklin County, Massachusetts. THE ASHFIELD WATER DISTRICT serves 475 permanent residents and more when there are town functions as the town government buildings are located within the DISTRICT. The proposed NED pipeline's path through the ASHFIELD WATER DISTRICT will bisect the DISTRICT and our critical watershed for at least 6000 ft. [See attached maps-the watershed area, at minimum, encompasses the Bear Swamp wetlands, the Upper Reservoir, the Lower Reservoir, the ridgeline east of Smith Road, and the northern and eastern slopes of Peter Hill as labelled on the maps]. The pipeline would pass through environmentally sensitive areas and land that is regulated for public water-supply protection.

B. Description of Impacts

THE ASHFIELD WATER DISTRICT will be directly impacted and harmed by the proposed project as in the following ways:

Construction Impacts: The DISTRICT is concerned that heavy equipment traveling on three (3) town roads in the district will damage the district's wells and delivery infrastructure. The district's Hawley Road well is 60-ft. from the road that will see heavy use during construction. The Smith Road well is located approximately 475- ft. from both Hawley Road and Smith Road - another byway that will be used heavily. The property around the Smith Road well, as well as property in the Peter Hill watershed area, is subject to conservation restrictions to prevent groundwater contamination from sources including erosion and runoff. The DISTRICT's 150,000 gallon storage tanks are 50-ft. from Hawley Road and the pipeline will pass under the primary 8-inch water main along Hawley Road. Additionally Bear Swamp Road will see heavy traffic running parallel to our reservoir and within 20-ft. of the dam. The DISTRICT is concerned about the possibility of structural damage to our storage tanks, reservoir, and other infrastructure as a result of drilling and blasting for construction. We are also concerned about the geological impacts of directional drilling and blasting and how they would affect our bedrock wells - our primary water sources.

Environmental and Water Resource Impacts: The proposed pipeline will bisect the ASHFIELD WATER DISTRICT's critical watershed area, including the stream and wetlands that feed our public drinking water reservoir and the assumed aquifer for the Hawley Road well. The DISTRICT's Hawley Road well is approximately 810-ft. north of the existing power lines which approximate the route of the pipeline, and our drinking water storage tanks are approximately 850-ft. north of the power lines - the proposed path of the pipeline in that area also runs north of the power lines, bringing it to within 600-700-ft. of the well and within 650-750-ft. of the storage tanks. The Smith Road well is approximately 1560-ft. south of the power lines. The ASHFIELD WATER DISTRICT is concerned about the very high potential for negative impact to public water supplies, water bodies, and water quality resulting from construction and other disturbance on the watershed and wetland areas that are critical to supplying and filtering the groundwater that feeds our wells and our reservoir. The DISTRICT is also concerned about potential environmental and public health impacts presented by the construction, operation, and maintenance of the proposed pipeline, and the increased risks for environmental contamination, including erosion due to changes in drainage patterns caused by construction and by the pipeline itself, causing degradation of our watershed and drinking water quality.

Public Safety Impacts: THE ASHFIELD WATER DISTRICT is concerned about the project's potential to damage or breach our reservoir dam and spillway, during construction phase or in the event of a pipeline accident. If the reservoir were breached, it would cause significant damage downstream to roads and homes through Ashfield's Apple Valley neighborhood and to properties throughout the town of Buckland. Furthermore, the DISTRICT's water sources supply water to the Town of Ashfield's fire department. Any loss of stored water or chemical contamination of water supplies would impact the Town's ability to effectively respond to fire emergencies.

Economic Impacts: THE ASHFIELD WATER DISTRICT is concerned about the degradation of environ-

mental quality and monetary value of our property in the vicinity of the pipeline during and after construction. The proposed project bears a high risk of placing new and undue economic burdens on the DISTRICT, in the event of any kind of structural or infrastructural damage or contamination event resulting from the proposed project. In such an event, the DISTRICT is obligated to respond to any disruption of our property, infrastructure, watershed area, and drinking water supply, in order to protect and ensure continued drinking water access to the residents whom we serve.

Liability Concerns: THE ASHFIELD WATER DISTRICT is concerned about the Tennessee Gas Pipeline Company's LLC status and thus its ability to cover potential damages. The Commission must consider this issue and explore solutions which may include requiring the parent company to take responsibility for liability or post substantial bond to ensure ability to pay.

C. THE ASHFIELD WATER DISTRICT'S Motion to Intervene Must Be Granted

THE ASHFIELD WATER DISTRICT satisfies the standard for intervention under the Commission's regulations. As discussed above, THE ASHFIELD WATER DISTRICT is directly impacted by the proposed project, and no other individual or organization can adequately represent ASHFIELD WATER DISTRICT'S unique interest in this proceeding. Further, ASHFIELD WATER DISTRICT'S intervention is in the public interest because it is responsible for the protection of the health and safety of the public water supply for the town center. Accordingly, ASHFIELD WATER DISTRICT respectfully requests that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The following [individuals/ entities] should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Elizabeth A. Stewart-Administrative Assistant to the Board of Water Commissioners

Address: 463 Main Street, POBox 219, Ashfield, MA 01330

Phone: 413 628 3297

Email: ashfieldwaterdistrict@verizon.net

IV. CONCLUSION

Wherefore, in light of the foregoing, the ASHFIELD WATER DISTRICT respectfully requests that, the Commission (1) GRANT this motion to intervene and allow INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted by the Ashfield Water District Board of Water Commissioners

Jonh Nawrocki, Chairman

Duncan Colter

Michael Skaslki

CERTIFICATE OF SERVICE

Wherefore on this January 4,2016, I caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission's electronic service list in this proceeding, in accordance with Commission regulations.

Elizabeth A. Stewart

Basis for Intervening:

I am a Massachusetts landowner and electric ratepayer, who firmly believes that additional pipeline infrastructure proposed by Tennessee Gas Pipeline Company, LLC (the “Company”) is not needed. And that the Company will be looking to secure my electric utility as a Project shipper, in turn, seeking to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a blow torch to light a candle. This new proposed pipeline would be a massive overbuild and would likely lead to higher energy costs for New England’s ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

This proposed pipeline would also have a devastating impact on our environment. With over 100 conservation properties potentially impacted by it, our obligation should be to fight for what has taken years and countless dollars to protect. Our efforts should be spent on investing in energy conservation and clean energy options so that we leave a legacy for our children and future generations.

Individual	SRDow2016@gmail.com	
------------	---------------------	--

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”).

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

As a Contingent Property Owner: I am an estate beneficiary of the owner of the property located at 529 Main Street, West Townsend, Massachusetts. The proposed pipeline will cut directly across this property and includes plans to use several acres of the property for construction, storage, and a staging area. This acreage produces three crops of hay per year. The proposed removal of all top-soil will not only render these fields unable to produce hay, but the Company plans to construct and operate a work-site and Valve Station in the field. The extremely close proximity to proposed construction would make the property unlivable during construction. One of the specific functions of these valve stations is to release gas into the air. This will negatively impact upon the health of any resident at the property and reduce the value of the land. The release of dangerous gases, the lights, sounds, and smells after construction will greatly diminish the usability

ity and value of the property.

As a Consumer: My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from rate-payers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), the Company is proposing to build a pipeline to meet capacity requirements which do not exist and will never materialize and which will in all likelihood be used primarily to export liquid petroleum. This competing demand for our limited energy resources will likely drive the domestic cost of energy upward. This will be compounded by the likelihood that this massive proposed overbuild will result in unutilized capacity by New England utility companies which will pass the cost of this unused capacity to local rate payers.

As a Massachusetts property owner and taxpayer: I object to the proposed Pipeline because it will destroy land which has been set aside as a land trust and protected by Article 97 of the Articles of Amendment to the Massachusetts State Constitution. FERC does not have the authority to violate the Massachusetts Constitution nor does FERC have the power or authority to grant the Company the right to violate the Massachusetts Constitution. FERC should set aside the pipeline application by the Company until such time as the Massachusetts Legislature has voted to approve release of all impacted areas under land trust for use by Kinder Morgan.

As an ecologically conscientious citizen: The proposed pipeline will destroy protected wetlands, breeding grounds for endangered wildlife, and destroy vast acres of state parks. Many sections of the pipeline, including the valve station they want to build in my field, are in flood plain where there are deep floods of several feet and massive ice-dams which make any pipeline or valve station extremely susceptible to damage and ecological catastrophe.

WHEREFORE, for the foregoing reasons, I respectfully request that my Motion to Intervene be granted.

Respectfully submitted,

Stephen R. Dow

Basis for Intervening:

I am a life long resident in the small town of Cheshire Massachusetts. I spend my free time rollerblading on the rail trail or hiking and snow shoeing a portion of the Appalachian trail from Cheshire to Dalton. I work in the town of Lanesboro. The proposed path for this pipeline would force me to cross directly over the pipeline while on both the Appalachian trail and the Ashuwillticook rail trail as well as my drive to work. I have also ice fished on the Cheshire lake which could become contaminated because of the pipeline. This pipeline would also go under 3 of Lanesboro farms which I purchase food from. This pipeline has the potential to put my safety in jeopardy as well as my health. This pipeline will have a direct and measurable negative impact on my way of life.

Basis for Intervening:

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Project)

**MOTION TO INTERVENE OF
Paul McGrail**

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Paul McGrail
2485 West State Rd
Ashby, MA 01431
(978) 833-7338
paul.mcgrai@gmail.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

— My interest as an electric ratepayer, inasmuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is essentially telling the Commission that New England needs a blow torch to light a candle. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England’s ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

— My interest as a resident of the Westfield River Watershed, living just downstream from where the Company proposes to cross the federally designated Wild & Scenic Westfield River with its pipeline. In addition to living in the watershed, my family swims and plays in the river near the Windsor town line. I am concerned about the impact that the construction and operation of the pipeline, and the compressor station proposed for Windsor, could have on ecological and human health in our watershed.

— My interest as a taxpayer, neighbor and visitor to protected public land in Massachusetts. My land abuts the Deer Hill State Reservation, and I am very concerned about the threat this Project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution.

— My interest as a land trust supporter, visitor and neighbor to the Massachusetts Audubon Society’s West Mountain Wildlife Sanctuary in Plainfield, MA and The Trustees of Reservations’ Notchview Reservation in Windsor, MA.

All visits to our treasured wild areas are now bittersweet. I live in the western part of Cummington, Massachusetts, with a portion of my property located in Plainfield, Massachusetts. My property line is approximately a mile from the proposed pipeline path through the West Mountain Wildlife Sanctuary. The entrance to the wildlife sanctuary is just up my street, and I would need to cross over the pipeline any time I wanted to spend time there (or go to Plainfield or Windsor for any reason). At this wildlife sanctuary this autumn, my two children – both in pre-school – marveled at their first sight of a beaver, at the pond near the

entrance from our road. From my reading of the maps filed with the Company's application, the center line of the proposed pipeline would transect an adjacent pond, with no readily available information as to how devastation to this ecosystem would be prevented.

Also this fall, we have started to see bald eagles in Cummington and Plainfield. Whether they are nesting in the Project area remains an open question; a separate question is whether the Company and its agents can be trusted to adhere to the requirements of the federal Bald and Golden Eagle Protection Act. The public record indicates that Kinder Morgan's modus operandi is to do whatever it takes to get pipelines approved and installed as quickly as possible, cut corners on construction and maintenance, and simply pay the fines later.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should be pursued. I have been studying this proposal since it first became public, and I can bring valuable information and perspective to this proceeding.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.
Respectfully submitted,
Paul McGrail

20160105-5051

{Motion to Intervene of Barber C Waters}

I live in Andover, Massachusetts, and want to have the ability to intervene in this proceeding to oppose the NED pipeline. I have interests that may be directly affected by the outcome of the proceedings. For example, the proposed route for the NED pipeline goes through my neighborhood. My home is expected to be in the blast radius and I fear for the well being of my family and fellow community members if this pipeline is built. This will impact my property and financial well being

Basis for Intervening:

I am a taxpayer and utility ratepayer in Massachusetts. I oppose adding pipelines or pipeline capacity. Atty General Maura Healy has already found that additional gas pipeline capacity is not necessary. I also oppose this pipeline because we need to ensure that MA meets its emissions reductions goals set in the Global Warming Solutions Act and in the UN Climate Agreement, to keep global warming under 1.5 degrees C.

Filing Party/Contacts:

I am concerned the construction or a leak in the pipeline may contaminate the aquifer the well uses. We are nearing retirement the reduction of my property value will impact our ability to afford to retire. Even if property values recover over time, which I doubt, it will delay our retirement. My town is home to a state park the pipeline will cross, the beauty of the park will be forever damaged. The pipeline will cause a reduction in our rural quality of life in our beautiful quiet New England town that I, my spouse, friends and neighbors live in.

I object to expanding the delivery of non-renewable fossil fuels in the form of fracked natural gas that contributes to greenhouse gas and the resulting warming of the planet. The claims of fracked gas is "clean" do not take in account that extracting and transporting fracked gas releases large amounts of Methane and does extensive environmental damage to land.

The most important reason for my opposition, the pipeline is not needed. The current pipeline capacity in New England is adequate for 50 weeks of the year. The continued expansion of renewable energy sources and energy conservation efforts will negate the need for the NED pipeline. FERC should consider only the energy needs of New England and not the need for a pipeline to export fracked gas.

Basis for Intervening:

I am a resident of Dracut, Massachusetts. The NED project would have a huge effect on me. I am concerned about effect the pipeline and compressor station will have on the quality of life in my town. My home is near all the proposed facilities as well as my parish church. I am also concerned that the route keeps changing so I am concerned there will be additional worries with this proposal. I consume produce from Dracut farms and am concerned the pipeline may cause contamination of the water supply and crops. Additionally, as a Dracut taxpayer, I am concerned with the loss of potential taxable real estate and the devaluation of homes in my community.

I am filing a motion for intervention status on FERC docket CP16-21 based on my current residency in Greenfield and my future residency in Turners Falls. My interest will be directly affected by the outcome of the proceeding, seeing as I have lived and worked in this area for over 5 years and plan to spend many more here. My partner and I are about to close on our first house in Turners Falls, and I would hate to see the community I love be adversely affected by the pipeline. My daily commute crosses over the proposed pipeline route placing so I would be at physical risk. This proposed project has detrimental effects to the environment

and the people whose lands and lives it will disturb.

20160105-5061

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
North East Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Walter and Susan Cudnohufsky file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

Walter L. and Susan Cudnohufsky
413 628 4759
walt@wcala.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the proposed NED Pipeline would directly, indirectly and adversely impact us and our property in Ashfield, Massachusetts.

Our property is approximately one mile from the currently proposed NED route in Ashfield, MA. We live on the single lane mostly dirt Bug Hill Road which would be subject too much of the construction traffic access and also the emergency vehicle access should there be an incident.

While we may be just beyond the prime incineration zone for the all too common explosions and fires, our conservation protected 85 acres of forest is a connected forest should there be any resulting forest fire.

We, our families and our neighbors and friends regularly cross the proposed NED route and would be at physical risk.

Our annual taxes are subject to the tax base diminution first to our neighbor's private property and then the collective Ashfield Tax base. This loss in value and taxes is born by all citizens including us. We have already experienced the impact of the proposed NED route in our community through the termination of a sales agreement on a major farm property once the route was made public. No additional offers have come forward in two years.

We have a growing list of concerns:

- We are electric ratepayers who, if KM secures our electric utility as a project customer, expects to see an increase on our bill relating to NED construction cost recovery an irrational and unfair imposition.
- we enjoy the out of doors and do not want any state or town public parks or forests, or additional private conservation lands which have been set aside for the people and wildlife, to be impacted by any activities of this commercial private for profit project.
- we cannot imagine allowing or forcing the callus practice of eminent domain for private gain.
- we begrudge vigorously the divisive and actual "taking impacts" that even the mere proposal of such a

pipeline already exact on people land their land sales where such life savings market value is terminated with even a sniff of a pipeline on or near a property.

- The application of lowest common denominator environmental rules to judge impacts 401 Federal standards and not the more stringent MA standards
- The proposed use of minimal and unsafe standards for thin walled pipe and other materials supply specifications
- The imposition of fire-fighting, policing and security costs largely if not fully on the impacted communities
- The release of methane and its unconscionable multiplier impacts on my/our climate and earth and habitability
- The NED is directly linked in all ways to the Fracking industry and thus sanctions and makes possible the methane releasing, water polluting, earthquake generating, and climate altering practice. Allowing the NED makes us complicitors in an obvious fraud, for us a moral impossibility.

This is separate from the fact that the gas is not needed in New England as our Attorney General's report clearly shows.

We will have information to contribute that will be in the public interest.

III. CONCLUSION

Wherefore, we, respectfully requests that the Commission to grant our Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this fourth day of January 2016.

Walter and Susan Cudnohufsky
PO Box 419 Ashfield, MA 01330

walt@wcala.com

20160105-5067

This pipeline has no direct or indirect positive impact on North Reading residents especially property owners like us whose legally deeded land will be in jeopardy during, while and after this proposed pipeline is installed.

1. Safety – Kinder Morgan TGP has not satisfied any inquiry regarding long term safety concerns of our residents other than to say leaks and explosions are the costs of doing business. At this time the pipeline will be within 500 feet of our residence and a leak or explosion from a pipe of that size will devastate our and other's property and most likely be fatal.
2. There are wetlands and drinking water sources that will be disturbed and the pipeline will have negative impact on creating undue burden on the town and residence to find alternative sources in the near future.
3. Natural wildlife will be disturbed for an other-wise flourishing area being designated wetlands.
4. Property – Our property will not only be affected negatively but there are real possibilities that our legally deeded land will be taken or changed with no recourse, compensation or regard for us as property owners. It is our right to protect our property and livelihood.

This pipeline will not have any positive impact here or anywhere else aside from lining the pockets of TGP executives while putting everyday citizens in peril.

Basis for Intervening:

The pipeline has several negative impacts on the land, society, and individuals: Important natural resources would be damaged, the safety and economic value of communities diminished, and individual homes and properties put out of commission.

I am a landowner. The proposed pipeline would pass at about 1500 feet from my property. My neighbors are even closer. I am concerned not only for my personal safety but for the negative impact the pipeline will have on the value of my property.

I find none of the promised benefits to outweigh these negatives, some of which can be shattering to those affected. By many accounts the region does not need increased supply of energy in the form promised. Certainly, claims to the contrary are dubious. Furthermore, should meeting energy needs prove challenging in the future, all the better for the motivation and impulse to develop renewable sources. Better such a struggle than to have to deal with the ravages of the pipeline.

I would like for these reasons to intervene.

Basis for Intervening:

As a resident of the town of Dalton, MA I would be significantly impacted by the construction and operation of the proposed Northeast Energy Direct (NED) pipeline. I therefore would like to intervene in this proceeding to oppose this project.

Low traffic volume and abundant natural resources are essential components of the quiet, beautiful character that defines and enhances the value of my town and my property. I live just 0.5 mile from the one main road (State Rte 9) that would necessarily experience a substantial increase in large trucks carrying pipeline components, machinery and explosives during construction. The current proposed route would cross Rte 9 less than 2 miles from my home, and would go over North Mountain. I live on North Mountain Rd and regularly cross the utility corridor when hiking. Exposed ledge is plainly visible. The blasting and disruption from construction would be a substantial change from the peaceful surroundings which attracted my family and me to this location.

Of even greater concern are the long-term impacts of the pipeline to my health and property value. The proposed route goes perilously near my town's municipal drinking water reservoir (Cleveland Res) which serves my home. Both construction and operation of the pipeline pose great risk to water quality. Even small quantities can affect health over the long term. In addition, the town of Dalton is slated to receive a metering station and we are just downhill from the neighboring town of Windsor where a large compressor station is planned. Release of toxic gases during regular operation is a great concern. I live within the 10 mile radius that would see an impact on air quality. Again, even small quantities of toxins, over a long term may have health effects.

Finally, I am a rate payer who will experience an increase in my utility bill to pay for the pipeline infrastructure and/or the gas when much if not all of it is exported.

For all these reasons, I respectfully request that my motion to intervene be granted.

Henry Rose, MD
89 North Mountain Rd
Dalton, MA

Basis for Intervening:

I contribute annually to Woolman Hill Conference Center and participate in programs there at least twice a year. I go there for retreats of Quaker organizations. The pipeline would have a negative impact on Woolman Hill. It is a quiet place suitable for contemplation. The construction of a pipeline on their property would change the character disastrously.

I'm a rate payer with Berkshire Gas and Eversource. If their rates increase as a result of the pipeline being built I will be hurt. I'm a widow on a fixed income.

20160105-5072

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Northeast Direct Project of
Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

MOTION TO INTERVENE AND COMMENTS FROM LAURA PIERCE , RESIDENT OF CUM-

MINGTON, MA

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”) promulgated at 18 C.F.R. § 382.212 and § 385.214, Laura Pierce respectfully moves to intervene and provide comments in the above- captioned proceeding.

Basis and Grounds for Intervention

I live within 5 miles of the proposed station. I homestead and raise food organically. Not only would the station destroy my health and livelihood, but it would drive down my property value and make the town poorer. In addition, there would be much damage all along the route that would impact nature, wildlife and people in devastating ways. The pipeline and compressor station offer absolutely NO BENEFIT to the citizens of Massachusetts. The only beneficiaries would be an already too rich, environmentally irresponsible corporation at the cost of destroying lives and the ecological balance all along the route. Kinder Morgan has a history of violating environmental regulations and has no right to impose their self serving interests at the expense of the health and welfare of the whole Northeast.

Pursuant to Commission Rules 385.214(b) and 157.10, I move to intervene and file comments in the above proceeding. This intervention is timely filed.

Contact Information

Please enter Laura Pierce on the official service list for Docket No. CP16-21-000. All pleadings, filings and correspondence in this proceeding should be served on the following;

Laura Pierce 5 Frazier Lane Cummington, MA info@jazzinsight.com

Motion to Intervene

Laura Pierce seeks to intervene because my family will be directly impacted by the proposed 41,000 hp compressor station (possibly doubling in size at the option of the developer). We would be impacted by: compressor station emissions, ground water (well water) contamination during construction and from subsequent pollution, structural damage from blasting during construction, loss of livelihood and devaluation in property values; thus diminishing the town’s tax base. I, Laura Pierce, oppose this proposed project for the foregoing reasons. I request that the Commission GRANT this motion to intervene and comment.

Respectfully submitted,

Laura Pierce

Basis for Intervening:

As a long time resident of Massachusetts and new resident of New York I strongly oppose the transportation of any fracked gas through either of these states that mean so much to me. The plan does not make economic sense to me and the pipeline comes with inherent risks that could severely harm the environment and people living in close proximity to it. I currently live in Schenectady, which is relatively close to the proposed project and is an area that would be impacted by the pipeline.

Individual emilydingee@gmail.com

Basis for Intervening:

I live in Nashua, NH and want to intervene in this proceeding to oppose the NED Pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a member of an impacted community who has concerns about various negative impacts to the local economy, environment and health issues. I am also an electric rate payer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to NED costs recovery. I am gas ratepayer with Liberty Utilities whose gas company has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts of the gas company).

The construction of this pipeline would be hazardous to the environment and to our communities. Water contamination, methane leaks, explosions, and other hazards from pipeline ruptures are detrimental to our local natural resources, residential developments, and the overall health of our communities. There are multiple documented examples of the dangers of this system occurring all over the country. Even new pipelines are not immune to costly complications. The proposed path of this new line runs through or dangerously close to some of the east coast's best preserved natural treasures. Many protected areas that support endangered plants and animals will be put at risk.

We don't need another pipeline. We can instead invest in our county's distant future by ensuring a clean and safe environment for our grandchildren and their descendants to inhabit.

Basis for Intervening:

Wish to intervene in this application due to my proximity to the project. I have an interest in this since my residence is within a short distance to the proposed easement but not in direct contact with it. As such I am not listed as directly affected but am more than close enough to suffer loss in the event the project is completed, and adversely affected by construction. I have been observing this process for a year now and have found the process of the application by TGP through FERC to be less than acceptable to residents. The scoping hearings were too spread out, too short, and should have been organized better. This site was shut down for two weekends in a row, for example. People that work full time need time during weekends and evenings to get this kind of work done, especially on short notice. Since this project has been pushed through during an election run up season in New Hampshire it has gathered little attention, since nearly all publicity is soaked up by candidates and their incessant demand for attention. Kinder Morgan has put up websites and employed a variety of tactics in its interactions with the press and public and take advantage of the scarcity

of media involvement. This is all strategic on their part, part of a process that was started to take advantage of the election cycle in a process that will prove to be unfair to property owners if this certificate of need is issued.

My biggest issue with CP16-21-000 is twofold. If this project goes through Kinder Morgan will be trying to perform maintenance using spraying equipment with defoliant to keep the completed site clean enough to inspect in their typical cursory manner by air. This will never be acceptable to landowners that depend on local water supplies for drinking water. New Hampshire residents neither trust FERC or Kinder Morgan to honor any commitments made during this process after the work is done and the supervision is gone. At that point this will be under the domain of another agency that handles the "safety" of installed transmission pipelines. We do not trust them, either. Since the terrain involved in a great deal of the path will not support tracked tank vehicles to spray the path involved this will end up involving application by helicopter, leading to complaints about the cost involved. We as a state do not need or desire this effort, the paltry statements of support have all come from politicians like our current candidates that have received donations and a hand full of union employees. The likely contamination of every public and private water source in the path is unacceptable.

The second issue is the effect on public safety and welfare. The safety issue is obvious, an explosive gas pipeline co-located on the right of ways of an expanding electric utility network near the homes of residents lie in the path is obvious to all but the simplest. The destruction of property value and the denial of the use of property to residents and landowners is something that FERC and Kinder Morgan have downplayed, even though it has been commonplace in past projects. The fragile economy that stands to gain nothing from NED and will suffer multiple changes in cost structures within the taxation framework of the state can't sustain a project of this size that has no payback. Kinder Morgan's strategy of switch and bait when it comes to the payments for easements and the property taxes to towns is fairly obvious, our local town administrator who was from Pennsylvania and well aware of how they depreciated their assets explained the process in detail.

Intervention and pressure on the State of New Hampshire Site Evaluation Committee are the only avenues we have left to try to bring an end to this application.

Thanks for the opportunity to be involved in this process.

Basis for Intervening:

I am a homeowner in Treadwell, NY, a hamlet of the town of Franklin NY. and want to intervene in the process of granting approval to the NED Pipeline/compressor station.

I have an interest that may be directly affected by the outcome of these proceedings because I believe there is a health issue involved.

The American Medical Association and the New York Medical Association have declared that fracked gas infrastructure is hazardous to our health. It can cause cancer, neurological and respiratory disorders and fetal abnormalities. The proposed compressor station and pipeline are near two schools.

in high school cross-country races. I've run the scenic Robert Frost Trail, which lies a short distance from the proposed pipeline. I have many memories canoeing and rowing down the Connecticut River.

I spent two summers researching and working to protect endangered beetles along the Connecticut River. Populations of the beetle are only found along the Connecticut River and one other location in the United States. Though, located downstream from the proposed pipeline, I'm worried there could be future effects on this sensitive insect.

Having a pipeline run through this region will not only have effects on the ecosystems, but also spoil the beauty of rural New England. This area sees many visitors from all over to view its beautiful rolling hills and hardwood forests. This is the reason my parents left the city and moved to Massachusetts. They wanted clean air for their children and unspoiled woods to roam.

As a population we should be moving towards more climate friendly options. Putting in another pipeline is a step in the wrong direction. Natural gas is 75% methane, which is a way more potent gas than carbon dioxide!!

So, as a long-time resident of Massachusetts I am opposing the construction of a new pipeline. It will contribute to the degradation not only of the state, but of the world as a whole.

Basis for Intervening:

I live in Townsend, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly impacted by the outcome of the proceeding.

We enjoy the outdoors and do not want any state or town lands, forestry, rivers and brooks or properties which have been preserved and maintained for farming and agricultural purposes impacted by this project.

I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase in my bill relating to NED cost recovery.

Townsend proudly lays claim to near-perfect drinking water and the pristine Squannacook River. I have serious concerns of the impact on our source of drinking water crossed by the proposed route. Our drinking water is at the risk of the construction and/or operation of the pipeline.

After careful, prolonged study, research and attendance at several public forums, I have yet to be convinced or informed that the project is of any benefit to our town, our commonwealth. It is the pipeline to nowhere. Poorly planned, poorly presented without thought to the quality of life of our 8000 residents.

Basis for Intervening:

I am within a half mile of the proposed New Ipswich Compressor station. I am an Eversource ratepayer, a home/landowner and I will be directly effected by this project. I have a dug well that requires surface water, this is my drinking water and I am concerned by the suspected contaminants from compressor stations. I am concerned about the reported physical health risks associated with living near a compressor station. I am concerned for the noise that comes from compressor stations. I am obviously also concerned about the loss in property/home value and the ability to resell my property. I am opposed to this project. NOTE My mailing address is: 182 Tobey Highway Greenville NH 03048 (my road uses the Greenville NH post office) My physical property is in New Ipswich NH paying New Ipswich taxes

Individual	jankows9@aol.com	

Basis for Intervening:

I live in New Ipswich, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding.

As proposed, the pipeline route enters my town and sites a new utility corridor next to one already within its borders. If the project route shifts or its infrastructure changes, there may be other privately or publicly owned parcels in my town which could be impacted.

I am a NH resident who may be charged with paying for the pipeline with a tariff charge added to my electric rates.

The aquifer which provides my well water could be degraded by construction and operation of the pipeline.

The quality of air that I breathe could be degraded by toxic emissions from planned and unplanned compressor station blow downs and/or valve and/or metering station leaks.

The soils on nearby farms and my garden which grow produce I eat could be compromised by toxic emissions from planned and unplanned compressor station blow downs and/or valve and/or metering station leaks.

The financial ramifications of known and unanticipated consequences of the construction and operation of this pipeline and related appurtenances could increase my local and state tax obligations.

I am opposed to the construction of new infrastructure which promotes further dependence on fossil fuels. I, like all other citizens, will experience the consequences of climate warming which could be accelerated by the methane this project will release into the atmosphere. I believe this pipeline is NOT in the public interest, and I oppose it.

Basis for Intervening:

We, Carol & Nathaniel Plaza, Hudson, NH are filing as to “Motion to Intervene” with regards to the NED pipeline, Reference Docket number CP16-21, that will run from New York to Massachusetts, through New Hampshire.

We live in Hudson, NH, 2.5 miles from the proposed pipeline route. My son lives about 1 mile from the proposed pipeline route in NH. We and our son own land in Lanesborough, MA which is directly affected by the NED pipeline. We oppose the construction of the NED pipeline because we have an interest which may directly be affected by the outcome of the proceedings because of the following reasons:

1. My family are electric rate payers who if Kinder Morgan (KM) secures my electric utility as a project customer, we expect to see an increase on our bill relating to the NED pipeline
2. My family is a directly impacted land owner
3. My family has house lots for sale in Lanesborough, MA and cannot sell them due to the NED pipeline and the house lots will have a decrease in value due to the pipeline. KM said “Someday, you will find the right buyer and someone will buy them.” In the meantime, I have to pay taxes waiting for that day and KM is making a profit from using my land
4. My family’s land is within the “Blast Radius” and directly in the path of the pipeline, which creates an unnerving situation for every visit. If there was an incident, would my family be able to escape or would one of us have to watch a family member die?
5. The access to our 170 acres of fields, woodlands and house will have to cross over the proposed pipeline and will be restricted due weight limits that will prevent me from having any access for heavy vehicles. There is only one way into the property being surrounded by steep ravines and water North East and North West of the proposed pipeline
6. The property has streams and ponds that contain wild brook trout that will have to be crossed. The clearing of land will affect the water temperature in these bodies of water. The run off from the cleared easement path and work areas will be tremendous because of the steep slopes in the area. We will also be losing about a dozen of trees that are 4-5 feet in diameter plus many other trees.
7. The property has historical sites on the property in the path of the pipeline along with stone walls that were constructed in the 1760’s to 1780’s.
8. KM will be using herbicides to control vegetation growth which will cause contamination in the streams and ponds
9. Our family are residents whose watershed is crossed by the proposed route and could have an impact

on our well water and aquifers that feed neighboring lakes and streams. The construction and or operation of the pipeline will have an effect on the wells for our house lots as well as our residences.

10. Our property in Lanesborough, MA contains caves that are habitats for endangered species of bats.
11. Our property contains habitat for deer, bear, rabbits, squirrels, fox, salamanders, black weasels and hawks
12. When KM filed for construction of the pipeline, it was filed with the intent for export. Why should KM be allowed to use our property for profit since it is a private company?
13. Eminent domain should not be used as a threat to use our property for profit by KM.
14. The referenced property in Lanesborough, MA was to be a place for our retirement or a long term investment for retirement. My son's wife even stated that she would be willing to move there away from the high property taxes of Londonderry, NH. Since the proposed pipeline would go directly on our property, my plans for retirement are out the window.
15. Finally, the use of eminent domain cannot be used to benefit "Our allies of Germany and Japan" as stated to my father by a person who works at FERC. Germany and Japan are not residents of the United States.

Thank you.

------------	-------------------------	--

Basis for Intervening:

Dear FERC Officials:

I want to intervene in the NED proceedings as a long-time resident of Richmond/West Stockbridge MA who has several interests which would be directly affected by its outcome.

My first interest is personal and family health: I moved up to the Berkshires for clean air and clean water as a person with Universal Reactor Syndrome. My husband now has bone marrow cancer.

Our lives depend on avoiding toxic and carcinogenic substances. The numerous health "side effects" of excavating and installing high pressure fracked gas pipelines would include: water contamination, leakage, contamination from explosions, emissions from compressor stations and other kinds of chemical and particulate exposures resulting from blasting. We moved here to escape the worst effects of industrialization and the toxic pollution that it brings.

Furthermore, as a homeowner in Richmond, we are concerned about the negative effect on our property values by having yet another pipeline crossing our town. Neighbors who are/were directly in the line of one of the pipeline routes would be forced out of their homes. This does not make for a psychologically or economically attractive place to live or do business.

This area relies heavily on tourism and nature and both sectors would be seriously diminished, which would affect those trying to live, work or vacation here.

In addition, I and my family regularly enjoy walking in our local parks and do not want these lands which have been protected under Article 97, (won by people who devoted their lives to protecting them) to be

given to a company of questionable merit to transport toxic materials for their own profit.

This land is part of the Commons, and as such was never intended for private use, let alone exportation.

Finally, I am also a ratepayer, and from what I have read on this issue, I understand that pipelines leading to export terminals will actually increase the cost of gas and electricity.

Significant amounts of US LNG exports would raise domestic natural gas prices, possibly as much as 54% by 2018, the Energy Information Administration said Thursday. (from Platts.com)

The Global Warming Solutions Act was put in place in our state in order to lower greenhouse emissions and to make our state healthier on all levels. This infrastructure project completely contradicts this intention.

It requires reductions from all sectors of the economy to reach a target of a 25% reduction of Greenhouse Gas (GHG) emissions by 2020 and an 80% reduction by 2050.

Massachusetts is showing the way to a clean energy economy — and it is reaping some of the direct benefits in economic growth — through the development of smart, targeted policies that reduce emissions by promoting greater energy efficiency, developing renewable energy, and encouraging other alternatives to the combustion of fossil fuels.

If FERC really does care about global warming, human health and a healthy economy, I would think you would table projects such as NED permanently and begin to do what you were commissioned to do: to create a viable energy economy that is sustainable for this nation.

Thank you for your kind consideration,

Karen Andrews

Basis for Intervening:

Docket#: CP16-21

I, Joann Donnelly, live in Northfield, Ma and have an interest which may be directly affected by the outcome of the proceeding and am writing to apply for intervenor status in docket # CP16-21. I am writing in opposition to the NED project proposed by Kinder Morgan. I will be affected by this project in many ways.

To begin, I am a resident of Gulf Road in Northfield, Ma where Kinder Morgan has proposed to build a compressor station, pigging station and a blowdown valve. I live less than a mile from the proposed site and a matter of feet and inches from the outer perimeter of the blast radius. Should there be a “significant incident”, defined by Kinder Morgan as damage in excess of \$50,000.00, although I am outside of the blast zone, I surely am not immune to any catastrophic incidents. There are only two ways to leave my house, east or west (Northfield Center). It is clear that should there be an incident the only means of egress would be to go east toward Erving center, if that was even possible. I am very concerned about emergency preparedness and my town and region’s limited ability to cope with any significant incidents. I deeply resent that my home and neighborhood is considered a preferred site due to the likelihood of less “collateral damage” meaning fewer lives lost and fewer structures destroyed. I also understand that in the event of a significant incident First Responders would be tasked with limiting entry to the mountain until whatever gas

remaining in the line burns off after it has been shut off. I understand that entry to the compressor station property by emergency responders requires the presence of a Kinder Morgan representative—the nearest office is in Agawam, MA more than an hour away. The implications of this scenario are more than chilling.

Should this project be approved, once construction of the compressor station begins, I am concerned about the likelihood of disruption of traffic flow to the extent that my access to the town center-town hall, public safety, library post office, local markets etc. would change from a 4 mile trip to a drive down the other side of the mountain, west to route 63 and then back north to Northfield Center—which would become a 20 mile trip (see mapquest). Although a very rural area, Gulf Road is a major commuter roadway for people and trucks traversing from 91 over Gulf Rd to Erving where one can pick up Route 2 to Boston. As a member of this community I am very concerned about limited access to town center during the construction process and negative impact on the local economy during construction and potentially Once the station is up and running, my daily commute would necessitate my crossing through the blast radius and through part of the pipeline route which may put me at increased physical risk.

I have livestock. My water is well water. Jack's Brook runs through my property along with some smaller waterways. I am concerned about possible effects of blasting and drilling for the pipeline and associated construction with regard to potentially shifting the water which feeds my well and contamination from the drilling and blasting process. If my access to clean water is affected and/or is diminished who will pay to provide me with clean water for my home and livestock? I would request that Kinder Morgan test my water prior to any construction and 3x year thereafter so long as the pipeline exists. Additional concerns related to water has to do with possible contamination of water due to methane emissions which contain known carcinogens as well as some chemical agents used in the fracking process not yet revealed by the gas extractors. It is frequently argued that methane is lighter than air and is released to the atmosphere. However, during weather inversions-which happen frequently in our area

(think ground fog), then any chemicals being released do not go up and into the atmosphere but remain close to the ground and indeed can go into watershed areas and transported from there. This affects not only my neighborhood but my community further down the mountain.

I enjoy the outdoors and do not want any state or town public parks or forests which have been set aside for the people or wildlife, to be impacted by any activities of this commercial project.

Respectfully submitted,

Joann Donnelly

Basis for Intervening:

I am a landowner in New Ipswich, NH. I have lived in this town for over 40 years. I remained because of the natural environment, the rural life, the clean air, clean water and the dark skies with stars.

I have hiked and photographed much of the places which the pipeline will disrupt including the Wapack Trail, the jewel of New Ipswich.

I know many of the people who will be directly impacted by the construction of the pipeline and 23 Megawatt compressor station, including folks whose property will be taken by eminent domain, a concept that angers me terribly.

Kinder-Morgan is a company whose financial stability is in question. I doubt they have the resources to deal with a major disaster and may be tempted to dispense with safety and periodic maintenance to save money. New Ipswich does not have the emergency resources to deal with a problem and none of the surrounding towns are large enough to provide aid, especially if something occurs in the midst of a winter storm. The entire project is ill-advised and foolhardy and I urge FERC to reject the application.

Basis for Intervening:

I oppose the proposed Northeast Energy Direct pipeline for many reasons.

- I am an electric ratepayer, and my electric utility can raise my rates to pay for this pipeline.
- I am a landowner with a well near the proposed pipeline route, with risk of contaminated aquifer from the pipeline construction and operation.
- I enjoy the conservation land of Horse Hill Nature Preserve in Merrimack NH, for hiking, bicycling, and skiing. This conservation land could be partially destroyed by the proposed pipeline going through it.
- There will be reduced property values in the overall community, beyond any compensation offered by the pipeline company.

The public record indicates that Kinder Morgan's modus operandi is to do whatever it takes to get pipelines approved and installed as quickly as possible, cut corners on construction and maintenance, and simply pay the fines later.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities.

Basis for Intervening:

I am against the NED pipeline. I live in Pepperell, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities. At the Pepperell FERC meeting held at Nissitissit Middle School a town resident who is a retired hydrologist for the state of Massachusetts expressed concern for the issues of the flows of aquifers in these areas and possible future contamination from the pipeline project. Also, I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics and health issues. Further, I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery. I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of the commercial project.

Basis for Intervening:

Reasons to Intervene

My residence in Ashfield is close to the Plainfield town border, as well as the Watson Spruce Corner corridor. The proposed pipeline will affect my neighborhood, my neighbor and my neighbor's neighbor. Ashfield's rural landscape, farmlands, forests, wetlands, and preserved acreage/ land trusts will be in peril.

"Nature is not a place to visit. It is home." – Gary Snyder

1. Agricultural Land Preservation.

The preservation of land for our food and water sources is paramount. Those of us with livestock depend on local farms for hay and silage. My husband and I grow, preserve and store 1/3 of the food we eat in a year on our 1.7 acres on Spruce Corner Rd. Residents who don't garden depend on the local produce and farm foods cultivated and processed by local farmers year round. The disturbance of the landscape by dynamite blasting could create bedrock fractures that would harm natural drainage, contaminate the soil, redirect our aquifers, and affect supplies of farm water and soil, wells, waterways, and wetland habitat impacting the health of animal and human life.

2. Invasive Species, Herbicides and Bee Health

The upheaval and loss of topsoil involved with the proposed pipeline will attract invasive species. The effect of herbicides along the pipeline path will be hazardous to the existing bee population, bee keeping farmers and other residents, human and animal where herbicides are sprayed.

3. Native Habitats/Animal Migrations

Pipeline construction and maintenance will disturb fragile habitats and interrupt migration patterns of native wildlife.

4. Recreation

The rural recreation that we enjoy which also brings tourist revenue to town for biking the roads and hiking the many designated woodland trails will be impacted and disrupted by the proposed pipeline.

5. Decreased Land Value

The proposed pipeline will cause harm to individual property owners resulting in the reduction of the Town's tax revenue and change the character of the landscape we value in incalculable ways.

6. Targets for Terrorism

The proposed pipeline and its proposed stations would also be at risk of becoming potential terrorist targets, endangering the populations of Western Massachusetts all along the path.

7. Rural Character/Natural Resources

Lastly, and concertedly, the rural character, protected lands, and agricultural and historical landscapes of Western MA are specifically why I live in Ashfield. Like my neighbors, I have chosen to live here, for to enjoy the invaluable natural resources, farmlands, aquifers, and native habitat, from the largest mammals (moose), to the smallest butterfly or lichen growth. My desire is to keep this area undisturbed and safe from hazardous industrial impact.

Most sincerely,

Rochelle Wildfong
1355 Spruce Corner Rd
Ashfield, MA 01096

Individual	jennifer@chandon.net	jennifer@chandon.net

Basis for Intervening:

I am requesting to intervene on this project, as I am a property owner that is an abutter to the latest pipeline route, within about 1000 feet and may be within the incineration zone in the event of a rupture. I feel that it is an unnecessary burden to the residents of the state of New Hampshire from a financial, safety and property ownership standpoint, without proof of any public convenience or any real benefit to the residents of New Hampshire.

I am also a taxpayer in Pelham, NH and I this project leaves me with significant concerns with loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services.

Furthermore, my home is also within 1 mile of the proposed compressor station which poses a great risk to me and my family, including my 3 children who suffer from respiratory issues, from an air quality standpoint.

In addition to the air quality, I (and all of the other residents of Pelham, NH) use well water I am particularly concerned about the fact that the development plans by Kinder Morgan and the blasting from construction are likely to impact the migration of toxic chemicals from the contaminated former EXXON site at 970 Broadway Road. This contamination was detailed in a letter and proposal reviewed at the meeting of the Dracut Board of Health on April 1, 1982 and is fully documented at the Mass DEP web site at the following URL: <http://public.dep.state.ma.us/fileviewer/DefaultScanned.aspx?documentid=24154>

Finally, I have extreme reservations about trusting the safety of our environment, not to mention the safety concerns surrounding a high-pressure, high-volume gas line running through hundreds of miles of residential areas from Pennsylvania to Massachusetts, to a company that is suffering from major financial downgrading over the last few months. They are highly leveraged and I fear that they will sacrifice safety and maintenance in favor of profits for their shareholders.

Thank you for your consideration.

Individual	soupycow@juno.com	

Basis for Intervening:

My objection to the Kinder Morgan Pipeline is that the pipeline and compressor station would be located too close to our water supplies; the town do not supply town water and all homes must have wells. Our facility is located between two watersheds. The pipeline and compressor station would also be too close to parks, the reservoir, and conservation lands and would bring significant environmental hazards.

FERC has already approved another pipeline in Dracut, MA to satisfy New England's natural gas-fired electric generation needs on the coldest days of winter. We do not see the need to add more supply especially in since, for the most part, the pipeline supply will be shipped to Europe and Asia. Added to these negative impacts is the devaluation of property for all homeowners in the affected areas.

leaks and blowdowns is a much more powerful greenhouse gas than ordinary CO2.

I urge FERC to deny NED

Thank you for your consideration

Paul Stevens

Basis for Intervening:

United States of America

Before The Federal Energy Regulatory Commission:

Tennessee Gas Pipeline, LLC

Northeast Direct Pipeline Project: Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE:

Pursuant to rules 212 and 214 of the Federal energy Regulatory Commission's rules of Practice and Procedure, 18 C.F.R.#385.212 and 385.214 (2007), We, John and Elaine Iannuzzi file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC(TGP) filed its application under #7 of the Natural Gas Act, 15 U.S.C. #717f, and #157 of FERC's regulations, 18 C.F.R. # 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16-21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings and orders with respect to this proceeding should be sent to the following individuals:

John and Elaine Iannuzzi
150 Cardigan Rd. Tewksbury, Ma. 01876
978-851-5412
jeiannuzzi@aol.com

II. INTEREST OF PETITIONER

The proposed Lynnfield Lateral, will directly impact land owned be us. This pipeline would adversely jeopardize the health and safety of our lives and the future of our children. We live in a densely populated area and Kinder Morgan plans to place a highly volatile 24" methane gas high pressure 1400 psi pipeline within a few feet of our outdoor deck with a propane grill and a family vegetable garden. This invasion of our privacy and depreciation of our home value will cause extreme psychological stress and anxiety. When there is a natural gas explosion, fiery debris gets thrown up to 1,000 feet through wetlands that contribute to our clean drinking water. Even a small leak or small electric spark, can set off an explosion. The Town of Tewksbury lacks the equipment, training and funding to effectively respond to a rupture of this size or an explosion of this magnitude!

Our property also borders an Historic Fieldstone Wall in the direct path of the pipeline. This stone wall is recognized by The Commonwealth of Massachusetts as having significant historic and cultural value.

III. CONCLUSION

We respectfully request that FERC grant this MOTION TO INTERVENE as a landowner with full rights to participate in all further proceedings.

Respectfully Submitted; January 04, 2016

I live in New Ipswich, NH, 2 1/2 miles from a proposed site of a Kinder Morgan NED 41,000 hp compressor station. I am a cancer survivor and am very concerned about the toxic emissions that will be released from the site jeopardizing air quality in our town and neighboring towns. I am opposed to this project

a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics and health issues. Further, I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery. My town taxes will also be affected by the pipeline. I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of the commercial project.

Basis for Intervening:

January 4, 2016

Basis for Intervening:

We are writing to express our interest to intervene in opposition to the Kinder Morgan Northeast Energy Direct pipeline project, due to the location of the Compressor Station in Nassau, NY. We believe it will have great adverse impacts on our community.

Our Concerns Include:

- We believe this pipeline to be against our constitutional rights to clean air, water, and the right to pursue happiness. How can anyone feel safe and at peace living in such close proximity to a compressor station, with the risks of incineration?
- Potential impacts to our drinking water, well, volume of output, etc.
- Air pollution.
- Health impacts regarding toxic emissions and blowdowns. We are senior citizens who are already suffer-

ing with asthma and a heart condition.

- Noise pollution.

- Impacts to the health of our horses and wildlife. Our horses have no way to escape Volatile Organic Compounds that settle on their pasture.

- An evacuation plan. How would the horses lives be saved if we need to evacuate?

We do not own a horse trailer.

- Economic devastation. Our home is our primary asset for retirement. We have poured our money and sweat into our home. At a time of our choosing we would

like to downsize and use the equity in our home to relocate and as a source of income.

We respectfully request that FERC grant us the right to intervene. We believe we would be greatly impacted and can best protect our own interests.

Debra and Alan Austin

I am filing an Intervention as the Sole-Proprietor of Good Bunch Farm, a vegetable farm that markets locally and the land manager of Open View Farm, a workshop and educational farm both located at the same address 482 Newhall Road, Conway, MA 01341. I am also a resident of this address.

At least one cultivated field and 25x100 greenhouse of Good Bunch Farm are very close to the WMECO high tension lines. These growing areas may be permanently or temporally impacted by either placement of pipeline or the construction of the pipeline, depending on the pipelines placement relative to the existing high tension lines.

Pipeline construction could limit access to farm fields if Bardwells Ferry Road and/or Bridge are closed. Bardwells Ferry Road and Bridge are frequently utilized by Good Bunch Farm to access rented land on either side of the Deerfield River.

Pipeline construction or placement may also effect the pastures at Open View Farm which also run adjacent to the WMECO high tension lines.

Basis for Intervening:

I reside in Otsego County, NY in the town of Oneonta. The proposed "NED" pipeline route would run about 4 miles from my home and the related compressor station would reduce air quality to unacceptable levels, especially for those with impaired lung capacity.

As a social scientist with an MPH with research in community and environmental development I am concerned that the proposed "Northeast Direct" open-access pipeline would lead escalating industrial development along the pipeline route. This would destroy the area's rural character, which is it's greatest asset. Additionally, few would be interested in investing in property anywhere near a high pressure gas pipeline. Indeed, i sold my home and moved to a a rental knowing that property values could drop up to 30%.

I have friends and business associates in many nearby towns including, Sidney, Masonville, Franklin, Davenport, and Harpersfield. All of these towns are on the proposed pipeline route. I often travel thorough these communities and am concerned about my safety and welfare, as well as that of the friends and associates who reside in these communities, from inevitable accidents involving this pipeline. I have watched my neighbors lose their land through eminent domain as part of the Constitution pipeline project. These are not two projects but rather one that has been segmented to gain approval. FERC proceedings must include a full cumulative impact analysis of the NED pipeline project which includes the proposed "Constitution" pipeline. As no one else can represent my interests in these matters, I am filing this motion to intervene.

Basis for Intervening:

I live in Dalton Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because:

I am a resident whose source of drinking water is crossed by the proposed route so my drinking water sup-

ply is at risk of construction and/or operation of the pipeline, compressor station, or other facilities.

Also, I am a member of an impacted community who has concerns about various impacts to the local environment -- i.e. the mountainside I have hiked for over 40 years.

Also, I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see and increase in my bill relating to NED cost recovery.

In addition, I am a gas ratepayer of Berkshire Gas who has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED, and may include standard costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts, and decreasing market value revenues due to recent gas discoveries off the coast of Egypt.

Additionally, I enjoy the out of doors AND DO NOT WANT ANY town or public parks or forests which have been set aside for the people and wildlife to be impacted by any activities of this commercial project.

And yes I am a donor to a land conservation organization (Berkshire Natural Resource Counsel) and the purpose of my donation would be violated if this project is allowed to take easements over land that is ment to be protected forever.

Thank you.

Basis for Intervening:

Mark Salisbury

Temple Mountain Beef

877 N.H. Rt. 45

Temple, NH 03084

August 25, 2015

Ms. Kimberly D. Bose,

Secretary Federal Energy Regulatory Commission

888 First Street NE

Washington, DC 20426

Docket No. PF16-21-000

Dear Secretary Bose,

My name is Mark Salisbury and I live in Temple, New Hampshire. I own and operate a grass fed beef cattle farm that has been in my family since 1941. This is my family's home and place of business. My property abuts the land where the proposed compressor station is to be built in New Ipswich, NH.

I have received documentation from the New Hampshire Department of Environmental Health Services stating that there will be 50+ chemical emissions from the compressor station as noted in the attached document (Southwest Pennsylvania and Compressor Stations Environmental Health Impact Project – Summary on Compressor Stations and Health Impacts – February 24, 2015).

My cattle will be grazing within 500 feet of this proposed site and I have concerns that I would like to bring

to your attention:

What will the emissions do to my cattle?

What kind of chemicals will be released - not just in the air, but in the soil as well?

What will these emissions do to my cattle?

How will they affect the people that eat the beef and the people that live around here?

My customers have already stated that if this proposal goes through, they will no longer buy my cattle or my hay. If this happens, I will suffer complete financial ruin, being as this farm and my cattle are my only source of income.

This will be largest compressor station on the pipeline. With all the noise and the emissions coming from the compressor station, this will have an extreme negative effect on the children that attend the elementary school across the street as well as my cows.

The school is downwind of the proposed compressor station and will be directly in line with the exhaust plume from the general running of the station and the expelled gases during "blow downs.

Also, the school gets its water supply from a reservoir that is fed by a stream originating on the site of the proposed compressor. As the construction site is intended to be placed on a brownfield site, heavily polluted with lead, the disturbance of the topsoil involved in the construction phase, will leach lead directly into this stream and consequently into the school's water supply. It should be noted that the same reservoir is also the water supply for the nearby town of Greenville.

The prospect of an industrial size compressor in our quiet, agricultural surroundings, running 24/7 is appalling. This will totally destroy the peace we have come to regard as the natural state of our small community.

So - to summarize- we are faced with noise, chemical emissions, a threat to the water supply of our farm, the school, and the next town all for the profit of a remote, huge corporation with a known record of poor maintenance to its pipelines and compressors. In addition to all this it would seem most likely I would lose both my cattle and farm and the land would be ruined for all future agricultural use.

Can you imagine living next to a compressor station that is running 24/7?

Thank you for your time and consideration.

Sincerely,

Mark Salisbury

Individual don082548@yahoo.com

Basis for Intervening:

I am intervening directly to prevent the building of the compressor station in the Town of Nassau near my residence on Burden Lake. The negative environmental issues that have been documented by medical professionals and presented to the residents of the Burden Lake community and the potential for negative impact on our environment and our health are the reason for intervening. These issues will also serve to negatively impact the financial value of my property on third Burden Lake.

Basis for Intervening:

The proposed Tennessee Gas / Kinder Morgan, Northeast Energy Direct (NED) pipe may not be so good for New Hampshire after all and here's why.

It was never intended for New Hampshire. It was intended for Massachusetts, but due to opposition, KM moved it north. So if it was not good for Massachusetts, why should it be good for New Hampshire?

We were told it will bring jobs. True, a pipeline will bring jobs to the region, but KM's claim of 3,000 jobs is a bit exaggerated. It's 3,000 jobs during peak construction, approx. 18-24 months, after that - five jobs. However, a good portion of them will go to specialized workers, like pipeline welding crews from Oklahoma. Alternatively, dollar for dollar, jobs in efficiency and clean energy could provide thousands of jobs for the same investment. LiUNA union workers are trained for clean energy and weatherization jobs as well. Some have stated they would rather work in these fields if more of them were available.

We were told the gas is for New Hampshire, but if that were true, why was the pipe planned for Massachusetts? KM states that they have 0.5 Bcf/day in contracts, but the pipeline capacity is 2.2 Bcf/day, leaving 1.7 Bcf/day extra. So where is all that extra going? They do NOT deny that they will take export contracts and new export terminals are coming online in Canada. Yet Kinder Morgan continues to deny the gas is intended for export. Furthermore, the only stated contracts in New Hampshire are with Liberty, a KM subsidiary and even those contracts re in dispute. So is it right for KM to use eminent domain to take New Hampshire residents' land away (when most New Hampshire residents do not use gas) just so one company can sell that gas to foreign powers?

We are told that the pipe will lower domestic gas prices. However, the European market pays 2-4 times as much as US customers, and the Asian market pays 3-5 times as much. This can only drive up domestic prices.

We are told that new pipelines and gas-fired electricity plants are needed to replace the 8,300 MW of electric generation capacity that is being retired in the next few years. Ending the reign of nuclear, coal, and oil plants is a positive step, but replacing them with natural gas perpetuates dependency on fossil fuels and only gets in the way of renewables. Also, not all of the capacity retiring needs to be replaced with power plants. The cost of utility-scale solar has dropped 78% in the past five years, and renewables are now becoming economically competitive with gas.

Thank you for your consideration

Linda Stevens

Basis for Intervening:

I live in Pepperell MA and Warwick MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because of several reasons.

I am a landowner directly impacted by the pipeline route in both towns. I am deeply concerned for the safety and health of my family while living, working, commuting, attending school, and enjoying the outdoors in

close proximity to this proposed pipeline and associated compressor stations.

I am deeply concerned that the presence of this pipeline would cause a steep drop in my land and property value due to the well-publicized, documented risks associated with gas pipelines. I am concerned that my community would thereby suffer from the loss of taxpaying residents and families as a result of the presence of this proposed pipeline.

I am a taxpayer who voted to approve a tax increase in Pepperell in order to secure and protect the Pepperell Springs watershed as a future Town water supply and conservation land, which the proposed pipeline would violate. Acquiring that land for conservation cost several million dollars in State and taxpayer money; it is unconscionable to destroy that value by running a pipeline through land specifically paid for to be protected in perpetuity by conservation law.

I am a gas ratepayer of National Grid, who has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts). I strongly feel that the current NG infrastructure should be repaired and maintained before any new construction is even considered; the egregious number of documented gas leaks should take precedence, both for conservation and ESPECIALLY for safety.

Basis for Intervening:

Deborah J. Taricano
426 Old Wendell RD
Northfield, MA 01360
debtaricano@gmail.com

I am a resident and property owner in Northfield, MA and I wish to apply for intervener status in the proceeding to oppose the NED pipeline. I have an interest which will be directly affected by the outcome of the proceeding because I am a landowner whose property is within the incineration zone of the proposed pipeline and the road which I live on is a dead end. Seven homes, seven families will have no evacuation route. The maps show a road that continues but in fact, Old Wendell Road, which may have been a cart path a century or more ago, is impassable except with an All Terrain Vehicle or by foot. We will live in constant state of danger and terror knowing that we have no escape if there is an incident.

Our water is supplied by private wells. The blasting which will be needed to bury the pipe through this area will jeopardize our water supply by diverting the underground waterways and/ or pollute our source of clean water, Kinder Morgan says they will mitigate this problem by delivering bottled water to the residents. That is a RIDICULOUS and unsustainable solution. Would that cost also be charged to the ratepayer?

The health of the people will be negatively impacted by the poisons released into the atmosphere from the proposed compressor station 1/2 mile from my property.

I object to the use of lower quality materials allowed in the construction of a pipeline which passes through a low population area. I can infer from this that my life and that of my neighbors is valued less than a city

rat.

In the Pioneer Valley we have a stewardship relationship with the earth, the land, wildlife, water, air and sky. The citizens of this region care about our relationship with the land, water, air, wildlife. The NED project will DESTROY our quality of life.

Respectfully,

Deborah Taricano

Basis for Intervening:

Basis for intervening:

I live in Northfield, MA, just a short distance from the planned route for the Northeast Energy Direct pipeline and the proposed compressor station.

I am deeply concerned about the variety of harmful, toxic, and carcinogenic air pollutants that are released by fracked gas infrastructure. Northfield is a wonderful and tight knit community, ideal for families and as a place to raise children and for those in retirement. The health risks associated with the volatile organic compound emissions (VOC) from the compressor station put everyone at risk. I have asthma and I believe I would have to move from Northfield to protect my respiratory health. While I have the means to move away if the time comes, there are many families that will not be able to afford to move. The research indicates that emissions can lead to increases in stroke, heart disease and diabetes. Even more tragically, the research indicates that the emissions can lead to an increase in still births, premature births, and low birth weight for babies. For people who are tied to the investment they have made in their homes and the emotional investment in their community to do if the compressor station is built?

I am also concerned that the emissions from the pipeline and the associated infrastructure will add to the severe challenges we face with climate change. Kinder Morgan representatives say that the pipeline is a bridge to renewables. I see it as a dangerous detour, at a time when we all need to move as quickly as possible to renewables to sustain the earth. The recently released report from the Attorney General has indicated that we do not need the pipeline to deal with electric reliability issues. The report indicates that the better approach is to focus on conservation and energy efficiency. As Pope Francis indicates in his climate justice encyclical, Laudato Si, this is a moral issue to prevent suffering on earth from extreme weather events, rising water levels that will lead to flooding of major metropolitan areas, and water shortages and drought that will displace millions of people.

I moved from eastern Massachusetts to western Massachusetts 20 years ago because I wanted to live in a more rural area. My quality of life is greatly enhanced by the many public and private conversation areas where I can hike and cross-country ski and just peacefully enjoy nature. The natural beauty of this area must be treasured. The current pipeline path will cross through 15 conserved forests, 5 state forests and 5 state wildlife areas, and 9 conserved water supply areas. It has taken 100 years to create these protected areas and we have more work to do to protect area farmlands, wetlands, and natural areas. We need to continue to move forward in our efforts and not backwards.

In the interest of being a steward of the beautiful land in western MA, and my concern for health and well-being of people in Northfield, I respectfully request that the Commission grant this motion to intervene.

Basis for Intervening:

I live in Northfield, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have an important health-related interest which would be directly affected by the outcome of the proceeding. As a teacher at the Northfield Elementary School, I see the results of respiratory issues and the effects upon growing and learning in my young students. I have concerns about the NED project with regard to its resulting particulate matter and emissions of various toxins that would increase the level of health risks. In students, this affects support received at home from family members struggling and can also affect absenteeism and cause individuals to be unavailable for learning. I have personally invested in solar energy at home here in Northfield to assist in the necessary and now governmental shift away from fossil fuel based energies.

Basis for Intervening:

I live in the village of Millers Falls in the town of Montague, Mass. The pipeline would be coming through our town straight through the pine barrens, which are rare themselves and home to several rare species. They are fire sensitive and Mass. Dept. of Fisheries & Wildlife has managed this area to prevent a wildfire from occurring. I very much fear what would happen should a high pressure gas line rupture. Not only would it put the local community & existing power lines in danger, our local firefighters are not equipped to deal with this possibility.

The pipeline is scheduled to drill under the aquifer here, which provides our town drinking water, and also to cross the local Millers river. I am concerned about the effects of blasting on our water supply. We are also located near a fault line.

As if that were not enough to worry anyone, I am under the impression that because we are rural we will get the least protective type of pipeline.

Our little town will not be able to afford to repair all the road damage I imagine the heavy equipment will cause.

Peoples Action for Clean Energy, Canton, CT.

Kimberly D. Bose, Secretary

Federal Energy Regulatory Commission

888 First Street, NE, Room IA

Washington, DC 20426

Re: Proposed Northeast Energy Direct Project, Tennessee Gas Pipeline L.L.C./

Kinder Morgan (FERC Docket No. CP16-21-000)

January 5, 2016

Dear Secretary Bose:

I am a Board member of People's Action for Clean Energy (PACE), a Connecticut non-profit organization working for over forty years to promote energy efficiency, conservation, and benign renewable energy in Connecticut and for renewable, sustainable, responsible energy development and management.

I submit these comments on behalf of PACE, in strong opposition to the proposal by Tennessee Gas Pipeline/Kinder Morgan (TGP) to install a natural gas pipeline for 14.8 miles from East Granby to Farmington, CT. TGP has proposed the installation of a 24" inch diameter pipeline next to the existing 16" pipeline across the Metropolitan District Commission's (MDC's) watershed land in West Hartford and Bloomfield. The pipeline will stretch across 5.7 miles of MDC land (and through many other private, municipal, and public lands in surrounding communities). With a construction Right of Way (RoW) of 90 feet, the project will create a clear cut swath over 62 acres, including Class I and Class II watershed land at the MDC and segments of the New England Trail.

PACE opposes the proposed pipeline for the following reasons:

- Connecticut is a leader in clean renewable energy solutions such as solar, wind, and geothermal. We need to support efforts to foster clean renewable energy and reduce our dependency on fossil fuels such as natural gas.

- The pipeline is unnecessary. The Office of the Massachusetts Attorney General issued a regional report on November 18, 2015 concluding that additional pipeline capacity would not serve New England’s future energy needs. Regional Electric Reliability Options Study: <http://www.mass.gov/ago/doing-business-in-massachusetts/energy-and-utilities/regional-electric-reliability-options-study.html>
- Natural gas is not clean energy. Natural gas is a non-renewable, carbon-producing fossil fuel and the natural gas to be piped through some of Connecticut’s most pristine and precious lands is produced through the toxic fracking process. Additionally, Kinder Morgan company executives concede that the company “has had safety incidents and pipeline spills at sites throughout the country, but said such events are an unavoidable part of providing the energy essential to daily life and the economy.” Carlson, Suzanne (2015, October 7). Gas Pipeline Proposal Meets With Public Disapproval in West Hartford. The Hartford Courant. <http://www.courant.com/community/west-hartford/hc-west-hartford-gas-pipeline-meeting-1008-20151007-story.html>
- Conservation and energy efficiency coupled with increasing investments in renewable energy sources such as solar power, wind turbines and geothermal heat pumps will lead to greenhouse gas reductions and to more Connecticut jobs, a smarter economic direction.
- The promotion of smaller, distributed renewable energy sources such as solar, wind and geothermal provides a more secure energy grid, limiting power outages in natural disasters to smaller areas, and also limiting the opportunities for hackers and terrorists to disrupt the flow of energy. Piping natural gas over a long distance does not provide a secure and accessible energy resource.

PACE urges FERC to deny TGP’s application for this unnecessary and retrogressive pipeline.

Thank you for this opportunity to comment.

Marianne Horn, PACE Board Member
 36 Kenmore Road
 Bloomfield, CT 06002

Submission Description: (doc-less) Motion to Intervene of Ashby Board of Health under CP16-21-000.

Submission Date: 1/4/2016 9:19:07 PM

Filed Date: 1/5/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

Filing Party	Signer (Representative)	Other Contact (Principal)
--------------	-------------------------	---------------------------

Ashby Board of Health	mc1morgan@verizon.net	
-----------------------	-----------------------	--

Basis for Intervening:

The Ashby Board of Health wants to intervene in this proceeding to oppose the NED pipeline. The Board has interests that may be directly affected by the outcome of the proceeding because:

A proposed alternative route for the pipeline runs directly through Ashby. A lateral for the pipeline and associated compressor station for the currently proposed route will run through West Townsend, just east of Ashby. Ashby residents will be affected. The currently proposed route runs through New Ipswich, located immediately north of Ashby, and effects will be felt in Ashby. A large compressor station is also proposed for New Ipswich.

The Ashby Board of Health is charged with protecting water supplies. The Town is entirely served by private wells, most of which are bedrock wells. The proposed pipeline and associated extensive blasting will undoubtedly affect water supply. Kinder Morgan has not proposed adequate testing, setbacks, or safeguards for water supplies including water supply wells.

The proposed pipeline routes in and near Ashby all extend through protected wildlands which are vital for

protection of the source and quantity of groundwater. These lands will be irrevocably disrupted if the pipeline is installed. The hydrology and ecological function of many wetlands, which are also critical to water supply and quality, will also be irrevocably damaged by the pipeline.

The Ashby Board of Health is charged with protecting the public health and abating public nuisances. Kinder Morgan has proposed no adequate setbacks or construction standards from residences to protect the peace, wellbeing, and safety of residents.

On a larger scale, greenhouse gas emissions associated with the pipeline will adversely affect public health by exacerbating global warming. The proposed pipeline runs directly counter to Massachusetts' legislative initiatives to reduce greenhouse gas emissions.

The Ashby Board of Health

Basis for Intervening:

I am a citizen of a town and area which will be strongly impacted by gas lines and a nearby compressor station. It would have a significant impact on our health and on the quiet, rural quality of life here. The compressor station in Windsor would ruin our dark night skies where people come from all over to view the stars in this darkest part of the state. I am also greatly concerned about our air and water quality and the danger of gas leaks and possible fires.

I am an electric rate payer who would likely see an increase on my bill to cover the costs of the NED project.

I am vehemently opposed to any gas lines and related structures going through environmentally sensitive areas and places that are public domain, be they parks, forests or wildlife areas and the like. We left a heavily populated and polluted area of Massachusetts to come to Plainfield for the natural beauty, quiet, and clean air and water and land.

I am also very concerned for some of my neighbors in town who would lose value in their homes and be very negatively affected by a pipeline running through or near their land. Some people I know have invested everything they have in their homes.

It has been shown that this pipeline is not even necessary. Gas leaks in all the affected states should be stopped, and alternative, sustainable, safe and healthy energy sources need to be pursued.

Basis for Intervening:

I want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because my family and I own property which is approximately 3/4 of a mile from the proposed mid station 4, New Ipswich compressor station at:
241 Hadley Highway
Temple, NH 03084

My family farm property has been used for agriculture and recreation for over 150 years. My grandparents purchased the farm in the 1930s and improved it, built on it and established a family legacy for my parents, my generation and hopefully generations to come. The proposed project could lead to our sale (at well below current value) or abandonment of the property for the following reasons:

Chemicals, toxins, particulate matter emitted by the compressor station potentially polluting our water supply (well), soil, and air. Empirical evidence has established that these pollutants as common near compressor stations and cause significant negative health effects.

Noise pollution at levels cited by the World Health Organization as damaging to human health including low frequency sound (LFN) emitted by turbines, noise associated with normal operations and blowdowns

Light pollution in violation of local dark skies ordinances

Traffic, noise, air and pollution associated with blasting, drilling and potential herbicide use during and after construction

Decreased value of our property, and negative impact on overall local tax base as properties across the area will lose value

Increased electric billing charges to cover costs of pipeline construction

Negative impact on the health and safety of local children attending the elementary school within 1/2 mile of the compressor station

Safety concerns related to feasibility of evacuation in the event of leaks, fires or other incidents as well as potential injury and property damage associates with such incidents

Our cost of living will increase. The value of our assets will decrease. Our way of life, that of our neighbors, and the rural characteristics of our town that make it a good place to live will be forever changed for the worse as a result of this project.

Submission Description: (doc-less) Motion to Intervene of BILL ERKKINEN under CP16-21-000.

2. There are wetlands and drinking water sources that will be disturbed and the pipeline will have negative impact on creating undue burden on the town and residence to find alternative sources in the near future.
3. Natural wildlife will be disturbed for an other-wise flourishing area being designated wetlands.
4. Property – Our property will not only be affected negatively but there are real possibilities that our legally deeded land will be taken or changed with no recourse, compensation or regard for us as property owners. It is our right to protect our property and livelihood.

This pipeline will not have any positive impact here or anywhere else aside from lining the pockets of TGP executives while putting everyday citizens in peril.

Basis for Intervening:

To Whom it may Concern:

I live in Pepperell, MA and want to intervene in this proceeding to oppose the TGP-NED pipeline. I have interests which will be directly affected by the outcome/decision of this proceeding:

1. I enjoy the out of doors and do not want any state, town or private conservation organization parks or forests, which have been set aside for the residents of Massachusetts to enjoy and to protect wildlife and habitats, to be forever impacted by this commercial project. Further, the Massachusetts Constitution protects conservation land. It would set a horrible precedent and would cause landowners to not donate their land for conservation purposes, if a private corporation could side step the Massachusetts Constitution.
2. In enjoy canoeing, kayaking and fly-fishing on Massachusetts rivers and streams. At the very least the Housatonic, Deerfield, Westfield and Connecticut Rivers will be crossed by this pipeline. I have seen pictures of the construction sites for these crossings before, during and after the construction and it is not pretty. It is obvious that these streams will be forever impacted by this project.
3. I have read the report issued by MA Attorney General Maura Healey, which indicates that this project is not needed, and that there are better alternatives available to meet any seasonal energy shortfalls that may or may not exist. I agree with the findings of this report.
4. I am an electric ratepayer of National Grid who, if Kinder Morgan secures them as a project customer, expects to see an increase on my bill relating to TGP-NED construction cost recover.

Basis for Intervening:

Emily Howard

183 Summit St

Plainfield, MA 01070

183greenleaf@gmail.com

I am filing a motion to intervene because, as a resident and landowner in the town of Plainfield, MA I have interests which may be directly affected by the construction of the NED pipeline (docket # CP16-21-000). I am opposed to the building of the NED pipeline for multiple reasons:

- 1) My property is adjacent to the proposed path of the pipeline and several miles downwind of the proposed Windsor compressor station. The watershed that supplies my well water and which feeds my organic farm may be contaminated. The toxic emissions emanating from the compressor station will almost certainly compromise air quality. Besides devaluing the quality of my life, the value of my property, which is my primary asset and into which I have invested all of my resources over the past 12 years, will most likely decline.
- 2) The path of the pipeline intersects in multiple locations with roads that I travel every day. During both construction and operation phase of the proposed project, there is potential for negative impact on my daily driving, including the worst-case scenario of driving across or near the pipeline during an explosion.
- 3) I am active in several local land conservation groups whose mission is to protect land, wetlands, animal habitat and other resources that will be negatively impacted by the proposed pipeline.
- 4) I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see my rates go up as a result of the NED pipeline.
- 5) With world powers finally recognizing and beginning to act on the need to slow climate change by reducing use of fossil fuels, it is absolutely NOT the time to be starting new infrastructure projects that will INCREASE carbon emissions. There are other, renewable, means of meeting the energy needs of Massachusetts and the other affected states.
- 6) Which leads to my final objection--the fact that the "need" for the NED pipeline may be seriously overstated. According the Attorney General Maura Healey, who represents the consumers of Massachusetts, the

pipeline is NOT needed.

I respectfully move to be granted Intervenor status based on the above reasons.

Sincerely,

Emily Howard

Basis for Intervening:

My name is Robert Connors and I live in Canaan, NY which is near the proposed NED route. I want to intervene in this proceeding to oppose the NED pipeline.

I am a co-founder of "Stop NY Fracked Gas Pipeline", a grassroots group opposed to the NED. I have a stake in this project as a citizen of the earth, as a member of a local NY community and as a father of two

children. We are all dependent on clean air water and soil for our well being and this project will denigrate our environment at a critical time in our planet's history.

I am opposed to any new fossil fuel infrastructure project because of the concern over climate change.

Building a fracked gas pipeline will only make life on earth more difficult.

Many communities and states have developed specific plans to reduce our reliance on fossil fuels and to increase our use of renewable energies. Continuing to rely on fossil fuels is slowing our transition to the use of renewable energy. If we put our time and money into creating renewable energy sources we could sufficiently meet our energy needs from these sources.

Due to its regulatory structure, FERC has a long history of fostering fossil fuel development at the behest of corporations.

I am opposed to the construction of the NED because corporations have increased their control of the US government to the extent that the foxes are guarding the hen house and indeed FERC is funded by the fossil fuel industry itself. Decisions are made for the benefits of corporations, at the expense of the general public. This is definitely true in the case of the proposed NED project.

As a consequence, there is no evidence that FERC has any concerns about climate change and, unsurprisingly, has only once denied a permit for new fossil fuel infrastructure.

This FERC history flies in the face of our local, national and international interests to preserve the health of our planet. I will do my best to stop this NED project and can only hope that conscience will be your guide.

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan").

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

As a Contingent Property Owner: I am an estate beneficiary of the owner of the property located at 529 Main Street, West Townsend, Massachusetts. The proposed pipeline will cut directly across this property and includes plans to use several acres of the property for construction, storage, and a staging area. This acreage produces three crops of hay per year. The proposed removal of all top-soil will not only render these

fields unable to produce hay, but the Company plans to construct and operate a work-site and Valve Station in the field. The extremely close proximity to proposed construction would make the property unlivable during construction. One of the specific functions of these valve stations is to release gas into the air. This will negatively impact upon the health of any resident at the property and reduce the value of the land. The release of dangerous gases, the lights, sounds, and smells after construction will greatly diminish the usability and value of the property.

As a Consumer: My interest as an electric ratepayer, inasmuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from rate-payers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), the Company is proposing to build a pipeline to meet capacity requirements which do not exist and will never materialize and which will in all likelihood be used primarily to export liquid petroleum. This competing demand for our limited energy resources will likely drive the domestic cost of energy upward. This will be compounded by the likelihood that this massive proposed overbuild will result in unutilized capacity by New England utility companies which will pass the cost of this unused capacity to local rate payers.

As a Massachusetts property owner and taxpayer: I object to the proposed Pipeline because it will destroy land which has been set aside as a land trust and protected by Article 97 of the Articles of Amendment to the Massachusetts State Constitution. FERC does not have the authority to violate the Massachusetts Constitution nor does FERC have the power or authority to grant the Company the right to violate the Massachusetts Constitution. FERC should set aside the pipeline application by the Company until such time as the Massachusetts Legislature has voted to approve release of all impacted areas under land trust for use by Kinder Morgan.

As an ecologically conscientious citizen: The proposed pipeline will destroy protected wetlands, breeding grounds for endangered wildlife, and destroy vast acres of state parks. Many sections of the pipeline, including the valve station they want to build in my field, are in flood plain where there are deep floods of several feet and massive ice-dams which make any pipeline or valve station extremely susceptible to damage and ecological catastrophe.

WHEREFORE, for the foregoing reasons, I respectfully request that my Motion to Intervene be granted.

Respectfully submitted,

Laurie Mayo

The Northeast Energy Direct pipeline route runs adjacent to my property, and will have direct physical and economic impact on it. Further, even a minor change to the route may move the right-of-way onto my property.

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	bmbaker_1999@yahoo.com	

Basis for Intervening:

I oppose this project. I live in a neighborhood that will be directly impacted by the addition of a pipeline. And I'm especially concerned about the impact to protected conservation lands. Some of these properties were donated with an understanding that they would remain protected for perpetuity. I do not foresee future donations of this type if future potential donors see that a company can find ways to work around these protections. I don't believe this is the type of precedent we want to set in my neighborhood, my state, or our country. Please help us.

Submission Description: (doc-less) Motion to Intervene of Jennifer Luebke under CP16-21-000.

Submission Date: 1/4/2016 9:24:54 PM Filed Date: 1/5/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	jluebke@bu.edu	

Basis for Intervening:

I live in Brookline Massachusetts and work at Boston University School of Medicine in Boston Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have several important interests which may be directly affected by the outcome of the proceeding, including:

- I am a property owner potentially impacted by the pipeline route/compressor station.
- I am a resident who's daily commute crosses over the "blast radius" of the proposed pipeline route, so I would be at physical risk.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline, compressor station, or other facilities.
- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health and well-being of wildlife in the area.
- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.
- I am gas ratepayer [of National Grid] who has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts).
- I value and cherish the natural environment and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.
- I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

--------------	-------------------------	---------------------------

Individual	gball346@hotmail.com	
------------	----------------------	--

Basis for Intervening:

I wish to intervene in the Kinder-Morgan, Tennessee Gas Co. Pipeline project that may go through my land located on Bush Road in Plainfield, MA. I have received many letters from these people seeking access to my land. I do not want them on the land nor do I want their pipeline near my land. My objections are as follows:

1. I purchased this land for an eventual home, garage, sewer system. There was only one part of the land available for the sewer. The pipeline could take that land and I would not be able to use the land for a residence.
2. The land for some time has been yearly mowed and hayed. It is developing as a grazing field for nearby sheep and possibly horses. These animals will be denied their food source.
3. The soils of the land are soft and readily compressed. When heavy machinery runs atop the soils they stay depressed; they don't return to where they were. The pipeline project would require heavy machinery and thus would permanently destroy the soils and the land form. No regarding or importation of other soils would restore the land to the current level of biodiversity or soil health. There are many wild plants and flowers that are seasonal and would be destroyed. These include wild thyme.
4. There appears to be several vernal pools on the property and they must not be disturbed.
5. There are shallow diverting water runoff channels on the land that, in conjunction with other adjacent lands, assure that the generally soft and moist soils drain. A pipeline project would destroy these very old land reformations and would require repair that would destroy the soil and biodiversity.

Respectfully submitted to intervene and curtail this environmentally disastrous project.

Sincerely,

Gisela Ballard

20160105-5173

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
A division of Kinder Morgan Energy Partners
Northeast Energy Direct Pipeline

Docket No. CP 16-21

**MOTION TO INTERVENE OF THE
NORTHFIELD MASSACHUSETTS HISTORICAL COMMISSION**

Under Massachusetts General Law Chapter 40 Section 8d the Northfield Historical Commission is charged with protecting historic and prehistoric cultural resources. We exist as a town commission created by the state "for the preservation, protection, and development of the historical or archaeological assets of such city or town." The historical and archaeological assets of Northfield are greatly impacted by this project with 242 acres of land being reserved for a compressor station, 8.5 miles of proposed pipeline, and roadway widening. Known historic sites are included in the affected areas.

Pursuant to the Federal Energy Regulatory Commission Rules of Practice and Procedure, 18 CFR § 385.214(b), the Northfield Historical Commission moves to intervene in the above captioned proceeding in

the public's interest. This intervention is timely filed.

I. CONTACT INFORMATION

Please enter the Northfield Historical Commission on the official service list for Docket No. CP 16-21. All pleadings, filings and correspondence in this proceeding should be served on the following:

Lisa McLoughlin
Northfield Historical Commission
69 Main St.
Northfield, MA 01360
Intervenor4@hemlockhouse.net

II. MOTION TO INTERVENE

Kinder Morgan/TGP filed their formal application for Northeast Energy Direct (NED) on November 20, 2015. Docket No. CP16-21 for a Certificate of Public Convenience and Necessity, pursuant to the Natural Gas Act, 15 U.S.C. § 717f, and 18 C.F.R. §§ 157.1 et seq. In its Application, TGP requests authorization to construct, modify and expand natural gas infrastructure. We expect to take a position on the project once we complete our review of the application filed with FERC and subsequent documentation.

Northfield's historic and prehistoric cultural resources are greatly impacted by this project. 242 acres of land with known historic resources including a colonial era cabin and stone walls, and suspected but as yet incompletely studied prehistoric Native American sites, are under contract to be acquired for a compressor station. In addition 8.5 miles of the Northeast Expansion pipeline will cross, abut, or come within 1/2 mile of over 100 public and private properties located within the town of Northfield. For example, the proposed route may impact the Northfield Farms Cemetery established in 1811, and a National Scenic Trail.

Additional transportation routes for equipment and materials will also be created, including widening of the Gulf Road, a Native American pathway documented by the Massachusetts Historical Commission (Massachusetts Historical Commission. Historic and Archaeological Resources of the Connecticut River Valley: A Framework for Preservation Decisions. Boston, MA: Massachusetts Historical Commission. 1984, 1988, 2007) with documented Native American sacred sites along it, at least one of which contains subterranean features which would potentially be disturbed by blasting and other earthworks.

The Northfield Historical Commission is charged with the protection of our cultural resources, thus we respectfully request to be granted intervenor status in this project. For the reasons set forth above, the Northfield Historical Commission has "an interest which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) and its "participation is in the public interest" pursuant to 18 C.F.R. § 214(b)(2)(iii).

III. CONCLUSION

WHEREFORE, for the foregoing reasons, the Northfield Historical Commission requests that the commission GRANT this motion to intervene.

Respectfully submitted,

Lisa McLoughlin
Northfield Historical Commission
Town of Northfield
69 Main St.
Northfield, MA 01360

20160105-5184

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company,
a subsidiary of Kinder Morgan
Northeast Energy Direct Pipeline Project

Docket No. CP 16-21-000

**MOTION TO INTERVENE OF
BERKSHIRE REGIONAL PLANNING COMMISSION, THE TOWN OF CHESHIRE, MASSACHUSETTS, THE TOWN OF RICHMOND, MASSACHUSETTS, THE TOWN OF WASHINGTON, THE DALTON FIRE DISTRICT, AND THE LANESBOROUGH VILLAGE FIRE & WATER DISTRICT, MASSACHUSETTS**

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, the Berkshire Regional Planning Commission files this Motion to Intervene in the above-captioned proceeding.

The Berkshire Regional Planning Commission does not take a position on the proposed project at this time, and seeks to intervene to monitor the progress of the proceeding.

Five directly impacted Berkshire County, Massachusetts municipalities and three additional potentially impacted constituent towns, as well as Rensselaer County, New York, and its three directly impacted towns have all taken formal votes opposing construction of the pipeline in their jurisdictions.

I. STATEMENT OF INTEREST

A. Description of INTERVENOR

The Berkshire Regional Planning Commission (BRPC) is a governmental substate district established under the authority of Massachusetts General Laws Chapter 40B (the Regional Planning Law). Its jurisdiction is Berkshire County, Massachusetts, and the 2 cities and 30 towns within Berkshire County are all members. Each municipality appoints a delegate and an alternate who collectively serve as BRPC's commissioners. In the absence of a county government serving Berkshire County, BRPC serves and advocates for the collective interests of the municipalities in the County. Since the subject proposed pipeline was proposed in February 2014, BRPC has coordinated and served a working group representing the following local governments located either on the preferred route, a previously preferred route, or a proposed alternative route in Berkshire County, Massachusetts, and Rensselaer County, New York: Rensselaer County, New York; City of Pittsfield, Massachusetts; Towns of Cheshire, Dalton, Hinsdale, Lanesborough, Lenox, Richmond, Washington, and Windsor, Massachusetts; Towns of Nassau, Schodack, and Stephentown, New York; and Dalton Fire District and Lanesborough Village Water & Fire District, Massachusetts. The working group, collectively through BRPC, actively participated in pre-filing for the NED Project under docket PF 14-22-0000, including filing detailed scoping comments dated October 15, 2015. BRPC expects to continue to serve the collective interests of the aforementioned municipalities and public districts during the formal filing process under CP 16-21-0000.

The Town of Cheshire, Massachusetts, joins in this request and asks that it be granted separate intervenor status as well. While it is a member of and participates in the regional working group, it has specific issues and concerns which it must protect. The Town of Cheshire is a general purpose unit of local government chartered by the Commonwealth of Massachusetts (1793). The pipeline, as proposed, crosses 1.92 miles of Cheshire and impacts the primary arterial highway (Rte. 8) in the town and impacts several local roads, as

well as the regionally important Ashuwillticook Rail Trail. The pipeline crosses Cheshire Reservoir which is a significant natural resource in town. The proposed North Adams Check Meter Station (approximately MP 7.1), while located immediately to the west of Cheshire, will require use of a Cheshire owned and maintained road (Nobody's Road) which involves an intersection with Rte. 8 which is already a very high accident location. The pipeline in Cheshire will directly impact three businesses and five homes, with associated public and private wells. Cheshire is served by an all-volunteer fire department and EMS service and relies upon surrounding communities, typically all-volunteer as well, for incidents involving mutual aid.

The Dalton (Massachusetts) Fire District joins in this request and asks that it be granted separate intervenor status as well. While it is a member of and participates in the regional working group, it has specific issues and concerns which it must protect. The District filed comments during the Environmental Assessment Scoping Process which outlines its primary concerns. The District was officially created through an act of the Massachusetts General Court on April 7, 1884, and provides water and fire protection service throughout the Town of Dalton and fire protection to adjoining communities through mutual aid agreements. The Fire District has two reservoirs and water distribution lines which are directly impacted by the proposed pipeline. Its primary drinking water source is from the City of Pittsfield's Cleveland Reservoir which is directly impacted by the proposed pipeline. The Fire Department is primarily volunteer, with one full-time fire fighter and relies upon surrounding communities, which are all-volunteer with the exception of the City of Pittsfield, for incidents involving mutual aid.

The Lanesborough (Massachusetts) Village Fire & Water District, joins in this requests and asks that it be granted separate intervenor status as well. While it is a member of and participates in the regional working group, it has specific issues and concerns which it must protect. The District filed comments during the Environmental Assessment Scoping Process which outlines its primary concerns. The District was formed by the Massachusetts Legislative Acts of 1938, Chapter 255. The District currently services approximately 830 residential users and 34 commercial users. The proposed pipeline crosses the District's Zone 2 Drinking Water Aquifer, its primary supply well is located in very close proximity as is its water storage tank, and the pipeline will cross several water distribution lines.

The Town of Richmond, Massachusetts, joins in this requests and asks that it be granted separate intervenor status as well. While it is a member of and participates in the regional working group, it has specific issues and concerns which it must protect. While not impacted by the currently preferred route, it is crossed by the 200 Line which has been identified for full alternatives analysis, a previously identified preferred route, and may be impacted by potential adjustments in the route. The Town of Richmond is a general purpose unit of local government chartered by the Commonwealth of Massachusetts (1765). The existing 200 line crosses 4.47 miles of Richmond. Expansion of that line would directly impact State Rte. 41 and multiple local roads. A significant number of residences served by private wells would be impacted. Richmond is served by an all-volunteer fire department and EMS service and relies upon surrounding communities for incidents involving mutual aid. Richmond relies upon the State Police for law enforcement and has no local police department.

The Town of Washington, Massachusetts, joins in this request and asks that it be granted separate intervenor status as well. While it is a member of and participates in the regional working group, it has specific issues and concerns which it must protect. While not impacted by the currently preferred route, it is crossed by a previously identified preferred route and may be impacted by potential adjustments in the route. The Town of Washington is a general purpose unit of local government chartered by the Commonwealth of Massachusetts (1777). The previously proposed preferred pipeline route crossed 0.32 miles of Washington, directly impacting one local road and one residence served by a private well. Washington is served by an all-volunteer fire department and EMS service and relies upon surrounding communities for incidents involving mutual aid.

BRPC supports the separate motions to intervene by other members of our pipeline working group: Rensselaer County, New York; City of Pittsfield, Massachusetts; Towns of Dalton, Hinsdale, Lanesborough, Lenox, and Windsor, Massachusetts; Towns of Nassau, Schodack, and Stephentown, New York; and Lanesborough

Village Water & Fire District, Massachusetts. Those entities support the separate motion to intervene by the Berkshire Regional Planning Commission.

Berkshire County contains 946 square miles and has a population of 128,715 people (2014). The proposed Northeast Energy Direct (NED) pipeline crosses seven towns in Berkshire County and impacts the City of Pittsfield's primary drinking water supply reservoir and associated watersheds. The seven towns directly impacted are Hancock, Lanesborough, Cheshire, Dalton, Hinsdale, Peru, and Windsor and collectively they have a population of 17,410 people (2013). The City of Pittsfield water supply system serves 62,000 customers located in the City of Pittsfield and the Towns of Dalton, Lanesborough, and Lenox. The Lanesborough Village Fire and Water District Zone 2 aquifer, primary well and storage tank are also directly impacted and serves an additional 850 customers.

The Dalton Fire District receives its primary drinking water supply from the City of Pittsfield but its back-up water supply reservoirs and associated watersheds are directly impacted by the proposed pipeline. A compressor station is proposed in the Town of Windsor and would also impact portions of the Towns of Hinsdale and Peru. The Town of Windsor is one of the most rural towns in Massachusetts and has some of the lowest ambient noise levels in the state.

Rensselaer County contains 665 square miles and has a population of over 159,000 people (2010). The proposed NED pipeline cross three towns in Rensselaer County. The three towns directly impacted are Scho-dack, Nassau, and Stephentown and collectively have a total population of 20,486 (2010). The three towns' population relies on well water from the Schodack and Valatiekill Aquifers which are directly impacted by the proposed pipeline. A compressor station is proposed in the Town of Nassau which is a rural residential community containing no industrial uses.

If the BRPC is not permitted to intervene as a party to this proceeding, its interests and those of the members of its Pipeline Working Group will not be adequately represented by other parties and it may be bound by actions, determinations and decisions in this proceeding without opportunity to participate and be heard. BRPC's participation as a party in this proceeding is in the public interest.

If the Towns of Cheshire, Richmond, and Washington and the Dalton Fire District and Lanesborough Village Fire & Water District are not permitted to intervene as parties to this proceeding, their interests and those of their citizens will not be adequately represented by other parties and they may be bound by actions, determinations and decisions in this proceeding without opportunity to participate and be heard. Cheshire, Richmond, Washington, Dalton Fire District, and Lanesborough Village Fire & Water Districts' participation as parties in this proceeding is in the public interest.

B. Description of Impacts

Berkshire County, Massachusetts, and Rensselaer County, New York, the 11 towns cited above, the City of Pittsfield, and the two fire & water districts will be directly impacted and harmed by the proposed project as follows.

- 1) The project impacts primary drinking water supplies for the City of Pittsfield and Town of Dalton, which also serve portions of the Town of Lenox and a portion of the Town of Lanesborough, with over 62,000 customers and the Lanesborough Village Fire & Water District, with 2,000 residents. The Schodack and Valatiekill Aquifers in Rensselaer County are the most important aquifers in the County and provide water to all residents and businesses in the Town of Schodack (12,794 residents), as well as numerous private residents and small businesses in the Towns of Nassau and Stephentown.
- 2) Construction of the pipeline and transportation of significant amounts of heavy equipment and supplies for construction of the pipeline and related infrastructure will impact aging and fragile local infrastructure and the regional transportation network. Specific areas of concern are all roads, bridges, and culverts used for transport; maintenance of public access, including for public safety during construction; and impacts on water supply infrastructure (water mains, water distribution systems,

and a primary aqueduct feeding Pittsfield's Cleveland Reservoir).

- 3) The location of two compressor stations (Nassau, New York, and Windsor, Massachusetts) which are very rural communities. Noise, air quality, lighting, and potential emergency response for facilities are primary issues. Existing zoning in both Nassau and Windsor for the proposed locations prohibit industrial uses and natural gas compressor stations are industrial uses. The Comprehensive Plan for Nassau calls for this area to be low density rural residential and location of a compressor station as proposed is in conflict with the Town's adopted comprehensive plan.
- 4) Provision of public safety services involving construction and operations of the pipeline and related facilities.
- 5) The large number of streams, lakes and ponds, and wetlands impacted by the NED pipeline.
- 6) The NED pipeline impacts multiple critical natural areas in both Rensselaer and Berkshire Counties. These include the Rensselaer Plateau (Nassau and Stephentown), the Hinsdale Flats Area of Critical Environmental Concern (Dalton, Hinsdale and Peru), the Westfield National Wild & Scenic River (Windsor), Notchview Reservation (Windsor), Massachusetts Core Habitat (Hancock, Lanesborough, Cheshire, Dalton, Hinsdale, Peru, and Windsor), and Massachusetts Critical Natural Landscapes & Landscape Blocks (Hancock, Lanesborough, Cheshire, Dalton, Hinsdale, Peru, and Windsor).
- 7) Socio-economic impacts regarding loss of agricultural lands, heritage and recreational tourism (including impacts to the Appalachian National Scenic Trail and the Ashuwillticook Rail Trail), commercial forestry, community tax base, imported workers and impact on lodging during primary tourist season, impacts on local businesses, municipal liability exposure, potential impact on a major interstate electric transmission line, impact on community quality of life, local property values, and local tax base due to the compressor stations in Nassau and Windsor, and impacts of property acquisition, construction, and operations on private property owners throughout the length of the pipeline.

C. Berkshire Regional Planning Commission's Motion to Intervene Must Be Granted

Berkshire Regional Planning Commission satisfies the standard for intervention under the Commission's regulations. As discussed above, the jurisdiction served by Berkshire Regional Planning Commission is directly impacted by the proposed project, and no other individual or organization can adequately represent Berkshire Regional Planning Commission's unique interest in this proceeding, particularly as there is not county government serving Berkshire County. Further, Berkshire Regional Planning Commission's intervention is in the public interest because the Commission is responsible for the protection of the interests of all of its member municipalities and its areas of responsibility include all impacts indicated previously, as well as others which may arise during the proceedings. Berkshire County has suffered from population loss and declining incomes for the preceding forty years and increasingly relies on a natural resource and tourist based economy which will be impacted by the NED project.

Accordingly, Berkshire Regional Planning Commission respectfully requests that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The following individuals and entities should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

Name: Nathaniel W. Karns, AICP, Executive Director
Address: Berkshire Regional Planning Commission, 1 Fenn St., Ste. 201, Pittsfield, MA 01201

Lanesborough, MA 01237
Phone: 413-442-5916
Email: lfwd@verizon.net

III. PROTEST/COMMENTS

In addition to seeking intervention, Berkshire Regional Planning Commission expresses its concern that the project as proposed, if adequate accommodation and mitigation of impacts is not agreed to through community benefit agreements with TGP or in the FERC certificate, that the Rensselaer and Berkshire municipalities, fire & water districts, and the individual property owners will be severely negatively impacted and will not be adequately compensated for or protected from those impacts. Most of the municipalities and water districts involved in our regional working group, covering portions of both Massachusetts and New York, are opposed to the project and believe it will have severe negative impacts on their communities and ability to provide vital public services, especially including adequate drinkable public water. We have significant concerns over impacts on public safety and the ability of our first responders, almost of whom are volunteers, to respond on a continual basis to potential public safety impacts. The impact of transport of significant amounts of heavy equipment and materials for construction on very fragile public roads is of considerable concern and the municipalities and states do not have the financial resources to repair damage to the roadway infrastructure. The impact of the compressor stations on two rural communities (Nassau and Windsor) will change the very quality of life that the residents of those two towns cherish and which make them desirable places in which to live.

IV. CONCLUSION

Therefore, in light of the foregoing, the Berkshire Regional Planning Commission, the Towns of Cheshire, Richmond, and Washington, Dalton Fire District and Lanesborough Village Fire & Water District, Massachusetts, respectfully request that the Commission GRANT this motion to intervene and allow the INTERVENORS to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Respectfully submitted,
Nathaniel W. Karns, AICP Executive Director

UNITED STATES OF AMERICA
BEFORE THE

FEDERAL ENERGY REGULATORY COMMISSION

Northeast Direct Project of
Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

**MOTION TO INTERVENE AND COMMENTS OF A PRIVATE CITIZEN
FROM WINDSOR MA.**

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”) promulgated at 18 C.F.R. § 382.212 and § 385.214, Richard Sutter, Ph.D. respectfully moves to intervene and provide comments in the above- captioned proceeding.

Basis and Grounds for Intervention

I live within 1 mile of the proposed compressor station. I rely on a clean environment to: farm organically to homestead, and raise organic produce as a livelihood.

Therefore, Richard Sutter, Ph.D. requests intervenor status because I would be directly impacted by this project. My gardens would no longer be considered organic with the level of emission pollutants in the air and water, and the products would no longer be considered safe. My life style and livelihood would be inalterably destroyed. My property values would be seriously diminished. My well water put in risk of contamination

Pursuant to Commission Rules 385.214(b) and 157.10, Richard Sutter, Ph.D. moves to intervene and file comments in the above proceeding. This intervention is timely filed.

Contact Information

Please enter Richard Sutter, Ph.D. on the official service list for Docket No. CP16-21-000. All pleadings, filings and correspondence in this proceeding should be served on the following;

Dr. Richard Sutter, 975 East Windsor Road , Windsor MA 01270 413-684-4744 richardsutter@verizon.net

Motion to Intervene

Richard Sutter, Ph.D. seeks to intervene because he will be directly impacted by the proposed 41,000 horsepower compressor station (possibly doubling in size at the option of the developer). I would be impacted by: compressor station emissions, ground water (well water) contamination during construction and from subsequent pollution, structural damage from blasting during construction, loss of livelihood and devaluation in property values; thus diminishing the town’s tax base.

Richard Sutter, Ph.D. opposes this proposed project for the foregoing reasons. Richard Sutter, Ph.D. requests that the Commission GRANT this motion to intervene and comments.

Respectfully submitted,

Richard Sutter, Ph.D. 975 East Windsor Road, Windsor MA 01270

20160105-5190

Motion to Intervene of Teresinha Lameiras

As a property owner in Pelham close to the power line I will be directly affected by the proposed pipe line. I am concerned not only for the impact on my property but also for the impact on all communities along the power line in New Hampshire. Most likely the blasting and heavy equipment will impact our houses, water, wells, and roads. I am worried about the long term and continuous contamination of our well water, air, soil, vegetation, conservation land, and wildlife. I am also alarmed with the health hazards due to the emissions of pollutants by the compressor station that will be very close to my community.

20160105-5192

Submission Description: (doc-less) Motion to Intervene of Joseph D Desruisseaux under CP16-21-000.

Individual	jddesruisseaux@gmail.com	

Basis for Intervening:

I own a property @ 122 Robbins Rd. in Rindge, NH. I object to the construction of this pipeline and would like to intervene in this process for the following reasons: 1) I live approximately 1000 ft from the proposed pipeline and blow-down station. This places me and my family at risk of physical injury. Kinder Morgan and it's subsidiary - Tennessee Gas have a deplorable safety record, yet their plans are still approved. They pay their fines and go about their business with little or no regard to the damage they create. Rindge is heavily forested and an accident would surely set this town ablaze. The local firefighters are volunteers and lack the expertise and equipment to handle accidents of this magnitude. 2) I have a drilled well that will surely be affected by the blasting of granite to install this pipeline. The granite outcroppings are easily visible in our area. This pipeline will cross two major aquifers in our town. If they become contaminated or disturbed my well water supply is at serious risk. Who will pay damages and how long will it take to correct the problem? The bigger question is can it ever be corrected? 3) Blasting may also affect my concrete foundation and cause cracks and structural damage to my home. Kinder Morgan seems to think that only the people directly in the pipeline path will be affected, however, shock waves from blasting may travel a great distance from and affect other properties. 4) Air pollution from the blow-down station will also affect properties beyond the blast zone. The fracked gas contaminants have been shown to contain cancer causing compounds such as MBTE, butane, hexane, ethane, benzene, etc. The SWPA-EHP study dated 2/24/2015 discusses this in detail, and also points out that inhalation of these toxins is especially dangerous to children, and my grandchildren live even closer to the blast zone than I do. 5) This pipeline will not provide the town of Rindge any significant benefits. Our town has officially voted to oppose it's construction. Property values have already been affected and devalued. Please consider these points seriously! Do not rubber stamp this application by Kinder Morgan!

20160105-5197

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company

Docket No. CP16-21-000

Motion to Intervene

Deborah W. Andrew hereby moves to intervene in the above-captioned proceeding. The Intervener lives at 165A Reynolds Road, Shelburne, Massachusetts and is directly impacted by the pipeline.

Background

On November 20, 2015, Tennessee Gas Pipeline, L.L.C. ("TGP) filed its application for a Certificate of Public Convenience and Necessity to Construct, Install, Modify, Operate and Maintain Certain Pipeline and Compression Facilities and to Abandon Other Facilities. On December 7, 2015 the Federal Energy Regulatory Commission ("FERC") gave Notice to stakeholders of TGP's application.

As an Intervener and resident of Shelburne, regardless of the final location of the NED pipeline (or any pipeline that transports hydrofracked gas or oil), I am deeply concerned about the negative environmental impacts should FERC approve the NED pipeline. I join my neighbors and fellow citizens who have voiced their objections and opposition to this project from its inception.

There are many sound reasons for FERC to oppose the approval and construction of the NED Pipeline

or any pipeline that transports hydrofracked gas or oil.

The NED pipeline, if approved, will increase the release of methane into the atmosphere resulting in an increase in the severity and frequency of climate chaos events: drought, flooding, hurricanes, tornadoes, the melting of glaciers, the rise of sea level.

The NED pipeline, along with any pipeline that transports hydrofracked gas or oil, supports the dangerous and ecological damaging practice of hydrofracking now banned in France and in many states and communities of the U.S. Hydrofracking requires the use of billions of gallons of life-sustaining water to be laced with carcinogenic chemicals, thereby polluting the ground around and the aquifer under each well. This alone should give pause.

Additionally, the practice of hydrofracking causes the release of quantities of methane into the atmosphere. Methane is far more lethal than CO₂, about which we are all concerned. Not only is methane released during drilling, it is released during transport. Thus the NED pipeline, and any other pipeline intended to transport hydrofracked gas or oil, will increase the frequency and severity of climate chaos events: drought, flooding, hurricanes, tornadoes, the melting of glaciers, the rise of sea level, the potential flooding of cities and island nations.

“...NOAA revealed in May that, for the first time in recorded history, global levels of carbon dioxide in the atmosphere averaged over 400 parts per million (ppm) for an entire month—in March 2015. Scientists have warned that, in order to achieve safe levels, CO₂ must be brought down to a maximum of 350ppm.” (<http://commondreams.org/news/2015/12/31/ten-weather-extremes-defined-hottest-year-ever-recorded>)

The proposed pipeline, if approved by FERC, will forever change the character of Shelburne and the region. The NED pipeline, if approved, will inevitably contribute to even more severe weather patterns than have occurred during 2015, causing even greater damage from flooding, high winds, extremes of temperature that negatively affect our farms resulting in food insecurity. There is the predicted effects of warming temperatures that would have a devastating effect on local orchards and farms that rely on the harvesting and sale of apples. Additionally, there is a prediction that among ten foods, the production of coffee will be severely affected by these changes in temperature. One of the successful businesses, Shelburne Falls Coffee Roasters (with three regional locations), will likely suffer. (<http://www.truth-out.org/news/item/34266-ten-foods-that-may-disappear-thanks-to-climate-change>)

Any actions that increase, rather than decrease, the methane put into the atmosphere would be reprehensible. A recent study, commissioned by Maura Healey, Attorney General of Massachusetts, has definitively shown that the claim made by Kinder Morgan and Tennessee gas that this pipeline would fulfill an existing need for gas throughout New England cannot be substantiated. (“Power System Reliability in New England - Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas” Analysis Group, Inc., Paul J. Hibbard Craig P. Aubuchon, November 2015)

Conservation has been shown to be the most ecologically and environmentally wise approach to reducing our carbon footprints and mitigating climate chaos events to whatever extent may be possible at this time. The NED pipeline, if approved by FERC, would increase, rather than decrease, the use of fossil fuels and thereby an increase in the release of methane into the atmosphere. The proposed pipeline is inconsistent with a sustainable future for our children and grandchildren.

Contact Information:

The following individual should be added to the Official Service List, with all pleadings, filings and correspondence in this proceeding directed to the contact listed below:

Name: Deborah W. Andrew
Address: 165A Reynolds Road
Shelburne, MA 01370
Phone: 415-625-8218
Email: deborah.w.andrew@gmail.com

To avoid the central issue of hydrofracking is to ignore the consequences of allowing this process to continue. At bottom: hydrofracking must be banned.

Beyond this, the refusal of the Massachusetts Department of Public Utilities to consider the factual basis for the many ways in which the proposed NED pipeline would, if approved, have a lasting and significant impact on many individuals, communities, the environment, the economy of this region is staggering and adds one more piece of evidence that our government – state and federal – serves corporate interests rather than the common good. The denial of a permit for the NED pipeline would renew the confidence of the public that at least those holding office at FERC serve the common good.

20160105-5198

I am a landowner directly impacted by the pipeline route. As a resident in the area of the proposed pipeline through Wilmington, MA 01887 I not only would be in the blast radius but also my drinking water supply is crossed by the proposed route so my drinking water is at risk due to construction and operation of the proposed Lynnfield Lateral.

20160105-5200

I am a landowner in Merrimack, New Hampshire. My husband and I invested in our house and chose Merrimack for many reasons. We liked the including accessibility to dark night skies, which we lost when they put the premium outlets in. My husband is an amateur astronomer. He is also an organic gardener and a clean environment, away from industrial development and pollution were important to us. We still have a child in the Merrimack school system and were planning on living here.

Then came along NED. Construction of the NED pipeline would mean that I would now be situated:

— less than a thousand feet, literally across the street from a proposed path in Merrimack. This would place my property across from the pipeline. It would lower our house value. I have spoken to insurance agencies and yes they do consider it a risk no matter what Kinder Morgan says. We would be in the blast zone. My neighborhood is not at risk for eminent domain (which is wrong) but our street leads right out the proposed path.

— Kinder Morgan, in their environmental assessment, proposes to run this pipe right through a town aquifer. The aquifer that we get our water from. If the tiniest leak should happen, our drinking water is polluted. Let alone, the nightmare of this being installed, probably having to blow through granite ledge.

The aquifer which provides our town water could be degraded by construction and operation of the pipeline.

--The quality of air that I breathe could be degraded by toxic emissions from a potential metering station. I have asthma and this worried me deeply.

--This path takes it by a local school which Kinder Morgan routed away from an Amherst School but closer to an elementary school that services special needs children.

--What makes me qualified to be an intervenor, is my home, land and family could be at risk. Our town water supply will be at risk. I have been following this project since spring of 2014 and have yet to see a real reason to disrupt our way of life.

--And now in light of Kinder Morgan's financial status, I am more concerned about paying for a project that New Hampshire has made clear, IT DOES NOT WANT. I am a NH resident who may be charged with paying for the pipeline with a tariff charge added to my electric rates.

— In a region that would feel the economic impacts of:

- reduced property values and the effect this would have on local tax bases, beyond any compensation offered by the pipeline company

- tariffs proposed to force regional ratepayers to cover the costs of the pipeline

- possible increases in energy costs that could result from export natural gas, forcing local markets to com-

pete on a global scale

— In a financial position where I would receive no compensation from the pipeline company, yet find my property more difficult to sell if I found living conditions here untenable after the pipeline is built. I, like many in the region, do not have the financial ability to abandon my property or sell at a greatly reduced rate to move elsewhere away from industrial development again. Construction and operation of the NED pipeline would greatly impact my quality of life, and economic wellbeing, and leave me in a position where it would be difficult to re-establish myself somewhere else.

-Finally, the world as a whole is moving away from fossil fuels. Now is the time to be looking for alternatives. Methane is a powerful greenhouse gas. Now is the time for FERC to start setting up infrastructure for alternatives. Not building pipelines when the capacity is so great. Where will it all go? We have yet to be told.

For these reasons, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

20160105-5201

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC,)
a subsidiary of Kinder Morgan) Docket No. CP16-21-000
Northeast Energy Direct Pipeline)

MOTION TO INTERVENE OF: Christopher A. Myers, 52 Maple St. Shelburne Falls, MA 01370; e-mail:
camyers_1@verizon.net

IN OPPOSITION TO NORTHEAST ENERGY DIRECT PIPELINE

Pursuant to Rule 214 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 C.F.R. §385.214, I, Christopher A. Myers, file this Motion to Intervene in the above-captioned proceeding.

I, Christopher A. Myers, oppose the project because I am the emergency management director appointed by the Town of Shelburne, and have concerns about the risks inherent in the pipeline that were not spelled out in the intervenor filing submitted by the Town of Shelburne. I seek party status to protest the proposed pipeline, and fully protect my ability to function as emergency management director.

I. STATEMENT OF INTEREST

A. Description of Christopher A. Myers

Nearly four years ago I was appointed emergency management director by the Selectboard of the Town of Shelburne, MA. The appointment was made following the year 2011 when Massachusetts was hit with four major disasters, where the President declared federal relief was appropriate. One of those disasters, Tropical Storm Irene, hit Shelburne directly, and two of the others were close.

The appointment came with no written job description, and only a small stipend, now around \$300, and a small budget of around \$1,000, most of which is used to pay for two telephone lines at the Shelburne Fire Station, where the town has its emergency operations center, when needed.

The training I have received has been provided mostly through the efforts of the state's emergency management agency (MEMA), the county regional emergency planning committee (REPC), and the Western Region Homeland Security Advisory Council (WRHSAC).

Through several grant applications I have written, I have succeeded in improving the material resources available to the town for emergency response. Money for these grants was provided by FEMA and channeled through MEMA

B. Description of Impacts

I, Christopher A. Myers, will be directly impacted and harmed by the proposed project as follows:

At a meeting on the same day the Shelburne selectboard approved the town's intervention motion, I found out that MEMA now faces substantial budget cuts. As the Vermont Yankee nuclear generating plant, in nearby Vernon, VT is shut down, its owner, Entergy, is no longer obliged to help fund the state's emergency planning and response agency (MEMA). When the Pilgrim plant, in Plymouth, MA, shuts down in a few years, the funding will be cut even more. The MEMA staff for western Massachusetts is about two thirds what it was 10 years ago, even though during that period Worcester County was added to the area of responsibility. So the major state agency to offer support in a large scale disaster, and provide training resources between disasters, is losing a substantial part of its budget.

About a year ago, the American Red Cross cut its professional staff for Western Mass in half. Similarly, in Franklin County, the Community Emergency Response Team and Medical Reserve Corps have lost most of the members who originally joined up in the last ten years.

Closer to home, local volunteer fire departments and ambulance services are finding it harder to recruit and retain volunteers. The volunteer ambulance service in the neighboring town of Charlemt has been threatened with loss of its certification because it has so frequently been unable to come up with the crew necessary to respond to a call. The town of Rowe recently decided to stop using the Charlemt ambulance service for its first response list, and instead switched to the service provided by North Adams, in Berkshire County. An article in the Greenfield Recorder of 4 January explains the difficulty the Turner's Falls Fire Department is having with recruiting and retaining volunteer firefighters. (<http://www.recorder.com/home/20097487-95/finding-call-firefighters-a-growing-concern-in-county>)

These losses of response capacity come at a time when the Northeast Direct Pipeline proposal brings added risk to the community. While the gas pipeline industry boasts of a relatively good safety record, it still brings risks that our community is not prepared to meet.

The construction of the NED adds to the threats to us, but brings no usable benefit. Unlike the nuclear power industry, the gas and petroleum industry apparently is under no obligation to help fund either state or local emergency response or preparation. So far as I have heard, Kinder Morgan - Tennessee Gas Pipeline has not offered any such funding.

My responsibility to protect the public includes finding a way to deal with fear. People in our community, particularly those living close to the proposed route of the pipeline, talk about a so-called "incineration zone". One person told me she heard that if you live within a thousand feet of a large pipeline, you live in danger of incineration if the pipeline explodes. Others say that the zone extends out to 500 feet, not a thousand. I have no way to know the engineering basis for calculating how far away from a pipeline is safe. Lacking real answers, which Kinder Morgan avoids providing, only aggravates the level of fear.

The lack of concrete data in Kinder Morgan's reports make it more difficult to deal with our community's concerns. Even with the added information Kinder Morgan supplied on 28 December, I still find no detailed information on the techniques to be used for drilling under the Deerfield River. Instead I read that additional information will be supplied in April, 2016.

C. Motion to Intervene Must Be Granted

I, Christopher A. Myers, satisfy the standard for intervention under the Commission's regulations. As discussed above I am directly impacted by the proposed project, and no other individual or organization can adequately represent my unique interest in this proceeding. Further, my intervention is in the public interest because I have responsibilities for the protection of the health and safety of all of its residents of Shelburne. Accordingly, I respectfully request that the Commission grant this Motion to Intervene.

II. CONTACT INFORMATION

The following individual should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

public interest.

III. CONCLUSION

Wherefore, I, give your name, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 4th day of January, 2016.

20160105-5207

UNITED STATES OF AMERICA
BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC)
A Division of Kinder Morgan) Docket No. CP16-21-000
Northeast Energy Direct Project)

MOTION TO INTERVENE AND OPPOSITION OF GERALD D'AVOLIO, JR. of DRACUT, MASSACHUSETTS

I, Gerald D'Avolio, Jr., hereby move, pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("FERC" or "Commission") Rules of Practice and Procedure, 18 C.F.R. §385.212 and 18 C.F.R. §385.214, to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan").

On November 20, 2015, the Company filed its application under §7 of the Natural Gas Act, 15 U.S.C. §717(t) and §157 of FERC's Regulations, 18 C.F.R. §157.1 et seq., for the proposed NED Project, FERC Docket No. CPI6-21-000.

I. STANDING TO INTERVENE

I believe I have standing to intervene because my three children (ages 9, 7, and 4), my wife and I reside at 87 Dadak Drive, Dracut, Massachusetts. Additionally, my children attend school in Dracut, Massachusetts. We are interested parties and are directly impacted by the proposed compressor station and pipeline.

II. REASONS FOR INTERVENING AND OPPOSING THE PROJECT

I am intervening because of the detrimental impact on the health and safety of my family and me, the families in my neighborhood, and the environment as a whole, including harm to waterways, animal life, crops and soil, increased noise pollution, and diminished air quality that the proposed compressor station and pipeline poses.

I am further intervening because there has been insufficient research and studies conducted concerning the detrimental impact a compressor station and pipeline will have on the environment and whether there is sufficient need for gas expansion in Massachusetts.

I am further intervening because of Kinder Morgan's failure to provide notice to me and others who are within the proximity of those who should have received notice of the proposal from Kinder Morgan or a related entity.

A. IMPACT ON HEALTH AND SAFETY

My family and I are personally impacted by the construction of the proposed compressor station and pipeline with respect to our health and safety. The neighborhood, in which I live, and the surrounding neighborhoods are also impacted by the NED Project. Further, the compressor station and the pipeline will have adverse environmental impact on the waterways, animal life, crops and land protected by municipal, state and federal laws.

The compressor station is proposed to be built within 1500 feet of my home, in addition to the proposed construction of a new 30 inch pipeline running near my home and my children's school. There are known health hazards resulting from the toxins emitted from such compressor stations which include but are not limited to: chronic dizziness, headaches, nosebleeds, sore throat and an elevated risk of certain cancers. Emission of such harmful toxins from the compressor station will cause detriment to our health. Further, catastrophe would result from an explosion at the compressor station.

My family and I live at what is now being called "Ground Zero" of the proposed compressor station and within the "incineration corridor" if there is an explosion. Within my neighborhood, there are more than 17 children under the age of 10 (and over 20 minor children in total) living within approximately 1500 feet of the compressor station - those numbers merely account for my neighborhood and doesn't consider the other newly developed and preexisting neighborhoods similarly situated with minor children numbering in the hundreds. If there is an explosion at the compressor station, it will cause harm and death.

Specifically pertaining to the compressor station, there is concern of the "blow-down" cycles which can last for hours which release methane (a green house gas that is approximately 30 times for potent than CO₂) into the air which quickly turns into formaldehyde (a carcinogen) when it reacts with the sunlight. It is also known that these "blow-downs" release many other cancer causing chemicals, including but not limited to benzene and toluene. Furthermore, the "blowdown" noise levels are not regulated by the EPA, and can range from 90 - 120 decibels. Upon information and belief, Kinder Morgan has requested permits to allow for at least seventy (70) "blow-downs" per year for each unit.

Upon information and belief, the Town of Dracut has insufficient first responders to react to an incident at either a compressor station or the pipeline. Further, the Town of Dracut has insufficient funds to maintain the integrity and safety of the compressor station or the pipeline.

This proposed Project causes me great emotional distress and alarm - for my family's and my health and wellbeing.

B. INADEQUATE RESEARCH AND FINDINGS REGARDING ENVIRONMENTAL IMPACT AND ALTERNATIVE SITES

There has been woefully inadequate research and study of the environmental impact that will be sustained by the residents of Dracut and the environment.

Upon information and belief, the Town of Dracut has commissioned an independent third party consulting firm to determine the environmental impact upon the air, soil, water, human and animal life.

Upon information and belief, neither Kinder Morgan nor any other related entity has conducted studies sufficient to determine the environmental impact of the proposed compressor station and pipeline.

Massachusetts Attorney General, Maura Healey, commissioned a study which produced findings stating that there is not a need to expand interstate natural gas pipeline capacity and that reliability can and will be maintained over time.

Upon information and belief, there have been studies conducted regarding alternative routes and sites for the NED Project in less densely populated areas and where the environmental impact would be less severe, regarding water and soil contamination and other related harm.

C. FAILURE TO PROVIDE NOTICE

Upon information and belief Kinder Morgan is required to provide notice to affected landowners. Kinder Morgan has failed to comply with that duty to notify me and my neighbors as we are affected landowners whom are in such close proximity to the compressor station and whom will be severely negatively impacted if the project moves forward as proposed.

Upon information and belief Kinder Morgan is requesting an exemption regarding their failure to provide adequate notice of their project to the potentially affected landowners directly impacted.

Kinder Morgan is a sophisticated large corporation with legal counsel that should be held accountable to the rules and regulations of the application and notice process. Kinder Morgan either chose not to follow the notice requirements or was grossly negligent in its failure to follow the notice requirements. In either case, Kinder Morgan should be required to re- file the application ab initio and provide sufficient notice to all potentially affected landowners.

III. PRAYER FOR RELIEF

I respectfully request the following:

1. that the Commission grant my Motion to Intervene and Opposition,
2. that the Commission deny Kinder Morgan's application for the foregoing reasons and require Kinder Morgan, if they choose to move forward, to resubmit the application ab initio and provide notice to all the potentially affected landowners,
3. that the Commission require Kinder Morgan to commission, conduct and complete sufficient independent third party studies into the environmental impact of the NED Project, and related compressor station and pipeline in Dracut Massachusetts, and
4. that the Commission require Kinder Morgan to establish a fund with monies sufficient to compensate those adversely affected by the NED Project, including funds for those affected by the compressor station and pipeline in Dracut Massachusetts.

IV. CONCLUSION

For the foregoing reasons, I am opposed to the NED Project and respectfully request that the Commission allow this Motion to Intervene and Opposition and the other relief requested.

Respectfully submitted this 4th day of January 2016,

Basis for Intervening:

I am a landowner and a resident of a cooperative community in the fertile agricultural Pioneer Valley, a major breadbasket and market supplier for citizens and businesses as far away as New York City. The many health dangers from methane exposure and water pollution concern me personally and on behalf of these many local farms, but I oppose this pipeline on behalf of all humankind, all future generations endangered to satisfy the commercial interests of a few.

20160105-5211

Martha Morgan
marthasnowmorgan@gmail.com
593 Erickson Road
Ashby, MA 01431

I am a landowner adjacent to a proposed route. I am concerned about my safety, and I'm concerned that my private drinking well will be damaged by the proposed blasting. I also drive through an incineration zone on my way to work and am concerned about safety on that road, and the disruption to my life in general regarding this pipeline.

Basis for Intervening:

I oppose the proposed pipeline: I object to it as an electric ratepayer, a taxpayer, a neighbor and visitor to protected public land in Massachusetts. It would imperil our food, water, and air.

I object to it as both a scientist and an individual deeply concerned about climate change and the large-scale extraction, combustion and release of natural gas into the atmosphere, which directly affects all beings on this planet.

Basis for Intervening:

I live in Warwick, MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I take walks through the area that will be affected by the pipeline in order to enjoy the unique habitats of both flora and fauna. All of this will be destroyed by the NED project. Also, I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

Individual amcn33@gmail.com

Basis for Intervening:

I am filing to urge FERC to reject this application.

As a resident of Western Massachusetts, I have many stakes in this decision:

- I live here and value the purity of the land, air and water;
- I buy fruits from Clarkdale Farm and vegetables from other farmers in the path of the pipeline;
- I hike the hills and valleys of Deerfield and other towns in the path;
- I am a Quaker associated with Woolman Hill Quaker Retreat;
- I am a taxpayer and homeowner.

It is important to have adequate energy supplies but it is also important not to build excessive capacity and ship our energy supplies overseas. The pipeline is excessive, wasteful, and harmful to our environment. It is not the path to the future.

Individual Cwalling@alum.bu.edu

Basis for Intervening:

I live in Rindge, NH and as a landowner am directly affected by the proposed NED pipeline. I wish to file a motion to intervene because I oppose this pipeline proposal. There are no reasonable benefits for this pipeline and the State of NH does not need this pipeline under any circumstances. Kinder Morgan has not made a good case to warrant approval of this pipeline.

20160105-5219

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
Northeast Energy Direct Pipeline Project

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, Caroline J. DAgostino, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Caroline J. DAgostino
52 Cart Path RD, Dracut, MA 01826
603-686-6285
carayres@hotmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me, my family, our home and our neighborhood. The proposed pipeline will run directly behind our house and land, along an existing energy corridor. However, there is currently a forest at the edge of the existing corridor (about 200 feet and visible from my home) that will be permanently destroyed by construction of the pipeline and the associated required buffer. Additionally, the planned metering station will be in direct view from my house, which is currently natural woodland.

Our family uses the forest area for many types of recreation right now, which will no longer be possible once the pipeline destroys it. We use the area for hiking, snowshoeing, four-wheeling, running, and viewing wildlife. Many families in our neighborhood (and many outside it) come to enjoy the trails for hiking and four-wheeling or riding dirt bikes. The forest is currently home to wild turkeys, beavers, coyotes, ground-hogs, hawks, deer, and numerous other types of animals and birds. Many of these creatures will be homeless once the construction of the pipeline destroys their homes and food sources. The pipeline is proposed to travel across existing farmlands (our neighbors) and destroy fields that they have created and harvest every year. The pipeline’s metering station (to be built directly behind my house) will ultimately turn what is a natural area into an industrial area. In addition to all the negative affects above, it will reduce our property values as where we now see a forest would be an industrial complex that will require maintenance, personnel and vehicles on a regular basis. The proposed pipeline and its associated construction, operation and maintenance will be detrimental to our family, home, neighborhood, town and state.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Caroline J. DAgostino, respectfully request that the Commission grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this fifth day of January, 2016.

Caroline J. DAgostino

Basis for Intervening:

I am a resident of Conway, MA and am close to the proposed Blowdown Valve on Shelburne Falls Rd. This pipeline project is not one I am comfortable with for many reasons including the impact it will have on the wildlife, forests, rivers, the destruction of the rural landscape in many of the towns it will be going through, the health/safety risks that come along with the project, the disruption for the community members that have helped preserve open space in Western, MA. Just because the population density in these towns is less than "in the city" doesn't mean we should disrupt the beauty we have here. I also feel there are 'greener' options the government/state/independent businesses should be implementing that are not so harmful to our environment. The need for this pipeline is one I question whole heartedly after reading all the materials.

Basis for Intervening:

I oppose the NED Kinder Morgan Pipeline Project. As an affected homeowner residing within a half mile of the proposed 41,000 gallon compressor station this project would adversely impact my property value. Documented studies show this to be true. Such as the 2014 Fremont Center NY study by a certified real estate appraiser that determined homes close to a compressor station will be reduced by 25% to 50% value. This substantial value loss is prior to the inevitable air and well water pollutants that will also affect my property rendering it worthless. Who will be held legally and financially accountable for our loss of property value as well as the increased health risks. A few of these health risks have recently been presented by a Doctor from Boston's Children's Hospital to NH Governor Maggie Hassan.

Basis for Intervening:

I am a resident of Conway, Massachusetts who opposes the proposed NED Pipeline for a number of reasons.
1. At a time when our nation and the world are endeavoring to reduce the use of fossil fuels the is pipeline would add to the regions dependency on fracked natural gas. We should be spending our money and efforts developing alternative energy sources.

2.As a member of the Franklin Land Trust Board of Directors I have spent years working to improve and protect the quality of our environment by protecting open space. The route of the proposed pipeline through "protected" Public and private land is both unconstitutional and immoral.

3. The taking of Public and private lands for the pipeline is a misuse of the concept of eminent domain. Eminent domain is intended to be used for the “general good” of citizens and not for private corporate profit. The residents of Franklin County will receive no benefit from the pipeline.

4. The potential damage to our environment from the construction and operation of this pipeline must not be allowed. Air and water quality will undoubtedly be impacted by this pipeline and will have a devastating effect on our health, farms and lives.

Basis for Intervening:

The Plainfield Massachusetts Conservation Commission is intervening in order to uphold and administer the Massachusetts Wetlands Protection Act, Massachusetts General Laws, Chapter 131, Section 40 and the Rivers Protection Act. The Commission will also intervene regarding a significant number of natural resources not referenced in Docket CP16-21. The commissioners have walked the entire length of the proposed NED pipeline route and are well acquainted with potentially impacted waterways, which include a number of cold water streams protected by large tracts of un-fragmented forests. These waterways are classified as “Cold Water Fisheries Resources” by the MA Department of Environmental Protection and are headwaters of tributaries to three watersheds and to the National Wild and Scenic Westfield River. Also under the Commission’s purview are lands under State Constitution Article 97 protection: the 1000 acre Audubon West Mountain Sanctuary, a unique natural wilderness, and a 300 acre farm which is encumbered by an Agricultural Protection Restriction easement. The Commission will also intervene regarding “Priority Habitats of Rare Species” and “Estimated Habitats of Rare Species,” (MA Natural Heritage and Endangered Species Program [“NHESP”]) and Biomap II “Core Habitats” and “Critical Natural Landscapes,” (NHESP and MA Division of Fisheries and Wildlife).

I am intervening as a resident of Peabody, MA, who is directly impacted by this project.

20160105-5230

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

MOTION TO INTERVENE OF

Kathy McGhee

I hereby move, pursuant to 18 C.F. § 385.21(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project: or the NED Project”), a subsidiary of Kinder Morgan, INC. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Kathy McGhee
237 Hayden Road
Hollis, NH 03049
603-465-2033
kmcghee257@gmail.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. 214(b)(2)(ii) include:

1. I am a landowner and resident of Hollis, NH. The NED route has changed several times since I first became aware of the project. My original concern arose from the prospect of the blasting that would be required to lay pipe on a hillside near my property that is known to be ledge rock. All Hollis residents rely on private wells for drinking water and the NED project could effect my water supply or those of my neighbors and/or agricultural land owners - who supply our food. Although the route has changed, alternatives are being considered that encroach further back into Hollis and Brookline, and I want to preserve my rights as an intervenor.

2. I chaired a task-force for the Town of Hollis when the initial NED pipeline route was moving through northern Massachusetts with the Nashua Lateral bisecting the entire community of Hollis from the southeastern corner to the northwest tip. In that capacity, I reviewed route changes and examined environmental impacts, regional energy policy, and claims made on behalf of Kinder Morgan/Tennessee Gas Company regarding need. I currently serve on the Energy Facility Advisory Committee of the Nashua Regional Planning Commission on behalf of the Town of Hollis. In both roles, research has shown the primary evidence of ‘need’ for this pipeline comes from TGP/Kinder Morgan and those it lobbies. I oppose this pipeline because it represents the wrong solution to winter reliability and imposes negative effect on the regions’ longterm energy decisions. Imposing NED on the region is like killing a mosquito with an anvil (the Massachusetts Attorney General’s Report provides supporting data for this point).

3. As a New Hampshire electricity rate payer, I am opposed to paying a tariff to support ‘new fossil fuel infrastructure’ when US and global efforts to decrease fossil fuel dependence and emissions, run counter to this choice. We have alternatives that do not include increasing the region’s 52% electric grid dependence on gas to a near monopoly (86% gas fired electric grid with the current course). New Hampshire’s long-term commitment to portfolio diversity has been hijacked by this plan, which calls for ratepayers to make massive investments in a temporary fuel solution. This project takes us backward in terms of emissions goals and will cause other economic impacts to the region from Clean Power Plan penalties to increased environmental havoc, from warming climate. Good for the gas industry; not so good for energy consumers who will have to pay for the ultimate conversion off of this heavy reliance on fossil fuels.

4. I am a member of the public that is referred to in the application for public convenience and necessity. I oppose closing aging nuclear plants that have reliably provided New England with clean electric energy for decades in order to convert them back to dirty, fossil fuel. If we build NED, energy investment dollars will be diverted away from clean energy investments and those that remain will not be enough to make up for the increased emissions - this is hardly convenient for the public. There is no ‘convenience or public necessity’ in asking the public to sanction furtherance of a policy that only serves the industry it profits. We ask for your diligence in recognizing that NED does not meet the burden of a project that serves ‘public convenience or necessity’.

The region can secure needed gas from existing pipeline sources and the public will benefit if we avoid overbuilding a system that needs to be phased out.

For the foregoing reasons, and others that are reflected in the many, many intervenor filings on this docket, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Kathy McGhee

Basis for Intervening:

As a property owner and resident of Dracut Massachusetts. My home at 107 Lexington Rd, lot 51-0-228, though not directly adjacent to the current proposed pipeline path or the current proposed Compressor station, is most directly impacted by the proposed pipeline expansion. Additionally, there are existing pipelines located within 1/2 mile of my home, and the site of the proposed Haverhill line expansion is less than 1 mile away.

The current path for the Kinder Morgan proposed pipeline directly abuts recreational open spaces that I frequent and is very close to other conservation and recreational areas actively used by town residents. Furthermore, I am concerned about the following aspects of this project:

- 1) blowdown noise and gas emissions from the proposed Dracut compressor station on Broadway Road;
- 2) the impacts that construction would have on property values in Dracut and the residential tax base which supports the town;
- 3) the proximity of the proposed pipeline to the active Brox Industries quarry;
- 4) the potential contamination of wells due to the proposed construction of the Market Path tail compressor station on 2 contaminated sites (see MA DEP Release Tracking Numbers 3-0000307 and 3-0001070), including wells that support farming and help preserve the rural character of Dracut.”;
- 5) increased light pollution;
- 6) increased noise pollution;
- 7) impact on local and migratory wildlife;
- 8) impact to local property values;
- 9) safety concerns if a pipe ruptures or the compressor station is damaged;

20160105-5235

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC)

Docket No. CP16-21-000

MOTION TO INTERVENE OF GEORGE JEPSEN, ATTORNEY GENERAL FOR THE STATE OF CONNECTICUT

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's (the "Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, George Jepsen, Attorney General for the State of Connecticut ("CTAG" or "Attorney General"), hereby moves to intervene as a full party in the above-captioned proceedings.

I. MOTION TO INTERVENE

The CTAG is an elected Constitutional official and the chief legal officer of the State of Connecticut. Among the CTAG's responsibilities are interventions in various types of proceedings to protect the State, the public interest and the people of the State of Connecticut, and assuring the enforcement of a variety of laws of the State of Connecticut, including Connecticut's Unfair Trade Practices Act and Antitrust Act, so as to promote the benefits of competition and to assure the protection of Connecticut's consumers from anti-competitive abuses. The CTAG's request for leave to intervene in these proceedings is in furtherance of these overall responsibilities.¹

The CTAG seeks to intervene in this proceeding to represent the interests of the State of Connecticut and the people of the State of Connecticut. On November 19, 2016, the Tennessee Gas Pipeline Company, LLC, filed with the Commission an application for a certificate of public convenience and necessity to construct and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, to be referred as the Northeast Energy Direct Project ("NED Project"). Application, 1. This Application, if approved, will have a direct impact on the regional and local prices both for natural gas and the prices paid by Connecticut electricity consumers.

As the public official charged with responsibility to represent the State, the public interest and the people of the State of Connecticut with respect to such matters insofar as they affect the gas and electric industries, as well as gas and electric consumers in Connecticut, the CTAG's interests in this matter are direct and substantial, and no other party can represent adequately those interests. For these reasons, the CTAG should be granted leave to intervene in this proceeding with full rights as a party.

II. PLEADINGS AND OTHER COMMUNICATIONS

Service of all documents should be addressed to the following persons whose names and addresses should be placed on the official service list compiled by the Secretary for this proceeding:

John S. Wright
Assistant Attorney
10 Franklin Square
New Britain, CT 06051
Tel: (860) 827-2684
Fax: (860) 827-2893
john.wright@ct.gov

Michael C. Wertheimer
General Assistant Attorney General
10 Franklin Square
New Britain, CT 06051
Tel: (860) 827-2603
Fax: (860) 827-2893
michael.wertheimer@ct.gov

IV. CONCLUSION

WHEREFORE, the CTAG respectfully request that the Commission grant the CTAG's motion to intervene.
Respectfully submitted,

GEORGE JEPSEN
ATTORNEY GENERAL FOR THE
STATE OF CONNECTICUT,

By: John S. Wright
Michael C. Wertheimer
Assistant Attorneys General,
Attorney General's Office

10 Franklin Square
New Britain, CT 06051
Phone: 860-827-2620
Fax: 860-827-2893

Dated: January 5, 2016

Footnote:

¹ The CTAG has previously initiated or intervened in a number of recent FERC proceedings addressing important policy issues affecting the electric industry and electric ratepayers in Connecticut and New England. These proceedings include FERC Docket Nos: ER-13-185, ISO New England, Inc.; EL-13-033; Environment Northeast, et al. v. Bangor Hydro-Electric Company, et al.; ER12-1455, ISO New England, Inc.; ER12-953, ISO New England, Inc.; EL11-66, Martha Coakley, Massachusetts Attorney General, et al. v. Bangor Hydro-Electric Company, et al.; IN12-007, Constellation Energy Commodities Group, Inc.; ER11-1943, ISO New England, Inc.; RM11-026, Promoting Transmission Investment Through Pricing Reform EL11-20, PJM Power Providers Group v. PJM Interconnection LLC; ER10-902, ISO New England Inc. and New England Power Pool; ER10-787, ISO New England Inc. and New England Power Pool Participants Committee; EL10-50, New England Power Generators Association v. ISO New England Inc.; EL09-47, Richard Blumenthal v. ISO New England, Inc.; ER09-1051, ISO New England Inc. and New England Power Pool; ER09-197, ISO New England, Inc.

CERTIFICATE OF SERVICE

I, John S. Wright, hereby certify that on this day I caused the foregoing to be served upon all parties identified on this agency's service list for this proceeding.

John S. Wright

Basis for Intervening:

My family & I live just outside of the "incineration zone" for the proposed compressor station. We are concerned about our health & the health of our lake (Burden Lake) and surrounding land. My daughter is asthmatic and would be directly impacted from the air pollution. There is nothing beneficial about the pipeline or compressor station to our community. Pollution, noise and reduction in our property values are of great concern. We oppose everything this project proposes.

Basis for Intervening:

We own land in Northfield Massachusetts where we built a passive solar house in 1981. Over the years we have added more insulation and enough solar panels to generate all the electricity we use allowing us to greatly reduce our carbon footprint. We grow vegetables almost all year long using hoop tunnel technology as well as sustainably harvesting firewood from our land to help heat our home. It is important to us to live a low carbon lifestyle because we are very concerned about the impacts of climate change and feel very personally threatened by the Northeast Energy Direct (NED) project as well as any expansion of fossil fuel infrastructure. The science is clear, we must rapidly transition away from fossil fuels toward a renewable energy civilization if we hope to maintain a healthy biosphere for all life on this planet.

Our property is less than a mile from the proposed pipeline route and less than 2 miles from the proposed compressor station. I am also a long time maintenance volunteer for the New England Scenic Trail (NEST) which runs through about 500 feet of our property and I also build and maintain local trails that “spur” off the NEST. For years, I have lead hikes on these trail systems for area groups and visitors alike. The proposed NED pipeline and compressor station are located in the heart of these trail systems, crossing them at least twice. If this for profit, commercial project is built, with the resulting clear cutting of forest, toxic emissions, noise and light pollution, we believe it will destroy the natural beauty and mountain ecosystems that make this such a special place to live and hike. We made a conscious decision to live in this area for the clean air, clean water and general sense of peace that comes from living within the natural world. Our way of life is now threatened by this project. Therefore we, Robert and Susan Pasteris, request that the Commission grant our Motion to Intervene.

Basis for Intervening:

I am a psychologist and serve on the board of directors for Mount Grace Land Conservation Trust. I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. As a psychologist, I am concerned about the light and sound pollution of the compressor station which will be visible in my community. As a member of the board of directors of Mount Grace, I believe the purpose of the land trusts we are protecting would be violated if the project is allowed to take easements over land that is meant to be protected forever.

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”).

As a resident of the town of Wilmington Massachusetts, I oppose Docket number for Northeast Energy Direct – #CP16-21-000. Despite concerns that I and local residents has stated to Kinder Morgan, there is still a significant negative impact to the town’s water supply. Kinder Morgan has provided no plan to deal with the eventual impact of drinking water contamination. I also object to a private business attempting to use eminent domain laws to take public land for private profit.

Basis for Intervening:

I'm affected by the construction of this pipeline, both as a resident of Massachusetts and the United States. Beyond the direct environmental concerns related to fracking in general and the transport of fracked gas, the larger long-term affects of the expanded use of fossil fuels as they apply to global warming, are significant. I strongly oppose any expansion of existing infrastructure as it relates to fossil fuels, and especially as it relates to fracking for natural gas.

Basis for Intervening:

I live in Lunenburg, MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because...

- I am a landowner directly impacted by the pipeline route
- I am a landowner who would have my property seized by eminent domain.
- I am a resident who lives in the "blast radius" so I would be at physical risk.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline.
- I am a member of an impacted community who has concerns about various impacts to the local economy/

environment/aesthetics/health/etc.

- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

20160105-5262

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
Northeast Energy Direct Project

Docket Number CP16-21-000

**MOTION TO INTERVENE
OF
MASSACHUSETTS ASSOCIATION OF CONSERVATION COMMISSIONS**

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (FERC), promulgated at 18 C.F.R. § 385.212 and 385.214, respectively, the Massachusetts Association of Conservation Commissions (MACC) hereby moves to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC, (TGP) filed with FERC an application for a certificate of public convenience and necessity (CPCN) for its proposed Northeast Energy Direct interstate gas pipeline project (NED) pursuant to subsections 7(b) and (c) of the Natural Gas Act (NGA). On December 7, 2015, FERC issued a Notice of Application for TGP's CPCN application and set a January 6, 2016, deadline for motions to intervene in this proceeding. On January 4, 2016, FERC extended the deadline for motions to intervene in this proceeding to January 15, 2016.

The so-called market path for NED would result in construction of a 188-mile, 30-inch pipeline designed to deliver up to 1.3 billion cubic feet per day of natural gas from Wright, New York, to Dracut, Massachusetts, where it would connect to an existing pipeline that could send the natural gas north through New Hampshire and Maine to Canada. As proposed by TGP, 64 miles of the pipeline would be located in Massachusetts, as would many new miles of lateral delivery pipelines and new compressor stations.

Statement of Interest and Grounds for Intervention

MACC, a non-profit corporation formed in 1961 and incorporated in 1978, is the professional association of Massachusetts conservation commissions. Pursuant to G.L. c. 40, § 8C, each of the 351 cities and towns in Massachusetts has established a conservation commission, and almost every conservation commission is a dues-paying voting member of MACC. More than 2,000 conservation commissioners are members of MACC. MACC's mission is to protect Massachusetts natural resources by supporting conservation commissions through education and advocacy.

Each Massachusetts conservation commission is an integral part of its municipal government. Notably, conservation commissions administer and enforce the Massachusetts Wetlands Protection Act (G.L. c.131, § 40) and municipal wetlands laws and regulations. Most projects in or near wetlands require filing an application (Notice of Intent) with the municipal conservation commission for a permit (Order of Conditions) before work can be performed within areas subject to the commission's jurisdiction. TGP has acknowledged in its filings with FERC that TGP will need to seek Orders of Conditions for the construction of the pipeline.

In addition to their regulatory authority, many conservation commissions own or manage municipally-owned conservation lands or conservation restrictions (easements) over other private properties through which the pipeline might pass. Thus, conservation commissions have property interests that may be directly affected by the NED project.

MACC has been advising conservation commissions on NED during the pre-filing period, and will continue that role during this proceeding. MACC held meetings along the proposed pipeline route for conservation commissions to discuss their roles implementing the Wetlands Protection Act and local wetland laws and as owners and managers of conservation lands that may be affected by NED. It held a workshop at its Annual Environmental Conference 2015 on NED and will hold another workshop on conservation commissions and natural gas pipelines at its Annual Environmental Conference in 2016. It provides NED updates and advice to conservation commissions in emails and publications.

MACC's mission also includes protecting natural resources throughout Massachusetts. In that regard, its interests include assuring that NED does minimal or no harm to wetlands and conservation lands, appropriate mitigation is achieved for any ecological impacts of NED, and that the need for NED (If any) is compared to other alternatives and to the potential environmental damages NED might cause. Consequently, MACC has already been active in reviewing and commenting on TGP's pre-filing submissions. MACC wrote to FERC on February 6, 2015, pointing out serious methodological flaws in the alternatives analysis included in TGP's November 2014 Resource Report 10 and recommending how an environmental assessment of NED might be done. On July 2, 2015, MACC wrote to FERC, requesting a postponement of scoping sessions and an extension of the deadline to submit scoping comments under the National Environmental Policy Act (NEPA). On October 15, 2015, MACC filed detailed and extensive scoping comments responding to the Notice of Intent to Prepare an Environmental Impact Statement for NED. TGP's filings with FERC since then have not responded to most of the issues MACC identified in its scoping comments, raising concern about TGP's understanding or willingness to perform the analyses necessary under NEPA.

MACC has a direct and substantial interest in this proceeding. MACC brings to this proceeding a unique combination of experience protecting wetlands and open space by working with and supporting conservation commissions in their roles implementing the Massachusetts Wetlands Protection Act and local wetlands laws and as owners and managers of conservation lands. If MACC is not permitted to intervene as a party to this proceeding, its unique interests will not be represented adequately by other parties, and MACC and its members may be adversely affected by the actions, determinations, and decisions in this proceeding without an adequate opportunity to participate and be heard.

Service and Contact Information

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual, whose name, address, and email should be placed on the official service list maintained by the Secretary in this proceeding:

Eugene B. Benson, Executive Director
Massachusetts Association of Conservation Commissions
10 Juniper Road
Belmont, MA 02478
Telephone: 617-489-3930
Email: eugene.benson@maccweb.org

Conclusion

Wherefore, for the reasons stated herein, MACC respectfully requests that its Motion to Intervene be granted and that it be granted the right to participate fully in this proceeding.

Respectfully Submitted,

Eugene B. Benson, Executive Director
Massachusetts Association of Conservation Commissions
10 Juniper Road
Belmont, MA 02478
Telephone: 617-489-3930
Email: eugene.benson@maccweb.org

Certificate of Service

I hereby certify that on this date this Motion to Intervene was served electronically on the parties as set forth in FERC regulations.

Dated: January 5, 2016

Eugene B. Benson, Executive Director
Massachusetts Association of Conservation Commissions
10 Juniper Road
Belmont, MA 02478
Telephone: 617-489-3930

20160105-5266

Nashoba Conservation Trust

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company LLC

Docket No. CP16-21-000

MOTION TO INTERVENE OF NASHOBA CONSERVATION TRUST, INC.

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”) promulgated at 18 C.F.R. § 382.212 and § 385.214, Nashoba Conservation Trust, Inc. files this Motion to Intervene in the above-captioned proceeding.

Nashoba Conservation Trust, Inc. (NCT) is a non-profit organization dedicated to conserving and protecting open space in Pepperell, MA. NCT stewards over 400 acres of land and water resources for the benefit of wildlife and the enjoyment of the public.

NCT, as a landowner, may be directly affected by the proposed pipeline project. The originally proposed route, and other proposed alternatives set forth in Tennessee Gas Pipeline LLC’s filings on this docket, would directly impact land owned, managed and protected by NCT.

NCT holds conservation restrictions on other properties in Pepperell, MA that would be impacted, should project alignment or associated infrastructure components shift as project plans develop.

NCT has assisted other private, non-profit land trusts, as well as state and municipal conservation agencies on land protection projects. NCT’s resource investments would be impacted if the intended permanent protection of such lands is altered by the project.

The disposition of land owned by NCT, or any other properties protected under Article 97 of the Amendments to the Massachusetts Constitution, for pipeline easements, or other commercial or industrial uses, could send a detrimental message to donors and benefactors of future conservation lands, thus imperiling the ability of NCT to fulfill its mission.

NCT’s interests cannot be adequately represented or protected by another party.

The following individual is designated for service for the proceeding:

Kenneth Hartlage
c/o Nashoba Conservation Trust
PO Box 188
Pepperell MA 01463
kheartlage@mac.com

Wherefore, Nashoba Conservation Trust, Inc. requests that the Commission accept this filing and grant its motion to intervene.

Respectfully submitted,
Kenneth Hartlage
President
Nashoba Conservation Trust, Inc.
PO Box 188
Pepperell MA 01463

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	jlharrkins@gmail.com	

Basis for Intervening:

My interests “which may be directly affected by the outcome of the proceeding” include:

o My interest as an electric ratepayer. Kinder Morgan seeks to secure my electric utility as a project shipper, which, in turn, would seek to recover costs associated with the project from ratepayers. This is not money I should be required to spend: it boosts the company’s income at my expense for a project that will not benefit me.

o My interest as a natural gas consumer. As I have invested in upgrading the insulation of my house, and in a high-efficiency furnace, kept my thermostat and my hot water usage low, I don’t feel the need for lower gas rates, nor do I want to pay for gas from a company which has demonstrated its commitment to ignoring the concerns of the communities it affects so strongly. Since the company is demonstrably more interested in its own profits than in any benefit to the wider community, it seems most likely that any projected lowering of energy costs would not materialize; and since there are profitable markets overseas, the disruption and expense to us would then be going toward financing the export of energy resources to other countries.

o My interest as a human being living on this planet. We need far more urgently to invest in energy resources that do not further disrupt the global energy balance. It is clear that fossil fuel use has played and will continue to play a substantial role in driving more extreme weather, which leads to immensely expensive cleanup costs, the disruption of lives, homes, communities, livelihoods and businesses, and which is costing an increasing number of people their lives.

o My interest as a hiker and wildlife observer. All my life I have had a passion for wild places, for enjoying their quiet beauty and for observing the interconnected living systems in undisturbed form. It is clear from surveys that some 90% of the population, even if they never go to wild places, would like to see them protected and preserved: see <http://www.ajelp.com/articles/why-we-should-protect-natural-areas/>.

o My interest as an amateur astronomer. Light pollution drowns out the beauty of the night skies, and whether or not any given individual cares, it is a wrong to many that the wonders of the sky are inaccessible to most people. The pipeline would add substantially to the light pollution in Western Massachusetts, a region which draws people from many areas for the sake of its dark skies.

o My interest as a member of Massachusetts Audubon and of the Trustees of the Reservations.

Kinder Morgan’s track record shows me no evidence of its willingness or ability to act from responsible regard for the interests of the people whose lives are materially affected by their for-profit business activities. Fines are not a sufficient recompense for what Kinder Morgan has shown it is willing to visit on communities.

I do not want to spend the rest of my life paying for, and living with, the results of the kind of environmentally and socially destructive business practices they engage in.

RE: Docket No. CP16-21-000
Federal Energy Regulatory Commission
Tennessee Gas Pipeline Co. – NED Project

Motion to Intervene

In 2008 my husband and I purchased a beautiful farmhouse in Ashfield, MA that has been in our family since it was completed in 1912. It is located on 52 acres of land, the lower part of which is on Baptist Corner Rd. , the upper part of which would run along the ridge above us on Bellus Rd. except for a small sliver of land that was sold to the power company by a previous relative/owner in 1970. We practice sustainable agriculture by growing our own fruits and vegetables naturally, and manage our 12 acre hayfield as much as possible in the same way.

It is on this small sliver of land owned by the power company that TGP (Tennessee Gas Pipeline Co.) has already put up stakes indicating the projected route of the pipeline. While neither the projected route nor much of the permanent easement appear to be on our land, a piece of the temporary easement will be, and the pipeline will be directly adjacent to our property.

As we seek to become more educated through information put out by FERC, Kinder-Morgan and others as to the effects of the pipeline on us, our neighbors, and future generations who will inherit this property, we become more and more concerned and dismayed.

We object to the pipeline for the following reasons:

1. It will devalue our property. An adjacent neighbor lost the sale of her property due to the projected pipeline, as did a neighbor further down the road. While we plan not to sell our property, it is hard to tell what the future holds. We have poured everything we have into this property and with the pipeline next to it we expect the value to plummet. If this happens it will greatly impact us financially as well as the inheritance of our children and grandchildren.
2. Our property is in chapter 61A. We have a forest management plan on the section which will be cut for the temporary easement. This also includes a section of sugar maple trees which are used per agreement with our neighbors for maple syrup production.
3. While TGP has said they will “restore” the area the pipeline goes through, and pictures shown of reseeded and green grass look very pretty, it is totally unrealistic for this area. It will take hundreds of years to restore what will be taken in just a few hours.
 - a) Maple trees take a minimum of 40 years to grow until they are big enough to be tapped, and many of the trees that are cut for timber take a lot longer.
 - b) Both the temporary and permanent easements will take out sections of historic stone walls which are

used for boundary lines. Massachusetts has state laws that protect these walls.

c) Clear cutting land and then reseeding provides fertile ground for an invasive species nightmare. Unless open space is constantly mowed, grazed, or sprayed with harmful herbicides, the invasive species take over. We are already seeking creative ways to deal with this problem on our property and don't need more. I have read that TGP will be responsible to mow 10 feet of the pipeline area once a year, the 50 foot easement every 2-3 years, and the temporary easement reverts back to the landowner. This doesn't even begin to cover the mess we will have to deal with for years to come.

4. It has been stated several times that the pipeline is simply not needed. We are delighted that our relatives had the foresight to situate the house so that the back is south facing, hence making it passive solar and able to reduce our need for fossil fuels in the winter. Many here are totally off the grid and take the idea of "reducing our carbon footprint" seriously. A gas pipe that we don't need running adjacent to our land goes against what we are trying to accomplish environmentally, and discourages people from seeking alternative forms of renewable energy.

5. There are many underground springs on our property which would be impacted if the pipeline were to leak. We are downhill from the pipeline. Water runs downhill. Any contamination will affect our water supply.

6. Any place the pipeline runs through will make it easier for Kinder-Morgan and TGP to access for future projects. If the gas pipeline is abandoned or repurposed in the future, they will be able to restart the process, hence invading the area again and negating any recovery which may have started to take place.

TGP has stated they try to be a "good neighbor". Let's not pretend. Someone who causes property values to lower, takes out stone walls and valuable sugar maple trees and other timber, then goes off and allows invasive species to grow in the area they destroyed is not a good neighbor.

If they really feel this pipeline is needed, it should run in an area where there is already an existing pipeline and infrastructure, not in an area where, while it seems remote, people make their living off their land and take extra measures to be environmentally conscientious.

Please grant us intervenor status for the above stated reasons.

Thank you,

Cynthia and Dennis Mangsen

Docless motion to intervene of Rosemary Riede under docket CP16-21-000.

20160105-5276

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.

Docket No. CP16-21-000

MOTION TO INTERVENE OF LANDOWNER

Now comes the Trustees of Deerfield Academy, (hereinafter known as “Deerfield Academy”), and move to intervene in the approval of the pipeline project as proposed in the above noted caption by the Federal Energy Regulatory Commission pursuant to Commission Rules 385.214(b) and 157.10

Deerfield Academy is a secondary school located in Deerfield, Massachusetts educating approximately 635 high school age students in a residential campus. Deerfield Academy is a Charitable Corporation established under Chapter 62 of the Acts and Resolves of 1796 of the Commonwealth of Massachusetts. It has a paramount responsibility to seek to protect the safety and well-being of its student body, faculty and staff.

Deerfield Academy seeks to intervene both as a land owner whose land is subject to a taking by eminent domain and as an interested Non-Governmental Organization whose interests are likely to be infringed upon because of its close proximity to the proposed pipeline.

Deerfield Academy is an injured party as the envisioned pipeline project has identified five parcels of land owned by Deerfield Academy that are subject to potential eminent domain takings. Portions of each of the five parcels are located within the anticipated rights of way and subject to condemnation if a certificate is granted. The proposed pipeline is also located in close proximity to Deerfield Academy’s 635 students and its approximately 300 employees and presents potential safety and security risks. Nearly 85% of the students reside on Deerfield Academy’s property as well as most faculty members and many of its staff and the families of each. Deerfield Academy also owns one residence which houses a faculty family which is within the current incineration zone boundary. Numerous other parcels including class rooms, dormitories and faculty residences owned by Deerfield Academy are in close proximity to proposed pipeline project. Deerfield Academy submits it is an entity that has a direct interest in the proceeding. This intervention is timely filed.

For more contact information please enter Deerfield Academy below on the official service for docket nos. CP16-21-000 and PF14-22-000, for all pleadings filings and correspondence in the proceeding should be served on the following:

Attorney John J. Stobierski
 Stobierski & Connor
 377 Main Street
 Greenfield, MA 01301
 413-774-2867
 john@stobierski.com

Additionally at least two of the parcels that are subject to eminent domain taking have a high potential of unique archeological value. The attached article published in, “Archeology in America: Encyclopedia” c. 2009 references the archeological significance of Deerfield and Deerfield Academy has reason to believe that the projected route may impact high value sites on its land. Two parcels have been identified to be part of a significant high value archeological resource are where avoidance or remediation may be required. The University of Massachusetts Archeology Department has conducted excavations near Deerfield Academy’s land and stated in its 2006 report that, “(an area subject to condemnation) and the Pocumtuck Range in Deerfield are often identified as possible locations of the Pocumtuck Fort, a seventeenth century fort believed to have been built by the Pocumtuck and destroyed by the Mohawk in 1665 There may have been several fortified places in the Pocumtuck homelands.” Pp. 9-10. The Applicant’s Environmental report dated November, 2015, fails to take note of any potential archeological significant areas on Deerfield Academy’s land and Deerfield Academy seeks to intervene and protect its interests. The Applicant’s Environmental Report lacks the specificity to determine if its property has been surveyed for archeological sites and whether any determinations have been made by the applicant.

Deerfield Academy also is concerned about the risks associated with this pipeline to its students and staff

who may occupy the property both within and outside the incineration zone. Deerfield Academy occasionally uses land within the incineration zone for travel, some athletic activities and for recreational purposes. Deerfield Academy seeks to intervene to monitor the proceeding and address potential impacts on its staff, its students, its property and its educational mission both within and outside the proposed right of way. Deerfield Academy opposes the proposed pipeline as it is currently designed. By intervening in the proceeding, Deerfield Academy will have access to Tennessee Gas Pipeline Company, LLC's filings which will enable the Academy to provide more detailed comments on safety enhancement or alternative routing scenarios. Intervention is necessary to enable Deerfield Academy to check and safeguard its land, including potentially significant archeological sites, its students and its staff and to defend itself from encroachment by Tennessee Gas Pipeline Company, LLC.

At this point Deerfield Academy does not have adequate information to provide a thorough and complete basis for its opposition, but reserves the right to do so in later comments as more information on the right of way boundary emerges, the nature and extent of the historical/archeological significance of its property and the health and safety concerns emerge.

During this proceeding Deerfield Academy may seek to verify that Tennessee Gas Pipeline Company, LLC can locate the proposed Northeast Energy Direct Project within or adjacent to the existing rights-of-way; and, further Deerfield Academy may investigate whether appropriate pre-filing and application protocols were followed.

If Deerfield Academy is not permitted to intervene in this proceeding, it is highly likely to be adversely affected and bound by action taken in this proceeding without having had an opportunity to be heard.

Wherefore, for the foregoing reasons Deerfield Academy respectfully requests that it be permitted to intervene in these proceedings and that it be granted all the rights of a party thereto, including the right to notice of, and to participate in, all hearings and other proceedings.

Respectfully Submitted,
The Trustees of Deerfield Academy,
By Its Attorney,
Isti John J. Stobierski

I am a retired teacher and grandmother who is presently living quietly and well in the hills of Conway MA. From the earth damage and pollution of fracking gas in PA, to the proposed crossing of conserved land - yes - "CONSERVED" land, the disruption of precious wildlife (flora AND fauna), the pollution to our home gardens and our amazing local commercial organic farms, the blowdown valve on the Shelburne Road, the unthinkable undermining of our waterways and watersheds, the possible taking of land by eminent domain for NO good to the general public, the backward thinking of continuing reliance on fossil fuel when we, here, are forwarding our thinking more every day to solar and wind generated energy, to the loss of home and land values, to the absurd idea that we need this gas (none will ever come to Conway), I voice an urgent plea to you to not allow this corporate proposal to be allowed.

I Live in Averill Park NY and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which will be directly affected by the outcome of the proceeding because:

I am a landowner directly impacted by the pipeline route. I would have a portion of my property seized by eminent domain. I live well within in the Blast zone of the pipeline. I run a high risk of my water supply being lost due to construction blasting. I will see a drastic reduction in my property value. I will see limitations in use of my property abutting the pipeline.

Basis for Intervening:

My family and I live in the Town of Nassau, NY, and wish to intervene in this proceeding to oppose the NED pipeline. I have an interest which will most definitely be affected by the outcome of the proceeding, because raising a family in the quiet countryside was the purpose of our having moved out here: to avoid the noise, traffic and pollution of the city. We have resided in Nassau for the past 15 years, and thoroughly enjoy the peace and tranquility we currently find here. If the NED pipeline is approved, there will be constant noise, non-stop vibrations, light pollution, the potential for deadly explosions and harm to the water table and wildlife, not to mention the potential health risks associated with living nearby a compressor station. Our well will be placed at risk, which is our only source of drinking water! There are several other much more intelligent, viable options for the location of this pipeline, should it be decided that the pipeline is necessary at all, which it is NOT! The Massachusetts Attorney General recently filed a statement with FERC that stated that they see no benefit whatsoever to the people of MA for this pipeline to traverse their state, so if MA doesn't want them in their state, WHY would Kinder Morgan continue to pursue coming through Nassau, NY with their pipeline, if they can't go through MA? This pipeline will not benefit the people of the State of New York, nor, more specifically, those of us in the Town of Nassau where the compressor station is proposed. A commercial endeavor to put money in the pockets of the privately-owned, for profit Tennessee Gas corporation billionaires that benefits NO ONE in the local communities or the State of New York, is simply NOT justified. Kinder Morgan (aka Tennessee Gas) wishes to destroy thousands of families lives and priceless miles of serene countryside and wildlife for NO RETURN WHATSOEVER to the people who are subjected to the risks, while they line their already-bulging wallets! We are supposed to be seeking renewable energy sources, and this certainly is NOT one of them. This pipeline is not needed, nor wanted and I urge FERC to reconsider any plans to allow this project to proceed. Thank you.

Basis for Intervening:

I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

20160105-5290

I am against the pipeline expanding into any conservation land in Massachusetts and elsewhere. Article 97 was developed and passed to protect conservation land. Any land legally deemed as conservation land should not have the threat of being developed, for profit by individuals or corporations.

The Attorney General has written a report stating that the gas pipeline infrastructure is not needed in New England and the present system is not being fully utilized. If this does go to court both Kinder Morgan and FERC will have to prove there is a great good being served, which the AG report clearly shows is not true.

Basis for Intervening:

I wish to intervene against the construction of the gas pipeline that Kinder Morgan wants to build through Massachusetts (Docket CP16-21). The proposed route of the pipeline abuts property owned by my parents in Plainfield. This is a rural area which is one of the great environmental reserves of the state. Kinder Morgan has not shown that this pipeline is truly needed, and building the pipeline would forever change the character of the area for no reason. There are other ways to address the energy needs of the state.

Basis for Intervening:

I am a resident of Pelham, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because:

I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery. I live here as I enjoy the outdoors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. Additionally, I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take elements over land that is meant to be protected forever.

20160105-5301

BEFORE THE UNITED STATES
FEDERAL ENERGY REGULATORY COMMISSION

TENNESSEE GAS PIPELINE COMPANY,
LLC, a subsidiary of KINDER MORGAN,
NORTHEAST ENERGY DIRECT PIPELINE

Docket No. CP16-21-000

**MOTION TO INTERVENE OF CYNTHIA M. AND PAUL F. BOUNDY IN
OPPOSITION TO THE NORTHEAST ENERGY DIRECT PIPELINE**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212, 385.214, landowners Cynthia M. and Paul F. Boundy ("Landowners" or "we") file this Motion to Intervene in the above-captioned proceeding. Landowners will be materially and adversely affected by Tennessee Gas Pipeline Company, LLC's Northeast Energy Direct ("NED") Pipeline and intervene in order to oppose this project and to urge the Commission to reject it.

I. STATEMENT OF INTEREST

A. Landowners Will Be Materially Affected by the NED Pipeline.

Landowners own Parcel No. 19.01, commonly known by its street address as 537 Main Street, West Townsend, MA 01474 (the "Property"). The Property is slightly larger than one acre, bordered to the north by Willard Brook, a tributary to the Nashua River and contributing water source to the Nashua River Watershed, to the east by a line of old-growth hickory and maple trees, and to the south by Main Street. In the middle of the land stands a center-chimney, post-and-beam farmhouse that was constructed sometime between 1770 and 1800. The house retains its original hardwood floors, mantels, fireplaces, interior doors, and windows. One closet door features a hand-carving of a woman, titled "Rachel Conant," that dates to the early 1800s. The farmhouse satisfies criteria to be listed for preservation on the National Register of Historic Places. The Property is our primary residence and our single most valuable asset. We purchased it over thirty-years ago, when we were just married and looking for a small town in which to raise our children. Two nearby state parks, Willard Brook State Park and Pearl Hill State Park, offer acres of woods for walking and hiking. The historic charm of our house and natural features of this area are what attracted us to the Property and have kept us here all these years.

According to the Application filed by Tennessee Gas on November 20, 2015, the NED Pipeline will run parallel along our eastern property line and a Valve Station will be constructed approximately halfway down the property line.

B. The NED Pipeline Will Ruin the Value and Natural Beauty of Our Property and the Surrounding Area.

As Landowners and as residents of Townsend, Massachusetts, the NED Pipeline will cause us significant harm.

1. Economic harms.

a. Diminished property value. The NED Pipeline carrying pressurized fracked gas along our Property will severely diminish the value of our Property. The proposed route of the NED Pipeline will also encroach upon our and/or our neighbor's septic systems, causing system failures and the release of raw sewage into the surrounding soil and groundwater. If our system fails, we will be unable to live in our home by law, and our home will be worthless.

Tennessee Gas also proposes to construct a Valve Station halfway down our eastern property line and within the line of sight from our dining and family rooms and our bedroom. The Valve Station will decrease the value of our Property and interfere with our enjoyment of the natural beauty of our backyard.

Indeed, the value of our Property has already diminished, as even the possibility of the NED Pipeline and Valve Station raises severe concerns among potential buyers. Only an unequivocal rejection of the proposed NED Pipeline project by the Commission will preserve the economic value of our Property.

b. Cost of replacing 30 old-growth trees. The construction of the Pipeline will also cause economic harm. Based on the proposed route, we will lose more than 30 old-growth trees to the construction of the Pipeline, which provide privacy and shade for our Property. We also stand to lose a one-hundred-year-old hickory tree in the southeast corner of our Property which provides invaluable character, privacy, and beauty. The cost of replacing these trees will be significant, and of course, it will be impossible to replicate the height and foliage density with younger saplings. In our lifetime, we will not see the trees regain their stature.

c. Loss of land to erosion and flooding. Tennessee Gas proposes routing the NED Pipeline underneath Willard Brook, which forms the northern boundary of our Property. The banks of Willard Brook flood every spring when the water runs high from the melting snow. The NED Pipeline's disruption of the banks of the Brook and the loss to Pipeline construction of our trees, which hold the south bank in place, will cause soil erosion, loss of land, and increased flooding of our Property.

d. Cost of repairing property after construction. When Tennessee Gas built a similar Pipeline through Lunenburg, Massachusetts, a nearby town, residents whose property was impacted by the construction were left with mechanic's liens on their property and "thousands of dollars of repair work" as a "direct result" of Tennessee Gas's project.¹ As the NED Pipeline will run along our eastern property line and construction will impact our Property, including the deforestation of our trees and extensive excavation, we anticipate at least "thousands of dollars of repair work."

2. Environmental harms.

a. Disruption of habitat for endangered and local species.

The proposed construction of the NED Pipeline will cause the loss of hundreds of trees in the area, notably the line of old-growth hickory and maple trees on our Property as well as several sycamores on the north bank of Willard Brook that are estimated to be over 150 years old. These trees provide critical habitat for migrating and local birds, including songbirds, hawks, and owls. In addition, the loss of the canopy so close to the Brook will deprive the northern long eared bat, an endangered species in this area, of critical habitat, as these bats require forest canopy close to water. The loss of the canopy will also warm the water of Willard Brook, disrupting the aquatic ecosystem for eastern box turtles (also an endangered species), native brook trout, many species of salamanders, newts, and crayfish. Willard Brook and the Nashua River Watershed are also home to beavers that dam its tributaries each year creating wetland areas for nesting waterfowl, such as mallard and black ducks, egrets, and blue herons. Routing the Pipeline under and through these waterways will interfere with this annual pattern. The construction of the NED Pipeline and the vegetation-less set-off required by the proposed Pipeline will disrupt the habitat and migration patterns of local fauna, including deer, coyote, moose, and bear.

b. Soil contamination and erosion. The deforestation of trees and vegetation and the vast amounts of excavation required to construct the NED Pipeline will cause soil erosion. Many properties in the area, in-

cluding ours, were farms for the better part of a century, resulting in rich, fertile topsoil that will be lost. The Pipeline, and in particular the Valve Station, significantly increases the likelihood (which is currently zero) that fracked gas will leak into the surrounding ground, contaminating soil in which we grow fruits and vegetables. The proposed route of the NED Pipeline will also encroach upon our and/or our neighbor's septic systems, causing system failures and the release of raw sewage into the soil.

c. Loss of old-growth trees. The destruction of old growth trees along our property line required by Tennessee Gas's proposed construction plan will contribute to the soil erosion and loss of habitat mentioned above. It will also decrease the availability of carbon dioxide storage and increase the likelihood that the stores of carbon in those trees are released into the atmosphere, thereby contributing to greenhouse gasses in the atmosphere and the warming of our climate.

d. Contamination of the Nashua River Watershed and aquifer. The Pipeline, and in particular the Valve Station, significantly increases the likelihood (currently zero) that fracked gas will leak into the surrounding ground, contaminating ground water from which the town of Townsend gets its water and from which we drink. Our Property is in the middle of the highest-yielding area of the local aquifer, the source of our and the town's drinking water, and Tennessee Gas proposes to transport fracked gas through this area. Contamination of the groundwater will also contaminate Willard Brook, in which we fish recreationally and cool of in the summer. Tennessee Gas proposes to disrupt Willard Brook, Locke Brook, Pearl Brook, and many smaller tributaries of the Nashua River, which feed the local aquifer and provide drinking water and water for agriculture for this area of Middlesex County. And, as noted above, the proposed route of the NED Pipeline will also encroach upon our and/or our neighbor's septic systems, causing system failures and the release of raw sewage into the surrounding ground water.

e. Light and noise pollution, spoiling pristine night sky and ambient sounds of rural ecosystem. From our backyard, you can see the arms of the Milky Way, not to mention the hundreds of constellations that make up the Northeast's night sky. Currently, there is minimal light pollution: there are few street lights along Main Street and the only building in our neighborhood with a light on a night is the Water Department, which uses a shield to minimize its impact on the night sky. Tennessee Gas proposes constructing a Valve Station that, based on the information available, will be lit 24 hours a day by high-powered lights. Such lighting would drastically increase the amount of light pollution in the area and decrease our enjoyment of the night sky and our ability to see the Milky Way and stars.

The noise from "pigs" traveling through the pipeline and from the Valve Station controlling the flow of gas will add loud, industrial noises to what is currently a quiet, rural area. This noise pollution would interfere with our ability to hear Willard Brook, the birds in our yard, and the wind the in trees—sounds which drew us to the area and which keep us here.

3. Emotional harms.

In addition to the economic and environmental harms enumerated above, the NED Pipeline causes us emotional distress. We are distressed by the likelihood of water and soil contamination and its potential impacts on our and our family's health. The severe decrease in the value of our Property caused by Tennessee Gas's proposed route causes us stress and anguish as our Property is a long term investment and a large part of our retirement savings. And, Tennessee Gas's proposed route will disturb our pet cemetery in which we have buried seven family pets over the course of the time we have lived at this Property. We are severely troubled that the economic and environmental harms discussed above would be the price we and the residents of Townsend would pay for nothing more than Tennessee Gas's corporate greed. The communities affected by the Pipeline will receive no benefit from it, and the only entity who stands to gain is Tennessee Gas.

II. COMMENTS IN OPPOSITION TO THE PROPOSED NED PIPELINE

1. Tennessee Gas's application and its Environmental Reports present incomplete information on the exact location and construction of the pipeline. Details on critical project elements, e.g., frequency and loading of construction traffic, directional drilling under various waterways, and co-location within existing transmis-

sion line corridors, are missing, making it difficult if not impossible for property owners like Landowners to know and assess the actual project impacts.

2. Tennessee Gas has not made a compelling case that there is a need for additional pipeline capacity to serve Massachusetts' energy needs, or that the need could not be better served by less intrusive, more sustainable, and lower cost methods. Based on the information available to Landowners, Unitil Energy Systems, Inc., the electrical distribution company serving the area, has not signed up to purchase any gas distributed through the NED Pipeline. The Commission should not approve the NED Pipeline without establishing that it is the most effective means of meeting our intermediate and long-term energy needs as a state, and that it will not result in overbuild or potentially unnecessary infrastructure.

3. Massachusetts residents should not be required to pay for a gas export pipeline. The Commission must specifically reject the pass-through of infrastructure costs to ratepayers for any pipeline it approves, particularly where, as here, the pipeline transports gas for export.

4. Massachusetts Attorney General Maura Healey commissioned a study that has made a compelling case that the NED Pipeline is not needed. We agree and urge the Commission to take the recently completed study into consideration when it evaluates whether the need for this pipeline and public benefit to Massachusetts residents justifies the economic, environmental, and emotional harms. Both U.S. Senators from Massachusetts, Elizabeth Warren and Edward Markey, oppose the NED Pipeline, as does our Congresswoman, Niki Tsongas, and many state representatives.

5. Because Tennessee Gas has not made a compelling case that the NED Pipeline is needed to serve this region, the Commission should simultaneously review all pipeline proposals now before it collectively. Such a side-by-side review will show how much additional gas infrastructure, if any, is needed in Massachusetts and the New England region, and which other measures for meeting regional energy needs create the fewest impacts and least environmental damage. When such a review is complete, we believe it will be clear there are even lower impact and more effective methods of meeting our energy needs than building the NED Pipeline.

6. Given the commitments by nations around the world to reducing fossil fuel use in order to slow human-caused climate change, the Commission must adopt a high threshold of need before approving new fossil fuel related energy infrastructure proposals. Tennessee Gas's proposal is a high impact, expensive, and unnecessary method for meeting regional energy needs. The NED Pipeline must be rejected.

III. CONTACT INFORMATION FOR SERVICE

All communications, filings, notices, and orders concerning the proceeding should be served on Landowners at:

Cynthia M. and Paul F. Boundy
537 Main Street
West Townsend, MA 01474

Basis for Intervening:

Have you visited Franklin, New York? I urge you to do so and imagine the impact of the proposed the proposed NED and a compressor station complex in the midst of a gorgeous, historic Victorian town and farming community of 2,500 residents. Deep forests house bald eagles; springs and streams surround Franklin and feed the Susquehanna River and the Chesapeake Watershed. The proposed pipelines will clear cut those wooded hillsides and run through Franklin's springs. Visit and think about the impact.

The pipeline and NED compressor station proposed for Franklin present profound social, environmental, and health challenges to our upstate community. As is already evidenced in Hancock and Minisink, compressor stations produce emissions which include neurotoxins, carcinogens, and mutagens which are enormous health hazards for residents and animal species. Children are particularly affected. The gas is not needed, not wanted, not for the public good, and is not meant to supply domestic energy needs but is intended for international export for the profit of a private corporation. New York State citizens, communities, animal species, and environments will pay the health, environmental, climate, and economic price for short term corporate profit.

I urge you to undertake a serious environmental review of cumulative effects (segmentation) and to deny the permit for the NED and associated infrastructure. Thus far, despite comprehensive scientific analysis, research, and citizen comment, FERC has not acknowledged irreversible, adverse environmental, health, financial, and community impacts of a gas infrastructure build out in our region.

FERC, consider the public good. Franklin, in Delaware County, N.Y., and all communities affected by pipeline infrastructure, are at the epicenter of the current failure of our nation to create a life-sustaining energy plan based on renewable energies. Stopping the NED will be part of that solution.

20160105-5313

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Northeast Direct Project of:
Tennessee Gas Pipeline Company, LLC
A division of Kinder Morgan

Docket No. CP16-21-000

**MOTION TO INTERVENE
OF THE NORTHERN MIDDLESEX COUNCIL OF GOVERNMENTS**

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (FERC) promulgated at 18 C.F.R. § 385.212 and 385.214, respectively, the Northern Middlesex Council of Governments (NMCOG) hereby respectively moves to intervene in the above captioned proceeding.

I. Background

On November 20, 2015, the Tennessee Gas Pipeline Company, L.L.c. (Tennessee Gas) filed an application for a certificate of public convenience and necessity (CPCN) for the Northeast Energy Direct interstate gas pipeline project (NED project) pursuant to sections 7(b) and 7(C) of the Natural Gas Act (NGA). On December 7, 2015, FERC issued a Notice of Application for the Tennessee Gas' CPCN application and set a January 6, 2016 deadline for motions to intervene in this proceeding.

The Market Path for the proposed NED project calls for construction of a 188-mile 30-inch pipeline designed to deliver up to 1.3 billion cubic feet per day (Bcf/day) of natural gas from Wright, New York to Dracut, Massachusetts. As proposed by Tennessee Gas, 64 miles of the main pipeline would be located in Massachusetts, as would many miles of lateral delivery pipeline and newly constructed compressor stations.

II. Statement of Interest and Grounds for Intervention

Northern Middlesex Council of Governments (NMCOG) is the regional planning agency for the Greater Lowell area. NMCOG was created under Chapter 40B of the General Laws of Massachusetts, and is one of thirteen regional planning agencies (RPAs) in the Commonwealth. NMCOG serves its member communities by providing technical assistance in transportation, economic and community development, housing, land use, historic preservation, municipal service delivery, environmental and energy issues, municipal service delivery, emergency management, public safety, hazard mitigation and public health. NMCOG's policy-making body is comprised of three members from each community (a Planning Board member, a Board of Selectmen member or City Councilor, and an alternate), and provides policy guidance to the Council's professional staff. The NMCOG planning district includes Billerica, Chelmsford, Dracut, Dunstable, Lowell, Pepperell, Tewksbury, Tyngsborough and Westford.

NMCOG has actively participated in the FERC process and assisted in the formation of the Northeast Municipal Gas Pipeline Coalition (NMGPC). Our agency and the communities that we represent have significant concerns about impacts of the NED pipeline project, including the direct impacts on public and private drinking water supplies, permanently protected open space, farmland, rare and endangered species habitat, public infrastructure, air quality, climate change, noise, public health and safety, and cultural and historic resources. The short- and long-term impacts of this proposed project on our communities and the region are quite profound. Two communities in our region (Dracut and Tewksbury) are on the preferred route, and three others (Dunstable, Pepperell, and Tyngsborough) are located along an alternate route. Through construction of the preferred route, the Town of Dracut would be severely impacted with nine 'miles of new pipeline, metering stations and a compressor station, as the destination hub for this project.

The taking of properties protected by Article 97 of the Massachusetts Constitution for the construction of the pipeline and associated infrastructure will impact land protection and conservation efforts throughout our region and across the Commonwealth. This project will potentially impact our obligation to protect and preserve lands of great conservation value that were either donated or acquired with taxpayer dollars.

Based on the review of the Resource Reports and other filing documents, it is evident that our communities will potentially be subject to severe long-term impacts that will produce very few, if any, benefits to our residents. Furthermore, a study recently released by the Massachusetts Attorney General entitled Power System Reliability in New England: Meeting Electric Resource Needs in an Era of Growing Dependence on Natural Gas found that the Commonwealth's energy needs can be met well into the future without this project and its impacts, through renewable energy sources, energy efficiency improvements, LNG and dual fueled plants. Therefore, the NMCOG Council voted unanimously on November 18, 2015 to seek intervenor status and authorized the Executive Director to submit this motion.

NMCOG has important information and perspectives to bring to this process, consideration of which will serve the public interest. It is clear that the region will be impacted by the construction and operation of the natural gas transmission line proposed by Tennessee Gas/Kinder Morgan. Accordingly, NMCOG, and the communities it represents, have a direct and substantial interest in the above docket and will be directly impacted by the outcome of this proceeding. NMCOG cannot be adequately represented by any other party and may be adversely affected or bound without opportunity to present its position unless it is permitted to participate in this matter. Moreover, NMCOG's participation in this proceeding is in the public interest. Accordingly, good cause exists to grant NMCOG's Motion to Intervene.

III. Communications

All correspondence and communications related to this proceeding should be directed to the following individual whose name and address should be placed on the official service list maintained by the Secretary for this proceeding:

Beverly Woods, Executive Director
Northern Middlesex Council of Governments
40 Church Street

Lowell, MA 01852
(978) 454-8021, ext. 120
bwoods@nmcog.org

IV. Conclusion

Wherefore, for the reasons discussed above, Northern Middlesex Council of Governments respectfully requests that the Commission grant NMCOG's Motion to Intervene as a party in the above-captioned proceeding with the rights attendant thereto.

Respectfully submitted this 4th day of January 2016,
Beverly Woods, Executive Director
Northern Middlesex Council of Governments
40 Church Street, Suite 200
Lowell, MA 01852
(978) 454-8021, ext. 120

I strongly object to the construction of the proposed pipeline for a number of reasons. The primary reason for this intervention filing is my objection to expanding the delivery of non-renewable fossil fuels in the form of fracked natural gas that contributes to greenhouse gas and the resulting warming of the planet, a course that is inherently self destructive to our world. Secondary objections are equally strong, namely the reduction of my property values, the negative effect on our watershed, concern for toxic emissions, the impact on conservation easements, the impact on the condition of our local roads, and the reduction in our rural quality of life. Additionally I am very concerned about the elementary school which is located within a quarter of a mile from the proposed station. Should an accident occur the children's lives and that of the teachers and staff are in jeopardy. Respectfully submitted January 4, 2016

My Business, Burden Lake Country Club, is located in Nassau, New York. The Business is within 1 mile of the proposed pump station and the gas line would run just south of my property line. Since 1983, my family has invested everything in the golf course and we have done very well for the past 33 years. There is no question that the pump station will affect my business and that all that I have worked for could be lost.

Just by constructing the pump station the aquifer that I depend on to keep the golf course green could be at stake. Besides my business there are many homeowners that will be affected and forced to move away which will hurt the existence of my Restaurant and community center that I have invested in for the future. I can not pick up my business and relocate. I have invested in this community and plan to spend the rest of my life enjoying what I have worked so hard for. My plan was for my daughter to have the same opportunity that my father gave me. A good life that you can be proud of the work that you do. The only alternative to a golf course would be a dairy farm. If the risk of true contamination isn't here than wouldn't it be an alternative so that everyone could enjoy the milk the cows could produce and then 10 years later we find out differently and innocent people like ourselves are left to pay the ultimate price. Not my choice for the future. What about you!

20160105-5341

We live in Cummington, MA and want to intervene in this proceeding to oppose the NED pipeline. We have many interests which will be directly affected by the outcome of the proceeding.

We are residents and landowners of 340 contiguous acres and two homes in Cummington on the north side of Bryant Mountain where we have lived since 1975. Our lands are directly downwind of and on the east side of the blast/incineration zone of the proposed Windsor compressor for the NED pipeline. We are firmly opposed to the proposed construction of the NED pipeline and the compressor station in Windsor for the inherent danger of explosion and proven pollution exposure of releases of natural gas to our lands and our children and grandchildren.

We have been active stewards of our lands by protecting it via sustainable forestry and growing our own food. We have worked with the Commonwealth's Forestry Department and the USDA to enhance our forest and provide wood resources and carbon sequestration via Chapter 61. Our land is surrounded by 2200 acres of lands owned by the Department of Conservation and Recreation (DCR), the Trustees of Reservation (TTOR) at the Bryant Homestead, various APR farm lands and the Nationally Designated Wild & Scenic Westfield River.

We are in the heart of the only remaining large area of land in Massachusetts that is not industrialized or densely populated. This cherished resource would be sacrificed along with the clean head water of the East branch of the Westfield River, the largest drainage area of the 3 branches of this river and one of the largest habitat reservoir left of the North American Brook Trout as identified by extensive studies by Mass. Wildlife and Trout Unlimited's (TU) Brook Trout project.

Another sacrifice would be the health of our forests, already under stress from wind born pollutants from the Midwest. NED would only add and accelerate the destructive power of pollutants on all cell life in the forest. This forest is not only a carbon sequestration tool for our civilization but it is also our lifetime investment. To see all the work and investment for the good of our collective environment, which has resulted in an incredible resurgence of the land around us both in term of biomass, by encouraging a healthy forest and the resulting increase in wildlife, destroyed by a commercially arrogant project will have a devastating effect on our interests.

We live here because of the land and the outdoor experiences, skiing, fishing, hunting, working the land, gardening. We sacrificed conveniences and bore the extra cost of living here for 40 years and are not willing to give that up for another corporate entity's profit.

On a broader horizon we are opposed to this NED pipeline because this fracked gas is produced in Pennsylvania and the proposed route through New York State, a state that wisely banned fracking and Massachusetts, a state not over the Marcellus shale deposit, allows this pollution to be imported against the desires of

these state's population. This polluted product should be used and transported in Pennsylvania with its access to a sea port. Why should we be sacrificed for their profits, they can still sell the natural gas it will take a little longer to make a profit. It is high time to protect our remaining viable environment and not sacrifice it to a quick profit for K&M and its multinational partners.

Dear FERC Folk and Kinder Morgan Folk and All Folk related to the NED Pipeline,

I am opposed to the construction of the proposed natural gas pipeline. I live in proximity of this proposed pipeline.

I value the importance of conserved land and I uphold Article 97 of the Massachusetts Constitution. Your construction would be in violation of Article 97. Also it is stated that fracking induces and contributes to earthquakes (Pennsylvania and Oklahoma). The New England states are on a fault line which does not need to be exacerbated. The Connecticut River is a jewel which does not need to be disturbed.

Alternatives to energy sources should be addressed: conservation, solar, wind. These are less hazardous to our health and to the environment. We have to be responsible for the 7th generation.

In the words of an Abenaki Native, Wolf Song:

“To honor and respect means to think of the land and the water and the plants and the animals who live here as having a right equal to our own to be here. We are not the supreme and all-knowing beings, living at the top of the pinnacle of evolution, but in fact we are members of the sacred hoop of life, along with the trees and rocks, the coyotes and the eagles and fish and toads, that each fulfill its purpose. They each perform their given task in the sacred hoop, and we have one, too.”

I implore you to make wise decisions based on knowledge and experience. Repair the current NE pipeline and fix the leaks. A Massachusetts energy study requested by Maura Healey revealed the lack of a need for more natural gas, at least for the next 15 years. Please be aware and be informed of the true needs.

The North Quabbin Region has worked hard to promote and to preserve its natural resources, please re-evaluate the request for a proposed pipeline through our natural woodlands.

Sincerely,

Clare Green

Member of: Mt. Grace Land Conservation Trust, North Quabbin Naturalist and Guide, Millers River Environmental Center and Allen E. Rich Environmental Park Steward, Warwick Library Trustee, Warwick Historical Society, founder and director of Nature Camp-Jump for Joy

As a member of an impacted community and a rate payer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery, I am vehemently opposed to the pipeline project. My husband & I are donors to a land conservation organization and often visit Con-

verse Meadow in Rindge which is land that is meant to be protected forever. We live on the Miller's River where the Great Blue Heron nest each year, an area now be considered for housing a compressor station.

We request that this project be recognized as damaging and un-necessary for our area and be dismissed.

Basis for Intervening:

MOTION TO INTERVENE OF ROSEERIN MOYLAN.

RoseErin Moylan is a resident of Nashua NH, in Hillsborough County. The proposed route of the pipeline affects the watershed that supplies water to the City of Nashua. This could have a negative affect on the quality of the water that Ms Moylan drinks and uses. The presence of a 36 inch pipeline degrades many of the natural areas that Ms Moylan enjoys, which would have a negative affect on her quality of life. This pipeline has a negative impact on the climate by creating an increased demand for natural gas. Excess natural gas that is pumped through this pipeline, which is sized far in excess of the needs of the Northeast, will likely be exported. This means that more natural gas will be drilled for than is needed locally, and there will be an unnecessary impact on the climate, which Ms Moylan uses daily. Ms Moylan also spends approximately one day each week in Pelham, NH, and this would likely be interrupted by construction and digging. Pursuant to Commission Rules 385.214(b) and 157.10, RoseErin Moylan moves to intervene. This intervention is timely filed.

Basis for Intervening:

I live in Northampton, MA and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding. These include:

My family is an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to NED and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts of the gas company.

I am a resident whose watershed (Connecticut Watershed - <http://www.mass.gov/eea/docs/eea/water/watersheds-map.pdf>) is crossed by the proposed route and could have my drinking water supply impacted by construction and/or operation.

I am opposed to the pipeline going through APR protected land under Massachusetts Constitution Article 97 of the Amendments to the Massachusetts Constitution which protects public lands in perpetuity. Kinder Morgan (KM) is trying to remove these permanent protections to install their high-pressure shale gas pipelines. The lands being targeted include State Forests, State Parks, Wildlife Management Areas, municipal conservation properties, public water supply protection areas, and conservation restriction and agricultural preservation restriction protected lands. Tennessee Gas Pipeline (TGP), a subsidiary of KM has requested a waiver of this protection.

This requires a 2/3 vote of Massachusetts house and senate) and in their application TGP assumes that the waiver will be granted.

Wet trenching during construction, pipeline coatings and other possible pollutant leaks affect towns and cities downstream from this crossing.

For these reasons, I am interested in and would be affected by the applicant's (Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan"), filing for the Northeast Energy Direct Pipeline. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in

proceedings for Northeast Energy Direct.

---Sean Tousey-Pfarrer

20160105-5355

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), 1, HELEN J. NADEAU, of Tewksbury, Middlesex County, Massachusetts, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Helen J. Nadeau
10 Bonnie Lane
Tewksbury, MA 01876
978-851-6922
princess161O@verizon.net

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would directly and adversely impact me as follows:

1) My home is in the direct path of the proposed pipeline, as are the other homes on my street. My home is shown as Lot 77.20 on sheet TEG_N-006 on the map named Segment N, Lynnfield Lateral, and on construction drawing LA-SEG_RES-I0. It is in a single family residential zone where there is no existing utility/power corridor right of way. My back yard has a sprinkler system and beautiful mature trees which provide a nice awning of shade. It abuts the wooded back yards of homes on the next street, shown on the

plans as Regis Way, Andover. It is separated from them by a post and rail fence along the property line. My back yard is also adjacent to large parcels of contiguous Article 97 conservation lands on both sides of the Tewksbury - Andover Town line. These parcels are recognized by NHESP Priority Habitat of rare species and a BioMap 2 core habitat. My yard serves as valuable uplands abutting the wetlands identified as WPI-2781 and WPI- 2782 on the map. My property is part of a contiguous wildlife corridor which abuts the conservation parcels and which runs from the Merrimack River to the Shawsheen River. My property also sits in Tewksbury's ground water protection zone and on the edge of a well head protection area.

The setting of my home is private, quiet and natural. My neighborhood is one of natural beauty and balance.

2) According to the plans, Tennessee Gas (TGP) intends to install a 24", 1460 psi pipeline in and across the entire width of my private back yard by clear cutting a swath behind my home in order to create temporary and permanent work easements. The swath will result in the elimination of hundreds of the mature trees which now give my neighbors and me privacy, and shade, and which provides wildlife habitat. According to the maps, the clear cut swath behind my home will be 165 feet wide. It will run between my home and the Regis Road homes behind me. It will then continue on through the other neighborhood back yards in one direction, and bisect the Article 97 Conservation and wetlands that I described above, in the other direction. It will result in the elimination of my post and rail fence and the destruction of my sprinkler system.

3) I will be permanently adversely impacted. The permanent clear cut easement will be 50 feet wide. The finished pipeline will be about 100-150 feet from my home. This puts me (and my neighbors) well inside the "Blast" or "incineration zone". My family and I will hear the high pressure gas being pumped through the line and the pigging when cleaning occurs. My neighbors and I will lose our trees, our sound buffer, our privacy, our beautiful, natural views. All of the mature trees that give our neighborhood its character will be permanently eliminated. The wetlands will dry out. The wildlife habitat will be eliminated and my family and I will be deprived of the enjoyment of watching the animals that inhabit and travel through the corridor daily. After construction my view will consist of nothing more than an expanse of grass or invasive weeds upon which my trees would have been replaced by yellow posts clearly marked "Danger High Pressure Pipeline". That is all that will separate me from my neighbors on Regis Road. Because of the need for ongoing inspections and maintenance, I will be permanently subjected to random intrusions and violations of my privacy by total strangers, as well as to risks associated with toxic herbicides. The path of the pipeline will deprive us of privacy, disturb and dry out wetlands and ground water, threaten our aquifers and well heads, and jeopardize our water supply.

4) During construction, I will be unreasonably subjected to noise, diesel odors, dust, debris, and loss of privacy. My neighborhood is well known to consist of ledge so substantial blasting would be inevitable. In fact, when I bought my home in 1972, I wanted to install a drinking well, but was advised by the contractor that, due to the ledge, I could not do it. This blasting will endanger the structural integrity of my home, of the other homes in my neighborhood, and adversely impact my health and sanity, as well as my use and enjoyment of my property. It will diminish the quality of my life and will unconscionably disrupt the wildlife.

5) Furthermore, according to the plans, TGP intends to clear cut and cross Kendall Road at Bellevue, the only main road between my home and route 133, as well between my home and the highways. This makes commuting to and from my home almost impossible. There are no reasonable alternate routes for me to travel to destinations in that direction. This creates a great expense and inconvenience for me and other homeowners as well as puts us at great risk should we need first responders in the event of an emergency. We will be greatly inconvenienced and endangered.

6) I am a customer and a rate payer. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Massachusetts has an LG facility in Everett that has been sitting unused. The Attorney General's independent study has established that there is no need for this additional NED infrastructure. This pipeline is not necessary at all to service New England. This Lynnfield Lateral is not necessary for providing energy to Massachusetts. There is no evidence that this project is justified by any public necessity and convenience. By this time it has become quite clear

that the true purpose of this oversized pipeline is to transport fossil fuels to Canadian and US coastal areas for sale and export to foreign markets, all at the expense of US rate payers. Massachusetts does not need this new pipeline infrastructure.

7) I am a senior citizen and this home is my only major asset. I depend on the equity here to survive. The value of my property will be diminished by this pipeline path. In fact, the resale value of my property has already been diminished by the mere news of this proposed project. No one wants to live next to a high pressure pipeline. The construction of this pipeline will deprive me of my retirement funds.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, HELEN J. NADEAU, respectfully request that the Commission grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 2 day of January, 2016.

Helen J. Nadeau
10 Bonnie Lane

Basis for Intervening:

As a member of an impacted community and a ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery, I am vehemently opposed to the pipeline project. I am a donor to a land conservation organization and frequently visit the Converse Meadow in Rindge..land that was meant to be protected forever. I also live on the Miller's river, a nesting site for the Great blue heron, and an area now being considered for a potential compressor station. This project is not needed in our region and as an active outdoor family, we do not want our forests, which have been set aside for people and wildlife, to be impacted by any activities of this commercial project.

Basis for Intervening:

I, Martha Pratt Elliott, residing at 725 River Road Deerfield MA am applying for intervenor status on the proposed NED pipeline that Tennessee Gas/Kinder Morgan is requesting to build across Franklin County MA. I am impacted by the proposed project in a multitude of ways and object to the building of this pipe-

line for a multitude of reasons. The following are but some of the concerns I have about the proposed pipeline and, if given approval the ways in which it could impact me.

As a citizen of the world: The stated need for the proposed pipeline is for bringing fracked Gas to New England. As a human being who listened to some of the news coming out of the Paris Climate Summit I believe we need to explore all other options before creating expensive infrastructure for the delivery of non-renewable fossil fuels that will add more greenhouse gases and result in more global warming. This is destructive to both the Earth and us, all her inhabitants.

As a Resident of New England: I do not think Kinder Morgan has demonstrated that there is an actual need in New England for additional Natural Gas. The recent study done by Attorney General Maura Healey concluded that New England does not need additional natural gas pipeline infrastructure to meet peak winter energy demand. Energy efficiency and “demand response” would be the best solution over the next 15 years for both consumers and the environment. There are some “demand response” storage tanks in western MA with more that have been approved but not yet installed. I believe that these potentially rate reducing steps have not been taken because they do not lead to increased profits. The public interests need to be protected.

As a ratepayer for electricity from the grid: I do not want to pay for a pipeline that there is no demonstrated need for. It is my believe that Kinder Morgan plans to export a portion of the gas that would come thru the pipe, and as the price of natural gas overseas is higher than in the US it would drive prices up all over. If the proposed pipeline gets approval I would be required to pay for a pipeline I do not want or need, which would result in more pollution and higher electricity rates in order to create additional corporate profits. I do not believe that is in the common good.

As a resident of Franklin County: This area abounds in natural beauty. Many of the residents of the area have moved here for just this reason and many people have worked hard to set aside some of these bucolic areas for posterity, either privately or with the state (and all taxpayers) funding the purchase of the land. The value of this may be hard to put a price on, however it makes us a very busy tourist area year round. Loosing or reducing that would be extremely harmful to our local economy. While the pipeline may be good business for Kinder Morgan their safety record is terrible and I do not trust that it will improve just because they say so. The stakes are high. The Economy of Franklin County needs to be put ahead of financial gain for Kinder Morgan.

As a resident of Deerfield: My home is within a few hundred feet of the proposed pipeline, well within the Incineration Zone. I am not sure exactly how far from the digging my well would be, but it is closer then the house and that is far too close for comfort. I, like many of my neighbors, have a shallow well. Homes in Deerfield cannot be sold without potable water so the water quality of that well determines the value of my home, either the assessed value or nothing. Have I mentioned that Kinder Morgan does not have a great safety record.

As an outdoors person and animal lover: This is a huge project, I walk my dog daily in a variety of locations in the woods and fields around my home. Many of the most scenic spots will be impacted by this proposal. There are hills thru which it would cut that are currently beautiful areas teaming with wildlife. How would leaks be detected, would the gas pool in low areas suffocating small animals until a spark sets it off? I kayak on the Deerfield River and it is home to many species including heron and bald eagle, there is no way to guarantee the water quality, and what takes a moment to pollute can take decades to abate.

I ask you to grant me intervener status as this proposed pipeline affects me.

Thank You

Martha Pratt Elliott
725 River Road
Deerfield MA 01342

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the matter of)	
Tennessee Gas Pipeline Company, L.L.C.)	Docket No. CP16-21-000
Northeast Energy Direct Project)	

MOTION TO INTERVENE

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”) promulgated at 18 C.F.R. § 385.212 and 385.214, respectively, the Townsend Board of Selectmen acting by and for the Town of Townsend, hereby respectfully file this motion to intervene in the above captioned proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC filed an application for a certificate of public convenience and necessity for the Northeast Energy Direct interstate gas pipeline project (the “NED Project”) pursuant to sections 7(b) and 7(c) of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq.

The Market Path for the NED Project calls for the construction of a 30 inch pipeline designed to deliver 1.3 bcf per day of natural gas from Wright, New York to Dracut, Massachusetts. As currently proposed by the Tennessee Gas Pipeline Company (“TGP”), a new 12 inch high pressure lateral pipeline (“Fitchburg lateral”) will be constructed through the Town of Townsend. Due to the adverse environmental, economic and health impacts of this pipeline on the Town outlined below, the Town stands opposed to the proposed NED Project and seeks party status to protest any issuance of a certificate of public convenience and necessity.

II. INTEREST OF PETITIONER

The adverse environmental impacts of this pipeline on the Town of Townsend are unprecedented in the Town’s history. TGP would leave a permanent 100 ft. wide swath over 5 miles long through the town, **the entire length of which is land designated by the Commonwealth of Massachusetts as an Area of Critical Environmental Concern**. Very few areas in the Commonwealth are designated ACECs because of the extremely stringent standards that must be met. This community spent years identifying the quality, uniqueness and significance of the area’s natural and cultural resources, and presented the documentation for nomination to the state’s Secretary of Energy and Environmental Affairs. Public hearings were held by the Secretary, who concurred that our critical resources and ecosystem merit ACEC designation. With that status came a higher level of regulatory review, which the residents of Townsend welcomed in order to protect their resources.

Eighty-one percent of the Fitchburg lateral would cross Townsend’s Aquifer Protection District, the source of the town’s drinking water supply! Twenty percent is over the High Yield Aquifer. Twenty-five percent is in DEP Water Supply Zone II. Fifty-two percent of the pipeline would be located in Priority Habitat of the Massachusetts Endangered Species Act. Eleven percent would cut through intact forest cores, opening up interior forest and making it no longer viable habitat for species that require large tracts of contiguous, unfragmented habitat.

Almost all of the wetlands and waterways of Townsend are designated Outstanding Resource Waters by the Commonwealth of Massachusetts. Based on the results of a recent National Park Service reconnaissance survey, the Squannacook River merited congressional funding through the National Park Service for a three-year Wild and Scenic River study. The study has begun and is in its first year. The proposed lateral would cut a trench across five of the six streams that are the headwaters of the Squannacook River. Not only are these tributaries Outstanding Resource Waters, but they have also been designated by the Commonwealth as Cold Water Fisheries, recognition of the water quality of our streams that are stocked every year by the Division of Fisheries and Wildlife with trout! We cannot allow the canopy along these streams to be removed or sediment from construction to be released. We cannot allow our wetlands that feed these tributaries to be

trenched.

Townsend's citizens have volunteered countless hours to achieve passage of bylaws and state laws that will protect its natural resources. This year the Conservation Commission will celebrate its 50th year. The town approved its wetland bylaw and regulations in the 1970s and 80s, and achieved state passage of the Squannacook-Nissitissit Sanctuary Act in the 1970s to make any new discharges into its waters subject to enforcement by the Superior Court and Attorney General of the Commonwealth.

Townsend is extremely fortunate to be home to large tracts of land that are owned and protected under Article 97 of the amendments to the Constitution of the Commonwealth of MA. The Commonwealth has invested millions of dollars to protect this land for the benefit of the public. The NED Project would cut through Willard Brook State Forest and Pearl Hill State Park, a state campground relatively close that provides a north woods escape for nearby suburban and urban areas. The Commonwealth has purchased hundreds of acres to create a Wildlife Management Area along the Squannacook River to protect the water quality of the waters of the Commonwealth.

The people of Townsend do not take these protections lightly but they know that the benefits of living where the ecosystem is protected far outweigh the limitations on human activity. These protections are the result of dedicated citizens who gave up their own time and volunteered long hard hours for the greater good of their children and grandchildren. The citizens of the town petitioned the Board of Selectmen in July 2014 to hold a Special Town Meeting to pass a warrant article that opposed the NED project. The article passed unanimously.

The adverse impact of the NED project on the economy of Townsend would be irreparable. Townsend is a community that struggles to recover from multiple recessions due to its distance from commercial centers. The pipeline directly impacts approximately 65 homes and working farms, and the impact of this pipeline on already depressed private property values would be one more blow to those whose homes are their only source of equity. Residents are concerned about their ability to refinance their mortgages, obtain homeowners' insurance and their inability to sell their property if necessary.

Residents are clearly and understandably concerned about the threat to public safety of a high pressure natural gas pipeline, and the Town is equally concerned about its ability to respond to a threat of a catastrophic incident. The Town's emergency response system is based primarily on volunteers and would be substantially burdened, if not overwhelmed, by a pipeline failure.

Massachusetts Attorney General Maura Healey's recent study on New England electric reliability options found that the reliability of New England's power system can and will be maintained over time. That includes during periods of peak winter demand without adding any new interstate natural gas pipeline capacity to service the New England region. The Town of Townsend must represent the economic interests of its citizens, who, as it is, struggle to make ends meet without the added burden of a tariff to pay for a pipeline that is not needed.

There is no doubt that the Town of Townsend's participation in this proceeding is in the public interest. The Town is in the best position to represent the interests of its citizens, and respectfully requests that the Federal Energy Regulatory Commission grant this motion to intervene on behalf of the residents of Townsend.

II. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Carolyn Smart, Chairman
Board of Selectmen
272 Main Street
Townsend, MA 01469
978-597-1700 x1719
csmart@townsend.ma.us

III. CONCLUSION

Wherefore the Town of Townsend respectfully request that the Commission grant the Town of Townsend's Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 5th day of January 2016

Carolyn Smart, Chairman
Board of Selectmen
272 Main Street
Townsend, MA 01469

Basis for Intervening:

Kinder Morgan is trying to get approval from the Federal Energy Regulatory Commission to build a unnecessary and dangerous pipeline across northern MA to transport fracked gas from Pennsylvania to Dracut and points north where it will be shipped overseas. The pipeline will be as large as 36" in diameter, pumping billions of cubic feet of natural gas across MA. The proposed route will cut a 150 foot-wide swath that crosses rivers, divides farms, protected wetlands, state and private land preservations. It will require three large compressor stations that will run 40,000 horsepower engines continuously to move the gas along at 1400 psi. Communities, residences and farms will be degraded and lose much of their value. The impact of methane released to the atmosphere due to leakage and forced venting has not been adequately researched. The costs of building maintaining this pipeline and cleaning up accidents and the eventual decommissioning of the infrastructure will be born by the people of MA.

Just the construction alone will cost \$5 billion, which will be paid for by ratepayers.

Natural Gas is not natural. It is fracked using toxic chemicals that are undisclosed to regulatory agencies. Each gas well pollutes millions of gallons of water per year. Toxic residue moves with the gas itself along the pipeline posing hazards to the environment along the way. Natural Gas is not "green"; it adds to the carbon dioxide being added to the atmosphere. There are far better, greener, more democratic and less centralized ways to address our energy needs now and in the future.

This pipeline is an egregious misappropriation of our common wealth to serve the interests of a narrow few. It is in direct violation with numerous state laws including land preservation trusts and the states Global Warming Solutions Act which mandates no new fossil fuel infrastructure in the state. It takes \$5 billion of yours and my money that could be used to develop safe clean renewable energy and locks it up in energy infrastructure with a high risk of being stranded long before it has paid for itself.

As a utility rate payer and a taxpayer in the State of Massachusetts and as a stakeholder in the quality of life which I hold dear locally in the rural community in which I live and globally in terms of slowing the rate of climate change, a responsibility I share with everyone else on the planet, I am registering with FERC as an intervenor in Kinder Morgan's petition to build this pipeline.

Basis for Intervening:

I am filing as an individual for Intervenor status as a concerned abutter to the project. If this project is approved, my home and its residents will reside within the "incineration zone" for the project, and I am concerned about the use of lesser materials for construction due to the "rural" categorization of the project. I am also concerned about the integrity of my well and any issues that can arise as a result of the construction of the project. In addition, as a resident of New Ipswich, NH, the proposed locating of a compressor station in my community is of concern due to the noise and light pollution that accompany a facility of this type, and the potential health issues that are attributed to residing within proximity to a facility of this type. I am also concerned as a utility rate-payer in the State of New Hampshire, and that the company building this project

seeks to secure my electric utility as a project shipper, which, in turn, would seek to recover costs associated with the project from me and my fellow rate payers. I am also deeply concerned about the overall impact that the project will have on the wetlands, conserved land and wildlife of the region.

Basis for Intervening:

I am opposed to the pipeline because it will have direct negative impacts on a number of natural land areas in the town in which I live, Fitzwilliam, New Hampshire. Having attended a number of local informational meetings, including the Open House that Kinder Morgan hosted in my town, I have had time to hear about the projected placement of the pipeline and review initial maps.

It is clear that construction endangers the landscape, ecosystem, and recreational use of Rhododendron State Park, a place I frequently walk, and Rockwood Pond, a local swimming area where my family, friends, and I spend much of our time during the summer. I am given to understand, from speaking directly with a Kinder Morgan representative, that the maps they are using to plan construction are heavily based on aerial views and do not take into account the realities of the natural features that are actually on the ground. The maps have also reflected changes at each of the meetings which I have attended. With no clear, agreed-upon route, Kinder Morgan will be able to construct the pipeline in any area they see fit, which is unacceptable.

In addition, I share a number of safety concerns that have been raised by not only fellow citizens, but also by the fire department and emergency responders in the area. Kinder Morgan has not supplied thorough information about the training, equipment, and emergency response services they are planning to provide. Without those details, I fear that a pipeline emergency would cause significant harm to our town's residents, animal life, and land.

Finally, this is a rural area that will not reap the benefits of natural gas anytime in the near future due to lacking infrastructure except for perhaps a few buildings on the main streets. We also do not require the amount of gas the pipeline is designed to provide, and it is quite obvious that much of the it will be exported to the benefit of others, including countries outside the U.S. In addition, we as ratepayers are being setup to fund the pipeline project despite the fact we will not see any of the benefits.

I urge you to make the right decision by not giving a private corporation, Kinder Morgan, the right to trample on the land, well-being, and rights of the citizens here. We choose to live here because of the community, natural beauty, and peace, three things which the pipeline project will most certainly tear apart. Thank you for your time and consideration.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	gweaver79@comcast.net	

Basis for Intervening:

If the NED project is approved I will be living less than 3 quarters of a mile away from the 41,000 horse powered compressor station in New Ipswich, NH. I do not wish to have the value of my home drop and the possibility of me not being able to sell my home. I also do not want to live near a compressor station that will cause, noise, light, and most importantly environmental pollution that has been known to cause neurological disorders, as well as cancer, birth defects, miscarriages, just to name a few. I moved to New Ipswich 4 years ago just prior to getting married and I wished to start a family in a nice quiet area. If this compressor station and pipeline goes in I will be forced to move. Currently more and more homes in the area are up for sale and homeowners are already having trouble selling their homes.

NED is not needed in New Hampshire. The only customer who signed on is Liberty Utilities which happens to be a subsidiary of Kinder Morgan. EverSource which is the main electrical company in New England has no plans to purchase natural gas from Kinder Morgan. EverSource has partnered with Spectra to expand an already existing pipeline that is already in New Hampshire. Spectra already has an existing right of way and has already said they can do the expansion without taking peoples homes and will lay down as little pipe as possible. EverSource will also use Wind and Solar to expand their energy needs as well. That pipeline has a clear purpose to expand our electricity needs. Kinder Morgans proposal lacks an actual need in New Hampshire. All they state is inflated numbers of what we need for electricity. And since Eversource sees no use for Kinder Morgan explain to me why Kinder Morgan needs/wants to build a pipeline in New Hampshire?

Kinder Morgan does not have an existing right of way. They will have to take peoples homes via eminent domain. Which should not be allowed since they are a private company. Kinder Morgan has various fines against them due to explosions and leaks as well as safety fines for improperly maintained lines. The proposed pipeline and compressor station will ruin our landscape and hurt local business in the area and will force them to close. And this is all for export. Kinder Morgan has every intention of exporting natural gas to Canada so it can be sold on the global market. 17 towns in New Hampshire will be destroyed for pure monetary reasons. They have no business being in New Hampshire and I urge you to deny their request to build the pipeline and compressor station in New Hampshire.

annagsmeyer@gmail.com

Basis for Intervening:

The Kinder Morgan Northeast Pipeline is proposed to rip right through my neighborhood. Though my land is not personally projected to be effected by the construction I am a stakeholder in the resistance to such movement because I enjoy the land and environment as-is around me. Not only would the pipeline put in jeopardy the historical farm land that my neighbors have maintained for decades, it puts the safety and health of my neighbors (as well as myself) in danger. If anything were to happen in regards to natural gas leaking, or combining of electricity (from the power lines above the proposed route) there is a serious risk of damage to residences around. My home and the land that I farm is half of a mile away from the proposed route. I do not want to my life or my business or the value of either to be at risk.

20160105-5392

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
Northeast Energy Direct Pipeline Project

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, David G. McCarthy, file this motion to intervene in this proceeding.

On November 30, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. Communications and Service

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

David G. McCarthy
91 Bailey Road
Andover, MA 01810
978-975-2435
davemccarthy.pipeline@gmail.com

II. Interest of Petitioner

Construction, operation, and maintenance of the pipeline would adversely affect my family since the pipeline is proposed to run through my property. The proposed pipeline would adversely affect the value of my home and property. Furthermore, the latest plans site the pipeline within 100 feet of my home. The part of my property that has been selected for this project contains wetlands as well as an area where my children play. As a result, the pipeline would have a huge effect on the value of my home and property, and my family's quality of life.

III. Conclusion

Wherefore, I, David G. McCarthy, respectfully requests that the commission grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted on this 5th Day of January, 2016.

David G. McCarthy

91 Bailey Road
Andover, MA 01810

Basis for Intervening:

I live in Averill Park, NY, and want to intervene in this proceeding to opposes the NED pipeline. I have many interests which may be directly affected by the outcome of the proceeding because:

I am a landowner directly impacted by the pipeline route and compressor station.

Our property is a heritage 46 acre farm that has been in the family for over 100 years. This property is partially within the "blast radius" so it would be at risk. This is both an agricultural and recreational area, due to it's close proximity to Burden Lake, I am concerned about health and environmental impacts as well as property values. I am a member of this impacted community who has concerns about various impacts to the local economy/aesthetics/health associated with this project, specifically noise, light, air and water aquifer pollution which may be negatively impacted by the compression station and the pipeline.

Further, I enjoy the out of doors and do not want any state or town public parks or forests, particularly the Rensselaer Plateau, which have been set aside for the people and wildlife to be impacted by any activities of this commercial project.

Basis for Intervening:

I am a resident of the town of New Ipswich and I believe the pipeline will have largely negative impacts on my community. I don't believe any jobs created from the project will support members of our community, nor do I believe they will be long term. I do not believe the project will benefit us in any way and believe the cost to our community is far greater than the benefits to other entities. I do not support compromising our conservation lands, our air quality, or putting our children or emergency service personnel at risk if their was an emergency situation. I also feel strongly that none of my neighbors should be forced or even asked to give up their lands to this endeavor.

Basis for Intervening:

I live in Plainfield, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I am not financially able to abandon my property and/or sell at a greatly reduced price to move away from industrial development which is the reason I bought my home in Plainfield. Construction and operation of the NED pipeline would have a negative impact on the quality of life of me and my family. I have interests which may be directly affected by the outcome of the proceeding:

*I would receive no compensation from the pipeline company and would find my property more difficult to sell if I found living conditions here unsatisfactory and unhealthy after the pipeline is built.

*I am a resident who lives in the "blast radius" and whose daily commute crosses over the proposed pipeline route so I would be at physical risk;

*I am a member of an impacted community who has concerns about various impacts to the local economy, environment, aesthetics, and health;

* I am an electric ratepayer who, if KM secures my electric utility as a project customer with disregard to my opposition to the pipeline, expects to see an increase on my bill relating to NED cost recovery;

* I enjoy the outdoors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project

TO: THE U.S. FEDERAL ENERGY REGULATORY COMMISSION

RE: TENNESSEE GAS PIPELINE, LLC, A DIVISION OF KINDER MORGAN,
NORTHEAST ENERGY DIRECT PIPELINE, DOCKET #CP16-21

FR: PHILIP ZEA, PRESIDENT, HISTORIC DEERFIELD, INC.,
DEERFIELD, MASSACHUSETTS 01342

DT: January 5, 2016

1. STATEMENT OF INTEREST

a. DESCRIPTION OF HISTORIC DEERFIELD, INC.

Historic Deerfield, Inc., is a 501 (c) 3 public, non-profit museum in Old Deerfield, MA. Our mission states that:

HISTORIC DEERFIELD, Incorporated, is dedicated to the heritage and preservation of Deerfield, Massa-

chusetts, and the Connecticut River Valley. Its museums and programs provide today's audiences with experiences that create an understanding and appreciation of New England's historic villages and countryside.

Historic Deerfield is located within The Old Deerfield National Historic Landmark, one of the first established by the Department of the Interior in 1962, which encompasses the village of Old Deerfield and approximately 1000 acres of actively cultivated farmland within its view shed along the floodplain of the Deerfield River. We work daily with local, regional and national agencies to protect the agricultural way of life in this beautiful village. Historic Deerfield itself is a teaching museum and business with a national reputation as one of the finest, mid-sized cultural history agencies in the nation with a \$6.5m annual budget, 54 buildings on 104 acres wholly within the Old Deerfield National Historic Landmark, 58 full-time employees, and thousands of year round visitors to our culturally rich and beautiful part of western Massachusetts. We own and operate the Deerfield Inn as well as the museum of twelve antique houses, anchored by the modern Flynt Center of Early New England Life, where we teach the history and culture of the Connecticut River Valley and rural New England to thousands of tourists every year who learn about New England history and culture. In all, the Old Deerfield National Historic Landmark counts the survival of 26 eighteenth-century houses, and 14 more that pre-date 1850, on their original sites with related archeology in a village that retains its original scale and town plan from the 1670s. Just as importantly, the Old Deerfield National Landmark encompasses the homeland of the Pocumtuck Native Americans.

b. DESCRIPTION OF IMPACTS

The proposed pipeline is projected to travel through the middle of the Old Deerfield National Historic Landmark and within a half-mile of one of the most historic streets in America: home to private householders, working dairy farms, two schools—Deerfield Academy and Bement School, and two museums—Historic Deerfield, Inc., and Memorial Hall Museum, which are destinations for thousands of visitors every year. The proposed pipeline will also travel through the very shadow of Pine Hill in the North Meadows, which is the site of the principal village of the Pocumtuck Indians established 8000 years ago and which, with other Native and historic sites within view, has been excavated and preserved by the University Massachusetts Summer Field School in Archeology, an affiliate of Historic Deerfield. Designation as a National Historic Landmark by the Department of the Interior recognizes high cultural and historic significance and provides a layer of protection from development. History and culture aside, we also feel that the proposed pipeline is a real threat to public safety, health, and our business with no benefit to the citizens and visitors to this great place on the American landscape let alone the long-term environmental impact of the pipeline on plant and animal species, air and water quality, and perhaps light and noise pollution not to mention land that is specifically protected by valid easements some of which are held by Historic Deerfield, Inc.

c. STANDARD FOR INTERVENTION

Historic Deerfield's Motion to Intervene must be recognized and accepted because it satisfies the standard for intervention under the regulations established by FERC and because of the significance of Historic Deerfield as a national resource.

2. CONTACT INFORMATION

Please add my name to the Official Service List, with all notices and communications in this proceeding addressed to:

Mr. Philip Zea, President and C.E.O.

Historic Deerfield, Inc.

P.O. Box 321

Deerfield, MA 01342

3. CONCLUSION

HISTORIC DEERFIELD, INC., respectfully requests that the Commission grant this MOTION TO INTERVENE and to allow the INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, question witnesses, and seek rehearing and appeal.

Sincerely yours,
Philip Zea, President and C.E.O., Historic Deerfield, Inc.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	peters.ada@gmail.com	

Basis for Intervening:

I am a resident of the Town of Dracut at 167 Ruby Road. Not only do I object to the Kinder Morgan Pipeline Docket #CP16-21 in my town, I object to any pipeline in my state, country, and planet.

I am and will be impacted by this pipeline and pumping station emotionally, financially, and likely physically.

The stress caused by the proposed construction and operation of this “unmanned” facility and its potential disaster has disrupted my feeling of safety and well being in this town. I moved here for the natural and clean environment.

The organic livestock farm where I buy my eggs, turkey, etc., will have to shut down due to the proximity of this station and the pollution it will create. The organic vegetable farm where I get my produce will likely also be lost. And if not, I am concerned that the pipeline may cause contamination of the crops from Dracut farms that are part of my diet.

I use well water and I am concerned about the environmental consequences of the pollutants created by the construction and operation of this pipeline and what the mitigation plan is and who will pay this this. Since air and water know no bounds, I would suggest that any plan for mitigation, no matter how good a plan, would not be 100% successful.

I am concerned about the health consequences caused by the methane, lead and other pollutants caused by this facility, particularly for children, elderly and those who are already struggling with health issues

Dracut is not easy to get in or out of. What is the plan for evacuation and who will pay for the facilitation of this plan?

I am concerned about the noise and smell that will come from this facility.

This project will have a negative financial impact on us regionally as well as personally. My husband and I are semi retired and are counting on the investment of our home to provide us with some financial stability. The reduced property values this will create will put us in a very difficult position. We do not have the financial resources to walk away from our property or sell it at a greatly reduced price. We are too old to start over. It's just not possible for us.

I am concerned about increased utility rates to cover the cost of this pipeline, increased taxes to cover administrative and emergency personnel and environmental and health issues created by this pipeline, lower property values, pollution, and the worry of a significant leak or explosion.

According to statistics kept by the US DOT Pipeline and Hazardous Materials Safety Administration, there have been 5,598 “significant” pipeline incidents in the U.S. over 20 years from 1995 through 2014.

For the above reasons, and many more, I object to the construction and operation of the Kinder Morgan Pipeline Docket #CP16-21 and ask for permission to intervene in the proceedings.

Thank you,

Ada Peters

Docket #CP16-21

January 4, 2016

Kimberly Bose
Nathaniel Davis Sr.
Deputy Secretary
Federal Energy
Regulatory Commission
888 First Street N.E.
Washington DC 20426

Dear Ms. Bose and Mr. Davis Sr.

My attempts to file a Motion to Intervene at FERC.GOV would not process so I have chosen to send this by overnight mail in an attempt to meet your deadlines. I do not want to be left out of this process.

My partner and I have owned Ashfield Hardware & Supply for over 18 years. It is the longest continuously operating business in Ashfield, originally opening in the 1860's during the Civil War. It stands prominently and proudly on Main Street across from the Library.

We do not believe that anything to do with a pipeline cutting through our town will provide us with a more secure energy source. Nor will a pipeline enhance our economy or quality of life. It is clear that this is a plan driven by fossil fuel based companies trying to create new markets at our expense.

We are a fiercely independent, autonomous and self-sufficient people. We are stewards of our land because our livelihood depends on it, literally. We are creative and enterprising. Our local economy is based in our beautiful pastime fields with a groundswell of small independent businesses returning to production. A number of our bands stay actively full because of the peace and beauty. We rely on these businesses to keep our doors open and likewise our products and services help to sustain these businesses.

A pipeline would strip us of what we have created over the past 250 years.

We do not need or want the fossil fuel proposed for this pipeline. It should simply stay in the ground. As a community we are shifting our energy reliance away from fossil fuel into renewable resources. This year alone our community of \$00 billion is scheduled for over 50 solar 'installations'.

The people of our small town, towns across the country, towns across the country are saying NO to pipelines and fracking and the rest of it. The people are moving forward and sending new solutions. It is time that the Federal Government backed the people and quit supporting the fossil fuel industries.

Sincerely, Nancy Hoff
Co owner of Ashfield Hardware & Supply
343 Main Street
Ashfield, MA 01330

20160106-0022

United States Senate
Washington, DC 20510-3205

Kirsten Gillibrand
New York
Senator
Ms. Andrea Spring

Deputy Director of External Affairs
Federal Energy Regulatory Commission
888 1st Street NE, Room 11H
Washington, D.C. 20426

Dear Ms. Spring,

Enclosed is a letter from Mr. Richard Komita relaying his concerns regarding the proposed Constitution and Kinder Morgan pipelines in his community.

I would appreciate your reviewing the information that has been presented and providing me with your comments. Please address your reply to my state office:

United States Senator Kirsten Gillibrand
780 Third Avenue, Suite 2601
New York, New York 10017-2024
Attention: Azaleea Carlea

Your cooperation and assistance are greatly appreciated. I look forward to hearing from you soon.

Sincerely,

Kirsten Gillibrand
United States Senator

Senator Gillibrand,

As a resident of Franklin NY in Delaware County, I am horrified by the prospect of the destruction and devastation that the proposed pipelines (Constitution & Kinder Morgan's NED) will inflict on the 124 mile stretch in NY State.

The energy industry continues to lie and deceive many of the residents and board members in these small upstate towns. They have promised low cost energy, jobs, increases to the tax base and have taken home owner's land illegally via eminent domain proceedings. The reality of this spin is that the majority of natural gas will be sniffing overseas where greater profits will fill their tills.

We hear that many politicians are pushing back on Kinder Morgan while thinking Constitution is ok. How wrong this thinking is!!!! Allowing one pipeline will still result in a 124 mile long 75 feet across defoliation which will include the destruction of almost one million trees, over 300 streams to be disrupted, historical sites to be contaminated and thousands of residents exposed to toxic chemicals in the air and in the ground.

In addition to all of the horrific rears, FERC continues to rubber stamp everything that these companies request. Is there compensation being provided by the energy companies? to FERC? to local town boards? The entire industry MUST be investigated!! Please

Please do everything in your power to protect the people who have elected you! Anything less would be unacceptable.

Richard Kornita
Franklin, NY 13775

20160106-5002

Evelyn Taylor, New Ipswich, NH.

This comment is to point out conflicts in statements from Kinder Morgan that are misleading and cloud the truth.

I was reading the Frequently Asked Questions on the Kinder Morgan web site and came across a question I had come across before in a Newsletter from TGP but now it had a different answer.

In both cases, the question was the same, namely:

Will the compressor station emit benzene into the air?

This is the written response to that question as printed in the Special Edition, Fall 2015 Northeast Energy Direct Project NEWSLETTER mailed to my home from Tennessee Gas Pipeline Company, L.L.C. and post-marked 23 Sept '15:

The natural gas that TGP transports on its existing pipeline system, and will transport through the proposed compressor station, is referred to as pipeline quality natural gas. This will also be the gas that fuels the combustion equipment at the compressor station. Pipeline quality natural gas is gas that ultimately is consumed by much of the public and private infrastructure, including homes, businesses, government offices, and schools, among other end-users. This natural gas has already been treated and/or processed prior to its entry into the interstate pipeline network so the impurities have been removed. Benzene, other hazardous pollutants (HAP), and Hydrogen Sulfide (H₂S) that may be present exiting wells have been removed prior to custody transfer into the TGP pipeline system.

This is the response to that same question from the Frequently Asked Questions page of Kinder Morgan's web site as available on January 5, 2015 as of 6:25 PM Eastern Time.

Website path: http://www.kindermorgan.com/content/docs/NED_Compressor_faq.pdf

The natural gas that TGP transports on its existing pipeline system, and will transport through the project facilities, is referred to as "pipeline quality" natural gas. Pipeline quality gas is gas that ultimately is consumed by the public, including homes, businesses, and schools, among other end-users. This natural gas has already been processed prior to its entry into the interstate pipeline network so the impurities have been removed. Benzene, Hydrogen Sulfide (H₂S), and other hazardous air pollutants that may be present as a result of production have been almost completely removed prior to custody transfer into the TGP pipeline system.

I bring attention to the following:

- Neither response directly answers the question as to whether the compressor station will emit benzene into the air.
- The first response from the Newsletter states the impurities have been removed leading one to surmise benzene and other substances noted would not be emitted as they have been removed.

- The second response from the web page makes no mention of “compressor station”. It still says the impurities have been removed but also says Benzene, H2S and other hazardous air pollutants have been almost completely removed. If impurities have been removed but some Benzene H2S and other hazardous air pollutants remain, then is Kinder Morgan suggesting Benzene, H2S and other hazardous air pollutants are not impurities?

What is Kinder Morgan’s definition of “almost completely removed”?

What data does Kinder Morgan have to quantify the impacts of the Benzene, H2S and the other “hazardous air pollutants” that remain?

What is the answer to the question, “Will the compressor station emit benzene into the air?”

20160106-5003

Greg Maliken, Amherst, NY.

January 6, 2016

Federal Energy Regulatory Commission
888 First Street, NE
Washington, D.C. 20426

Docket: CP16-21

To whom it may concern;

I’m writing in support of the Kinder Morgan sponsored natural gas transmission project known as The NED Pipeline Project. This project will help move gas from the vibrant Marcellus Basin to market areas. It will bring lower gas prices to New England. It will provide power generators the access they need to avoid high gas prices due to recent curtailments. It will benefit the labor force in the areas involved from the well pad, to the gathering systems, to the construction project and all the supplemental services (motels, restaurants, goods & services) needed to sustain this level of activity. It will benefit local communities in the way of impact fees, royalties and any additional taxes local governments decide to levy (which are already significant and currently contributing to local infrastructure improvements). Lastly, the overall effect on the environment will positive due to incremental natural gas being available to areas that currently use coal, fuel oil or gasoline (in the case of vehicle fuel).

The gas industry understands how to be good neighbors in the communities served and responsible stewards of the environment.

Sincerely,

Greg Maliken

20160106-5004

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Project)

**MOTION TO INTERVENE OF
TINA INGMANN**

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc.

("Kinder Morgan"). Communications concerning this proceeding should be served upon me as follows:

Tina Ingmann
zingmann@yahoo.com

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

1) As a US citizen and taxpayer:

Should this pipeline be built, the Tennessee Gas Company would be complicit in the pollution of water around the Marcellus Shale fracking fields, since it would be transporting gas extracted via hydraulic fracturing. Studies show this extreme method of extraction has great potential to contaminate water supplies: around injection sites, because the water used is mixed with chemicals and cannot be cleaned, and because the polluted used fracking water stored in open tailing pits.

The human right to clean water has been recognized through international law and through the United Nations. Since the United State Clean Water Act specifically exempts fracking from regulation in a law designed to keep our water clean, the United States may be held culpable in allowing the permanent fouling of the water supply. This cost will certainly be passed to taxpayers.

2) As a medical insurance consumer:

Studies show that residents and workers around fracking sites are exposed to highly elevated levels of toxic and carcinogenic chemicals, with an epidemic of health problems. The cost to treat these preventable tragic and preventable illnesses will in all likelihood be passed onto the medical insurance consumer.

3) As a Massachusetts taxpayer, business owner and property owner:

Kinder Morgan is currently not in a strong financial position, and world events and the energy economy do not guarantee financial strength. I am concerned with the situation should a pipeline accident occur (not a rare incident in the United States) and the company runs out of resources. Little incentive exists for an insolvent company to restructure to pay for an environmental disaster, so the cost will be borne by Massachusetts taxpayers and the Massachusetts economy.

Permanent damage to the aquifer and watershed on the pipeline route is a real possibility. Again, besides having to cope with the tragedy of fouled waters, Massachusetts taxpayers should expect to pay for the consequences.

4) As a property insurance consumer:

As stated in the Guidance for Federal Departments and Agencies on Consideration of Greenhouse Gas Emissions and the Effects of Climate Change in NEPA Reviews from the Council on Environmental Quality, reviews must consider:

- (a) the potential effects of a proposed action on climate change as indicated by its greenhouse gas emissions and
- (b) the implications of climate change for the environmental effects of a proposed action.

According to the directive, both upstream and downstream impacts of a project must be considered. Any review of the NED Project must include the downstream use of the transported product, which in this case will be burned, adding to greenhouse gas levels. Because it is now well-known that the burning of natural gas directly adds to the conditions causing the climate crisis, approval of this project implies moral culpability for the larger effects of climate instability, such as droughts, mudslides, severe tornados and hurricanes, extreme heat and cold, rising water levels. Also, because insurance risk is spread among all payers, our property insurance rates will increase.

5) As an investor in human lives:

I have invested in my own children with the expectations of the right to life, and the right to clean air and water.

I have expressed my interests above in pecuniary terms because the true purpose of this project is pecuniary: corporate profit.

My interests which cannot be expressed in pecuniary terms are summed up here: Because I am aware of facts concerning the existential environmental crisis we face, it is my responsibility to work together with all responsible adults to ensure that we leave a safe, stable climate and society in place for our children, their children, and their children.

I seek to intervene status in opposition of this project because I view the project as an unrecoverable step backwards away from a livable planet for our great-grand-daughters. A habitable environment for our descendants is a vision which surely we must all share. That is the real bottom line.

For the reasons stated above, I request that my Motion to Intervene be granted.

Respectfully submitted,

Tina Ingmann

20160106-5005

Leslie J Carey, Averill Park, NY.

In light of FERC's acceptance of Tennessee Gas Pipeline's application, it might be useful to bring recent news of Kinder Morgan's finances into focus.

The sudden collapse of Kinder Morgan's stock price and subsequent dividend cuts should not be a surprise. Shale gas companies have been over-producing gas for some time.

The "gold rush" of gas well drilling in the Marcellus field began eight to 10 years ago, and in the past two to three years, the natural gas industry has been forced to cut rig counts precipitously to try to limit the supply of natural gas and shore up prices. Earlier this year, well head prices for gas dropped below \$1.50 and the gas industry was calling for even more cuts in rig counts.

The problem that the shale gas well companies face is that most of the financing for this market is risky due to the nature of the well drilling itself (not all wells produce abundantly, or at all) and therefore such financing often carries junk or just above junk bond status. Kinder Morgan is not immune from these market risks just because it focuses on transmission, and that is what we are seeing play out in recent headlines.

But despite the desire to cut rig counts, limit supply and raise the price of natural gas, shale gas well drillers are financially caught because their investors are focused heavily on production. If production falls, stock values fall, and if those values fall below the thresholds set in their loan agreements, it can potentially call in their loan covenants.

This means that many of these companies are forced to keep drilling to maintain their production levels, or otherwise face bankruptcy.

Why should this matter? As we have seen in past financing debacles such as the savings and loan crisis and mortgage backed securities crisis, taxpayers are often left paying the price of cleaning up the mess. Will Kinder Morgan and its brethren be deemed "too important to fail?"

Will we be asked to bail them out too?

The entire shale gas industry is bleeding in debt due to low energy prices and has been for some time. In 2014, on average shale gas companies earned only 68 cents for every dollar they spent and added another \$10 billion of debt to the already existing \$83 billion.

We are being told in New England that we desperately need a new gas pipeline because of a shortfall in

supply. We are being told that our electric bills will be reduced, but the shale gas industry has acknowledged that the low gas prices are a result of the fact that regional demand is already at near saturation and there is limited takeaway capacity.

Limited take away capacity! Kinder Morgan has already admitted that it would not have control over where the gas for the NED pipeline would ultimately end up. Furthermore, we have a national energy policy that is projecting that the U.S. will be a net exporter by the 2020s. Exporting seems a more likely prospect for this pipeline as it can be connected to the existing Maritime/NE pipeline and the gas piped to Nova Scotia, converted to liquid natural gas (LNG) and exported around the world.

Those in our community who are pipeline proponents and think our electric bills will be lower with the building of the pipeline might take a closer look at Australia's natural gas market. Australia increased pipeline capacity, which eventually boosted their exports, and finally, yes you guessed it, boosted the domestic price of electricity, leaving rate-payers scratching their heads wondering what happened to their lower utility bills.

Shale gas companies desperately need to export the glut of supply they are creating, and we here in New England are being asked to take one for the "global" team. Instead of rushing to build another pipeline so that we can ship gas overseas, let's have a conversation on the national level about developing an energy policy that is driven less by risky lending, capturing market share, flipping land leases, and reaping profits, and driven more by making a responsible transition to clean energy.

I live in Ashfield Massachusetts, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest

which may be directly affected by the outcome of the proceeding because...

- I am a landowner directly impacted by the pipeline route / compressor station.

- I am a landowner who would have my property seized by eminent domain.
- I am a resident who lives in the “blast radius” so I would be at physical risk.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline,
- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health .
- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.
- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

Basis for Intervening:

According to the most recent plans, the pipeline runs alongside my condo, well within the incineration zone. Many of the maps presented by Kinder Morgan do not show the last three buildings of my condo association - Boulder Hills. How can you approve a pipeline based on old maps? Nobody has come to me personally, yet it appears our property is one of the closest to the pipeline as we abut the existing utility lines. We pay high taxes just like any other town resident yet have not been included in one on one discussions. There are 24 condo units here whose owners are over 55. So this is how you treat the retired, many living on fixed income, many with health issues, most of who planned on this being the last place we would live. In the beautiful residential country side of Pelham NH. Surrounded by woods, wildlife, peace and quiet. Don't do this to us, there are alternatives!

I am a retired 77 year old woman living at 63 Cross Road in Northfield, MA. I wish to intervene on behalf of the young children of my neighbors living down the street. I maintain that they will be directly affected by the pipeline proposed to cross their town as they grow up. 1) They will pay the cost of building the pipeline as interest and principal on the bonds issued to fund it are factored into their utility bills. 2) If the

pipeline is still active, they will suffer harm from its emissions and accidents, from climate disruption resulting from continued burning of fossil fuels, and from fuel costs determined by global pricing. 3) if, as seems likely, the pipeline and associated infrastructure have been retired due to increased use of sustainable fuels, they will find a large hideous relic of a pumping station, no longer needed but still being paid for, as they roam the town wild lands. 4) They will suffer harm from the legal precedents set as FERC disregarded and overrode Massachusetts law regarding reducing dependence on fossil fuels and protection of conservation areas from development.

I do not find the interests of our children and grandchildren, who are members of our community now and will be for years to come, have been adequately represented.

Climate Action Group; Unitarian Society of Northampton and Florence diamondwd59@gmail.com

Basis for Intervening:

I am filing for intervenor status on behalf of the Climate Action Group of the Unitarian Society of Northampton and Florence, in Northampton Massachusetts. Our congregation's members are located throughout Western Massachusetts including Hampshire County, Franklin County, Hampden County and Worcester County. We have more than 250 members of our congregation.

We have immediate personal objections and broader community objections to the construction of the Kinder-Morgan pipeline. Our immediate interest will be directly affected by the outcome of the Kinder-Morgan pipeline proceeding. A substantial number of our congregation live or work in Franklin County, Hampden County and the Hampshire County hill towns, in close proximity to the proposed Kinder-Morgan pipeline. Others are concerned that the pipeline will affect watersheds and drinking water supplies in their communities.

On a broader level, our members are concerned that the natural gas transported by the Kinder-Morgan pipeline will be primarily for export rather than for citizens of the Commonwealth of Massachusetts. We believe that our electric and gas rates will be increased to pay for the pipeline. Consistent with the analysis by Attorney General Healey, the pipeline is not required by Massachusetts consumers.

Our religious principles include "Respect for the interdependent web of all existence of which we are a part." This web includes animals and people living in and using local and state parks and forest as well as other rural land. It includes our entire planet, which is threatened by increased use of fossil fuel.

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual dnkbuilt@myfairpoint.net

Basis for Intervening:

We are stakeholders in this matter, since our home is located within one-half miles of a property where Tennessee is proposing to locate a new compressor station.

We would like to register as an objector to the Tennessee Gas Pipeline Company's Northeast Energy Director Project.

On June 4, 2015 Tennessee Gas Pipeline Company sent us a letter notifying us that we had been identified "as a landowner whose property is located within one-half miles of a property where Tennessee is proposing to locate a new compressor station...". Per the drawing that was attached to the letter it appears that the proposed NED pipeline and Proposed Compressor Station Property Boundary would be approximately 2300 feet from our home.

We moved to New Ipswich 12 years ago to enjoy the quite country life. We have enjoyed living in an area where often the loudest noise is wild turkeys. In addition, we have enjoyed star gazing a sky unpolluted by manmade lights. We are concern that if the pipeline and compressor station are built that we would be subjected to unnecessary noise, pollution, and health risks.

The land proposed for the compressor station is surrounded by groundwater and we are concerned that there is a chance that our well could be contaminated by the activity of building and operating the pipeline and compressor station. We are also concerned that in the event of a catastrophe (i.e. leak, explosion, fire, etc.) that our town would be unable to notify, protect and/or evacuate the residents in a timely manner. We are especially concerned about the wellbeing of the students and faculty of Temple Elementary School, which is also located within a half-mile of the proposed compressor station boundary.

It appears that the possibility of the pipeline and compressor station being built have already adversely effected property values in the region. We believe that if the pipeline is built, the value of our home will be greatly reduced.

It appears that little-to-none of the gas will be consumed by New Hampshire residents and the main intent of the pipeline is to deliver gas to Massachusetts (and out of the country). We believe that routing the pipeline through New Hampshire does not make economic sense, since most of the end users will not be located in New Hampshire.

We do not think the pipeline should be built and recommend that FERC denying Tennessee's request.

Daniel N. and Valara M. Kottle
122 Old Wilton Road
New Ipswich, NH 03071

Individual	Kegateggie@gmail.com	

Basis for Intervening:

I live in the community that will be impacted by the pipeline, and have concerns for the health impact as well as property impact that this project will have on my home and health. The construction on the pipeline will be a threat to the health of my well, from which all of outer water comes. My close proximity to the project puts me in direct threat of death should a pipeline or compressor station explosion occur.

through the largest recharge area of water in our aquifer. Nobody knows exactly where the veins of water run and therefore it is not possible to predict how long it would take for the disruptions to affect these veins of water. There is no plan to monitor water quality routinely after the pipeline is installed. The wetlands, numerous watersheds, the local streams and brooks including the brook that traverses the proposed pipeline area and feeds our lake, will all be affected adversely.

Our social concerns about this proposed pipeline are many and include concerns about adverse health effects, property devaluation, and safety concerns, especially for those within the quarter mile wide incineration zone as we are. The graveyards behind our house and down the road, the YMCA children's camp on the lake, the historical sites on and around our property are all within this incineration zone. The proposed reroute runs the pipeline along a mile and a half of Route 119 thus cutting off Richmond's direct access to the nearest hospital in Keene as well as access to other nearby towns. 119 is one of the few paved access routes in and out of town. Our town of Richmond has only a volunteer fire department and no ambulances at all should an explosion happen. There are no nearby medical facilities. Nearby towns are in similar circumstances. Most of the pipeline would not be accessible by road and firefighters would need to carry water by foot or on ATV vehicles. Depending on how the wind was blowing, fire would be hard to contain.

We know that there is no need for this oil in NH as NH produces 50% more energy than it uses and that contrary to what is being claimed there is no agreement to "co-host" with local public utility companies. There will be increased local costs due to the impact on our roads, surcharges that will be added to our utility bills to maintain this proposed pipeline that NH will not benefit from. Why should out of state companies (Kinder Morgan and Tennessee Pipeline) get rich at our expense? We haven't voted for this. Our democratic processes are being ignored. Given the reasons cited above, rerouting the pipeline through Richmond residential area in place of the original plan to go through vacant/ unoccupied logging land would be a result of ignorance and/ or LACK OF CONCERN. I know this is not the case for you and respectfully request your action and concern on this matter of the proposed pipeline.

Please block this proposed pipeline, which is of no benefit and greatly threatens our safety, our environment, our economy, and our quality of life.

Sincerely,

Dartha Hopkins, homeowner and citizen
119 Sandy Pond Road
Richmond, NH 03470

Individual jmcquaide@ymail.com

Basis for Intervening:

I live in Andover, Massachusetts, and want to have the ability to intervene in this proceeding to oppose the NED pipeline. I have interests that may be directly affected by the outcome of the proceedings. For example, the proposed route for the NED pipeline goes through my neighborhood. My home is expected to be in the blast radius and I fear for the well being of my family and fellow community members if this pipeline is built.

In solidarity,

Jenny McQuaide

this pipeline is not helping us meet this greater need of the country to honor global treaty agreements. We have, at great expense and temporary financial inconvenience, put up solar panels and insulated our home, as have a large percentage of our Massachusetts neighbors. Eventually, this will pay financial dividends but the upfront cost is a burden. Government policies that foster such continued growth in renewable energy sources, along with conservation efforts will start to help fill and respectively minimize growth of energy demands/needs better than a gas pipeline.

3) ENVIRONMENTAL INTERRUPTION AND DAMAGE TO PROTECTED LANDS: As an annual contributor to the Mt. Grace Land trust organization, I feel the need to intervene and have my voice represented to speak for the land that my money, in part, has been donated to protect. Our family has donated our after tax hard earned money in good faith trusting the laws that protect this land to have it remain as a state treasure for people and wildlife alike to enjoy, not to have a pipeline be run through it. The blasting, the clearing, the potential threat to vernal pools, the potential for leaks or other accidents, the threat to potable water supplies when the earth is disrupted, must all be considered.

4) REAL ESTATE VALUES: Whether you agree with any of what I have stated thus far, our neighbors are already noting a drop in real estate values due the proposed pipeline. Even if the pipeline were to bring all the fanciful rainbow unicorn predictions of Kinder Morgan to life (jobs, lower energy bills, meet “dire” energy needs...etc) there is no getting past the public perception that it is undesirable to live near a compressor station. The average price of homes continues to stagnate and drop, and the ability to sell homes in Northfield has been hindered by the prospect of the pipeline’s arrival. Future buyers already echo this concern.

I could go on with more concerns, but I’m sure you have plenty of letters that cover other issues. Please consider and respond in kind to mine. The NED pipeline should not be allowed to move forward. Please help us, and help your own conscience, you will sleep better at night, and the earth will still be here in a state you can continue to sleep in. We first move ourselves, then our community, our state, our country, and our world in the right direction. For some of us this means putting up solar panels, eating locally, buying locally, insulating our homes, biking to work occasionally, and fighting injustice and illogical future courses in energy policy. For you, FERC, it starts now with you and your decision. Which future will you impose on us, your fellow humble citizens?

Kind Regards,

Terry McKeon
260 Birnam Rd.
Northfield, Ma 01360

20160106-5025

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, Stephen Wallingford, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Pipeline Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Stephen Wallingford
15 Jordyn Lane, Andover, MA 01810
(978) 470-8472
SHWallingford@comcast.net

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

The pipeline, as proposed, would dramatically decrease the market value of our home, would make it impossible to sell our home (due to the explosive risk that would prevent a mortgage for a buyer) at a future date, would destroy the appearance of the wetland and wetland vegetation areas that dominate our property, would create an “eyesore” where they plan to clear-cut through such a wide area for such a relatively small pipeline, would create an explosive risk in a residential neighborhood where children play, would change the natural environment for the animal and bird species that use the wetland and wetland vegetation areas (including the larger pond used by various bird species) on my property, and would dramatically reduce the useable area of my property.

This proposed project would violate many environmental laws enacted in the Commonwealth of Massachusetts. As proposed, this pipeline would violate numerous environmentally protected areas instead of using existing utility right of ways. There are ways to build a pipeline; but, damaging and/or ignoring every environmentally sensitive area in sight is not the solution. Our Town leadership has provided several options which would dramatically reduce the impact on residential and environmentally sensitive areas. To date, I have not seen convincing evidence that these alternate routes have been given due consideration. I have seen only “lip-service” from the gas pipeline company. Increasingly, we do not trust the pipeline company.

Additionally, we continue to deny access to our property to the pipeline company employees for the following reason. Two months after we formally/initially denied them permission to be on our property, we caught one of the employees (the same person with whom we had registered our refusal to give permission) on our property. His excuse for being present without permission seemed like an exercise in “plausible deniability” to us. When I talk to pipeline company officials, they have provided information that we have been able to verify as being false. At this point, the pipeline company has not earned our trust.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Stephen Wallingford, respectfully request that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 5th day of January, 2016.

Stephen Wallingford

Individual mandyha@comcast.net

Basis for Intervening:

I live in Winchester, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because:

1. I am a resident who lives in the "blast radius" and whose daily commute crosses over the proposed pipeline route so I would be at physical risk.
2. I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health.
3. I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.
4. I don't believe there is a NEED for the pipeline

Individual deanna620@hotmail.com

Basis for Intervening:

We are against the pipeline:

Basis for Intervening:

The proposed pipeline routes directly through my property: 12 Ryan Road, Townsend MA 01474

I will hear, smell, feel, see and potentially taste (dug well water quality) the effects of the buried pipeline in disturbing the land and quality of my water, well and way of life.

We are concerned about air quality due to 41,000 HP turbines generating exhaust.

We are concerned disturbances to our dug well as it taps into stratified drift aquifer that the pipe line is virtually on top of.

We are concerned with the continuous noise of compressor station, .

We are concerned with noise and pollution from blowdowns.

We are concerned with light damage to dark skies. We won't be able to see stars.

We are concerned with subsonic vibrations that can subconsciously affect health.

We are concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.

We are concerned with traffic, noise, air pollution and numerous disturbances during construction.

We are concerned with the property value of our house being extremely close to a compressor station and fracked gas line.

We are concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.

We are concerned with the industrialization of the neighborhood. The reduction in property value, the destruction of our way of life.

industry.

We live directly in the path of the pipeline. Were my children play, snowboard, sled, build forts, play man-hunt and stay off video games and still have a childhood playing in the woods. This will change our way of living, take away a portion of our property, disturb the natural environment we sought, found and loved when buying our home. We purposely bought this home because it abutted conservation land, and specifically and strategically bought our property thinking that no industry or further building would occur here. This will virtually destroy what and why we bought our home.

Basis for Intervening:

I oppose the proposed pipeline: I object to it as an electric ratepayer, a taxpayer, a neighbor and visitor to protected public land in Massachusetts. It would imperil our food, water, and air. I object to it as a person deeply concerned about climate change and the large-scale extraction, combustion and release of natural gas into the atmosphere, which directly affects all beings on this planet.

Basis for Intervening:

I live in Pepperell MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because:

- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED.
- I am gas ratepayer whose gas company has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts of the gas company).

Basis for Intervening:

I am filing as a property owner concerned about this projects environmental impacts to my property and town. I wish to protect my legal status since my property is now on the alternate route proposed by Kinder Morgan when it was on the original proposed route. I opposed this project due to the concerns for our town water supply being contaminated by the pipeline construction.

20160106-5034

January 5, 2016

Gentlemen,

My name is Roger L. Martin and I live at 72 Methuen Road in Dracut, MA and I want to intervene in this proceeding to oppose the NED pipeline. I have an interest which directly affects me and my family by the outcome of the proceeding.

Construction of the NED pipeline, as proposed by Kinder Morgan in Docket # CP16-21, under the high voltage transmission lines crossing Methuen Road in Dracut, would mean that I would now be situated less than 2000 feet of the proposed 23,000 horsepower compressor station. The effects of living downwind of the compressor would pose irreversible risks to the health of me and my family and the surrounding neighbor-

hood.

In addition, the proposed pipeline and compressor station would cause detrimental impact to the surrounding area including:

- reduced property values, (which as a 70 years old senior I am counting on to support me in the very near future), and the effect this would have on local tax bases, beyond any compensation offered by the pipeline company)
- regional health and environmental consequences caused by pollutants associated with the operation of the compressor station & the pipeline
- tariffs proposed to force taxpayers to cover the costs of the pipeline
- possible increases in energy costs that could result from exporting natural gas, forcing local markets to compete on a global scale
- Stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts

I, like many other seniors in this bedroom community, do not have the financial ability to abandon my property or sell it at a greatly reduced price to move elsewhere away from this proposed industrial development. Construction and operation of the NED pipeline would greatly impact my quality of life, and economic wellbeing, and leave me in a position where it would be difficult to re-establish myself somewhere else.

For these reasons, I am interested in and would be affected by the Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in the proceedings at Northeast Energy Direct.

Thank you,

Roger L. Martin

---------------------	--------------------------------	----------------------------------

wish to intervene in the Northeast Energy Direct Project because I oppose the building of the pipeline and its compressor station and any other infrastructure that may accompany it . I have interests that may be directly affected by this project.

Nearly thirty years ago my husband and I invested everything we had to buy property here at 394 Van Tassel Road. We chose Franklin and this particular site for its beauty, peacefulness and rural character. It is 6 acres of heaven on Earth with gorgeous mountain views and crisp clear well water, fresh unpolluted air and a pond and woods that house wildlife.

Construction of the proposed NED pipeline would mean a 30 inch fracked gas pipeline would be a few hundred feet from the back side of our house and if approved, parallel to another 30 inch fracked gas pipeline , The “Constitution” Pipeline. These two pipelines would be separated by just 50 feet. The building of the NED pipeline would also mean a 50,500 HP gas compressor station would be just over 1/2 mile from our home. The American Medical Association and the NY Medical Association have declared that fracked gas infrastructure is hazardous to our health. It can cause cancer, neurological and respiratory disorders and fetal abnormalities. Compressor stations emit carcinogens such as benzene, toluene and formaldehyde as well as methane in large amounts when “blow downs” occur. Methane leaks are known to occur in all fracking infrastructure. Scientific evidence presented in New York State’s ban on fracking stated that living near a compressor station was more dangerous than living near a fracking well itself. Being just over 1/2 mile from the compressor station would also mean we are feet from the “buffer zone” or as Kinder Morgan itself has referred to it at an Open House the “incineration zone”. Franklin’s proposed compressor station will also house an odorant injection facility where 6,000 pounds of mercaptan will be stored on site. Mercaptan is toxic and flammable. Concerns of drifting particulate matter and volatile organic compounds are of huge concern. I will no longer be able to grow vegetables knowing human carcinogens are being expelled 1/2 mile away. Ground water contamination is also of huge concern with both the compressor station and the building of the pipeline both during construction and after. I am concerned about blasting in this area. We have a private water well and blasting could very well affect our drinking water.

I also have concerns over property devaluation. I am not in a position to walk away and abandon my home or even take a loss if we find living here is unbearable due to health issues or industrial development. We are abutters therefore we are receiving no compensation. Certainly our property will be devalued if not unsealable. Who would want to buy a home with two 30 inch fracked gas pipelines in the backyard and a 50,500 HP compressor station just 1/2 mile away? We would be forced to stay and suffer the health consequences, disturbances and /or contamination to our private water well, continuous noise and air pollution from the compressor station as well as even greater amounts of pollution from blow downs, light pollution, vibrations, truck traffic both before and after construction, fear of explosion , leaks and more. Our homeowners insurance company has already informed us if the pipeline and/or compressor station is built they will not cover any damage caused by the pipeline or compressor station to our home, possessions or medical payments to ourselves or others.

I am extremely concerned over this compressor station being sandwiched between two schools, one elementary and one Pre-Kindergarten through 12th grade. The bodies of children are much more vulnerable to toxins. What family would be attracted to a town that housed two 30 inch fracked gas pipelines and a massive , toxin spewing compressor station. Schools need families with children to survive. And children need fresh air and water to survive. I fear our beautiful, private like school will close as well could the neighboring town’s small elementary school. Placing a compressor station by not just one BUT TWO schools is appalling and unacceptable.

I am concerned my own grandchild will not be able to play in the same woods and fields his own father played in when he comes to visit. His life is not worth the risk.

Continuing to rely on fossil fuel hinders growth of renewables, energy our children and grandchildren need and deserve.

Kinder Morgan has admitted to its stockholders that much of this gas will be exported. This project is not for

the common good and therefore any eminent domain proceedings here or anywhere along the pipeline route would be highly illegal. I highly oppose eminent domain for private profit. None of this gas will be used for New Yorkers but we will be forced to deal with the environmental and economic impacts. Kinder Morgan does not have a good safety record. I am also concerned that being an open access pipe this will lead to more industrial build out along the pipeline route.

For these reasons and more, I am interested in and would most definitely be affected by the applicant's filing. My interests cannot be adequately represented and protected by any other party.

Hence, I ask that the Commission grant me permission to intervene in the proceedings for the Northeast Energy Direct Pipeline project.

Thank you,

Cynthia A. Beach

Basis for Intervening:

I am an impacted landowner on the proposed Kinder Morgan pipeline (Haverhill Lateral) route who is opposed to this project. I have attended a multitude of meetings and have researched the project. However, Kinder Morgan has been less than forthcoming with information on this project.

They have repeatedly come to meetings without the specific information that has been requested, they have been derelict in their responsibilities to provide complete information on items such as the actual pipeline size and the PSI of the gas that is expected to flow through the proposed pipeline. They have repeatedly brought outdated plans to any open meetings and then stated, "the proposed plan has changed, but we don't have those plans with us". They have also been evasive when asked where the demand for this gas is and who the customers are. They also do not answer the question if this gas to be shipped overseas. Their safety plan has also not been shared to my level of comfort.

I moved in the property at 3 Bounty Court in Salem NH over 10 years ago. Its a nice quiet neighborhood to live and raise my family. The curb appeal on my neighborhood will be destroyed if this project is to move forward. To the extent known to me my property has no easement for a gas pipeline. I am aware that my neighbors do have such an easement as part of their property. Based on Kinder Morgan and Kinder Morgan alone, they tell me the pipeline isn't on my property, but the easement is, or will be as part of the project. The project is an expansion of the old, existing pipeline. It is a replacement, but also an expansion of the old pipe and the greater size would require a larger easement, which would then be on my property.

I have expressed my concern & disbelief that this pipeline and easement is on my property. They claim it is and have assured me they will provide documentation from the land deed search company that the property does contain an easement.

I am seeking relief from this project and the confirmation via the land deed search that my property is free of an existing easement. Kinder Morgan and their subsidiaries have my request on record and to this date have not provided me with the results regarding the deed search and any claims or rights to build on my property.

They claim they need to survey my property to confirm this information. This confuses me. If my property did in fact include an easement for the pipeline, then they should have a record and be able to provide me with this information expressly. To repeat, they have not shared any such data with me. I have not provided permission not survey my property. A further support to my understanding of my land being easement free. If there was an existing easement, they would have the right to survey my land and not have to ask. I would be inclined to consider providing permission to allow surveying of my land for a fee. I would base this fee at a rate of \$1,000 per inch of each tree's diameter at the base for each tree they would plan to cut down. When I brought up this request at a meeting, I was laughed at. This is a for-profit company therefore they should expect costs to be incurred, but laughing at a landowner is not the best way to conduct affairs! My interest is directly affected by the outcome of the proceeding! Please deny this project and reject Kinder Morgan's application.

Basis for Intervening:

Potential emissions from a New Ipswich compressor station, and some associated health effects

For those air pollutants classified as toxic, Kinder Morgan predicts for the New Ipswich compressor station.

Per year:

Nitrogen dioxide: 50 tons

Carbon monoxide: 40 tons

Sulfur dioxide: 5 tons

Particulate matter: 9 tons

Volatile organic compounds: 8.5 tons

Formaldehyde: 1.3 tons

A limited review of public health studies shows:

Nitrogen dioxide: Increased respiratory hospitalizations (2%) 2, heart failure (1.7%) 3

Carbon monoxide: Increased premature birth rates (4%) 4, low birth weight (7%) 4

Sulfur dioxide: Increased low birth weight (3%) 4, heart failure (2.4%) 3

Particulate matter: Increased fatality from heart and lung disease (5.3%) 5, new childhood asthma diagnoses (10-12%) 6

Formaldehyde: Levels can exceed acute toxicity thresholds by 25% and cancer risk thresholds by more than 700-fold, up to 800 meters from compressor stations 7

Particulate matter: Levels of particulate matter near compressor stations may be more than double what is measured at regional monitoring stations 8, 9

Nitrogen dioxide levels would increase by up to 13.4 micrograms per cubic meter for distances up to 10.3 km from the proposed compressor station.

Temple Elementary School is very close, only about 800 meters from the proposed site.

Five towns are within the 10 km area of concern mentioned above.

Greenville Water supply is very close.

Formaldehyde: Levels could exceed acute toxicity and cancer-causing thresholds for children at the school based on published observations 7.

Nitrogen dioxide: If concentrations increase as predicted (13.4mcg/m³), public health studies suggest we should expect at least a 7% increase in new childhood asthma diagnoses 6 and a 2% increase in hospitalizations for asthma attacks 10 in a 10 km radius. People with chronic obstructive pulmonary disease, stroke, and heart disease would also be affected, as well as increased overall fatalities from these conditions 10.

The potential health care costs associated with the proposed emissions, based upon scientific estimates 11

Nitrogen dioxide: \$16,000 per ton x 50 tons = \$800,000 per year

Sulfur dioxide: \$28,000 per ton x 5 tons = \$140,000 per year

Particulate matter: \$130,000 per ton x 9 = \$1,170,000 per year

Estimate of total health care costs: \$2.11 million per year, for three pollutants only

------------	--------------------------	--

Basis for Intervening:

My family and I moved to Northfield, Massachusetts in 2008 and have since grown to love the rural land, town, and community that is Northfield. Over the years we have done many improvements and invested endless amounts of hard work, time, and money into our property. Living in a remote natural area where the water, air, and soil is clean has given us the privilege to create our own fruit and vegetable gardens, and plant numerous trees, flowers, and berry bushes on our property. We have watched them mature over the years and hope to continue for many years to come. In our home we have converted some of our energy systems to ones that are more conserving and economical as to help decrease our energy usage and become more efficient. We have also built a large shed for our wood as the main source of our heat in the winter and a sugar shack for one our favorite seasonal activities of making maple syrup from the trees on our land. Our land is bordered by dense forested habitat and the Brush Mountain Conservation Area, owned by the town, which is home to various wildlife and a host of hiking trails that we frequently visit.

If the Northeast Energy Direct pipeline is to be constructed my home, family, health and safety, environment, and community will be directly impacted. My house is less than a mile from the proposed compressor station set for Northfield. This concerns me for a handful of different reasons that include the potential risks and harms that the station and pipelines may be bringing with it. I fear that the air pollution caused by regular blow offs at the compressor station will cause increased levels of harmful particulate matter in the air that myself and all living organisms in the area breathe. There is also the concern that the compressor stations constant noise and light pollution can and will deter wildlife from the area and disrupt the beautiful night sky views that I so much enjoy. My home gains all of its water from our private well, which I worry may be threatened from the construction of the new NED infrastructure and if contaminated could cause health problems for my family and pets. But I am not only worried for my own homes water, but all residents of Northfield whom rely on a private well for water and even the towns water supply which could become contaminated. Northfield is also a town situated right on the Connecticut River and it is worrisome that ground water contamination may not only reach individual residents but also lead into the river which is home to so much aquatic life, a source of water for farming, and also a fantastic recreational attraction.

Northfield is a town whose attraction comes from its rural qualities and favorable location on the river. Farming in Northfield is one of the main means of economy for the small town, there are more than three

significantly sized local farms in Northfield who could be negatively impacted by the construction for the compressor station and pipelines. It is distressing to me that Northfield is a more appropriate location for the route and compressor station because it has lower consequences due to it being less densely populated, but the risks and consequences become extremely high for myself and other residents who would be situated so closely to the route. Being inside the incineration zone of the compressor station and along the pipeline route alarms me greatly because of the likely possibilities of leaks, ruptures, and explosions. Along with the history of safety violations by Kinder Morgan it is unsettling that if a situation were to occur in our town that our safety and rescue personnel are not educated, equipped, or allowed to respond to such a situation leaving nearby residents helpless and in great danger.

The acceptance of the NED pipeline burdens me because eminent domain would allow for the private company to seize private and public lands, conservation lands, wetlands and other sensitive habitats that are home to endangered species. If approved my home faces the threat of losing a great deal of its property value and the possibility that Kinder Morgan not fairly compensate us for the memories, safe and healthy environment, and happy home establishment that could be lost while we must deal with the future impacts. Construction could be disruptive and a sore site to see every day as I must pass the compressor station site in order to get into the center of Northfield. In addition the state evaluated capacity for the main line was roughly .7 billion cubic feet per day and the private project proposes to transport more than double that, this is discomforting because an increase in capacity also increases the pipelines pressures and safety risks. Also it makes me wonder why must they transport so much additional gas when the evaluated need is much lower, maybe because it isn't going to be fully intended for ratepayers in New England and in turn not lowering gas rates at all.

The concern I have for the pipeline proposal is not just for residents and the community of Northfield but for all residents whose property may be obtained for use of an energy infrastructure which is faulty, short lived, and an unrenewable source. It is also devastating that the gas is extracted from hydraulic fracturing a very dangerous method that leaves behind harsh results for the environment and communities in the area. This system seems unfavorable for the transition to renewable energy sources and doesn't help to meet state and nationwide goals for curbing greenhouse gas emissions. I fear the proposed pipeline would only further induce the growing climate change issue we all face and is a step backwards rather than one forward for all of humanity.

Accordingly, I request that the Commission grant this Motion to Intervene.

I am a homeowner who is directly impacted by your proposed pipeline project. I strongly object to this project for a number of reasons. First of all I disagree with the concept of expanding the delivery of fossil fuels and am concerned about the damages these methods can cause. I also object to the possibility of my property value going down, my water supply being damaged, toxic emissions and the defacing of our beautiful rural area. I also object to the destruction this project can and will cause to the wildlife that has already been forced into smaller unnatural areas.

I live in Rindge, New Hampshire and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because

- I am a resident whose source of drinking water is crossed by the proposed route and my drinking water supply is at risk from the operation of the pipeline and /or its construction.
- I spend much time in the outdoors, including Converse Meadows and Rhododendron State park and do not want these public lands, set aside to be protected and enjoyed by the citizens and visitors to these areas, to be impacted by the construction and operation of this pipeline.
- I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project consumer, expects to see an increase on my bill relating to NED cost recovery.
- I am concerned about the climate future of the earth and have taken steps to reduce my carbon footprint. I believe the proposed NED pipeline is counter to efforts being made nationally and globally to convert to renewable sources of energy. I am deeply concerned about the amount of documented negative environmental impact that practices such as fracking, compressing natural gas, and construction of the pipeline cause. I believe the economic resources involved in constructing such an unnecessary pipeline would be better put to use in the exploration, development, and construction of renewable energy infrastructures.

Basis for Intervening:

I am a homeowner in the town of Richmond, New Hampshire, and I want to intervene in this proceeding to oppose the NED pipeline. We will be directly affected by the outcome of the proceeding because our home is within feet of the proposed pipeline path, and the pipeline stretches across our property and through our watershed. We are in the blast zone and we are at physical risk because much of the land has no road access and our town has no ambulances or full time rescue squad. The pipeline construction would dramatically and negatively affect our well water quality and the quality of the lake we share with the town. A summer camp filled with children (who will also be at physical risk) would also be dramatically affected by any negative to our lake's water. As homeowners, we are gas and electric rate payers.

Basis for Intervening:

Motion to intervene of Bill Kearney and Kim Kearney. We are residences of Pelham NH in Hillsborough County. The proposed right of way of the Tennessee Pipeline will effect our property. As a result a portion of our property may be subject to condemnation if a certificate is granted.

Pursuant to commission rules 385.214(B) and 157.10 Bill Kearney and Kim Kearney move to intervene in the above caption proceeding. This intervention is timely filed.

Our Kearney family is directly impacted by this proposed pipeline. We are in the potential right away and incineration zone. We have concerns about our water as it relates to our well and drinking water. We are also concerned about our entire town and the impacted it will have on the aquifer. We are also concerned about the disruptions from the construction and how it will effect the value of our home in both the short and long term. Evidence shows that they try to be safe, but this is a high pressure pipeline, and I question whether our town can handle this type of situation via our fire department should an explosion occur. Bill and I are also concerned because we are in the air-shed of the Dracut compressor station which could ultimately impact our health and members of our community.

In conclusion Bill and I are not only are concerned about our families health but our friends and families around us and those down the pipeline route.

Basis for Intervening:

I am a resident of the North Quabbin area of Massachusetts, in Petersham. Although my town is not directly

impacted by the proposed Northeast Energy Direct pipeline envisioned by Kinder Morgan, I am writing to express my objections to this unnecessary infrastructure and its accompanying hazards.

I live in a relatively large and beautiful “neighborhood” that has been purposefully preserved from development and intrusion over the past 30+ years. This landscape, and its resources, are one of the few things that the North Quabbin has going for it. The small towns are poor and languishing due to disappearing industry, but the forests, farms, and recreational areas are a resource for residents and tourists alike. We have rivers, lakes, mountains, and farmland that have been preserved “in perpetuity” under Article 97 of the Massachusetts Constitution. I take this seriously and feel that the proposed pipeline is a violation of our Constitution. The proposed pipeline, that is intended to wreck havoc on this set of resources, comes at exactly the wrong time in the history of fossil fuel extraction and marketing. Massachusetts has invested strongly in alternative energy and has an exemplary record for energy conservation. The evidence that the proposed pipeline is necessary for Massachusetts is dubious indeed. Alternatives, such as stopping the hazardous leaks from existing infrastructure in the eastern part of the state, have not been explored. The Commonwealth itself has issued a report that casts doubt on the need for this investment in outdated energy infrastructure.

I am concerned about the hazards that come with the proposed pipeline. It will potentially damage the environment it crosses: the Connecticut River watershed, the farms and forests in its range, and the towns that would have to contend with a leak that is very likely given the history of gas leaks that already are raging in the US today. Compressor stations will add to the hazards, not to mention the 7x24 light pollution that comes with them.

To top it off, as a ratepayer, I will be expected to subsidize this project, which in the end will bring profits to Kinder Morgan, and only havoc to my community. I would like you to take seriously my objection to this project.

Sincerely,

Diane Nassif

Basis for Intervening:

The proposed NED pipeline will have negative impact on my property and property value. The proposed blowdown valve on Shelburne Falls Road will definitely put particulate matter over my house and on the fields of the horse-powered organic farm one mile from my house. Kinder-Morgan refuses to release the names of the chemicals used in the fracking process. Our well is likely to be adversely affected. We don't use natural gas and the Massachusetts attorney general has determined that we do not need more natural gas in our state. The 12/18/2015-01/10/2016 edition of Bloomberg Businessweek, page 17 states matter-of-factly that “American companies will be providing liquified shale gas to European power plants starting next year”. For this we have to have our utility rates raised?

Basis for Intervening:

We own a 41 acre pencil lot in Lanesboro, Mass. Besides being morally opposed to fracking, if the pipeline goes across our property, 80% of our land will be inaccessible.

We have owned the property for almost 15 years and paid full taxes on a building lot for those years. If the pipeline goes through and 80% of the lot is unusable, the value of the property will be almost nothing and very difficult to sell.

Please do not allow a company to rape our land for profit with such a huge negative impact on us, the land-owners.

Basis for Intervening:

My name is Deborah Guard and I live in Schenectady, NY. I wish to intervene. I am opposed to the project. Continued fossil fuel extraction is endangering life on our planet. Fracking is an extreme extraction process is a hazard to the health and safety of people living near the fracking well pads and the workers in the industry. According to the Massachusetts Attorney General Maura Healy, the pipeline is not needed. It is more important for America to transition to renewable energy sources. The construction of the pipeline will destroy thousands of trees and cross numerous wetlands and streams. The safety record of Kinder Morgan is not stellar. Leaks along the pipeline and venting of compressor stations release methane, toluene, benzene and other toxic chemicals. None of this "natural gas" will be used by New Yorkers, but we will be forced to deal with the adverse environmental and economic impacts.

1/5/2016

Kimberly D. Bose
Secretary
Federal Energy Regulatory Commission
888 First Street, NE, Room 1A
Washington, DC 20426

Dear Kimberly D. Bose:

My name is Virginia Costa and I've lived here most of my life. I'm concerned for the health and well-being of the residents. I've worked hard for my home and I am concerned that the Northeast Energy Direct pipeline project will ruin everything I've worked hard to achieve. I do not want to move but the studies I've read show significant health impacts to residents living in the area of a Compressor Station and Pipeline of this magnitude.

The environmental impact on local farms and our community will be extensive. Several studies have documented that these stations pollute the groundwater, soil and air within a ten mile radius.

I will be directly affected by the toxic emissions vented from the Compressor Station during 'Blown Down' events. The NED project has requested 75 'Blown Downs' per unit per year. These 'Blown Downs' have been shown to cause rashes, frequent nose bleeds and respiratory distress to residents but is more potent the closer the individual is to the Compressor Station. Please consider the impact the Northeast Energy Direct project will have on our town and families like mine. I am opposed to the NED project and you should be too.

Respectfully Submitted,
Virginia Costa

20160106-5068

**Seasonal temperature effects on the structural integrity
of the Kinder Morgan 30 inch gas pipeline**

By Walter Pasko, Phd ME

In Berkshire County of Massachusetts seasonal changes result in a wide variation in ambient temperature. A structural steel pipeline will exhibit longitudinal shrinkage as the temperatures drops from summer to winter. In addition, localized frost heaving can bend the pipe as the frost pushes sections of the pipe upward. Both effects induce large unsafe tensile stresses along the length of the pipe.

The following analysis will show that these environmentally induced stresses can far exceed the normal working stresses in typical structural steel.

Basic Pressure vessel design calculation with no environmental effects

Pressure vessel calculations for 30 inch diameter steel pipe with an assumed 1 inch wall thickness and operating gas pressure of 1000 psi gives a hoop stress based on a thin wall pressure vessel approximation as follows;

hoop stress = (pressure x pipe diameter) / (2 x pipe wall thickness) = 15000 psi

Since structural steel has a minimal strength of 60000 psi the working safety factor for the assumed 1 inch wall thickness would be:

$$\text{Safety Factor} = (60000 / 15000) = 4$$

Additional Stresses from Summer to winter pipeline lengthwise shrinkage

A one mile length of pipeline is estimated to shrink lengthwise by approximately 34 inches from a seasonal drop in ambient temperature of 70 degrees F, based on a coefficient of thermal expansion for steel of .0000078 inch per inch per degree F.

However, the one mile of pipe is part of a long continuous pipeline and is not free to shrink as the temperature drops. Consequently the pipe will develop a tensile stress throughout the whole length of the pipe. The stress value is calculated as follows:

$$\text{Stress} = \text{steel elasticity modulus} \times \text{thermal expansion coef} \times \text{temperature change} \\ = 30,000,000 \times .0000078 \times 70 = 16380 \text{ psi}$$

The result is that the pipe wall will experience a lengthwise 16380 psi tensile stress in addition to the normal gas pressure circumferential stress of 15000 psi.

Note: Changing the pipe wall thickness does not change the stress from shrinkage.

Additional stress from frost heaving

One type of Frost heaving occurs when subsurface water from higher elevations flows down hill and percolates up towards the soil frost line and accumulates as an ice layer over time, known as an ice lens. This can create localized uplifting forces which can push a section of the pipeline upwards creating unsafe bending stresses in the pipe wall.

{figure omitted; submission with figure, 3 pages, 259 KB, can be downloaded at: }

<http://elibrary.ferc.gov/idmws/common/opennat.asp?fileID=14091274>

In order to demonstrate the potential magnitude of this effect the pipeline was modeled mathematically and evaluated in the program called SCILAB using text book beam theory for the configuration below:

Computed pipe stresses for a 30 inch diameter pipeline subjected to both bending and shrinkage due to seasonal variation in environmental conditions

pipe length, feet	wall thickness, inches	frost heave length, feet	frost heave pressure, psi	pipe bending deflection, inches	pipe bending stress, psi	Combined bending + shrinkage stress, psi
100	1	20	30	5.4	34980	51360
100	2	20	60	5.4	37950	60760 *
100	1	10	60	5.6	39020	55400
100	2	10	120	5.6	38960	55340

* exceeds yield strength of 60000 psi for structural steel.

Results of bending stress calculations

This chart shows that the bending stress for the 30 inch pipeline is determined by pipe deflection and is independent of the wall thickness, In other word, a thicker pipe wall does not help to reduce bending stresses.

The frost heave pressure required to create a dangerous bend in the pipeline is no greater than the pressure exerted by a truck tire contacting the road. This pressure is extremely low compared the 1000's of psi pressure that freezing water can exert if necessary to accommodate the expansion as ice is forming.

The pressure applied by the frost heave and the length of the frost heave together create the total force acting to lift and bend the center section of the pipe. For shorter length frost heaves higher upward pressures will develop as necessary to accommodate the unstoppable expansion of freezing water.

Conclusions

The combined stresses from frost heave bending and thermal shrinkage can far exceed the pressure vessel design operating stress level ,which in this example case has a safety factor of 4.

These environmentally induced stresses can approach the yield strength of structural steel steel and may create cyclic yielding of the pipe steel resulting in very rapid fatigue failure, especially at stress risers such as welded joints, valve connectors, surface scratches, elbow transitions, and surface defects. High cyclic stresses can cause rapid crack growth a leading cause of catastrophic pressure vessel failure.

Basis for Intervening:

I am a landowner directly impacted by the KM/NED pipeline route and compressor station in Northfield, Mass.

Our property is within 1/4 of a mile of the pipeline right of way.

Our property is within 1 mile of the compressor station.

Our property value (and those of our neighbors) would be severely decreased by the close proximity of the pipeline and compressor station. It is likely that it would not be possible to sell our property at all, which would severely impact our ability to relocate to a different part of the state or country.

I and my family would be negatively impacted by the noise and light from the compressor.

I and my family would be negatively impacted by the potential environmental hazards caused by the pipeline and compressor.

I and my family enjoy nature and the pristine outdoors, and we do not want to see any State or Town public lands, parks or forests, which have been set aside for the benefit of the people and wildlife of the Commonwealth of Massachusetts, to be negatively impacted by any activities of this commercial project.

I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

According to numerous studies, including that of the Attorney General of Massachusetts, this pipeline is not needed from an energy supply perspective.

The pipeline will negatively impact the State's efforts towards decreased reliance on fossil fuels.

The KM/NED pipeline is overwhelming OPPOSED by the residents of the communities in Massachusetts through which it passes. It is the responsibility of the Federal Energy Regulatory Commission to REFUSE permission to projects such as this one that are clearly and demonstrably NOT in the public good.

Motion To Intervene of Debra A. Reynolds To Oppose The NED Pipeline

Re: Docket #CP16-21

Northeast Energy Direct(NED)Pipeline

Tennessee Gas Pipeline, LLC a Division of Kinder Morgan

I am a resident of Erving, Massachusetts and I have personal, local and regional interests which may be directly affected by the outcome of this proceeding.

Any pipeline and compressor stations(Northfield site closest to Erving)impacts the health, safety and well-being of the residents and the environment(forests, wildlife, air, water)working farms, any public or private conservation land and our scenic

New England landscapes(beauty, public recreation, tourism).

My interests include, but are not limited to and may be impacted by construction or operation:

I am a resident(20 years)of an impacted community.

The town of Erving has a Town Resolution in opposition to the NED Pipeline.

I have a well as do all the residents and businesses in Erving Center.

Erving's local economy consists mainly of small businesses supported by tourism.

The proposed pipeline impacts Erving by vertical drilling under the Millers River(white water kayaking, fishing and the Erving Riverfront Park)across Route 2(part of the Massachusetts Scenic Byways Drives)onto Old State Road(mobile home park, homes and an old town cemetery)and through The Erving Town Forest(protected under Article 97 of the Massachusetts Constitution).

I am a resident expected to be in the "blast radius" because my daily commute crosses over the proposed pipeline route so I will be at physical risk.

Erving Riverfront Park is a recreation-focused plan for the redevelopment and restoration of the Usher Mill Complex and a major part of the revitalization of Erving Center. A 2016 PARC grant(just approved)and Town funding will allow Phase I to begin.

Erving Town Forest(125 acres)has well-used trails(deer, coyote, bear etc.) plus the summit(50 acres)of Poplar Mountain with a spectacular view of the Millers River Valley. Pipeline construction would clear miles of forest and require blasting which would impact the summit and change the forest forever.

I am a member of the Mount Grace Land Conservation Trust(Mount Grace currently holds the deed to Poplar Mountain and is an Intervener). As a donor to land conservation, my donations would be violated. Furthermore, I am opposed to any Eminent Domain.

The Farley Ledges in Erving has extensive rock climbing ascents and is popular with climbers from all over the world. At times, portions of the ledges are partially closed due to falcon activity. Falcons are state protected birds.

Erving State Forest has boating, swimming and fishing at Laurel Lake along with camping, picnicking, hunting, horseback riding and winter sports(another example of local recreation, tourism and vital habitat and watershed values.

I am electric rate payer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to NED.

In conclusion, I have information to contribute that would be in the public interest. Therefore, I request the Commission grant my Motion to Intervene and be allowed to participate in the proceeding with full rights including appeal.

CP16-21-000

Application for a Certificate of Public Convenience and Necessity (NED Project)

Basis for Intervening:

Repsol Energy North America Corporation (Repsol) is a Texas corporation and an indirect wholly-owned subsidiary of Repsol, S.A., with offices located in The Woodlands, Texas. Repsol and its affiliates are engaged in a variety of natural gas activities in the United States, including marketing and trading.

Repsol is a shipper of natural gas on the Tennessee Gas Pipeline Company, L.L.C. (Tennessee) system and delivers natural gas supply to markets located off of Tennessee.

As a shipper and provider of gas supply on Tennessee, Repsol has a substantial interest in Tennessee's certificate application for the Northeast Energy Direct project. Repsol will be directly affected by the outcome of this proceeding, and no other party can adequately represent or protect its interests. Accordingly, Repsol respectfully submits that its participation in this proceeding is in the public interest.

Basis for Intervening:

I am an amateur astronomer and science educator. I do many free programs setting up telescopes and showing the night sky to the general public, school groups, and scouting and other organizations. Many of these programs are held at Notchview in Windsor, MA and Arunah Hill Natural Science Center in Cummington, MA.

These wonderful locations are used because of the "dark skies", freedom from light pollution that plagues observing from urban locations.

From Notchview and Arunah Hill, the beauty of the night time sky is revealed in its full glory. Children and adults can't help but be inspired by the night sky, from the beauty of the Milky Way or seeing fleeting shooting stars that are not visible when artificial lighting overwhelms the night.

The skies over Cummington and Windsor are among the last pristine skies in Southern New England. Amateur astronomers from as far away as Boston and New Haven travel to Arunah Hill to view the dark sky.

Any industrial activity such as a pipeline pumping station with industrial lighting will destroy the views of the nighttime sky. Loss of the pristine nighttime sky will change the character of rural life in Cummington and Windsor.

This will also impact the local economy, with fewer visitors coming to visit the area to enjoy the dark skies, who patronize local restaurants and gas stations.

We support many conservation organizations. The gas pipeline will have a deleterious effect on conserved lands and other open space, especially on wetlands. This pipeline is expensive for MA residents and completely unnecessary. We should be finding ways of using less fossil fuel, not more.

Basis for Intervening:

MOTION TO INTERVENE OF

CHARLOTTE E. POGUE

Pursuant to 18 C.F.R. § 385.214(b), I seek to intervene in opposition to the Northeast Energy Direct Project (the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC, a subsidiary of Kinder Morgan, Inc. Communications concerning this proceeding should be served upon me as follows:

Charlotte E. Pogue

PO Box 535

97 Mason Road

Brookline, NH 03033-0535

charliepogue@gmail.com

My interests “which may be directly affected by the outcome of the proceeding” include:

My interest as a Brookline, New Hampshire, resident with a home two miles south of the “Market Path Component” and two miles east of the spur that runs south through the town of Mason.

I’m concerned about possible contamination of the source of my well water as my pump is located two hundred feet down in rock, the water accumulating from fissures of unknown geology that may be affected by pipeline construction and blasting. I’m concerned about the Nashua River Watershed as a resident and as a contributor to the conservation association that supports it, because there’s never been a pipe that hasn’t eventually leaked. Energy companies seem particularly adept at maximizing profits then shedding their responsibility for maintenance, shutdown, and cleanup.

I’m also concerned about the market value of my home – already 10% of the properties on my street are for sale.

I frequently travel to Greenville and New Ipswich so I’m concerned about the uncontrolled and unregulated blowoff at pumping stations, and the release of contaminants and the methane that exacerbates the warming of the planet. The amount of blowoff is determined by the capacity of the pipe and the pressure maintained, and the capacity of the NED Project pipeline is more than double that needed for existing contracts.

I’m concerned that the excess capacity is intended for foreign markets, which will increase the domestic price of natural gas. And I’m concerned that the NED Project is unneeded with the rise of clean energy.

I’m concerned that the cost of the NED Project will be borne by New Hampshire’s electric ratepayers.

For the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Charlotte E. Pogue

Gina Boisse
190 Methuen Rd
Dracut, MA 01826
1/05/16

Kimberly D. Bose
Secretary
Federal Energy Regulatory Commission
888 First Street, NE, Room 1A
Washington, DC 20426

Dear Kimberly D. Bose:

I am writing to intervene on Docket CP16-21-000 because I will be directly impacted by the proposed compressor station for Dracut, Ma. My home is about 1200 feet away where I live with my husband and 6 year old daughter. We will be so close to this that we are considered in the “blast zone”, or “ground zero”. We live in a neighborhood with young families, all children under the age of 10, the youngest a newborn. There has been evidence where these compressor stations emit dangerous toxins when they have “blow-downs”. Kinder Morgan explains that these blowdowns are “infrequent”, but 75 blowdowns per unit, per year does not sound infrequent to me. With these blowdowns will be a large plume of gas and dangerous chemicals that will land on our trees, grass, houses, clothing and ingested into our bodies by way of food, and inhaled. This is extremely concerning to me. I want me, my family, and my neighbors to have as healthy lives as possible. It will not be possible with a huge compressor station in our backyards. Our people deserve better.

Also, it should be noted that Kinder Morgan failed to notify our development after the route change to our backyard. They asked FERC to waive our rights and for you to approve of the project regardless. I urge you to not accept this. Our people do not accept this. If our people do not accept this, then neither should FERC. Kinder Morgan’s project should be denied and they should have to stop their process. They need to be able to answer our questions. They need to research the health effects to living beings.

Also I oppose this project due to Dracut not being equipped to handle a big compressor station. We live in a small town where a lot of people will be affected. We have a small fire department not equipped to handle this should a fire happen here. We have already been told that our property values will decrease. We can’t afford this.

We need to have our people in mind and not the profits of big companies. There is no benefit in this for us and the risk is too great. Please accept my motion to intervene.

Respectfully Submitted,
Gina Boisse

Ms. Kimberly D. Rose, Secretary
Federal Energy Regulatory Commission
888 First Street, NE, Room 1A
Washington, DC. 20426

RE: Proposed Northeast Energy Direct Project, Tennessee Gas Pipeline L.L.C/Kinder Morgan
(FERC Docket No. CPI6-21-000)

The South Central Connecticut Regional Water Authority (RWA) is a non-profit, public corporation and political subdivision of the state. Our mission is to provide our customers with high quality water at a reasonable cost while promoting the preservation of watershed land and aquifers. We provide approximately 45 million gallons of water per day to some 430,000 consumers in 15 communities in our region. The source of this water is a system of watershed and aquifer areas that cover about 120 square miles within 24 municipalities. Much of our 27,000 acres of land is managed for watershed protection, timber resource conservation, wildlife habitat, open space, education, and research.

The RWA has been alerted to the NED Tennessee Gas/Kinder Morgan pipeline application that is proposed to cross Metropolitan District (MDC) property in West Hartford and Bloomfield. The application calls for the pipeline to cross Class I and Class II public water supply watershed land. The Connecticut Department of Public Health (DPH) classifies Class I and Class II lands as being on the watershed of a public drinking water supply reservoir. The class designation is in place to protect the quality and adequacy of Connecticut's public drinking water supplies.

While the proposal does not directly affect the RWA's land, we are concerned about the precedent that might be set if this proposal is approved by FERC. First, we understand that the current project may not fit within an existing right-of-way easement. If this is the case, it would require an enlargement of the easement which is a transfer of interest in real estate. Any such transfers are subject to permitting by the DPH per CGS 25-32. Second, any change in use of that land is also subject to review and permitting by the DPH. Approvals by the DPH require a finding that such actions "will not have a significant adverse impact upon the purity and adequacy of the public drinking water supply".

We want to be sure that any and all such projects that affect Class I and Class II water company lands in Connecticut are duly and fully reviewed, and approved, if warranted, by the DPH. We also urge that any alternatives to the disturbance of water company owned lands be identified and appropriately considered and evaluated for their potential impact on the public water supply. The loss of control over public drinking water supply watershed land and the actual disturbance that such a project would entail are issues that concern us. The protection of the public water supply is our highest priority.

Sincerely,

Larry L. Bingaman
President and Chief Executive Officer

(202) 429-8805 (fax)
ksweeney@jhenergy.com

II. DESCRIPTION OF PROCEEDING

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) filed an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act, 15 U.S.C. §§ 717f(b) and 717f(c), and Part 157 of the Commission’s Regulations, for the Northeast Energy Direct (“NED”) Project. Specifically, Tennessee requests authorization to: (1) construct, install, modify and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut, and (2) abandon certain facilities. Tennessee states that the NED Project would provide up to 1.3 billion cubic feet per day of firm capacity at a projected cost of approximately \$5.2 billion.

The NEP Project comprises two components. The Supply Path Component consists of approximately 174 miles of mainline pipeline facilities extending from Troy, Pennsylvania, to Wright, New York, three new compressor stations totaling 153,000 horsepower (“hp”), and appurtenant facilities. The Market Path Component consists of approximately 188 miles of mainline pipeline facilities in New York, Massachusetts and New Hampshire, approximately 58 miles of laterals and pipeline looping, six new compressor stations totaling 207,600 hp, new and modified meter stations, and appurtenant facilities.

III. MOTION TO INTERVENE

AESC is a Delaware corporation with its principal place of business in the Woodlands, Texas. AESC is a wholly owned subsidiary of Anadarko Petroleum Corporation (“Anadarko”). Anadarko is among the world’s largest independent oil and natural gas exploration and production companies. AESC is engaged in trading and marketing natural gas and other petroleum products. As a supplier and shipper of natural gas, AESC has interests which may be directly affected by the outcome of this proceeding. AESC’s interests cannot be adequately represented by any other party. AESC respectfully submits that its intervention and participation in this proceeding are in the public interest.

WHEREFORE, for the foregoing reasons, AESC respectfully moves for leave to intervene in the captioned proceeding with full rights as a party.

Respectfully submitted,

ksweeney@jhenergy.com

II. DESCRIPTION OF PROCEEDING

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) filed an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act, 15 U.S.C. §§ 717f(b) and 717f(c), and Part 157 of the Commission’s Regulations, for the Northeast Energy Direct (“NED”) Project. Specifically, Tennessee requests authorization to: (1) construct, install, modify and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut, and (2) abandon certain facilities. Tennessee states that the NED Project would provide up to 1.3 billion cubic feet per day of firm capacity at a projected cost of approximately \$5.2 billion.

The NEP Project comprises two components. The Supply Path Component consists of approximately 174 miles of mainline pipeline facilities extending from Troy, Pennsylvania, to Wright, New York, three new compressor stations totaling 153,000 horsepower (“hp”), and appurtenant facilities. The Market Path Component consists of approximately 188 miles of mainline pipeline facilities in New York, Massachusetts and New Hampshire, approximately 58 miles of laterals and pipeline looping, six new compressor stations totaling 207,600 hp, new and modified meter stations, and appurtenant facilities.

III. MOTION TO INTERVENE

Shell Energy is a marketer of natural gas and electric power with its principal place of business in Houston, Texas, including natural gas that may be transported on Tennessee’s system. Shell Energy therefore has interests that may be directly affected by the outcome of this proceeding. No other party can adequately represent Shell Energy’s interests in this proceeding. Shell Energy’s participation is therefore in the public interest.

WHEREFORE, for the foregoing reasons, Shell Energy requests that the Commission grant it leave to intervene in this proceeding with full rights as a party.

Respectfully submitted,

II. DESCRIPTION OF PROCEEDING

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) filed an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act, 15 U.S.C. §§ 717f(b) and 717f(c), and Part 157 of the Commission’s Regulations, for the Northeast Energy Direct (“NED”) Project. Specifically, Tennessee requests authorization to: (1) construct, install, modify and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut, and (2) abandon certain facilities. Tennessee states that the NED Project would provide up to 1.3 billion cubic feet per day of firm capacity at a projected cost of approximately \$5.2 billion.

The NEP Project comprises two components. The Supply Path Component consists of approximately 174 miles of mainline pipeline facilities extending from Troy, Pennsylvania, to Wright, New York, three new compressor stations totaling 153,000 horsepower (“hp”), and appurtenant facilities. The Market Path Component consists of approximately 188 miles of mainline pipeline facilities in New York, Massachusetts and New Hampshire, approximately 58 miles of laterals and pipeline looping, six new compressor stations totaling 207,600 hp, new and modified meter stations, and appurtenant facilities.

III. MOTION TO INTERVENE

ConocoPhillips Company is a Delaware corporation with its executive offices located at 600 North Dairy Ashford, Houston, Texas 77079. ConocoPhillips is an independent producer and marketer of natural gas, including natural gas that may be sold to or transported by Tennessee or by pipelines connected to Tennessee's system. Consequently, ConocoPhillips has direct and substantial interests that may be affected by the outcome of this proceeding. ConocoPhillips' interests cannot be adequately represented by any other party.

WHEREFORE, for the foregoing reasons, ConocoPhillips moves to intervene in this proceeding with full rights as a party.

Respectfully submitted,
/s/ Kevin M. Sweeney
John & Hengerer
1730 Rhode Island Ave., NW Suite 600
Washington, DC 20036-3116

UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.

Docket No. CP16-21-000

MOTION TO INTERVENE OF SWEPI LP

Pursuant to 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission ("FERC" or "Commission"), 18 C.F.R. §385.214 (2015), and Section 157.10 of the Commission's Regulations, 18 C.F.R. § 157.10 (2015), SWEPI LP hereby moves to intervene in the captioned proceeding. In support of this Motion, SWEPI LP respectfully states as follows:

I. COMMUNICATIONS

SWEPI LP requests that service of all pleadings and all communications with respect to this proceeding be addressed to:

II. DESCRIPTION OF PROCEEDING

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) filed an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act, 15 U.S.C. §§ 717f(b) and 717f(c), and Part 157 of the Commission’s Regulations, for the Northeast Energy Direct (“NED”) Project. Specifically, Tennessee requests authorization to: (1) construct, install, modify and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut, and (2) abandon certain facilities. Tennessee states that the NED Project would provide up to 1.3 billion cubic feet per day of firm capacity at a projected cost of approximately \$5.2 billion.

The NEP Project comprises two components. The Supply Path Component consists of approximately 174 miles of mainline pipeline facilities extending from Troy, Pennsylvania, to Wright, New York, three new compressor stations totaling 153,000 horsepower (“hp”), and appurtenant facilities. The Market Path Component consists of approximately 188 miles of mainline pipeline facilities in New York, Massachusetts and New Hampshire, approximately 58 miles of laterals and pipeline looping, six new compressor stations totaling 207,600 hp, new and modified meter stations, and appurtenant facilities.

III. MOTION TO INTERVENE

SWEPI LP is, among other things, a producer and marketer of natural gas that may be transported on Tennessee’s system. As such, SWEPI LP has interests that may be affected by the outcome of this proceeding. SWEPI LP’s interests cannot be effectively represented by any other party. SWEPI LP respectfully submits that its participation in this proceeding is in the public interest.

WHEREFORE, for the foregoing reasons, SWEPI LP moves for leave to intervene in this proceeding with full rights as a party.

Respectfully submitted,
Joel E Talley
Legal Counsel Shell Oil Company
150 N. Dairy Ashford Rd.
Houston, TX 77079

Basis for Intervening:

The more infrastructure we provide for burning fossil fuels the more CO2 in the atmosphere. If we don't build the pipeline there will be more demand for renewable energy. Why are we not subsidising renewables more than fossil fuels? As has been pointed out conservation of energy is more productive and making the importance of natural gas much less!

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____
Individual gregg3670@yahoo.com

Basis for Intervening:

I live in New Ipswich, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because:

- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED. This insomuch as the company seeks to secure my electric utility as a project shipper, which, in turn, would seek to recover costs associated with the project from ratepayers.
- I am a directly impacted landowner with site-specific concerns, I am approximately less than 1 mile from the proposed pipeline and will be near or in fact in the "incineration zone" of the pipeline.
- I am a resident expected to be in the "blast radius"/my daily commute crosses over the proposed pipeline route, so I will be at physical risk.
- I am a resident whose watershed is crossed by the proposed route and could have my drinking water supply impacted by construction and/or operation. I am concerned about the impact that the construction and operation of the pipeline, and the compressor station proposed for New Ipswich, could have on ecological and human health in our watershed.

As explained in depth by others on this docket, Kinder Morgan is essentially telling the commission that New England needs a blow torch to light a candle. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England's ratepayers — either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.

My interest as a taxpayer, neighbor and visitor to protected public land in New Hampshire. I am very concerned about the threat this project poses to all public.

The public record indicates that Kinder Morgan's modus operandi is to do whatever it takes to get pipelines approved and installed as quickly as possible, cut corners on construction and maintenance, and simply pay the fines later.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this 400-mile, 360,000-horsepower monstrosity are not worth the risks and the impacts to our communities. Far less harmful and disruptive means of meeting our energy needs should

be pursued.

The construction of this pipeline would bring additional hazards to the people of New Ipswich, NH. I do not want to suffer the hazards that Sandisfield has already endured a pipeline accident during the installation of the second Tennessee Gas pipeline. These hazards could take the form of:

- additional emissions of methane and its associated chemical residues from the processes by which it was extracted;
- risk to long-term health impacts from those chemicals - known carcinogens, neurotoxins and endocrine disruptors;
- greatly increased risk of pipeline rupture, fire or explosion due to the high pressure at which the pipelines are planned to run once the expansion is complete;
- risk to extensive damage from said fires or explosions due to the inability of this small community’s emergency response team to adequately address the situation, and due to the distance of the town from TGP’s main offices in Agawam, MA and Nassau, NY, the most likely sources of emergency trained and equipped to respond to these very specific hazards;
- risk of damage to existing pipelines, as occurred during the installation of TGP’s second line, necessitating the evacuation of citizens;
- risk of decreased property value as evidenced in other areas in the state where pipeline proposals have rendered properties “unsellable” by real estate professionals.
- removal of permanently protected land from that permanent protection in violation of our state constitution’s Article 97
- increased contribution to climate change and its related hazards of extreme and unpredictable weather events

The most disturbing aspect of this pipeline proposal is the request for expedited review, even after similar shortcuts were denied them at the state level. When faced with state environmental review (MEPA), Tennessee Gas Pipeline asked for a waiver, citing that they had already provided adequate review for earlier pipeline construction. This request was denied by the Secretary of Energy and Environmental Affairs, Maeve Vallely Bartlett, who has written to the company to demand that they comply. This request has, to date, gone unanswered.

This request for expedited review would cut the public out of their chance for the standard procedures of open houses, scoping meetings and comment periods as required by FERC. It would appear to be an attempt to push the project through with as little interaction with the people of the affected community as possible — a populace that has made its opposition to this project widely known through its resolution passed by the people of Sandisfield, the “Resolution to Ban Pipeline Expansion in Sandisfield”.

(Text available here: http://media.wix.com/ugd/23563d_21f2f8b19473421e9615972ccc27dbac.pdf).

Bypassing standard pre-application and environmental reviews can only be seen as an attempt to squelch the voices of opposition to this project; the voices of the people who will have to live with the impacts of this project if it is approved and constructed.

Basis for Intervening:

I think we should focus on building infrastructure for renewable and cleaner energy; and on conservation of energy. It makes no sense to spend and encourage fossil fuel use. This will leave us behind in the global economy as other countries move ahead with clean energy sources, production and ideas. We should become leaders in the clean energy economy not fossilized in an oil/gas based economy.

Motion to Intervene of Alma Healey

I, Alma Healey a resident of Pelham, New Hampshire am requesting to be an intervener. I live a 6 Tina Ave in Pelham, NH Hillsborough County.

My home is within 100 feet of the proposed Northeast Energy Direct pipeline. My concerns are for my well water being affected by change in the aquifer. I rely on my well for drinking water, cooking, bathing and daily life. I am also concerned about a pipeline and all its dangers be so close to my home. I am concerned for the environment and the impact the pipeline will have on the forests, animals and closer to my own home my trees and shrubs that I have grown for the 53 years since I've been living here.

I am strongly opposed to this pipeline.

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____

Individual tsweet@womenscancercareassociates.com

Basis for Intervening:

I am a homeowner in the town of Sand Lake. My home is just over the Nassau town line. I chose to return to the quiet, unpolluted area I grew up in to raise my own children. As a single parent who has made many sacrifices to make it possible, it is important to me that they continue to have the opportunity to do so in a clean, quiet, SAFE environment.

My personal concerns in regard to the proposed NED Compressor station and pipeline include, but are not limited to:

Our location within the incineration zone; our location within the drift zone of particulate matter and other toxic pollutants - causing health risks to myself and my children, damage to my ability to garden and grow food; damage to ground water supplies; noise pollution from blow offs; decrease to overall property resale value.

My concerns as a resident extend to my neighbors. This is a populated rural area, strewn with family farms, ponds, lakes and homes. To choose to place a compressor station as proposed in such an area seems to be extremely short sighted when there are areas within the state it could be placed with negligible impact.

I live in Ashby, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I enjoy the out of doors, hiking and kayaking, and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

20160106-5118

UNITED STATES OF AMERICA

BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)

Docket No. CP16-21-000

**MOTION TO INTERVENE BY
THE APPALACHIAN MOUNTAIN CLUB**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §385.212 and §385.214, the Appalachian Mountain Club (“AMC”) respectfully moves to intervene in the above-captioned proceeding.

Communication

All communication concerning this proceeding should be sent to the following individual:

Heather Clish
Director of Conservation & Recreation Policy
Appalachian Mountain Club
5 Joy Street
Boston, MA 02108
617-391-6580
hclish@outdoors.org

Interests

The AMC is the oldest non-profit conservation and recreation organization in the country, with 100,000 members, supporters, and advocates from Maine to Washington, D.C., including nearly 68,000 dues-paying members in New Hampshire, Massachusetts, Connecticut, New York, and Pennsylvania. AMC’s mission is to promote the protection enjoyment, and understanding of the mountains, forests, waters, and trails of the Northeast and Mid-Atlantic regions. Because successful conservation depends on active engagement with the outdoors, we encourage people to experience, learn about, and appreciate the natural world. We lead over 8,000 outdoor trips each year, the success of which is greatly dependent on the integrity of the natural landscape and the quality of the air our participants breathe.

The AMC, including our thousands of volunteer trail stewards, maintains over 1,800 miles of trail throughout the Northeast and Mid-Atlantic and ensures that the public is able to enjoy high-quality outdoor recreation experiences on our region’s relatively limited natural lands. AMC also has over 30 years of experience researching the effects of air pollution and climate change on the northeast environment and hiker health.

AMC cares for several long-distance trails that would be impacted by the proposed Northeast Energy Direct project, including the following:

- a. The Appalachian National Scenic Trail (“A.T.”). The Massachusetts A.T. Committee of AMC’s Berkshire Chapter is responsible for maintaining the A.T. in Massachusetts with delegated authority from the National Park Service and the Appalachian Trail Conservancy, including the Crystal Mountain Campsite that will be affected by the current proposal.
- b. The New England National Scenic Trail (“NET”). AMC and its Berkshire Chapter have primary responsibility for maintaining the New England Trail in Massachusetts in partnership with the National Park Service, including the Richardson-Zlogar cabin in Northfield, MA that is frequently used for its views of Mt. Ascutney (VT), Mt. Monadnock (NH), and Mt. Wachusett (MA). The NED as currently proposed would cross the NET twice in Massachusetts where lands adjacent to the utility ROW have a conservation restriction that was funded in part through the federal Forest Legacy Program. Compressor Station 3 is just 0.75 mile south of the Richardson- Zlogar cabin, which was built with a combination of federal funding and AMC volunteer labor.
- c. The Metacomet-Monadnock Trail (“M-M Trail”). The M-M Trail in New Hampshire is part of a long-

distance trail network that connects the New England National Scenic Trail to the Monadnock-Sunapee Greenway and subsequently to the Sunapee-Ragged-Kearsarge Greenway. AMC supports local volunteers in maintaining and protecting the M-M Trail. The NED as currently proposed would cross the M-M Trail in Rhododendron State Park, approximately 300 acres of which AMC granted to the State of New Hampshire in 1946.

- d. The Bay Circuit Trail (“BCT”). AMC collaborates in support of the Bay Circuit Alliance, including the maintenance and promotion of the Bay Circuit Trail. The NED as currently proposed would cross the BCT in Andover and Middleton, MA.

By reference we note that AMC submitted scoping comments to FERC on October 16, 2015 and AMC’s Massachusetts A.T. Committee submitted scoping comments on August 30, 2015 during the pre-filing stage under Docket PF14-22-000. These filed comments further outline impacts to the described trails and are not repeated here for brevity’s sake. At a minimum, we believe these impacts should be addressed. AMC’s October 16 comments also detail air and climate impacts we believe FERC must consider. If the project is modified and as additional information is provided, additional or alternate interests for our members and stewardship responsibilities may emerge. AMC reserves the right to submit additional comments and information.

AMC’s participation in this proceeding is in the public interest. AMC is the primary steward of several of the region’s pre-eminent outdoor recreation resources that provide outstanding experiences for our members, as well as other residents of and visitors to the region. Those experiences are directly dependent on the condition of the landscape as well as air quality. The interests of our members, supporters, and recreational users cannot be adequately represented by another party.

Wherefore, the AMC requests that the Commission accept this Motion to Intervene and grant full rights to participate in all further proceedings.

Respectfully Submitted,

Heather Clish

Director of Conservation & Recreation Policy

Individual	Amy_Elizabeth@comcast.net	
------------	---------------------------	--

Basis for Intervening:

I live in Dracut, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because of my close proximity to the proposed pipeline. I have one child who already has asthma, and poor air quality resulting from the compressor station poses a risk to his health. There are many others in the community who have similar concerns. Many toxins will be released into the environment from this compressor station—toxins that I fight to keep away from my children by carefully monitoring what we wear, eat, and clean with. Now our whole community will be forced to breathe them as they are released into environment, directly impacting the quality of the air we breathe.

20160106-5124

Anna Aguilera, Newton, MA.

To the FERC,

I am in strong opposition to the Natural Gas Pipeline project in Massachusetts. This pipeline will slow Massachusetts transition to alternative renewable energy sources. Further, recent study has shown that fracking is particularly problematic for Climate Change as in the process of extraction methane (a greenhouse gas 34X as strong as carbon dioxide) is released. The only way the world will be able to address the current climate change problem (and avoid a crisis situation) will be if people regain control of their local services. Please respect the wishes of Massachusetts and other New England residents by not building this pipeline.

Many thanks,

Anna Aguilera (lifelong Massachusetts resident).

Averill Park, NY 12018

I'm against this project that is in the processing stages for permits and to be built in Nassau NY off of Chapel Rd. My concerns are as following: I have four horses along with many more residents that live in this area. As you must know when you have animals who can't speak or tell me that they are not feeling well and after being looked at by a vet we find their sick due to this compressor station, what do I do? Animal life is just as important and someone needs to speak up for them.

2) What do I do if the fumes from this compressor station are so bad an I'm having a difficult time breathing?

3) What if this compressor station has an affect on the recreational business that have been here for years such as the camping sites, the burden lake ass. camp schodack, ect.

4) what about the health of everyone that lives close by the compressor station and all the rest of the resi-

dents that live from a mile to ten miles area?

5) As you know we all need drinking water to live, what will happen if our water supply gets contaminated? As resident of Nassau along with others and knowing the adverse affects this compressor station will have on us I ask that it not be built.

I thank You for your time with this matter

Kim Goodermote,

20160106-5132

Basis for Intervening:

I live in Rindge, NH, and wish to intervene in this proceeding to oppose the NED pipeline project. I have interests which may be directly affected by the outcome of the proceedings because I am a homeowner who lives in the "blast radius" of the pipeline so I would be at physical risk. In addition, my drinking water supply could be at risk because of activities such as blasting required for the construction of the pipeline and associated facilities. I am also a resident of a town which raised money to purchase land, meant to be protected forever, which now would be directly impacted by the pipeline route, and potentially by the extraction and/or release of water used for hydrostatic testing.

I am a landowner in Pepperell, MA, and an active member of several conservation organizations in this area. I am very concerned that this project will destroy or damage conservation land which has been bought and paid for by town dollars, and that the proposed destruction will impact my property values. This is a rural town and what it has to offer is lots of conservation property. I do not think we need more pipeline capacity, and am opposed to this project.

Basis for Intervening:

As an affected land owner I have decided to intervene in opposition to the NED project.

First and foremost the health and well being of my family is of great value and concern. The pipeline and compressor station slated to be erected in New Ipswich WILL place both of these in danger. Countless studies proving the ill effects of ground, water and air contamination from existing pipeline and compressor facilities are sufficient reasons alone to halt this project.

Secondly, I am an existing tax payer in my town and am not approving nor expect my taxes to increase due to new tariffs or any other such means of taxation due to NED. This is an unneeded and unwanted project in New England, and hold ZERO BENEFIT for our town, citizens and environment now and into the future. NED if approved will deliver NON RENEWABLE energy through facilities and infrastructure that is man made, and will erode, and fail leaving us in its devastation path.

The only reason NED is being routed through Southern NH is because Massachusetts denied it the ability to traverse through certain sections. So I ask why should New Hampshire communities who cannot even take advantage of the product Kinder Morgan wants to run through these lines be forced into NED?

Again my health and future, as well as my families, along with the community I live in in what lies in in question here. So I register as an intervener against NED which would ruin our community.

Basis for Intervening:

I am in the process of purchasing a home on Burden Lake in the Town of Nassau in New York state and want to intervene in this proceeding to oppose the NED pipeline.

My residence will be very close to the boundary of the blast radius. In addition, my daily driving will take me through the area within the blast radius, so I would be at extreme physical risk.

My soon to be purchased home on Burden Lake will be within the recreational community of Burden Lake and I am concerned about the health and environmental impacts, especially from the compressor station, on the Burden Lake ecosystem, my family and drinking water supply that comes from a well. Property values would plummet because of the adverse environmental effects which would take place on the surrounding areas of the location of the compressor station.

At my new home on Burden Lake I will be an electric ratepayer, who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

Basis for Intervening:

I live in Greenfield Massachusetts, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest

which may be directly affected by the outcome of the proceeding because I have immediate family that own and reside on land directly impacted by the pipeline route and compressor station slated to be constructed in Northfield Massachusetts.

I am gas ratepayer Berkshire Gas, who has been contracted for NED capacity, which is expected to result in an increase on my bill resulting from this NED project (and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts).

Personally I enjoy the outdoors and do not want any state, town, public parks or forests, which have been set aside

for the people and wildlife, to be impacted by any activities of this commercial project.

Thank you for your time and appointment of Intervenor Status

Nathaniel Hussey

20160106-5146

William Aguilera, Newton, MA.

This project is fraught with problems and apparent improprieties.

There are basic environmental concerns stemming from Fracking.

There are economic concerns:

1. Is the extra capacity even needed? or is it simply a play for monopolies to squeeze more profit by lowering supply costs and but at the same time passing infrastructure costs to consumers.
2. Corporate connections that speak to the monopolistic nature of the industry and calls into question who are the true beneficiaries of the deal. "Berkshire's former parent company, UIL Holdings, was recently acquired by Iberdrola USA in to form the publicly-traded Avangrid. UIL Holdings is partnering with Kinder Morgan and Liberty Utilities to own the market path of Northeast Energy Direct, according to the pipeline company's Nov. 20 federal certificate application."

And local concerns that need to be addressed anytime imminent domain is brought to the table. Again, is this really benefitting anyone other than the energy companies?

On top of everything, Massachusetts has clear, legislated "green" goals that this project does not support in the slightest.

Regards,

Will Aguilera
Newton MA

Basis for Intervening:

I am an electric ratepayer who, if KM secures my electric utility, Eversource, as a project customer, expect to see an increase on my bill relating to NED.

Also, I would have to pay the increase in general energy costs that would result from exporting natural gas. There is no doubt that most of the gas in this proposed pipeline would be exported. Local markets would have to compete on a global scale.

I am a member of an impacted community, Deerfield, with concerns about various impacts:

Here on River Road in Deerfield, I and other neighbors have worked for decades to get a toxic dump rail-road yard cleaned up. Now the pipeline is proposed to go under the rail yard, potentially disturbing and undoing decades of state and federal work, and threaten the only federally endangered species in the Connecticut River! * See Insert

River Road is a rural, tertiary road that would be negatively impacted by the huge equipment brought in to build the proposed pipeline. My rural quality of life would be terribly reduced, because of increased traffic, noise, and toxic emissions from the pipeline.

Deerfield's fire and other emergency workers are not trained or knowledgeable in case of pipeline accidents. Kinder Morgan has a terrible pipeline accident record. Emergency workers could be subject to serious dangers, along with my neighbors who live close to the proposed pipeline routes.

I enjoy the out of doors and do not want any state or town public parks or forests which have been set aside for the people and wildlife to be impacted by any activities of this commercial project. For example, I have often walked in the Northfield State Forest, part of the New England National Trail, which would be devastated by the construction and operation of the NED pipeline and compression station.

I am a long time donor to a land conservation organization, Franklin Land Trust, and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever. <http://www.mountgrace.org/sites/default/files/Pipeline-Affected-Conservation-Land-9-15.pdf>

And lastly, and most importantly, I am applying to be an Intervenor because I am a citizen of Planet Earth. This proposed pipeline would expand the delivery of non-renewable fossil fuels that will add more greenhouse gases and result in more global warming. This is destructive to both the Earth and us, all her inhabitants. Building the proposed NED pipeline would neither be convenient nor necessary.

* Insert: Pipeline's Potential Impacts to East Deerfield Rail Yard by Lynn Rose, Town of Deerfield's Hazardous Waste Coordinator

I, the neighborhood and the Deerfield Select Board have worked for decades to get more than 12 hazardous waste sites cleaned up or stabilized under the Massachusetts Contingency Plan (MCP) at the East Deerfield Rail Yard at the junction of the Deerfield and Connecticut Rivers. The rail yard contains a major fueling station and has a locomotive repair shop.

Currently the pipeline is proposed to go under the rail yard at a location where the area's only potentially productive high yield aquifer is located, and currently contaminated with perchloroethylene. This aquifer is undergoing a state superfund clean-up under the MCP to bring it up to drinking water standards.

We are greatly concerned that either or both of the activities related to the installation, or the accidents related to the operation of the pipeline could pose a major threat to this site, and adjacent environmentally sensitive areas that are subject to state and federal protections. Not only would it potentially undo decades of state and federal compliance related environmental mitigation work, it could threaten the only federally endangered species in the Connecticut River, the Short Nosed Sturgeon, whose spawning area is located adjacent to the rail yard, in the vicinity of the proposed path of the pipeline.

It could also disturb land that that Pan Am Railroad is proposing to install a deed restriction, Activity Use Limitation, to ensure that contamination remaining in the ground throughout the 129 acre rail yard will not be disturbed. An explosion in the vicinity of the rail yard could disturb these areas, causing contaminated soil and groundwater to be distributed into the Connecticut and Deerfield Rivers, disturbing the water quality on both rivers, and impacting adjacent state and federally protected lands, the rail yard, adjacent prime agricultural farmlands, and an adjacent residential area.

In addition, an accident in the yard could damage rail cars with hazardous cargo, potentially spilling it into the rivers and other areas, causing explosions, chemical fires and/or contamination, destroying habitat, etc. There is also a huge fuel #2 storage tank farm with an above ground storage tank of 100,000 gallons located on site.

In summary, the fact that Kinder Morgan is even considering located the pipeline near such a site illustrates extremely poor judgment on their part. In addition to the environmental issues, disrupting operations at a major rail hub that serves the north, south, east and west rail lines has implications for impacting transportation throughout the northeast.

Also, note that the rail yard is located adjacent to the active quarry that still continues to conduct blasting operations. The pipeline is slated to be located adjacent to the quarry. There is concern that the blasting that at times has rocked houses more than 1/4 mile away, will disturb the joints in the pipeline in the area not only in the quarry, but in the surrounding area. If this scenario doesn't damage the pipeline during a blast, it would increase the potential for a catastrophic accident over time. Nothing could truly protect this area from the mixing and spewing of numerous contaminants from a pipeline explosion. It would devastate this environmentally sensitive area.

I live in Jaffrey, New Hampshire and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I am a member of an impacted community who has concerns about various impacts to the local economy and environment, because I am an electric rate payer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery and because I enjoy the outdoors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

20160106-5154

Mandy Mallet, Warwick, MA.

I live in Warwick MA and I STRONGLY DISAGREE with building the pipeline! I disagree because I believe this will negatively impact the environment and our community in several ways. My town is the abutting town where they are proposing to construct a very large compressor station and I believe that is a huge risk for our community to take. I don't believe they should have the right to blast through ledge on protected land. We pay more in taxes in this town because most of land is conservation land which should remain protected.

Please consider stopping the Pipeline from being constructed and consider renewable resources that will not negatively impact the environment.

Basis for Intervening:

I live in Townsend, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have an interest (home on 17 Pheasant Ridge Road) which may be directly affected by the outcome of the proceeding. My property lies directly on the original planned route of the pipeline and would potentially be subject to seizure by eminent domain.

I have very grave concerns about the long-term safety and environmental impact of this project; furthermore, I am not convinced that this project is being proposed with the long-term energy interests of the Commonwealth in mind. There is little evidence indicating the need for this additional natural gas when other renewable/cleaner sources of energy are available; any incremental NG desired could be handled via existing pipelines.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
DIRECT ENERGY BUSINESS MARKETING, LLC**

Pursuant to 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“FERC” or “Commission”), 18 C.F.R. §385.214 (2015), and Section 157.10 of the Commission’s Regulations, 18 C.F.R. § 157.10 (2015), Direct Energy Business Marketing, LLC (“DEBM”) hereby moves to intervene in the captioned proceeding.

In support of this Motion, DEBM states as follows:

I. SERVICE AND COMMUNICATIONS

DEBM requests that service of all pleadings and all communications with respect to this proceeding be addressed to:

Thomas P. Thackston
Direct Energy, LP
194 Wood Ave S
Iselin, NJ, 08830
Office: 732 516-7168

(202) 429-8805 (fax)
ksweeney@jhenergy.com

II. DESCRIPTION OF PROCEEDING

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) filed an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act, 15 U.S.C. §§ 717f(b) and 717f(c), and Part 157 of the Commission’s Regulations, for the Northeast Energy Direct (“NED”) Project. Specifically, Tennessee requests authorization to: (1) construct, install, modify and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut, and (2) abandon certain facilities. Tennessee states that the NED Project would provide up to 1.3 billion cubic feet per day of firm capacity at a projected cost of approximately \$5.2 billion.

The NEP Project comprises two components. The Supply Path Component consists of approximately 174 miles of mainline pipeline facilities extending from Troy, Pennsylvania, to Wright, New York, three new compressor stations totaling 153,000 horsepower (“hp”), and appurtenant facilities. The Market Path Component consists of approximately 188 miles of mainline pipeline facilities in New York, Massachusetts and New Hampshire, approximately 58 miles of laterals and pipeline looping, six new compressor stations totaling 207,600 hp, new and modified meter stations, and appurtenant facilities.

III. MOTION TO INTERVENE

Direct Energy Business Marketing, LLC, is a subsidiary of Direct Energy Business, LLC, and a North American subsidiary of Centrica plc. DEBM has its principal place of business in the State of New Jersey.

DEBM is engaged in the marketing of natural gas, and is a firm shipper on Tennessee's system. As such, DEBM has interests that may be directly affected by the outcome of this proceeding. DEBM's interests cannot be effectively represented by any other party. DEBM therefore submits that its participation in this proceeding is in the public interest.

WHEREFORE, for the foregoing reasons, DEBM moves to intervene in this proceeding with full rights as a party.

Respectfully submitted,

Thomas P. Thackston

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21
Northeast Energy Direct Project)
Application for Certificate of Public)
Convenience and Necessity)

**MOTION TO INTERVENE OF
STATE OF CONNECTICUT DEPARTMENT OF PUBLIC HEALTH**

In response to a Notice of Application issued on December 7, 2015, by the Federal Energy Regulatory Commission (the "Commission") and published in the Federal Register on December 11, 2015 (80 Fed. Reg. 76969), pursuant to Rules 212 and 214 of the Commission's Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the State of Connecticut Department of Public Health ("the CTDPH") hereby moves to intervene in the above-captioned proceeding. Intervention in this proceeding by the CTDPH would promote the public interest.

I. SUMMARY OF PROPOSAL

On November 20, 2015, Tennessee Gas Pipeline Company, LLC ("Tennessee Gas") filed an application ("Application") for a certificate of public convenience and necessity with the Commission to (i) construct, install, modify, and operate pipeline and compression facilities in the States of Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, and (ii) abandon certain facilities, as part of the Northeast Energy Direct Project ("NED Project").

The NED Project activities in the State of Connecticut include construction of a 24 inch, 14.80 mile pipeline loop, which will be generally located within or directly adjacent to Tennessee Gas's existing 300 Line's right-of-way, as well as modified meter stations. Of the 14.80 miles of pipeline loop proposed to be constructed, approximately 5.7 miles will be located within watershed land owned by the Metropolitan District Commission, a water company that provides public drinking water to over 440,000 customers located within the Greater Hartford region. This watershed land is classified as Class I, II or III water company land and, as such, is strictly protected due to its important role in preserving water quality.

II. REASONS SUPPORTING INTERVENTION

The CTDPH is the state agency charged with oversight over the public health matters of the State of Connecticut. Among the CTDPH's responsibilities are all matters concerning the purity and adequacy of public water supply sources, the protection of the State of Connecticut's watershed lands, including Class I, II and III water company lands, administration of the federal Safe Drinking Water Act on behalf of the U.S. Environmental Protection Agency, and oversight and enforcement of the rules and regulations regarding water quality. The CTDPH's request for leave to intervene in these proceedings is in furtherance of these responsibilities.

By requesting intervenor status, the CTDPH seeks to ensure that the water quality and quantity of the public drinking water sources located in the MDC watershed is protected from pollution and degradation that may result from the NED Project. The construction of approximately 5.7 miles of pipeline loop in the MDC watershed would involve extensive construction, excavation, blasting and disturbance of soils in close proximity to public drinking water supply sources, which may negatively impact the water quality of the public drinking water sources nearby unless it can be avoided or adequately mitigated.

The CTDPH has a unique interest and responsibility in this proceeding as the agency in the State of Connecticut with jurisdiction over the water quality and quantity of public drinking water sources, including the water company land that protects these sources. The unique interests that CTDPH seeks to protect are not represented by other parties to the proceeding; and there will be no prejudice to the existing parties that might result from permitting the intervention. In addition, the CTDPH's participation in the proceeding is in the public interest as required by 18 CFR § 385.214(b)(2)(iii). The CTDPH neither opposes nor supports the NED Project, and makes this motion to gain party status and protect CTDPH's participation in the process, including the ability to seek judicial review of any final decision on the Application.

III. PLEADINGS AND OTHER COMMUNICATIONS

Service of all documents should be addressed to the following persons whose names and addresses should be placed on the official service list compiled by the Secretary for this proceeding:

Lori Mathieu
Public Health Section Chief
Drinking Water Section
Department of Public Health
410 Capital Avenue
Hartford, CT 06134

Hartford, CT 06134
Tel: (860) 509-7566
Fax: (860) 509-7553
kathryn.keenan@ct.gov

IV. CONCLUSION

WHEREFORE, the CTDPH respectfully request the Commission to acknowledge the CTDPH's Notice of Intervention and to grant this motion to intervene and allow the CTDPH to become a full party in the above-referenced proceeding.

Respectfully submitted,
RAUL PINO, MD, MPH
ACTING COMMISSIONER OF THE
STATE OF CONNECTICUT
DEPARTMENT OF PUBLIC HEALTH,

By:

I.

Communications

The names and addresses of the individuals who are to be served with future notices, orders, pleadings, correspondence and other documents in this proceeding are stated below:

Deidre L. Shearer*
Corporate Secretary and
Managing Counsel
Cabot Oil & Gas Corporation
Three Memorial Plaza
840 Gessner, Suite 1400
Houston, Texas 77024
(281) 589-4890
deidre.shearer@cabotog.com

Matthew M. Schreck*
2226 Pine Street
Philadelphia, PA 19103
(713) 444-6687
matt@airmail.net

* To be included on the Secretary's Official Service List

II.

Interests of COGC

The full name of COGC is Cabot Oil & Gas Corporation. COGC's primary place of business is located at Three Memorial Plaza, 840 Gessner, Suite 1400, Houston, Texas, 77024. COGC is an exploration and

production company with operations in numerous producing regions of the United States. COGC owns natural gas production that is in the vicinity of the applicant's project being proposed in the above-styled proceeding.

III.

The Application

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. ("Tennessee") filed in Docket No. CP16-21-000 an application seeking the authority to: (1) construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut; and (2) to abandon certain facilities. The project, the Northeast Energy Direct Project ("NED Project"), will provide up to 1.3 billion cubic feet of gas per day of firm capacity at a cost of approximately \$5.2 billion.

IV.

Motion to Intervene

COGC, as a producer of natural gas with production in the vicinity of NED Project, has a direct interest in this proceeding that cannot adequately be represented by any other party. Accordingly, there exists good cause for the Commission to grant this intervention, as it meets the standards set forth in Rule 214 of the Commission's Rules and Regulations

V.

Conclusion

WHEREFORE, COGC respectfully moves to intervene in the above-styled proceeding.

Respectfully submitted,

/s/ [electronically filed]

Matthew M. Schreck

Attorney for Cabot Oil & Gas Corporation

January 6, 2016

CERTIFICATE OF SERVICE

Pursuant to Rule 2010 of the Commission's Rules of Practice and Procedure, 18 C.F.R. § 385.2010 (2015), I hereby certify that I have this day served the foregoing document upon each person designated on the official service list compiled by the Secretary in this proceeding.

Dated at Houston, Texas this 6th day of January, 2016.

Washington, DC 20426

Motion to Intervene: Docket No. CP 16-21-000

Dear Ms. Bose and Mr. Davis:

Spring Water Farm is applying for FERC intervener status to formally oppose the request by Kinder Morgan to build the Northeast Direct Pipeline – Docket No. CP16-21-000.

Our interest is to protect our business, our assets, our health, and our natural resources! Our organic farm is situated on Baptist Corner Road in Ashfield, MA, 1/2 mile from the proposed path of the pipeline and 2 miles from blowoff valves in Conway, MA. Our family, our farm and our town would be negatively impacted in the following ways:

1. The NED pipeline will contaminate our farmland by emitting toxic emissions from the local blow off valve and from the two regional compressor stations.
2. The NED pipeline will disrupt and contaminate the emergency water source for the Town of Ashfield with the blasting of ledge during construction and the emission of toxic fumes during operation. We have three springs on our property. Two springs were hand dug and provide pure, soft drinking water – a priceless and scarce resource. One spring is freely accessible to the public and has been designated an emergency water source for Ashfield residents by the Ashfield Emergency Manager.
3. The NED pipeline threatens our farm stand’s viability because our customers do not want to buy food that is contaminated with toxic emissions.
4. The NED pipeline will lower the resale value of our farm and home thus depriving us, our children, and our grandchildren of our most valuable asset.
5. The NED pipeline will increase our property taxes by devaluing 62 Ashfield properties that are directly in the path of the proposed pipeline.
6. The NED pipeline will increase our utility costs because ratepayers would be charged more for power. Also, ratepayers are being asked to hire Kinder Morgan to install another pipeline in our state when their existing pipelines have many leaks that should be fixed. Kinder Morgan is not maintaining their infrastructure – therefore FERC should not authorize them to build another pipeline.
7. The NED pipeline will increase the extraction, use and pollution of fossil fuels, which directly causes climate change. Climate change is directly affecting our farm. For example, new insects have infected our crops and last year, extreme cold and snow delayed our growing season for more than a month! FERC must not approve any more fossil fuel related projects. FERC must only approve renewable energy projects.
8. The Massachusetts Attorney General concluded that the NED pipeline is NOT necessary for the citizens of Massachusetts.

In conclusion, the Northeast Energy Direct Project is NOT convenient and is NOT necessary!

Sincerely,

Donna C. Elwell, Farmer

20160106-5177

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)

Docket No. CP16-21-000

**IRVING OIL TERMINALS OPERATIONS INC.
MOTION TO INTERVENE AND COMMENTS IN SUPPORT**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("FERC" or "Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214 (2015), and the December 7, 2015 Notice in this proceeding, Irving Oil Terminals Operations Inc. ("Irving Oil") moves to intervene and comment in the above-captioned proceeding concerning Tennessee Gas Pipeline Company L.L.C.'s ("Tennessee") Northeast Energy Direct Project ("NED Project") certificate application.¹ On November 20, 2015, Tennessee filed the Application pursuant to Sections 7(b) and (c) of the Natural Gas Act seeking Commission authorization to construct and operate the NED Project, which will provide up to 1.3 Bcf/d of firm natural gas transportation capacity. Irving Oil supports the NED Project and Tennessee's request for prompt approval of its Application.

I. Motion to Intervene

All communications regarding this pleading should be served on the following persons:

Robert M. Lamkin
William M. Friedman
McDermott Will & Emery, LLP
500 North Capitol Street, NW
Washington, DC 20001
202-756-8268
rmlamkin@mwe.com
wfriedman@mwe.com

Chris Clinton
Irving Oil Terminals Operations Inc.
10 Sydney St. E2L 4K1
Saint John, NB
506-202-7203
Chris.Clinton@irvingoil.com

The NED Project will consist of a Supply Path Component from Troy, Pennsylvania to Wright, New York and a Market Path Component from Wright, New York to Dracut, Massachusetts.

Irving Oil is an end-user of natural gas in New Brunswick, Canada. Irving Oil has entered into a precedent agreement with Tennessee along the Market Path of the proposed NED Project. As a shipper with an executed precedent agreement for transportation on the NED Project, Irving Oil is interested in and will be directly affected by the outcome of this proceeding. Irving Oil's interests cannot be adequately represented and protected by any other party. Therefore, the Commission should grant Irving Oil permission to intervene in this proceeding.

II. Comments in Support

As described in the Application, Tennessee seeks Commission authorization to provide up to 1.3 Bcf/d of new firm natural gas transportation capacity in its Application. Natural gas transportation capacity has been constrained in the Northeast. The NED Project will allow Irving Oil to transport natural gas from production areas in Pennsylvania and New York through the Northeast United States and into Canada. Irving Oil therefore supports the NED Project and requests its prompt approval.

WHEREFORE, Irving Oil respectfully requests (i) that Irving Oil be granted permission to intervene as a party to this proceeding and (ii) for the foregoing reasons, the Commission promptly approve the NED Project so that Tennessee is able to place the Market Path in service by November 1, 2018.

Respectfully submitted,

William M. Friedman
McDermott Will & Emery LLP
500 North Capitol Street NW
Washington, DC 20001
(202) 756-8268
wfriedman@mwe.com

On behalf of Irving Oil Terminals Operations Inc.

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

This proposed pipeline would abut my property. It is proposed to be placed 300 feet from my water supply, and my water would be contaminated both during construction and operation, especially when the inevitable leaks occur. The chemicals from fracked gas are known carcinogens. Both of my parents died of cancer. I moved to the country in 8/2104 to further my commitment to healthy living and to improve my physical and mental health. Yet with this proposed pipeline, my water supply would be made carcinogenic.

I own property on both sides of the National Grid right of way. I have the right to cross over to use my property. Not only would we be barred from using our property during potential construction, I would fear to cross over the pipeline due to the possibility of explosion. Kinder Morgan has an abysmal safety record, has demonstrated unethical practices, and I have no confidence in their ability to do this safely. Therefore, the pipeline would render 12 acres of my property off limits because of concerns for the health and safety of myself, my family, and my animals. In addition, the pipeline would abut my yard and a stream, rendering the enjoyment of this natural resource unsafe, because it would be in the incineration zone if the large, shallowly buried pipe blows up. So again, I can't use my own property if this proposed pipeline is placed.

The proposed pipeline has already devalued my home. If it is approved, then the value of my home will plummet further. And because of the health and safety issues, it is doubtful that I could sell this home, thus I would be trapped with carcinogenic chemicals in my air, water, and soil, greatly increasing the likelihood that I will contract cancer. So between the possibility that the pipeline would explode and kill me or my family or animals, and the toxic pollution that we would be exposed to, this pipeline would contribute to our deaths.

The proposed compressor station is only four miles from my house. Air pollution from these stations has been recorded to travel ten miles, so again, I would be exposed to carcinogenic chemicals. In addition, I purchase organic eggs, meat, poultry, and maple syrup from a lovely farm that is one quarter mile from the proposed compressor station. That farm is in the incineration zone. So not only would I not want the products produced by this farm, I wouldn't want to go there and risk death by incineration.

This kind of industry, when placed in residential areas such as ours, causes depression and anxiety. These conditions severely impact a person's ability to cope and function. I am finding that it is a struggle to work, pay bills, attend to activities of daily living, and participate in life. I am self employed and if I miss work, I don't get paid. This proposed pipeline has caused depression and anxiety me. If this pipeline is approved, our depression and anxiety will worsen and my ability to work and economically sustain myself will be further damaged.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Matthew Carey Morley respectfully requests that the Commission grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 6th day of January, 2016

Basis for Intervening:

I live in New Ipswich NH, and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding.

As proposed, the pipeline route enters my town and sites a new utility corridor next to one already within its borders. If the project route shifts or its infrastructure changes, there may be other privately or publicly owned parcels in my town which could be impacted.

I am a NH resident who may be charged with paying for the pipeline with a tariff charge added to my electric rates.

The aquifer which provides my well water could be degraded by construction and operation of the pipeline.

The quality of air that I breathe could be degraded by toxic emissions from planned and unplanned compressor station blow downs and/or valve and/or metering station leaks.

The soils on nearby farms and my garden which grow produce I eat could be compromised by toxic emissions from planned and unplanned compressor station blown downs and/or valve and/or metering station leaks.

The financial ramifications of known and unanticipated consequences of the construction and operation of this pipeline and related appurtenances could increase my local and state tax obligations.

I am opposed to the construction of new infrastructure which promotes further dependence on fossil fuels. I, like all other citizens, will experience the consequences of climate warming which could be accelerated by the methane this project will release into the atmosphere. I believe this pipeline is NOT in the public interest, and I oppose it.

Basis for Intervening:

As a landowner in a town (New Ipswich) that will be dramatically effected by the NED (KMC) pipeline, I oppose this project because:

1. This project brings none to extremely minimal benefits to NH. The proposed gas supply to localities to so minimal as to be insignificant. The proposed sites are few and the cost to pipe the gas is large. The cost to retrofit from existing to gas is never considered.
2. The claim of reduced energy cost is without merit as gas is a commodity and is priced as such.
3. The purpose of this line is to supply gas to gas for export to an already problematic site in either Maine of Canada.
4. The size of the proposed line is much larger than might be required to meet additional customer needs to MA. Such needs can be better meet with other proposed projects.

5. The use of eminent domain for right of way acquisition is troublesome as this project appears to have minimal or no value to the burdened public.
6. The damage to the properties adjacent to the pipeline including wildlife habitat will be repairable and out of scale to any local benefit.

RE: Tennessee Gas Pipeline Company, LLC-Northeast Energy Direct Project
FERC Docket Number PF 14-22-000

Dear Secretary Bose:

Thank you for the opportunity to provide comments to the Federal Energy Regulatory Commission (“FERC”) on the Northeast Energy Direct Project (“NED”) as proposed by the Tennessee Gas Pipeline, LLC (“Tennessee”). The Connecticut Department of Public Health (“CT DPH”) is concerned with the proposed construction on, and the proposed crossing of the natural gas pipeline through, a public drinking water supply watershed in the Connecticut towns of Bloomfield and West Hartford. Moreover, the CT DPH is concerned with the proposed construction on, and the proposed crossing of 5.7 miles of, Class 1 and 2 water company owned land within these watershed areas as owned and managed by the Metropolitan District Commission (“MDC”) (“water company land”). The MDC public water supply reservoirs provide public drinking water to over 400,000 people in the greater Hartford area with over ten municipalities reliant upon these reservoirs for their daily public drinking water supply; therefore, the protection of water company land is vital to public health.

In Connecticut, public drinking water supply watershed areas have been protected and preserved for public health, water quality and quantity protection. Numerous unique state laws and policies exist that provide Connecticut’s watershed areas with special protections. Each of these laws under the multibarrier approach has preserved Connecticut’s special watershed areas to assure long term public drinking water quality and to protect public health. Use of these watershed lands for commercial purposes is inconsistent with the multi-barrier approach and the intent of the water company land laws. To that end, in a November 2000 formal Connecticut Attorney General opinion, U.S. Senator Richard Blumenthal, at that time Connecticut’s Attorney General, stated:

“Watershed lands are among Connecticut’s most precious natural resources - a legacy for future generations that we have a responsibility to preserve and protect. Besides their vital role in protecting the purity of the state’s water supplies, the natural beauty of these lands, undisturbed and tranquil, provides a refuge and respite from development and commercialism. These pristine lands are irreplaceable; once developed they are forever lost.”

A specific watershed protection Connecticut law as administered by the CT DPH is a requirement for a change of use permit pursuant to section 25-32 of the Connecticut General Statutes (Conn. Gen. Stat.). This

law requires a water company who wishes to move forward with any change of use of water company land to apply to the CT DPH for a permit prior to moving forward with construction. The Connecticut water company land statute restricts the type of actions allowed on water company land. Proposals specific to public water supply purposes are generally allowed. Under Conn. Gen. Stat. section 25-32, MDC would be required to apply to the CT DPH for a change of use permit prior to any construction on their water company land.

Given the concerns expressed by the CT DPH for the protection of the public drinking water supply watershed lands, including water company land, and the water supply, the CT DPH respectfully recommends and requests that:

1. All other route alternatives be fully vetted prior to deciding on a final pipeline route. Traversing a public drinking water supply watershed should be seen as a last resort for a pipeline crossing;
2. During the review of alternatives, the vetting process must be fully cognizant and respectful of Connecticut's public health laws that protect the public drinking water supply, including the requirements and restrictions under Conn. Gen. Stat. section 25-32;
3. Permits required pursuant to Conn. Gen. Stat. section 25-32 be added to the list of permits that Tennessee is required to obtain and that CT DPH be added to the list of federal and state agencies in the project area with permitting requirements; and
4. Any order issued by the FERC with respect to the portion of the NED in Connecticut require that Conn. Gen. Stat. section 25-32 be complied with and permits under such section be obtained.

It is without question that Connecticut's water company land laws are unique and have afforded the state of Connecticut with the highest level of public drinking water quality in the country. These laws were in place in the 1970s and strengthened in 1980 in order to assure that the over 100,000 acres of water company land are protected and remain in a natural state. Coupled with numerous other source water protection laws, Connecticut has a unique and strong investment in the preservation of its public drinking water supply and the protection of public health. It is with that background that the CT DPH requests that FERC and Kinder Morgan, Tennessee's parent company, strongly consider other routes and alternatives versus the use of public drinking water supply lands in Connecticut.

The CT DPH offers to FERC and Tennessee its technical assistance in the review of alternatives, discussion and application of Connecticut public health law, and the protection of public health and Connecticut's public drinking water supply.

The CT DPH respectfully requests an opportunity to supplement or revise these comments.

Sincerely,

Lori J. Mathieu
Public Health Section Chief
Drinking Water Section

Basis for Intervening:

I am a resident who lives within 1.2 miles of the proposed compressor station in Northfield, MA - a com-

pressor station that will be larger than any on the east coast. I have concerns about various impacts to my health such as air quality and water quality. I am also upset that protected land is being compromised for an unnecessary project. I do not believe that the health impacts of living near compressor stations have been considered enough by FERC in the approval process. I would like to know how many FERC decision makers would be happy to live within a 1.2 mile zone of a compressor station of the size proposed for Northfield. If you wouldn't want to live that close, then don't make us live in an environmentally toxic environment. Asthma, headaches, and cancers can be caused by the toxins that are released into the air surrounding compressor stations. My rights to clean air and water should allow me full intervenor status because clearly, I will be more impacted than Mr. Kinder of Kinder-Morgan.

Re: Tennessee Gas Pipeline Company, L.L.C., Docket No. CP16-21-000
Northeast Energy Direct Project

Update to Landowner Mailing List

Dear Ms. Bose:

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. ("Tennessee") filed with the Federal Energy Regulatory Commission ("Commission") a certificate application in the above-referenced docket for the Northeast Energy Direct Project ("Project").

On December 21, 2015, Tennessee filed an updated landowner list pursuant to Section 157.6(d)(5) of the Commission's regulations, 18 C.F.R. § 157.6(d)(5)(2015), which included corrected addresses for landowners whose notification mailings were returned to Tennessee as undeliverable. Subsequent to that filing, Tennessee discovered that 19 landowners located within one-half mile of the proposed Market Tail Compressor Station to be located in Dracut, Massachusetts, were inadvertently not included in the original landowner list filed with the certificate application on November 20, 2015 or the updated landowner list filed on December 21, 2015. The GIS data that Tennessee used to gather detail regarding landowner names and addresses indicated that a housing development company owned the land, which was subsequently developed into condominiums. Therefore, the required landowner notifications for this land was sent to the landowner/developer. Based on comments filed in the Project docket with the Commission and additional research, Tennessee later determined that the housing developer had already constructed homes on and sold the 19 properties in question. Tennessee has now identified the landowner names and addresses for the 19 properties, and the names and addresses for these landowners are included on the attached list. Tennessee notes that, as of January 5, 2016, it has sent the required notification materials regarding the Project to these landowners at the addresses listed in the attached spreadsheet. Furthermore, Tennessee notes that it will continue to track and monitor all notification mailings returned as undeliverable, and will plan to file an additional updated landowner list (to include all changes from the list filed with the certificate application on November 20, 2015) with the Commission no later than January 15, 2016.

Tennessee requests that the attached landowner list be accorded privileged and confidential treatment, pursuant to Section 388.112 of the Commission's regulations, 18 C.F.R. § 388.112 (2015), and has marked the list with the legend "Privileged and Confidential - Do Not Release". Tennessee respectfully requests that the Commission waive the landowner notification provisions of Section 157.6(d) to allow for the submission of the notification materials to the 19 affected landowners.

In accordance with the Commission's filing requirements, Tennessee is submitting this filing with the Commission's Secretary through the eFiling system. Tennessee is also providing a copy of this filing to the Office of Energy Projects.

Respectfully submitted,
TENNESSEE GAS PIPELINE COMPANY, L.L.C.

Joseph and Maryjane Barros, 104 Concord Rd., Dracut, MA 01826

jfbarros@comcast.net

My wife and I are impacted as the property owner of parcel 7-15-1.13 on the Dracut Assessor's Map. This will most definitely impact my property and financial well being.

Our daughter, her husband and their 3 children (our grandchildren) also live in Dracut and are actually closer to proposed compressor station and are in the process of selling and moving. This fact alone is very disturbing to my wife and I. Personally we don't blame them for considering to move as it is for the health and well being of their very young family. My one granddaughter has just one kidney and the uncertainty of this project (Docket CP16-21) and its affect on health make it scary for anyone close to compressor station to look into other options.

We will hear, smell, feel, see and potentially taste (we have well water) the effects of the compressor station.

We are concerned about air quality due to turbines generating exhaust.

We are concerned with the continuous noise of compressor station, 24-7.

We are concerned with noise and pollution.

We are concerned with light damage to dark skies. We may not be able to see stars.

We are concerned with subsonic vibrations that can subconsciously affect health.

We are concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.

We are concerned with traffic, noise, air pollution and numerous disturbances during construction.

We are concerned with the property value of our house being close to a compressor station.

We are concerned with the negative effects it will have on nearby Campbell Elementary School because families (my grandchildren included) will not want children to go an elementary school within a mile or so of the compressor station. Part of the property value and benefit of my residence is being in this school district to include the Campbell School.

We are concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.

We are concerned with the industrialization of the neighborhood. The only things that are comfortable living next to compressor stations are other heavy industry and there are already 2 or 3 along this very stretch of road (Rte.113). Imagine the increased traffic, accidents and the like.

We live in the shadow of the proposed compressor station. We will feel its effects.

Basis for Intervening:

I have lived in Peabody most of my life and enjoy the walking path and Ipswich River. There is not enough open space to enjoy in this city and putting in another pipeline will effect the quality of life and risk water supply contamination and wildlife in the area and surrounding areas. This is not needed in this area and most people to not want it in our city and surrounding cities. Please DO NOT let this happen.

Best regards,

Christine Spence

Basis for Intervening:

I live close to the proposed compressor station and close to the proposed meter station near St. Francis Church.

I am a direct abutter to one of the prior routes to this pipeline that are still considered by FERC to be alternate route.

I use well water in East Dracut and I am particularly concerned about the fact that the development plans by Kinder Morgan and the blasting from construction are likely to impact the migration of toxic chemicals from the contaminated former EXXON site at 970 Broadway Road. This contamination was detailed in a letter and proposal reviewed at the meeting of the Dracut Board of Health on April 1, 1982 and is fully documented at the Mass DEP web site at the following URL:

<http://public.dep.state.ma.us/fileviewer/DefaultScanned.aspx?documentid=24154>

Finally, I am concerned about my property devaluation.

**Rivers Alliance
of Connecticut**

US FEDERAL REGULATORY COMMISSION

Regarding:

Docket No. CP16-21-000 - Tennessee Gas Pipeline Company, LLC - Northeast Energy Direct Project

January 6, 2016

MOTION TO INTERVENE OF RIVERS ALLIANCE OF CONNECTICUT INC

On December 7, 2015, the Federal Energy Regulatory Commission (“FERC”) issued a Notice of Application for the proposed Northeast Energy Direct Project, FERC Docket Nos. CP16-21-000 and PF14-22-000. As noted in FERC’s Notice of Application, Tennessee Gas Pipeline Company, LLC (“the Applicant”) seeks, among other things to construct an interstate natural gas pipeline and associated facilities of approximately 412 miles in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut. In accordance with Rules 212 and 214 of FERC’s Rules of Practice, 18 C.F.R. § 385.212 and 385.214, and Section 15 (a) of the Natural Gas Act, 15 U.S.C. § 717n, Rivers Alliance of Connecticut Inc. (“Rivers Alliance” or “Intervenor”) respectfully moves the Commission to grant it intervention in the above captioned matter.

I. INTERVENOR

Rivers Alliance of Connecticut Inc. is the statewide, non-profit coalition of river organizations, individuals, and businesses formed to protect and enhance Connecticut’s waters by promoting sound water policies, uniting and strengthening the state’s many river groups, and educating the public about the importance of water stewardship. The mission of Rivers Alliance of Connecticut is to protect and restore our state’s invaluable and imperiled waters, including drinking water sources. To this end, we promote sound, science-based environmental policies; work collaboratively and in coalitions to get results; encourage and aid local groups and persons working on water protection; educate the public to understand, value, and defend our water resources.

II COMMUNICATION AND CORRESPONDENCE

Service in the proceeding should be made upon, and communications should be directed to:

Margaret Miner, Executive Director
Rivers Alliance of CT
P.O. Box 1797
Litchfield, CT 06759
rivers@riveralliance.org

III GROUNDS FOR INTERVENTION

The proposal includes a pipeline loop, a portion of which will be constructed through 5.7 miles of land owned by the Metropolitan District Commission (“MDC”) in West Hartford; Connecticut. Several drinking water reservoirs maintained and operated by the MDC are located on this property. These reservoirs provide the major source of public drinking water to over 400,000 people in the greater Hartford, Connecticut area and, as such, they are subject to special public health protections under state law. More than ten municipalities in this area rely on these reservoirs as the sole source for their public drinking water supply.

The MDC lands where the pipeline loop will be constructed are statutorily protected Class land Class II watershed lands. In accordance with Conn. Gen. Stat. § 25-32(b), no change in use of these protected lands can take place unless the Applicant can demonstrate that such change in use will not have a significant impact upon the present and future purity and adequacy of the public drinking water supply. Pursuant to Conn. Gen. Stat. § 25-32(c), the Applicant has not demonstrated that its proposed activities will not have a significant impact on this critical drinking water supply. In fact, Applicant makes no reference to the fact that the MDC property is statutorily protected watershed land and is the location of a major public drinking water supply in its Environmental Report (ER) submitted with its Application for a Certificate of Public Convenience and Necessity. Applicant’s ER is deficient and does not provide any alternatives analysis for the location of the pipeline in this area.

Rivers Alliance also questions the adequacy of the Applicant’s claim that there is a need for more natural gas in New England and therefore the need to construct additional infrastructure to increase capacity in order to provide it.

Applicant’s proposed activities will have a major negative impact on the natural resources in this area and upon the recreational activities that take place on this land, one of the few open space areas for recreation in a primarily urban area. Because the proposed location of the pipeline loop passes through the major source of public drinking water for the Hartford area and because this proposed project will cause environmental damage to the drinking water supply and the other natural resources in this area and the Applicant’s inadequate showing of need for additional capacity, Rivers Alliance opposes this application.

Connecticut law provides the highest protections in the nation for drinking water. First, no water body that has received a waste discharge can be used for public supply of potable water. Second, water utility land hydrologically linked to drinking-water reservoirs must be kept as natural open space and cannot be disturbed in any way other than certain limited permitted actions necessary to maintain operations. By statute the protected lands are termed Class I (closest to the source) and Class II (also impacts the source).

Protection of Class land II lands is the highest priority in our state water policy. To violate this protection would set a precedent that would put at risk Connecticut’s drinking water sources. The state’s standards for drinking water are uniquely high (only Rhode Island has similar standards). These high standards are increasingly justified as science reports document the myriad new pharmaceuticals, plastics, pesticides and other toxins in ordinary wastewater. Existing treatment methods cannot adequately define or manage this array of toxins.

As an advocate for water health, Rivers Alliance of Connecticut frequently works on land-use policy. Thus, for example, our Executive Director is a member of the statute-based, state land conservation board (Connecticut Natural Heritage, Open Space, and Watershed Land Acquisition Review Board); and co-chair of the Watershed Lands Sub-Committee of the statute-based Water Planning Council Advisory Group.

Based upon all of the above, it is in the public interest that Rivers Alliance be allowed to participate as a party in this proceeding. Therefore, the Commission should grant our motion to intervene in these proceedings.

IV CONCLUSION

For all or the above reasons, Rivers Alliance of Connecticut respectfully requests that this Motion to Intervene be granted and that we be permitted to participate, with full rights as a party, in the above captioned proceeding before FERC.

Respectfully Submitted,
Margaret Miner, Executive Director
Rivers Alliance of CT
P.O. Box 1797
Litchfield, CT 06759
rivers@lliance.org

V CERTIFICATION

I hereby certify that I have this day served the foregoing document upon each person designated on the official service list compiled by the Secretary in this proceeding.

I am a gas user. Introducing more gas related infrastructure into our environment is unnecessary and is a decision contrary to the actual needs of our environment in Massachusetts. What is needed is to fix the thousands of gas leaks in Massachusetts.

We must concentrate our efforts on renewables like wind and solar. Gas always leaks and increases global warming.

2. Rates will increase. 3. Environment will be destroyed. 4. Lands will be confiscated.

Basis for Intervening:

I live in Fitzwilliam NH and want to intervene in this proceeding to oppose the NED Pipeline . I have interest which may be directly affected by the outcome of this pipeline proceeding , because I am a resident of an impacted community and have concerns about various impacts to the local economy , the environment, aesthetics', health concerns, pollution control, fires, natural beauty and wildlife of the surrounding area. I am also an electric ratepayer , and I am concerned my rates will go up due to this. This is not clean energy by

any means , we have car companies making electric and solar vehicles to save our earth from the bad things we have already done to it and now people with money to burn want to shove this thing down our throats, they do not live here or plan to they just want to make more money somehow. They should do something good with that money like feed the homeless, help our veteran's , who have help them get where they are by risking their lives .

Basis for Intervening:

– I am a member of an impacted community, Winchester, NH. I have concerns about various impacts to our local economy, the environment, to the aesthetics of our town and the surrounding areas and after doing much research and reading, our health.

Kinder Morgan's motives for this pipeline being directed through our town and their abysmal safety and maintenance record concerns me greatly, not only for the safety of those who's homes and properties will be affected, but also for their children and to a somewhat lesser degree their livestock/pets and way of life.

If this project is allowed to proceed, all in the name of greed, as we surely do not need, nor will many, if any of us will directly benefit from it's construction, the damages, far outweigh any good that would come of it for all of the local communities and it's citizen's.

Therefore I wish to be listed and heard, as an intervenor in this matter.

Sincerely,

Michael Towne

I strongly object to the construction of the proposed pipeline for a number of reasons, certainly not the least of which is that it will cross directly across our property, especially across the power leading to and the water pipe leading from our well. The primary reason for this intervention filing is my objection to expanding

the delivery of non-renewal fossil fuels in the form of fracked natural gas that contributes to greenhouse gas and the resulting warming of the planet.

In addition I object to the proposed tariff to be levied on the communities affected where we have to pay so that a large corporation may profit from our suffering. I also object to the resulting reduction of the property values of all affected, the destruction of Massachusetts State Park land and Townsend Conservation land. I object to the potential damage to our personal water supply and the damage to Town of Townsend Massachusetts wells in close proximity to our property.

For these reasons, I am interested in and would be affected by the Applicant's filing. I believe my interests cannot be adequately represented and protected by any other party. Therefore the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

Thomas J. Davis

20160106-5240

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000
North East Direct Pipeline Project)

NOTICE OF INTERVENTION

Pursuant to 18 C.F.R. 385.214(a)(2), the Massachusetts Department of Fish and Game ("MA DFG") files this notice of intervention in the above captioned proceeding.

On November 20, 2015 the Tennessee Gas Pipeline Company, LLC ("TGP") filed an application pursuant to sections 7(b) and 7(c) of the Natural Gas Act seeking authority from the Federal Energy Regulatory Commission ("FERC") to construct, install, modify, and operate a gas pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut. FERC's Notice of Application dated December 7, 2015 opened a thirty (30) day intervention period for this proceeding that ends on January 6, 2016.

I. Grounds for Intervention and Interests of Intervenor

Under 18 C.F.R. § 385.214(a)(2), "[a]ny ... state fish and wildlife ... agency .. is a party to any proceeding upon filing a notice of intervention in that proceeding, if the notice is filed within the period established under Rule 210(b)." MA DFG, which includes the Division of Fisheries and Wildlife ("DFW"), is the Commonwealth of Massachusetts fish and wildlife agency with the authority and responsibility to protect, conserve and manage the Commonwealth's wildlife and fisheries resources, including endangered, threatened and species of special concern regulated by DFW pursuant to the Massachusetts Endangered Species Act ("MESA"). In addition, MA DFG has interests that will be directly affected by the outcome of this proceeding because the pipeline and/or associated facilities are proposed to be located on or will abut lands which MA DFG either owns in fee or holds a conservation restriction.

For the above stated reasons, MA DFG hereby provides notice of its intervention in this proceeding.

II. MA DFG Contacts for Service List

MA DFG requests that FERC add the following MA DFG contacts to the official service list for Docket No. CP 16- 21-00. All pleadings, filings, orders, correspondence, and other communications in this proceeding should be served on:

George N. Peterson, Jr.
Commissioner
MA Department of Fish and Game
251 Causeway Street, Suite 400

Richard Lehan
General Counsel
MA Department of Fish and Game
251 Causeway Street, Suite 400

Boston, MA 02114
(617) 626-1550

Tennessee Gas Pipeline Company, LLC)

Docket No. CP16-21-000

**MOTION TO INTERVENE
AND COMMENTS IN SUPPORT OF
THE NATIONAL GRID GAS DELIVERY COMPANIES**

Pursuant to Rule 214 of the Commission's Rules of Practice and Procedure, 18 C.F.R. §385.214, The Brooklyn Union Gas Company d/b/a National Grid NY ("National Grid NY"); KeySpan Gas East Corporation d/b/a National Grid; Boston Gas Company, Colonial Gas Company, collectively d/b/a National Grid; Niagara Mohawk Power Corporation d/b/a National Grid; and The Narragansett Electric Company d/b/a National Grid, all subsidiaries of National Grid USA, Inc. (collectively the "National Grid Gas Delivery Companies" or "National Grid") hereby jointly and severally move to intervene and comment in support of the application filed by Tennessee Gas Pipeline Company, L.L.C. ("Tennessee") on November 30, 2015 ("November 30 Application") for the proposed Northeast Energy Direct Project ("NED Project") in the above referenced proceeding.

In support hereof, the National Grid Gas Delivery Companies respectfully state:

1. National Grid NY is a corporation duly organized and existing under the laws of the State of New York, with its principal office located at One MetroTech Center, Brooklyn, New York 11201.

2. KeySpan Gas East Corporation d/b/a National Grid (“National Grid LI”) is a corporation duly organized and existing under the laws of the State of New York, with its principal office located at 175 East Old Country Road, Hicksville, New York 11801.
3. Boston Gas Company (“Boston Gas”) and Colonial Gas Company, collectively d/b/a National Grid, are corporations duly organized and existing under the laws of the Commonwealth of Massachusetts, with their principal offices located at 40 Sylvan Road, Waltham, Massachusetts 02451.
4. Niagara Mohawk Power Corporation d/b/a National Grid is a corporation duly organized and existing under the laws of the State of New York, with its principal office located at 300 Erie Boulevard West, Syracuse, New York 13202.
5. The Narragansett Electric Company d/b/a National Grid (“Narragansett”) is a corporation duly organized and existing under the laws of the State of Rhode Island, with its principal office located at 280 Melrose Street, Providence, Rhode Island 02907.
6. The National Grid Gas Delivery Companies are engaged primarily in the purchase and distribution at retail of natural gas, serving approximately 3 million customers in New York State and over 1 million customers in Massachusetts and Rhode Island.
7. The following persons are designated to receive service in this proceeding:

Samara Jaffe

Motion To Intervene

8. In its November 20 Application, Tennessee seeks authorization to (i) construct, install, modify and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut, and (ii) to abandon certain facilities, all as part of the NED Project which will provide up to 1.3 billion cubic feet per day (Bcf/d) of firm transportation capacity at a cost of approximately \$5.2 billion dollars. Tennessee states in its Application that the Market Path component extending from Wright, New York, to Dracut, Massachusetts, will consist of approximately 188 miles of 30-inch pipeline, with a maximum design capacity of 1.3 billion cubic feet per day, a 1.3 million Dekatherms (“Dth”) per day equivalent.¹

9. Each of the National Grid Gas Delivery Companies are currently contract customers of Tennessee. In addition, certain of the National Grid Gas Delivery Companies – Boston Gas and Narragansett – have already executed binding precedent agreements for firm transportation capacity on the NED Project.² As customers of Tennessee and projected shippers under the NED Project, the National Grid Gas Delivery Companies have a substantial interest that will be directly affected by Commission action in this proceeding. National Grid will not be adequately represented by any other party. Unless permitted to intervene and participate fully, National Grid may be bound and adversely affected by the Commission’s orders herein without an opportunity to have its views heard and considered. Accordingly, the public interest will be served by granting this motion to intervene.

Comments In Support

National Grid supports Tennessee's NED Project and respectfully requests that the Commission approve it within the timeframe requested by Tennessee so that service can commence by November 1, 2018. As discussed supra, certain of the National Grid Gas Delivery Companies have executed binding precedent agreements with Tennessee for firm transportation capacity under the NED Project. This increased firm capacity is needed within the timeframe requested to enable Boston Gas and Narragansett to serve their forecasted and existing markets and to alleviate pressure constraints in the Boston Metropolitan area, which is located at the end of Tennessee's system. There is no viable alternative project that can replace the firm capacity that Boston Gas and Narragansett have contracted for on the NED Project to serve their end use gas distribution markets.

As stated in the Application, the price for natural gas in New England is relatively expensive in comparison to other parts of the country.³ Moreover, the price of natural gas in New England has also been extremely volatile in recent periods.⁴ Consumer demand for natural gas in the Northeast continues to increase for a number of reasons, including growth in the traditional end use gas markets such as those for space heating, water heating and cooking. The increased use of natural gas in these markets benefits the New England region both economically and environmentally as a result of displacement of more expensive and less environmentally friendly alternative energy sources. Increased firm capacity from the NED Project will ensure the National Grid Gas Delivery Companies' ability to serve increased demand and help to reduce both volatility and the overall cost of gas supply in New England by providing access to competitively priced and reliable sources of supply from geographically proximate supply basins. As Tennessee states in its Application (at 59-60), the NED Project will connect markets in New England to the "abundant and low-cost gas supplies available from nearby domestic natural gas supply regions."⁵ In so doing:

[T]he NED Project will generate significant cost savings for gas consumers in New England. In the recent order from the Massachusetts DPU approving [National Grid's] Boston Gas Co.'s Project precedent agreement, the Massachusetts DPU found that "access to lower-cost supplies will allow customers to achieve commodity cost savings estimated to be between \$237 million under normal-year conditions and \$813 million under design-year conditions from November 1, 2018, through October 31, 2024. These savings are derived from: "(1) the ability to access less expensive domestic supplies on a year-round basis; (2) the elimination of Eastern Canadian supply purchases at Dracut, Massachusetts; and (3) reduced reliance on citygate-delivered supplies."

Application at p. 60.

National Grid supports the NED Project because it will (i) provide firm capacity needed to continue to meet existing requirements and forecast growth in end use markets, (ii) improve access to competitively priced and reliable sources of supply, (iii) reduce price volatility, and (iv) generate significant environmental benefits. From National Grid's perspective, consideration of the foregoing factors and the reasons stated by Tennessee in the November 30 Application clearly demonstrates that construction and operation of the NED Project is clearly in the public interest.

Conclusion

WHEREFORE, the National Grid Gas Delivery Companies respectfully request that the Commission:

- a. issue an order permitting the National Grid Gas Delivery Companies to intervene in this proceeding with full rights as parties hereto;
- b. issue a final order approving Tennessee's November 20 Application by the fourth quarter of 2016 to permit Tennessee to meet the proposed November 1, 2018 in-service date for the NED Project; and
- c. grant the National Grid Gas Delivery Companies such other and further relief as may be required to protect their interests and the interests of the gas consumers they serve.

Respectfully submitted,

The National Grid Gas Delivery Companies

/s/ Kenneth T. Maloney
Gregory T. Simmons
Cullen and Dykman LLP
1101 Fourteenth Street, NW, Suite 750
Washington, D.C. 20005
(202) 223-8890

Footnotes:

- 1 Application at 6.
- 2 Boston Gas and Narragansett have executed binding precedent agreements for a total of 186,962 Dth of firm capacity on the NED Project.
- 3 Application at 55.
- 4 Id. at 60-62.
- 5 Id. at 59.

Dated: January 6, 2016

CERTIFICATE OF SERVICE

I hereby certify that I have this day served the foregoing document upon all parties to this proceeding in accordance with the requirements of Rule 2010 of the Commission's Rules of Practice and Procedure.

Dated at Washington, D.C. this 6th day of January, 2016.

Basis for Intervening:

I live on the Third Burden Lane in Averill Park, Town of Sand Lake in New York State and want to intervene in this proceeding to oppose the Northeast Energy Direct pipeline. I have an interest which may be directly affected by the outcome of the proceeding because I live about a mile south of the compressor station proposed to be located on Clarks Chapel Road in the Town of Nassau, New York and have serious health, safety, environmental and economic concerns if said compressor station is constructed and becomes operational in this residential and recreational area. The construction of the pipeline and compressor station would have serious impacts on the countryside impacting both the landscape and animal life in the area. More importantly, if the compressor station becomes operational additional impacts will obtain both on humans and animals, especially nocturnal animals, as the station will run 24/7 maintaining a level of industrial noise and lighting which will disrupt animal life and diminish the quality of life of people living in the area. The noise will be significant especially for people like myself who live on the Third Burden Lake whose southern shore will be a few thousand feet from the proposed compressor station--sound carries rather extensively over water and my neighbors and I will constantly hear the operating compressor station and the southern sky will be constantly aglow. The quality of life on the Third Burden Lake as well in the other areas surrounding the station will be negatively impacted. Another concern from the proposed

compressor station's operation would be the impact on the local bat population which in recent years has begun to rebound from the effects of a debilitating disease. The nocturnal, echo-location hunting bats in the area will have difficulty hunting and surviving in the area due to the constant noise and well-lighted skies at night. Equally important is the health and safety impact of the compressor station whose normal operation including periodic "blow downs" will release significant quantities of methane gas and a variety of other known toxins into the air and the prevailing winds will carry said gas and toxins down the chain of the Burden Lakes into the village of Averill Park and beyond. Additionally, local first responders (all volunteer groups) are not equipped to adequately handle any mishaps that may occur along the pipeline or at the compressor station. Ultimately, the cumulative result of all these negative impacts will be to diminish my property value and those of my neighbors. Also, my normal routines will cause me, my wife and neighbors to travel through the blast radius surrounding the pipeline and compressor station several times a week. To date, the applicant has not presented any information that leads me to believe my concerns are unfounded. This has led me to conclude that myself, my neighbors and all of the local governments in the immediate vicinities of the NED project will be bearing enormous costs while gaining no benefits. The gas to be transported through the pipeline will not be used in New York and many of the communities beyond New York have raised significant concerns about the need for additional natural gas supplies in their areas. Growing evidence suggest the vast majority of the gas to be transported through the NED pipeline and compressor stations is destined for foreign markets in Europe. While this may serve to enhance the profitability of the applicant, it nevertheless calls into question the need for the NED pipeline at all and how the public interest will be served by this proposed project.

Exelon Corporation	FERCe-filings@exeloncorp.com	lisa.simpkins@exeloncorp.com
Exelon Corporation		Christopher.Young@Constellation.com

Basis for Intervening:

Exelon Corporation (Exelon) is a holding company, headquartered at 10 South Dearborn Street, Chicago, Illinois, with operations and business activities in 47 states, the District of Columbia and Canada. Exelon owns Commonwealth Edison Company (ComEd), Baltimore Gas and Electric Company (BGE) and PECO Energy Company (PECO). Together ComEd, BGE and PECO own electric transmission and electric and gas distribution systems that deliver electricity to approximately 6.6 million customers in central Maryland (BGE), Northern Illinois (ComEd) and southeastern Pennsylvania (PECO). PECO distributes natural gas to over 500,000 consumers in the suburban Philadelphia area. BGE distributes natural gas to over 600,000 customers in central Maryland and also operates a liquefied natural gas facility for the liquefaction and storage of natural gas as well as associated propane facilities. Exelon Generation (ExGen) is the largest competitive power generator in the U.S., with approximately 32,000 megawatts of owned capacity comprising one of the nation's cleanest and lowest-cost power generation fleets, located in a number of organized markets. The company's Constellation business unit, which consists of subsidiaries and divisions of ExGen, is one of the nation's leading marketers of electricity and natural gas and related products in wholesale and retail markets. These businesses serve approximately 2.5 million residential, business and public sector customers in various markets throughout the United States. As a result, Exelon has a direct and substantial interest in the outcome of this proceeding, and its interests cannot be represented adequately by any other party.

20160106-5258

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)

Docket No. CP16-21-000

NOTICE OF INTERVENTION

Pursuant to Section 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“FERC”) promulgated at 18 C.F.R. § 385.214, the Massachusetts Department of Environmental Protection (“MassDEP”) files this notice of intervention in the above captioned proceeding.

On November 20, 2015 the Tennessee Gas Pipeline Company, LLC (“TGP”) filed an application pursuant to sections 7(b) and 7(c) of the Natural Gas Act seeking authority from the FERC to construct, install, modify, and operate a gas pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut. FERC’s Notice of Application dated December 7, 2015 opened a thirty (30) day intervention period for this proceeding that ends on January 6, 2016.

I. Grounds for Intervention and Interests of Intervener

Under 18 C.F.R. § 385.214(a)(2), “[a]ny ... state . . . water quality certification, or water rights agency ... is a party to any proceeding upon filing a notice of intervention in that proceeding, if the notice is filed within the period established under Rule 210(b).” MassDEP is the Commonwealth of Massachusetts’ water quality certification agency for purposes of 33 U.S.C. § 1251 under M.G.L. c. 21, §§26-53, the Massachusetts Clean Waters Act, and it seeks to ensure that the activity subject to federal licensing in this proceeding will conform to the applicable requirements of state law.

For the above stated reasons, MassDEP hereby provides notice of its intervention in this proceeding.

II. MassDEP Contact for Service List

MassDEP requests that FERC add the following MassDEP contact to the official service list for Docket No. CP16-21-00. All pleadings, filings, orders, correspondence and other communications in this proceeding should be served on:

Kathleen Kerigan
Director for the Office of Ombudsman & Special Projects 2
Massachusetts Department of Environmental Protection
One Winter Street
Boston, MA 02108
617-556-1181
MassDEP.PermitAssistance@massmail.state.ma.us

Respectfully submitted this 6th day of January, 2016.

Benjamin J. Ericson
General Counsel
Massachusetts Department of Environmental Protection
One Winter Street
Boston, MA 02108
617-556-1121

20160106-5260

Otsego
2000

January 6, 2016

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street, NE, Room 1
Washington, DC 20426

RE: North East Direct Pipeline: FERC Docket No. CP16-21-000

Dear Secretary Bose:

Otsego 2000 is a 501c3 public charity founded over thirty years ago to protect the environmental, historic, agricultural, and cultural assets of the Otsego Lake region in Central New York. We work to promote the preservation of our rich historic and cultural assets through intelligent planning and land use, advocate for sustainable agricultural uses of the rural lands in our region, and employ education, outreach, advocacy, and, as needed, legal action to protect the fragile environmental assets of the Otsego Lake region.

The proposed North East Direct Pipeline would, like the proposed Constitution Pipeline, have a significant impact on the Otsego Lake region, located within 20 miles of the proposed pipeline routes. This area constitutes the headwaters of the Susquehanna River, which flows south to the Chesapeake Bay and provides drinking water to millions along the way. The region also includes over 37,000 acres deemed nationally significant, listed as historic and cultural landscapes on the National Register of Historic Places, and its economy is largely driven by a reliance on sustainable agriculture and recreational tourism.

Otsego 2000 hereby requests intervenor status in Docket CP16-21-000 in order to properly and fully address the potential environmental, social, cultural, and economic impacts of this additional proposed pipeline on the environmental, agricultural, economic, historic, and cultural resources of the Otsego Lake region.

Otsego 2000's interests in this matter cannot be adequately represented by any other entity, as Otsego 2000 is the only regional organization whose mission encompasses protecting the entirety of these significant resources in the area potentially affected by the proposed pipeline.

Sincerely,

Ellen Pope
Executive Director

Individual	krisdingle@hotmail.com	

Basis for Intervening:

I live in Dracut, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which is directly affected by the outcome of the proceeding because I am a resident with a family who lives in the blasting zone, so we would be physically at risk. As a young mother with 3 children, this raises many concerns for us. (My two younger children have an autism spectrum disorder).

The location of the proposed pipeline also comes along with a compressor station which is located less than 1/4 mi from my front door. The anxiety of the effects of a compressor station means added noise, air pollution, and fear of incineration with no warning!! My children with Autism Spectrum Disorder have a heightened sensitivity to noise and the noise level produced by this compressor station is an added stressor for them and my family.

Dracut is a beautiful town composed of farm land, conservation land, and a wonderful community of friends and family. I chose to grow my family in this town based upon these factors. Please think long and hard before issuing any certificate to a corporation of this type. Please put yourselves (or your family members) in our situation and way out the benefits of a pipeline with a compressor station in your neighborhood!!

Sincerely,

Kristin Dingle

Dracut resident and scared mother or 3!!

20160106-5276

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
North East Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR REPRESENTATIVE SPELIOTIS TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, Theodore C. Speliotis, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CPI6-21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Representative Theodore C. Speliotis,
Room 20, State House
Boston, MA 02133
617-722-2410
Theodore. Speliotis@mahouse.gov

II. INTEREST OF PETITIONER

I am a State Representative for Danvers, Peabody, and Middleton, all of which are on the proposed path of the Peabody lateral pipeline. I represent both homeowners that are immediate abutters to the proposed pipeline as well as several thousand homeowners that have over the years expressed a strong interest in having access to gas provided to their homes. My communities also draw their drinking water from the already stressed Ipswich River, which the pipeline is planned to run alongside. As an intervener in this proposed project, I can best represent and channel the needs and concerns of my constituents.

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, T, Theodore C. Speliotis, respectfully request that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 6th day of January, 2016.

Theodore C. Speliotis
State Representative
Room 20, State House
Boston, MA 02133
617-722-2410
Theodore. Speliotis@mahouse.gov

Basis for Intervening:

I motion to intervene in opposition to the Northeast Energy Direct Pipeline. This is an un-necessary project that will have negative impacts on the beautifully conserved town of Dunstable, MA, where we reside. Conservation land should not be used for energy transmission, it goes against the very definition of "conservation". I also disagree with any funds being used to further natural gas as a fuel source when so much technology exists for clean alternatives.

All federal projects regarding energy use should be looking toward renewable alternatives.

Thank you for your consideration,

Valerie Callahan

Individual quabbin0@yahoo.com

Basis for Intervening:

The plan to construct a gas pipeline through NH has not been widely presented and few of the land owners along it have been notified, possibly to limit the criticism it deserves. I am one of those un-notified land owners, with property in Richmond (Map 405, lots 20, 22 and 25).

Sandy Lake is a rare, valuable, vulnerable water body. It is pristine because its watershed is undisturbed save for a transmission line that is the proposed pipeline's path. The shoreline is undeveloped, with almost no buildings. Undisturbed water bodies are uncommon in Southern New Hampshire. This is a precious natural resource.

The Lake is unusually deep, 15 meters (50 feet), providing a large hypolimnion region and a longer "resi-

dence time” for water (and any contaminants) than in the typically shallower lakes of the region which “flush” more rapidly. The Lake’s fauna includes fish, water birds, raptors (e.g., osprey) and nighthawks, reptiles (turtles and snakes), amphibia (including the densest population of eastern spotted newts ever reported in the scientific literature). Mammals include occasional beavers and otters, and a substantial bat population (a threatened group that could be adversely affected). Historically the brooks of Sandy Lake had an annual run of alewives that reproduce upstream of the proposed pipeline. Any remaining fish are endangered and disturbances in the watershed and streams could cause their extinction.

Most of Sandy Lake’s watershed is to the north. There is virtually no runoff coming from the east or west. The southern watershed limit is a hundred meters or so from the shoreline with this zone constituting less than 10 percent of the watershed and contributing a correspondingly small proportion of water. Nearly all water entering the Lake comes from the area impacted by the pipeline. Actions affecting water quality in this zone have a maximum effect on the quality of Sandy Lake and its ecosystem. The wide margins of the corridor insure that it will affect nearly all of the watershed.

The most obvious impacts, forest clearing and excavation of soil and bedrock leading to erosion are damaging. More devastating will be herbicidal control of vegetation. Construction and maintenance of a pipeline corridor using chemical vegetation control will be disastrous to Sandy Lake, regardless of the toxicity of the chemical agents used.

The most common herbicide uses glyphosate, determined by the World Health Organization’s International Agency for Research on Cancer to be a likely human carcinogen. The children’s summer camp, Wiyaka, has used the Lake for swimming, boating, and, in the past, even drinking water. Introduction of a harmful chemical would be irresponsible in the extreme.

Herbicides are, by definition, toxic. They kill plants. Sandy Lake is an ecosystem based on plants at its basic trophic level. Any herbicide that enters the Lake will have a deleterious effect on plant life. The prolonged residence time of water (and substances in it such as herbicides) in Sandy Lake insures maximum negative effect.

There is a more insidious effect of herbicide use in a watershed: Research conducted in the Hubbard Brook Experimental Forest in northern New Hampshire under the US Forest Service and collaborating universities including the University of New Hampshire, Dartmouth, Cornell, Yale and others over 6 decades shows the essential role of living plants in retaining plant nutrients within terrestrial ecosystems like the Sandy Lake watershed. Research led by Professors Gene Likens and F. Herbert Bormann and including contributions from dozens of others show that when a forested ecosystem is cut and prevented from re-growing through the use of herbicides, enormous amounts of nutrient materials are dissolved in rain water and lost from the ecosystem in runoff. The runoff water may appear normal, but the dissolved content may exceed acceptable levels for potable water.

Plant nutrients that sustain terrestrial ecosystems’ growth are like fertilizers. Increased growth of aquatic plants including undesirable and noxious species result from an increase in nutrients. Organisms at higher trophic levels -- plankton, invertebrates and fish -- are adversely affected by the disruption of the plants on which they depend. The plants eventually die and may overwhelm the ecosystem’s aerobic decomposition capacity, resulting in foul anaerobic decomposition. Aquatic organisms that normally obtain oxygen from water die as well. Note that this chain of events is unrelated to which herbicide is used and how expertly it is applied.

Could this happen in Sandy Lake? Initially vegetation on the transmission line that is the pipeline’s path through the watershed was controlled by herbicide. This caused growths of a previously absent vascular plant known as bladderwort or *Utricularia* in the Lake. The plants grew in large mats at the water surface (up to several square meters in area and half a meter thick). They were unpleasant and potentially dangerous to swimmers who could become entangled. After a few years during which this plant growth increased, the maintenance of the transmission line was changed to mechanical vegetation control and the *Utricularia* disappeared.

To summarize, Sandy Lake is a rare and threatened habitat: a deep, undeveloped, pristine aquatic ecosystem. The Lake supports wildlife populations including threatened organisms as well as public recreation and a children's summer camp. The planned pipeline will pass through the watershed that is critical to Sandy Lake's health and will inevitably have an adverse impact on the Lake. Herbicidal control of vegetation will dramatically exacerbate the harm done by the pipeline regardless of the type of herbicide and the care with which it is applied.

It can only be concluded that routing the pipeline through the Sandy Lake watershed is the result of ignorance and/or a lack of concern.

20160106-5291

Intervention for CP16-21, Northeast Energy/Tennessee Pipeline

I motion to intervene in opposition to the Northeast Energy Direct Pipeline. This is an un-necessary project that will have negative impacts on the beautifully conserved town of Dunstable, MA, where we reside. Conservation land should not be used for energy transmission, it goes against the very definition of "conservation". I also disagree with any funds being used to further natural gas as a fuel source when so much technology exists for clean alternatives.

20160106-5295

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.

Docket No. CP16-21-000

MOTION TO INTERVENE OF ALLEGHENY DEFENSE PROJECT

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("FERC") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, and 18 C.F.R. § 157.10, the Allegheny Defense Project ("Allegheny") respectfully requests leave to intervene in the above-captioned proceeding regarding Tennessee Gas Pipeline Company's ("Tennessee") proposed Northeast Energy Direct Project ("NED Project"). In support of this motion, Allegheny states as follows:

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to:

Ryan D. Talbott
5020 NE 8th Avenue
Portland, OR 97211
Tel: (503) 329-9162
rtalbott@alleghenydefense.org

II. INTERESTS OF PETITIONER

Allegheny Defense Project is a grassroots conservation organization headquartered at 117 West Wood Lane, Kane, PA 16735 and is dedicated to the protection and restoration of the Allegheny Bioregion. Formed in 1994, Allegheny works to protect the Allegheny National Forest and other public lands, resources, and wildlife habitat in Pennsylvania from the impacts of industrial extraction such as oil and gas drilling. Allegheny does not support the Project and does not believe it is required by the public convenience and necessity.

Authorization of the Project will likely induce additional shale gas development in the Marcellus and Utica shale formations in Pennsylvania. According to Tennessee, the NED Project will transport:

domestic natural gas supplies from producing areas in northern Pennsylvania on a firm basis. Tennessee has contractual commitments from both producers and end-users for firm transportation service on the

Project. Application at 5.

Although Tennessee refused to disclose the identity of the two producers, it did acknowledge that the contracts with both producers are for a primary term of 10 years, with the first producer agreeing to supply 200,000 Dth/d and the second producer agreeing to supply 150,000 Dth/d. See Application, Ex. I – Summary of Precedent Agreements. Thus, it is reasonably foreseeable that authorization of the Project will induce more drilling in the Marcellus and Utica shale region in Pennsylvania, causing further environmental harm to Pennsylvania’s forests, watersheds, wildlife, and recreation opportunities.

It is also important to point out that FERC is already reviewing three other Tennessee projects in north-eastern Pennsylvania. Since June 2015, FERC has published notices of intent to prepare an environmental assessment (“EA”) for Tennessee’s proposed Susquehanna West Project (Docket No. CP15-148-000), Triad Expansion Project (Docket No. CP15-520-000), and Orion Project (Docket No. CP16-4-000). In its motion to intervene in the Orion Project, Allegheny notified FERC that “Tennessee is apparently engaging in the same segmentation activities that the D.C. Circuit Court declared illegal in Delaware Riverkeeper Network v. FERC, 753 F.3d 1303 (D.C. Cir. 2014).” See Motion to Intervene of Allegheny Defense Project at 2 (Docket No. CP16-4-000, Accession No. 20151116-5036). This segmentation continues with the NED Project.

For example, all three of the above-referenced projects involve increasing the capacity of Tennessee’s existing 300 Line through a series of pipeline loops. See Susquehanna West Application at 4; Triad Expansion Application at 4-5; and Orion Application at 8. According to Tennessee:

The NED Project is comprised of two components, the Supply Path Component and Market Path Component. The Supply Path Component will have a maximum design capacity of 1.2 billion cubic feet (“Bdf”) per day (equivalent to 1,230,000 dekatherms (“Dth”) per day) and consists of (i) approximately 133 miles of 30-inch diameter pipeline extending from Tennessee’s existing 300 Line in northern Pennsylvania to an interconnect with Tennessee’s 200 Line and Iroquois Gas Transmission System, L.P. (“Iroquois”) at Wright, New York; and (ii) approximately 41 miles of 36-inch diameter looping pipeline along Tennessee’s 300 Line in Bradford and Susquehanna Counties, Pennsylvania. The Supply Path Component also will include the construction and operation of one modified and three new compressor stations and two new meter stations.

Application at 5-6. As the D.C. Circuit stated just last year regarding four other Tennessee pipeline projects that were illegally segmented:

The Supreme Court has held that, under NEPA, “proposals for ... actions that will have cumulative or synergistic environmental impact upon a region ... pending concurrently before an agency ... must be considered together. Only through comprehensive consideration of pending proposals can the agency evaluate different courses of action.”

Delaware Riverkeeper Network, 753 F.3d at 1313 (quoting *Kleppe v. Sierra Club*, 427 U.S. 390, 410 (1976)).

The Susquehanna West Project, Triad Expansion, Orion Project, and NED Project are connected, cumulative and/or similar actions that are “pending concurrently” before FERC in the same region. Indeed, three of the projects (NED, Susquehanna West, and Triad Expansion) involve proposed pipeline loops along the 300 Line in Bradford and Susquehanna Counties while the Orion Project proposes similar activities in Wayne and Pike Counties, which are just to the east and southeast of the other projects. Therefore, FERC must consider the four projects in a single EIS. 40 C.F.R. § 1508.25(a).

III. CONCLUSION

WHEREFORE, the Allegheny Defense Project respectfully requests that it be permitted to intervene in this proceeding with full rights to participate.

Dated: January 6, 2015

Respectfully submitted,
/s/ Ryan Talbott

Executive Director
Allegheny Defense Project
117 West Wood Lane
Kane, PA 16735

Basis for Intervening:

I am a resident of Amherst, MA in the Pioneer Valley. I will be adversely affected by the pipeline which will be placing all residents to the danger of gas leaks and explosions. Our state is moving towards clean energy sources and the pipeline is working in reverse of the direction to have Massachusetts meet our clean energy goals.

20160106-5302

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
Northeast Energy Direct Pipeline Project)	

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission")

Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we, Eric & Katie Wallace, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Eric & Katie Wallace,
5 Mercury Circle, Andover, MA 01810
(603)818-9528
wallacek412@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

Construction of this NED Pipeline would adversely impact our family, friends, and our community. We reside in Andover, Massachusetts only 2 miles away from the proposed route. The initial route was proposed to pass through our back yard. There are tremendous safety concerns in regards to the pipeline route. This route is planned to travel under the Merrimack River which is a water source to our town of Andover, in addition to many neighboring towns. There are also concerns regarding the safety of having such a high pressure pipeline near residential neighborhoods. Damage to the material could result in injury or death. We strongly disagree with ability of this company to take people's private property through eminent domain. That takes away the rights of the homeowner. Additionally, this pipeline project will travel through Article 97 land which has been designated as protected land. This is the home to endangered species and land that the public and community members enjoy with their family and friends through outdoor activities such as jogging, etc. We are in complete opposition to this pipeline project. We believe in looking toward renewable energy resources that provide for a safer future. Additionally, the Attorney General's report solidified the motion that this pipeline project is unnecessary!

I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, Eric & Katie Wallace, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this _6th day of January, 2016__.

Eric & Katie Wallace
5 Mercury Circle, Andover, MA 01810

Wallacek412@gmail.com

20160106-5306

Lance E Mallet, Warwick, MA.

I believe the pipeline should not be constructed!

It is not fair to charge all national grid customers in additional fee for gas they may never use. The pipeline will totally devastate our community and everything we stand for. We are a farming community and believe we should use renewable resources that will not negatively impact the planet.

Filing Party/Contacts:

Filing Party _____ Signer (Representative) _____ Other Contact (Principal) _____
Individual _____ scpp4@comcast.net

Basis for Intervening:

I live in New Ipswich, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding.

As proposed, the pipeline route enters my town and sites a new utility corridor next to one already within its borders. If the project route shifts or its infrastructure changes, there may be other privately or publicly owned parcels in my town which could be impacted.

I am a NH resident who may be charged with paying for the pipeline with a tariff charge added to my electric rates.

The aquifer which provides my well water could be degraded by construction and operation of the pipeline. The quality of air that I breathe could be degraded by toxic emissions from planned and unplanned compressor station blow downs and/or valve and/or metering station leaks.

The soils on nearby farms and my garden which grow produce I eat could be compromised by toxic emissions from planned and unplanned compressor station blown downs and/or valve and/or metering station leaks.

The financial ramifications of known and unanticipated consequences of the construction and operation of this pipeline and related appurtenances could increase my local and state tax obligations.

I am opposed to the construction of new infrastructure which promotes further dependence on fossil fuels. I, like all other citizens, will experience the consequences of climate warming which could be accelerated by the methane this project will release into the atmosphere. I believe this pipeline is NOT in the public interest, and I oppose it.

Society for the Preservation of Rockwood Pond mirvings@comcast.net

Basis for Intervening:

I am the president of the Society for the Preservation of Rockwood Pond, a 501(c)(3) organization formed approximately ten years ago to save Rockwood Pond, a 75 acre lake in Fitzwilliam, NH that is an active recreation site for the surrounding area (fishing, boating, swimming). The proximity to the lake also greatly enhances the taxable value of houses in the area, increasing local tax collections by about \$100,000 over non-lake property. The lake abuts the rails-to-trails route and has magnificent vistas towards Mt. Monadnock. After a community fund-raising effort the SPRP purchased the dam that creates the lake from a bankrupt business, and have maintained the dam ever since to state requirements.

Approximately 1/4 mile from the lake is the Troy Mills Superfund site, on which many millions of tax dollars were expended to cap the toxic waste that was dumped there by Troy Mills. The proposed pipeline would come within a few hundred feet of the Superfund site, and there is a great possibility that blasting and excavation related to the construction would disturb the trapped toxins. There is already some evidence that the plume from the underground storage areas is already moving towards the streams, and construction would greatly increase the risk of widespread dispersal of the poisons. The risk to Rockwood Pond is real and will not be easily remedied. The pipeline therefore poses immediate and irreversible health risks to this beautiful natural resource and the local population. It also threatens the property value of surrounding houses and hence, the tax collections of the town.

20160106-5313

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, LLC)

Docket No. CP16-21-000

**MOTION TO INTERVENE
OF THE CONNECTICUT OFFICE OF CONSUMER COUNSEL**

Pursuant to Rules 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”), the Connecticut Office of Consumer Counsel, by and through Elin Swanson Katz, Connecticut Consumer Counsel (“CT OCC”), hereby moves to intervene in this proceeding.

I. PLEADINGS AND OTHER COMMUNICATIONS

All communications and correspondence in this proceeding should be addressed to the following persons, who also should be designated for service on the Commission’s official service list:

Elin Swanson Katz, Esq., Consumer Counsel
Joseph A. Rosenthal, Esq.
Connecticut Office of Consumer Counsel
Ten Franklin Square
New Britain Connecticut 06051-2644
Phone: (860) 827-2900
Fax: (860) 827-2929
Elin.Katz@ct.gov
Joseph.Rosenthal@ct.gov

II. MOTION TO INTERVENE

CT OCC, an independent agency of the State of Connecticut, is the statutory advocate for Connecticut consumers in utility matters (including the gas and electric industry). CT OCC submits that there is a sound legal and factual basis for granting CT OCC’s request for intervention pursuant to Commission Rule 214.

Commission Rule 214(b)(2)(i) states that a movant must declare whether it “has a right to participate which

is expressly conferred by statute.” CT OCC has such a right. Under Connecticut General Statutes § 16-2a(a), CT OCC is “authorized to appear in and participate in any regulatory or judicial proceedings, federal or state” which may affect the interests of Connecticut consumers in utility matters.

This matter involves an application by Tennessee Gas Pipeline, LLC, for a certificate of public convenience and necessity to construct and operate certain pipeline and compression facilities, known as the Northeast Energy Direct or “NED” Project, in several states, including Connecticut. The construction of this project impacts the regional gas infrastructure upon which Connecticut consumers rely and upon which New England power plants depend. This proceeding will therefore directly or indirectly impact retail gas rates, gas reliability, electric reliability, and retail electric rates, all of which in turn impacts the ratepayers represented by OCC. Pursuant to Commission Rule 214(b)(2)(ii), CT OCC represents an interest which may be directly affected by the outcome of these proceedings -- namely, the interests of Connecticut consumers of electric and gas services. Consumer and customer interests are specifically mentioned in Commission Rule 214(b)(2)(ii) as examples of interests which the Commission intends to be within the scope of this Rule. Mention already has been made of the potential impact of this Commission proceeding on Connecticut electric and gas consumers. Thus, CT OCC’s intervention is also authorized by this portion of Rule 214.

III. CONCLUSION

WHEREFORE, CT OCC respectfully requests that the Commission grant this motion to intervene.

Respectfully submitted,

CONNECTICUT OFFICE OF CONSUMER COUNSEL

20160106-5315

Stephen P St Arnaud, Dracut, MA.

I am filing this comment on the grounds that I feel my rights as a land owner in Massachusetts were violated due to the gross negligence of Kinder Morgan - Tennessee Gas Pipeline Company LLC (“Tennessee”). The background of this complaint is related to the lack of notification by Tennessee regarding the proposed construction of a natural gas compressor station as part of the Northeast Energy Direct Project (“Project”) in Dracut. As a land owner with property within one-half mile of proposed compressors or their enclosures pursuant to Section 157.6(d)(5) of the Federal Energy Regulatory Commission (“Commission”) regulations, 18 C.F.R. § 157.6(d)(5)(2015), I was never notified by Tennessee. Tennessee has made two filings to the

Commission as part of their certificate application for the Project. I was not notified as part of Tennessee's initial filing to the Commission on November 20, 2015 or as part of their updated landowner list filed December 21, 2015.

The resolution I seek is for Tennessee to be required to re-file their certificate for application with the Federal Energy Regulatory Commission due to the above gross negligence.

Docket No.: PF14-22-000

January 6, 2016

MOTION TO INTERVENE
OFFICE OF THE NEW YORK STATE ATTORNEY GENERAL

In response to a Notice of Application published in the Federal Register on December 11, 2015 (80 Fed. Reg. 76969) by the Federal Energy Regulatory Commission (FERC or Commission) and pursuant to the Natural Gas Act (NGA), the National Environmental Policy Act (NEPA), the Administrative Procedure Act (APA), and their implementing regulations, the Office of the New York State Attorney General (N.Y. Attorney General) hereby moves to intervene in this proceeding. Intervention by the N.Y. Attorney General would promote the public interest.

SUMMARY OF PROPOSAL AND PROCEDURAL HISTORY

Tennessee Gas Pipeline Company, LLC (Company) seeks a certificate of public convenience and necessity for permission to construct and operate a natural gas pipeline and related facilities including, but not limited to, compressor stations. According to the Company's application, if granted authorization, the Company will create a new interstate high-pressure transmission pipeline network, called the "Northeast Energy Direct" (the Project) that is designed to transport up to 2.2 billion cubic feet of natural gas per day from northeastern Pennsylvania through eastern New York State and into neighboring New England states. According to the notice, the Project includes two components: (1) the Supply Path Component, which is comprised of facilities from Troy, Pennsylvania, to Wright, New York, and (2) the Market Path Component, which is comprised of facilities from Wright, New York, to Dracut, Massachusetts. Approximately 150 miles of the proposed Project will run through New York State.

On November 20, 2015, the Company filed an application under Section 7(c) of the NGA and Part 157 of the Commission's Rules and Regulations requesting authorization to construct and operate the Project. FERC staff began a preliminary review of the proposed project in a "pre-filing process" (Docket No. PF14-22-000), which started on September 15, 2014, when the Company filed its request to initiate a NEPA pre-filing review of the Project pursuant to 18 C.F.R. § 157.21(b) of the Commission's regulations. On October 2, 2014, FERC staff approved the Company's request to utilize the pre-filing process. On June 30, 2015, FERC staff issued a Notice of Intent to Prepare an Environmental Impact Statement and solicited comments on environmental issues. FERC staff received numerous comments from citizens, municipalities, and federal and state agencies, including the U.S. Army Corps of Engineers, the U.S. Environmental Protection Agency, and the New York State Department of Environmental Conservation. During the pre-filing review phase, FERC staff did not release a draft environmental impact statement. As such, the public has not yet had an opportunity to review, analyze, and comment on FERC's environmental impact analysis.

On December 11, 2015, the Commission published its Notice of Application in the Federal Register. 80 Fed. Reg. 76969. Among other things, the notice stated that the Pre-Filing Process had ended and that the proceeding shall be conducted on a going-forward basis under Docket Number CP16-21-000. In its request for pre-filing review, the Company describes the Project as the construction of approximately 135 miles of new 30-inch diameter pipeline and related facilities beginning from Troy, Pennsylvania to points of interconnection with the existing Iroquois Gas Transmission Pipeline and the Tennessee Gas Pipeline in the Town of Wright in Schoharie County, New York, and the construction of 177 miles of new 36-inch diameter pipeline and related facilities from Wright, New York to Dracut, Massachusetts. In addition, the Project calls for the construction of eighteen compressor stations, and associated meter station valves, piping, and project facilities to facilitate the transportation of gas from Pennsylvania to through eastern New York, New Hampshire and ultimately Massachusetts.

REGULATORY FRAMEWORK

The National Environmental Policy Act, 42 U.S.C. §§ 4321-37, requires all federal agencies to examine environmental impacts that could be caused by their discretionary actions. As a federal agency, the FERC must comply with NEPA. *Calvert Cliffs Coordinating Comm. v. U.S. Atomic Energy Commission*, 449 F.2d 1109 (D.C. Cir. 1971); 18 C.F.R. Part 380. As made clear in the regulations promulgated by the President's

Council on Environmental Quality (CEQ), NEPA was designed to “provide a full and fair discussion of significant environmental impacts and shall inform decision makers and the public of the reasonable alternatives which would avoid or minimize adverse impacts or enhance the quality of the human environment.” 40 C.F.R. § 1502.1. NEPA directs all federal agencies, “to the fullest extent possible” to comply with this policy and, inter alia, to use a systematic and interdisciplinary approach in considering environmental issues, and, before taking any major federal action significantly affecting the quality of the human environment, to generate a detailed environmental impact statement. 42 U.S.C. § 4332(2)(A), (C) and (E). NEPA also requires a comparative analysis of the environmental consequences of the alternatives before the agency. 42 U.S.C. § 4332(2)(C)(iii); 40 C.F.R. § 1502.14(d).

An environmental impact statement under NEPA is intended to guarantee that the relevant information regarding the costs and benefits of federal action and its alternatives will be made available to the larger audience that may also play a role in both the decision-making process and the implementation of that decision. *Center for Biological Diversity v. U.S. Dept. of Interior*, 623 F.3d 633 (9th Cir. 2010), citing *Dep’t of Transp. v. Pub. Citizen*, 541 U.S. 752, 768 (2004). Publication of an environmental impact statement, both in draft and final form, also serves a larger informational role. It gives the public the assurance that the agency has indeed considered environmental concerns in its decision making process, and, perhaps more significantly, provides a springboard for public comment. See *Robertson v. Methow Valley Citizens Council*, 490 U.S. 332, 348-349 (1989). NEPA requires federal agencies to stop and objectively identify the environmental effects of their discretionary actions and consider alternative means to mitigate those effects – before taking any action that may affect the environment.

CEQ has promulgated regulations pursuant to NEPA (40 C.F.R. Parts 1500-1508), as has FERC (18 C.F.R. Part 380). Although FERC allows applicants to prepare an initial draft of the environmental review documents, the duty to comply with NEPA rests with the federal agency itself. Under FERC’s procedural regulations, any motion to intervene should state the movant’s interest in sufficient detail to demonstrate that (i) the movant’s right to participate is expressly conferred by statute or by FERC rule, order, or other action; (ii) the movant has or represents an interest which may be directly affected by the outcome of the proceeding; or (iii) the movant’s participation is in the public interest. 18 C.F.R. § 385.214(b)(2). Such motion must also state the movant’s position and its basis in fact and law. 18 C.F.R. § 385.214(b)(1). Persons seeking permission to intervene shall also state whether they seek a formal hearing on the application. 18 C.F.R. § 157.10(a)(1). Any person may also file a motion to intervene in a Commission proceeding dealing with environmental issues under 18 C.F.R. § 385.214. See 18 C.F.R. § 380.10(a)(1).

REASONS SUPPORTING INTERVENTION

In support of this timely motion to intervene, the N.Y. Attorney General submits the following:

1. The N.Y. Attorney General is the chief legal officer of the State of New York. The N.Y. Attorney General intervenes in various types of administrative and legal proceedings to advance the interests of the State, enforce federal and state environmental laws such as the National Environmental Policy Act, and to protect the public health, the environment, and the economic interests of New York citizens. The N.Y. Attorney General’s request for leave to intervene in this proceeding is in furtherance of these overall responsibilities and in the public interest.
2. The N.Y. Attorney General has experience with environmental review and energy laws (such as NEPA, the Energy Policy Act, the Energy Policy and Conservation Act, and the Clean Water Act) as well as climate change issues (such as methane emissions) and technical matters (such as cathodic protection of pipelines).
3. Approximately 150 miles of the proposed Project’s natural gas transmission pipeline would be located in New York State. If approved, the pipeline will traverse New York towns and counties and cross State-owned lands and water bodies, and will likely have environmental and economic consequences for the citizens of New York. The N.Y. Attorney General seeks to ensure that, if approved, the proposed pipeline is properly constructed, monitored, inspected, and maintained, that its ultimate route and operation avoids or minimizes adverse impacts to New York’s environmental resources. Among other things, the N.Y. Attorney General

seeks to ensure that FERC's review of the proposed project under NEPA and NGA objectively identifies and considers alternatives to the proposed Project (including the noaction alternative), squarely addresses the cumulative impacts of the Project, minimizes contested condemnation procedures against New York citizens, and allows for an orderly review of such actions before irreversible actions take place. The N.Y. Attorney General also seeks to ensure that FERC conducts a comprehensive review of long-term supply contracts related to the proposed Project as well as the public need for this and other related natural gas pipeline proposals.

4. Additionally, the N.Y. Attorney General seeks to ensure that FERC addresses the potential methane emissions from the project. Unless properly constructed, operated, maintained and monitored, natural gas pipelines and associated infrastructure can be a significant source of methane emissions, which, in turn, contributes to climate change and its attending economic costs, damage to physical infrastructure, disruption of natural ecosystems, and threats to public health within the State. Recently, the President of the United States acknowledged the need to ensure natural gas pipelines minimize the amount of methane they release as part of the federal government's goal to reduce methane emissions from the oil and gas sector by 40 - 45% from 2012 levels within the next 10 years.

5. Furthermore, the N.Y. Attorney General seeks to ensure that any permit conditions concerning the construction and operation of the proposed pipeline are binding and enforceable.

6. The interests that the N.Y. Attorney General seeks to protect by intervening in this proceeding are not represented by other parties to the proceeding; and there will be no prejudice to the existing parties that might result from permitting the intervention.

7. At this juncture, the N.Y. Attorney General neither opposes nor supports the Project, and makes this motion to gain party status and protect the State of New York's participation in the review process, including the ability to seek judicial review of any final decision on the underlying the application.

8. At this early juncture before the release of the proposed draft environmental impact statement, the N.Y. Attorney General does not now request a formal hearing on the application, but instead reserves the right to request a formal hearing later in the process as allowed by the Commission's rules and regulations.

CONTACT AND SERVICE INFORMATION FOR MOVANT

All communications and service of all pleadings, motions, or other documents in this proceeding should be directed to the following persons:

Siobhan Blank

State of New York
The Capitol
Albany, NY 12224

20160106-5323

I strongly object to the construction of the proposed pipeline for a number of reasons, certainly not the least of which is that it will cross directly across our property. The primary reason for this intervention filing is my objection to the transportation of fracked natural gas which contains chemicals that the pipeline company will not disclose and the related health problems these chemicals will cause.

I am opposed to the construction of this new pipeline. The pipes are currently within 100 feet of my house. I object to the potential damage to our personal water supply.

There are currently 2 smaller gas pipes running through our property but they are a much smaller diameter and the gas is transmitted under much lower pressure than the 30"-36" pipe at 1,460 PSI (pounds per square inch). I have great concerns that the larger high pressure pipes are a HIGH RISK SAFETY HAZARD.

For these reasons, I am interested in and would be affected by the Applicant's filing. I believe my interests cannot be adequately

represented and protected by any other party. Therefore the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

Craig & Patricia Cahill

To Whom It May Concern,

I respectfully request to be added to the list of Interveners in opposition to the proposed NED pipeline expansion project.

Kinder Morgan and TPP wish to expand the right of way that bisects property located at 884/872 Stone Rd, Windsor CT 06095. This will significantly impact me as it will reduce the value of my home at 782 Stone Rd. It will cause excess traffic using vehicles that exceed the posted load limit and has the potential to leak addition methane and other pollutants and to explode causing great harm to my property and family.

Michele Napolitano, Nashua, NH.

We have gone into all the reasons this pipeline is no benefit to New Hampshire health issues, no jobs from it no money to the state and as one of the people who already has gas heat and hot water in my home they will pass this cost of the pipeline to me and others so as a senior I don't need to pay higher bills. This company would not know the truth if it bit them on their bum they have never told the truth about anything. Their safety record is so bad look at California and what has been happening their since October and no end in sight for it to be fixed. Many towns in New Hampshire have wells I read of one family where their well was ruined and for a while the pipeline company provided water to them now they want to stop that do you have any idea what it would cost a home owner to have water brought to their home. How would they sell that home they would be ruined and they don't have town water can you live with yourself doing this to people. The people of New Hampshire deserve better than to let Kidner Morgan make money on the backs of innocent people. We are not getting the gas they will sell it outside the US. Once again we ask you to consider all sides of this matter. This does not benefit anyone but the gas company no way does it do anything for New Hampshire I am not sure anymore how to stress this to you. Do the right thing say NO PIPELINE. Thank you

Basis for Intervening:

I live in Ashfield, MA and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because as a member of the community I am concerned about the environmental risks involved, as well as about the potential impact of this project on the quality of the drinking water supply, and other health risks. I also enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.

Basis for Intervening:

This pipeline is a threat to Western Massachusetts land and the well being of every living thing near the pipeline route. It is also a threat to every living thing on this planet. It is 2015, temperatures have broken new records. We are in the midst of climate chaos, and a third world war, and we are still laying down pipelines to make things worse. Humanity is better than this. We have come too far to be destroyed by greedy corporations. This pipeline would invite in new waves of global warming. There are people dying and being pushed out of their countries right now because of climate change. We must not make it any worse for those populations.

New England will not accept this pipeline. No matter what you do, or what Kinder Morgan does, the NED Pipeline will not make it to the shore, and LNG will not be exported in large quantities from the Marcellus shale fields. That is because as a species we have drawn the line. We cannot accept any new fossil fuel infrastructure. We have a moral obligation, necessitated by the well being of the generations who will follow us, to keep fossil fuels in the ground and to build a new society and new ways of life. I am filing this motion to make sure FERC and Kinder Morgan know that we have already won. The people will not let this pipeline pass. It's up to you when to back down. Until then, we will organize and we will win.

Individual mwhussin@gmail.com

Basis for Intervening:

I live in Pelham, Massachusetts, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because :

As a self-employed citizen who depends on the economic health of the entire region I fear the region and thus my practice would feel the economic impacts of:

- reduced property values and the effect this would have on local tax bases, beyond any compensation offered by the pipeline company
- regional health consequences of pollutants associated with the operation of the pipeline
- tariffs proposed to force regional ratepayers to cover the costs of the pipeline
- depressed area economy that relies on the rural character of the region for tourist income
- possible increases in energy costs that could result from export natural gas, forcing local markets to compete on a global scale

I further object to any plans for the pipeline to go through any public lands protected by the state and vari-

ous municipalities, land paid for and used by citizens like me.

Further as a citizen concerned about the local as well as the global environment I seek to intervene because I object to expanding the delivery of non-renewable fossil fuels in the form of fracked natural gas that contributes to greenhouse gas and the resulting warming of the planet, a course that is inherently self destructive to our world.

20160106-5343

MOTION TO INTERVENE
IN DOCKET # CP16-21

Pursuant to FERC §385.214 (3) (R.214), I hereby move to be granted Intervener status, in compliance with the following subsections:

§(4)(b)(1) – I am a directly affected landowner opposed to the proposed Northeast Energy Direct Project. I live approximately 1/4 mile north of the proposed route for the pipeline.

§(4)(b)(2) - My position is that Kinder Morgan and its subsidiaries are misrepresenting the need and demand for natural gas in the Northeast, and rather are motivated by the opportunity to reap huge profit at the expense of landowners such as myself and utility users throughout Massachusetts.

I believe approval of the Kinder Morgan proposal will result in profound damage to the environment, economy, sense of community, agriculture, and aesthetics of this region. I am concerned about the potential decrease in the value of my property, associated increases in my utility bills from Eversource, adverse effects on my drilled fresh water well, and the negative impact on our town's scenic rural environment.

I also believe that promoting continued reliance on fossil fuels as an energy source will accelerate adverse climate effects associated with global warming and therefore pose a threat to humans, other species, and our planet. I think that by permitting the Kinder Morgan proposal FERC would be violating both the letter and the spirit of the Agreement recently entered into by the United States in the 2015 Paris Climate Conference.

NGSA Natural Gas Supply Association

April 15, 2015

Ms. Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street, N.E.
Washington, D.C. 20426

Re: Comment on Northern Access 2016 Project
National Fuel Gas Supply Corporation and Empire Pipeline, Inc.
Docket No. CP15-115-000

Dear Ms. Bose:

The Natural Gas Supply Association (NGSA), representing major integrated and independent producers and marketers of domestic natural gas, supports the pipeline industry in its efforts to build much-needed natural gas pipeline infrastructure. Our member companies supply trillions of cubic feet of natural gas each year to a growing number of power plants, local gas utilities, factories and other industrial users. Our commitment to our customers is why we are deeply invested in ensuring that there is adequate infrastructure in place for

them to transport their natural gas.

Fortunately, our nation has abundant natural gas resources that enable our industry to satisfy all of our customers' needs. In only a few years' time, the United States has become the biggest producer of natural gas in the world. Indeed, estimates of the gas resource base have more than tripled in the last decade.¹ And just since 2010, production has grown 20 percent, with government forecasts calling for production to reach a record-setting 72 billion cubic feet per day this year.²

Consumer demand for our commodity has been steadily growing since 2009, and for all the right reasons: it is abundant, American, burns clean and it is affordable. Access to abundant domestic natural gas has given U.S. industrial companies a competitive advantage over their global competition, leading to the resurgence of gas-intensive manufacturing in the United States and the creation of more jobs to construct and fill the resulting new and expanded industrial facilities.

At the same time, demand from the power sector has also increased, driven by natural gas's low carbon emissions, retirements of older coal-fired plants, and the comparatively low cost and small footprint of natural gas-fired power plants.³ In recent years, greater use of natural gas has produced significant reductions in U.S. carbon emissions because, over its lifecycle, natural gas emits only about half the carbon of other fossil fuels when combusted, whether to make electricity, forge steel or provide heat.⁴ Because of these advantages, along with its lack of sulfur dioxide (SO₂) or mercury, very little nitrogen oxide (NO_x) and no soot or volatile organic compounds, natural gas is poised to become an even more important part of states' energy portfolios as they seek cleaner energy alternatives in order to comply with the Environmental Protection Agency's proposed Clean Power Plan.

In fact, natural gas can help states meet their Clean Power Plan objectives in a reliable manner as greater levels of renewable forms of energy are included in their portfolios. We anticipate that the Clean Power Plan will likely bring more intermittent renewable energy sources into the generating mix, which could require more available natural gas capacity, particularly when the sun doesn't shine or the wind doesn't blow. Natural gas generating capacity is competitive, flexible and reliable, allowing it to play a fundamental role in ensuring that electricity is available for consumers whenever it is needed -- as long as the needed infrastructure is in place.

Adequate infrastructure enhances the resiliency of the energy delivery system, alleviates bottlenecks and provides market liquidity that leads to a more stable pricing environment.

The forecasted growth in demand illustrates the need for increased flexibility in our pipeline systems to meet the anticipated variation in demand from the power sector. This flexibility can be achieved through the addition of new pipeline capacity, such as the Northern Access 2016 Project. The power sector will benefit from a more resilient natural gas delivery system in times of system stress, such as severe weather events.

The natural gas industry is committed to environmental stewardship and has a track record of reducing methane emissions. Government data show that the industry successfully reduced its methane emissions by 14 percent while production quadrupled over the same 2008-2012 timeframe.⁵ Our industry is committed to further reductions.

Clearly, plentiful natural gas is good news for consumers however, consumers cannot benefit from this abundance of natural gas if infrastructure is not developed to connect supply with demand. Plentiful natural gas means lower household energy bills; lower overhead costs for businesses and lower costs for products as diverse as pantyhose and fertilizer. Of course, that's in addition to the enormous tax and revenue base generated by natural gas production, which directly employs more than 1.5 million people in the United States, and indirectly supports the jobs of millions more.⁶ Natural gas was one of the few industries that expanded during the recent recession, providing a rare bright light for job-seekers.⁷

Over the past decade, natural gas production has become increasingly diversified across the country bringing supply closer to the market area and end-users. Yet insufficient infrastructure can limit users' ability to tap into supplies that are close to their market areas. Natural gas producers are doing our part, making enormous investments in exploration and production of natural gas, while also financially committing to the pipeline

projects that provide the capacity needed to bring gas from supply areas to market hubs. But more is needed. The path ahead seems straightforward: in order for Americans to take full advantage of the benefits offered by abundant natural gas supplies, additional natural gas infrastructure must be in place to transport natural gas from the wellhead to consumers. Unnecessary delays in building needed pipelines and related facilities will only hurt the American businesses and households.

For these reasons, we encourage the Commission to give this project and all pipeline applications serious consideration to ensure that natural gas infrastructure is built that will allow us to continue to provide natural gas to our customers and to help meet the country's need for reliable and clean energy. Sincerely,

Dena E. Wiggins
President and CEO
Natural Gas Supply Association

NGSA represents major integrated and independent companies that produce and market approximately one-fourth of the natural gas used in the United States. Established in 1965, NGSA encourages the use of natural gas within a balanced national energy policy, and promotes the benefits of competitive markets, thus encouraging increased supply and the reliable and efficient delivery of natural gas to U.S. customers. www.ngsa.org

Basis for Intervening:

Having seen the story about what happened in Calif. I am afraid of that happening in New Hampshire the pipeline going so close to homes schools the compressor station in a small town. we are trying so hard to slow global warming why would we want to put so much carbon dioxide and methane in to the air we breath. what about all the health issues you know them all we have told you about them before. We will not benefit from the gas but we will be hurt by this pipeline. This company is not known for their safety record and now with financial problems they will find ways to cut corners to save money. Please help this state stay beautiful and healthy for all the residents of the state especially the children not to sound silly our children are our future. Please help us by saying no to Kinder Morgan and yes to New Hampshire. Thank you

Re:

Notice of Application for the NEXUS Project (FERC Nos. CP16-22-000 and PF15-10-000), the TEAL Project, (FERC Nos. CP16-23-000, PF15- 11-000, and PF14-22-000), and the operating lease filed by DTE Gas Company (FERC No. CP16-24-000). Multiple Counties in Michigan and Ohio.

Dear Secretary Bose:

This responds to your request for comments on DTE Gas Company's application for the Nexus Gas Transmission Project and Texas Eastern Appalachian Lease (TEAL) Projects. NEXUS Gas Transmission, LLC (NEXUS) and Texas Eastern Transmission, LP (Texas Eastern) plan to construct and operate approximately 256 miles of interstate natural gas transmission pipeline and associated facilities in Michigan and Ohio. The projects are separate, but connected, interstate natural gas transmission pipeline projects.

These comments are provided pursuant to the Endangered Species Act (ESA) (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.), the Fish and Wildlife Coordination Act (FWCA) (48 Stat. 401; 16 U.S.C. 661 et seq.), Clean Water Act (CWA) section 404(j) (as amended; 33 U.S.C. 1251 et seq.), The United States Fish and Wildlife Service Mitigation Policy (16 U.S.C. 742(a)- 754), Executive Order 11990 (E.O. 11990): Protection of Wetlands, the Bald and Golden Eagle Protection Act (BGEPA) (16 U.S.C. 668-668c), the Migratory Bird Treaty Act (MBTA) (16 U.S.C. 703-712), and Executive Order 13186 (E.O. 13186): Responsibilities of Federal Agencies to Protect Migratory Birds (January, 2001).

The U.S. Fish and Wildlife Service (Service) recommends that proposed developments avoid and minimize water quality impacts and impacts to high quality fish and wildlife habitat (e.g., forests, streams, wetlands). Additionally, natural buffers around streams and wetlands should be preserved to enhance beneficial functions. If streams or wetlands will be impacted, the Corps of Engineers should be contacted to determine whether a clean Water Act section 404 permit is required. Development in Michigan that would impact these wetlands may require a permit for which the Michigan Field Office may have review authority. In the evaluation of these permit applications, the Service may concur (with or without stipulations) or object to permit issuance, depending whether the proposed work may impact public trust fish and wildlife resources. The Service encourages the avoidance and minimization of impacts to wetlands to the maximum extent feasible. Best management practices should be used to minimize erosion, especially on slopes. All disturbed areas should be mulched and revegetated with native plant species. Prevention of non-native, invasive plant establishment is critical in maintaining high quality habitats.

On June 20, 2014, President Obama signed a Presidential Memorandum, "Creating a Federal Strategy to Promote the Health of Honey Bees and Other Pollinators," outlining an expedited agenda to address the devastating declines in honey bees and native pollinators, including the monarch butterfly. Recent research has showed dramatic declines in monarchs and their habitats leading conservation groups to petition the Service to list the species under ESA. Ensuring adequate and sustainable habitats that meet all their life history needs would be key to conserving the monarch and other pollinator species. The success of both initiatives requires immediate actions to replace and restore monarch and pollinator habitat on both public and private lands across the U.S. landscape. The Service recommends that revegetation of disturbed areas with native

plant species include species of nectar-producing plants and milkweed endemic to the area where the mix is applied. Consultation with state botanists is highly recommended.

Listed and Candidate Species Comments

Based on the information provided, the Service has determined that ten federally listed species and one proposed species are within the range of the proposed projects, and may be affected by the construction and operation of the proposed projects. In Ohio, these species are the endangered Indiana bat (*Myotis sodalis*), Kirtland's warbler (*Setophaga kirtlandii*), and rayed bean mussel (*Villosafabalis*), the threatened northern long-eared bat (*Myotis septentrionalis*) and eastern prairie fringed orchid (*Platanthera leucophaea*), and the proposed eastern massasauga rattlesnake (*Sistrurus catenatus*). In Michigan, these species include the endangered rayed bean mussel, northern riffleshell mussel (*Epioblasma torulosa rangiana*), the snuffbox mussel (*Epioblasma triquetra*), Mitchell Satyr butterfly (*Neonympha mitchellii mitchellii*), Powesheik skipperling (*Oarisma poweshiek*), Karner blue butterfly (*Lycaeides melissa samuelis*), and the Indiana bat, and the threatened Northern long-eared bat, Eastern prairie fringed orchid, and the proposed Eastern massasauga rattlesnake.

Indiana bat

All projects in Ohio and Michigan lie entirely within the range of the federally endangered Indiana bat. In Ohio, presence of the Indiana bat is assumed wherever suitable habitat occurs unless a presence/absence survey has been performed to document absence. Suitable summer habitat for Indiana bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ~3 inches diameter at breast height (dbh) that have any exfoliating bark, cracks, crevices, hollows and/or cavities), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Roost trees vary considerably in size, but those used by Indiana bat maternity colonies are typically greater than 9 inches dbh. Male Indiana bats have been observed roosting in trees as small as 3 inches dbh. In the winter, Indiana bats hibernate in caves and abandoned mines.

TRC Environmental Corporation (TRC, an environmental contractor to NEXUS) submitted a bat survey report to the Service on December 14, 2015. In that report, TRC documented the results of both desktop and field surveys for portals within the project area that could indicate the presence of potential Indiana bat hibernacula. No portals were identified during the course of the investigations, therefore no potential hibernacula for the Indiana bat are expected to be affected by the NEXUS project.

The NEXUS project within Carroll, Columbiana, and Stark Counties in Ohio will result in a small amount of forest clearing relative to the available habitat in the immediately surrounding area. If no caves or abandoned mines are present and tree removal is unavoidable, we recommend that clearing of trees ~3 inches dbh for the NEXUS project in Carroll, Columbiana, and Stark Counties occur only from October 1 through March 31. Following these seasonal tree clearing restrictions should ensure that any effects to Indiana bats are insignificant or discountable for the NEXUS project within the counties specified above.

Portions of the proposed NEXUS project in Ohio are in the vicinity of several confirmed records of Indiana bats in Erie, Medina, Wayne, and Summit Counties. In an October 9, 2014 letter, the Service's Columbus Ohio Field Office (COFO) provided detailed information on where the Ohio portion of the NEXUS project intersects Indiana bat records to TRC Solutions (TRC), consultant working on behalf of NEXUS and Texas Eastern. Wherever an Indiana bat record buffer intersects the proposed NEXUS project, we recommend avoiding tree removal and stream corridors, riparian areas, and upland woodlots which provide forage sites, to the maximum extent possible to avoid adversely affecting Indiana bats. Any unavoidable removal of trees ~3 inches dbh within Indiana bat record buffers should only be conducted between October 1 and March 31.

The NEXUS project area within Lorain, Sandusky, Wood, Lucas, and Fulton Counties in Ohio and within Erie, Medina, and Wayne Counties in Ohio outside of Indiana record buffers, contains suitable Indiana bat habitat. A summer Indiana bat presence/absence survey was performed within these areas in 2015. COFO received the report for this survey on December 14, 2015. No Indiana bats were detected during that survey demonstrating probable absence of Indiana bats in these portions of the project area. Tree clearing in these areas at any time of the year is unlikely to result in adverse impacts to Indiana bats. Negative summer surveys are valid for a minimum of two years. Therefore, no tree clearing should occur in these areas after March 31, 2018 without further coordination with COFO.

In written and verbal communication with the Service, NEXUS has committed to conduct all tree clearing within the winter clearing timeframe (October 1 through March 31). Because portal searches determined that no caves or abandoned mines will be affected by the NEXUS project and all unavoidable tree clearing is expected to occur within the winter clearing timeframe, the Service anticipates that all potential effects to Indiana bats will be insignificant and discountable for the NEXUS project.

The TEAL project also lies entirely within the range of the Indiana bat. In a January 21, 2015 letter to TRC, COFO recommended that suitable habitat be saved wherever possible and that if any caves or abandoned mines may be disturbed by the project, further coordination with COFO was requested to determine if spring/fall surveys are warranted. TRC responded to COFO's letter in an April 8, 2015 email stating that cave/mine portal searches were underway for the project and none had yet been identified. Additionally, in the April email, TRC committed to conducting all unavoidable tree removal between October 1 and March 31 to avoid adversely affecting the Indiana bat. If no cave/mine portals are found within the area affected by the TEAL project and all unavoidable tree clearing is conducted within the winter clearing timeframe (October 1 through March 31), the Service anticipates that all potential effects to Indiana bats will be insignificant and discountable for the TEAL project.

Northern long-eared bat

All projects in Ohio and Michigan lie within the range of the federally threatened northern long-eared bat (*Myotis septentrionalis*). In Ohio, presence of the northern long-eared bat is assumed wherever suitable habitat occurs unless a presence/absence survey has been performed to document absence. Suitable summer habitat for northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ~3 inches diameter at breast height (dbh) that have any exfoliating bark, cracks, crevices, hollows and/or cavities), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat. In the winter, northern long-eared bats hibernate in caves and abandoned mines.

TRC submitted a bat survey report to the Service on December 14, 2015. In that report, TRC documented the results of both desktop and field surveys for portals within the project area that could indicate the presence of potential northern long-eared bat hibernacula. No portals were identified during the course of the investigations, therefore no potential hibernacula for the northern long-eared bat will be affected by the NEXUS project.

The proposed NEXUS project is in the vicinity of several confirmed records of northern long-eared bats in Sandusky, Erie, Wayne, Medina, Summit, Stark, Columbiana, and Carroll Counties, Ohio. COFO provided detailed information on where the NEXUS project intersects northern long-eared bat records to TRC in an October 9, 2014 letter. Wherever a northern long-eared bat record buffer intersects the proposed NEXUS

project, we recommend avoiding tree removal including upland and lowland woodlots and tree lined corridors which provide forage sites, to the maximum extent possible to avoid adversely affecting northern long-eared bats.

A summer northern long-eared bat presence/absence survey was performed within the NEXUS project areas that fall outside northern long-eared bat record buffers areas in 2015. COFO received the survey on December 14, 2015. Four northern long-eared bats in Ohio were captured during the survey and three of them were successfully radio-tracked resulting in the identification of multiple roost trees. No northern long-eared bats were captured during TRC bat surveys in Michigan. There are, however, recent records within range of the NEXUS project in the Michigan Natural Features Inventory (MNFI) database.

In an October 26, 2015 letter to the Service, TRC committed to clearing trees for the NEXUS project between October 1 and March 31 within 1.5 miles of roost trees and 3 miles of the northern long-eared bat capture location for the bat that was unsuccessfully radio-tracked in Ohio (roost trees not located). In addition, TRC committed to clearing trees for the NEXUS project between October 1 and March 31 for all previously identified areas where northern long-eared bat records exist in Sandusky, Erie, Wayne, Medina, Summit, Stark, Columbiana, and Carroll Counties, Ohio.

Since portal searches determine that no caves or abandoned mines will be affected by the NEXUS project and if all unavoidable tree clearing within northern long-eared bat record buffers is conducted within the winter clearing timeframe (October 1 through March 31), the Service anticipates that all potential effects to northern long-eared bats will be insignificant and discountable for the NEXUS project.

The TEAL project also lies entirely within the range of the northern long-eared bat. In a January 21, 2015 letter to TRC, the Service recommended that suitable habitat be saved wherever possible and that if any caves or abandoned mines may be disturbed by the project, further coordination with COFO was requested to determine if spring/fall surveys are warranted. TRC responded to COFO's letter in an April 8, 2015 email stating that cave/mile portal searches were underway for the project and as yet, none had been identified within the project area. Additionally, in the April email, TRC committed to conducting all unavoidable tree removal for the TEAL project between October 1 and March 31 to avoid adversely affecting the northern long-eared bat. If the portal searches determine that no caves or abandoned mines will be affected by the TEAL project and all unavoidable tree clearing is conducted within the winter clearing timeframe, the Service anticipates that all potential effects to northern long-eared bats will be insignificant and discountable for the TEAL project.

No tree clearing on any portion of the NEXUS and TEAL projects area should occur until consultation under section 7 of the ESA, between the Service and the FERC, is completed.

Kirtland's warbler

The proposed NEXUS project lies within the range of the Kirtland's warbler, a federally listed endangered species. The Kirtland's warbler is a small blue-gray songbird with a bright yellow breast. This species migrates through Ohio in the spring and fall, traveling between its breeding grounds in Michigan, Wisconsin, and Ontario and its wintering grounds in the Bahamas. While migration occurs in a broad front across the entire state of Ohio, approximately half of all observations in Ohio have occurred within 3 miles of the shoreline of Lake Erie. During migration, individual birds usually forage in shrub/scrub or forested habitat and may stay in one area for a few days. If clearing of suitable habitat cannot be avoided, to preclude adverse effect to migrating Kirtland's warblers, clearing within 3 miles of the shoreline of Lake Erie should not occur from April 22nd - June 1st, or from August 15th - October 15th•

Freshwater Mussels

The proposed NEXUS project lies within the range of the rayed bean mussel, a federally listed endangered species. The rayed bean is known to occur in Swan Creek, which flows through Fulton and Lucas counties, Ohio. The NEXUS project proposes to cross Swan Creek in one location in Fulton County, Ohio. A mussel survey was performed at the crossing location in 2015 following the Service and Ohio Division of Wildlife's 2015 Ohio Mussel Survey Protocol. COFO received the survey report on November 20, 2015. No living or

fresh dead rayed bean were detected during the survey. Furthermore, the low diversity of mussel species and low density of mussels found during the survey indicates that the rayed bean is unlikely to occur at the crossing location. Therefore, the proposed NEXUS crossing location on Swan Creek in Fulton County is unlikely to have any effect on the rayed bean.

Rayed bean mussels are also known to occur in the Huron River and River Raisin in Michigan, with records higher in the watershed. TRC submitted a report of mussel surveys in Michigan at crossings that meet the Ohio Mussel Survey Protocol criteria. Horizontal directional drilling (HDD) has been proposed at the River Raisin where rayed bean were found during surveys, and also at the Huron River. Dry cuts and mussel relocations are proposed for other crossings where federally listed species were not found.

The northern riffleshell mussel has a historical record for Macon Creek, a tributary to the River Raisin in Michigan, as well as records of occurrence in the Huron River in Michigan. Additionally, snuffbox mussels (*Epioblasma triquetra*) are known to occur in the Huron River in Michigan. TRC submitted a report of mussel surveys in Michigan at crossings that meet the Ohio Mussel Survey Protocol criteria. Horizontal directional drilling (HDD) has been proposed at the River Raisin where rayed bean were found during surveys, and also at the Huron River. Dry cuts and mussel relocations are proposed for other crossings where federally listed species were not found. In Macon Creek no federally listed mussels were found during surveys at the crossing location.

Eastern Prairie Fringed Orchid

The proposed NEXUS project in Ohio and Michigan lies within the range of the eastern prairie fringed orchid, a federally listed threatened species. In an October 9, 2014 letter to TRC, COFO recommend that the portions of the project located in Wayne and Sandusky Counties, Ohio be examined to determine if suitable habitat for the orchid is present. A survey was conducted in 2015 and report received by COFO on December 14, 2015. No eastern prairie fringed orchids were detected during 2015 botanical surveys within suitable habitat for the species in Ohio or Michigan. Therefore, the proposed NEXUS project is unlikely to have any effect on the eastern prairie fringed orchid.

Eastern Massasauga Rattlesnake

The eastern massasauga rattlesnake is currently proposed for listing under the Endangered. Species Act (ESA). Critical habitat has not been proposed at this time. Pursuant to section 7(a)(4) of the ESA, Federal action agencies must confer with the Service if their proposed action is likely to jeopardize the continued existence of a species proposed for listing [50 CFR 402.10(a)]. Action agencies may also voluntarily confer with the Service if the proposed action may affect a proposed species.

The proposed NEXUS project in Michigan and within Hanover Township, Columbiana County and Townsend Township in Sandusky County, Ohio and the TEAL project in Columbiana County, Ohio, lie within the range of the eastern massasauga, a small, docile rattlesnake that is currently proposed to be listed as a federally threatened species.

In an October 26, 2015 letter to the Service, TRC provided notification that a desktop review of the NEXUS project area in Ohio found that no suitable habitat for the eastern massasauga would be affected by the project. If no habitat for the eastern massasauga will be affected by the project, the proposed NEXUS project in Ohio is unlikely to have any effect on the eastern massasauga.

Reported in an email dated October 20, 2015, TRC identified and evaluated ten areas along the project route in Michigan as potential habitat for Eastern massasauga rattlesnake. Two sites warranted presence/absence surveys for eastern massasauga. None were found during fall surveys in 2015. Additional surveys are planned by TRC in the spring of 2016. Potential effects of the project on eastern massasauga will be assessed once all surveys are complete.

In an April 8, 2015 email to COFO, TRC provided information regarding the TEAL project location in Columbiana County. Due to the lack of habitat for the eastern massasauga within the TEAL project area in Columbiana County, an eastern massasauga survey was deemed unnecessary by COFO for the TEAL proj-

ect. COFO notified TRC in an April 10, 2015 letter that an eastern massasauga survey for the TEAL project is not necessary. No effects to eastern massasaugas are anticipated for the TEAL project.

Listed, Proposed, and Candidate Species evaluation:

We do not anticipate adverse effects to any other federally endangered, threatened, proposed, or candidate species. Should the project design change, or during the term of this action, additional information on listed or proposed species or their critical habitat become available, or if new information reveals effects of the action that were not previously considered, consultation with the Service should be initiated to assess any potential impacts.

Other State-listed species

We recommend that the project be coordinated with the Ohio Division of Wildlife and the Michigan Department of Natural Resources due to the potential for the project to affect other state-listed species and/or state lands.

Bald and Golden Eagles

The NEXUS and TEAL projects lie within the range of the bald eagle (*Haliaeetus leucocephalus*). Bald eagles and their nests are protected under the MBTA, and are afforded additional legal protection under the BGEPA. Disturbance of eagles should be minimized and any resulting take must be permitted by the US Fish and Wildlife Service (Service). The National Bald Eagle Management Guidelines (<http://www.fws.gov/northeast/ecologicalservices/eaglenationalguide.html>) offer guidance on minimizing any disturbance that may be caused by project activities near eagle nests.

According to TRC's October 26, 2015 letter to the Service, an aerial survey for occupied bald eagle nests was performed for the NEXUS project. There were seven active nests located in the general vicinity of the project, six in Ohio and one in Michigan. None of the nests were within 660 feet of the proposed project route. Therefore, at this time, no impact to bald eagles is anticipated from the NEXUS project.

Please note that it is possible that new bald eagle nests could be built within or near the project area in the future. Therefore, we recommend that the project site and surrounding area be evaluated prior to clearing and construction to determine if any new eagle nests are present. In order to avoid take of bald eagles, we recommend that no tree clearing occur within 660 feet of a bald eagle nest or within any woodlot supporting a nest tree. Further, the Service requests that work within 660 feet of a nest or within the direct line-of-site of a nest be avoided from January 15 - July 31. This will prevent disturbance of the eagles from the egg-laying period until the young fledge, which encompasses their most vulnerable times.

In an April 8, 2015 email to COFO, TRC provided a habitat assessment for the bald eagle for the TEAL project. The assessment determined that habitat for the bald eagle is unlikely to be affected by the TEAL project. Therefore, a bald eagle nest survey was deemed unnecessary by COFO for the TEAL project. COFO notified TRC in an April 10, 2015 letter that a bald eagle nest survey for the TEAL project is not necessary. No effects to bald eagles are anticipated for the TEAL project.

Assessment of Risks to Migratory Birds

The MBTA implements protection of native migratory game and non-game birds with exceptions for the control of species that cause damage to agricultural or other interests. According to 50 CFR § 10.12, a migratory bird means any bird, whatever its origin and whether or not raised in captivity, which belongs to a species listed in the Service's regulations, or which is a mutation or a hybrid of any such species, including any part, nest, or egg of any such bird, or any product, whether or not manufactured, which consists, or is composed in whole or part, of any such bird or any part, nest, or egg thereof. In total, 836 bird species are protected by the MBTA, 58 of which are currently legally hunted as game birds. The MBTA prohibits the take of any migratory bird, part, nest, egg or product. Take, as defined in the MBTA, includes by any means or in any manner any attempt at hunting, pursuing, wounding, killing, possessing, or transporting any migratory bird, nest, egg, or part thereof.

The MBTA does not explicitly include provisions for permits to authorize incidental take of migratory

birds. While it is not possible to absolve individuals or agencies from either MBTA or BGEPA liability, the Service's Office of Law Enforcement focuses its resources on investigating and prosecuting those who take migratory birds without identifying and implementing reasonable and effective measures to avoid take. The Service will regard an agency's coordination and communication with the Service as appropriate means of identifying and implementing reasonable and effective measures to avoid the take of species protected under the MBTA and BGEPA.

E. O. 13186 was signed in January of 2001. Its purpose is to further the purposes of the migratory bird conventions, the MBTA, the BGEPA, the FWCA, the ESA, the National Environmental Policy Act (NEPA), and other pertinent statutes. As called for in the E.O., a Memorandum of Understanding (MOU) between FERC and FWS was signed in 2011. The purpose of the MOU focuses on avoiding or minimizing adverse impacts on migratory birds and strengthening migratory bird conservation through enhanced collaboration between the Commission and FWS. The MOU states that "It is in the interests of both Parties that potential impacts, direct and indirect, are thoroughly assessed and unavoidable impacts are appropriately mitigated." This supports the statement in the E.O. for each agency to ... : "restore and enhance the habitat of migratory birds, as practicable" (Section 3(e)(2)). The definition for mitigation in the MOU is taken from NEPA regulations which includes, "(e) compensating for the impact by replacing or providing substitute resources or environments" (40 CFR, Section 1508.20). Therefore, where impacts cannot be avoided or fully minimized, the Service will seek compensatory mitigation for removed habitat which was used by either migratory birds (under E.O. 13186 and the 2011 MOU between FERC and the Service) or by listed species (under ESA).

Potential exists for avian mortality from habitat destruction and alteration within the project boundaries. Site-specific factors that should be considered in project siting to avoid and minimize risks to birds include avian abundance; the quality, quantity and type of habitat; geographic location; type and extent of bird use (e.g. breeding, foraging, migrating, etc.); and landscape features. We recommend minimization of land and vegetation disturbance during project design and construction and that all new activities be constrained to previously disturbed areas wherever possible (e.g., road and utility line rights-of-way, agricultural fields, previously mined areas, etc.). We offer the following recommendations to avoid and minimize impacts to migratory birds within and around the project area:

1. Due to the difficulty in assessing the entire project site for all bird nests, we recommend that the clearing of natural or semi-natural habitats (e.g., forests, woodlots, reverting fields, fencerows, shrubby areas) be carried out between September 1 and March 15, which is outside the nesting season for most native bird species. Without undertaking specific analysis of breeding species and their respective nesting seasons on the project site, implementation of this seasonal restriction will avoid direct take of most breeding birds, their nests, and their young (i.e., eggs, hatchlings).
2. To conserve area-sensitive species, avoid fragmenting large, contiguous tracts of wildlife habitat, especially if habitat cannot be fully restored after construction. Maintain contiguous habitat corridors to facilitate dispersal. Where practicable, concentrate construction activities, infrastructure, and man-made structures (e.g., roads, parking lots, staging areas) on lands already altered or cultivated, and away from areas of intact and healthy native habitats. If not convenient, site construction activities and structures in fragmented or degraded habitats over relatively intact areas.
3. To reduce habitat fragmentation, co-locate roads, lay down areas, staging areas, and other infrastructure in or immediately adjacent to already-disturbed areas (e.g., existing roads, pipelines, agricultural fields). Where this is not possible, minimize roads and other infrastructure. To minimize habitat loss and fragmentation, cluster development features (e.g., lay down areas, staging areas, roads) where possible rather than distributing infrastructure broadly across the landscape ..

Conclusion

In conclusion, the current proposed alignment for the NEXUS and TEAL projects will potentially impact multiple species. Due to the presence of federally listed species in the vicinity of the project areas, consultation under section 7 of the ESA between the Service and FERC will be necessary for these projects.

It should be noted that the Service will only concur on a whole and complete project. It is important to note that “project” includes all project features, not just the portion of the project prompting the submittal of a permit application (e.g., FERC, or the Corps). For example, our review of this project would include not only the pipeline, but also the roads, compressor stations, and staging areas.

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline, L.L.C.)

Docket No. CP16-21-000

MOTION TO INTERVENE OF PORTLAND NATURAL GAS TRANSMISSION SYSTEM

Pursuant to Rule 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”), 18 C.F.R. § 385.214 (2012), Portland Natural Gas Transmission System (“PNGTS”) hereby submits this timely motion to intervene in the above-captioned proceeding. In support of its motion, PNGTS states the following:

The name and address of the persons upon whom service is to be made and to whom communications are to be addressed in this proceeding are as follows:

Richard D. Bralow
Legal Counsel
TransCanada US Pipelines
700 Louisiana, Suite 700
Houston, Texas 77002
Tel: (832) 320-5177
Fax: (832) 320-6177
richard_bralow@transcanada.com

Margaret Foulds
Administrative Analyst
Portland Natural Gas Transmission System
One Harbour Place, Suite 375
Portsmouth, NH 03801
Tel: (603) 559-5517
Fax: (603) 427-2807
margaret_foulds@transcanada.com

I.

Background

On November 20, 2015, under Sections 7(b) and 7(c) of the Natural Gas Act, as amended, and Part 157 of the regulations of the Commission, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) submitted an application for a certificate of public convenience and necessity and other related authorizations (the “Application”) to construct, install, modify, operate, and maintain certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut (such facilities are hereinafter sometimes referred to as the “NED Project”).

PNGTS is a high-pressure interstate natural gas pipeline that runs from Pittsburg, New Hampshire to Westbrook, Maine and then to Dracut, Massachusetts. PNGTS interconnects with Tennessee's pipeline system at Dracut and Haverhill, Massachusetts.

**II.
Motion for Intervention**

PNGTS submits that it has material interests in the instant proceeding that cannot be represented adequately by any other party. As stated above, PNGTS interconnects with Tennessee's pipeline system at Dracut and Haverhill, Massachusetts. The NED Project has the potential to affect the operation of these interconnects and other aspects of the PNGTS system. Further, the market areas of PNGTS and the NED Project overlap, and PNGTS is a direct competitor with Tennessee for services provided in the area. Each of these facts demonstrates that PNGTS has interests which may be directly affected by the outcome of the proceeding as contemplated by 18 C.F.R. § 385.214(b)(2)(ii).

Thus, PNGTS respectfully requests that the Commission grant its motion to intervene and allow it to participate in this proceeding with full rights of a party hereto.

WHEREFORE, for the foregoing reasons, PNGTS respectfully requests that it be permitted to intervene with full rights as a party in this proceeding.

Respectfully submitted,

PORTLAND NATURAL GAS
TRANSMISSION SYSTEM

Basis for Intervening:

I am a citizen of Massachusetts who is very concerned about the expansion of fossil fuel pipelines across the United States. In the spirit of the Paris Climate Talks, we must not expand our use of fossil fuels, even natural gas. Emphasis must be on conservation of energy and use of renewable non-carbon-based energy sources. Furthermore, I do not believe that these pipelines are safe and the risk of accidents is not insignificant. I strongly protest the request for Kinder-Morgan and other energy companies to build pipelines and expand the production and distribution of natural gas.

20160106-5368

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)

Docket No. CP16-21-000

MASSACHUSETTS DEPARTMENT OF CONSERVATION AND RECREATION
NOTICE OF INTERVENTION AND MOTION TO INTERVENE

Pursuant to 15 U.S.C. § 717N, and Rule 214 of the Federal Energy Regulatory Commission's ("FERC") Rules and Regulations, 18 C.F.R. 385.214, and the Notice of Application issued in the above-referenced docket, the Commonwealth of Massachusetts Department of Conservation and Recreation (the "DCR") files this Notice of Intervention and, in the alternative, moves to intervene in the above-captioned proceeding.

1. All pleadings, filings, orders, correspondence and other communications with respect to this proceeding and filing should be served on and addressed to:

Thomas J. LaRosa, Deputy General Counsel
Massachusetts Department of Conservation and Recreation
251 Causeway Street, Suite 600
Boston, MA 02114
(617) 626-4994
Thomas.LaRosa@state.ma.us

2. Notice of Intervention.

DCR is a state "water rights agency" within the meaning of 18 C.F.R. 385.214(a)(2). Under state law, it is DCR's "duty" to "exercise general care and oversight of the natural resources of the commonwealth and its adjacent waters; to make investigations and to carry on research relative thereto; and to propose and carry out measures for the protection, conservation, control, use, increase, and development thereof." MASS. GEN. L. ch.21, § 1. The "natural resources" of the Commonwealth of Massachusetts include, among other things, its "...lakes, ponds, streams, coastal, underground and surface waters." Id. DCR's two statutory divisions (state parks and recreation, and water supply protection) have general oversight or control over the waterways, great ponds and tidelands of the Commonwealth and the state's watershed system and rights in water sources. Id.; MASS. GEN. L. ch. 91, § 2; MASS. GEN. L. ch. 92, § 33; MASS. GEN. L. ch. 92A1/2, § 2. DCR has the administrative responsibility on behalf of the Commonwealth of Massachusetts to implement the Watershed Protection and Flood Prevention Act, 16 U.S.C. 1001, et seq., and direct authority to take or otherwise acquire land for protection and safe-guarding of drinking water supplies. MASS. GEN. L. ch. 21, § 9; MASS. GEN. L. ch. 92A1/2, § 17. DCR also administers programs for the "preservation and restoration of the publicly-owned lakes and great ponds of the commonwealth" and for "aquatic nuisance control." MASS. GEN. L. ch. 21, §§ 37A-37D. DCR owns and operates a number of flood control systems and dams, and also regulates the registration and safety inspection requirements for publicly- and privately-owned dams that impound or divert water. MASS. GEN. L. ch. 253, §§ 44-48B. Accordingly, as a state water rights agency, DCR may intervene and become a party by filing a notice under 18 C.F.R. 385.214(a)(2) and hereby does so in this matter.

3. Motion to Intervene.

- A. To the extent any issue may arise with DCR's status as a state "water rights agency" under 18 C.F.R. 385.214(a)(2), DCR moves in the alternative to intervene as a party consistent with 18 C.F.R. 385.214(a)(3).
- B. As addressed in more detail in above-referenced paragraph 2, DCR exercises general care and oversight of the natural resources of the Commonwealth of Massachusetts and its adjacent waters, carries out measures for the protection, conservation, control, use, increase, and development of these natural resources, which includes its lakes, ponds, streams, coastal, underground and surface waters, minerals and natural deposits. DCR's two statutory divisions collectively have general oversight over the waterways, great ponds and tidelands of the Commonwealth and the state's watershed system and rights in water sources. DCR is additionally charged under state law to implement a number of regulatory and administrative programs pertaining to the state's rights in water resources, including programs to preserve and restore publicly-owned lakes and great ponds, to encourage the public's use of these resources, to suppress and control aquatic nuisances, and for dam safety. DCR is also directed under state law to administer an array of other water-based and water rights programs for the benefit of the Commonwealth, including but not limited to responsibility under G.L. c. 21, § 9, on behalf of the state under the Federal Watershed Protection and Flood Control Prevention Act, 16 U.S.C. 1001, et seq. DCR is charged with acquiring interests in land under G.L. c. 21, § 9A, to "protect and conserve water impoundment sites and land adjacent to such sites which it deems necessary to meet the water resource needs of the commonwealth for flood control, low flow augmentation, and municipal water supply," as well as under G.L. c. 92A1/2, § 17, "relative to the construction, maintenance and operation of the watershed system" and assuring "the availability of pure water for future generations." MASS. GEN. L. ch. 92A1/2, §§ 2 and 17.
- C. As a landowner, DCR has interests that will be directly affected by the outcome of this proceeding. Tennessee Gas Pipeline Company, LLC ("Tennessee") proposes a route for its project that will cross, alter and impact numerous acres of protected conservation and recreation land that DCR holds and manages for benefit and utilization of the public. Specifically, the proposed project will cross DCR's Pittsfield, Northfield, Willard Brook and Harold Parker State Forests, the Appalachian National Scenic Trail, the Ashuwillticook Rail Trail, and a DCR-held conservation restriction upon property along the Deerfield River adjacent to South River State Forest. Tennessee will require property interests upon the involved DCR lands to construct, operate and maintain its proposed project. All of these state-owned lands are subject to the protection of Article 97 of the Amendments to the Massachusetts Constitution.¹ These natural, open and scenic areas encompass critical resource areas, including but not limited to priority habitat for rare species, BioMap2 core habitats and critical natural landscapes, streams, wetlands and buffer zones, forest cores, and cultural and archeological sites. One property has been designated by DCR as a forest reserve, and three tracts are within "Key Sites" – areas identified by the Massachusetts Department of Fish and Game within the most important 10% of Biomap2 for biodiversity conservation. In addition to their high conservation value, the properties include numerous trail and recreational assets providing the public with opportunities for a variety of activities including hiking, canoeing, kayaking, snowmobiling, cross-country skiing, fishing, and hunting.

DCR is concerned about impacts from the project during and after construction that may adversely affect stream and riverfront areas, coldwater fisheries, and trees, plants and wildlife in connection with cutting, land disturbance and potential erosion. Invasive plant species are also an issue within and along utility corridors, and DCR is concerned about further disturbance and the potential spread of invasive plants. Additionally, the project raises issues associated with increased illegal off-highway vehicle use (OHV), as OHVs are a significant management challenge along utility corridors on DCR property. 5

As a directly-affected landowner with significant property interests at issue, and as a state environ-

mental agency with conservation, recreation, and water rights and resource interests at stake, DCR has a distinct, direct interest in the proceedings associated with Tennessee's proposed project, particularly as they relate to the issues in connection with the temporary construction and permanent impacts to the above-referenced diverse resources and values on DCR's properties in Massachusetts.

- D. To the extent any issue may arise with DCR's status as "water rights agency" under 18 C.F.R. 385.214(a)(2), DCR respectfully requests the Commission allow DCR to intervene in this Certificate Proceeding with full rights attendant to that status, with respect to Tennessee's application filed on November 20, 2015. DCR asserts that its participation in this proceeding is in the public interest as required by FERC Rule 214, as codified at 18 C.F.R. 385.214(b)(iii). DCR further asserts that the interests it represents, as both a conservation, recreation and state water rights agency and a significant landowner as described above, are unique and cannot be represented adequately by any other party. DCR has participated in the pre-filing process and plans to file separate detailed comments throughout the environmental review of the application.

Respectfully submitted,
MASSACHUSETTS DEPARTMENT OF
CONSERVATION AND RECREATION
Thomas J. LaRosa, Esq.
Deputy General Counsel

January 6, 2016

Footnote:

¹ Article 97 of the Amendments to the State Constitution states:

The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historic, and esthetic qualities of their environment; and the protection of the people in their right to the conservation, development and utilization of the agricultural, mineral, forest, water, air and other natural resources is hereby declared to be a public purpose.

The general court shall have the power to enact legislation necessary or expedient to protect such rights.

In the furtherance of the foregoing powers, the general court shall have the power to provide for the taking, upon payment of just compensation therefor, or for the acquisition by purchase or otherwise, of lands and easements or such other interests therein as may be deemed necessary to accomplish these purposes.

Lands and easements taken or acquired for such purposes shall not be used for other purposes or otherwise disposed of except by laws enacted by a two thirds vote, taken by yeas and nays, of each branch of the general court.

CERTIFICATE OF SERVICE

I hereby certify that I have this day served a copy of the foregoing document upon the participants, to date, in this proceeding in accordance with the requirements of Rule 2010 of the Commission's Rules of Practice and Procedure.

Dated this 6th day of January 2016.

Thomas J. LaRosa, Esq.
Attorney for
Massachusetts Department of
Conservation and Recreation

Filing Party/Contacts:

pipeline or its operation. The pumping station in Riders Mills is about 2 miles from my home and it seems to be well maintained, does not make any noise that I can hear, and I have never smelled any gas. Based on that record, I believe that this proposed pipeline will operate in a similar manner and cause no problems.

2) During the past 60 years the local environment has not been changed in any significant way. The pipeline row is kept clear and you can see the scar, but I do not find that to be a problem. In this area, real estate values have risen substantially (by a factor of more than 10) during this time period. Based on that record, I believe that this proposed pipeline will have a similar impact.

3). The opposition to this proposed pipeline seems to be aimed at stopping the hydraulic fracturing of natural gas (fracking) in the Marcellus shale and reducing our carbon footprint. I believe that reducing our carbon footprint is a good thing. However, stopping this pipeline construction in order to accomplish that goal is just dumb. When the gas in the Marcellus shale is depleted, couldn't this proposed pipeline be modified and used to transmit a non carbon based gas like hydrogen? The pipeline is the safest way to transport gas.

Thank you for your considerations!

James H Temple

PE- retired

20160107-5001

lauren paul, sandisfield, MA.

I am completely against Kinder Morgan's proposal to dig up Mass. and create a wildlife and landscape destroying waste of resources. We don't need more gas here. We/you should be concentrating our resources to find renewable sources of clean energy. Spectacle Pond, for instance is a treasure to our community that is threatened by the proposed pipeline. Many people have already been hurt by the previous pipelines and this unnecessary and greedy plan is solely for the benefit of corporate powers and not at all for the people or wildlife benefit of Mass. Please see that this plan does NOT go through.

Thank you for considering the long term health of our land, our home, and not to cave to the power of a money hungry corporation.

Thanks you for seeing clearly,

Passionately,

Lauren Paul

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”).

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 C.F.R. § 214(b)(2)(ii) include:

As a Contingent Property Owner: I am an estate beneficiary of the owner of the property located at 529 Main Street, West Townsend, Massachusetts. The proposed pipeline will cut directly across this property and includes plans to use several acres of the property for construction, storage, and a staging area. This acreage produces three crops of hay per year. The proposed removal of all top-soil will not only render these fields unable to produce hay, but the Company plans to construct and operate a work-site and Valve Station in the field. The extremely close proximity to proposed construction would make the property unlivable during construction. One of the specific functions of these valve stations is to release gas into the air. This will negatively impact upon the health of any resident at the property and reduce the value of the land. The release of dangerous gases, the lights, sounds, and smells after construction will greatly diminish the usability and value of the property.

As a Consumer: My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), the Company is proposing to build a pipeline to meet capacity requirements which do not exist and will never materialize and which will in all likelihood be used primarily to export liquid petroleum. This competing demand for our limited energy resources will likely drive the domestic cost of energy upward. This will be compounded by the likelihood that this massive proposed overbuild will result in unutilized capacity by New England utility companies which will pass the cost of this unused capacity to local rate payers.

As a Massachusetts property owner and taxpayer: I object to the proposed Pipeline because it will destroy land which has been set aside as a land trust and protected by Article 97 of the Articles of Amendment to the Massachusetts State Constitution. FERC does not have the authority to violate the Massachusetts Constitution nor does FERC have the power or authority to grant the Company the right to violate the Massachusetts Constitution. FERC should set aside the pipeline application by the Company until such time as the Massachusetts Legislature has voted to approve release of all impacted areas under land trust for use by Kinder Morgan.

As an ecologically conscientious citizen: The proposed pipeline will destroy protected wetlands, breeding grounds for endangered wildlife, and destroy vast acres of state parks. Many sections of the pipeline, including the valve station they want to build, are in flood plain where there are deep floods of several feet and massive ice-dams which make any pipeline or valve station extremely susceptible to damage and ecological catastrophe.

WHEREFORE, for the foregoing reasons, I respectfully request that my Motion to Intervene be granted.

Respectfully submitted,

Edward C. Dow, Jr.

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	nm6n@aol.com	

Basis for Intervening:

My family has lived in this 1860 farmhouse for over 50 years. It took my husband and me 3 years to find the perfect town and house to raise our children in. We have been adding to and remodeling over the intervening years and just prior to hearing about your pipeline coming through the property it had been contracted for a \$100,00.00 remodel, addition and new roof. This is now complete, but even if I wanted to sell my home it isn't worth anything because of your pipeline. Two years after we moved in the Vermont Yankee Atomic power plant took an acre of our land by eminent domain. Now all these years later the proposed NED pipeline will take the remaining property and my home.

It is my understanding that the pipeline cannot be within 50 feet of the electrical lines. We have a glow all the time from emissions and the hum can be heard most of the time. DO NOT TELL ME THAT SCENARIO IS A SAFE PLACE TO PUT A GAS PIPE LINE! It's a disaster waiting to happen.

We have been organically growing apple and pear trees, blueberry bushes and strawberries all these years, as well as a small vegetable garden. Not only will all this disappear but the wild life found in and around my property will be displaced or destroyed. Our back yard is the stomping grounds for bear, moose, deer, coyote, wolf, bobcat, skunk, possum, porcupine, groundhog, raccoon as well as other small animals and birds not to mention all the flora found in the surrounding fields and woods.

This is just a few acres we are talking about here, not even going with my neighbors and their properties. The Granite state is called that for a reason. We are all GRANITE. Blasting is the only way to go which in turn will create other problems in the neighborhood. Cellars, wells, structures will all be harmed. By blasting, or digging, the water table will be disturbed which in turn will ruin the wells. The effects might not show up for a number of years, BUT THEY WILL. You cannot do this to the land without upsetting the water table. I know this from just having cut down a few trees, not the thousands that you will be destroying or blasting out of the way. The Granite State is also very prone to earth quakes and you will be adding to this unstable land. Granite is prone to Radon and this will also be released as well as all the other carcinogens. New Hampshire has one of the highest rates of breast cancer in the states. Your NED proposal will have a high impact in creating more health problems.

Please do not take my home by eminent domain or ruin my neighborhood.

Basis for Intervening:

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of

Tennessee Gas Pipeline Company, L.L.C. Northeast Energy Direct Project

Docket No. CP16-21-000

MOTION TO INTERVENE AND PROTEST

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("FERC") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Town of Temple, New Hampshire ("Town") hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Town opposes the construction of the natural gas pipeline and other facilities known as the Northeast Energy Direct project ("Project") due to the adverse impacts that will be sustained by the Town, and therefore seeks party status to protest the Project and fully protect the Town's interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. The Town is committed to enhancing and protecting the quality of life of all its residents, workers, and businesses, and is gravely concerned for those who live, work, and recreate near the proposed pipeline route and the compressor station. There are substantial and real environmental, economic, and health threats to the Town arising from the construction and operation of the pipeline within the municipality. It is unacceptable that we may be coerced into the industrialization of our landscape and the degradation of our scenic, historic, and cultural resources for a Project that will never benefit us.
2. Several miles of the pipeline will be located immediately adjacent to our Town border and a proposed 41,000 horse power compressor station would be immediately adjacent to our Town line and within a quarter mile of our Elementary School and emergency shelter. The Town and its residents will be directly affected by the construction and operation of the pipeline. Temple has concerns as to construction-related impacts on the safety and convenience of residents and business, and as to the impacts of the completed pipeline and compressor station on public health and safety.
3. The proposed location of the pipeline and compressor station is intrusive, and threatens to disrupt the rural tranquility our residents enjoy. Several properties in Temple are slated to be taken by eminent domain to serve as construction staging sites. Additionally, construction will impede Town roadways and cause traffic and transportation disruptions along with related interruptions of public services including mutual aid agreements with neighboring towns.
4. There are also dozens of Temple homes in close proximity to the proposed pipeline and compressor station and these residents are deeply worried about the reduction in value of their homes, and the difficulties they may encounter in refinancing and in obtaining homeowner's insurance for their properties. Faced also with the looming threat of the forcible taking of their property to facilitate the construction of the Project, these citizens are uniquely harmed by the Project and the Town is obligated to defend them from encroachment by the pipeline. Moreover, the Project threatens public safety by placing fire and explosion hazards in close proximity to our Elementary School and residential areas, and subjects the Town and its residents to an ongoing fear of such catastrophic incidents. The Town's emergency response systems will also be burdened by these pipeline failures. Like neighboring towns, Temple has a small volunteer fire department.
5. The Project specifically contemplates building a compressor station immediately adjacent to the Town's southern border that would negatively affect the quality of life for all residents of Temple. In addition to producing harmful toxic emissions and atmospheric pollution, the compressor station will burden our residents with constant noise pollution that will be unbearable and damaging during blowdowns. Communities should not have to endure the inherent risks associated with compressor stations.
6. Temple is responsible for the protection of both its natural environment and the health and welfare of its residents, and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project. Accordingly, Temple has a substantial interest in the outcome of this

proceeding. Moreover, given the Town's expertise and familiarity with the locale of the proposed pipeline and compressor station, and the proposed alternative site locations, its participation in the above-captioned proceeding will significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual(s) should be included on the service list for this docket, and all communications should be sent to:

Gail Cromwell
Chairman
Town of Temple Board of Selectmen
PO Box 191
Temple, NH 03084
603-878-2536
templenhboardofselectmen@gmail.com

III. CONCLUSION

WHEREFORE, the Town of Temple respectfully requests that it be permitted to intervene in this proceeding with full rights to participate in all further proceedings.

Respectfully submitted,

Gail Cromwell
Chairman
Town of Temple Board of Selectmen
PO Box 191
Temple, NH 03084

20160107-5013

Submission Description: (doc-less) Motion to Intervene of John/Constance Kieley under CP16-21-000.

Submission Date: 1/6/2016 6:18:57 PM Filed Date: 1/7/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	cckieley2847@gmail.com	

Basis for Intervening:

1. We are elderly residents of Temple NH and live in close proximity to the proposed New Ipswich NH compressor station. The hundreds of thousands of tons of toxic emissions from the operation of this compressor station have been proven to degrade our health and longevity.
2. We came to Temple for its serenity. The noise emanating from the compressor station particularly the blowdowns would eliminate the very reason we came here.
3. Temple's elementary school is a quarter mile from the site of the compressor station. Given the health implications to our children, this school would have to be abandoned and rebuilt in another location placing a severe financial burden on our town and us as individual taxpayers.
4. This school also serves as our town's emergency shelter which unfortunately we have had to use. The

close proximity to the compressor station would also require that we build another emergency shelter which also would place a severe financial burden on us.

5.Small NH towns are not equipped to deal with the calamities that natural gas pipelines bring. To protect us, Temple would need to invest large sums in additional safety resources which we cannot afford.

6.The proposed site of the pipeline and compressor station is heavily forested. The number one risk that our town has (as documented in our Federal Hazard Mitigation Plan and Emergency Management Plan) is forest fire. If a fire was ignited by even a small incident related to the pipeline or compressor station we would likely lose our house and in fact our entire property.

20160107-5015

UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION

In the Matter of)	Docket No. CP16-21-000
Tennessee Gas Pipeline Company, L.L.C.)	
Northeast Energy Direct Project)	

MOTION TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, the Town of Troy, New Hampshire hereby submits this timely motion to intervene and file comments in the above-captioned proceeding. The Town has major concerns regarding construction of a natural gas transmission pipeline and other facilities known as the Northeast Energy Direct project ("Project") due to the adverse impacts that will be sustained by the Town, and therefore seeks Party status to protest the proposed pipeline, and fully protect the Town's interests.

I. IDENTITY AND INTERESTS OF PETITIONER

1. The Town is committed to enhancing and protecting the quality of life of all its residents, workers, and businesses, and is gravely concerned for those who live, work, and recreate near the proposed pipeline route. There are substantial and real environmental, economic, safety, and health threats to the Town arising from the construction and operation of the pipeline within the municipality. It is unacceptable that we may be coerced into the industrialization of our landscape and the degradation of our scenic, historic, and cultural resources-for a Project not even intended to benefit us, or, other New Hampshire residents with a majority still designated for foreign export with an expected state construction tariff.
2. The proposed pipeline will run through 1.6 miles within the Town and within the right of way of pub-

lic streets and on other property owned by the Town. It will cross conservation lands, particularly Rhododendron State Park, designated a National Natural Landmark in 1982 and is New Hampshire's only designated botanical park. The Kinder Morgan pipeline plan would destroy valuable ecosystems in Rhododendron State Park, such as a designated marshswamp-shrub ecosystem. It is a symbol of our commitment to preserve New Hampshire's natural heritage for generations to come. In it is a 16 acre stand of native Rhododendrons that are several centuries old. The summit of Little Monadnock Mountain is in the center of the park and the Metacomet -Monadnock Trail passes through the park as well.

3. While much of the proposed pipeline route follows existing utility corridors, the trade-off is the expected rural impact on various species, their habitats and ecologically-sensitive areas. Also at risk are sensitive water protection areas including drinking, recreation, vegetation, wetland and habitat water concerns including Scott Pond Watershed, Rockwood Pond, Bowker Brook, Nester Brook and Rockwood Brook. In the event of a pipeline event or construction mishap, residential drinking water wells and the town water supply could be jeopardized.
4. The pipeline will cross ecologically sensitive land, vegetation and species' habitats and migration patterns. Hemlock-Hardwood-Pine Forests are found along Rockwood Brook and are considered critical wildlife habitats, according to the W AP (Wildlife Action Plan). These forests include important wildlife such as the American woodcock and state threatened bald eagle. Vernal pools are listed in the W AP (Wildlife Action Plan) as a critical habitat. Several vernal pools exist along the utility corridor in Troy. They are critical for long-term survival of many obligate species such as the state-endangered Marbled Salamander. The New England Cottontail (endangered) can also be found using this habitat for feeding and/or cover from predation. Other species and vegetation considered at risk in Troy if the pipeline is built include: Ringed Boghaunter dragonfly (state-endangered), Eastern Smooth Green snake (a species of least concern but increasing), Wood Turtle, (a species of special concern in NH), Blandings Turtle (endangered), Eastern Hognose snake (endangered), Northern Long-eared Bat (endangered), Marbled Salamander (endangered), Jefferson Salamander (species of special concern), Veery, Purple Finch, Eastern Towhee, and Ruffed Grouse are birds of greatest conservation concern and have been observed in Troy), Bur Sedge (*carexsparganioides*) is state endangered, and Goodenough's sedge is state threatened.
5. The proposed location of the pipeline is intrusive, and threatens to disrupt the rural tranquility our residents enjoy. Also the pipeline will intrude upon property values in an economically-depressed town already paying the state's second highest property tax rate. It has been empirically demonstrated in similar rural areas around the country that a pipeline depresses property values anywhere from 5-30 percent, along with affecting home insurance rates and coverage protection.
6. Additionally, construction will impede Town roadways and cause traffic and transportation disruptions along with related interruptions of public services, State Route 12, State Route 119, Rockwood Pond Road, Bowkerville Road, South Street and Main Street.
7. There are 11 Impacted land and homeowners, including one historical farm-residence that is over 200-years-old and still has numerous original elements such as three interior walk-in fireplaces with bee hive ovens, a hidden "Indian Room," shadow closets and tombstone paneling. This property owner is currently seeking designation by the State and National Registers of Historic places through the New Hampshire Division of Historic Resources. There are nearly 20 affected land and homeowners within the 1,000- foot incineration zone if a pipeline explosion or fire occurs. These residents are deeply worried about the reduction in value of their homes, and the difficulties they may encounter in refinancing and in obtaining homeowner's insurance for their properties. Faced also with the looming threat of the forcible taking of their property to facilitate the construction of the Project, these citizens are uniquely harmed by the Project and the Town is obligated to defend them from encroachment by the pipeline. The Town's tax base will be eroded with a concurrent drop in house and land values for properties within 1,000 feet of the proposed pipeline. Moreover, the

Project threatens public safety by placing fire and explosion hazards in close proximity to residential areas, and subjects the Town and its residents to an ongoing fear of such catastrophic incidents. The Town's emergency response systems will also be burdened by these pipeline failures. Troy's Emergency response teams, both Fire and Ambulance are 100 percent volunteer, and have no training or equipment capable of responding to a pipeline emergency. The plans for the pipeline do not include full access for emergency response vehicles; there are no roads or fireponds.

8. Of major concern is the U.s. EPA Troy Mills Superfund Site, an environmentally sensitive area that needs to be protected from nearby construction. The proposed pipeline route is within 110 feet of the restrictive covenants surrounding the site and the site responsibility is federal (EPA). Drilling, blasting, or digging could interfere with ground water flow in which a continuation of contaminates from the site in groundwater could be impacted. There is a network of sensitive monitoring wells that could be impacted from construction nearby and interfere with the process of monitored natural attenuation. The potential for pipeline leaks of liquid natural gas near the superfund site presents risks that are hard to predict or quantify. Buried waste carpet and fabric scraps in the solid waste landfill could ignite and burn, emitting toxic fumes that would create an extremely hazardous environment for firefighters and nearby residents.
9. The Town has palustrine unconsolidated wetland systems that would be impacted by the pipeline construction. A lot of the utility corridor in Troy is made up of ledge/bedrock. Blasting bedrock can release arsenic into the water resources. The largest contiguous aquifer in Troy is located along the South branch of the Ashuelot River and Rockwood Brook. It is a stratified drift aquifer that is an excellent source of drinking water for the Town. Nester Brook and Rockwood Brook cross the utility corridor in Troy. Any kind of industrial development near a stream/brook is a major threat to surface water quality. Rockwood Brook is part of the Middle Ashuelot River Watershed and flows into Sand Dam Pond. Sand Darn Pond is protected by the Shore land Protection Act (RSA 483-B) NH DES.
10. As of January 4, 2016, Kinder Morgan is now proposing two possible compressor stations to expedite gas movement for export that flank Troy to its east and west, in Winchester, N.H. and New Ipswich, N.H. In addition to producing harmful toxic emissions and atmospheric pollution, two compressor stations put our residents at environmental risk, particularly during blowdowns and their resultant chemical releases. Communities should not have to endure the inherent risks associated with compressor stations.
11. The Town is responsible for the protection of both its natural environment and the health and welfare of its residents, and would like to ensure that the aforementioned local concerns are adequately addressed in the environmental review of the Project. Accordingly, the Town has a substantial interest in the outcome of this proceeding. Moreover, given the Town's expertise and familiarity with the locale of the proposed pipeline, and the proposed alternative site locations, its participation in the above-captioned proceeding will significantly benefit the Commission.

II. COMMUNICATIONS AND CORRESPONDENCE

The following individual should be included on the service list for this docket, and all communications should be sent to:

20160107-5019

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

**INITIAL COMMENTS OF
THE TRUSTEES OF RESERVATIONS
AND
REQUEST FOR SITE VISIT AND COMMUNITY MEETING**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission (“Commission”) Rules of Practice and Procedure, 18 C.F.R. §§ 385.212 and 385.214, The Trustees of Reservations (“TTOR or Trustees”) timely moved to intervene in the abovementioned proceeding, and no opposition was filed to TTOR’s timely motion to intervene within 15 days after it was filed. As such, TTOR is a party in the above-captioned proceeding and herewith files its initial comments and request for a site visit and community meeting.

Initial Comments

With regard to the proposed Northeast Energy Direct Pipeline Project (the “NED Project”), Tennessee Gas Pipeline Company, L.L.C.’s (“Tennessee”), is proposing to locate a natural gas compressor station in Windsor, Massachusetts (“Market Path Mid Station 2”), adjacent to the Trustees’ Notchview Reservation (the “Reservation”). By letter dated December 8, 2015, Eric J. Tomasi, Environmental Project Manager, wrote on behalf of the Commission to J. Curtis Moffat, Deputy General Counsel and Vice President of Tennessee, asking Tennessee to identify and consider viable, alternative locations for four of the final five compressor stations which constitute the Market Path Component pipeline. Excluded from the sites for which Tennessee must consider alternative locations is Market Path Mid Station 2. The Trustees requests that the Commission require Tennessee to identify and consider viable, alternative sites for Market Path Mid Station 2.

For over 125 years, the Trustees have served to protect natural resources in Massachusetts. It is an organization with over 100,000 members who care deeply about the outdoors and the New England landscape. The Trustees’ Notchview Reservation has over 3,000 acres of rolling hills and high elevation forest, wildlife habitat, scenic vistas, and 25 miles of Nordic ski and hiking trails which sees over 12,000 visitors annually. A compressor station located nearby would adversely impair the Reservation for many generations.

The Trustees have been informed by Tennessee that compressor stations are generally needed along a pipeline every 25 miles and that there is, roughly, a four mile band within which compressor stations may be

sited along the NED Project's proposed pipeline. Compressor stations may also be located some distance from the pipeline itself, but at the cost of pipeline operational efficiencies. While the Trustees understand that proposed and final selection of compressor station locations turn on many factors, including willing sellers, appropriate sized lots, proximity to the proposed pipeline, and the location of other stations, there is no cause for FERC to exclude Market Path Mid Station 2 from those sites that FERC has asked Tennessee to identify and consider viable, alternative sites.

The use of land for the proposed Market Path Mid Station 2 site is one that is incompatible with the Reservation and the uses of land in the region. Windsor has no industrial facilities and no zoning for industrial sites. While Tennessee has offered potential mitigation features in connection with the construction and operation of Market Path Mid Station 2, even upon implementation of all mitigation features, its impact will be substantial and detrimental to the Reservation and its users. The lighting and noise which Market Path Mid Station 2, even when equipped with down lighting and noise buffers, would still have a direct impact on the quality of and visitation to the Reservation.

Massachusetts State Senator Benjamin B. Downing (Berkshire, Hampshire, Franklin & Hampden) and State Representative Paul W. Mark (Second Berkshire District), wrote a letter to Kimberly Watson, President of Tennessee, dated November 10, 2015, to make Tennessee aware of the recreational and economic importance of the Reservation to the community and their and their constituents' concerns for the environmental and scenic impact that Market Path Mid Station 2 would have on the Reservation. Senator Downing and Representative Mark offered to work with Tennessee to identify a more appropriate site and even offered to meet with Ms. Watson to further discuss their concerns. In response, by letter dated November 25, 2015, Tennessee states that it had previously ruled out three alternative sites, but does not state or suggest that Tennessee has fully investigated or determined that there are no other viable, alternative sites in the area.

The Commission's December 8, 2015 letter asked Tennessee to identify and consider viable, alternative sites for each of the other four compressor stations, but not Market Path Mid Station 2. The proposed site plans, their proximity to natural resources, and the zoning regulations of the towns for each compressor station site referenced in the Commission December 8, 2015 letter do not suggest any cause or reason for the Commission not to ask Tennessee to identify viable, alternative sites for Market Path Mid Station 2. Exhibit A, which is attached hereto, shows that the proposed facilities at each compressor station are substantially similar. In addition, every site contains or borders wetlands and/or streams; however, Market Path Mid Station 2 is the only site which borders 3,000 acres of conservation land — the Reservation — and a potential sensitive habitat, referred to as Black Spruce Swamp.

For these reasons, there is not cause for the Commission to have excluded Market Path Mid Station 2 from the list of compressor stations for which Tennessee has been asked to identify and consider viable, alternative sites, and the Trustees request that the Commission require Tennessee to identify and consider viable, alternative sites for Market Path Mid Station 2.

Request For A Site Visit And Community Meeting

Further, the Trustees believe that the Commission's analysis of the site will be greatly enhanced by a site visit to the location of concern synchronized with a community meeting regarding the same. As a result, Trustees request a site visit and community meeting for further opportunities of review and assessment.

WHEREFORE, TTOR respectfully requests that the Commission require Tennessee to identify and consider viable, alternative sites for Market Path Mid Station 2. Further, TTOR requests the Commission conduct a site visit and community meeting for further opportunities of review and assessment.

Respectfully submitted,

On behalf of TTOR:

I live in the town of Ashfield, Massachusetts and want to intervene to oppose the NED pipeline. I have an interest which is directly affected by the outcome of the proceeding because of the various impacts to the local environment, aesthetics, and health of our community.

Also, I enjoy the outdoors and do not want any state or town public parks or forest, which have been set aside for the people and wildlife to be impacted by any activities of this commercial project.

Basis for Intervening:

I am an electric ratepayer who, if KM secures my electric utility, Eversource, as a project customer, expect to see an increase on my bill relating to NED. Also, I would have to pay the increase in general energy costs that would result from exporting natural gas. There is no doubt that most of the gas in this proposed pipeline would be exported. Local markets would have to compete on a global scale.

I am a member of an impacted community, Deerfield, with concerns about various impacts. I object to the construction of the proposed pipeline. I am applying to be an Intervenor because I have interests which may be directly affected by the outcome of the proceeding.

My own farmland and woods are protected conservation lands. The proposed pipeline aims to take 27,400 acres of conserved land in 25 MA towns. The State bought my development rights, under Article 97 of our Constitution, which states, "The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historical, and esthetic qualities of their environment...Lands and easements taken or acquired for such purposes shall not be used for other purposes." As a MA taxpayer, I paid for all conserved land in MA. Why should land protected for long-term public health and conserva-

tion purposes be sacrificed for short-term private financial gain? And the sacrifice would be for naught. The Massachusetts AG's independent study concerning the need for additional gas pipeline capacity in New England reached the conclusion that it was NOT necessary.

On my road, I and other neighbors have worked for decades to get a toxic dump railroad yard cleaned up. Now the pipeline is proposed to go under the rail yard, potentially disturbing decades of state and federal work! *See Insert

The pipeline is also proposed to go under the Connecticut River at the rail yards, negatively impacting my watershed and irrigation of my fields from the CT River. The pipe would disturb dioxins, mercury, and especially PCBs. PCBs, though they may be buried in sediment, can cause problems when work is done on the river and sediment is disturbed.

And lastly, I am applying to be an Intervenor because I am a citizen of Planet Earth. This proposed pipeline would expand the delivery of fossil fuels that will add more greenhouse gases and result in more global warming. This is destructive to both the Earth and all of us. Building the proposed NED pipeline would neither be convenient nor necessary.

* Insert: Pipeline's Potential Impacts to East Deerfield Rail Yard by Lynn Rose, Town of Deerfield's Hazardous Waste Coordinator

Here on River Road in Deerfield, I, the neighborhood and the Deerfield Select Board have worked for decades to get more than 12 hazardous waste sites cleaned up or stabilized under the Massachusetts Contingency Plan (MCP) at the East Deerfield Rail Yard at the junction of the Deerfield and Connecticut Rivers. The rail yard contains a major fueling station and has a locomotive repair shop.

Currently the pipeline is proposed to go under the rail yard at a location where the area's only potentially productive high yield aquifer is located, and currently contaminated with perchloroethylene. This aquifer is undergoing a state superfund clean-up under the MCP to bring it up to drinking water standards.

We are greatly concerned that the activities related to the installation or the accidents related to the operation of the pipeline could pose a major threat to this site, and adjacent environmentally sensitive areas that are subject to state and federal protections. Not only would it potentially undo decades of state and federal compliance related environmental mitigation work, it could threaten the only federally endangered species in the Connecticut River, the Short Nosed Sturgeon, whose spawning area is located adjacent to the rail yard, in the vicinity of the proposed path of the pipeline.

It could also disturb land that that Pan Am Railroad is proposing to install a deed restriction, Activity Use Limitation, to ensure that contamination remaining in the ground throughout the 129 acre rail yard will not be disturbed. An explosion in the vicinity of the rail yard could disturb these areas, causing contaminated soil and groundwater to be distributed into the Connecticut and Deerfield Rivers, disturbing the water quality on both rivers, and impacting adjacent state and federally protected lands, the rail yard, adjacent prime agricultural farmlands, and an adjacent residential area.

In addition, an accident in the yard could damage rail cars with hazardous cargo, potentially spilling it into the rivers and other areas, causing explosions, chemical fires and/or contamination, destroying habitat, etc. There is also a huge fuel #2 storage tank farm with an above ground storage tank of 100,000 gallons located on site.

In summary, the fact that Kinder Morgan is even considering located the pipeline near such a site illustrates extremely poor judgment on their part. In addition to the environmental issues, disrupting operations at a major rail hub that serves the north, south, east and west rail lines has implications for impacting transportation throughout the northeast.

Also, note that the rail yard is located adjacent to the active quarry that still continues to conduct blasting operations. The pipeline is slated to be located adjacent to the quarry. There is concern that the blasting that at times has rocked houses more than 1/4 mile away, will disturb the joints in the pipeline in the area not only in the quarry, but in the surrounding area. If this scenario doesn't damage the pipeline during a blast, it

would increase the potential for a catastrophic accident over time. Nothing could truly protect this area from the mixing and spewing of numerous contaminants from a pipeline explosion. It would devastate this environmentally sensitive area.

20160107-5025

Jeanne Dietsch, Peterborough, NH.

INCOMPLETE MISLEADING DATA IN FERC FILING BY KINDER MORGAN.

- 1) Kinder Morgan itself warns its shareholders against risks to its stock price due to low demand, poor financing, lack of supply and changes in regulation in its own annual Securities and Exchange Commission (SEC) 10K filing (beginning on p 29.) These risks could result in stranded assets and diminished value of NH property with no off-setting benefits, yet this possibility is not addressed in the FERC filing. Likewise, KM's SEC 10K mentions the possibility of KM losing its ability to support its extensive debt for similar reasons, yet the FERC filing does not discuss what will happen should the company be required to file for bankruptcy or other protection from creditors due to regulation that stops fracking, with a goal of no fossil fuel use by 2030.
- 2) ICF Report cited for most energy predictions in FERC filing, pp 64, 68, 77, 86 and 99, is based on historical data rather than future projections. In Peterborough, our town now runs 100% on sustainable fuels. We have the largest solar project in the state. Although low prices bring about spikes, long-term gas and oil demand is falling in the US. Thus, historical demand does not predict future demand.
- 3) In June, the G7 agreed to reduce greenhouse gas emissions by 40-70% by 2050. The Paris Climate Agreement, to be signed April 22, reinforces those plans. Overall emissions, including methane and other emissions released during the fracking process plus emissions from the burning of the fuel, make fracked gas at least as undesirable as oil and possibly as bad as coal. Hence, it is highly likely that regulations will reduce and perhaps stop fracking altogether. This will leave the State of NH without compensation or benefit from the pipeline that will remain in the ground and the damage done in order to put it there.

Basis for Intervening:

Dear FERC:

Windsor, MA is a beautiful, wonderful community my husband and I chose to live in since 1974 We have lived here for 42 years. We moved to Windsor for all its natural beauty and clean air, and quietness, and picturesque land. The people in this community care deeply about the land, air, food, creatures, and people.

The proposed pipeline and compressor station are not necessary or wanted to be in our community. We strongly oppose the building of the pipeline and compressor station.

It would devastate our incredible community and the harsh results of it would do harm to our land, air, food, and people.

20160107-5029

Motion to Intervene of Suzy Winkle

My name is Suzanne Winkler. I own 175 acres and have lived in Burlington Flats, NY since 1991. My home is about 30 miles from the proposed Northeast Energy Direct Pipeline.

I oppose this pipeline knowing that the gas that will move through it has been extracted from the properties of families in Pennsylvania who are already suffering the consequences of living in an industrial zone that has been forced upon them by the gas industry via shale gas extraction.

Kinder-Morgan has shown a genuine disregard and disrespect for our communities, the natural resources of our region and the small local businesses supported by those resources. Kinder Morgan offers no benefit for the residents of Central New York, only negative impacts associated with flooding from what will be the bald steep slopes along the pipeline corridor. Citizens will also experience the harmful short and long term health effects from the carcinogens that will be emitted via compressor stations and the gas fired power plant associated with this pipeline proposal.

I oppose the Northeast Energy Direct because I travel various routes between Rt 17 and I-88 several times a week and each time I cross over the pipelines path I will be putting myself at risk.

This pipeline proposal is not for the common good, but rather for corporate profit and I object to the taking of private property by eminent domain.

I believe that all of the interests listed above would be directly affected by the outcome of the Federal Energy Regulatory Commission proceedings. As no one else can represent my particular interests in this matter, I am filing this **motion to intervene**.

Suzanne Winkler
174 Pickens Road
PO Box 91
Burlington Flats, NY 13315

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
Northeast Energy Direct Project

Docket No. CPI6-21-000

**MOTION TO INTERVENE OF
DEACON DANIEL P. ROMANELLO, KM**

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications concerning this proceeding should be served upon me as follows:

Deacon Daniel Romanello, KM
171 West Center Road
West Stockbridge, MA 01266
(413) 232-7889
dollenamor@aol.com

My interests “which may be directly affected by the outcome of the proceeding” pursuant to 18 c.F.R. § 214(b)(2)(ii) include:

- My interests as a Berkshires landowner owner, electric ratepayer and tax payer are in direct conflict with all aspects of this proposed construction monolith.
- Firstly, Kinder Morgan has been unable thus far to conclusively and incontrovertibly establish the necessity for a pipeline of this magnitude. It also is abundantly clear that the excess energy transport capacity provided by this oversized infrastructure will be used to serve markets outside of the North-eastern United States, including Canada and overseas.
While such a scenario offers obvious markets here and economic benefits for Kinder Morgan, local residents will be penalized while the corporation and its shareholders profit. These impacts include being forced to help pay for the construction of the pipeline through higher taxes. It also is likely (if not certain) that energy costs will rise due to unused excess capacity and/or international consumption of this capacity driving up domestic energy prices.
- The NED pipeline threatens wildlife sanctuaries and wetlands; promises the pollution of our beautiful natural environs; and creates health hazards through the release of toxic chemicals in to the atmosphere. The proposed construction of this pipeline already has disrupted the lives of many families and will continue to have adverse impact on Western Massachusetts residents for years to come if the project moves forward.
- Those of us who live in the Berkshires do so in part because we deeply value the rural style and quality of life here. Excessive noise generated both by the building and operation of the infrastructure, coupled with a damaging, irrevocable transformation of the landscape, are unacceptable outcomes. And all of this negative impact is the result of an investment in an energy of the past rather than the creation of alternative sources for the future.
- While counterintuitive to those who oppose the pipeline, this approach makes perfect sense to Kinder Morgan. It takes years and billions of self-funded corporate dollars to develop and implement new forms of energy, and years following the introduction of any new technology to seed the market and realize profits. Better to simply build more capacity for existing technologies in order to tap new markets that generate a quick return-on-investment.
- Finally and most importantly, I share an abiding, deep concern with many other opponents of this plan regarding the “right” of the federal government to approve the taking of private property through the

principle of eminent domain. I cannot imagine any scenario where the residents of this state (other than those motivated purely by greed) will ever give up fighting for what is rightly theirs. Allowing Kinder Morgan to take control of private property to facilitate the building of an unnecessary pipeline would be an absolute tragedy.

While my property doesn't intersect with the latest published route of the project, I am fearful that federal approval of NED could open the door for other spurious proposals to gain traction that could at some future point affect my property and that of my neighbors. Such developments inevitably would result in a proliferation of expensive and time-consuming inverse condemnation proceedings.

- This pipeline project can be distilled down to one driving motivation - corporate greed.

Despite protestations to the contrary, Kinder Morgan has demonstrated very little real concern for how this pipeline project will adversely and permanently impact the inhabitants and natural resources of our region.

- It is incumbent upon the Federal Energy Regulatory Commission to ensure that the best interests of all parties involved are protected through an impartial, careful investigation and review process. Given this obligation and in view of all the published facts, I cannot envision any scenario in which FERC could judiciously approve NED construction.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Deacon Daniel P. Romanello, KM

20160107-5032

Submission Description: (doc-less) Motion to Intervene of Gregory Blais under CP16-21-000.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	blaisgc@gmail.com	

Basis for Intervening:

I Greg Blais & Family are homeowners in New Ipswich, NH living on a 42 acre lot which the proposed NED pipeline would cross. Our home is located within 350 feet of the proposed pipeline path. Approximately 1/4 mile of the proposed route runs right through the middle of our lot, and splits it in two. This would most likely render our property of very little value. We are concerned that the planned construction will be disruptive and adversely impact our quality of life.

Of primary concern is contamination or damage to our well, which is our only source of water. There are considerable amounts of ledge where the proposed pipeline would cross our property, making it likely to blast or drill.

Another concern is for the wetland and natural springs located on our property. I am also worried about contamination of the aquifers in the area.

We are concerned about the blasting & drilling activity impacting our well, foundation and septic system. Our foundation has some minor cracks in it already and we believe the pipeline construction would only make it worse. This could cause structural damage to our house & further reduce the value of our property.

We have a disabled (autistic) son living with us and we suspect that the proposed construction, noise, and contamination of the air, ground and water will be very disruptive to him. The use of herbicides as proposed for maintenance activities of the pipeline route.

We have children in college and high school and believe this project will be disruptive to their studies. We

also were relying on our property value to increase to provide us with the means to send our younger children to college.

Not only is this project of no benefit to NH or America, it is of no benefit to the citizens affected along the path of this pipeline. We ask the FERC to consider the impacts on lives of us citizens and disapprove the NED pipeline project.

We are one of the very unfortunate families who own property along the pipeline path. We are concerned for our safety for the following reasons:

- There would be a massive amount of extremely flammable and highly explosive fuel practically on our doorstep.
- The cost of homeowner's insurance for anyone along the pipeline, (if we can even still be covered) is expected to increase significantly.
- If an explosion was to occur, I am concerned about fire, explosions & sections of pipe being thrown long distances. Not only could damage occur to our property from the pipeline but also the risk of pipeline causing secondary damage to the co-located powerlines, which could cause fires.
- Kinder Morgan / Tennessee Gas Pipeline proposes to use cheaper, thinner, lower quality pipe in rural areas, such as our area. Since it is not densely populated, therefore, they are not required to use the higher quality pipe. This concerns us since we are so close to the pipeline path, and the risk of explosion, leakage, and corrosion over time increases, and will potentially cause more catastrophic results. It also tells me that KM believes that our lives in rural areas are less valuable than occupants of densely populated areas, and that their primary focus is maximizing profits and not safety.
- Kinder Morgan / Tennessee Gas Pipeline has an abysmal safety record. Since 2003, Kinder Morgan has had 20 major accidents that were serious enough to be reported to the Pipeline and Hazardous Materials Safety Administration.
- There is always allowable leakage in these pipelines, even in new pipes. I am concerned about leakage and gas build-up underground and since it is co-located on an electric transmission line, the increased possibility of a spark or lightning strike triggering an explosion and/or fire.
- If KM/TGP claims that these pipelines are so safe, why not put their own staff on the frontlines for a disaster first response? Our communities do not currently have the means of dealing with a disaster caused by a pipeline explosion or fire. Kinder Morgan has not proposed to provide any financial support, resources, equipment or even training to the local first responders to handle such a disaster. The FERC should require KM/TGP provide a disaster plan, including, for example, KM /TGP financed fire stations at pre-determined intervals along the route staffed with KM payrolled first responders prepared to deal with a disaster of this type.

my house. I'm concerned with the impact the pipeline will have on our environment, our native species and our local economy. Please stop NED pipeline in Nassau and Schodack, NY!

20160107-5038

Karen St. Arnaud, Dracut, MA.

I am filing this complaint on the grounds that I feel my rights as a land owner in Massachusetts were violated due to the gross negligence of Kinder Morgan - Tennessee Gas Pipeline Company LLC ("Tennessee"). The background of this complaint is related to the lack of notification by Tennessee regarding the proposed construction of a natural gas compressor station as part of the Northeast Energy Direct Project ("Project") in Dracut. As a land owner with property within one-half mile of proposed compressors or their enclosures pursuant to Section 157.6(d)(5) of the Federal Energy Regulatory Commission ("Commission") regulations, 18 C.F.R. § 157.6(d)(5)(2015), I was never notified by Tennessee. Tennessee has made two filings to the Commission as part of their certificate application for the Project. I was not notified as part of Tennessee's initial filing to the Commission on November 20, 2015 or as part of their updated landowner list filed December 21, 2015.

The resolution I seek is for Tennessee to be required to re-file their certificate for application with the Federal Energy Regulatory Commission due to the above gross negligence."

Basis for Intervening:

1. I live at 201 Temple Road New Ipswich NH. 03071 My house is less than 1 mile from the proposed NED compressor station. I am concerned about health issues due to toxins emitted by the blowdowns and toxins created by the exhaust of the station and its compressors. I am concerned about leaks in the pipeline.
2. I am concerned about noise and light pollution. I am concerned about a 24 hour ongoing disturbance.
3. I am concerned about possible damage to our aquifers and our water supply. I live off well water.
4. I am concerned about the value of my house and farm plummeting due to the pipeline and more significantly the compressor station. My husband and I own 2 additional houses and properties (15 Greenville Road and 189 Temple Road) bordering this same farm property which would be seriously effected by a devaluation of property values.

I am concerned that the quality of my life will be gravely effected by the location of the pipeline and compressor station nearby to my home.

6. I strongly oppose the construction of the NED pipeline and compressor station in our rural, environmentally conscious neighborhood and region.

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

(now numbering over 137), other conservation and advocacy organizations, government entities and land-owners to increase the pace, quality, scale and permanency of land conservation in Connecticut while assuring the perpetual, high quality stewardship of conserved lands in the state. Consistent with our mission, ensuring the permanent protection of lands valuable for conservation purposes is a priority for our organization.

It is our understanding that the route of the proposed pipeline will cross: (1) critical and highly protected public water supply watershed land near drinking water reservoirs on the property of the Metropolitan District Commission (MDC) in Hartford; (2) land owned and preserved by the Wintonbury Land Trust in Bloomfield; and (3) the New England National Scenic Trail in several locations. For the following reasons, CLCC shares the concerns raised by conservation organizations and individuals about the potential adverse impacts from the project to each of these valuable natural and recreational resources.

Impacts to Highly Protected Class I and II Watershed Lands

According to the MDC (letter dated June 26, 2015) and maps of the project area, the pipeline could potentially disturb 250+/- acres of MDC property, running 5+ miles through the Class I and Class II water company land. Pursuant to state water policy and law, such lands are protected and preserved to safeguard the quality of our state's water resources. Accordingly, transactions involving Class I lands are severely restricted and those involving Class II lands are limited. The law furthermore provides that because these are lands located closest to water supply sources they require a state Department of Public Health permit to transfer or change their use.

Permitting the project to move forward will serve to undercut the strict protections on these lands currently accorded under state law, not only posing a risk of adverse impacts to highly valuable water supplies, but also setting a dangerous precedent for further erosion of such laws in the future.

Impacts to the Wintonbury Land Trust's Speer Preserve

We are also concerned about the potential adverse impacts of the proposed project on the Speer Preserve in Bloomfield. Donated by private landowners and The Nature Conservancy to the Wintonbury Land Trust, this 13.9 acre preserve, featuring a mix of evergreens and hardwoods, some of which are upwards of 150 years old, is considered by the land trust as its most treasured upland preserve.

It is our understanding that the project's expansion of the existing gas right-of-way on the Speer Preserve will result in a clear cutting of a width of 90' for the entire 390' length of the Preserve, severely diminishing the existing habitat and leaving the land vulnerable to erosion and invasive species.

Perhaps more critically, the Speer Preserve was donated with the intent that it be permanently preserved and held in public trust by the Wintonbury Land Trust, a charitable land trust. Expanding the existing pipeline to the extent proposed would, at a minimum, undermine that charitable intent and the associated public purpose and trust in permanently protecting the land.

Impacts to the New England National Scenic Trail

The New England National Scenic Trail (NET) is a 215-mile hiking trail route that has been in existence for over half a century. The NET travels through 41 communities in Connecticut and Massachusetts featuring long-distance vistas, historical landmarks, and a diversity of ecosystems and natural resources. With the route of the proposed pipeline crossing the NET in several places (Bloomfield, Farmington, Simsbury and West Hartford), CLCC shares the concerns raised by the Connecticut Forest & Park Association regarding the nature and extent of disruption to the recreational and scenic purposes for which the NET was created.

For the foregoing reasons, we contend that a project of this magnitude, proposed in an area rich with protected natural, scenic and recreational resources, should be subject to the highest and most comprehensive degree of scrutiny.

Thank you for your consideration.

Very truly yours,

Amy Blaymore Paterson
Executive Director
Connecticut Land Conservation Council (CLCC)

I am filing a motion for intervention status on FERC docket CP16-21 based on my residence in Montague, MA. My interest will be directly affected by the outcome of the proceeding and I am participating in the public interest as a consumer. I am a resident who lives in the “blast radius” and whose daily commute crosses over the proposed pipeline route so I would be at physical risk. I am strongly opposed to this pipeline as it perpetuates the use of non-renewable energy sources, which is detrimental to our society and planet. The proposed project has detrimental effects to the surrounding living environment, the impact on local roads, the impact on conservation lands, the negative effects on the quality of our water, air, soil, and life.

Basis for Intervening:

I am an affected landowner, whose home is less than a half mile from the proposed compressor station. I am extremely concerned about the pollutants that this proposed compressor station will emit, namely the Nitrogen dioxide, Sulfur dioxide, particulate matter, formaldehyde, and volatile organic compounds that are listed in Kinder Morgan’s filing. I had asthma as a child and have already experienced what it feels like to not be able to breathe. I have no wish to experience that again by being exposed to these airborne pollutants.

I am also concerned by the noise and light pollution that this proposed compressor station will emit. We currently enjoy background noise of only 30db during the day, and 20db at night. This compressor station will likely destroy this quiet during normal running and completely shatter the calm during a blowdown. At night we can see the Milky Way galaxy as our skies are dark, with little to no light pollution. This will likely also be destroyed by this compressor station.

I moved to this area to open a B&B with my partner, as this part of the country is heavily trafficked by tourists during the leaf peeping season. The concerns listed above would/will prevent us from opening the B&B. I could not in good conscience open a B&B this close to the compressor station knowing the visitors would be exposed to the pollutants listed above.

Basis for Intervening:

I am the owner of property that abuts the proposed path of this pipeline.

I believe that this pipeline will have a seriously negative effect on the value of my property.

I am concerned that this pipeline will have a negative and potentially life threatening effect of poisoning the ground water and the well that provides drinking water to my property.

I am concerned that this pipeline will have a negative and hazardous effect to the aquifer that provides the drinking water to my town.

My children live in Pelham and I am concerned that this project will potentially effect their health and well being in a negative and potentially life threatening manner through the poisoning of groundwater and air.

I believe that there is an overabundance of energy resources already available to the world market. This is substantiated by the current low price of crude oil \$36/barrel and natural gas, \$2.28.

I believe that there is no need for the additional energy product this pipeline proposes to sell outside of the United States of America.

Individual dvfrano@gmail.com

Basis for Intervening:

I oppose the proposed pipeline: I object to it as an electric ratepayer, a taxpayer, a neighbor and visitor to protected public land in Massachusetts. It would imperil our food, water, and air.

I object to it as a person deeply concerned about climate change and the large-scale extraction, combustion and release of natural gas into the atmosphere, which directly affects all beings on this planet.

To continue with this pipeline project would be a detriment not only to the communities and ecosystems directly impacted by its construction, but to the country and world as a whole. The further development of fossil fuel based energies will only serve to worsen climate change, which has already begun to have major impacts on the world, particularly people in developing and island countries. We cannot sustain continued extraction and consumption of fossil fuels. While there may be financial gains in the short-term for some, millions of others will have to suffer the consequences of these actions for decades to come.

On a more local scale, the pipeline will hardly improve quality of life for those in the region and states through which it is proposed to travel. Not only will the construction and presence of the physical pipeline damage private and public lands, it will endanger the precious natural resources our communities depend upon, such as clean drinking water, healthy soil for producing food, and air that is free of toxic chemicals. In addition to this, the proposed pipeline travels through a number of habitats for wildlife and plants that are rare, at-risk, or endangered. Building the pipeline may further weaken the biodiversity of the region.

I object to this proposal to destroy our land, our ecosystem, and the health of our communities.

My name is Francena Dwyer. I have a summer cottage at #1 The Willows in Northfield, MA.

I am very concerned about the chemicals sure to be emitted from the compressor station about 4 miles from our property. I am disabled from severe chemical sensitivities already. This must be stopped.

My drinking water supply is also at risk from the construction and/or operation of the pipeline, compressor station, or other facilities.

Please look to the disaster in California as reason enough not to proceed with this project.

20160107-5054

Submitted in opposition to CP16-21 due to the inherent risks and hazards to health, safety, and environment.

Kinder Morgan (KM), with its principal executive offices located in Houston, TX, is the largest independent owner and operator of petroleum product pipelines in the United States, engaging in substantial business activities, including but not limited to, the ownership, management, operation, maintenance and control of approximately 84,000 miles of pipelines.

The minimum federal safety standards for the transportation of gas and pipeline facilities was established by the U.S. Secretary of Transportation pursuant to Section 3(b) of the National Gas Pipeline Safety Act of 1968 (P.L.90-481, 49 U.S.C. Section 1672(b)).

Public documents allege that ruptures of KM pipelines, releases of hazardous product into the environment, and safety violations pertaining to their pipelines have occurred frequently and excessively. Such occurrences include but are not limited to the following:

- a) In 2009 KM corporate defendants were cited by the Pipeline and Hazardous Materials Safety Administration (PHMSA) in for violating safety standards pertaining to their pipelines (PHMSA letter of September 1, 2009).
- b) In 2011 the PHMSA cited KM corporate defendants for various safety violations, including: failing to update maps to show pipeline locations, failing to test pipeline safety devices, failing to maintain proper firefighting equipment, failing to inspect its pipelines as required, and failing to adequately monitor pipes' corrosion levels (PHMSA letter of February 28, 2011).
- c) History of neglect documented by The Wall Street Journal, in "Wall Street Worries about Kinder Morgan's Safety Record: BC Pipeline slashes and defers maintenance spending," September 19, 2013.
- d) History of neglect further documented by The Wall Street Journal, in "Is Kinder Morgan Scrimping on its Pipelines?," after an investment analyst determined that the company was starving its pipelines of routine maintenance by diverting excessive funds to investors, September 27, 2013.
- e) Excessive history of leak data and ruptures of Kinder Morgan's onshore gas transmission pipelines documented by PHMSA, 1994-2013, including determinations of faulty infrastructure, failure of the pipe, cracked welds, faulty pipeline equipment, corrosion of the pipe, and other problems.
- f) In Texas alone, from 2003 to 2014, Kinder Morgan experienced 36 "significant incidents," per Pipeline Risk Report of the PHMSA, "Building Safe Communities: Pipeline Risk and Its Application to Local Development Decisions."
- g) PHMSA reports that throughout the United States since 2003 Kinder Morgan and its subsidiaries

have been responsible for at least 180 spills, evacuations, explosions, fires and fatalities in 24 states.

- h) PHMSA Corrective Action Order CPF No. 4-2003-1008H cites Kinder Morgan for an explosion, throwing a 54-foot long section of pipe 30 feet from the ditch, due to cracking along the length of the failed section.
- i) Rupture of a KM 14 inch pipeline on April 27, 2004, in Solano County, California spilled over 120,000 gallons of fuel onto a marsh, resulting in a \$5.3 million dollar fine, and an agreement by KM to enhance spill prevention, response and reporting practices.
- j) Order of August 2005 by PHMSA cites 44 KM spills in 31 months, indicating “widespread failure to adequately detect and address the effects of outside force damage and corrosion.”
- k) California Occupational Safety and Health Administration cites KM for failure to accurately mark or map pipeline location; contributing toward an event which caused a gasoline spill and fire and explosion that incinerated five workers and severely injured others; also fine levied by the California Fire Marshall for KM’s role in the “completely preventable” tragedy; KM agreed to upgrade pipeline inspection methods and improve corrosion control.
- l) KM pipeline leaked gasoline into Summit Creek, near Truckee, California, on April 1, 2005.
- m) May of 2005, stress corrosion cracking of KM pipeline near Marshall, Texas caused an explosion, fireball and injuries.
- n) July 26, 2006, near Campbellsville, Kentucky, a KM pipeline exploded, due to external corrosion of the pipe.
- o) November 11, 2006 near Cheyenne, Wyoming, rupture and explosion of a KM pipeline, after which the Federal Energy Regulatory Commission cited KM’s “poor compliance record.”
- p) November 27, 2006, at Charlotte, North Carolina, KM’s Plantation Pipe Line released about 4,000 gallons of gasoline.
- q) July 24, 2007, pipeline operated by KM Canada released over 250,000 litres of crude oil into the environment.
- r) September 23, 2008, corrosion of a KM pipeline causes explosion and fire near Pasadena, Texas, causing fatality and injury; deemed a “significant event,” with PHMSA referencing at least 18 “significant incidents” 2009 to 2013, per “Texas Significant Incidents Listing,” PHMSA.
- s) May 2009, near Palm City, Florida, a KM pipeline ruptured, blowing out of the ground about 106 feet of buried pipe, weighing about 5,000 pounds, causing injuries.
- t) July 15, 2009, a pipeline explosion at Sylvarena, Mississippi involving KM and others, resulting in fatality and injury.
- u) November 30, 2010, failure of KM pipeline near Natchitoches, Louisiana, causing evacuation of 100 homes. The large crack in the pipe was near a previous fracture in 1965 which caused multiple fatalities. Determined to be caused by stress corrosion cracking, per PHMSA Corrective Action Order, Case CPF 420101007H.
- v) March 14, 2011, leak and fire from KM pipeline at Carteret, New Jersey. On April 4, 2013 PHMSA issued a Notice of Probable Violation, Proposed Civil Penalty and Proposed Compliance Order (NOPV) after an inspection. KM paid a penalty of \$63,100 and was required to complete pipeline integrity testing and other corrective measures by May 2015. (See KM Annual Report for 2013, p. 166).
- w) August 17, 2011, KM pipeline near Herscher, Illinois has flash fire and explosion, sending five employees to hospital. KM cited for pipeline and safety violations.
- x) November 16, 2011 near Glouster, Ohio, a KM failed weld causes leak and explosion, leaving 30 feet across by 15 feet deep, and destroying three homes. The leak was caused by “... inadequate understanding of the influence of the geotechnical threats on the pipeline,” and inadequate design,

materials or workmanship, exceeding operational limits and gaps in integrity management.

- y) May 2012 at Arvin, California, failure of KM relief valves and pipe supports, causing an explosion, due to “the complete structural failure of the over pressure protection support system.” PHMSA Failure Investigation Report, GT 2012-5-2.
- z) June 2012 in Gray County, Texas, KM pipe failure, with gas igniting, blowing crater 30 feet in diameter, and causing large fire, due to 50 foot long longitudinal rupture in the pipe. PHMSA Corrective Action Order, CPF No. 4-2012-11011 H.
- aa) December 26, 2012, in West Melbourne, Florida, explosion of a KM pipeline, ejecting a 20 foot section of 20 inch diameter pipe. PHMSA CPF No. 2-2012-IOOSH.
- bb) May 8, 2013, fire at a KM compressor station near Crockett, Texas caused over \$7.5 million dollars in damage.
- cc) June 18, 2013, in Washington Parish, Louisiana, rupture of a 30 inch KM pipeline, with explosion and fire, knocking over trees for 200 yards across and large fire.
- dd) June 26, 2014, near East Bernard, Texas, KM pipeline blew out, destroying the road and setting a truck on fire, with flames shooting 150 feet high.
- ee) May 12, 2014, near Belton, South Carolina, KM’s Plantation Pipeline ruptured at KM’s pump station, causing a geyser of gasoline 150 feet into the air.
- ff) Early December, 2014, in Anderson County, South Carolina gasoline discharged from a 26 inch pipeline. Reports of gasoline leaked vary (from 8,800 gallons to 369,600 gallons). After 10 months of remediation efforts, less than 53% of the release has been recovered leaving substantial gasoline remaining in the soil, groundwater and surface waters, and throughout the aquifer and substratum.

Following the 2004 pipeline rupture and spill in California, Kinder Morgan pled guilty to criminal charges with several million dollars in fines. The Chief of California’s pipeline safety division determined that KM had committed criminal offenses by ignoring data that the pipeline had corroded and required maintenance.

In addition to the criminal pleas noted above, the PHMSA in 2005 ordered KM to address its rise in pipeline incidents resulting from KM’s “inadequacies” in interpreting data to evaluate and repair its pipelines. The United States Department of Transportation also determined to “form a task force to look into Kinder Morgan Inc.’s maintenance and inspection practices on several petroleum pipelines, ... the first such task force the agency has ever formed.”

Public documents against Kinder Morgan claim negligent and deficient maintenance and repair of corporate pipelines, including inadequate allocation of funds for needed maintenance, repair, and other operational function; as well as inadequate budgeting, staffing, training, supervision, development, and implementation of policies and procedures which have resulted in ruptures of pipelines and catastrophic releases of hazardous product into the environment.

Furthermore, Kinder Morgan’s standard disclaimer that it will abide by all federal safety and environmental standards has little value when our national standards have been so weakened by the “Halliburton Loop-hole” (passed during the Bush/Cheney administration) which exempts fracking processes from the Clean Water Act, the Safe Drinking Water Act, and the Clean Air Act.

IN CONCLUSION, Massachusetts, New Hampshire, and New York residents DO NOT NEED the proposed Northeast Energy Direct Pipeline (CP16-21) with its inherent risks and hazards to our health, our safety, and our environment. Furthermore, this project is NOT CONVENIENT nor is the exportation of our limited resources beneficial to the majority of New England or New York residents. PEOPLE BEFORE PROFITS!

Basis for Intervening:

Construction, operation and maintenance of the Pipeline would adversely impact me. The existing pipeline abuts my back yard. As such my wife, two daughters and myself are in the established 'incineration zone.'

I am a landowner, and with my property abutting the pipeline any expansion is likely to require the use of eminent domain to take my property and/or cut down trees that are on my property. I chose to build on my lot because of the tree cover and privacy.

As a landowner I am concerned that the pipeline and planned compressor station, along with at least one metering station, will have a negative impact on property values, directly impacting my financial well-being and ability to move elsewhere.

As a person who enjoys being outside with my family, I am concerned about air and noise pollution from the planned compressor and metering stations. My entire family is active and having a compressor station within a mile that emits cancer-causing pollutants not acceptable.

Finally, I have important information and perspectives to bring to this process, consideration of which will serve the public interest.

20160107-5059

I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery

Basis for Intervening:

- a) I am a Pelham resident. The NED project, due to number of proposed facilities and amount of construction and road closures proposed in town, would have a enormous effect on me.
- b) I am a direct abutter to the latest pipeline route, within 400 feet (or) i live very close the the pipeline (within about 1000 feet) and may be within the incineration zone in the event of a rupture
- c) I may be a direct abutter to the route in the future as the route through Pelham keeps changing (or) I am a direct abutter to one of the prior routes to this pipeline that are still considered by FERC to be alternate routes
- d) I have a child who attends one of the 3 public schools in Pelham, all of which are close to either the current or the alternate route for the NED pipeline
- e) I am a taxpayer in Pelham and I am concerned with loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services.
- f) I am a consumer of produce from Pelham farms and I am concerned the pipeline may cause industrialization and contamination of the water supply and crops that are part of my food supply
- g) I am a ratepayer for National Grid gas service or electric service and am concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals
- h) I use well water in Pelham and I am particularly concerned about the fact that the development plans by Kinder Morgan and the blasting from construction are likely to impact the migration of toxic chemicals from the contaminated former EXXON site at 970 Broadway Road. This contamination was detailed in a letter and proposal reviewed at the meeting of the Dracut Board of Health on April 1, 1982 and is fully documented at the Mass DEP web site at the following URL:
<http://public.dep.state.ma.us/fileviewer/DefaultScanned.aspx?documentid=24154>
- i) I use a shallow groundwater well for my drinking, cooking and bathing water for myself and my family and I am very concerned about toxic pollution as a direct or indirect result of this project

20160107-5068

Traer Price, St. Petersburg, FL.

My family bought a home in Otis, MA in 1994 and it has literally become a spiritual homestead for our immediate family and a large group of extended family and friends. Berkshire County is not simply stunningly beautiful, it is a uniquely peaceful and restorative place. I've seen bear and wild turkeys and there are tales of a moose on our lake. There is nothing more precious to me than the sun rising over Big Pond. My husband and I lived in West Stockbridge and Otis full time one year and have never had more wonderful neighbors. My family and I, we don't consider ourselves vacationers. We know and love Otis deeply. Frankly, if there's a home where I want my ashes scattered when I leave this plane, it's in Otis.

But I'm not there year round any more, so I'm writing on behalf of those who are. I oppose the proposed Northeast Energy Direct pipeline with every fiber of my being. I'm sure it would come with some number of jobs, which are desperately needed in certain parts of the Berkshires, but it will also come with environmental risks that will undermine the very characteristics that make the Berkshires what they are-pristine beauty, clean air and water, reverence for the earth.

I won't list the many arguments against fracking. They are numerous and well-documented. I'm among the millions of American voices being raised saying no to this form of energy development. Most of us understand that a mix of methods will need to be employed until we have a higher percentage of clean/renewable

energy at our disposal, but there are some processes that pose more risk than any benefit we can collectively reap. This may require sacrifice on our part near term but we must begin to make difficult choices for the sake of current and future residents' health, not to mention the well being of our wild spaces and wild creatures.

I think I may have missed the comment deadline by one day but this site was down earlier in the week, so I hope that you will extend me a one-day grace period and allow my comments to be added to those received already.

Thank you for the opportunity to contribute to this most important decision.

20160107-5069

Karen St. Arnaud, Dracut, MA.

I have been in communication with Kinder Morgan and FERC regarding the matter of not being properly notified of the NED project. My home currently resides within 1200' of the proposed Compressor Station on Broadway Rd. in Dracut, MA. I have completed the following activities trying to acquire proper landowner notification for myself and neighbors.

11/22/15: Attended an NED information session at Dracut Harmony Hall. I learned of this project through signs on residents lawns stating 'Stop the Pipeline' and conducting research regarding the project online.

12/1/15: Attended open session held by Kinder Morgan at Windham, NH High School over a month ago. Informed several KM representatives that our entire neighborhood was not notified. We provided contact information and we were never notified.

12/13/15: Contacted James Duggan, Dracut Town Manager, and was told 'Dracut has NO control over the project, thus the reason for the lack of abutters notices.'

12/21/15: Sent email to Allen Fore, Vice President of External Affairs at Kinder Morgan, to inform him of this error. I did not receive a response back from Mr. Fore but my email was forwarded to Mr. Michael Lennon (NED Project Manager). Threaded email response from Mr. Lennon over a two week period trying to help Kinder Morgan understand that we have received zero communications regarding the NED project. Last communication received from Mr. Lennon stated my home is within 1200' feet of the proposed Compressor Station boundary and a generic map was provided with no map key or details as to what various details referenced with the documentation. I provided a follow up email asking for clarification on this item and have not heard back from Mr. Allen or Mr. Lennon as of 1/5/15.

12/21/15, 12/23/15, Ongoing: Contacted FERC directly concerning the lack of proper notifications from Kinder Morgan. I was told to continue contacting Kinder Morgan directly.

12/21/15: Kinder Morgan files notification to FERC stating that 46 Dracut residents were inadvertently not notified per the FERC landowner notification requirements. I contacted FERC directly to inquire if I was on this list. FERC has been researching my request for over two weeks now.

12/30/15 – 1/4/16: FERC website is unavailable/down.

1/6/2015: Kinder Morgan files a SECOND notification to FERC stating that 19 Dracut residents were inadvertently not notified per the FERC landowner notification requirements. I contacted FERC directly to inquire if I was on this list. My calls and emails have not been returned by FERC.

I reviewed the filing made by Kinder Morgan on 1/6/2016 stating the following (see quote below). I would appreciate Kinder Morgan being forthcoming in how they learned about not notifying the 19 affected landowners. Kinder Morgan did not proactively research to identify if any residents within a half mile radius of the proposed Compressor Station did not receive proper notification. It was not until I repeatedly inquired about this matter via email and phone that this discovery was made by Kinder Morgan. Kinder Morgan was grossly negligent in properly identifying residents who will be directly impacted by this massive project on two separate occasions and has requested these landowners rights be WAIVED. Kinder Morgan has repeatedly violated several residents and families rights to proper notification set forth within the landowner noti-

fication section of FERC regulation Landowner Notification 157.6 Requirement. Please note, as of today (1/7/16) my neighbors and I have received ZERO documentation from Kinder Morgan regarding the NED project. Please do not allow our rights to proper notification be waived because Kinder Morgan did not provide adequate time, effort, research and due diligence in researching this matter. If they do not follow the rules and requirements set forth by FERC they should be held accountable for their actions. I am requesting that my entire neighborhood be properly notified and FERC require Kinder Morgan re-file their application due to repeated requests to waive requirements set forth by FERC.

“ Based on comments filed in the Project docket with the Commission and additional research, Tennessee later determined that the housing developer had already constructed homes on and sold the 19 properties in question. Tennessee

has now identified the landowner names and addresses for the 19 properties, and the names and addresses for these landowners are included on the attached list. Tennessee notes that, as of January 5, 2016, it has sent the required notification materials regarding the Project to these landowners at the addresses listed in the attached spreadsheet.”

I have an interest in this project as an abutter to the proposed compressor station. KM has not responded to my requests, by phone and email, as to what the designation of living in the impact zone of a compressor station implies. I have put my house on the market for six months and received no offers. KM continues to show little regard for the residents of Northfield and has an abysmal safety record.

I also have an interest as a ratepayer as the costs of this project will be funded by residents utility payments, with no discernible benefit to us.

Many of my neighbors intend to board their homes and leave if the compressor is sited as planned, literally leaving us behind in a blighted neighborhood with a toxic emitting compressor station as our neighbor, compromising our health and safety.

There is no justice in putting corporate greed ahead of the health and safety of the public.

I am a homeowner in New Ipswich, NH. I am opposed to the NED pipeline. I am concerned that the construction of the pipeline will disrupt our aquifers and negatively affect my well. I am concerned that having a compressor station in this town will lower property values and make my home hard to sell. I fear that the compressor station will cause harm to nearby residents and I believe it will change the rural character of the town.

Intervenor status for Shuk Yuen and Peter Vichi. Submitted request for intervenor status yesterday within timeframe but used incorrect docket number (PF14-22).

We reside at 11 Taylor Hill Road in Montague and the proposed route for the pipeline runs through our town.

20160107-5082

Stephen Carter, Troy, NH.

Docket number CP16-21-000

I believe this project should not be approved as presented. While natural gas has a lower carbon footprint, it is still a fossil fuel and as such should be left in the ground. In addition this project has an unreasonable hazard to life, property, and the environment along the route.

But what bothers me most about this project is the lies presented to the public. It is being sold as necessary for the energy needs of the Northeast and yet the capacity is many times what that need would justify. This is clearly a project to supply natural gas to the world market and as such to make a windfall profit. While the natural gas may be a transition fuel to a carbon neutral future, I believe this gas would be better saved and used only if necessary for the transition of this country.

I believe this project should be rejected until the capacity of the project is reduced to meet the stated justifi-

ation, and then only approved if it is demonstrated that the public good justifies the risk.

Basis for Intervening:

UNITED STATES OF AMERICA BEFORE THE FEDERAL ENERGY REGULATORY COMMISSION
Tennessee Gas Pipeline Company, L.L.C.

Docket No. CP16-21-000

MOTION TO INTERVENE

We, Rachel Monette and Joel Monette hereby move to intervene in the above captioned proceeding as impacted property owners at 623 River Road, Deerfield, MA and as taxpayers of this town. I grew up in Deerfield, working for local farms and now make a living as General Counsel and Chief Compliance Officer of Nourse Farms, Inc. We eventually hope to raise children of our own in the beautiful Pioneer Valley. I have lived here for most of my life years (34 years). The church I have attended is located in Deerfield and still houses the gold door and stained glass window bearing my great grandmother's name. We love this area with every fiber of our being and will do whatever we can to protect it.

The NED pipeline is proposed to be located about one mile from our home, as the crow flies, crossing River Road north of us. We strongly object to the construction of the proposed pipeline. We are applying to be Intervenor for the following reasons:

As electric ratepayers, we would have to pay the tariffs proposed to force us to cover the costs of the pipeline. Additionally, we would have to pay the increase in energy costs that would result from exporting natural gas. There is no doubt that most of the gas in this proposed pipeline would be exported. Overseas, gas costs a lot more, and then local markets would have to compete on a global scale.

We are also effected as MA Taxpayers who have paid for all conserved land in MA (and also through our own charitable contributions). The Commonwealth of Massachusetts bought development rights, under Article 97 of our state Constitution, which states, in part, "The people shall have the right to clean air and water, freedom from excessive and unnecessary noise, and the natural, scenic, historical, and esthetic qualities of their environment...Lands and easements taken or acquired for such purposes shall not be used for other purposes." Why should land protected for long-term public health and conservation purposes be sacrificed for short-term private financial gain that is not in the best interest of this community?

My research and participation as an educated member of this community in the process has left me with the understanding that we DO NOT need this pipeline. The Massachusetts Attorney General's independent study concerning the need for additional gas pipeline capacity in New England reached the conclusion that it was not necessary. As a trained lawyer and an independent thinker all my life (much to my mother's chagrin) I'm with the MA Attorney General on this.

I wanted to live on River Road my whole life. It was always the pretty country road that I went for Sunday drives on with my grandparents on the way to Ames and Wilson's and the grocery for our weekly shopping. River Road is a rural, tertiary road. The condition of our road (my dream road) would be negatively impacted by the huge equipment brought in to build the proposed pipeline. Our rural quality of life would be terribly reduced, because of increased traffic, noise, and toxic emissions from the pipeline.

Deerfield's fire and other emergency workers are not trained or knowledgeable in case of pipeline accidents, which, in the case of Kinder Morgan, has a terrible record. Emergency workers could be subject to serious dangers, along with my neighbors who live close to the proposed pipeline routes. This is our town, we've lived here for decades, and we pay taxes here.

I am most recently concerned after watching the current situation in LA unfold, where the governor has declared a state of emergency over the leaking of gas from an underground storage field. This storage field is situated in a mountainous area more than a mile away from residential areas, but residents have complained of health effects like headaches, nausea, vomiting and trouble breathing. Gas has been spewing into the atmosphere since October at a rate so fast that the well now accounts for about a quarter of the state's total emissions of methane - an extremely potent greenhouse gas. The climate equivalent of this leak is like burning thus far almost 700 million gallons of gasoline or it's the same amount of pollution as 4.5 million cars put out every day, which is absurd. Residents have been complaining of nausea, headaches and other symptoms from the exposure thus far but the long-term effects of being exposed to the gas are unknown. So far, only 2,200 families have been relocated even though 6,500 have applied for help!

My husband Joel Monette is a fly fisherman and he is particularly concerned by the impact it would have on our waterways. The proposed pipeline would cross the Westfield River, a designated federal "Wild and Scenic" river and one which we spend a lot of time on. Wet trenching during construction, pipeline coatings and other possible pollutant leaks affect not only our community, but the entire Hilltowns region, downstream from this crossing. This crossing is part of the headwaters that lead through Worthington, Huntington, Russell, Westfield and West Springfield among other communities on its way to the Connecticut River and is a host to already endangered coldwater fish communities and the predator and raptor species that rely on them as a food source. There are countless River Guides, fly shops and businesses that rely on this being a desirable place to fish. The pipeline would negatively impact this.

I am not willing to watch our community, which my grandparents worked so hard to build, be undone, pillaged and tainted by this. This proposed pipeline would expand the delivery of non-renewable fossil fuels that will add more greenhouse gases and result in more global warming. This is destructive to both the Earth and to us. Building the proposed NED pipeline is neither convenient nor necessary.

Basis for Intervening:

I live in Northampton and work in Greenfield, on Munson Street not far up the road from Clark Fruit Orchards. This is a beautiful area, and as a member of this community, I am concerned about the environmental and economic impact of the proposed Kinder Morgan pipeline. I love the out doors and do not want natural areas, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. These lands are meant to be protected forever. In addition, the state of Massachusetts is moving towards a renewable energy base, and putting in a gas pipeline is like burying money and time-bombs (like gas leaks) into non-renewable energy sources which will deface our natural environment, and is directly contradictory to putting resources into renewable energy.

I urge Kinder-Morgan to join the citizens of Massachusetts and stop the pipeline.

20160107-5098

Marilyn Delongchamp, fitzwilliam, NH.

My last name has been changed to Stillwell. Please adjust.

I cant sleep nights knowing I am in the incineration zone!!!Our water supplies are threatened!!!!

I own two parcels of land that are directly affected. The blasting will compromise ledge and lay of the land. Wildlife will have to either cease or reroute through this lovely area.....lush with wetlands.

My dear friend is literally sleeping on top of the proposed pipe laying. She has lived there over 50 years and this would, indeed be catastrophic.

The python must go!!!!!!

The potential contamination of this area, simply because of greed, should not be thrown on us. We are a free state and want to stay that way. I don't want to die defending that freedom!

Re: Electronic Filing - Project CP16-21-000

New York State Department of Environmental Conservation

Petition for Intervention

Dear Secretary Bose:

Enclosed is the New York State Department of Environmental Conservat's petition for intervention in the above-referenced proceeding, submitted by electronic filing and distributed via U.S. Mail to persons identified on the Commission's service list for this proceeding. Please add those identified within as the Department's representatives to the Commission's official service list for this project. Thank you.

Very truly yours,

Patricia J. Desnoyer

As grounds for its Petition to Intervene, NYSDEC respectfully states:

1. NYSDEC is a duly constituted Department of the Government of the State of New York, charged by law with administrative management of the State's fish, wildlife, water and other natural resources.
2. The project is located wholly within the State of New York and impacts the natural resources and environment of the State. ,
3. As the agency of the State of New York responsible for administering the State's Environmental Conservation Law (McKinney's Consolidated Laws of New York Annotated, Volume 17 1/2), NYSDEC is the State agency most intimately involved with and responsible for analyzing environmental impacts from natural gas projects. NYSDEC's resources, expertise and familiarity with the locale of the proposed project and related resources will be of considerable assistance to the Commission during the course of the above captioned proceeding.
4. NYSDEC is the State agency charged by law to consider and, upon proper showing, to issue appropriate State permits and a water quality certification pursuant to Section 401 of the Clean Water Act [33 U.S.C. Section 1341]. NYSDEC's participation as an agency of the Executive branch of the New York State government is in the public interest, as well as in the interest of the public health, welfare and the environment.
5. No disruption to this proceeding will result from granting NYSDEC party status.
6. NYSDEC's interest is not adequately represented by any other party hereto.
7. Existing parties will not be prejudiced by, nor will they sustain any additional burden by NYSDEC be-

coming a party to this proceeding.

WHEREFORE, NYSDEC respectfully requests that the Commission grant NYSDEC intervention as a full party in this proceeding. NYSDEC does not request a hearing in this proceeding at this time; however, if a hearing is ordered, NYSDEC further requests that it be granted the right to have notice of and an opportunity to appear at all hearings in this proceeding, to produce evidence and witnesses, to cross-examine witnesses, and to be heard by counsel or other representatives for briefing and oral argument if oral argument is granted. ‘

Respectfully submitted,
New York State Department of
Environmental Conservation

Basis for Intervening:

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Northeast Direct Project of
Tennessee Gas Pipeline Company, LLC

Docket No. CP16-21-000

MOTION TO INTERVENE AND COMMENTS OF PRIVATE CITIZENS
FROM WINDSOR MA. RESIDENT JAN L. BRADLEY

Pursuant to Sections 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”) promulgated at 18 C.F.R. § 382.212 and § 385.214, I, Jan Bradley, resident of Windsor Ma., move to intervene and provide comments in the above-captioned proceeding.

Basis and Grounds for Intervention

I have been a resident of Windsor for the past 31 years. My husband and I have invested our lives into the farm that we own. We raise all that we eat but for sugar, rice, flour, oils. We raise poultry for eggs and for meat. We have dairy goats. We do this without the use of genetically modified grains or pesticides or chemical fertilizers. We feel most fortunate for this to be our way of living. I have taught high school Regents Earth Science for 27 years and A.P. Environmental Science for 10 years. Since this pipeline project was proposed; I have written my comments to FERC, spoken at a scoping meeting, written to every elected official I can think of and now, I write again. I have come to realize that FERC is an agency designed to facilitate the fossil fuel industry. I do not believe that FERC has a single care for the thousands upon thousands of American lives it has intentionally ruined. It is no exaggeration to call them crimes against humanity. My husband and I would be directly impacted by the air emissions known to come from compressor stations. The unbiased, scientific studies that now verify this are many to choose from. Our farm would be worthless to us or to anyone else. We would be forced to give up our lifestyle and move...and suffer devastating financial loss. I have every reason to be an intervenor. I also know that I speak for many. We, who oppose this project, are organized and we are determined. FERC hasn't seen the likes of this before because the many sins of fracking and pipeline infrastructures have only become apparent to the majority of Americans in the last couple years. That, and the fact that New Englanders have a different set of priorities compared to other areas of the country. For us, there is the knowledge that there is no price for safe drinking water, no price tag for replacing relatively clean air with pollution filled with methane and VOCs. We appreciate our environment, we realize how fragile and interconnected it all is and we want to protect it for generations to come. Furthermore, we know that climate change is real and it's NOW. So, regardless of what you think you are deciding, FERC, the real answer has already come from US, the residents, the caretakers for this piece of the Earth where we live. Not in a million years will we allow this to happen. NO, NADA, NEVER. Do you hear me? Wake up-- You're not listening! Our FRACKING answer is NO. Future generations will thank us and right now, many millions around the country and the planet support us. If you go ahead and make your wrong decision; you will RIP THIS COUNTRY APART because we are prepared to take this on, nationwide. We are the doctors, lawyers, teachers, nurses, environmentalists, athletes and lovers of nature. We are educated, we vote, we will not sit down, we will not shut up and we will WIN....because we have become organized across the country and because we are so many Americans saying NO. The fracking genie is long gone from the bottle. It's been replaced with benzene in the ground water and bottle water shipped in. The fossil fuel industry's lies has been exposed in the same way that the tobacco industry was and they will suffer a similar fate.

Pursuant to Commission Rules 385.214(b) and 157.10, I, Jan L. Bradley, move to intervene and file comments in the above proceeding. This intervention is timely filed.

Contact Information

Please enter my name on the official service list for Docket No. CP16-21-000. All pleadings, filings and correspondence in this proceeding should be served on the following;

Jan L. Bradley 841 route 9 Windsor 413-684-3732 frosthollowjan@gmail.com

Motion to Intervene

I seek to intervene because I am directly impacted by the proposed 41,000 hp compressor station (possibly doubling in size at the option of the developer). I would be impacted by: compressor station emissions, ground water (well water) contamination during construction and from subsequent pollution, structural damage from blasting during construction, loss of livelihood and devaluation in property values; thus diminishing the town's tax base.

I oppose this proposed project for the foregoing reasons. I request that the Commission GRANT this motion to intervene and comments.

Respectfully submitted,

Jan L. Bradley

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street, NE
Room 1A
Washington, DC 20426

Re: Tennessee Gas Pipeline Company, L.L.C.
Northeast Energy Direct Project; Docket No. CP16-21-000
Response to Accounting Data Request

Dear Ms. Bose:

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) filed with the Federal Energy Regulatory Commission an application for a certificate of public convenience and necessity (“Application”) for the proposed Northeast Energy Direct Project (“Project”) in the above-referenced docket.

On December 23, 2015, the Commission issued an Accounting Data Request to Tennessee in the above-referenced docket. Enclosed with this filing is Tennessee’s response to the Accounting Data Request, including one attachment.

In accordance with the Commission’s filing requirements, Tennessee is submitting this filing with the Commission’s Secretary through the eFiling system. Copies of this filing are being served on all parties on the official service list for the above-referenced docket. Any questions concerning this filing should be addressed to Ms. Jacquelyne Rocan at (713) 420-4544 or to Ms. Shannon Miller at (713) 420-4038.

Respectfully submitted,

TENNESSEE GAS PIPELINE COMPANY, L.L.C.
J. Curtis Moffatt
Deputy General Counsel and Vice President Gas Group Legal

Official Service List

Tennessee Gas Pipeline Company, L.L.C.
Northeast Energy Direct Project (“Project”), Docket No. CP16-21-000
December 23, 2015 Accounting Data Request

Accounting:

1. In Exhibit K, Tennessee estimates the capitalized AFUDC as \$189,786,000 for the Supply Path of the Northeast Energy Direct project, and \$341,430,000 for the Market Path. Please provide the following in Microsoft Excel. Also, the worksheets and/or files should retain all notes, plus any formulas supporting the calculation:

- a. The worksheet computations on a monthly basis to support the amount of AFUDC. Identify the debt/equity AFUDC amounts.
- b. The computation and methodology to support the debt/equity cost rates used to derive the AFUDC rate.

Response:

a. and b.

Please refer to Attachment 1 to this response, which includes Excel spreadsheet versions of the information that was provided in Exhibit K, pages 6 and 7, to Tennessee’s certificate application filed on November 20, 2015.

As noted on pages 6 and 7 of Exhibit K and the attached Excel spreadsheets, the AFUDC amounts are based on the debt and equity cost rates and capital structure reported on page 218a of Tennessee’s 2014 Form 2. The cost of debt and the debt-equity capital structure reported on page 218a of Tennessee’s 2014 Form 2 reflect actual costs as of year-end 2013. The cost of equity is based on the terms of the rate settlement in Docket No. RP95-112, which was settled on a black-box basis, and was re-affirmed in Tennessee’s last rate settlement in Docket No. RP15-990. Please also refer to the footnotes on page 218a of Tennessee’s 2014 Form 2.

Basis for Intervening:

On a micro level, I am an electric rate payer who will see my electric utility rates go up related to cost recovery from the NED project. I do not believe ratepayers should shoulder these costs.

On a macro level, I am an outdoor enthusiast and significant numbers of endangered species are at risk liv-

ing in the corridors where the NED pipeline is slated to be built. Additionally fragile wetlands and other priceless natural treasures are at risk on land that I routinely hike and enjoy.

Finally, as a citizen of the state of MA, this project runs completely counter to the MA Global Warming/Climate Change bill passed by my State Legislature in 2008. Our Senate President, Stanley Rosenberg, has written clearly to FERC that this project is counter to the direction that my state has set for itself in minimizing its reliance on fossil fuels and maximizing the development of alternatives forms of energy. As a citizen of MA, I want the clear will of MA citizens to be heard and respected.

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	rkeplin@gmail.com	

Basis for Intervening:

I am worried that the NED pipeline is not moving in the right direction towards a cleaner future. I am concerned that the construction of the compressor station less than a half mile from my house, will cause both short and long term health issues for my newborn son, wife and myself. I am worried about breathing in the toxic fumes that the compressor station will put into the air during a burn off cycle. I am also worried that a catastrophe such as a natural gas leak will occur - similar to the one that is happening in California. I am concerned that my well water will be compromised. I am concerned for the health of the children of nearby schools.

If Kinder Morgan constructs this pipeline as their stock depreciates and debt soars, I am worried that the necessary precautions will be overlooked. I am concerned about all the residents who are going to lose their land and have depreciated house values all for a pipeline that is not needed and is going against the motion of a cleaner future.

Motion to Intervene of Double Edge Theatre

From: Hayley Wood hwood@doubleedgetheatre.org

Subject: Pipeline letter

Date: December 31,2015 at 1 :53 PM

To: Carroll Durand cdurand@doubleedgetheatre.org

Here you go. May the force be with us.

--Hayley

Pipeline intervener letter.doc

double edge theatre . the farm

Double Edge Theatre is an internationally renowned theatre company on 105 acres of agriculturally protected farm land in Ashfield. We are a company of about 20 who all live in Ashfield. Each year we teach an average of 100 students from around the world and the US. We also produce performances that tour nationally and internationally. Our summer spectacle takes place on sites all around the farm and plays to an audience of thousands every year.

We are moving as quickly as possible to greening the farm while growing more and more organic food for the company. It is our hope to be fully green by 2018, and to have enough organic vegetables and fruit to provide sustenance for our company and the larger community.

We strongly oppose the proposed KM pipeline through our town. It is antithetical to our life devoted to saving natural resources and a beautiful habitat. Pipelines carrying fracked gas through productive farmland for the purpose of export are dangerous besides being unnecessary. We feel that we would be endangering all the people who come to learn and to experience our unique theatre if the pipeline is allowed to intrude on our very existence.

No pipeline through the hills and fields of Ashfield. No pipeline of tracked gas. NO PIPELINE!

948 Conway Road . Ashfield, MA 01330

Municipal Coalition Against the Pipeline - MA	jproujan@gmail.com	

Municipal Coalition Against the Pipeline - MA jproujan@gmail.com

Basis for Intervening:

The Municipal Coalition Against the Pipeline (“MCAP”) hereby moves to intervene in the above-captioned proceeding, pursuant to Rule 214 of the Federal Energy Regulatory Commission (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.214.

All communications concerning this proceeding should be served upon following individuals:

[JED? JOHN? BRIAN? Name, title, address, email, phone]

Movant’s Position

MCAP is a coalition of Massachusetts municipal governments working together to prevent construction of the Northeast Energy Direct pipeline project (“NED” or the “Project”), which is being proposed by Kinder Morgan, Inc. through its subsidiary Tennessee Gas Pipeline Company, LLC (the “Company”). MCAP files this motion in opposition to the Company’s application for a certificate of public convenience and necessity filed with the Commission for the NED project (the “Application”).

MCAP’s Interest That May Be Impacted by the Project

MCAP includes municipalities that would be directly impacted by the proposed NED route; municipalities that would be directly impacted by alternate routes presented by the Company; municipalities whose watersheds would be impacted by the Project; and other municipalities that are opposed to the Project because it would be a blight upon our region, an unjustifiable energy option for our Commonwealth, and would run counter to our state energy and land use policies.

As further set forth below, MCAP's intervention is necessary to enable the pipeline-affected towns to protect their public and private recreational, farm and natural resources, and to defend their taxpaying residents, businesses, and associated properties from encroachment.

Economic and Cultural Concerns

MCAP is concerned about the impacts that the Project would have on local businesses, public ways, agricultural resources, and cultural resources. In addition to concerns about impacts on local tax bases and community character, MCAP notes that tariff adjustments for utilities that subscribe for capacity on NED would ultimately be reflected in the utility bills of MCAP members and their residents and local businesses. We already see that property values are dropping and that property sales in affected towns has been greatly diminished.

Furthermore, MCAP includes municipalities in the service area of the Berkshire Gas Company ("Berkshire Gas"). Ratepayers and potential ratepayers of Berkshire have been subjected to a moratorium on any new or expanded gas service in this gas distribution company's eastern division, which includes MCAP municipalities. Berkshire Gas claims, directly on its customers' bills, that the moratorium will be in place until the NED pipeline "is permitted and built". Many question the legitimacy of the moratorium. There is convincing evidence that, even if the moratorium is based on actual capacity concerns, Berkshire Gas is foregoing opportunities to resolve the moratorium with more expeditious supply options and system modifications. The result is that MCAP members and their economic development plans are being subjugated to the investment interests of Berkshire Gas' parent company, UIL Holdings Corporation, which has an ownership interest in the NED project, and their corporate parent Iberdrola S.A., which has an interest in shipping liquefied natural gas overseas.

Environmental Concerns

MCAP's environmental concerns include: the impact to the flora, fauna, soils and water, including the impact on the quality and flow of subterranean water; the impact on public health; noise pollution (audible and sub-audible) ; and the integrity of the proposed pipeline given the proximity to existing power lines.

Impacted land includes parcels that are designated as permanently protected and parcels used for recreation. There are multiple proposed Horizontal Directional Drilling (HDD) operations and other river and stream crossings that would negatively impact the forests, soils and waters. These water ways include habitat for rare and/or endangered species as well as watersheds that are part of a Salmon restoration project, all of which could be effected by this drilling.

Three large compressor stations are proposed for Massachusetts. The siting of one of these compressor stations is planned for a member town and the potential impact of this is magnitudes greater. There is grave concern by all, residents and non-residents alike, that dangers are inherent in this plan, including the release of particulate matter, unknown chemicals from the fracking of the gas, methane and other toxins in any natural gas and the dangers of highly pressurized gases

Most homes along the proposed route have private wells and septic systems. The specific geology of much of the proposed route across Massachusetts is a grave concern with respect to any proposed drilling or blasting as part of the proposed NED project as the geology of the region is particularly unsuited to the placement of a pipeline and could negatively impact the underlying aquifer. There is the potential of these lines to allow the migration of contaminated waters to spread.

Lack of Public Need, Minimal Benefit

Finally, questions persist regarding the need for the NED pipeline and the gas it would carry. There is

no direct benefit to residents of the state from the proposed Project, though the adverse environmental and economic impacts are clear. For any lack of capacity there have been numerous alternatives presented that could provide for that need, all of which would be less harmful to the environment and to the economy of the region.

Respectfully submitted,

Jed Proujansky,

Selectman, Town of Northfield, MA, and,

on behalf of the Municipal Coalition Against the Pipeline and its current members: the towns of Ashfield, Conway, Deerfield, Erving, Gill, Leverett, Montague, Northfield, New Salem, Orange, Warwick, and Wendell, Massachusetts

Basis for Intervening:

I am a mother and a grandmother seriously concerned about the impact of climate change on my children and grandchildren. More gas infrastructure is not needed according to a report from the Atty General's Office, and it certainly not on the path to reducing our carbon and methane emissions. I oppose this pipeline.

20160107-5173

Christine O'Keefe, Dracut, MA.

Christine O'Keefe, Dracut, MA

I request Kinder Morgan- Tennessee Gas Pipeline Company LLC ("Tennessee") re-file their application. As a land owner of property within one-half mile, I was not notified of the proposed Market Tail Compressor Station. I feel me and my neighbors (also not notified) deserve the right to be properly informed so we have adequate time to seek information and evaluate our [options] concerns. I also want to underscore that I have lived in Dracut with my family for over three years paying my utilities, taxes and mortgage. Tennessee should have put more effort into finding out land ownership as it is all public record. I strongly feel they should not be given a "pass" because the system they used did not properly generate the information they sought. We still have not received any notification. Please do not allow our rights of proper notification to be waived.

20160107-5176

UNITED STATES FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.,)
Applicant, Northeast Energy Direct Project.)

Docket No. CPI6-21-000

**MOTION TO INTERVENE BY
MOUNT GRACE LAND CONSERVATION TRUST, INC.**

Pursuant to Section 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (the "Commission"), 18 C.F.R. § 385.214, Mount Grace Land Conservation Trust, Inc. ("Mount

Grace”) respectfully moves to intervene in the above- captioned proceeding.

Mount Grace is a non-profit corporation organized and existing under the laws of the Commonwealth of Massachusetts, with a principal address at 1461 Old Keene Road, Athol, Massachusetts 01331. The mission of Mount Grace is to protect significant land and encourage land stewardship for the benefit of the environment, the economy, and future generations. A leader in Massachusetts land conservation, Mount Grace has conserved nearly 30,000 acres since 1986, including more than 30 family farms, 10 community forests, and 250 distinct public lands subject to Article 97 of the Massachusetts Constitution. Mount Grace owns 1600 acres of land for the benefit of the public, and manages and monitors 77 conservation restrictions on privately and publicly owned land. Since 2006, Mount Grace has raised more money than any other Massachusetts land trust for landscape scale conservation projects: \$17.5 million in USDA Forest Legacy funding and \$2.8 million in funding from the Massachusetts Executive Office of Environmental Affairs, using for those projects a multi-landowner, multi-partner approach to protect more than 11,000 acres. Since 2010, via its statewide MassLIFT-AmeriCorps program, Mount Grace sends forth 23 AmeriCorps members each year to serve at other land trusts operating in more than 200 Massachusetts communities from the Berkshire Mountains to Massachusetts Bay.

Thus, Mount Grace, by its mission and by its actual conduct, has both direct conservation land ownership and management interests and representative interests in the conservation and stewardship of Massachusetts’ farmlands, forests, and other natural lands, and in the protection of those properties against, among other sources of damage, such commercial development as is represented by the Applicant’s proposed Northeast Energy Direct (“NED”) project and pipeline, which may be directly affected by the outcome of the above-captioned proceeding. The participation of Mount Grace in this proceeding is in the public interest.

Service Address of Mount Grace

All documents required to be served upon Mount Grace in this proceeding should be addressed as follows:

Mount Grace Land Conservation Trust, Inc.
c/o Leigh Youngblood, Executive Director
1461 Old Keene Road
Athol, MA 01331
Email address: youngblood@mountgrace.org

Position of Mount Grace

It is the position of Mount Grace in this proceeding that no certificate of public convenience and necessity should be issued in response to the application of November 20,2015. Based on the studies of the Massachusetts Attorney General and others, in the balancing analysis required of the Commission any need for additional gas pipeline capacity is far offset by the extensive adverse effects on the interests of landowners and surrounding communities identified below and by other parties to this proceeding. The Applicant is now seeking approval for less than one-third (0.7 billion cubic feet per day) of the capacity described in the Commission’s Notice of Intent issued for the NED on June 30, 2015 (2.2 billion cubic feet per day) while keeping the footprint of the project relatively unchanged. In addition, the negative environmental impacts on all scales, from the most local to the planetary, of this massive increase to the region’s carbon energy infrastructure render this project impossible to certify under existing United States and Massachusetts law.

Interests of Mount Grace

Due to its land conservation and land stewardship work and responsibilities in 23 towns in north central Massachusetts, and its broader state-wide activities, Mount Grace has direct interests and represents additional direct interests that will be affected by the outcome of this proceeding. These range from direct ownership of protected conservation land on which the pipeline is to be built to its obligation to dues-paying members and to substantial donors to protect Massachusetts Constitutional and statutory provisions from evisceration through unnecessary and unwarranted claims of federal preemption and use of federal eminent

domain and, of even greater importance to the continuation of land conservation in Massachusetts, from the loss of citizen confidence in the reliability and enforceability of instruments of land protection. Article 97 of the Massachusetts Constitution with respect to public lands, and legal principles of charitable trusts, restricted donations, and contractual conservation restrictions with respect to private lands, together are the bedrock of land conservation in this state. Under these principles Mount Grace is obligated to protect many existing conservation investments made in the past; conversely, Mount Grace must protect these principles if future conservation investments are to be possible.

I. Conservation Land Owner

Specifically, Mount Grace is the owner of a 50-acre parcel on Poplar Mountain in Erving, Massachusetts (parcel 79 on the Erving Property (tax) Map No.4), immediately north of the Erving Town Forest on Old State Road. This property was donated to Mount Grace for conservation purposes and ultimately will be granted by Mount Grace to Erving and added to its Town Forest. This mountain top land is heavily forested and is ranked at the highest level of well-recognized Habitat Block Analysis characteristics (score 18-23: Tire 1 Hot Spot) used by Mount Grace to judge the importance of properties for land conservation. The interest of Mount Grace in protecting the conservation values of this unique property, and implementation of its duty to do so, would be affected adversely by the installation of the proposed NED pipeline across the land, including by the destructive consequences of the construction process, the effects of blasting and erosion on steep terrain, the installation of access roads, and the risks of gas leakages, fires, or explosions associated with high pressure gas lines. These interests will be directly affected by the outcome of this proceeding, and thus Mount Grace, the only entity responsible for this property, must be a party to protect these interests.

Mount Grace is also the direct owner of the Charles A. Morse, Sf. Memorial Forest, 57 acres of land at milestone 28 in Section H of the NED pipeline map, on the northern border of the Town of Warwick. This property was donated to Mount Grace in 1996 for conservation purposes and contains fragile steep slopes and extensive wetland communities, including a Black Gum Swamp. Under the plan as filed, the pipeline does not cross this conservation property, but access roads will, with the damage to conservation values that all road building brings.

II. Conservation Land Manager and Monitor

Other interests for which Mount Grace is directly responsible are those arising from ownership of conservation restrictions on land owned by others and from management agreements also applying to land owned by others along the proposed pipeline. In these circumstances, Mount Grace has the responsibility to monitor and insure that the conservation land is maintained in accordance with the requirements imposed by the conservation provisions designed to protect the property; in short, Mount Grace is made responsible contractually and by state law for enforcement of the applicable conservation restrictions. And again, no other entity has this responsibility in these circumstances.

One example is the property owned by Samuel and Barbara Richardson on which there is a conservation restriction owned by the Town of Northfield. Mount Grace facilitated the protection of these 38 acres and now, under a contractual arrangement with the Town, is responsible for monitoring the land to insure it is maintained as required by the conservation restriction document recorded at the Franklin County Registry of Deeds at Book 6034, Page 179. Mount Grace is uniquely obligated to protect the conservation values of this land and thus must participate in this proceeding because of the potential adverse effects the proposed pipeline can have on the property.

Similarly, Mount Grace has compliance, stewardship, and/or monitoring responsibilities and obligations with regard to other properties affected by the proposed pipeline:

- (a) Land owned in Northfield by the Northfield Mount Hennon School, on which Mount Grace holds conservation restrictions and therefore is obligated to defend the property against any use not permitted by the conservation restriction document recorded at the Franklin County Registry of Deeds at Book

(b) Mount Grace also has contractual monitoring and stewardship obligations on Town owned land managed as the Northfield Town Forest and protected by a USFS Forest Legacy deed restriction recorded at the Franklin County Registry of Deeds at Book 6034, Page 207.

III. Facilitator of Conservation Land

In addition to its interests in property owned directly or for which it has responsibilities, Mount Grace has continuing interests in land for which it facilitated conservation protections and which may be affected adversely by the proposed pipeline. For instance, Mount Grace obtained USDA Forest Legacy funding, which brings with it various restrictions inconsistent with pipeline construction, for the above-described Northfield Town Forest and Richardson CR property, and for land acquired by the Commonwealth that is now part of the Northfield State Forest (Franklin County Registry of Deeds Book 6144, Page 266). The proposed NED pipeline would cross each of these lands, the latter two of which also contain well-used sections of the New England National Scenic Trail. In addition, Mount Grace helped obtain state Self-Help Program (now known as the L.A.N.D. Program) conservation funding, which brings with it various restrictions inconsistent with pipeline construction, for the acquisition of the Erving Town Forest property, adjacent Old State Road Town of Erving CR, and Northfield's Brush Mountain Conservation Area.

IV. Charitable Trust and Public Trust

Mount Grace acquired, and subsequently conveyed explicitly for conservation purposes, the Brush Mountain Conservation Area, the Northfield Town Forest, and a 117-acre property conveyed by Northfield Mount Hermon School for conservation purposes that is now a part of the Northfield State Forest, each of which would be directly impacted by the NED pipeline. And again, Mount Grace pre-acquired an Agricultural Preservation Restriction (APR) on property then owned by John R. Bitzer in Montague, Massachusetts, and subsequently transferred that APR to the Massachusetts Department of Agricultural Resources under its APR program. The NED pipeline originally was planned to go through this valuable, organically managed agricultural land but was, at least for the moment, moved just to the north, but the land remains within the explosion impact radius of the NED. In all of these cases Mount Grace actively sought and obtained charitable funding from members and donors specifically directed to these projects with the understanding and expectation that the land would be protected from residential, commercial, and industrial use in perpetuity, and that environmental and agricultural values would be maintained. If these expectations are undermined by the NED project, the ability of Mount Grace to develop similar projects in the future will be severely and adversely affected by loss of public trust in the land conservation process in Massachusetts.

V. Ongoing Public Conservation Needs and Objectives

In the 23 towns served by Mount Grace, 150,000 more acres of forest and farmland have been prioritized by the Commonwealth and others for conservation. Mount Grace's mission is to continue protecting land in these towns, and thus it has an interest not only in the properties of past conservation projects but also in those of the future. As there is no other entity or organization focused specifically on this potential for further conservation in its service area, Mount Grace must become a party here to help insure the future of land conservation is not undermined by a huge infrastructure project that is not necessary now and that contradicts the direction energy policy and development must increasingly move in the immediate future to save the next human generation from extreme adversity.

In all of the above areas of interest, a wide variety of impacts to the land is at issue. Property will be affected by the clearing of land and the widening of existing rights of way, by construction and maintenance of access roads, by blasting, by drilling under rivers and streams, by erosion resulting from the construction process and permanent changes to soil structures, by gas leakage and blow-offs, by degradation and/or pollution of aquifers, by noise and light pollution caused by compressor stations, and by damage to the natural landscape and scenery of the entire area.

VI. Excessive Use of Eminent Domain

Finally, the Commission's decision in this matter is governed in part by the extent to which the proposed project would require excessive use of eminent domain proceedings by the Applicant to obtain necessary rights of way for the NED pipeline on both public and private land. Neither the Commonwealth nor Municipalities nor private land owners nor holders of conservation restrictions are free to negotiate pipeline easements that violate Article 97 of the Massachusetts Constitution, the laws of charitable trusts, or specific conservation restrictions: the alleged federal right of eminent domain will have to be imposed in scores of instances of state, municipal, and charitable interests. In addition, at least 50 other affected private landowners have advised Mount Grace that they also oppose selling easements to the Applicant, and accordingly acquisition of rights of way across many private properties will require exercise of eminent domain powers and procedures as well.

The Public Interest

At every level, therefore, from the most specific to the most encompassing, Mount Grace has interests that may be directly adversely affected by the subject project and the outcome of the above-captioned proceeding and that can be adequately expressed, represented, and protected only by its intervention as a party in this proceeding. Because many of these interests affect the public welfare and can be represented by no other party, the participation of Mount Grace in this proceeding is in the public interest.

WHEREFORE, Mount Grace hereby moves, pursuant to Rule 214 of the Commission's rules, to intervene in and thereby be made a party to the above captioned proceeding.

Respectfully submitted,

MOUNT GRACE LAND CONSERVATION TRUST, INC.

By Leigh Youngblood

---------------------	--------------------------------	----------------------------------

Individual	wendymaebe@yahoo.com	
------------	----------------------	--

Basis for Intervening:

I am against allowing the proposed pipeline anywhere (but especially in New Ipswich, NH) for the following reasons:

(1) Production of non-renewable fossil fuel in the form of fracked natural gas is bad enough. The construction of a delivery system taking the fuel from middle America to the east coast so that it can be EXPORTED overseas is unthinkable. Any natural gas infrastructure incidents that might occur could require area evacuation and might result in destruction of/damage to property and lives.

Aside from the owners of the companies which will use this export delivery system, what benefit will be derived by any other US entity?

(2) Proximity to compressor station will have adverse affect on environment and consequently the health and welfare for area humans, animals and vegetation as well.

(A) The air quality will decline to due the turbines producing polluted exhaust. Because of the migratory nature of air, these hazardous toxins will be carried to far reaching and unexpected places, potentially placing untold lives at risk for rash, infection, breathing problems and perhaps even death.

(B) Chemicals & toxins from polluted exhaust will contaminate the ground soil in which food (& feed) for human and animal consumption is being cultivated.

(C) Water quality could be rendered unpotable due to both air pollution and titrated release of chemicals and toxins directly into nearby aquifers.

(D) Residences and schools within miles of the compressor stations will be attacked by continuous noise. Unrelenting sound significantly increases stress and significantly decreases the ability to sleep, thereby dramatically compromising mental health.

(3) It is unreasonable and unfair that the residents of New Hampshire should be burdened with the costs of the pipeline and its compressors when they will never reap any of the financial benefits. New Ipswich residents can expect to be assessed \$600 per household for the next 20 years as a “share of costs and expenses”. This is financially injurious, especially for fixed & low income families so often located in rural areas.

Town of Winchester	swalker@winchester.nh.gov	
--------------------	---------------------------	--

Basis for Intervening:

Town of Winchester, New Hampshire

Basis for Intervening:

As the Town Administrator for the Town of Winchester, New Hampshire, I have been authorized by the Board of Selectmen to file an intervention on behalf of the Town and its residents. The Town is extremely concerned about the impacts the construction of this pipeline will have on the community.

The Northeast Energy Direct Project (NED) will involve the construction of approximately 7 miles of pipeline through the Town of Winchester. The plans filed by Tennessee Gas Pipeline Company with FERC will impact many private homes, it is slated to cross a substantial stratified drift aquifer, the source of existing and future town drinking water wells; eminent domain will be used to supersede the deeded conservation easement on town owned public property; land owners may be forced to sacrifice their land not only for the benefit of the public, but also for the considerable monetary gain of private corporations; and the town will be obligated to spend conservation funds to defend its conservation easement on a historic place.

The TPG filing with FERC indicates that New Hampshire ratepayers may be required to pay a utility bill tariff effectively underwriting the cost to construct this pipeline. There have been no guarantees that an increase in natural gas will lower energy costs or that mitigation funds will be available to the Town directly. We feel there is no economic benefit to constructing a natural gas pipeline in Southern New Hampshire. The minimal demand for additional natural gas needed can be met by expanding existing lines. The State of NH has energy plans prepared and strive to use alternate energy sources that include hydropower, solar and proposals to construct windmill farms.

The Town concludes the estimated tax benefits and speculative local business prospects from the proposed gas pipeline will be inadequate to offset loss of property value, forest destruction and disturbance of our aquifer.

Basis for Intervening:

I am a resident of Ashfield, MA. I oppose the creation of the "NED" Kinder Morgan pipeline. This project will degrade the environment, contribute to climate change, lower our property values, endanger people, flora, and fauna. It's purpose is primarily for export and for private profit, yet it will ruin our pristine environment here in Western Massachusetts. Massachusetts does not need this pipeline. We can and must face our energy needs by conservation and renewable energy.

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	barryannette@comcast.net	

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R. § 385.214(b), to intervene in the above-captioned proceeding. I seek to intervene in opposition to the Northeast Energy Direct Project (the "Project" or the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan").

Communications to me concerning this proceeding should be directed as follows.

Barry Pfannebecker
8 Baker Lane
South Deerfield, MA 01373
(413) 665-7950
barryannette@comcast.net

My interests "which may be directly affected by the outcome of the proceeding" pursuant to 18 C.F.R. §

214(b)(2)(ii) include:

- My interest as an electric ratepayer, inasmuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers. As explained in depth by others on this docket (and on the pre-filing docket PF14-22), Kinder Morgan is telling the Commission that New England needs a significant supply of gas to meet its energy requirements. In contrast, in a report to you, the Massachusetts Attorney General has concluded that this type of approach to New England's energy needs is significantly overdefined. The massive overbuild embodied in this proposal is very likely to lead to higher energy costs for New England's ratepayers – either because the excess capacity contracted for by our utilities would go unused, or because capacity would be used for markets overseas, driving up domestic energy prices.
- My interest as a resident of South Deerfield is to object to the Company's route that would cross a federally designated Wild & Scenic Westfield River with its pipeline in addition to State conservation lands protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution. They have rejected alternate routes that would spare these precious regions because of "cost". This is very misleading since a proposed \$5 billion pipeline would not suffer any meaningful cost override attributable to an additional 50 or so miles of pipe.

The public record indicates that Kinder Morgan's approach is to do whatever it takes to get pipelines approved and installed as quickly as possible, cut corners on construction and maintenance, and simply pay the fines later. Not only do their documents show a significant lack of respect for environmental concerns, but they intermingle heavy reliance of variance procedures whenever a problem occurs that was not anticipated, of which there will be many since they have not completed any thorough assessment of the environmental regions they wish to cross.

Kinder Morgan continues to show disregard and disrespect for the people and natural resources of our region. The purported benefits of this pipeline are not worth the risks and impacts to our communities to supply gas that is not required now or in the projected future (e.g., the Mass AG letter noted above).

20160107-5200

Maggie Hassen is my Governor. The Kinder Morgan NED pipeline is proposed to go through Winchester, New Hampshire, where I reside and am a ratepayer.

Maggie Hassen, protect the rights of your citizens in New Hampshire! Support the Stop Building Pipelines movement and Stand for the future of New Hampshire. That is my basis for intervening.

Individual	patriciaborke1452176649@compract.com	
------------	--------------------------------------	--

Basis for Intervening:

Fracking typically injects underground millions of gallons of water for one gas well, to force cracks into the shale rock, to extract the gas. To produce this fracking fluid, the water is mixed with a variety of chemicals, some of them toxic or carcinogenic. These chemicals get into the gas produced.

20160107-5211

Basis for Intervening:

I am intervening because I reside in Winchester, NH, where the NED pipeline is proposed. In addition, as an electric ratepayer to Eversource, I am concerned about ratepayer funding for the proposed pipeline. Also I am concerned about the potential for the pipeline to damage the ground water in the high-transmissivity, stratified-drift aquifer supplying town drinking water. In addition I am a member of the Winchester Conservation Commission. As a member of that commission I was the person primarily responsible for protecting and preserving the Pulpit Falls and Pulpit Rock area of Winchester. I am concerned about the potential for the proposed pipeline route to diminish this historic, natural area conserved to remain in its' natural state forever.

Basis for Intervening:

Fracked Gas Pipelines and other infrastructure leak methane into the atmosphere, gas that is up to 80 times more destructive to our climate than CO2. The proposed Kinder Morgan / Tennessee Gas pipeline project will only worsen an already critical threat to me and all my friends and family, not to mention all lifeforms on the planet. The Climate Crisis is real and continued expansion of fossil fuel infrastructure is a real danger.

Basis for Intervening:

Our property at 227 Beldingville Rd, Ashfield, is on the proposed route for the NED pipeline. When we bought this land more than 20 years ago, we agreed to a covenant in the title deed, drafted by Franklin Land Trust, to prevent any new permanent structure of any kind being built on the 11-acre site. No outside private entity has the right to violate this provision which we had agreed to in the interest of conservation and the preservation of open space in our rural setting.

20160107-5219

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
North East Direct Pipeline Project)	

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I/we, name here, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16- 21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Joseph Cosgrove, Environmental Program Manager
Merrimack Valley Planning Commission
160 Main Street
Haverhill, MA 01830
e-mail: jcosgrove@mvpc.org
phone: 978-374-0519

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact communities I serve as regional planning official.

I am on staff of the regional planning agency, Merrimack Valley Planning Commission (MVPC), which serves 15 communities in northeastern Massachusetts. The proposed routing of the pipeline lateral is through two of our member communities—Andover, MA and Methuen, MA. I and my organization MVPC have important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, I, Joseph Cosgrove of Merrimack Valley Planning Commission, respectfully requests that the Commission to grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 7th day of January, 2016.

Joseph M. Cosgrove
Environmental Program Manager
Merrimack Valley Planning Commission
160 Main Street
Haverhill, MA 01830

Room 1A
Washington, DC 20426

Re: Tennessee Gas Pipeline Company, L.L.C.
Northeast Energy Direct Project; Docket No. CP16-21-000
Response to Accounting Data Request – Supplement with Affidavit

Dear Ms. Bose:

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) filed with the Federal Energy Regulatory Commission an application for a certificate of public convenience and necessity (“Application”) for the proposed Northeast Energy Direct Project (“Project”) in the above-referenced docket.

On December 23, 2015, the Commission issued an Accounting Data Request to Tennessee in the above-referenced docket. Tennessee submitted a response to the Accounting Data Request on January 7, 2016, and the filing was accepted by the Commission’s Secretary and assigned accession number 201601075123. However, Tennessee failed to attach the required affidavit signed by the respondent to the data response to the filing. Therefore, as a supplement to Tennessee’s response filed on January 7, 2016 the completed affidavit is attached to this filing.

In accordance with the Commission’s filing requirements, Tennessee is submitting this filing with the Commission’s Secretary through the eFiling system. Copies of this filing are being served on all parties on the official service list for the above-referenced docket. Any questions concerning this filing should be addressed to Ms. Jacquelyne Rocan at (713) 420-4544 or to Ms. Shannon Miller at (713) 420-4038.

Respectfully submitted,

TENNESSEE GAS PIPELINE COMPANY, L.L.C.

20160107-5237

Motion to Intervene of Robert J. Barba

As a land- and homeowner in South Ashfield, MA, though not in direct proximity to the proposed path of the pipeline, both the property value of my home and land and quality of life in this community would be significantly and negatively impacted by the pipeline.

Furthermore, since 2011, I have served as a volunteer vernal pool monitor for the Deerfield River Watershed Association in the Bear Swamp Reservation in Ashfield, which lies directly in the path of the pipeline. The pool that my partner and I monitor holds not only the usual indicator species (Spotted Salamander, Wood Frog, and others) but also each year since we have been involved a species of special concern, the Jefferson Salamander. The Bear Swamp Reservation itself is a gem of a property, one where we ski, snowshoe and hike regularly, and the desecration of such a property (let alone the multitude of such properties this project would devastate) is unacceptable for the short-term benefits, if any, of the proposed pipeline.

As a ratepayer and customer of Eversource, I reject the proposed model for financing the project as well. New England Governors had proposed a tariff or tax on electricity ratepayers to pay for pipeline construction. Former Governor Patrick backed out, but a leading pro-pipeline energy lobbyist, Anthony Buxton, told the Springfield Republican he hopes new Mass. Governor Charlie Baker and the other Governors will revive

talks about the ratepayer tariff proposal. Under such a plan, the New England rate-paying public could be taxed to help build a pipeline privately owned by the subsidiary of a \$125-billion company, Kinder Morgan. As a resident of one of the most beautiful places in the eastern U.S., I object fiercely to the environmental impacts of the proposed project, both in the construction and operation of the pipeline and also those of the extraction of the fracked gas from the Marcellus Shale deposit. Fracking typically injects underground millions of gallons of water for one gas well, to force cracks into the shale rock, to extract the gas. To produce this fracking fluid, the water is mixed with a variety of chemicals, some of them toxic or carcinogenic. These chemicals get into the gas produced. On a recent trip to my home state of Ohio we drove through a part of West Virginia that has been sacrificed to the gas industry. It was a hellscape of brine trucks, muddy roads hacked into the mountains, fracking pads and their attendant flaming stacks, and everywhere the same poverty we've always witnessed when driving this stretch of road. Someone is getting rich, I suspect, but not the residents of West Virginia.

Of course, my most significant objection is from a perspective of climate change. Recent agreements in Paris mean nothing if in the months following the agreements we proceed to build an unneeded, unwanted, and unstable pipeline for the enrichment of the owners and shareholders of Kinder-Morgan. Dangerous climate change is heavily driven by carbon dioxide (CO₂) and other heat-trapping greenhouse gases from fossil fuels: coal, oil and natural gas. If built, the TGP gas pipeline would likely be in service 50 years or more, helping lock in more fossil fuel burning for over half a century. Natural gas is mostly methane, a powerful greenhouse gas. Natural gas has climate change impacts both as methane, when it leaks from pipelines and drilling sites, and when it is burned and turns to CO₂. Pound for pound, methane has more than 20 times the greenhouse gas impact of CO₂ over a 100-year period. Numerous studies have shown that gas drilling sites and gas pipelines leak methane.

For these reasons, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

888 First Street, NE, Room 1A
Washington, DC 20426

Reference: Docket No. CP16-21-000- Comments from Dracut Board of Selectmen, Dracut, Massachusetts

Dear Secretary Bose,

The Town of Dracut, Massachusetts is identified as a proposed site for a natural gas compressor station, two new metering stations, three new laterals in addition to a main line, alongside an already existing gas pipeline infrastructure.

Therefore we request the following concerns be taken into serious consideration:

- (1) **Public Safety:** How will the dense population, especially children, in East Dracut and nearby places of assembly (St. Francis Church, Campbell Elementary School), and first response station (Jones Avenue Fire Station) be affected in the event of a catastrophic event caused by operator error, system failure, or breach of the system due to a terrorist attack?

Note: The Joseph A. Campbell Elementary School, 1021 Methuen Street, Dracut, MA 01826 accommodates approximately 500 children (including staff) from September through June. Summer programs are also offered.

- (2) **Agricultural Impact:** Determine protections for Dracut farms that are engaged in major food production operations throughout Merrimack Valley and beyond, and committed to natural growing practices for sustainability. Examples: The New Entry
- (3) **Sustainable Farming** Project/Dracut Land Trust, Corey Pride Farm, Ogonowski Farm, Brox Farm, Dumaresq Farm, and Saja Farm.

Keeping free from contamination:

- a. Waterways, aquifers, artesian wells, vernal pools, and wetlands which traverse these lands.
- b. Above ground crops subject to airborne particulates.

- (4) **Accountability:** Who will monitor Kinder Morgan, the for-profit, privatized corporation which professes to adhere to any and all agency regulations?
- (5) **Response Time:** What guarantee is in place to assure Kinder Morgan will respond in a timely manner to residents' complaints of gas odor, excessive noise levels, or evidence of health effects not previously experienced?
- (6) **Environmental Changes:** How will this proposed infrastructure impact wildlife corridors, wild life sanctuaries, and wildlife ecosystems? How can we be assured Kinder Morgan will not permanently disrupt these natural habitats? Which agencies will examine the long term effect of changes to these ecosystems? Impact on rare species?
- (7) **Long Term Undetermined Health Effects:** How will the proposed infrastructure impact the general population as a whole? What is the risk of these effects on the entire Merrimack Valley? What is the long term risk to waterways, tributaries, brooks, and the like which seep into underground aquifers and artesian well systems?

- (8) **Emissions:** We request baseline studies be performed prior to any approval of a project this type to assure no person/persons, pregnant women, or gestating animals (including wildlife) are subject to exposure of emissions that would contribute to undue upper respiratory distress, cardiovascular stress, or other adverse long term health effects, including those conditions aggravated by fugitive emissions and VOCs (volatile organic chemicals).

Note: We recommend that baseline testing be conducted by a third party company with no ties to Kinder Morgan.

- (9) **Examination of Contaminants at 970 Broadway Road, Dracut:**

- a. We request any and all findings from studies performed seeking information about pre-existing contamination to the proposed compressor site location (970 Broadway Road, Dracut, MA 01826) be disclosed to the Dracut Board of Health and town residents prior to construction.
- b. We request the parameters of testing include the testing of all contaminants which may be present on the proposed install site.
- c. We request that testing for contaminants not be limited to only those contaminants of the applicant's choosing (petroleum based only).
- d. We specifically request testing include testing for chlorinated solvents and any other chemicals

named in tests previously conducted on the proposed site.

- (10) **Noise Pollution:** Identify all equipment, operations, and procedures, both ongoing and at random which may produce audible noise outside the metering station(s) and compressor station, noting the maximum noise level which may be emitted individually or collectively during normal operations, peak operation, or during unplanned “events”.

Noise Baselines:

- a. Identify all noise-sensitive areas within at least one-half mile radius of the proposed metering stations and compressor station where a quiet setting is a reasonable attribute (including but not limited to residential, educational, health, religious, recreational, agricultural areas, wildlife refuges, cultural, and historic sites).
 - b. Accurately identify baseline noise in conjunction with detached third party intervention.
 - c. Surveys should be conducted over a period of weeks during winter months when seasonal noise is not present.
 - d. Include all affected locations (including those identified in (2) Public Safety) along with East Richardson Preserve, Dunlap Sanctuary, and Dennis McNamara Way.
 - e. Post-construction: Conduct noise surveys within one month of the in-service date to assure compliance with all noise regulations.
 - f. Post-construction: Perform annual noise surveys during winter months.
- (11) **Industrial Lighting:** Determine the impact of high intensity 24X7 industrial lighting on nearby residents, wildlife, wildlife corridors, nocturnal animals (reproductive cycles, foraging habits), and migratory birds.

(12) **Leaks/Maintenance:**

Kinder Morgan has stated to elected officials in Merrimack, NH:

“All compressor and metering stations along pipeline routes are monitored remotely from a 24 hour control center.”

“If a leak is detected which does not present a safety concern, classified as a nonhazardous leak, an appropriate repair plan would be developed.”

Note: This is deemed unacceptable. Any leak is regarded to be both a safety and environmental concern. The currently proposed compressor station location places at risk: wetlands feeding into local farmland, underground aquifers tied to artesian wells, and the local Campbell Elementary School (approximately 500 students, including staff).

We request Kinder Morgan to act as follows

- a. Quantify, in detail, chemicals that can possibly be emitted from any and all metering stations, pumping station(s), and compressor station(s).
- b. Disclose projections of any and all emissions pertaining to future leaks of the system and intentional/unintentional venting of the system.
- c. Quantify the effects to human health and welfare regarding the number of people potentially exposed to the emission and the number of people who may develop adverse health effects from exposure to emissions.
- d. Identify all adverse health risks to the public and wildlife.
- e. Identify the adverse effects to sensitive populations, including but not limited to: children, residents with lung diseases (such as asthma, emphysema, COPD, chronic bronchitis), elderly, and handicapped individuals.
- f. Quantify the long term, indirect health costs associated with effects to human health and welfare, including costs for long term health care, insurance costs, loss of wages, unemployment insur-

ance, and loss of productivity.

- g. Include a separate evaluation of all of the above regarding farming operations (also previously listed), especially those farms under the Agricultural Preservation Restriction.
- h. Detail compliance with the National Emissions Standards for Hazardous Air Pollutants and how compliance with these standards will be independently monitored through third party intervention in order to hold Kinder Morgan immediately accountable for non-compliance.
- i. Detail and evaluate all emission control alternatives for all proposed stations to ensure system controls cannot be compromised, creating a soft ter(fat jbr terrorism.

To ensure maximum security:

- i. Install proper check valve system to guard against backflow.
- ii. Reduce distance between shut-off valves (from typical 4 to 5 mile span) to as minimal distance as possible.
- iii. Establish a control center directly in Dracut to eliminate dependency on out of town control centers and headquarters located in Texas.
- j. Include specific health based and epidemiological criteria to determine significance to air quality.
- k. Determine which agency will monitor such activity.
- l. Determine a decommissioning plan should an installed pipeline or any other component be deemed “no longer necessary.”
- m. Describe reductions-by-design, emission control procedures, emission offsets, and any mitigation which can be implemented to reduce impacts on air quality and water quality.

(13) Quarry Operations:

- a. The proposed pipeline infrastructure by Kinder Morgan comes precariously close to an active quarry. Given the safety concerns by nearby residents, what practices would be in place to prevent damage to the existing pipeline? Who can serve as an independent third party witness to assure compliance with such practices?
- b. How can residents be assured that an active quarry poses no threat to leakages or explosions directly caused by quarry activity?
- c. To assure local quarry owners that their interests are protected and that owners are not held liable for any injury or damage to the pipeline secondary to Kinder Morgan’s desire to place their pipeline near a blasting zone, we request a long term study, including detailed blasting records with seismic data to determine the overall effect of this type of blasting from this said location on the pipeline infrastructure proposed for Dracut.

(14) Ongoing Maintenance:

Note: Several cases being reviewed demonstrate that proper maintenance of existing pipeline infrastructure is deficient.

Therefore we request the following:

- a. Analysis of the construction and maintenance of all stations, including details on visual impacts on surrounding properties.
- b. Detailed analysis of lighting, impact on surrounding properties, including agricultural operations, and wildlife refuges.
- c. Detailed analysis of emergency planning and emergency response procedures.
- d. Detailed analysis of safety measures, as in installation of a fast-acting shutdown valve upstream and check valve downstream to prevent backflow.
- e. Details regarding impacts to endangered species and/or threatened endangerment to such species,

and mitigation regarding the same.

- f. Detailed use of non-chemical and chemical vegetation control, given stations are closely located to wells, wetlands, and underground aquifers.
- g. Specific details about all chemicals and/or substances to be stored at any facility and how these chemicals/substances will be extracted and removed along with inspection by independent third party(s) to assure operations are performed without risk to the general population.
- h. Details regarding the de-commissioning of the infrastructure should this become necessary, who will inspect and oversee the de-commissioning of such facilities, and who will be held accountable for any costs associated with de-commissioning as well as environmental cleanup.
- i. State mechanisms and processes as needed to assure residents, farming operations, and businesses are not negatively impacted.

(15) Use of Existing Infrastructure in Lieu of New Proposed Laterals:

- a. Acknowledge the existing Joint Facilities Pipeline from Dracut to Methuen and Methuen to Beverly (reference the FERC Docket No. CPD 97-238) which already provides sufficient capacity to serve both proposed and future project customers.
- b. Given this existing pipeline infrastructure (jointly owned by Spectra and Transcanada subsidiaries) provides a 30 inch (1440 psi) pipeline constructed in year 2000, create a plan to use this pipeline in lieu of the proposed Lynnfield Lateral and Haverhill Lateral expansion.

Thank you for your attention to these matters. We look forward to your response.

Respectfully submitted,

Tony Archinski, Chairman Alison Hughes, Vicechairwoman

Judith Whitman, Hancock, MA.

As long time residents and taxpayers of the town of Hancock, Mass., we would like to register our strong opposition to the Tennessee Gas Pipeline project. This is a hazard to our local area, will put a strain on our resources and damage our property.

We are against fracking because of the use of chemicals (undisclosed) and the danger to underground aquifers. The disposal of the water is also in question. It has been shown that there are many negative impacts regarding this pipeline.

This project will diminish property values, make it harder to sell affected property, affect local wells, put undue strain on our volunteer fire department should there be disasters such as gas leaks or earthquakes, and noise pollution near pumping stations is terrible. Another concern is the pipe depth. Our frost has been as deep as 6ft. This pipeline is scheduled to be at a depth of 3 ft and as large as 36". That seems to be much more susceptible to trouble.

We all have private wells, property that is our lifeblood and limited clout.

We should be moving toward alternative energy, not installing bigger fossil fuel projects. No one in this town is in favor of this pipeline.

20160108-5001

Gerald D Davolio, ESQ, Dracut, MA.
Gerald D'Avolio, Jr., Dracut, MA

I am filing this comment on the grounds that my rights as a landowner in Massachusetts have been and continue to be violated due to the intentional omission or gross negligent omission of Kinder Morgan – Tennessee Gas Pipeline Company LLC (“Company”). Specifically, I am a landowner, living within one-half mile of the compressor or their enclosures proposed as part of the Northeast Energy Direct Project (“Project”). Therefore the notice requirement pursuant to 18 C.F.R. 157.6(d)(2)(iii) is applicable. The Company never provided notice to me, which is prima facie evidence of their failure to comply with 18 C.F.R. 157.6(d)(2)(iii). Further, Company is a sophisticated corporation represented by legal counsel familiar with the Federal Energy Regulatory Commission (“Commission”) regulations and fully aware of the notice requirements not only morally incumbent upon it, but required pursuant to applicable law. Upon recent information and belief, Company has made two (2) filings as part of their application for the Project. I have not been notified as part of Company’s initial filing to the Commission on November 20, 2015 or as part of their updated landowner list filed December 21, 2015.

In furtherance of the argument of Company’s willful omission or gross negligence, the Company’s filing with FERC on January 6, 2015 regarding their failure to notify the owners of 19 properties in Dracut, contains errors – including but not limited to, it states that the land was “developed into condominiums”. To the contrary, the land was developed into 20 single family residential homes. By the Company’s own admission in the January 6, 2015, filing the landowner notification is “required”. (See Submittals: 20160106-5210 and 20160106-5211)

The resolution I seek is that Company be required to file its certificate for application ab initio. In the alternative, I request any and all other relief the Commission may deem appropriate due to Company’s willful omission or gross negligence with respect to this matter.

Respectfully Submitted

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)
Northeast Energy Direct)

Docket No. CP16-21-000

MASSACHUSETTS ENERGY FACILITIES SITING BOARD
MOTION TO INTERVENE

Pursuant to 15 U.S.C. § 717N, and Rule 214 of the Federal Energy Regulatory Commission’s (“FERC”) Rules and Regulations, 18 C.F.R. 385.214, and the Notice of Application issued in the above-referenced docket on December 7, 2015, the Commonwealth of Massachusetts Energy Facilities Siting Board (“Massachusetts Siting Board”), files this Motion to Intervene in the above-captioned proceeding (“Motion”). In support of its Motion, the Massachusetts Siting Board asserts as follows:

1. Communications and correspondence with respect to this Motion should be addressed to:

Stephen H. August, Esq.
Massachusetts Energy Facilities Siting Board
One South Station
Boston, Massachusetts 02110
(617) 305-3622
Stephen.August@state.ma.us

2. The Massachusetts Siting Board is an independent board of the Commonwealth of Massachusetts located within the Massachusetts Department of Public Utilities (“MDPU”). The statutory directive of the Massachusetts Siting Board is to ensure “a reliable energy supply for the commonwealth with a minimum impact on the environment at the lowest possible cost.” M.G.L. c. 164, § 69H. The Massachusetts Siting Board is chaired by the Secretary of Energy and Environmental Affairs and the Board members include the Secretary of Housing and Economic Development, the Commissioner of the Department of Environmental Protection, the Commissioner of the Division of Energy Resources, two commissioners from the MDPU and three public members. The governmental officials on the Board may designate someone else under their supervision to act as their proxy on the Board.

3. On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”), acting pursuant to section 7(c) of the Natural Gas Act, 15 U.S.C. § 717f(c), filed with FERC an Application for a Certificate of Public Convenience and Necessity to Construct, Install, Operate, and Maintain Certain Pipeline and Compression Facilities and to Abandon Other Facilities, known as the Northeast Energy Direct Project (“NED” or the “Project”). This Application was assigned Docket No. CP16-21-000.

4. Pursuant to the Siting Board’s statutory mandate, the Board must approve, prior to construction, any jurisdictional facilities proposed by Massachusetts gas companies. In the instance of an application by an interstate natural gas pipeline company, which is regulated by FERC pursuant to the Natural Gas Act, to construct new or modify existing facilities within the Commonwealth, the Massachusetts Siting Board is required by its own regulations “to preserve the rights of interested citizens of the Commonwealth by intervening in the FERC proceedings on said application.” 980 Code of Massachusetts Regulations (“CMR”) § 7.07(9)(b).

6. The responsibility of the Massachusetts Siting Board to preserve the rights of the citizens of the Commonwealth exists whenever an interstate natural gas company plans to construct facilities in Massachusetts. The Massachusetts portion of the Project includes approximately 64 miles of 30-inch line, together with five new lateral pipelines with a total length of approximately 51 miles in Massachusetts. Tennessee also proposes three new compressor stations in Massachusetts.

7. Consistent with its statutory mandate, the Massachusetts Siting Board is interested in the potential impacts, environmental and otherwise, of the facilities and activities proposed for construction in Massachusetts as part of the Project. The Massachusetts Siting Board is also interested in having the Commission take into consideration these impacts in determining whether to issue a Certificate of Public Convenience and Necessity.

8. Based on the foregoing, the Massachusetts Siting Board respectfully requests the Commission to allow it to intervene in this Certificate Proceeding with full rights attendant to that status, with respect to Tennessee’s application filed on November 20, 2015. The Massachusetts Siting Board asserts that its participation in this proceeding is in the public interest as required by FERC Rule 214, as codified at 18 C.F.R. 385.214(b)(iii). The Massachusetts Siting Board further asserts that the interests it represents are unique and cannot be represented adequately by any other party.

Respectfully submitted,

MASSACHUSETTS ENERGY FACILITIES SITING BOARD

Stephen H. August, Esq.

January 7, 2016

CERTIFICATE OF SERVICE

I hereby certify that I have this day served a copy of the foregoing document upon the participants, to date, in this proceeding in accordance with the requirements of Rule 2010 of the Commission’s Rules of Practice and Procedure.

Dated this 7th day of January 2016.

Stephen H. August, Esq.

20160108-5007

BEFORE THE UNITED STATES FEDERAL ENERGY REGULATORY COMMISSION

TENNESSEE GAS PIPELINE, LLC)
A Division of Kinder Morgan)
Northeast Energy Direct Pipeline)

Docket No. CP16-21-000

MOTION TO INTERVENE OF GEORGE C. MALONIS AND LAUREN ECKLUND-MALONIS IN REFERENCE TO THE NORTHEAST ENERGY DIRECT (NED) PIPELINE

Now comes George C. Malonis and Lauren Ecklund-Malonis (hereafter Malonis) and hereby file this Motion to Intervene in the above-captioned proceeding.

STATEMENT OF INTEREST:

Our residence is located within a half mile of the pipeline and a proposed compressor station. As such, our home and family are in proximity to the so called “incineration zone” that would arise in the event of a station/pipeline accident.

DESCRIPTION OF IMPACTS:

The proposed pipeline and station will permanently affect the environment surrounding our home and family.

The proposed compressor station will impact our home and family as follows:

- a. Decrease air quality with a constant and periodic stream of toxins.
- b. Pollute drinking water wells
- c. Result in permanent 24-7 noise pollution from compressor operations.
- d. pollute the area light with artificial evening light adjacent to our home.
- e. result in subsonic vibrations that have been demonstrated to adversely affect physical and mental health of abutters.

The proposed compressor site is located in a former Exxon petroleum terminal storage facility that was shut down thirty years ago after contamination was discovered in wells surrounding the area.

The proposed compressor site sits adjacent to an area with a permanent environmental restriction from prior contamination at the site and will likely exacerbate the probability of adverse chemical impacts to an aquifer which provides water to local residents and farms.

The area of the proposed compressor station in Dracut is adjacent to over 35 residential homes, a future planned site for town recreational fields and beautiful farmland the Town of Dracut and existing farmers are striving to maintain and protect for future generations.

An average of one gas accident per week occurs with gas pipelines located in the United States. An accident involving the pipeline and or the compressor station could result in death of local inhabitants and destruction of all homes within the incineration zone. The proposed, unmanned compressor station also serves as an unprotected and undefended target for anyone seeking to cause harm to tile location and surrounding community.

STANDARD OF INTERVENTION

Our Motion to Intervene must be granted as it satisfies the standard for intervention under FERC’s regulations. As discussed above, Malonis is directly impacted by the proposed project, and no other individual or organization can adequately represent our unique interest in this proceeding.

Accordingly, Malonis respectfully requests that FERC grant this Motion to Intervene.

CONTACT INFORMATION:

The following should be added to the Official Service List, with all notice and communications in this proceeding addressed to the contacts listed below:

George C. Malonis
Lauren Ecklund-Malonis
156 Jones Avenue
Dracut, MA 01826

CONCLUSION:

Given the above, we respectfully request that the Commission GRANT this Motion to intervene and allow the INTERVENOR to participate in this proceeding with full rights of party status, including the right to request a hearing, cross examine witnesses and seek rehearing and appeal.

Submitted by

George C. Malonis
Lauren Ecklund-Malonis

CERTIFICATE OF SERVICE

On this 7th day of January, 2016, we caused to be served the foregoing Motion to Intervene electronically on all parties on the Commission's electronic service list in this proceedings, in accordance with Commission regulations.

George C. Malonis
Lauren Ecklund-Malonis

20160108-5008

BEFORE THE UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC
Northeast Energy Direct Project

Docket No. CP16-21-000

**MOTION TO INTERVENE OF
SUNRIDGE NEIGHBORS ASSOCIATION**

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214, the members of Sun ridge Neighbors Association ("the Association"), hereby move to intervene in the above-captioned proceeding. The Association seeks to intervene in opposition to the Northeast Energy Direct Project (the "NED Project") proposed by Tennessee Gas Pipeline Company, LLC (the Company"), a subsidiary of Kinder Morgan, Inc.

COMMUNICATIONS AND SERVICE

Communications concerning this proceeding should be served upon us as follows:

Sunridge Neighbors Association
Maryann B. Harper, Vice President
154 Sunridge Road
Rindge, NH 03461
(603) 899.6027
mbharper17@gmail.com

BACKGROUND

Sunridge is a residential community located in Rindge, NH which has been developed with energy efficient residences served by private wells and septic systems. It consists of 18 privately owned parcels of land plus four additional parcels of common land. Surrounding this is additional undeveloped land used primarily for recreation. All of these lands are protected by deeded restrictions regarding further development. Sunridge Community is part of a quiet, remote and rural location and is accessed from Robbins Road via a private road - Sunridge Road (“the Road”) and its offshoot Little Meadow Brook Road. According to deeded covenants Sunridge Road and Little Meadow Brook Road are to remain private and are to be maintained entirely by the members of Sunridge community through the Association. Both roads end in cul-de-sacs.

INTEREST OF THE PETITIONERS

Our interests “which may be directly affected by the outcome of the proceeding” include the following:

The November 2015 filing indicates that Sunridge Road is designated as a “construction access road” providing an entrance to the NED Project located adjacent to the Eversouce and National Grid easements through one of the cul-de-sacs. Sunridge Road is a private way and posted for use by residents and guests only. All maintenance costs are borne by the members of the Association. The road was built to serve the community and not to withstand heavy industrial construction traffic. It would be severely damaged by such activity. Its narrow cartway would present a safety hazard to the residents if utilized by heavy industrial traffic as an access road during the six months or longer construction phase estimated by the Company.

The November 2015 filing also indicates that two of the four common land parcels of Sunridge Community will be directly impacted by the construction of the NED Project. Additional “construction access roads” for the project are also shown on the common land. The permanent pipeline easement and the temporary construction corridor for the NED project also directly impact these two parcels of common land. These lands are within the proposed right-of-way for the NED pipeline, thus exposing the property to condemnation if the certificate is granted. The NED project would cause damage to the property. The deeded covenants designed to protect the Sunridge community expressly prohibit the removal of vegetation on the common land. The construction of the NED Project is in direct opposition to this restriction.

Sun ridge Road connects to a town road - Robbins Road - which is a feeder road to all other access points. A mainline ball valve station is planned to be located close to the intersection of Sunridge Road and Robbins Road. [Market Path: MP 21.9 / MLV-I-02] Mainline valve stations can and do emit whatever substances, including methane, that are currently in the pipe during blow-offs. The construction of such a station will impact anyone who traverses Robbins Road and that includes the members of Sunridge community. The Association is concerned that above ground pipeline infrastructure will bring its own inherent risks and effects on property values.

The residents of Sunridge community chose to make a substantial investment in their community by maintaining their own road at considerable expense to keep it private thereby limiting traffic and preserving a peaceful life style. The community includes natural open spaces to act as a privacy buffer and to provide for shared recreational space. All of the homes in Sunridge were constructed to meet the energy efficient requirements set forth in the deeded covenants and the NED project would provide them no benefit. In fact, the construction of the NED Project is in direct opposition

to the shared goals of the members of the Sunridge Community. The NED project would put members of the community at risk exposing them unnecessarily to construction traffic hazards, construction safety issues, noise pollution, the effects of blasting, and emissions from the mainline valve station that includes a remote blow off valve. It would also expose the community to a pipeline stigma resulting in property devaluation. See” Pipelines can reduce property values by 5 to 40 percent according to Realtors.”

<http://www.ldnews.com/story/news/local/2016/10/02/pipelines-could-affect-property-values/77984160/>

The interests of the Association include the adverse impacts that the NED Project will have on the road we are obligated to maintain, our lands - both private and common, our residences including our wells and other

structures as well as our health and general safety. Our interests also include concerns that the excessive costs of this project will be passed on to us as electric ratepayers should the Company secure our electric utility as a Project shipper which in turn would seek to recover associated costs from its ratepayers.

CONCLUSION

We object to the approval of the NED project for the above reasons. We believe we have a substantial interest in the outcome of these proceedings and that granting us intervenor status is in the public interest. No other entity can represent our shared interests and we are filing this motion in a timely manner.

WHEREFORE, we respectfully request that our motion to intervene be granted.

Respectfully submitted,

Maryann B. Harper, Vice President

Duly Authorized for Sunridge Neighbors Association

20160108-5010

Submission Description: (doc-less) Motion to Intervene of Joel p Hone under CP16-21-000.

Submission Date: 1/7/2016 7:13:00 PM

Filed Date: 1/8/2016 8:30:00 AM

Dockets

CP16-21-000 Application for a Certificate of Public Convenience and Necessity (NED Project)

Filing Party/Contacts:

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	shone80134@gmail.com	

Basis for Intervening:

Joel Peter and Sharon Hone, residents of Windham Road, Pelham, NH since 1972. As abutters, we are concerned about the environmental damage to the forests and wetlands caused by the blasting for this pipeline. Concerns also include those surrounding air quality during construction, and use. Since we have a well, impacts to water quality are also of major concern as the blasting and the pipeline affects the aquifer. Safety and environmental issues involved in the pressurization of the pipeline through this area have not been adequately addressed, nor have issues involving any benefit to the community to offset the costs for this pipeline. The pipeline will undoubtedly limit the future use of our property as well as the value of our home and our property as a whole. This pipeline jeopardizes our well-being and our future.

20160108-5013

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)
Northeast Energy Direct Pipeline Project)

Docket No. CP16-21-000

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212, 214 and 157.10 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), we John D. and Patricia L. King of Tewksbury, Middlesex County, Massachusetts, file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC ("TGP") filed its application under § 7 of the Natural Gas Act, 15 U.S.C. § 717f, and § 157 of FERC's regulations, 18 C.F.R. § 157.1 et seq., for the

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individuals:

John D. and Patricia L. King
184 Vale Street
Tewksbury, MA 01876
978-851-9478
kingtenn@verizon.net

II. INTEREST OF PETITIONERS

Construction, operation and maintenance of the Pipeline would adversely impact us as follows:

1) We are directly impacted by the proposed pipeline on two small lots known as 178 and 184 Vale Street, Tewksbury, Massachusetts. 178 Vale Street is identified as lot MA LL 104 on the map entitled Segment N, Lynnfield Lateral Alignment Sheet TE-SEG_N-008 and on Construction Drawing LA-SEG_N-RES-014. 184 Vale immediately abuts 178 Vale, but 184 has not been assigned an independent Lot number on the map. (For further reference, see Tewksbury Tax Assessor's Map 117, Lots 3 and 7, consisting of 16,000 sq. ft. and 31,000 sq. ft., respectively). These lots are thickly wooded. The trees provide a buffer to vital privacy, noise, dust, fumes, and sheltering our lots from the highway.

While 178 Vale will be subject to a permanent 50 ft easement, both of these lots will be subject to temporary work clear-cut easements totaling as much as 190 feet. The work area as shown on the construction plan is so close to our home that the safety fence actually touches our structures. The construction limits appear to be only 8 feet from our shed and only 33 feet from our house.

Specific Impact on Lot at 178 Vale Street: Beginning with the Route 93 highway property line which is the beginning of our Lots, the sum of the distance for both Lots from the highway is approximately 400 feet. The Tennessee Gas Company's proposed corridor for the pipeline consumes the entire first Lot (178 Vale Street) abutting Route 93. We have set this lot aside, providing it with a town sewer connection for our retirement home to be built and with the amenities now needed in our older age (single story, wheelchair accessible, etc.). If the pipeline is installed, the lot will be rendered unbuildable. Given that its approximate depth from the highway of 150 feet, 178 Vale Street will be completely consumed within the Tennessee Gas Company's Map as it shows a "construction limit" of 151 feet. Included within this construction zone too, is the 16 X 20 foot shed which is on the 184 Vale Street property. The negative impact here is most severe because the 'clear-cut process' will also remove 80 foot tall trees providing our only buffer to noise levels and grime from the highway some 30 feet above the elevations of both lots. Unlike the extensive man-made sound barriers already erected along Route 93, there is none in this area, nor there is any reason to believe there will be. The Tennessee Gas Company's verbal offer to 'restore vegetation with shrubs and plantings' cannot equal to what will be removed. As a result, noise levels, grime and direct views of the highway will increase significantly. The present value as a residential lot (tax appraised at \$ 166,000) will be reduced significantly, or more likely reduced to zero. In contrast to that, the Tennessee Gas Company's verbal offer to us during their Spring Informational Presentation in Andover was \$ 5,500.

Specific Impact on Lot at 184 Vale Street: This Lot contains our current residence of 50 years. It too lays within the Tennessee Gas Company's map of a "300 foot proposed right of way" and within the "construction limit" of 151 feet; a point some 16 feet from our home. The 'safety zone fence' cuts off any movement from one side of our yard to the other from the rear and needed for near future wheel-chair, or walker access. Access then would only be done from the front of the home with about 15 steps up from the street. This is too steep to push a wheelchair which will be needed for Patricia because she has Parkinson Disease and heart condition amongst her other diagnoses. Balance and ambulation are already a problem. Here too, noise levels, pollution, and grime will increase significantly as a result of the extensive and permanent loss

of the natural tree buffers lost due to the ‘clear-cutting’ necessary for gas line installation and maintenance access.

2) We are senior citizens and these lots constitute our major assets.. Our equity here was to be our retirement. We are depending on our equity to survive. The value of our property will be diminished by this pipeline path. In fact, the resale value of our property has already been diminished by the mere news of this proposed project. No one wants to live next to a high-pressure pipeline. The construction of this pipeline will deprive us of our retirement funds.

3) During construction, we will be unreasonably subjected to noise, diesel odors, dust, debris, fumes, and loss of privacy. Our neighborhood is well known to consist of ledge so substantial that blasting would be inevitable. This will endanger the structural integrity of our home, of the other homes in our neighborhood, and adversely impact our health as well as our use and enjoyment of our property. It will unconscionably disrupt the wildlife.

4) Furthermore, according to the plans, TGP intends to clear-cut and then cross Vale Street at the main road between our home and the highway. This makes coming and going to and from our home almost impossible. There are no reasonable alternate routes for us to travel in that direction. This creates a greater risk for us and other homeowners should we need emergency responders as we have in the past. We will be greatly inconvenienced and endangered.

5) Furthermore, in addition to being property owners we are customers and rate payers. Massachusetts is a leader in the development and institution of the use of renewable energy. Tewksbury and Andover are both green communities. Massachusetts has an LG facility in Everett that has been sitting unused.

6) Lastly, we question the Tennessee Gas Company’s often stated claim that the pipeline is ‘needed for the ‘New England’s customer needs’. The Tennessee Gas Company appears to be highly dependent on large commercial accounts which may, or may not, become long standing commitments.

The Massachusetts Attorney General’s Office (Martha Healy) has now agreed the ‘needs issue’ is in question. We note that a “Regional Electric Reliability Options Study” performed for the Massachusetts Attorney General’s Office has been sent to the Washington Federal Energy Regulatory Commission office (ref; Letter from; Melissa A. Hoffer, Assistant Attorney General and to Kimberly D. Rose, Federal Energy Regulatory Commission,(dated Nov. 18, 2015.) That Study by the Boston based international consulting firm, Analysis Group, Inc. concluded with findings including:

(1) That, “this pipeline is not necessary”.

(2) That, “Under business-as-usual circumstances, the region can maintain electric reliability through 2030, even without additional new natural gas pipelines. Even under a “stressed system” scenario, there are cheaper, less carbon intensive ways to ensure electric reliability, like energy efficiency and demand response that are less risky for ratepayers.”

(3) That, “Thanks to energy efficiency, our electric needs on the winter’s coldest days aren’t growing over time anymore, despite economic growth”, and that; “ New energy market rules will ensure that new gas-fired power plants have oil backup systems so that they can run without natural gas.”

(4) That this Study “was informed by feedback from a Study Advisory Group comprised of representatives from electric utilities, the gas industry, the business community, consumer groups, and clean energy and environmental groups. Unlike many prior studies, the Study is independent, takes into account recent events like the anticipated retirement of the Pilgrim Nuclear facility, covers all of New England and focuses on meeting reliability needs.”

A copy of this Study is available on-line at

<http://www.mass.gov/ago/docs/energy-utilities/reros-study-final.pdf>

5) After construction, our residence is then vulnerable to ongoing safety hazards. Further, both small lots within the right of way corridor expose the properties to condemnation as residential lots.

We have important information and perspectives to bring to this process, and consideration of which will serve the public interest.

III. CONCLUSION

Wherefore, we, John King and Patricia King, stand opposed to this pipeline project and we respectfully request that the Commission grant our Motion to Intervene as parties with full rights to participate in all further proceedings.

Respectfully submitted this 6th day of January, 2016.

John D. King

Basis for Intervening:

I live in Montague and want to intervene in this proceeding to oppose the Kinder Moran NED pipeline for many reasons. I have chosen to live in western Massachusetts because of the clean air, clean water, natural resources, pristine forests, rivers, lakes, plains, farms, mountains. I have contributed financially to many local land trusts to preserve tracts of land, paid taxes to the state so that land could be protected from development and I am FURIOUS that my actions may be negated by a private company's plans to make money at my expense! I am concerned that my town (and most towns in the path of the pipeline) will not have the resources to deal with any sort of emergency during the construction or lifetime of the pipeline. Kinder Morgan does not have a good safety record and I fear that more lives will be negatively affected by a possible pipeline - a pipeline that has not been shown to even be necessary! We do not need more gas - we need more solar and wind energy and more energy efficiency. I feel strongly that renewable and energy efficiency strategies are more likely to create more local jobs than a pipeline.

I am concerned that the federal government is even considering Kinder Morgan's proposal to put in a pipeline - to pipe fracked gas from Pennsylvania and New York through Massachusetts to the coast - where it will inevitably be shipped internationally, raising the domestic price of gas and not lowering our energy costs as suggested by supporters. Massachusetts has pledged to be more energy efficient, support more solar and wind energy and NOT pollute the environment with gas, oil, coal and nuclear energy. PLEASE listen to the people who will have to live with this potential disaster in our backyards. do NOT allow this project to go any further.

Basis for Intervening:

I am a direct abutter within 200 feet of the proposed pipeline and I am in the incineration zone.

I am concerned about the value impact to my property and my ability to sell my property now, during and after construction due to the safety and health concerns of all perspective buyers.

I have a “no cut zone” deeded on the property as a matter of public record directly on the land where the proposed right of way would be which is one of the reasons we purchased the property ensured we would have a green belt between our family and the power right of way.

I have two wells on the property that service water to my home and I am very concerned about the impact to both well function and capacity as well as water quality as the result of construction of the pipeline.

I am a taxpayer in the town of Pelham and a rate payer for Eversource and I am concerned that my town and state have no need for this gas or associated power...yet will be burdened with the cost for others to export the gas being piped through my backyard.

I am concerned about the impact that this pipeline will have to the use of my property where we currently have both recreational and utility uses.

I am concerned about the security of my property and home as the pipeline will remove the entire greenbelt that provides for a secure barrier between my home and the power line right of way where many vehicles trespass on a daily basis.

I am concerned about the impact to our quality of life as we have four children and will now have an open view and access to both a cleared gas line and powerlines where we currently have a peaceful greenbelt and recreation area. This entire are will become wide-open for use by unauthorized vehicles driving through the expanded right of way within 150 feet of my home.

20160108-5019

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC)	Docket No. CP16-21-000
North East Direct Pipeline Project)	

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), the Townsend Conservation Land Trust, files this motion to intervene in opposition of this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under Section 7 of the Natural Gas Act, for the proposed Northeast Energy Direct Project (NED), FERC Docket No. CPI6-21-000.

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Veronica Kell, President
Townsend Conservation Land Trust
POBox 734
Townsend, MA 01469
978-597-5163

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact the Townsend Conservation Land Trust (TCLT). TCLT is a non-profit organization in the Town of Townsend, MA, that was created in 1988 in response to the Town’s Master Plan for the purposes of preserving the natural resources and rural character of Townsend. All properties held or controlled by the Trust are exclusively for conservation, education, public recreation and scientific purposes. TCLT owns 12 parcels totaling approximately 180 acres of open space all within Townsend. Of these 180 acres, 103 acres are affected by NED. As the project route shifts, additional properties owned by TCLT may be impacted.

The Fitchburg Lateral of NED crosses TCLT property (43 acres) at Off Greenville Road, (Map/Parcel/Lot 6/7/1). Other properties affected by alternatives to the main pipeline route include TCL T properties on Greeley Road (Howard M Stein Memorial Park - 20 acres), and Pheasant Ridge Rd (Article 97 - 40.37 acres). The Pheasant Ridge property was donated to TCLT in 1990 through the Town’s Open Space Preservation Development process. The property was to be maintained in its natural state in perpetuity.

All three affected parcels are within the Squannassit Area of Critical Environmental Concern (ACEC), attesting to the quality and significance of the natural resources on these properties. They also abut existing protected conservation land owned by the state, town, or homeowners’ association, and contribute to providing large tracts of unfragmented forest habitat. TCLT practices regular, long-term forest management goals on two of these parcels.

As an impacted landowner, Townsend Conservation Land Trust has a direct interest in the outcome of the proceedings. TCLT also has important information and perspectives to bring to this process, consideration of which will serve the public interest.

III. REQUEST FOR FORMAL HEARING

Pursuant to 18 C.F.R. § 157.10(a)(I), TCLT respectfully requests a formal hearing on the Application, including the environmental impacts of and public need for NED.

IV. CONCLUSION

Wherefore, I, Veronica Kell, on behalf of Townsend Conservation Land Trust, respectfully request that the Commission grant my timely Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 7th day of January 2016.

Veronica Kell, President
Townsend Conservation Land Trust

Attention FERC:

As property owners in Mason, we are 100% against the pipeline!!! Not only are we concerned for our own property, but we are concerned for the entire Town of Mason and the communities that will be affected by this pipeline. This pipeline is not needed, there are hazardous risks, landowners losing rights by eminent domain, etc. I do hope FERC reviews all the information and that you listen to what the residents of these communities have to say. This is our life that we worked very hard for. You and I both know, this isn't right for any of us!

I find it appalling that a business such as Kinder Morgan can summarily destroy so many lives by rendering people's property valueless by asserting rights to eminent domain for a project that benefits only their shareholders. The pipeline is not wanted and needed. What is needed is our ability to protect precious aquifers and habitats and farm and forest lands.

Basis for Intervening:

I am a veteran and recent home buyer of my first home in New Ipswich. I do not want this pipeline in my town. I have educated myself on such matters and this pipeline does ABSOLUTELY NOTHING for New Hampshire. What it does do is lower property values, destroy pristine southern New Hampshire habitats and

threatens the safety of all who live here. There are better alternatives to this current route, like the use of the corridor along the Massachusetts turnpike. No one here cares how much Kinder Morgan pays for such BS, they can go through Massachusetts or some other route that might make better sense. This southern New Hampshire route brings nothing to the Granite State. I will do everything in my power to oppose this pipeline and recommend that FERC look at the merits of this current plan and expose it as the sham that it truly is. Corporate greed at the expense of the private citizen will never be acceptable, especially when it provides no benefit. This plan provides no energy relief to the area with oil forecast to go below 32 dollars a barrel. This resource is FOR EXPORT and at NO BENEFIT to New Hampshire or the Northeast. Oppose this in the name of all that is logically responsible. Thank you.

20160108-5025

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC Docket No. CP16-21-000

MOTION TO INTERVENE of NO FRACKED GAS IN MASS

Filed: January 7, 2016

No Fracked Gas in Mass non-profit community education organization whose mission is to inform communities of the public health and safety and other issues surrounding natural gas pipelines and their accompanying facilities. We also help communities share ideas and information with each other through website, social media and newsletter communications, and have made presentations in dozens of communities across the Northeast Energy Direct pipeline route to help them understand and respond to the pipeline proposal.

No Fracked Gas in Mass is filing this motion to intervene, in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10), in opposition to the construction of the Northeast Energy Direct pipeline by Tennessee Gas Pipeline company (TGP).

The construction of this pipeline is not in the public interest and would bring additional hazards to the health, safety, environmental and economic well being of communities in the Northeast region and to the global climate as well. Compressor and meter station emissions from this pipeline would also force Massachusetts to violate its own Global Warming Solutions Act, and building through lands held in conservation under Article 97 of the Massachusetts State Constitution would violate the Constitutional rights of the citizens of the Commonwealth.

For these reasons, No Fracked Gas in Mass is interested in and would be affected by Applicant's filing. Our organization's interests cannot be adequately represented and protected by any other party. Given its role in community outreach and education, No Fracked Gas in Mass respectfully submits that its participation in this proceeding is in the public interest. Hence, the Commission should grant No Fracked Gas in Mass permission to intervene in proceedings for Northeast Energy Direct.

Rosemary Wessel, Founder
No Fracked Gas in Mass

As a Realtor, I represent many homeowners who have seen their home values drop and an inability to sell. I had 3 buyers pull out of transactions with accepted offers for the unknown fear of how the pipeline would change the property they wanted to buy. If this pipeline goes in, it will destroy the beauty that attracts people to our area. Very little of the gas will benefit us locally and the low capacity can be easily overcome with a second 10,000 storage tank in Whately. With Kinder Morgan's finances a shambles as they imitate Enron, we worry about their ability to safely complete this project. Most people around here oppose this project; they don't want to invest in old technology. Please deny Kinder Morgan's permit.

20160108-5028

{Motion to Intervene of Plainfield Agricultural Commission}

The Plainfield Agricultural Commission is intervening on behalf of Chapter 184, Section 31 of the MGL stating the parameters for the use of land under the state Agricultural Preservation Restriction (APR) and on behalf of Chapter 184, Section 32 defining the limited instances in which this restriction can be removed.

APR's are given almost exclusively to soils which are classified as "prime farmland" or "of state importance" and are delegated exclusively for agricultural use. According to the Natural Resources Conservation Service, in cooperation with other interested federal, state, and local government organizations, "prime farmland" is of major importance in meeting the Nation's short- and long-range needs for food and fiber. Because the supply of high-quality farmland is limited, the U.S. Department of Agriculture recognizes that responsible levels of government, as well as individuals, should encourage and facilitate the wise use of our Nation's prime farmland."

The proposed pipeyard is to be located on a 300 acre piece of land classified as "prime farmland" preserved under an APR. Irrevocable damage would be done to this valuable land through irreversible compaction of these delicate soils and contamination from hazardous and poisonous substances from machinery and stored materials.

Allowing a for-profit company to destroy prime farmland under public trust, not "for the public good," is in violation of both Chapter 184, section 32 MGL, and Article 97 of the State Constitution. The Massachusetts Attorney General has recently done a study which determined that gas from this pipeline is not necessary for the fulfillment of future state energy demands.

Individual wcopeland916@gmail.com

Basis for Intervening:

I live in Northfield, Massachusetts and want to intervene in this proceeding to oppose the NED pipeline. I have a number of interests that will be directly affected by the outcome of the proceeding:

1) I am a conservation landowner and member of the Mount Grace Land Conservation Trust. I have heard that eminent domain may be used to seize and deforest conserved, protected properties along the route of this pipeline. I believe this is very wrong since it violates the trust of all the people engaged in this vital work. I have agreed to protect my own property and I am extremely concerned this project, if allowed to

proceed, will set a precedent for the destruction of conservation land.

2) My property is directly across the river in a sight and sound line to the proposed compressor station. I chose my homesite for the quiet and the spectacular day and nighttime views. I am concerned that this will be ruined by the compressor and its day to day operation. I am concerned about the light and noise pollution it is likely to cause and its effect on my own life and the value of my property.

3) I am a practicing pediatrician with a public health background. I am fully aware of the toxicity of the chemicals associated with the natural gas industry and the difficulty of preventing catastrophic accidents. I actively follow the research on medical risks and harms of this industry - from the cancer-causing effects of fracking components, to deadly accidents, to cases of sickening and evacuation both historical and current (Porter Ranch in California). There are too many unanswered safety questions for me, as a physician, to willingly allow this pipeline to run through my community.

20160108-5038

New York

Agriculture and Markets

ANDREW M. CUOMO

RICHARD A. BALL

Governor

Commissioner

January 7, 2016

Kimberly D. Bose, Secretary

Federal Energy Regulatory Commission

888 First St., N.E., Room 1A

Washington, DC 20426

Re: Tennessee Gas Pipeline Company, L.L.C.,

Northeast Energy Direct Project, Docket No. CP16-21-000;

Dear Secretary Bose:

The Department has completed a review of the Resource Reports, Environmental Construction Plan for New York, and other documents filed with the Federal Energy Regulatory Commission by Tennessee Gas Pipeline, L.L.C. for the Northeast Energy Direct Project. The Department is providing the comments below concerning these documents as they relate to construction and restoration impacting agricultural land.

Resource Report 1, Section 1.3.2.3, page 1-105 - remove the statement "any rock uncovered during construction will be returned to the construction work area similar to that of adjacent areas not disturbed by construction." Rock is only allowed to be returned to the work area in agricultural fields when it is used to backfill the trench and the rock is at a depth greater than 24 inches below the construction work area in mesic soils or 30 inches in frigid soils.

Resource Report 7, Section 7.4.3, page 7-9 - this section includes information relative to measures to pre-

vent or mitigate soil compaction where the project crosses agricultural and residential land. The third bullet states that “[u]pon completion of backfilling operations, topsoil will be placed over the graded area.” In agricultural areas, subsoil de-compaction must be completed after backfilling and prior to topsoil replacement. This statement should be modified to include this requirement.

Resource Report 7, Section 7.5.2.1 page 7-13 - the first bullet is confusing and should be changed to indicate that all stones greater than 4 inches, brought to the surface during the de-compaction process, will be removed from the surface of the subsoil.

Resource Report 7, Section 7.5.5, page 7-17 - the first bullet states “[i]n managed agricultural lands, wetlands, and residential areas, rock may only be backfilled to the top of the existing bedrock profile.” In agricultural areas, rock should not be used to backfill the-trench, unless it is at a depth greater than 24 inches below the construction work area in mesic soils or 30 inches in frigid soils. This bullet should be modified to reflect this backfill depth.

Upland Erosion Control, Revegetation, and Maintenance Plan, Section V.A. page H-9 - paragraph 3 discusses the use of rock for trench backfill. This paragraph should include the statement that “in agricultural areas, rock will not be used to backfill the trench, unless it is at a depth greater than 24 inches below the construction work area in mesic soils or 30 inches in frigid soils.”

Upland Erosion Control, Revegetation, and Maintenance Plan, Section v.c. page H-10 _ this section should be revised to indicate that the soil compaction in agricultural areas will be mitigated as stated in Resource Report 7, Section 7.5.2.1. During the two year monitoring period, soil compaction should be tested and mitigated as discussed in Section V.c.

Environmental Construction Plan for New York, Section 5.6.6 _ this section should include details concerning the delaying of agricultural restoration because of wet soil conditions. Specifically, the shutdown of restoration in the fall and determining when to resume restoration the following spring and the use of the Atterberg field test to determine when soils have dried sufficiently to conduct restoration.

Environmental Construction Plan for New York, Section 5.6.6, page K-117 _ The last sentence in the first paragraph states “[t]he allowable depth of rutting prior to suspension of construction will vary based upon the depth of topsoil and if topsoil was segregated prior to the agricultural area becoming saturated.” This statement conflicts with the first sentence on page K-118, which states “[t]he maximum depth of rutting through agricultural areas where topsoil has not been segregated prior to becoming saturated will be 4-inches, regardless of the depth of topsoil.” The allowable depth of topsoil rutting in agricultural areas is no more than 4 inches. The words “prior to becoming saturated” should be removed from this sentence, as rutting can occur even if the soil has not reached “saturation.”

Alignment Sheet TE-SEG_D-011- the proposed alignment of the N ED Pipeline is not adjacent to the Constitution Pipeline between stations 415+00 and 455+00. The area between approximately stations 445+00 and 455+00 is used for agricultural production and having two pipelines in different locations in this field could impact future agricultural land use decisions. Routing the NED Pipeline adjacent to the Constitution Pipeline in this area would significantly reduce the impact to the farm operation during construction and restoration, as well as in the future. The Department is opposed to the proposed alignment of the NED Pipeline in this area.

Alignment Sheet TE-SEG_E-047 - the proposed alignment of the NED Pipeline is not adjacent to the Constitution Pipeline between stations 2430+00 and 2465+00. The area between approximately stations 2456+00 and 2459+50 is used for agricultural production. See above comment concerning the alignment of the NED Pipeline adjacent to the Constitution Pipeline in agricultural areas. The Department is opposed to the proposed alignment of the NED Pipeline in this area.

Alignment Sheet TE-SEG_E-051 _ the proposed location of the Market Path Head Station in the Town of Wright, Schoharie County and the proposed staging area at this location will impact a significant number of acres of agricultural land. This land is located within Schoharie County Agricultural District No.2 and the conversion of the agricultural land for the Market Path Head Station is not consistent with the intent of

the Agricultural Districts Law, which is to “provide a locally-initiated mechanism for the protection and enhancement of New York state’s agricultural land.” The number of acres of agricultural land converted to nonagricultural use as a result of the construction of the proposed Market Path Head Station should be minimized to the greatest extent possible.

Alignment Sheet TE-SEG_F-023 _ The proposed alignment of the pipeline between stations 1155+00 and 1163+72 is not adjacent to the existing Tennessee Gas Pipelines and the National Grid Right-of-Way. This property has been burdened with a number of natural gas pipelines and electric transmission lines in the past. Routing the proposed pipeline in a previously undisturbed area of the agricultural field significantly increases the impact to the entire property and could impact future agricultural land use decisions. The proposed NED Pipeline should be located adjacent to the existing pipelines and electric transmission lines in this area. The Department is opposed to the proposed alignment of the NED Pipeline in this area.

The Department also notes that a significant number of acres of agricultural land is proposed to be used for contractor yards and staging areas. These uses can result in significant impact to agricultural resources, including permanent conversion to nonagricultural use, severe soil compaction, and mixing of topsoil and subsoil. It appears that agricultural land has been targeted for such uses. Tennessee Gas should continue to investigate alternative, nonagricultural areas, for such uses.

Thank you for consideration of the Department’s comments.

Sincerely,

Matthew J. Brower

Individual eliadelmolino19@gmail.com

Basis for Intervening:

I hereby move, pursuant to 18 C.F.R 385.214 (b), to intervene in Tennessee Gas Pipeline Company, LLC, Northeast Energy Direct Project (Docket No. CP16-21-000). I seek to intervene in opposition to the Northeast Energy Direct Project (the “Project” or the “NED Project”) proposed by Tennessee Gas Pipeline Company, LLC (the “Company”), a subsidiary of Kinder Morgan, Inc. (“Kinder Morgan”). Communications

concerning this proceeding should be served upon me as follows:

Elia P Del Molino
16 South Street Apt 2
Great Barrington, MA 01230
(413) 429-6416
eliadelmolino19@gmail.com

My interests "which may be directly affected by the outcome of the proceeding pursuant to 18 C.F.R 214(b)(2)(ii) include:

-My interest as an electric ratepayer, insomuch as the Company seeks to secure my electric utility as a Project shipper, which, in turn, would seek to recover costs associated with the Project from ratepayers.

-My interest as a resident of the Housatonic River Watershed and an active hiker, wildlife tracker, nature photographer, environmental educator, and naturalist. I am concerned about the construction of the pipeline, specifically through the more critical areas of ecological concern and especially in the wildlife corridor. Particularly threatening is the proposed compressor station which would reside in one of the key linkages between core forests in western Massachusetts.

-My interest as a taxpayer, neighbor and visitor to protected public land in Massachusetts. I am very concerned about the threat that this Project poses to all public land protected by Article 97 of the Articles of Amendment to the Massachusetts Constitution.

-My interest as a land trust supporter and visitor to Berkshire Natural Resources Council's Constitution Hill and The Trustees of Reservations' Notchview Reservation in Windsor, MA.

WHEREFORE, for the forgoing reasons, I respectfully request that my motion to intervene be granted.

Respectfully submitted,

Elia P. Del Molino

Fossil fuels contribute to climate change. We do not need this pipeline, it will not help the environment.

20160108-5047

Randy Boisse, Dract, MA.

Just recently, as of January 6, 2016; the Tennessee Gas Pipeline Company told FERC that they neglected to notify (19) of the impacted landowners that are within 1/2 mile of the proposed Dracut, MA (market tail) compressor station site. The Tennessee Gas Pipeline Company requested that FERC waive the landowner notification provisions of Section 157.6(d) since Tennessee Gas supposedly sent out belated letters to the (19) impacted landowners on January 5, 2016. Per an e-mail correspondence between Kinder Morgan and one of my neighbors; this was to have happened via an overnight delivery method. As of January 8, 2016, know one within the development has received a letter from Tennessee Gas.

This waiver request is not right, and is unconstitutional. The FERC deadline to intervene is January 15, 2016. This does not allow sufficient time for the impacted landowners to ask questions, and to reach out to

Town officials and State Representatives.

Please deny Tennessee's request to waive the landowner notification provisions of Section 157.6(d), and I respectfully request that FERC forces Tennessee Gas to refile their application; for it is not right for Tennessee Gas Pipeline Company to request that landowner rights be waived due to "gross negligence" on their behalf. My neighborhood has been around for 3-plus years, there is no reason that Tennessee should not have known about our existence.

Furthermore, Tennessee Gas had requested back on December 21, 2015 that (46) residents within a 1/2 mile of the market head compressor station site should also be waived their landowner notification rights – again, due to negligence on their end.

This leads me to ask how many more residents within a 1/2 mile of proposed compressor station sites have not been notified? The application for docket CP16-21-000 should be rejected while an investigation is performed to identify additional landowners who have not been properly notified.

Sincerely,

Randy Boisse

Basis for Intervening:

I am vehemently opposed to the pipeline proposed for Windsor, Massachusetts. It would be devastating to our community, both physically and environmentally. The dangers of this project far out way any potential benefit; and clearly the only benefit is for Kinder Morgan TGP Pipeline. The residents of Windsor face multiple risks that are avoidable by preventing this project. I live within 2 miles of the planned compression station. This project threatens my well being related to health and finances. I plan to sell my home in the next 3 years as I move into retirement. The sale of my home is a key component of my retirement plan. This project seriously threatens my future health, well being and opportunity for security. I will seek legal help to protect my future.

UNITED STATES OF AMERICA , FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.) Docket No. CPI6-21-000

Northeast Energy Direct)

MASSACHUSETTS DEPARTMENT OF AGRICULTURAL RESOURCES MOTION TO INTERVENE

Pursuant to 15 U.S.C. § 717N, and Rule 214 of the Federal Energy Regulatory Commission's ("FERC") Rules and Regulations, 18 C.F.R. 385.214, and the Notice of Application issued in the above-referenced docket on December 7, 2015, the Commonwealth of Massachusetts Department of Agricultural Resources ("Department"), files this Motion to Intervene in the above-captioned proceeding ("Motion"). In support of its Motion, the Department asserts as follows:

1. Communications and correspondence with respect to this Motion should be addressed to:

Tara Zadeh, Esq.
 General Counsel
 Massachusetts Department of Agricultural Resources
 251 Causeway Street, Suite 500
 Boston, MA 02114
 (617) 626-1705
 Tara.Zadeh@state.ma.us

2. The Department is a duly authorized administrative agency of the Commonwealth of Massachusetts ("Commonwealth") established pursuant to M.G.L. c. 20, § 1. The Department is charged with, among other statutory obligations, "[a]id[ing] in the promotion and development of the agricultural resources of the commonwealth and the improvement of conditions of rural life, the settlement of farms and the distribution of the supply of farm labor." M.G.L. c. 128, § 2(b).
3. The General Court of Massachusetts has "the power to provide for the taking, upon payment of just compensation therefor, or for the acquisition by purchase or otherwise, of lands and easements or such other interests therein as may be deemed necessary to accomplish [certain] purposes." Mass. Const. Art. XCVII ("Article 97"). Those purposes include "the protection of the people in their right to the conservation, development and utilization of the agricultural ... and other natural resources[.]" *Id.*
4. The General Court of Massachusetts created an "agricultural preservation restriction" ("Restriction") to serve these public purposes. See, M.G. L. c. 184, § 31. Such Restrictions are "appropriate to retaining land or water areas predominately in their agricultural farming or forest use" and "shall be in perpetuity," with narrow exception not applicable in this case. *Id.* Restrictions ensure the protection and preservation of agricultural lands and help to preserve the agricultural potential of lands within the Commonwealth.
5. Additionally, Massachusetts Executive Order 193 requires state agencies to "encourage the protection of state-owned agricultural land" in order to protect this finite resource that is threatened by competing land use pressures.
6. The Department's Restriction program, which was the first in the nation, was established in 1976 in order to carry out the statutory authorization set forth in M. G.L. c. 184, § 31. Since this time, it has been and remains the intent of the Commonwealth, acting through the Department, to perpetually protect and preserve agricultural lands, to encourage sound soil management practices in accordance with generally accepted agricultural practices, to preserve natural resources, to maintain land in active commercial agricultural use, and to ensure resale of land subject to a Restriction at an agriculturally affordable price for future agricultural use. The Commonwealth, acting through the Department, obtains a Restriction by offering qualified farmland owners the difference between the "fair market value" and the "agricultural value" of their farmland in exchange for a permanent deed

restriction, ranging anywhere from \$50,000 to over \$2 million. The Restriction prohibits activities or uses which may be detrimental to: the actual or potential agricultural viability of the land subject to a Restriction; water or soil conservation; good agricultural practices; and activities or uses which may be wasteful of the natural resources of the Commonwealth.

7. As of March 25, 2015, 874 farm properties have been placed under a Restriction for a total of 71,274 acres of farm land protected throughout the Commonwealth. Of these Restrictions, approximately 424 are co-held by cities and towns. Additionally, the Department has worked with the federal Natural Resources Conservation Service (NRCS) easement reimbursement programs since 1996. Approximately 277 of the Department's Restrictions are jointly held with NRCS and are monitored on an annual basis.
8. Any non-agricultural use of the property would require a legislative release of that portion of the Restricted land in accordance with the terms of M.G.L. c 184, § 32 and Article 97. The Commonwealth has invested public funds to protect restricted farm land and a change in use of these lands would be contrary to the public purpose for which it is protected, which is why only the General Court of Massachusetts can take action by a two-thirds vote to release a Restriction.
9. On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. ("Tennessee"), acting pursuant to section 7(c) of the Natural Gas Act, 15 U.S.C. § 717f(c), filed with FERC an Application for a Certificate of Public Convenience and Necessity to Construct, Install, Operate, and Maintain Certain Pipeline and Compression Facilities and to Abandon Other Facilities, known as the Northeast Energy Direct Project ("NED" or the "Project"). This Application was assigned Docket No. CP16-21-000.
10. The Massachusetts portion of the Project includes approximately 64 miles of 30-inch line, together with five new lateral pipelines with a total length of approximately 51 miles along with three new compressor stations in the Commonwealth.
11. The Department has reviewed the potential impact of the Project on land in active agricultural use and/or prime farmland soils or soils of state or local significance to farming and has determined that the Project will directly impact land subject to a Restriction held by the Commonwealth. Specifically, the Department has identified the following properties (owner/farm name and recording information):
 - (a) Crystal Brook Farm, Tyringham Middle Berkshire County Registry of Deeds, Book 1672, Page 958.
 - (b) Holiday Farm, Inc., Dalton -Middle Berkshire County Registry of Deeds, Book 1367, Page 684
 - (c) Musante Farm, Dalton Middle Berkshire County Registry of Deeds, Book 1712, Page 847
 - (d) Williams Brook Farm, Inc., Deerfield -Franklin County Registry of Deeds, Book 4633, Page 221
 - (e) Robert E. Waryjasz, Sr. Trust, Plainfield -Hampshire County Registry of Deeds, Book 7853, Page 126
 - (f) Keith and Colleen Lily, Ashfield -Franklin County Registry of Deeds, Book 5074, Page 133
 - (g) Alan and Shirley Lily, Ashfield -Franklin County Registry of Deeds, Book 4593, Page 76
 - (h) Stephen and Kathleen Melnik, Deerfield Franklin County Registry of Deeds, Book 3584, Page 243
 - (i) William W. Sr. and Sharon Melnik, Deerfield Franklin County Registry of Deeds, Book 5151, Page 111
12. In addition to Restricted lands, both the mainline and the Massachusetts Loop impact active farmland throughout the Commonwealth, including the land identified in Paragraph 11. The Project will require a construction Right-of-Way (ROW) of 100 feet for the mainline. Once constructed, the operational ROW is 50 feet for the mainline, which will adversely impact farms as a result of the following:

- (a) The extent of the disturbance and the ability of the farmer to continue to use land for agricultural purposes;
 - (b) Long term needs for access to the land -the Project proposes both temporary and existing access roads for construction;
 - (c) Clearing, grading and excavation of the land;
 - (d) Disturbance of the soil, impacts on soil fertility, and the management of the topsoil;
 - (e) Potential for leakage and explosions; and
 - (f) Location of infrastructure, such as meter stations and compressor stations, relative to agricultural land.
13. Additionally, pursuant to 18 C.F.R. §385.214(b)(2)(i)-(iii), the Department has an interest because of the substantial environmental impacts that this Project will have on the agricultural properties located throughout the Commonwealth including, but not limited to, destruction of mature forest, wider and more significant forest fragmentation, destruction of valuable stream corridor habitat, degradation of water quality, compaction of soils on agricultural lands, increased air and noise pollution, introduction or spread of invasive species, and significant impacts to preserved open space and farmland.
 14. Consistent with its statutory mandate, the Department has a direct interest in the outcome of the Project and is interested in the potential impacts, environmental and otherwise, of the facilities and activities proposed for construction in the Commonwealth as part of the Project. The Department is also interested in having the Commission take into consideration these impacts in determining whether to issue a Certificate of Public Convenience and Necessity.
 15. If the Department is not permitted to intervene, its interests will be adversely affected and bound by action taken in this Certificate Proceeding without having an opportunity to be heard.
 16. The Department asserts that its participation in this proceeding is in the public interest as required by FERC Rule 214, as codified at 18 C.F.R. 385.214(b)(iii).
 17. The Department further asserts that the interests it represents are unique and cannot be represented adequately by any other party.
 18. Based on the foregoing, the Department respectfully requests the Commission to allow it to intervene in this Certificate Proceeding with full rights attendant to that status, with respect to Tennessee's application filed on November 20, 2015.

Respectfully submitted,

MASSACHUSETTS DEPARTMENT OF AGRICULTURAL RESOURCES

BY: Tara Zadeh

January 6, 2016

CERTIFICATE OF SERVICE

I hereby certify that I have this day served a copy of the foregoing document upon the participants, to date, in this proceeding in accordance with the requirements of Rule 2010 of the Commission's Rules of Practice and Procedure.

Dated this 8th day of January 2016.

Individual BALAZS@CROCKER.COM

Basis for Intervening:

I am filing as an individual, a resident of Northfield, MA, whose home is within 500 feet of the proposed path of this pipeline.

Our concerns are as follows:

- Physical damage to our well due to blasting of bedrock.
- Groundwater/aquifer disruption to our well water supply.
- Groundwater contamination from construction and pipeline leaks.
- Drastically reduced property value to our most valuable asset, our home and land.
- Inability to sell home now or someday, due to pipeline proximity.
- Possibility of loss of homeowner's insurance coverage, or drastically increased cost of same.
- Loss of local forest due to construction.
- Disruption of wildlife.
- Damage to Northfield roads due to construction.
- Concerns about light pollution and noise pollution from compressor station.
- Extreme concern about off-gassing of natural gas, and the toxic components and additives in the pipeline and at the compressor station.

We are terrified of the prospect of explosions. We are in the "INCINERATION ZONE" of the pipeline. There is no escape from such a disaster.

I am outraged at the possibility of any of my land being taken by eminent domain, not for the greater good, but for Corporate shareholder profit.

I am also outraged at the notion that this pipeline is over-designed, not for future New England customers, but for the export of natural gas, again for maximum corporate profit.

Submission Date: January 8, 2016 11:05AM

Docket: CP16-21

Filer: Individual

Esther L. Reynolds
671 Franklin Mt Rd
Otego, NY 13825

Of the 150 acres I own, 120 are located in the half mile Buffer Zone (or as a neighbor calls it “the Kill Zone”) of the proposed NED Compressor Station. in the town of Franklin in the county of Delaware.

A huge concern I have is the detrimental effect that this project will have on the value of my lands and structures. I can only see them being devalued. My husband and I worked for years clearing land and building several structures mosly by ourselves. I am sick to think that all of this hard work will be devalued by the NED

Compressor station project.

When the project begins my quiet rural life will be no longer as truck and equipment will be going by my lands and the noise will penetrate my once quiet life.

As constuction begins I am very concerned about the blasting and drilling and the impact it will have on my already tenuous water supply. My well is 350 feet deep. It yields a half a gallon a minute and has only a 250 gallon reserve.

Upon completion Of the NED Compressor Station I am worried about the constant noise produced by the compressor, the harmful emmissions and the potential for a hazardous event. Will not make for easy sleeping at night or peaceful days.

The pros in the area say this project will benefit the area. I think they are right for the 2 or 3 years it is under construction. Local people will be hired for menial job (guards, truck drivers). After constuction these jobs will be gone and only high paid gas engineers will be imported into our area.

The area will be left scarred with the swath that is cut, become industrialized, lose its idyllic rural atmosphere, and be injected with noise and chemical pollution.

What an awful environment to live in. What an awful legacy to leave to future generations. From what I have read the project is not needed. There are other cleaner, safer, envionmentally friendly ways to meet future energy needs. Lets go with solar and water projects.

Hopefully somebody in government will really take a good look and come to their senses and STOP the NED Compressor Project.

Individual	val.dudley@gmail.com	
------------	----------------------	--

Basis for Intervening:

I reside in Delaware County, NY in the town of Kortright. The proposed "Constitution" pipeline route would cross approximately 42 miles of my county.

I am concerned that the proposed "Northeast Energy Direct" open-access pipeline would lead to fracking and unwanted industrial development along the pipeline route. This would destroy Delaware County's rural character, its greatest asset. Additionally, few would be interested in investing in property anywhere near a high pressure gas pipeline. Because of this, property values and all taxpayers in Delaware County would suffer if the NED pipeline project is permitted by FERC.

I am a resident expected to be in the "blast radius" and my daily commute crosses over the proposed pipeline route, so I will be at physical risk.

I have friends and business associates in many Delaware County towns including, Sidney, Masonville, Franklin, Davenport, and Harpersfield. All of these towns are on the proposed pipeline route. I often travel thorough these communities and am concerned about my safety and welfare, as well as that of the friends and associates who reside in these communities, from inevitable accidents involving this pipeline.

The multiple interests I've noted above, and others too numerous to mention, would be directly affected by the outcome of these FERC proceedings. I also expect the proceedings to include a full cumulative impact analysis of the pipeline project which includes the proposed "Constitution" pipeline. As no one else can represent my interests in these matters, I am filing this motion to intervene.

Basis for Intervening:

I reside in Delaware County, NY in the town of Kortright. The proposed “Constitution” pipeline route would cross approximately 42 miles of my county.

I am concerned that the proposed “Northeast Energy Direct” open-access pipeline would lead to fracking and unwanted industrial development along the pipeline route. This would destroy Delaware County’s rural character, its greatest asset. Additionally, few would be interested in investing in property anywhere near a high pressure gas pipeline. Because of this, property values and all taxpayers in Delaware County would suffer if the NED pipeline project is permitted by FERC.

I am a resident expected to be in the “blast radius” and my daily commute crosses over the proposed pipeline route, so I will be at physical risk.

I have friends and business associates in many Delaware County towns including, Sidney, Masonville, Franklin, Davenport, and Harpersfield. All of these towns are on the proposed pipeline route. I often travel thorough these communities and am concerned about my safety and welfare, as well as that of the friends and associates who reside in these communities, from inevitable accidents involving this pipeline.

The multiple interests I’ve noted above, and others too numerous to mention, would be directly affected by the outcome of these FERC proceedings. I also expect the proceedings to include a full cumulative impact analysis of the pipeline project which includes the proposed “Constitution” pipeline. As no one else can represent my interests in these matters, I am filing this motion to intervene.

Basis for Intervening:

I oppose the proposed pipeline: I object to it as an electric ratepayer, a taxpayer, a neighbor and visitor to protected public land in Massachusetts. It would imperil our food, water, and air. I object to it as a person deeply concerned about climate change and the large-scale extraction, combustion and release of natural gas into the atmosphere, which directly affects all beings on this planet.

Basis for Intervening:

I am very concerned about the public drinking supply of the Town of Dalton and City of Pittsfield. The pipeline crosses a large portion of the watershed of the Cleveland Reservoir that serves these communities (50,000 people in total). Blasting in the ledge of the watershed will have all kinds of negative effects on our drinking water. Please reconsider this drastic activity.

--------------	-------------------------	---------------------------

PSEG Energy Resources & Trade LLC	cara.lewis@pseg.com	david.caffery@pseg.com
-----------------------------------	---------------------	------------------------

Basis for Intervening:

Pursuant to Section 214 of the Federal Energy Regulatory Commission’s (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.214, the December 7, 2015 “Notice of Application,” and the January 4, 2016 “Notice of Extension of Comment Date,” PSEG Energy Resources & Trade LLC (“PSEG ER&T”) hereby moves to intervene in this proceeding.

IDENTITY OF PSEG ENERGY RESOURCES & TRADE LLC

PSEG ER&T is engaged in, among other things, the business of natural gas supply. PSEG ER&T purchases firm transportation capacity and storage services from a number of natural gas interstate pipeline companies and provides gas supply in support of the basic gas service offering of Public Service Electric and Gas Company (“PSE&G”). PSE&G is a public utility operating company, that provides distribution and serves gas to approximately 1.8 million customers in an area having a population in excess of 6 million persons and which extends from the Hudson River opposite New York City, south to the Delaware River at Trenton and west to Camden, New Jersey. PSEG ER&T and PSE&G are both wholly owned direct or indirect subsidiaries of Public Service Enterprise Group Incorporated. PSEG ER&T’s principal and executive offices are located at 80 Park Plaza, Newark, New Jersey 07102-0570.

{PIPELINE}’S FILING

On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”) filed an application seeking authority to: (i) construct, install, modify, and operate certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire, and Connecticut; and (ii) to abandon certain facilities, as part of the Northeast Energy Direct Project (“NED Project”). Tennessee proposed to provide up to 1.3 billion cubic feet per day (Bcf/d) of firm capacity at a cost of approximately \$5.2 billion dollars. Specifically, according to Tennessee, the NED Project includes two components: (1) the Supply Path Component, which is comprised of facilities from Troy, Pennsylvania, to Wright, New York (“Supply Path Component”), and (2) the Market Path Component, which is comprised of facilities from Wright, New York, to Dracut, Massachusetts (“Market Path Component”). The Supply Path Component facilities include: (i) approximately 174 miles of pipeline facilities in Pennsylvania and New York of which approximately 41 miles will be looped; (ii) three new compressor stations totaling 153,500 horsepower (hp); (iii) modifications to one existing compressor station; (iv) two new meter stations; and (v) various appurtenant facilities. The Market Path Component facilities include: (i) approximately 188 miles of mainline pipeline facilities in New York; Massachusetts, and New Hampshire; (ii) approximately 58 miles of lateral and pipeline looping, including a total of five delivery laterals in Massachusetts and New Hampshire, one pipeline loop in Connecticut; (iii) six new compressor stations totaling 207,600 hp; (iv) construction of 13 new meter stations; (v) modification of 14 existing meter stations; and (vi) various appurtenant facilities. On October 2, 2014, Commission staff granted Tennessee’s request to utilize the National Environmental Policy Act (“NEPA”) Pre-Filing Process and assigned Docket No. PF14-22-000 to staff activities involving the project. As of the filing of the application on November 20, 2015, the NEPA Pre-Filing Process for this project has ended. From this time forward, this proceeding will be conducted in Docket No. CP16-21-000 as noted in the caption of the Notice of Application. Pursuant to section 157.9 of the Commission’s rules, 18 CFR 157.9, within 90 days of the Notice of Application, the Commission staff will issue a Notice of Schedule for

Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement ("FEIS") for this proposal. The issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS.

INTERVENTION

PSEG ER&T is a transportation and storage customer of Tennessee, and has a substantial interest in this proceeding. The instant matter could affect PSEG ER&T's current level of rates and services with Tennessee and therefore PSEG ER&T has a direct and substantial interest in the instant filing. Given its interest in this proceeding, PSEG ER&T will not be adequately represented by any other party. Accordingly, PSEG ER&T should be permitted to intervene in, and be made a party to, the subject proceeding, with all rights attendant thereto.

20160108-5200

Sullivan Family, New Ipswich, NH.

Submitted in opposition to CP16-21 due to the inherent risks and hazards to health, safety, and environment.

Kinder Morgan (KM), with its principal executive offices located in Houston, TX, is the largest independent owner and operator of petroleum product pipelines in the United States, engaging in substantial business activities, including but not limited to, the ownership, management, operation, maintenance and control of approximately 84,000 miles of pipelines.

The minimum federal safety standards for the transportation of gas and pipeline facilities was established by the U.S. Secretary of Transportation pursuant to Section 3(b) of the National Gas Pipeline Safety Act of 1968 (P.L.90-481, 49 U.S.C. Section 1672(b).

Public documents allege that ruptures of KM pipelines, releases of hazardous product into the environment, and safety violations pertaining to their pipelines have occurred frequently and excessively. Such occurrences include but are not limited to the following:

- a) In 2009 KM corporate defendants were cited by the Pipeline and Hazardous Materials Safety Administration (PHMSA) in for violating safety standards pertaining to their pipelines (PHMSA letter of September 1, 2009).
- b) In 2011 the PHMSA cited KM corporate defendants for various safety violations, including: failing to update maps to show pipeline locations, failing to test pipeline safety devices, failing to maintain proper firefighting equipment, failing to inspect its pipelines as required, and failing to adequately monitor pipes' corrosion levels (PHMSA letter of February 28, 2011).
- c) History of neglect documented by The Wall Street Journal, in "Wall Street Worries about Kinder Morgan's Safety Record: BC Pipeline slashes and defers maintenance spending," September 19, 2013.
- d) History of neglect further documented by The Wall Street Journal, in "Is Kinder Morgan Scrimping on its Pipelines?," after an investment analyst determined that the company was starving its pipelines of routine maintenance by diverting excessive funds to investors, September 27, 2013.
- e) Excessive history of leak data and ruptures of Kinder Morgan's onshore gas transmission pipelines documented by PHMSA, 1994-2013, including determinations of faulty infrastructure, failure of the pipe, cracked welds, faulty pipeline equipment, corrosion of the pipe, and other problems.
- f) In Texas alone, from 2003 to 2014, Kinder Morgan experienced 36 "significant incidents," per Pipeline Risk Report of the PHMSA, "Building Safe Communities: Pipeline Risk and Its Application to Local Development Decisions."
- g) PHMSA reports that throughout the United States since 2003 Kinder Morgan and its subsidiaries have

been responsible for at least 180 spills, evacuations, explosions, fires and fatalities in 24 states.

- h) PHMSA Corrective Action Order CPF No. 4-2003-1008H cites Kinder Morgan for an explosion, throwing a 54-foot long section of pipe 30 feet from the ditch, due to cracking along the length of the failed section.
- i) Rupture of a KM 14 inch pipeline on April 27, 2004, in Solano County, California spilled over 120,000 gallons of fuel onto a marsh, resulting in a \$5.3 million dollar fine, and an agreement by KM to enhance spill prevention, response and reporting practices.
- j) Order of August 2005 by PHMSA cites 44 KM spills in 31 months, indicating “widespread failure to adequately detect and address the effects of outside force damage and corrosion.”
- k) California Occupational Safety and Health Administration cites KM for failure to accurately mark or map pipeline location; contributing toward an event which caused a gasoline spill and fire and explosion that incinerated five workers and severely injured others; also fine levied by the California Fire Marshall for KM’s role in the “completely preventable” tragedy; KM agreed to upgrade pipeline inspection methods and improve corrosion control.
- l) KM pipeline leaked gasoline into Summit Creek, near Truckee, California, on April 1, 2005.
- m) May of 2005, stress corrosion cracking of KM pipeline near Marshall, Texas caused an explosion, fireball and injuries.
- n) July 26, 2006, near Campbellsville, Kentucky, a KM pipeline exploded, due to external corrosion of the pipe.
- o) November 11, 2006 near Cheyenne, Wyoming, rupture and explosion of a KM pipeline, after which the Federal Energy Regulatory Commission cited KM’s “poor compliance record.”
- p) November 27, 2006, at Charlotte, North Carolina, KM’s Plantation Pipe Line released about 4,000 gallons of gasoline.
- q) July 24, 2007, pipeline operated by KM Canada released over 250,000 litres of crude oil into the environment.
- r) September 23, 2008, corrosion of a KM pipeline causes explosion and fire near Pasadena, Texas, causing fatality and injury; deemed a “significant event,” with PHMSA referencing at least 18 “significant incidents” 2009 to 2013, per “Texas Significant Incidents Listing,” PHMSA.
- s) May 2009, near Palm City, Florida, a KM pipeline ruptured, blowing out of the ground about 106 feet of buried pipe, weighing about 5,000 pounds, causing injuries.
- t) July 15, 2009, a pipeline explosion at Sylvarena, Mississippi involving KM and others, resulting in fatality and injury.
- u) November 30, 2010, failure of KM pipeline near Natchitoches, Louisiana, causing evacuation of 100 homes. The large crack in the pipe was near a previous fracture in 1965 which caused multiple fatalities. Determined to be caused by stress corrosion cracking, per PHMSA Corrective Action Order, Case CPF 420101007H.
- v) March 14, 2011, leak and fire from KM pipeline at Carteret, New Jersey. On April 4, 2013 PHMSA issued a Notice of Probable Violation, Proposed Civil Penalty and Proposed Compliance Order (NOPV) after an inspection. KM paid a penalty of \$63,100 and was required to complete pipeline integrity testing and other corrective measures by May 2015. (See KM Annual Report for 2013, p. 166).
- w) August 17, 2011, KM pipeline near Herscher, Illinois has flash fire and explosion, sending five employees to hospital. KM cited for pipeline and safety violations.
- x) November 16, 2011 near Glouster, Ohio, a KM failed weld causes leak and explosion, leaving 30 feet across by 15 feet deep, and destroying three homes. The leak was caused by “... inadequate understanding of the influence of the geotechnical threats on the pipeline,” and inadequate design, materials or workmanship, exceeding operational limits and gaps in integrity management.

- y) May 2012 at Arvin, California, failure of KM relief valves and pipe supports, causing an explosion, due to “the complete structural failure of the over pressure protection support system.” PHMSA Failure Investigation Report, GT 2012-5-2.
- z) June 2012 in Gray County, Texas, KM pipe failure, with gas igniting, blowing crater 30 feet in diameter, and causing large fire, due to 50 foot long longitudinal rupture in the pipe. PHMSA Corrective Action Order, CPF No. 4-2012-11011 H.
- aa) December 26, 2012, in West Melbourne, Florida, explosion of a KM pipeline, ejecting a 20 foot section of 20 inch diameter pipe. PHMSA CPF No. 2-2012-IOOSH.
- bb) May 8, 2013, fire at a KM compressor station near Crockett, Texas caused over \$7.5 million dollars in damage.
- cc) June 18, 2013, in Washington Parish, Louisiana, rupture of a 30 inch KM pipeline, with explosion and fire, knocking over trees for 200 yards across and large fire.
- dd) June 26, 2014, near East Bernard, Texas, KM pipeline blew out, destroying the road and setting a truck on fire, with flames shooting 150 feet high.
- ee) May 12, 2014, near Belton, South Carolina, KM’s Plantation Pipeline ruptured at KM’s pump station, causing a geyser of gasoline 150 feet into the air.
- ff) Early December, 2014, in Anderson County, South Carolina gasoline discharged from a 26 inch pipeline. Reports of gasoline leaked vary (from 8,800 gallons to 369,600 gallons). After 10 months of remediation efforts, less than 53% of the release has been recovered leaving substantial gasoline remaining in the soil, groundwater and surface waters, and throughout the aquifer and substratum.

Following the 2004 pipeline rupture and spill in California, Kinder Morgan pled guilty to criminal charges with several million dollars in fines. The Chief of California’s pipeline safety division determined that KM had committed criminal offenses by ignoring data that the pipeline had corroded and required maintenance. In addition to the criminal pleas noted above, the PHMSA in 2005 ordered KM to address its rise in pipeline incidents resulting from KM’s “inadequacies” in interpreting data to evaluate and repair its pipelines. The United States Department of Transportation also determined to “form a task force to look into Kinder Morgan Inc.’s maintenance and inspection practices on several petroleum pipelines, ... the first such task force the agency has ever formed.”

Public documents against Kinder Morgan claim negligent and deficient maintenance and repair of corporate pipelines, including inadequate allocation of funds for needed maintenance, repair, and other operational function; as well as inadequate budgeting, staffing, training, supervision, development, and implementation of policies and procedures which have resulted in ruptures of pipelines and catastrophic releases of hazardous product into the environment.

Furthermore, Kinder Morgan’s standard disclaimer that it will abide by all federal safety and environmental standards has little value when our national standards have been so weakened by the “Halliburton Loop-hole” (passed during the Bush/Cheney administration) which exempts fracking processes from the Clean Water Act, the Safe Drinking Water Act, and the Clean Air Act.

IN CONCLUSION, Massachusetts, New Hampshire, and New York residents DO NOT NEED the proposed Northeast Energy Direct Pipeline (CP16-21) with its inherent risks and hazards to our health, our safety, and our environment. Furthermore, this project is NOT CONVENIENT nor is the exportation of our limited resources beneficial to the majority of New England or New York residents. PEOPLE BEFORE PROFITS!

Basis for Intervening:

I live in Merrimack, NH and want to intervene in this proceeding to oppose the NED pipeline. I have an interest directly affected by the outcome of the proceedings because:

I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED.

I am a member of an impacted community concerns about various impacts to local economy/environment/aesthetics/health.

The proposed pipeline puts us at risk without providing any benefit to the residents of Merrimack, or New Hampshire.

Sincerely,

Alicia Flanders

20160108-5213

K Sullivan, New Ipswich, NH.

I have the spotted salamander in/on my property.

Within the northeastern United States, several states have already named

the spotted salamander a Species of Special Concern. New Hampshire is one of these states. I am doing my part to help protect salamanders and help protect them from development. If the KM gas pipeline & compressor station is allowed to continue to fruition, these creatures will be put in serious harms way by this development.

This pipeline is not needed, it is not wanted by the people in southern New Hampshire.

Please do the responsible action and DENY this Certificate of Public Convenience and Necessity (NED Project).

**Tennessee Gas Pipeline
Company, L.L.C**
a Kinder Morgan company

January 8, 2016

Ms. Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street, N.E.
Washington, D.C. 20426

Re: Tennessee Gas Pipeline Company, L.L.C., Docket No. CP16-21-000
Northeast Energy Direct Project

Response to Request for Extension of Time to File Comments of the Town of
Stockbridge, Massachusetts.

Dear Ms. Bose:

Tennessee Gas Pipeline Company, L.L.C. ("Tennessee") filed an Application for a Certificate of Public

Convenience and Necessity for the Northeast Energy Direct Project (“NED Project”) with the Federal Energy Regulatory Commission (“Commission”) on November 20, 2015, in the above-referenced docket. On December 7, 2015, the Commission issued a Notice of Application for the NED Project establishing January 6, 2016 as the deadline for filing comments on the Application. On January 4, 2016, the Town of Stockbridge, Massachusetts (“Stockbridge”) filed a request for a 30-day extension of time to file comments in order to respond to information contained in Tennessee’s December 30, 2015 response to the Commission’s data request. Also, on January 4, 2015, the Commission issued a Notice of Extension of Comment Date for the NED Project proceeding, extending the comment date to January 15, 2016 for reasons unrelated to Stockbridge’s request.

Tennessee believes the record in this proceeding should be as thorough and complete as reasonably possible to afford all parties and the Commission a sound basis for understanding and evaluating the NED Project. While Tennessee does not agree with Stockbridge’s claims concerning the adequacy or timeliness of Tennessee’s response to the Commission Staff’s data requests, Tennessee is not opposed to Stockbridge’s request. Because the proceeding is still in its early stages and in the interest of creating a fully developed record for the Commission and the public, to the extent the Commission deems a further extension of time is warranted, Tennessee would not oppose such an extension of time. Tennessee would note, of course, that whether or not an extension of time is granted, all parties, including Stockbridge, are free to submit comments concerning any aspect of the Project throughout the pendency of the proceeding.

Tennessee is working diligently to respond to information requests from the Commission to aid in the processing of Tennessee’s Application, and is prepared to do so throughout the process. Any questions concerning this letter should be addressed to Jacquelyne Rocan at (713) 420-4544.

Respectfully submitted,

TENNESSEE GAS PIPELINE COMPANY, L.L.C.

Jan 4, 2016

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street NN, 1A
Washington, DC 20426-0001

RE: Tennessee Gas Pipeline, LLC
Northeast Direct Project (NED)
Docket no. PF14-22

Secretary Bose,

In October 2015 the Mascenic Regional School Board, representing the towns of New Ipswich and Greenville New Hampshire, authorized our chairman to draft a letter of opposition to the routing of the Northeast Direct (NED) pipeline and the siting of a large compressor station in our communities. This letter was submitted to FERC to meet a public comment deadline. After reviewing the letter this Board feels that it may have inadvertently expressed that there were conditions under which this Board might approve of the NED project in our community. We therefore request that you receive this letter from the Mascenic School Board as clarification to the stated position.

We, the Mascenic Regional School Board, wish to unequivocally state our objection to the routing of the NED pipeline and/or the siting of the proposed compressor station through or within the towns of New Ipswich or Greenville New Hampshire under any circumstances. Our previous letter clearly established our standing in making this objection. The children that we have the responsibility for educating will be affected by the construction, operation, and emissions of the proposed pipeline. No degree of monitoring before, during, or after construction can reduce the risk to our students to an acceptable level. There will be unacceptable changes to the ecosystem - any level of increased air-pollution, sound pollution, or potential contamination of our ground water is intolerable. We can foresee no lasting positive impact to our community from this project.

The calculus is simple. If this project is indeed 100% safe then there is absolutely no reason - beyond financial benefit to Kinder-Morgan and Tennessee Gas Pipeline LLC, which should not be a consideration of the government of the United States of America - to route the pipeline or site the compressor station in a rural area. In fact it makes far more sense to route through urban/industrialized areas where the environment has already been disrupted rather than create additional damage in rural areas. If the project is not 100% safe then we object to FERC marginalizing the value of the lives of the citizens of our community over those of urban/suburban areas. Not one of our citizen's lives should be traded for the profit of any petro-chemical corporation.

We thank you for your consideration of our opinion in your deliberations on the NED project,

The Mascenic Regional School Board
Earl Somero, Chairman
Jeff Salmonson, Member

Jim Kingston, Member
Tara Sousa, Member

Motion to Intervene

Jan 8th, 2016

Docket #CP16-21-000

As the Chairman of the School Board, please accept this motion to intervene in the proceedings for the proposed NED pipeline. This is mainly due, but not limited to, our concerns of serious health impacts to the children of the Mascenic School District and surrounding areas.

Earl Somero
Chairman of the Mascenic School Board

20160108-5228

UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, L.L.C.)
Northeast Energy Direct Project)

Docket No. CP16-21-000

**MOTION TO INTERVENE OF THE
NEW HAMPSHIRE OFFICE OF CONSUMER ADVOCATE**

Pursuant to Rule 212 and 214 of the Rules of Practice and Procedure of the Federal Energy Regulatory Commission (“Commission”), 18 C.F.R. §§ 385.212, 385.214, and 157.10, the New Hampshire Office of Consumer Advocate (“NH OCA”) by and through the Consumer Advocate, Susan W. Chamberlin, hereby moves to intervene as a full party in the above-captioned proceedings.

I. MOTION TO INTERVENE

A. Description of Movant

The NH OCA is authorized by statute to advocate on behalf of residential ratepayers in any proceeding before state and federal courts, tribunals and commissions, concerning rates, charges, tariffs and consumer services. NH RSA 363:28, II.

B. Basis for Intervention

The NH OCA seeks to intervene in this proceeding to represent the interests of New Hampshire residential utility customers. On November 20, 2015, Tennessee Gas Pipeline Company, L.L.C. (“Tennessee”), pursuant to sections 7(b) and 7(c) of the Natural Gas Act, submitted its application “for a certificate of public convenience and necessity to construct, install, modify, operate and maintain certain pipeline and compression facilities to be located in Pennsylvania, New York, Massachusetts, New Hampshire and Connecticut (referred to as the Northeast Energy Direct Project” (“NED”).¹ NED is comprised of two segments, (1) the Supply Path, which extends from Susquehanna County, Pennsylvania to Wright, New York; and (2) the Market Path, extending from Wright, New York into Massachusetts, through southern New Hampshire for approximately 70 miles and eventually completing its course in Dracut, Massachusetts.² The NH OCA has participated as a full party in matters before the New Hampshire Public Service Commission where a shipper has sought approval of precedent agreements with Tennessee for the procurement of Natural Gas Capacity on both the Market Path and Supply Path.³ Any approval of such agreements directly affects the interests of New Hampshire gas customers. The NH OCA also recognizes that any section 7 approval of NED may also directly affect the interests of New Hampshire electric customers.⁴ The NH OCA is the public officer charged with representing New Hampshire residential ratepayers with respect to electric and gas industry

matters that affect these customers. The NH OCA does not typically intervene on proceedings that primarily assess whether pipeline infrastructure should be built based on the project's review under the National Environmental Policy Act, but because NED has the potential to directly and indirectly impact New Hampshire ratepayers in the aforementioned ways, the NH OCA respectfully moves for intervenor status in this proceeding.

The movant's participation is in the public interest and good cause exists for the Commission to grant the NH OCA leave to intervene. The NH OCA is the public officer charged with representing New Hampshire residential electric and gas customers with respect to electric and gas industry matters that affect these customers. Resolution of this matter may directly affect the interests of such customers and the rates they pay. These customers' interests will not be adequately protected without the NH OCA's intervention. No other party to this proceeding represents the interests of New Hampshire utility customers. The interests of the NH OCA in this matter are direct and substantial, and no other party can represent adequately said interests. For these reasons, granting intervention is in the public interest, and the Commission should grant the NH OCA's leave to intervene in this proceeding with full rights as a party.

II. PLEADINGS AND OTHER COMMUNICATIONS

Service of all documents filed in this proceeding should be addressed to the following persons whose names and addresses should be placed on the official service list compiled by the Secretary for this proceeding:

Susan W. Chamberlin
Consumer Advocate
21 S. Fruit St., Ste.
Concord, NH 03301
(603) 271-1174 (phone)
susan.chamberlin@oca.nh.gov

Nicholas J. Cicale
Attorney for the Office of Consumer Advocate
18 21 S. Fruit St., Ste. 18
Concord, NH 03301
(603) 271-1173 (phone)
nicholas.cicale@oca.nh.gov

III. CONCLUSION

WHEREFORE, The NH OCA respectfully requests that the Commission:

1. Grant this Motion to Intervene and order that the NH OCA be allowed to participate fully as a party in this proceeding;
2. Grant such further relief as the Commission deems just and proper.

Respectfully submitted,

NEW HAMPSHIRE OFFICE OF CONSUMER ADVOCATE

K Sullivan, New Ipswich, NH.

Incremental pipeline upgrades, such as Spectra’s Algonquin Incremental Market (AIM) project, which are designed to make the existing pipeline systems more efficient, should be employed long before any brand new pipeline systems are built. Existing pipeline systems, like Spectra’s Algonquin Gas Transmission system, are already connected with existing power generators. This would mean the Kinder Morgan Northeast Energy Direct pipeline, which would not be situated near any power generating plants, would only be necessary and economically justified after all other pipeline options have been exhausted, and that only after all LNG, EE, and DR options are exhausted. We are nowhere near justifying a brand new pipeline the size and scope of Kinder Morgan’s Northeast Energy Direct.

Just say NO to the Application for a Certificate of Public Convenience and Necessity (NED Project).

This Kinder Morgan/TN Gas Pipeline Company/NED is not needed. it is not wanted.

20160111-0008

Hand written card, Dana V. Taplin, Dracut, MA: opposing.

20160111-0010

Dear Federal Energy Regulatory Commission:

As a resident of the town of Dracut, Massachusetts, I’ve been noticed about constructing a new 36-inch natural gas pipeline with it’s accompanying 23,000HP compressor station proposed by the Kinder Morgan – Tennessee Gas Corporation through the Town of Dracut

As a resident and a parent of a newborn, who lives within 1,000 feet from gas pipeline, I am so concerned about exploitation, leakage, and environmental damage, especially compressor station, which are high threats to human’s lives. I can see enough evidence of impacts from the type of pipeline, which already killed many people. In addition, I hate to see many houses raise “For Sales” signs, which is a big impact to the property values.

I believe the technology is moving so fast and many clean energy options, such as solar panel, are preferable for current and future times.

Would you please carefully consider the concern and impacts of such the pipeline project, do we need it, is it a good option, how does it change the global environment?

Please do not ruin our lives, our environment, our homes, our town, and our children.

Sincerely,
Connlie Chen
35 Dadak Drive

Attention: Federal Energy Regulatory Commission

Docket CP16-21-000

Dear Administrative Staff

As a resident of the town of Dracut for more than 62 years I have yet to be shown the need for this new 30" pipeline with its accompanying 23000 hp Compressor Station and the Metering stations proposed. Kinder Morgan-Tennessee Gas Corporation will be pumping what I have been told 1.3 billion cubic feet of gas per day through the town of Dracut.

The new location of the proposed pipeline along with the Metering stations and Compressor station still affects many residents of the quaint rural town, with many open space acres and Sums that produce vegetables for residents for the town and its surrounding neighbors.

This project has caused myself and my neighbors great concern for our safety and health. Kinder Morgan never has been open with the residents of this town or even openly explained what is about to happen in our town, especially the east end of town where I reside.

Kinder Morgana proposed project is devastating to me. I'm a 62 yr old man who has worked hard all his life to build a beautiful, but modest home for my wife and three children on an acre of land given to me that was part of my Father's farm so I could start a family. I built the home 33 yrs ago. I worked countless hours to create what I have now at 270 Wheeler Rd. Dracut. Along comes Kinder Morgan and that if this project is approved will destroy everything I ever worked for. I can't start over at my age because I retired after having open heart bypass surgery at the age of 62. It will reduce my property to the value of a starter home... if that. I will have no opportunity to sell as I will have to disclose that I will have a Meter Station being built across the backside of my property within 75 to 100 ft of my property line in full view of every window and every angle of my yards hmdscape. Most of my neighbors signed the do not survey papers that were out there to

prevent Kinder Morgan from coming on their land. I chose not to because of how much this project would severely affect me. I wanted to keep open the lines of communication with them. The many times I spoke with land agents, I was fed all different scenarios that would happen but none to lessen the damage to my home equity and quality of life.

The new proposal will put me within 1/2 mile of that 23000 HP Compressor Station. My well is private and I have no public water access to my home. My well is located on the furthest backside of my property where all the digging will take place for the Meter Station. I repeatedly asked the land agent as to why he would locate it in a proposed 35 lot subdivision called Berube Farms. This development has all the permits and roads designed and approved by the town and will be built sometime in the near future. The Land Agent said he would buy the 3 small closer lots behind me to locate the Meter station. The Meter station with the many exposed pipes above the ground would be seen from every room of my home along with the added noise and smells the facility will cause. It's also very close to the Centerville Sportsman Gun Range. What should happen if a stray bullet from the range hit an exposed gas pipe? The proposed site will affect so many facets of my life. It also scares myself and my family living so close to it and is causing me to be stressed out without any addressing of my concerns.

The town has a Meter station on Methuen Street Dracut that has many complaints from residents stating they smell gas all the time and the noise from it during winter months due to increased usage through the pipes.

I also will have a new 30 inch pipe from the Compressor station that will connect to the Meter station. There is a 30 inch along the field behind me now. They will drive a new 30 inch pipe alongside a present 30 inch pipe comprising of two 30 inch pipes. The new pipe will be closer to my home about 150 feet from the right side of my home stripping many trees and exposing my home to 5 rows of power lines.

The access road to the Meter station is not disclosed but will most likely be along the left side of my property directly alongside my property line from Wheeler road.

Three sides of my home will be dug up for construction that will destroy any value my property has now. I have no recourse as none of this is on my property that I own. I have thought of other sites that are away from developments and would have minimal affect on families and homes and with them ...one being directly on the opposite side of the power lines from me and away from homes. This is directly across from the St Francis church but into the woods about 200 ft from Wheeler Rd, not affecting the church at all as it would be in a heavily wooded area not visible from the street. This is a high and dry site on raw land owned privately with many many acreage alongside power lines ...this site would eliminate an access road from the side of my home. Raw land vs. buying 3 approved building lots from a developer in a proposed development does make so much more sense to buy. Locate it away from the developments and any homes around it. Even the cost would be greatly less for Kinder Morgan but this company seems stuck on locating this within the 35 lot development and myself with potential for complaints in the future from these homeowners. I didn't ask for this and should not be subject to this from a company that has no empathy for anyone. I'm just the little guy asking for your help in this situation.

Please look thoroughly into what is happening here and to my town. Thank you so much for taking the time to read my letter.

Sincerely,

Thomas J Berube

20160111-0018 Motion to Intervene of Thomas J. Berube

December 20, 2015

Attention: FERC

Docket 1 CP16-21-00

Dear Administrative Staff,

I would like to be an Intervener for this project. I am the property owner of parcel MBLU 38/48/1 on the Dracut Ma. assessors map. I reside at 270 Wheeler Road in Dracut Massachusetts . I will be severely impacted by this project on 3 sides of my property. On the right side of property an added 30” Pipe alongside a 30” existing pipe within 150of my property line stripping trees that now hide 5 rows of power lines .Along the backside of my entire lot will be a New Metering Station within 100ft of my property line exposing my home to fumes and noise pollution and severely impacting the views from my yard and windows .The left side will be dug up along the entire length of my property for an access road to the new Metering Station. This project will make the sale of my home virtually impossible along with substantial decrease of my homes property value. It will compromise my health and safety. I am also within 1/2 mile of the proposed Compressor Station on Broadway Rd Dracut.

Sincerely,

Thomas J Berube
270 Wheeler Road

tmb270@aol.com

20160111-5005

Julianna Lichatz, Wilton, NH.

I am writing to you to share my concern over Kinder Morgan’s proposed Northeast Energy Direct Expansion Project (NED). There are several reasons why it needs to be stopped.

I live four miles from one of the proposed compressor sites. I teach at a school one mile from my house. My neighbors in Temple have it worse than I. Their public school is 1300 feet from the proposed site. In the event of a” blowdown” or a leak, natural gas and the proprietary chemicals (many of which are outlawed by the Clean Air and Clean Water Acts) will contaminate our air and water. Children are more susceptible to these carcinogenic substances. For the health and safety of our children and future generations, please veto this pipeline proposal.

My grandmother gave up her land for the construction of I-84. This is what I understand as eminent domain-buying private land for public good. The proposed pipeline does not serve the people of New Hampshire. It stands only to put more money in the pockets of a large company. From all accounts, the fuel passing through our lands will be shipped overseas. Because this is not a case of eminent domain, please veto this pipeline proposal.

At last tally, New Hampshire had a surplus of energy. We need to put our focus on renewable resources like solar, wind, wood, and water. In the name of greenhouse gas reduction, please veto this pipeline proposal.

Conservation of land was one of the greatest gifts our forefathers left for future generations. New Hampshire is one of the best places in the US to live because of our landscape and conservation of resources. We owe it to our forefathers to protect the land they set aside for us. If we don’t, no one will want to continue maintaining such a legacy. In the name of our forefathers, please veto the pipeline proposal.

I recently moved to New Hampshire from the western slope of Colorado, where the effect of fracking is a daily conversation and for many, a fight for their livelihoods and health. The environmental degradation caused by the oil and gas industry is apparent on I-70. Massachusetts already has one pipeline highway/corridor. Let’s not destroy another pristine area for someone else’s profit.

As a native New Englander, I moved back to plentiful clean water, good air, beautiful landscapes and historically preserved towns. Please help protect our way of life and keep New Hampshire one of the best places

to live.

20160111-5006

Becky Meier, Canaan, NY.

The Constitution Pipeline filed a request for a Partial Notice to Proceed to begin tree clearing. We assert this activity is presently ILLEGAL and will be resisted.

In fact, this is just the latest in a long list of illegal activities relating to this project, including:

FERC failing to study cumulative impacts of CP and the Kinder Morgan NED as required by the National Environmental Policy Act.

FERC failing to show a need for this pipeline, which will be largely used for export.

Constitution Pipeline Company lying to landowners, and using threats, intimidation, and bribes of dubious legality.

FERC granting a Certificate of Compliance and Necessity to principal partners Williams Company, and Cabot Oil and Gas, d/b/a “Constitution Pipeline Company”, who collectively have one of the worst safety and compliance records in their respective industries, and clearly cannot “perform the service proposed and to conform to the provisions of this chapter and the requirements, rules, and regulations of the Commission thereunder”, and thus in violation of the Natural Gas Act.

FERC issuing the bogus “conditional certificate” prior to the environmental review being completed. This legal trickery allowed properties to be condemned prematurely, before the suitability of the project could even be determined.

.... and countless other examples of violations of law.

And now this request to begin clearing trees before the CWA 401 or 404 permits are in place.

We therefore DEMAND that

- 1: FERC rescind the Certificate in CP130-499 until cumulative impacts analysis are done
- 2: Constitution Pipeline Company CEASE AND DESIST any and all construction activity, including clearing of trees.

So please be advised that any tree clearing, or other illegal, unauthorized, and/or unpermitted construction activity will be resisted by citizens.

Best Regards,

Becky Meier
1409 Route 5
Canaan, NY 12029

20160111-5009

Robert E Marra, West Haven, CT.

Dear FERC,

I write to express my deep concern regarding the Kinder Morgan application for the “Northeast Energy Direct Energy Project,” which would entail the building of a natural gas pipeline through Class I and Class II protected lands in the Hartford area belonging to the Metropolitan District, which holds this land for the purposes of ensuring and protecting the drinking water supply for hundreds of thousands of residents in the Hartford area. It appears to many, including myself, that the review process has to date been insufficient in objectively assessing the risks this project poses to this critical habitat and its natural resources.

The plan, which would clear-cut a swath nearly 6 miles in length through this watershed, for the purpose of digging a 90-foot-wide trench nearly 6 feet deep, is grossly inconsistent with the protections that this land requires and already receives through Connecticut law.

Additionally, the proposal makes clear that no alternative siting, avoiding Class I and Class II protected lands, has yet been considered.

Therefore, as a concerned citizen, I urge FERC to reject the current application. FERC must require the applicants do their due diligence, and submit a proposal that includes a process that includes robust and substantial stakeholder outreach to ensure that all interested and concerned citizens and parties have ample opportunity to provide input. Nothing short of this is acceptable for a project of this magnitude and with this much potential for risk.

Thank you for your consideration.

Sincerely,

Robert E. Marra, Ph.D.

20160111-5010

John Eaton, Chester, CT.

Regarding the proposed pipeline, The issue is much larger than the one small patch of watershed near Hartford. It has more to do with fracking in Pennsylvania, for instance, and the pollution caused by bad practices, unregulated discharges due to the Haliburton Loophole and secretive formulas for injection chemicals. It also has to do with the establishment of an infrastructure of gas supply pipelines leading to port facilities to export natural gas, which can be sold offshore for three times the price nationally. At which point the price of gas here will double or triple, after we are all hooked in. This scheme is facilitated by the rider attached to the recent spending bill allowing export of oil.

I also assume that The recent proposal for an offshore gas terminal in Long Island Sound was not for importing gas, but exporting it.

20160111-5011

Karen Sullivan, New Ipswich, NH.

New Hampshire has the highest rate of asthma in the nation (WMUR News, Channel 709 on 7/30/15). This alone leads to an overburdened health care system for New Hampshire. Now add all the health problems that come from the pipeline & compressor station, this is not only a health care problem for New Hampshire & the citizens in the towns affected by the pipeline & compressor station but it becomes an economic nightmare for all of NH citizens.

According to Wilma Subra, past Vice-chair of the EPA National Advisory Council for Environmental Policy & Technology

these are the additional health care problems reported by people living up to 2 miles from a compressor station:

Frequent Nausea, Throat Irritation, Burning Eyes, Nasal Irritation, Sinus Problems, Bronchitis, Persistent Cough, Weakness, Tiredness, Chronic Eye Irritation, Shortness of Breath/Asthma, Muscle Aches, Dizziness, Ringing in Ears, Sores & Ulcers in the Mouth, Urinary Infections, Depression, Decreased Motor Skills, Falling, Staggering, Frequent Irritation, Brain Disorders, Severe Headaches, Frequent Nose Bleeds, Sleep Disturbances, Difficulty Concentration, Joint Pain, Nervous System Impacts, Forgetfulness, Irregular/Rapid Heart Beats, Strokes, Allergies, Easy Bruising, Severe Anxiety, Excessive Sweating, Abnormal EKG, Spleen, Lump in Breast, Pre-Cancerous Lesions, Amnesia, Thyroid Problems.

For Additional Resources with extensive reports go to: <http://www.environmentalhealthproject.org/wp-content/uploads/2012/03/Compressor-station-emissions-and-health-impacts-0>

http://www.ostego2000.org/wpcontent/uploads/2012/08/Madison_County_DOH_Comments-Docket_No.CP14-497-000.pdf

FERC, just say NO to Docket Number:CP16-21

There is NO “public convenience and/or necessity (Northeast Direct Project) for this pipeline &/or compressor station.

20160111-5012

K Sullivan, New Ipswich, NH.

Kinder Morgan DOES NOT have a good safety record. In 2009, the Pipeline and Hazardous Materials Safety Administration (PHMSA) cited Kinder Morgan for violating safety standards regarding the distance between a natural gas pipeline and a “high consequence area” such as a school or hospital, the pipeline was too close for safe operation in case of a leak.

In 2011 the PHMSA cited Kinder Morgan for these safety violations: Failing to test pipeline safety devices. Failing to maintain proper firefighting equipment. Failing to inspect its pipelines as required. Failing to adequately monitor pipes’ corrosion levels.

In 2013, the Wall Street Journal published the article: “Wall Street Worries About Kinder Morgan’s Safety Record”: pipeline operator slashes and defers maintenance spending-this was/is a concern to anyone who lived or worked near a Kinder Morgan pipeline.

The Wall Street Journal asked, “Is Kinder Morgan Scrimping on its Pipelines?” Deferred maintenance may account for the high number of Kinder Morgan pipeline accidents in the last decade.

In the US, since 2003, Kinder Morgan and its subsidiaries’ pipelines have been responsible for at least 180 spills, evacuations, explosions, fires and fatalities in 24 states. This is cited by the PHMSA.

Kinder Morgan’s response (Kinder Morgan’s SEC 10-K filing) states: From time to time, despite our best efforts, our pipelines experience leaks and ruptures. These leaks and ruptures may cause explosions, fire and damage to the environment, damage to property and/or personal injury or death.

This is TOTALLY UNACCEPTABLE to me. I will be within that 1/2 mile incineration zone of the proposed New Ipswich compressor station.

If it was YOUR house or YOUR family exposed to this I know you WOULD DENY this application (Docket Number: CP16-21).

Please have the same concerns for me and my family and the countless other families living within the area of the proposed pipeline and compressor station in southern New Hampshire.

This project is NOT NEEDED. There are several other pipelines already in place that can handle this proposed pipeline and compressor station movement of gas through the region.

20160111-5013

Timothy Millhiser, Madison, CT.

The Constitution Pipeline filed a request for a Partial Notice to Proceed to begin tree clearing. We assert this activity is presently ILLEGAL and will be resisted.

In fact, this is just the latest in a long list of illegal activities relating to this project, including:

FERC failing to study cumulative impacts of CP and the Kinder Morgan NED as required by the National Environmental Policy Act.

FERC failing to show a need for this pipeline, which will be largely used for export.

Constitution Pipeline Company lying to landowners, and using threats, intimidation, and bribes of dubious legality.

FERC granting a Certificate of Compliance and Necessity to principal partners Williams Company, and Cabot Oil and Gas, d/b/a “Constitution Pipeline Company”, who collectively have one of the worst safety and compliance records in their respective industries, and clearly cannot “perform the service proposed and to conform to the provisions of this chapter and the requirements, rules, and regulations of the Commission thereunder”, and thus in violation of the Natural Gas Act.

FERC issuing the bogus “conditional certificate” prior to the environmental review being completed. This legal trickery allowed properties to be condemned prematurely, before the suitability of the project could even be determined.

.... and countless other examples of violations of law.

And now this request to begin clearing trees before the CWA 401 or 404 permits are in place.

20160111-5014

Sullivan Family, New Ipswich, NH.

If the pipeline companies are not fairing well in terms of funding & economic conditions why would FERC even consider approving

the Tennessee Gas Pipeline Company/Kinder Morgan/NED’s application for the pipeline & compressor station for southern NH?

(Docket No:CP16-21). (See the added article from the Wall Street Journal). In my opinion the installation of the pipeline &

compressor station in southern New Hampshire is akin to a rape. Our country side, water ways,including our rivers, streams, ponds, brooks, aqua-filters and drinking water is going to

be subjected to a rape by the Tennessee Gas Pipeline Co/Kinder Morgan/NED with FERC’s approval. The compressor station in the

towns of New Ipswich & Temple, New Hampshire will forever change our rural way of life.

From an economic standpoint it makes no sense. From a moral & environmental standpoint it is OUTRAGEOUS.

We are two very small rural towns in southern New Hampshire. We do not have the infrastructure to install town water for all. Most of us rely on well water. We live here because we enjoy the natural beauty of the area. It is teeming with wild life, fresh air, clean water ways & drinking water & forested mountain sides, along with peace & quiet. I could go on and on about the

natural environment we live in. We do not want this to change. I do not see the Tennessee Gas Pipeline/ Kinder Morgan/NED project as a step up or a step forward for our area.

From the economic standpoint why approve the pipeline & compressor station only to have it shelved later, after it is built & the land/area raped when there is no more funding & no more use for it? The Portland Gas Company pipeline is not at capacity.

We have plenty of pipelines/projects to take care of what ever it is that the Tennessee Gas Pipeline Company/Kinder Morgan/NED

group thinks they are going to be transporting. The Marshalls Shell area does not have a indefinite supply of gas for the taking.

Thank you for your time. Please DENY the Tennessee Gas Pipeline company/Kinder Morgan/NED’s application for the pipeline & compressor station in the southern New Hampshire area. (Docket Number: CP16-21) It is not needed nor is it wanted

20160111-5015

Elizabeth Gara, West Hartford, CT.

January 11, 2016

Kimberly D. Bose, Secretary
Federal Energy Regulatory Commission
888 First Street, NE, Room IA
Washington, DC 20426

Re: CP16-21-000 - Proposed Northeast Energy Direct (NED) Pipeline Project, Tennessee Gas Pipeline/Kinder Morgan

The Connecticut Water Works Association, Inc. (CWWA) is an association of private, municipal and regional public water supply utilities serving more than 500,000 customers, or population of about 2 1/2 million people, located throughout Connecticut. As purveyors of public water to customers and communities across the state, we consider the protection of public water supply sources to be of the utmost importance.

As such, we are interested and concerned about the gas pipeline expansion proposed on the watershed land of the Metropolitan District Commission. We are not going to comment on the merits of the specific proposal, but want to go on record to urge the Commission to be aware of and adhere to the Department of Public Health's permitting requirements pursuant to Connecticut General Statutes Sections 25-32 through 25-37 regarding any change in use on water company class I or II lands.

Under that statute, no water company shall sell, lease, assign or otherwise change the use of any watershed land without a permit from the Commission of Public Health which may only be granted if the applicant can demonstrate that, "...such change will not have a significant adverse impact upon the present and future purity and adequacy of the public drinking water supply..." Further, the statute allows the Commissioner to grant a permit, "... subject to any conditions or restrictions which the commission may deem necessary to maintain the purity and adequacy of the public water supply..." This review is done even on relatively minor projects proposed by water companies that relate to their own uses of the property and should be applied to any other proposed activities on such lands.

It is vitally important that these statutory provisions be considered before any change to the proposed use on the watershed land is allowed that might adversely impact the purity of the public water supply. We are also concerned about the possible use of eminent domain to take water company lands and/or bypass the Department of Public Health's legal requirements and would want to be sure that the environmental impact of the changes to the pipeline or any such project on water company lands be fully evaluated.

Very truly yours,

Elizabeth (Betsy) Gara
Executive Director

20160111-5016

Sullivan Family, New Ipswich, NH.

New Hampshire has the highest rate of asthma in the nation (WMUR News, Channel 709 on 7/30/15). This alone leads to an overburdened health care system for New Hampshire. Now add all the health problems that come from the pipeline & compressor station, this is not only a health care problem for New Hampshire & the citizens in the towns affected by the pipeline & compressor station but it becomes an economic nightmare for all of NH citizens.

FERC, just say NO to Docket Number:CP16-21

There is NO “public convenience and/or necessity (Northeast Direct Project) for this pipeline &/or compressor station.

20160111-5017

K Sullivan, New Ipswich, NH.

Incremental pipeline upgrades, such as Spectra’s Algonquin Incremental Market (AIM) project, which are designed to make the existing pipeline systems more efficient, should be employed long before any brand new pipeline systems are built. Existing pipeline systems, like Spectra’s Algonquin Gas Transmission system, are already connected with existing power generators. This would mean the Kinder Morgan Northeast Energy Direct pipeline, which would not be situated near any power generating plants, would only be necessary and economically justified after all other pipeline options have been exhausted, and that only after all LNG, EE, and DR options are exhausted. We are nowhere near justifying a brand new pipeline the size and scope of Kinder Morgan’s Northeast Energy Direct.

Just say NO to the Application for a Certificate of Public Convenience and Necessity (NED Project).

This Kinder Morgan/TN Gas Pipeline Company/NED is not needed. it is not wanted.

20160111-5018

Sulli Sullivan, New Ipswich, NH.

Kinder Morgan DOES NOT have a good safety record. In 2009, the Pipeline and Hazardous Materials Safety Administration (PHMSA) cited Kinder Morgan for violating safety standards regarding the distance between a natural gas pipeline and a “high consequence area” such as a school or hospital, the pipeline was too close for safe operation in case of a leak.

In 2011 the PHMSA cited Kinder Morgan for these safety violations: Failing to test pipeline safety devices. Failing to maintain proper firefighting equipment. Failing to inspect its pipelines as required. Failing to adequately monitor pipes’ corrosion levels.

In 2013, the Wall Street Journal published the article: “Wall Street Worries About Kinder Morgan’s Safety Record”: pipeline operator slashes and defers maintenance spending—this was/is a concern to anyone who lived or worked near a Kinder Morgan pipeline.

The Wall Street Journal asked, “Is Kinder Morgan Scrimping on its Pipelines?” Deferred maintenance may account for the high number of Kinder Morgan pipeline accidents in the last decade.

In the US, since 2003, Kinder Morgan and its subsidiaries’ pipelines have been responsible for at least 180 spills, evacuations, explosions, fires and fatalities in 24 states. This is cited by the PHMSA.

Kinder Morgan’s response (Kinder Morgan’s SEC 10-K filing) states: From time to time, despite our best efforts, our pipelines experience leaks and ruptures. These leaks and ruptures may cause explosions, fire and damage to the environment, damage to property and/or personal injury or death.

This is TOTALLY UNACCEPTABLE to me. I will be within that 1/2 mile incineration zone of the proposed New Ipswich compressor station.

If it was YOUR house or YOUR family exposed to this I know you WOULD DENY this application (Docket Number: CP16-21).

Please have the same concerns for me and my family and the countless other families living within the area of the proposed pipeline and compressor station in southern New Hampshire.

This project is NOT NEEDED. There are several other pipelines already in place that can handle this proposed pipeline and compressor station movement of gas through the region.

20160111-5020

Don O. Noel Jr., Hartford, CT.

I oppose the proposed Kinder-Morgan pipeline route.

I am old enough to remember when many of us fought a proposed interstate perimeter highway through the Metropolitan District Commission's watershed and storage reservoirs; I thought we had established that those natural resources are not to be put at risk, but should rather be kept inviolate.

Apparently my optimism was premature, or perhaps memories fade. This proposed pipeline crosses and re-crosses the Farmington River and its tributaries, and runs the entire length of the MDC watersheds.

I urge you put an end to this madness.

Basis for Intervening:

My husband and I live on Rockwood Pond in Fitzwilliam, just south of the proposed pipeline route. According to Kinder-Morgan's maps we are located in the burn zone. Such proximity to this project has been keeping us awake at night for good reason. But beyond all the concerns we have personally, we see no rationale for this pipeline that makes any sense. We don't need it, we don't want it, it's a stain on the environment, taxpayers are at risk of absorbing the costs etc. But in these comments, I will focus on the pipeline's direct impact on us.

The issue that scares me the most is the potential impact of the pipeline construction and operation on the Troy Mills Superfund site. It took several years and around \$50 million dollars to clean up this site, but more importantly the toxic nature of this event damaged the Troy economy for generations to come. The site continues to be monitored. Given all that went into cleaning up and containing of the toxins, why would FERC approve a project that would clearly involve extensive blasting into the bedrock adjoining the Superfund site.

We have been told that the pipeline will be 30-36" and that it needs to be buried 30-36" from the top of the pipe. We are known as the granite state for a good reason. The noise generated by the construction is a big concern, not only to us humans along the route but to all the creatures great and small that populate our rural area including Rhododendron State Park which the pipeline is supposed to cut through.

Having reviewed recent maps on the NH Southwest Regional Planning Commission website, it is clear that

Kinder Morgan proposes using Rockwood Pond Rd as an access point to the construction that crosses the Cheshire Rail Trail. The vast majority of the residents of Rockwood Pond Rd have sought out this area for its quiet natural beauty. We live on a dirt road – totally unsuited to carrying these kind of trucks and earth moving devices which this project would require. The noise, the dust, the traffic – all of these issues are of concern. Will Kinder Morgan be responsible for repairing or even re-building the road once construction is complete? Will maintenance and repair vehicles use this same route? How will Kinder Morgan compensate us for our loss of peace and quiet, impact on our property values etc?

It is our understanding that FERC has never turned down a pipeline proposal. I have seen the arguments for the pipeline but the arguments against are so much more compelling and speak directly to the residents of the communities along the route. NH has so little to gain from this project and so much to lose.

Basis for Intervening:

I am a resident of Northfield and live less than two miles from the proposed pipeline and approximately 2.5 miles from the proposed compressor station.

As an owner of two residential properties in town, I will be materially harmed by this development as it will damage property values and the local rental market here in Northfield.

My family's proximity to the pipeline and compressor station sites expose us to hazards from multiple emissions of fracking chemicals, methane, formaldehyde, toluene and other solvents, significant noise and light pollution which do not currently exist in Northfield, and a personal and community psychological trauma and stress imposed by arbitrarily imposed termination of our personal, economic and cultural security. The NED project has already imposed significant psychological burdens to residents of Franklin county and beyond.

The NED project imposes undue and irresponsible risks to mankind and other planetary life by drastically increasing the transportation, burning and emissions of carbon fuel which has proven destabilizing impacts on global climate and human security. The additional incidental release of methane gas directly into the atmosphere in the normal operation of pipeline infrastructure constitutes another unnecessary and dangerously irresponsible risk to human habitat on earth.

The NED project unreasonably pre-empts local industry and energy infrastructure development by creating an artificially high share of market prominence for so-called natural gas. This energy source already represents some 40 percent of regional electricity production and as such creates a dangerous over-reliance on one fuel source. More of the same merely provides artificial need and artificial market dominance for the largest and wealthiest players in the energy sector at the expense of a resilient, local energy industry and the true survival objective of lowering toxic atmospheric pollution: CO2 and methane.

Basis for Intervening:

I am a property owner and 1239 Watson Spruce Corner Road, Ashfield, Mass. 01330. The proposed North-east Direct Pipeline will pass within a quarter mile of my property, crossing a small pond with an antique mill before proceeding through protected woods and wetlands. As a taxpayer, I object to any surcharge that will occur to underwrite this project which is opposed by the majority of townspeople and, officially, by the town itself. Kinder Morgan and its subsidiary are using a ruse of supposed energy needs and lower costs to force approval of a project that in the main is intended to carry gas to the Dracut facility for export. The environmental and potential disaster risks of this project are too great to justify it for company profits. The downside to us as property owners is the diminishing value of our homes and properties and the inestimable damage that will be done to precious environmental resources. KM's rejection of alternative sites is in my view bogus, and FERC should reject the current proposed pipeline route in favor of one of the two proposed alternatives so that a more appropriate route is compelled. The costs to property owners, towns and the environment need to be weighed against KM's contention that the marginal cost increased associated with the alternate routes make them inviable.

Basis for Intervening:

I live in New Ipswich, New Hampshire, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding which are:

- I am a landowner directly impacted by the pipeline route.
- I am a landowner who would have my property seized by eminent domain.
- I am a resident who will see the barrier between my home and the power lines destroyed. This barrier is made up of beautiful hardwoods that will be cut down needlessly to make way for an extremely wide construction zone proposed by the NED pipeline.
- I am a resident whose source of drinking water which may be is at risk.
- I am a resident of a community which will be impacted and have concerns about various impacts to the local economy, the environment, the health of our population.
- I am a landowner whose property contains conservation restrictions for wetlands that would be endangered by the NED pipeline.
- I am a resident who lives in the "blast radius" and whose daily commute crosses over the proposed pipeline route so I would be at physical risk.
- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

4. The proximity of the pipeline to the Eversource electrical lines. This strikes me as a significant risk factor for public safety.
5. Noise and light pollution that will be associated with this pipeline. This corner of the Commonwealth has been found to be the quietest in the Commonwealth. The pipeline will irrevocably change this.
6. Increased traffic in the form of workers, trucks, etc.. Those of use who have chosen to live in this rural community have done so because we desire a quiet, underpopulated location in which to live our lives. The pipeline threatens this forever.
7. Smith Rd. where I live is a federally designated scenic highway. This will not remain the case in the event of the pipeline installation.
8. The significant impact on the value of the only asset I have, which is my home. Should the pipeline be installed, the value of my property will plummet and I will never be able to recoup this.
9. The benefits to western MA and the Commonwealth are time limited. The gas running through the pipeline is intended for export and whatever jobs are created during installation will end once installation is complete.

The damage to the quality of our lives, our safety and security, physically and financially, and the nature of our town and way of lives are significant and will be changed forever should this pipeline go in. Please, don't put in the pipeline.

Sincerely,

Evelyn Resh

Basis for Intervening:

I live in Conway, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because of the following:

- I am a landowner directly impacted by the pipeline route / compressor station. I am particularly concerned with the venting station on the proposed route quite near my home.
- I am a resident whose daily commute crosses over the proposed pipeline route so I would be at physical risk.
- I am a member of an impacted community who has concerns about various impacts to the local economy/environment/aesthetics/health.
- I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.
- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.
- I am a donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements over land that is meant to be protected forever.

- The existence of a natural gas transmission pipeline on our property could prevent sale or sub-division of the property due to the potential inability of the buyer to obtain a mortgage.

Also, according to a Town of Tewksbury Zoning Map (February 2015), our property is on a Groundwater Protection District. The purpose of this Groundwater Protection District is to:

- a. Promote the health, safety, and general welfare of the community by ensuring an adequate quality and quantity of drinking water for the residents, institutions, and businesses of the Town of Tewksbury
- b. Preserve and protect existing and potential sources of drinking water supplies
- c. Conserve the natural resources of the town
- d. Prevent temporary and permanent contamination of the environment.

The effort to meet Massachusetts' ongoing energy needs should not adversely impact residents' quality of life, nor come at the expense of open space benefitting the public good. The proposed pipeline merely perpetuates reliance on non-renewable resources for short-term gain while ignoring the long-term benefits of renewable solutions that are safer, less invasive and potentially less costly.

Massachusetts has a strong track record promoting renewable energy and energy efficiency programs. I urge you to fully prioritize further investment in and deployment of these solutions, and to take any actions as are necessary to disallow the Tennessee Pipeline Expansion project.

III. CONCLUSION

Wherefore, we, David & Connie Roy, respectfully request that the Commission to grant our Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 8th day of January, 2016.

David & Connie Roy
36 Dunvegan Road, Tewksbury (MA LL 83) (978) 851-2095

Basis for Intervening:

WCC Request to Intervene in Docket CP16-21-000

The Winchester NH Conservation Commission (WCC), appointed by the Winchester NH Board of Selectmen, is responsible for the proper use and protection of all natural resources within the town, including its lake and water resources.

The Conservation Commission is concerned with the risks and hazards to the health and safety of our citizens caused by having the NED natural gas pipeline traverse historic natural areas, historic farmlands, drinking water aquifers and steep slopes.

We are particularly concerned with the proximity of the proposed route to historic Pulpit Falls and Pulpit Rock, a natural conservation area owned by the town and managed by the WCC. Although Kinder Morgan (KM) changed the pipeline route at the request of the town to avoid this deed restricted, historic area, both Kinder Morgan and FERC retained the original route as an alternative. Furthermore, FERC requested KM to

identify alternative locations for compressor stations. Three of the alternative compressor locations identified by KM are near the Pulpit Falls, Pulpit Rock area and in or near other areas identified by the WCC for permanent conservation. The WCC actively has been working to protect the greater area around Pulpit Falls and Pulpit Rock for a decade. This area is not only historic and special, but also the abutting land constitutes one of the beautiful, undisturbed highway entrances to NH. Protecting both the natural beauty of the area and reducing the risk inherent in driving on Manning Hill Road (Route 10) makes this a priority. Locating a compressor station on Manning Hill would be tragic! Natural scenic beauty, two nearby working farms and the safety of all travelers over the Route 10 section of Manning Hill would be threatened. The town and the State of NH recognize Manning Hill as high on the list of problem roads. Any development on Manning Hill is ill advised.

The WCC objects to the pipeline crossing the high transmissivity, stratified drift aquifer in the Sunny Valley area of town (NH Route 78.) At the request of the town, KM moved the proposed aquifer crossing further east and further away from existing and proposed town well sites. Nevertheless, the pipeline will cross this important aquifer that feeds town and private wells and empties directly into the Ashuelot River. Sunny Valley itself is the town's top priority for conservation. It is a beautiful, historic valley with important soils and a major aquifer. Locating a pipeline through this area or any other aquifer in Winchester is an unnecessary risk and a degradation of an historic farming district and the blessing of abundant water resources.

The proposed NED pipeline crosses numerous steep slopes. The Town's Natural Resources report recognized the importance and beauty of Winchester's myriad mini mountains. Our steep slopes are important enough to have a specific steep slope ordinance as part of our Zoning Bylaws. The WCC is charged with protecting the steep slopes. The proposed pipeline is an impending threat to these areas.

Construction of a major pipeline threatens many species of plants and wild life in the town. Southwestern NH is host to many threatened species. The natural terrain of steep slopes, fertile valleys and abundant water coupled with a relative lack of development makes Winchester a prime location for almost every naturally occurring species in southern NH. The WCC objects to the pipeline reducing the safety of our environment through major construction impacts and ongoing noise and light pollution. The intrusive nature of a major pipeline will disrupt habitat for plants, animals and people. An accident or disaster from human error, inadequate engineering or natural causes such as fire, earthquake, lightning, etc. would overwhelm the environment and the ability of a small town to respond. People and nature are unnecessarily threatened by the NED pipeline.

Basis for Intervening:

I live in Cheshire, MA, and want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because...

- I am a resident who lives in the "blast radius" whose daily commute crosses over the proposed pipeline route so I would be at physical risk.

- I am a member of an impacted community who has concerns about various impacts to the local economy, environment and health of myself, my family and our townspeople. This pipeline is slated to go under the Cheshire Reservoir, a valuable and well loved resource in our community. This body of water would be at

risk of contamination that is beyond repair.

- I am an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery.

- I am gas ratepayer of Berkshire Gas who has contracted for NED capacity, which is expected to result in an increase on my bill relating to NED, and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts.

- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project. I also do not want to breathe the possible leakage of methane gas and other toxic gases related to building a high pressured pipeline of this capacity. This is extremely hazardous to my health and the citizens of Northern Berkshire County.

- I am a member / donor to a land conservation organization and the purpose of my donation would be violated if this project is allowed to take easements for a very large compressor station, over land that is meant to be protected forever, specifically Notchview Reservation in Windsor, MA.

For these reasons, I am interested in and would be affected by Applicant's filing. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

Basis for Intervening:

Our names are Epifanio and Linda Bevilacqua, husband and wife, who reside at 964 Finch Rd, Franklin, NY 13775. We live in the town of Franklin, which is, if approved, being subjected to two pipelines and a 50,500 horse-power compressor station. We moved here with our young family 20 years ago from the polluted metro area of New York to enjoy a peaceful, rural, pure lifestyle. The gas industry has decided to invade our sanctuary for their own profits. Our health, safety, property values, drinking water, etc., may be affected by their selfish decisions. We are most concerned about the proposed compressor station, which will be emitting VOC's, methane, and a host of other dangerous chemicals. We have children attending the local school here, which is approximately 1 - 1/2 miles from the site. Our property value will suffer as well, as we cannot promote our healthy lifestyle if we decide to sell one day. We currently operate a small farm, with 10 cows, 2 horses, 2 sheep, a donkey, peacocks, and many cats. Their health will be affected as well, and it will ultimately wind up in the human food chain. We are also very concerned about the pipelines, especially after researching the safety records of the gas companies. Franklin is a very small rural town, which doesn't even have a traffic light in it. Who is going to save/help us if there is a disaster? Because no one else can represent our interests, we feel that FERC should accept our motion to intervene. Please do not let this monster industry destroy us.

20160111-5033

Submission Description: (doc-less) Motion to Intervene of George W Rendle, JR under CP16-21-000.

Submission Date: 1/10/2016 3:36:33 PM Filed Date: 1/11/2016 8:30:00 AM

<u>Filing Party</u>	<u>Signer (Representative)</u>	<u>Other Contact (Principal)</u>
Individual	billrendle1968@gmail.com	

Basis for Intervening:

My wife and I reside in Mason, N.H. and want to intervene in this proceeding to oppose the NED pipeline.

I have an interest which may be directly affected by the outcome of the proceedings because:

-I am a landowner directly impacted by the pipeline route/compressor station because my wife and I reside 1/4 mile from the so-called "blast radius". We are qualified handicapped persons pursuant to Federal standards of the Social Security Administration. We will be at physical risk by the proposed pipeline route.

-As qualified disabled persons we are at risk because the applicant and FERC have failed to evaluate the risk to our physical and mental health at any stage in the permitting process. From lack of handicap accessibility at public forums; to a complete lack of consideration to the human effect on disabled persons as required by 40 CFR 1508.14 .

-A Human Factors Analysis and Classification System-HFACS- recognized by the military including the Army Corps of Engineers is an Essential requirement in an Environmental Impact Study to evaluate the proposed pipeline route to the Human Environment in which I reside.

-I use the roadways with a mobility scooter. In the event of many construction vehicles on rural roads, my daily mobility is threatened. Our lack of safe evacuation in the event of emergency is of constant concern. Avoidance of airborne antigens threaten my respiratory condition.

-No study has been proffered by any participant as to the effect of the pipeline permitting process, pipeline construction or health and welfare issues of a Federally protected class of disabled citizens This constitutes Handicap Discrimination by the Applicant and FERC's requirements, or lack thereof.

-I am a resident whose drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline. The septic system and foundation of my home may be at risk during construction

-I am an electric ratepayer who, if KM secures my electric utility as a project customer, expects to see an increase on my bill relating to NED cost recovery

-I am a resident of Mason, N.H., an impacted community that is being disproportionately affected by the proposed route ,as the Town is T-boned by the main proposed route and a proposed lateral route creating a denial of Equal Protection in the siting and comparative gravity of the risk;

Such denial of Equal Protection demands the inclusion of a Human Factors Analysis of the comparative risk and mitigation thereof of the proposed NED route

- I am in fear that we will suffer great pain of mind and body as a result of the NED proposal.

WHEREFORE, for the foregoing reasons, I respectfully request that my motion to intervene be granted

Respectfully submitted

George W. Rendle, Jr.
425 Brookline Road
Mason, NH 01026

Individual	rrivinus@yahoo.com	

Basis for Intervening:

I am a resident of Ashfield and my home is 1/2 mile from the proposed location of the pipeline. We are especially concerned about the safety and health care risks of this location within a neighborhood of homes which all rely on well water for drinking and farming. If there were leakage into the ground water from the pipes our water and land would be contaminated and our homes and farms would be unlivable. Even if the pipeline did not have any leaks the herbicides and pesticides which would be used to maintain the line would be toxic to our environment and place us at risk. Our home is directly down hill from the pipeline route which would add to the risk of pollutants flowing into our wells and land. Kinder-Morgan's safety record has demonstrated that this risk is real and explosions and leaks have been recorded.

The area is all rocky ledge which will require considerable blasting and the potential for disruption of the existing stability of the land.

We are a small, rural town with a volunteer fire department which is not equipped to manage any sort of gas explosion. This places all of us in serious jeopardy and undermines our quality of life and public safety.

The character of this beautiful, quiet town and surrounding farms would be put at risk for loss of quality of life and the potential risks stated above. In addition, the effects of noise and light pollution from construc-

tion, maintenance, and increased traffic would seriously and negatively effect the historic and scenic attributes of Smith Road which has been designated as a scenic road by the federal government.

Additional dangers which have been expressed by neighbors as well as EverSource workers that placement of gas under major electrical lines.

Many of us living in close proximity to the proposed pipeline route are older and have only our homes for assets. We will lose the value of our properties at a time when this is all we have for retirement should we need to capitalize on our homes due to unforeseen circumstances. s

Municipal Coalition Against the Pipeline - MA jproujan@gmail.com

Basis for Intervening:

Submission Description: (doc-less) Amended Motion to Intervene of Municipal Coalition Against the Pipeline - MA under CP16-21-000.

Basis for Intervening:

The Municipal Coalition Against the Pipeline (“MCAP”) hereby moves to intervene in the above-captioned proceeding, pursuant to Rule 214 of the Federal Energy Regulatory Commission (“Commission”) Rules of Practice and Procedure, 18 C.F.R. § 385.214.

All communications concerning this proceeding should be served upon following individuals:

Jed Proujansky, Selectman Northfield, MA, 01360. 413.626.7721 jproujan@gmail.com

Movant’s Position:

MCAP is a coalition of Massachusetts municipal governments working together to prevent construction of the Northeast Energy Direct pipeline project (“NED” or the “Project”), which is being proposed by Kinder Morgan, Inc. through its subsidiary Tennessee Gas Pipeline Company, LLC (the “Company”). MCAP files this motion in opposition to the Company’s application for a certificate of public convenience and necessity filed with the Commission for the NED project (the “Application”).

MCAP’s Interest That May Be Impacted by the Project

MCAP includes municipalities that would be directly impacted by the proposed NED route; municipalities that would be directly impacted by alternate routes presented by the Company; municipalities whose watersheds would be impacted by the Project; and other municipalities that are opposed to the Project because it would be a blight upon our region, an unjustifiable energy option for our Commonwealth, and would run counter to our state energy and land use policies.

As further set forth below, MCAP’s intervention is necessary to enable the pipeline-affected towns to protect their public and private recreational, farm and natural resources, and to defend their taxpaying residents, businesses, and associated properties from encroachment.

Economic and Cultural Concerns:

MCAP is concerned about the impacts that the Project would have on local businesses, public ways, ag-

Individual bad0125@msn.com

Basis for Intervening:

I am concerned that the emissions from the proposed compressor station approximately 1-mile from my home will negatively affect my children some of whom have developmental and learning disabilities.

In addition, I will hear, smell, feel, see and potentially taste (dug well water quality) the effects of the compressor station.

We are concerned about air quality due to 41,000 HP turbines generating exhaust.

We are concerned disturbances to springs as they taps into stratified drift aquifer that the compressor station is on top of.

We are concerned with the continuous noise of compressor station, 24-7.

We are concerned with noise and pollution from blowdowns.

We are concerned with light damage to dark skies. We won't be able to see stars.

We are concerned with subsonic vibrations that can subconsciously affect health.

We are concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.

We are concerned with traffic, noise, air pollution and numerous disturbances during construction.

We are concerned with the property value of our house being extremely close to a compressor station.

We are concerned with the potential schools in the Mascenic Regional School District because families don't want children to go school system within two miles of the compressor station.

We are concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and lives.

We are concerned with the industrialization of the neighborhood. The only things that are comfortable living next to 41,000 HP compressor stations is other heavy industry.

We live in the shadow of the proposed compressor station. We will feel its effects.

I own property in Northfield, MA, and I want to intervene in this proceeding to oppose the NED pipeline. I have an interest which may be directly affected by the outcome of the proceeding because the area close to my property is directly impacted by the pipeline route and compressor station. I am concerned about the effects on the drinking water supply to my property as well as the environmental, aesthetics and health toll this may take on my hometown. I fear what this project may do to my beautiful picturesque country town where the people truly enjoy the woods for hiking and camping, the rivers for swimming, kayaking and canoeing. I would hate to see this beautiful area ruined.

Basis for Intervening:

I am a resident of Dalton, Massachusetts. I moved here because the quality of life is far superior to any place I have ever lived. I am healthier now, at 66, than I have been in many years. This is due to the excellent air quality, water quality and abundance of outdoor recreational facilities and sites located throughout Berkshire County.

I am a retired teacher and a photographer and painter and I believe that the pristine and near pristine condition of the forests and farmland, including those protected by MGL Article 97, would be negatively impacted by the proposed pipeline. As points of interest for recreation and tourism alike, they are critical to the health and to the economy of this county. They are a constant source of inspiration for myself and for others like me who enjoy and make their living in the Berkshires.

At Scoping Hearings, representatives of the FERC have heard testimony from area professionals and residents who have explained that under the top 2' of soil, much of this area is rock. The dangers of blasting--dangers relating to the collapse of water tables and potentially irrevocable harm to the feeder streams of area reservoirs have been highlighted. Other professionals have cited concern regarding the fallout of methane gas, future leaks, potential damage from blow downs and the likely eradication of habitats of the small creatures with whom we share this planet and who actually contribute to the habitability of the earth as well.

The pipeline proposed for our area is 30" in diameter and Berkshire County has a population of 129,585 (2013). In fact, the entire population of Massachusetts is only 6.75 million and there are plenty of options for heating. We should be promoting the use of renewables and NOT making way for the transport of toxic/greenhouse gases. If much of the gas that the Northeast Energy Direct Pipeline would carry is intended for export, how is it that a for-profit corporation is allowed to take by eminent domain and/or alter landscapes to suit their profitability??

New York City has a population of 8.4 million people and some 6,302 miles of pipes that transport natural gas. According to the New York Times, leaks are common in New York City's system (3/23/14). The point is that regardless of where they are installed, pipelines will age and eventually they will leak, thus contributing to environmental degradation and to global warming.

In closing I would like to restate that we need to move AWAY from fossil fuel based sources of heating and energy. 'Natural' gas is methane. Methane is a greenhouse gas and extremely toxic to the habitability of our planet.

Sincerely,

Sandra G. Leonard

FEDERAL ENERGY REGULATORY COMMISSION
IN THE MATTER OF NORTHEAST ENERGY DIRECT PROJECT

Docket No. CP16-21

I am writing once again to alert you to the carelessness and shoddy workmanship exhibited by Kinder Morgan / Tennessee Gas Pipeline in their mapping.

I refer to segment I, market path in alignment sheets labeled TE-SEG_I-004, TE-SEG_I-005, TE-SEG_I-006, and TE-SEG_I-007 submitted on July 24th 2015

Issue #1

I have found through careful examination that alignment sheets 4 of 7 and 5 of 7 that cross Winchester, New Hampshire do not meet at their ends.

This may be because when the pipeline route was changed, the southern part of the route was the most affected. Alignment sheets 5, 6 & 7 are on Winchester's tax map number 6, while alignment sheets 1 through 4 cross tax maps 2 & 3. The route changes were mainly on tax maps 2 & 3.

Errors were made on alignment sheet 5, in attempting to make it fit with the end of alignment sheet 4.

A contributing factor was that the intersection of alignment sheets coincided with the intersection of the tax maps and made it difficult to determine which property lines were showing on the alignment sheets. Through very careful examination, I have determined that the alignment sheets intersect.

Issue #2

The town line between Winchester and Richmond, NH is incorrectly placed

Issue #3

How can affected property owners be notified with these poorly done maps? For example, the owners of lots 6-4 and 6-48 are unable to determine if the pipeline will cross their property.

Please ensure that Kinder Morgan corrects these errors and notifies affected property owners immediately.

I am sending you a PDF format picture of the alignment sheets with map and lot numbers added to illustrate my points. (Sent separately)

Winchester tax maps are large PDF files, available here:

http://www.winchester-nh.gov/Pages/WinchesterNH_Assessing/Winchester%20Tax%20Maps.pdf

Basis for Intervening:

I am writing this letter as a concerned resident of the town of Dracut, MA. My fiancé and I live on Dadak Drive and will be severely impacted by the NED project. For this reason, I oppose the completion of the NED project. We purchased our first home here over three years ago and our property is located within a half mile of the compressor station site, putting us in the “incineration zone”. We are getting married this upcoming August and have plans to start a family. This proposed project is raising many concerns about raising a family where we currently live. The NED project will surely decrease the value of our property but more importantly, it will jeopardize our lives. There are many health concerns to consider when approving this project and I hope that the lives of our town residents are a top priority.

I just received a notice today (January 8th, 2016), notifying us of the proposed project. The letter came from the Tennessee Gas Pipeline Company and this is the first correspondence that we have received. According to the letter, an application was filed on November 20th, 2015 for authorization and this is proof that there has not been proper landowner notification. As a resident of Dadak Drive, I was also made aware of a letter requesting that my rights be waived. I have a copy of this letter addressed to your organization from the Tennessee Gas Company and I am completely appalled that they would make such a request.

We would greatly appreciate FERC stepping in to help protect our rights as landowners by requiring Tennessee to re-file their certificate for application. This will hopefully be the first step in protecting our neighborhood. Thank you for taking the time to read this letter.

Sincerely,

Gary Dalton

Individual stouseypfarrer863@hcc.edu

Basis for Intervening:

I live in Northampton, MA and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding. These include:

My family is an electric ratepayer who, if Kinder Morgan secures my electric utility as a project customer, expects to see an increase on my bill relating to NED and may include stranded costs of overbuilt infrastructure rather than more appropriate measures to meet realistic growth forecasts of the gas company.

I am a resident whose watershed (Connecticut Watershed - <http://www.mass.gov/eea/docs/eea/water/watersheds-map.pdf>) is crossed by the proposed route and could have my drinking water supply impacted by construction and/or operation.

I am opposed to the pipeline going through APR protected land under Massachusetts Constitution Article 97 of the Amendments to the Massachusetts Constitution which protects public lands in perpetuity. Kinder Morgan (KM) is trying to remove these permanent protections to install their high-pressure shale gas pipelines. The lands being targeted include State Forests, State Parks, Wildlife Management Areas, municipal conservation properties, public water supply protection areas, and conservation restriction and agricultural preservation restriction protected lands. Tennessee Gas Pipeline (TGP), a subsidiary of KM has requested a waiver of this protection.

This requires a 2/3 vote of Massachusetts house and senate) and in their application TGP assumes that the waiver will be granted.

Wet trenching during construction, pipeline coatings and other possible pollutant leaks affect towns and cities downstream from this crossing.

For these reasons, I am interested in and would be affected by the applicant's (Tennessee Gas Pipeline Company, LLC (the "Company"), a subsidiary of Kinder Morgan, Inc. ("Kinder Morgan"), filing for the Northeast Energy Direct Pipeline. My interests cannot be adequately represented and protected by any other party. Hence, the Commission should grant me permission to intervene in proceedings for Northeast Energy Direct.

---Sean Tousey-Pfarrer

20160111-5056

REGISTRATION AND MOTION TO INTERVENE
NED pipeline, FERC Docket #CP16-21-000

January 4, 2016

From: Jacqueline Cooper
549 Watson Rd., Ashfield, MA 01330

To: Kimberly D, Bose, Secretary and Nathaniel J. Davis, Sr., Deputy Secretary
Federal Energy Regulatory Commission
888 First Street, N.E., Washington, DC 20426

Greetings Kimberly Bose and Nathaniel Davis,

It is my understanding that this letter will serve both to register myself and as a request to become an intervenor.

I am a resident and homeowner in Ashfield, having made a year-round life here over the last forty years. My property is located on the back roads, four miles from town center and one mile from the high wires where the proposed pipeline is planned for installation. On a daily basis my work and recreational activities take me, not just near, but through at least three locations where the proposed pipeline is planned to be. This will occur whether I am in my vehicle on the very local winding roads, or on foot visiting woodland paths and water bodies.

My reasons for this request:

- I believe the public holds the right to understand and to actively engage in energy decisions that affect one's community and region.
- Financial impact will occur as to loss of value on my real estate, which is my only savings to support my current senior-to-elder years.
- Socio-economic consequences will occur regarding tourism, impacting a much-needed piece of my income, which derives from local media art productions. Ashfield and surrounding hill towns - a pristine rural and cultural part of Massachusetts, a destination - thrive from visitors and thereby income, especially in the spring, summer, and autumn seasons.
- As a Massachusetts resident and electric ratepayer - I believe I am mandated through my electric

bill to pay for the building and likely for the maintaining of the proposed pipeline. My senior years income cannot support a rise in my electric bill rates.

- Local effects to the health and safety of drinking and bathing water, toxic emissions, and so on. The integrity of a profit-driven giant such as Kinder Morgan is in question. Research has revealed much about KM's choices and consequences especially in less populated areas. They submit a plan to get the approval of FERC, and after approval they will change it, ie: using reduced quality of the materials that contain, transport and shut off the gas (as needed in a catastrophe), and poor-to-no concern as to the impact on people and environment, the inability of the town's resources to deal with a leakage, catastrophe, etc. (Recently KM provided our town with their map of this project. The map is not accurate and apparently very out of date - a 1963 map?)

As I do not have access to email, I will look forward to receiving by post, your notice of "FERC Receipt of Filing in CP16-21-000" followed by a "FERC Acceptance for Filing in CP16-21-000".

Respectfully,

Jacqueline Cooper

Basis for Intervening:

I live in Merrimack, NH, and want to intervene in this proceeding to oppose the NED pipeline. I have interests which may be directly affected by the outcome of the proceeding.

I am a NH resident who may be charged with paying for the pipeline with a tariff charge added to my electric rates.

The aquifer which provides my town water could be degraded by construction and operation of the pipeline. If there's any kind of damage to the pipeline this could contaminate the town's water supply.

The quality of air that I breathe could be degraded by toxic emissions from planned and unplanned compressor station blow downs and/or valve and/or metering station leaks.

The soils on nearby farms and my garden which grow produce I eat could be compromised by toxic emissions from planned and unplanned compressor station blown downs and/or valve and/or metering station leaks.

The financial ramifications of known and unanticipated consequences of the construction and operation of this pipeline and related appurtenances could increase my local and state tax obligations.

I am opposed to the construction of new infrastructure which promotes further dependence on fossil fuels. I, like all other citizens, will experience the consequences of climate warming which could be accelerated by the methane this project will release into the atmosphere. I believe this pipeline is NOT in the public interest, and I oppose it.

A huge concern to me is that the pipeline will be installed close to Thorntons Ferry School which is where my daughter goes & is very near my house.

Basis for Intervening:

I am a resident of Dracut, Ma, and want to intervene in this proceeding to oppose the NED pipeline. My family lives within 1/4 mi from the proposed compressor station which feeds the pipeline of natural gas, so we would be at physical risk. I am utterly disgusted with the idea of my family living in such close proximity to this proposed NED pipeline/compressor station site. I fear for the well-being of my family, including my twin sons, age 7 with autism diagnosis. The increased traffic, noise level, air pollution, and disturbances during construction, also the noise involved with the blowdowns, will only increase their sensitivity to sound/noise around them causing them added stress.

If these pipeline/compressor stations are so safe, then Kinder Morgan should build them in his neighborhoods!! We don't want them in ours!!!

Pete Dingle
1095 Broadway Road
Dracut, Ma 01826

Basis for Intervening:

Motion to Intervene of Pepperell, Massachusetts (and the State in general)

In Opposition to the Northeast Energy Direct Pipeline

The Northeast Energy Direct gas pipeline is being proposed in western and northern Massachusetts at a time when the State is trying to find ways to move beyond fossil fuels due to the increasingly real and imminent threat that global warming poses to the earth. The fossil fuel industry has enjoyed a subsidized monopoly on energy in the United States for many decades. As a tax payer, I am outraged that our country's citizens continue to be used as a resource by oil and gas companies for our primary energy needs. It is time to move on and see that primary support shift to alternative green options. For this and numerous other reasons including 1) cutting across protected public open space 2) using tainted bi-products in the fracking process and 3) we do not need it, I oppose the development of this proposed pipeline.

20160111-5065

{Motion to Intervene of Carole M Singelais}

Basis for Intervening:

I am a directly impacted in that I will hear, smell, feel, see and breathe the effects of the compressor station during construction and into operation. I commute through the impacted area on a daily basis and am part of a local running group that routinely jogs in the immediate area. I am a taxpayer, an electricity rate payer and homeowner residing within one mile of the Mid station 4, New Ipswich compressor station. I am opposed

to this project.

340 Hadley Hwy
Temple, NH 03084

I am concerned about the air quality impact associated to discharges for routine operation, maintenance and emergency responses.

I am concerned with disturbances to our well as it taps into a stratified drift aquifer that the compressor station is on top of and of the potential impact to the recharge rate as a result of construction of the compressor site.

I am concerned with the continuous noise associated with operation of the compressor station.

I am concerned about any chemicals or toxins released into the ground that will end up in our stratified drift aquifer.

I am concerned with traffic, noise, air pollution and numerous disturbances during construction.

I am concerned with the impact to my property value of my house as a major investment towards my retirement as a result of its proximity to a compressor station and high pressure gas line.

I am concerned with the potential health and safety risks to young children attending the Temple Elementary School and associated with impact to air and water quality and safety as a result of operations of the compressor station.

I am concerned with any natural gas infrastructure incidents that would require evacuation from the neighborhood and potential destruction/damage of property and to lives.

I am concerned with the industrialization of the neighborhood. The only things that are comfortable living next to 41,000 HP compressor stations is other heavy industry.

I am concerned with potential long term risks associated with the in place abandonment of the compressor station, pipe lines and associated support equipment as its usefulness is depleted.

I am concerned with the impact to open space, wildlife and conservation areas through the installation of the compressor station and pipeline.

I live in the close proximity to the proposed compressor station and will feel its effects.

Roberta Fraser
Intervenor

The Northeast Energy Direct Project has approximately 7 miles of pipeline coming through the Town of Winchester. It will not only impact privately owned land, cross over an aquifer and potentially harm the town's water wells, a proposed route and a potential site for a compressor station is slated to come through a town owned historic beautiful piece of land called Pulpit Falls. The following essay shows how special Pulpit Falls is. It would be a shame to put that piece of land or any other piece of land in our town or any other town in harms way for the monetary benefit of large corporations. I am a native of Winchester and proud to have lived here my whole life and I love my Town. I adamantly oppose the pipeline being constructed at all

and especially oppose it coming into the Town of Winchester NH.

I've heard the word "Pauchauog" means "Dancing Place" As I start my walk into the woods, I have no doubt that the Indians were right- this is a "Dancing Place."

Pauchauog Brook flows into Pulpit Falls. A place of wonder, of beauty and fulfillment and as we walk down the path my daughter Annalia is skipping ahead, laughing in delight at all the salamanders that have meandered from their warm hiding place in search of the waters after the rain, moving slowly, mouths open, then scurrying quickly as they sense a feeling of danger. It is getting hard to see, as we are on a twilight hike, and Annalia warns me not to step on the salamanders and don't ever touch them! We continue through the forest, the leaves like a blanket under our feet. Wet and slippery now we are careful not to fall. We come to the stream and gently cross the worn stepping stones. Anna laughs as her feet slip off the stone. We are yet to cross the stream without one of us getting our feet wet.

Once across we quickly scramble up the hill on the other side, listening for the rush of the water long before we see the falls. It's always a race, who can get up the hill, around the bend and over the rocks the fastest. Anna loves to win and once again she is waiting, hollering to me, "Mom, what is taking you so long?" with a grin on her face. I don't move as quickly as she does anymore, but I can still nimbly jump the rock and climb down the crevice and make it to our destination in an impressive amount of time. Around the corner and the first sight of the waterfall always takes my breath away -a white stream cascading over rocky outcrops, crashing into the dark bowl below. Anna is quickly removing her shoes and shorts, oblivious to the coolness in the air or the chill of the water as she quickly wades in. I sit on my big gray slate rock, and I begin to gulp in the beauty, much as a starving person would gulp down food. I need to be full of the beauty and of the peace.

I lay back and look up at the trees, the branches have spread just for me and I can see the twilight settling in and I can't help think that with time we are all in the twilight of our life. My gaze goes down by the bank of the creek. How many times have I sat here on this rock, kissed by the morning sun, and now moist from the summer rain, and stared down this creek? My thoughts go back to a time when my youth group came here and we swam and had our picnic and quoted the Bible as we prayed. At that time I don't remember ever feeling closer to God. I remember the spirituality of that day and the serenity that enveloped us as we stood at that place. It was a time of renewal, much like a baptism and a time to start over and to know that everything is good in life.

As I continue my gaze I notice a new tree that had been blown over in a recent storm. There are many immense trees lying across the creek, their roots hanging out of the earth, knarled and crooked, much like the hands of the ancestors who have hiked this path and found this place of peace and tranquility. I move from my rock and start my ritual; my hike up the rock walls. I start on the well- worn path and at the top are many large boulders covered in moss. I pick a different one each time; the moss is my mattress, so soft and so thick. If I let myself I could fall asleep right here, as I have many times.

I lay here content, watching Anna playing in the creek below, listening to her delighted squeals as she catches a frog or throws a stick to watch it get caught in the quagmire of leaves and tree limbs below. Oh, the simple pleasures of nature. I dream with my eyes open, I dream of the early Indian settlers and the celebrations they must have had in this very place. I dream of my childhood and my youth and my later years. Of all the times I've come here just to be alone, to clear my mind. I dream of my children and a hot summer day and gallons of Koolaid and peanut butter and jelly sandwiches and ice cream and bathing suits and lots of laughter and smiles. And the tears. Always the tears when you have to leave. Even I want to cry when it is time to bid adieu.

I dream of a love, in his arms, and how we made this our special place. And how love is the artwork of nature and when you have love it is a beautiful and serene calm that becomes your soul. We were on a journey and this was our destination.

As I lay on my bed, I look around and see two squirrels as they scramble to their abode for the night- cautiously watching me to see if I will move- as if to say " Go away, this is our Utopia, not yours"

I slowly pull myself up off the boulder and know that it is time to go. Dusk has settled like a cloak around the earth. I call to Anna and I get the usual “ Not yet, I’m not done yet,” and I smile. I hope as the years pass Anna will be bringing her children to this special place and she will be urging them to put on their shoes and let’s get moving; it’s too dark now and what if we step on a salamander? As we start our climb back up the wall I take one last look behind me and I wonder, as I have so many times before, will it be here when I come back?

Basis for Intervening:

As a lifelong environmentalist, I have devoted many years to protecting and preserving our precious irreplaceable resources locally, nationally, and globally. Therefore, the following issues are the basis for my application as Intervenor regarding the proposed NED pipeline which I oppose.

1. The taking and destruction of conservation lands under Mass. Article 97 – not only do I utilize these precious resources, I have also financially contributed to their protection for future generations.
2. The threat to local organic farms, most especially Natural Roots, located in Conway, which would be directly affected by a blowdown valve that the NED proposal sites nearby. Natural Roots and other farms affected by the proposed pipeline provide food to us and to urban areas of Massachusetts.
3. The threat of gas leaks and explosions in a town that relies solely on an already understaffed and strained volunteer fire and ambulance force that in no way can be trained or equipped to handle such a disaster
4. The potential of our community being exposed to toxic chemicals that are inherent in the fracking and piping/transporting process
5. The likelihood of water contamination – water is the life blood of this community and of the entire state

of Massachusetts.

6. The likely increase to the cost of utilities via a proposed tariff to cover pipeline installation costs, thus constituting corporate welfare for the Gas industry, while our town would gain no benefit from the gas in any way
7. The export of this gas that would drive up the cost for customers at home and create economic disadvantages for the entire state of Massachusetts, a cost that would undoubtedly come back to me by way of increased taxes or reduced services
8. This pipeline as a poor investment: A demonstrated lack of need for this gas via the Massachusetts Attorney General's study
 - a. Shale resources diminishing greatly as indicated through investigative studies
 - b. Likelihood of "stranded assets" - pipe installation never utilized – due to overbuilding
 - c. Inefficiency- wasteful use of current pipeline systems
 - d. Massive amount of identified unrepaired gas leaks throughout the state of Massachusetts that release climate warming methane, risking health and safety of residents
9. Increased reliance on fossil fuels that, given unpredictable markets, puts us at economic risk and undermines the Massachusetts goal toward sustainable independent energy

In conclusion, I maintain that "less is more" and that there are many identified alternative solutions to address any potential winter shortfalls. There is little if nothing to be gained for Massachusetts/New England residents from the NED pipeline. Rather it would be to the exclusive benefit of Kinder Morgan and the industry given the apparent agenda of exporting gas to foreign markets. Accordingly, I implore you as Commissioners to think about the greater good for the ratepayers of Massachusetts and to expand your thinking even further to the greater picture, doing your part to help minimize climate change, helping to protect our children's future on this planet!

Respectfully submitted: Sandra M. Sobek, Conway, MA

Individual longhillgang@gmail.com

Basis for Intervening:

This is what might occur should your committee permit the Kinder-Morgan pipeline proposal to go through western Massachusetts.

At its core such a decision would be seen as violating principal issues our constitution: the respect for popular opinion, protection of the commonwealth (resources held in common), and avoidance of corruption (particular interests overriding more general ones): see G. Hart, 2015 "The Republic of Conscious". It would further seriously erode confidence in our politicians and the political process, and would call into question the integrity of the FERC.

You have read hundreds of letters and listened to passionate testimony as to why the pipeline is not needed and would endanger and destroy so many aspects of life we hold so dear in western Massachusetts. In addition, you have received statements from town after town as well as conservation groups along the pipeline corridor that they are opposed to such an endeavor. With such a diversity of reasons as to why the pipeline should not be permitted, and such widespread opposition to the project, it will be seen as a supreme injustice

that the intentions of a mega corporation should override such public opinion.

While many issues of contention that you decide upon are local, affecting communities in the immediate vicinity, this issue unites municipalities across western Massachusetts. Furthermore, it is a heartfelt issue that endangers our commonwealth, our health, and the aesthetics of this beautiful region. In passing through farmland and forests, over mountains and under rivers it will create a huge perceived scar which people will be willing to defend against. And in going through conservation lands, which we assumed to be protected in perpetuity, it snatches from us a long stretch of our commonwealth. The pipeline scar will then become etched into our landscape in perpetuity.

You are probably not aware that this is the land of Daniel Shay's Rebellion, of Lovejoy's nuclear war, and of the recent closing down of Vernon Yankee. People in western Massachusetts are willing to defend their rights in the face of what is perceived as an unjust action. And it is an articulate populace that knows how to take their issues to the national press. "The Keystone of the East" undoubtedly will receive critical scrutiny by national readers who are already sufficiently jaded by the political/corporate juggernaut. That Mr. Kinder and Morgan are ex-Enron executives will not be overlooked in the reporting.

So what is the probable option for so many who feel so passionate about this issue should you permit the pipeline to go through? What do you think will happen as residents from over forty towns unite in disgust??? You can invent your own scenarios, but I suspect people will assemble to protect their cherished places from the ravages of Kinder-Morgan's chainsaws and earth-eating machines. Neighbors will protect a neighbor's farmland, and passes across the Berkshires will be blocked. Town roads and bridges not under Commonwealth authority will be shut down. And as they try to cut under the West, Deerfield and Connecticut Rivers I suspect that massive protests will occur.

In summary, I implore you to take the voice of the people of western Massachusetts into consideration for a project they will not benefit from, which is not really needed, and will discourage alternative energy which is the solution for the future.

As Thomas Jefferson wrote to James Madison in 1787 upon hearing of Shay's Rebellion: "A little rebellion now and then is a good thing."

20160111-5072

UNITED STATES OF AMERICA BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Tennessee Gas Pipeline Company, LLC) Docket No. CP16-21-000 North East Direct Pipeline Project)

MOTION FOR LEAVE TO INTERVENE

Pursuant to Rules 212 and 214 of the Federal Energy Regulatory Commission's ("Commission") Rules of Practice and Procedure, 18 C.F.R. § 385.212 and 385.214 (2007), I, Sheila DS Foraker file this motion to intervene in this proceeding.

On November 20, 2015, the Tennessee Gas Pipeline Company, LLC (“TGP”) filed its application under § 7 of the Natural Gas Act, 15 u.s.c. § 717f, and § 157 of FERC’s regulations, 18 C.F.R. § 157.1 et seq., for the proposed North East Direct Project (NED), FERC Docket No. CP 16-21-000

I. COMMUNICATIONS AND SERVICE

All communications, pleadings, and orders with respect to this proceeding should be sent to the following individual:

Sheila DS Foraker
205 China Hill Road
Nassau, NY 12123
518-766-2047
sdsforaker@gmail.com

II. INTEREST OF PETITIONER

Construction, operation and maintenance of the Pipeline would adversely impact me.

This proposed pipeline would abut my property. It is proposed to be placed behind my house where the National Grid power lines run on both sides of my property. It is very close to my water supply, and my water would be contaminated both during construction and operation, especially when the inevitable leaks occur. The chemicals from fracked gas are known carcinogens. Not only are we endangered to get cancer, but also to lose our lives in an explosion caused by leaks. We also know the scientific evidence of putting a gas pipeline under or by electric power poles is fuel for massive explosions and incinerations should a spark from the power lines ignite the gas from the pipelines. I do not wish to put myself or my community in danger. We relocated from California to this property in September 2005. I inherited this property, which has been in my family for over 75 years.

We moved here because it is a safe place with pristine air, clean and pure spring water and a peaceful and quite atmosphere.

Not only would the pipeline abutting my property, but also the proposed compression station down the road would change all that. The compression station would pollute the air and the water. We would no longer be in a safe environment. The noise alone would inhibit our ability to live in peace. The dangers that a pipeline in our backyard and a compression station very close to our property would make it an unsafe place to live.

I, Sheila DS Foraker, oppose the proposed project. Continued extraction of fossil fuel is causing climate warming and is endangering life on our planet. Fracking as an extraction process is endangering the health and safety of people living near the fracking fields and workers in the industry. According to Massachusetts Attorney General Maura Healy’s report this pipeline is not needed. (<http://www.mass.gov/ago/news-and-updates/pressreleases/2015/2015-11-18-electric-reliability-study.html>) Continuing to rely on fossil fuel is slowing our transition to renewable energy. If we put our energy and money into creating renewable energy sources we could meet our energy needs with these sources. The destruction of habitat created by the building of the pipeline is significant. The weekly explosions of pipelines across our country are scary. The safety record of Kinder Morgan is not encouraging. Leaks along the pipeline and venting at compression stations release methane and other toxic chemicals into our air, soil and water, making me fearful about the effect this has on the health and safety of residents along the pipeline. I object to the fact that in the FERC regulations people who live in rural areas are less protected (allowing thinner pipes, shutoff valves farther away and less inspection). None of this gas will be used by New Yorkers, but New Yorkers will be forced to absorb the adverse environmental and economic impacts, not to mention the intrusion on individual land-owners’ property. Kinder Morgan has made clear to its stockholders that it expects to export much of this gas, making big profits in so doing. Kinder Morgan has been lobbying to have electric users pay a tariff to help pay for this pipeline. Since this project is clearly not for the common good, I object to Eminent Domain

being used for private profit.

I also protest the robbery of our community's wealth by Kinder Morgan through their proposed compression station and pipelines. As soon as they would be established all the property values will go down to nothing. After all who wants to live next to a pipeline and a compression station? Would any of the decision makers? Would anyone from Kinder Morgan, or any of their stockholders? Would anyone on the FERC committee? Would anyone at all? I think not.

If we are to survive, then we must not be consumed by corporate greed, money, and power. You must make a decision that will be for the good of the people, for humanity, for the environment, for our government, which is of the people, for the people, by the people. You must not make your decision by being paid by the Corporation to pass it. The leaders of Kinder Morgan and all other corporations do not care about the people, the animals, the habitat, the environment, the destruction of the earth, the safety and well-being of humanity. You know that as well. They are doing this only for private, private corporate profit.

I have been suffering from depression and anxiety over this proposed pipeline and compression station. It is so evident that the pipeline in this rural, residential area should not happen. It should not happen anywhere. It is not for the common good.

III. CONCLUSION

Wherefore, I, Sheila DS Foraker, respectfully request that the Commission grant my Motion to Intervene as a party with full rights to participate in all further proceedings.

Respectfully submitted this 9th day of January, 2016

Basis for Intervening:

I am Lynne Hanley and I live at 79 Shelburne Falls Road in Conway, Massachusetts. My objections to the NED pipeline are multiple. First, fracking itself is known to cause earthquakes, to inject unknown chemicals into the earth's groundwater, to result in unknown risks to our aquifers, and to increase our carbon foot print. Next, the pipeline will disrupt conservation lands, state forests, wetlands, wildlife habitats, water-

ways and farmlands. Then there is the specific danger of blasting to my own well and well water, and to my air quality as a result of the “Blowdown Valve” less than half a mile from my house. The attorney general of Massachusetts, Maura Healey, has determined that we do not need this additional gas, while Kinder Morgan is insisting the Massachusetts ratepayers pay for the pipeline, which will likely primarily be used for export and to enrich Kinder Morgan and Tennessee Gas Company. Finally, Kinder Morgan (nee Enron) is a very unstable company right now and anxious to make every penny it can eke out of this enterprise, including, I suspect, cutting every corner it possibly can. Pipelines in other parts of the northeast, Vermont, for example, have been plagued with huge cost overruns and it is likely the NED pipeline will follow suit. So do your job, FERC, and for once regulate in the interests of the common public good and not in the interests of the fossil fuel industry.

---------------------	--------------------------------	----------------------------------

Individual	jdpalmer47@comcast.net	
------------	------------------------	--

Basis for Intervening:

My interests, which may be directly affected by the outcome of the proceedings include:

My interest as a property owner is that Kinder-Morgan will take a portion of my property through eminent domain and it will and already has reduced my property value. It will greatly affect our quality of life and emotional well being because I am concerned about the affect on my artesian well water during construction and after the gas is being transported, knowing that there are leaks that will contaminate our groundwater aquifers. Also of concern is the health and safety issues of the New Ipswich, NH compressor station which is 2 miles from my home. We have owned our property for thirty years and retiring soon and planned on living out our lives at this location. If we feel that we must move, the financial impact of the loss of property value would make it close to impossible to re-establish ourselves somewhere else.

My interest as an electric rate payer is that the electric utility company has no right to put a tariff on rate payers to finance a project for a private corporation’s (Kinder-Morgan) profit. This is a heavy industrial project and NED should be kept in an industrial corridor such as the Massachusetts Turnpike.

John & Darlene Palmer
New Ipswich, NH

RE: Docket No. PF14-22-000
Tennessee Gas Pipeline
Northeast Energy Direct Project
To Whom It May Concern:

I would like to file as an intervenor related to Docket No. PF14-22-000. I am a member of the First Reformed Church of Bethlehem in Selkirk NY and I also live within 1/4 mile of the proposed pipeline that will be going through the forest and nature preserve on the church property.

The church has existed on this property since 1763 and in 1795 Stephen Van Rensselaer sold this property to the First Reformed Church of Bethlehem. Our property has been registered on the National Register of Historic Places since 11/25 2002 under reference # 02001398.

Our forest and nature preserve contain wetlands, walking trails, Eagle Scout projects and have been the site of archeological digs. Native American artifacts have been found on this property. Elmwood Cemetery abuts the other side of our forest property.

As a member of the First Reformed Church of Bethlehem and a property owner who stands to have the health and well-being of my family and neighbors negatively impacted, I am seeking intervenor status.

Sincerely,

Deborah J Weisheit
1087 US Route 9W
Selkirk, NY 12158

Basis for Intervening:

I may be a direct abutter to the route in the future, as the route through Dracut keeps changing.

I am a taxpayer in Dracut, and am concerned with the loss of potential taxable real estate value and the devaluation of homes (both existing and proposed developments). These funds are needed for our schools, police, fire, and other services.

I am a consumer of produce from Dracut farms, and am concerned that the pipeline may cause contamination of the water supply and crops that are part of my food supply.

Lastly, I am a ratepayer to National Grid for gas and electric services. I do not want to overpay for unnecessary pipeline infrastructure that was conceived primarily to move large amounts of gas to export terminals.

20160111-5081

My name is Thomas Durkin and I am a Dracut resident. The NED project, due to number of proposed facilities and amount of construction and road closures proposed in town, would have an enormous effect on me. I am a direct abutter to one of the prior routes to this pipeline that are still considered by FERC to be alternate routes. In fact, the compressor station had been planned to be constructed within 1000 feet of my property in a residential area. In addition, I am a taxpayer in Dracut and I am concerned with loss of potential

taxable real estate value and the devaluation of homes (both existing and proposed developments) that are needed to fund our schools and police and fire and other services. Also, I am a ratepayer for National Grid gas service and electric service and am concerned about overpaying for unnecessary pipeline infrastructure which was conceived primarily to move large amounts of gas to export terminals.

In closing, I am filing this intervention to show my opposition to the pipeline coming through the town of Dracut.

Sincerely

Mr and Mrs Thomas J Durkin Sr

Basis for Intervening:

As landowners in the path of the proposed pipeline in Northfield, Massachusetts my husband Philip Watson and I want to intervene in this process for four main reasons:

1. The proposed pipeline construction threatens our home and surrounding property.
2. The water resources of the Town of Northfield are threatened by construction through and around Mill Brook.
3. The value of our property, including our off-grid solar house will be greatly diminished if the proposed pipeline is allowed to be built.
4. Our property could be seized by eminent domain.

The current maps of the proposed route show the pipeline crossing our property on Warwick Rd. in Northfield adjacent to the power line. The maps also show two potential access roads. One is our driveway. Needless to say, use of our driveway would cause unacceptable levels of disruption to our property and daily lives. The other road, Parker Camp Road, is on the border of our property. Our well and only water supply borders this road and would be at serious risk of contamination should Parker Camp Rd be used as the access road for pipeline construction.

Mill Brook runs parallel to Warwick Rd. at the point where the proposed pipeline enters our property. This area is currently a beautiful wooded habitat for wildlife and includes small waterfalls, fishing holes and paths that we hike. More importantly in the big picture, Mill Brook feeds into the Northfield watershed. Construction through the brook and blasting up the steep slopes adjacent to the brook will certainly have a negative impact on this water resource.

When we built our home six years ago, we decided to create a home that was as energy efficient as possible within our means. Our house is highly insulated, heated with wood from our property and solar hot water, and powered by photovoltaic solar panels. We grow much of our own food, have started a small orchard and vineyard and plan to expand our food production. We are proud of the fact that we have found a way to live comfortably by conserving energy and taking advantage of the efficiencies of solar power. If and when we need to sell this property, it stands to reason that potential buyers would also be interested in living on a property that is not only energy efficient, but surrounded by the beautiful woods and streams that we currently enjoy. Buyers interested in living off the grid like we do would most probably not be interested in a property that included a 30 inch highly pressurized gas pipeline, along with the risk and liability that goes

along with it. Our property which is currently a prime example of sustainable living would lose much of its value should the pipeline destroy its integrity.

Finally we vehemently oppose the possibility that our property be seized by eminent domain. Such an action is supposed to be used for a project that is for the good of the public. It is obvious to us that the main reason for this pipeline is for the profit of Kinder Morgan, not the good of the public.

As intervenors, we ask that FERC use the highest level of scrutiny when considering the NED proposal.

Basis for Intervening:

Basis for Intervening:

I live within 8 miles of the proposed New Ipswich compressor station.

For these reasons I am strongly opposed to the NED pipeline proposal:

I am concerned that the pipeline would be a daily hazard to those who live and work around it.

I am concerned the pipeline would cause excessive toxic emissions from compressor stations to poison the water and air, putting innocent people's health and lives at risk.

I am concerned the pipeline would cause excessive light and noise pollution from compressor stations.

I am concerned the pipeline would cause long-term damage to the beauty and health of nature preserves and wildlife in our area.

I am concerned the pipeline would be a soft terror target due to the pipeline's size, high pressure, volatility, and unpatrolled corridor.

I am concerned the pipeline would lower property values because no one wants to live in a danger zone.

I am concerned the pipeline would unjustly impose Eminent Domain on average citizens who have worked hard for their land.

I am concerned the pipeline would cause a proposed tariff to be forced on energy ratepayers.

I am concerned that the rural towns along the pipeline route are not equipped for the burden of the potential dangers associated with this volatile pipeline.

I am concerned the pipeline would negatively impact tourism in the area and result in a depressed regional economy.

Individual	entaylor1@msn.com	

Basis for Intervening:

I am making a motion to intervene as a resident homeowner in close proximity to the proposed large compressor station site in New Ipswich, NH. I received a letter on 12/18/2015 (dated 12/9/2015) from Tennessee Gas Pipeline Company, L.L.C. (Tennessee) stating my property may be subject to a temporary or permanent easement that could be secured through eminent domain, if necessary.

I do not believe sufficient need has been established to justify Tennessee's/Kinder Morgan's expressed benefit of this pipeline or to justify use of eminent domain. I am deeply concerned that an approval for use of eminent domain proliferates the ominous practice that allows executives of private corporations to enact a scheme to invade any neighborhood in any town in any state at any time to take any lands they so choose to achieve a mission of private profit.

I also believe these practices are an expression of entrapment with undertones of enslavement. Why must a rightful landowner be required to forfeit partial or total use of his or her property to a private corporation or be expected to watch over or police a pipeline through or near one's property? Must we function as unpaid servants to the whims of a private corporation?

I am concerned that evacuations by eminent domain of people who resist the pipeline may be a discriminatory act that allows a corporation to achieve a specific, more preferred demographic selection of residents by capitalizing on landowner losses through restructuring or reselling properties taken from resistant members to those who are more accommodating of the private company's motives and objectives, such as a desire to expand initial pipeline operations.

I believe such practices demonstrate a focus on profit with little or no concern for environmental damage or human suffering inflicted and thus this raises concerns to me that civil and human rights are being violated.

I do not believe the fracked gas expected to pass through this pipeline is clean and safe as claimed by Tennessee and Kinder Morgan. I believe my health and life are at high risk of harm due to the close proximity of the pipeline and compressor station to my home.

I believe I will suffer illness or death from exposure to toxic and radioactive chemicals, volatile organic compounds and damaging particulates that exit the compressor station site or surrounding pipeline routes and that if an explosion occurs, my death is likely from the combined effects of jarring explosive forces, intense thermal radiation, and the effects of a sustained burn as has been the outcome to other victims sited or present close to similar pipeline projects. In fact, if any accident occurs, my home is located in such a way that I would need to drive towards the hazard before I would be able to drive away from it.

It is my opinion that statements that the gas is clean and safe are similar to claims made by the tobacco industry many years back saying that cigarette smoking and other uses of tobacco were not harmful.

It is my opinion that these statements of clean and safe gas by Tennessee and Kinder Morgan are also similar to those made to encourage widespread use of the pesticide DDT (dichlorodiphenyltrichloroethane) which was indiscriminately sprayed upon everything in the path of extensive aerial plumes spewed from planes and trucks.

Subsequent research and science brought to light the consequences of releasing large amounts of potentially dangerous chemicals without sufficient understanding of their effects on the environment and human health. DDT not only killed birds and other wildlife, but had the unfortunate and drastic outcome of destroying the ability of some birds to reproduce.

Cigarettes must now carry clear notice of harm.

Pesticides must also contain warnings.

Gas pumps at filling stations have warning messages posted.

Regulated and over the counter pharmaceuticals and drugs also must provide informational disclosure of known and suspected negative side effects.

I believe that since the public is being forced to inhale, ingest and absorb known carcinogenic and radioac-

and/or compressor station. They cannot sell or insure or live in their own homes. This cannot be allowed to happen to us!

I (Lynn) am also concerned about my safety. My commute to work takes me up Northfield/Warwick Road and crosses the proposed pipeline route, so I would be at risk should there be a pipeline leak or explosion. This is a well-founded fear since I understand that Kinder Morgan plans to use a lesser gauge of steel for the pipeline construction since we are in an underpopulated area. We may be underpopulated, but we are not UNpopulated. Any increased risk to anyone so that others who don't even live here may reap higher profits is unacceptable!

We have a strong commitment to the protection of wildlife. The pipeline and compressor station pose serious threats to the flora and fauna in Northfield and beyond. For example, we have many vernal pools which are critical to the reproduction of endangered and threatened amphibians such as the Jefferson, Blue-spotted, and Marbled salamanders. These are but three species which will likely be adversely affected by the construction of and leakage from a gas pipeline and/or compressor station.

These are not our only concerns regarding the potential effects of the pipeline and compressor station on our lives. We have so many more. These will more than suffice to grant us intervenor status. We thank you for your time.

Basis for Intervening:

MY CONCERNS:

- 1) The pipeline would cause excessive toxic emissions from compressor stations to poison the water and air, putting innocent people's health and lives at risk.
- 2) The pipeline would cause long-term damage to the beauty and health of nature preserves and wildlife in our area.
- 3) The pipeline would unjustly impose Eminent Domain on average citizens who have worked hard for their land.
- 3) The rural towns along the pipeline route are not equipped for the burden of the potential dangers associated with this volatile pipeline.

Individual	Dljuncmail@gmail.com	

Basis for Intervening:

- I am a landowner directly impacted by the pipeline route.
- I am a landowner who would have my property seized by eminent domain.
- I am a resident whose source of drinking water is crossed by the proposed route so my drinking water supply is at risk of the construction and/or operation of the pipeline.
- I am a resident who lives in the "blast radius" so I would be at physical risk.
- I am a resident whose livelihood may be impacted by the construction process do to truck traffic, staging of equipment and lengthy operation of large machinery.
- I enjoy the out of doors and do not want any state or town public parks or forests, which have been set aside for the people and wildlife, to be impacted by any activities of this commercial project.
